Homogeneous isotropic models of the universe, based on the general theory of relativity, lead to the existence of a preferred frame of reference, which is similar to the absolute space of Newton, and a preferred time coordinate, which resembles the absolute time of Newton. These concepts seem to be in contradiction to the principle of covariance on which the general relativity theory is based. A theory of gravitation is therefore proposed which uses the world picture of general relativity but is not covariant. In the three crucial tests, the proposed theory gives the same results as the general relativity theory. However, in contrast to general relativity, the present theory predicts the emission of gravitational waves by spherically symmetric systems, and gravitational waves are found, in general, to have both transverse and longitudinal components. (auth)

53343 MULTIDIRECTIONAL, MULTIPOLARIZATION ANTENNAS FOR SCALAR AND TENSOR GRAVITATIONAL RADIATION. **Forward, Robert L. (Hughes Research Labs., Malibu, Calif.). Gen. Relativity Gravitation: 2: No. 2, 149-59(1971).**

Some gravitational radiation antenna designs are discussed which are capable of distinguishing between the spin-zero scalar radiation predicted by the Brans–Dicke theory of gravitation and the spin-two tensor radiation predicted by the Einstein theory of gravitation. The antennas will also give information concerning the direction to the source of radiation, and will measure the polarization of the tensor radiation. The designs consist of symmetric masses with appropriately spaced and oriented transducers. The transducers are combined to give orthogonal outputs. Linear combinations of these orthogonal outputs then are uniquely associated with the various possible combinations of radiation type, propagation direction and polarization orientation. (auth)

53344 SEARCH FOR GRAVITATIONAL WAVES. **Szalay, A. Sandor (Eoetvoes Lorand Univ., Hungary). Fiz. Szemle: 21: No. 5, 153-7(May 1971). (In Hungarian).**

There are very few experimental techniques suited to detect the effects of gravitational waves. Detection of gravitational waves is based on the measurement of stresses induced within bodies of slight changes in the gravitational field, i.e., of the space-time curvature. In case of periodic perturbations induced in an elastic body, excitation of normal modes may result in resonances if the frequency of the gravitational field coincides with that of the normal mode. The original experiments were carried out with a 1.5-ton aluminum cylinder, transducing the mechanical stresses into electrical voltage by means of piezoelectric crystals. To avoid local effects, two detectors were used in coincidence, at a distance of 1000 km from each other. The results indicated that the radiation sources are located among the about 10^{10} stars at the center of the galaxy. (TTT)

53345 PARTICLE PATHS OF GENERAL RELATIVITY AS GEODESICS OF AN AFFINE CONNECTION. **Burman, R. (Univ. of Western Australia, Nedlands). Bull. Aust. Math. Soc.; 3: No. 3, 325-35(1970).**

The motion of incoherent matter, and hence of test particles, in the presence of fields with an arbitrary energy-momentum tensor is considered. The equations of motion are obtained from Einstein's field equations and are written in the form of geodesic equations of an affine connection. The special cases of the electromagnetic field, the Proca field and a scalar field are discussed. (auth)

53346 GEOMETRIC INTERPRETATION OF CHRONOMETRIC INVARIANTS IN GENERAL THEORY OF RELATIVITY. **Novotny, J.; Horsky, J. (Faculty of Science, Brno). Czech. J. Phys.; 21: No. 7, 809-12(1971).**

The geometric interpretation of Zelmanov's chronometric invariants is given and their connection to observable quantities as well as the connection of Zelmanov's approach to the generally covariant Dehnen's method is found. (auth)

53347 ACTIVE GRAVITATIONAL MASS OF ELECTROMAGNETIC RADIATION. **Hegarty, J. C. (Boston Univ.). Nuovo Cim.; 5B: No. 1, 52-8(11 Sep 1971).**

The decay of a particle into two pulses of electromagnetic radiation is investigated to learn if the active gravitational mass of the radiation is twice that of the particle. The results show that, to first order in g_{ij}, the radiation tends to destroy the gravitational field; this is expressed mathematically by the equation $R_{ijkl} = 0$ for all space points lying inside the future light-cone whose apex is at the decay event. In addition the decay produces an impulse on a stationary particle which is perpendicular to the axis of propagation of the radiation and whose magnitude is inversely proportional to the normal distance between the particle and the axis of propagation. (auth)

53348 NONLINEAR SPINOR EQUATION AND ASYMMETRIC CONNECTION IN GENERAL RELATIVITY. **Hehl, F. W.; Datta, B. K. (Technische Univ., Clausthal-Zellerfeld, Ger.). J. Math. Phys. (N. Y.); 12: No. 7, 1334-9(Jul 1971).**

In order to take full account of spin in general relativity, it is necessary to consider space–time as a metric space with torsion, as was shown elsewhere. A Dirac particle in such a space is treated. The generalized Dirac equation turns out to be of a Heisenberg–Pauli type. The nonlinear terms induced by torsion express a universal spin–spin interaction of range zero. (auth)

53349 COVARIANCE, INVARIANCE, AND EQUIVALENCE: A VIEWPOINT. **Anderson, J. L. (Stevens Inst. of Tech., Hoboken, N. J.). Gen. Relativity Gravitation; 2: No. 2, 161-72 (1971).**

The underlying principles of general relativity, in view of its application to the phenomenon of gravitational collapse, are reexamined, precise statements of these principles given and their inter-relations discussed. According to Einstein's theory the gravitational field and the "geometry" of space–time are simultaneously characterized by a second rank symmetric tensor satisfying the Einstein equations. Einstein held that a principle of covariance and a principle of general covariance together with a Mach's Principle were the basis for general relativity and beyond this point very little agreement is found. Hence the formulations are given as a basis for further discussion. A brief review of a previous formulation (NSA 21: 18876) of the principle of general covariance is given and then related to the active and passive interpretations of co-ordinate transformations. The agreement with one statement of a principle of equivalence is then discussed. It is concluded that the Einstein group is the invariance group of all space–time systems. (UK)

53350 STATIC GRAVITATIONAL FIELD OF MULTIPOLES IN THE SECOND APPROXIMATION. **Pechlaner, E.; Das, A. (Simon Fraser Univ., Burnaby, Canada). J. Math. Phys. (N. Y.); 12: No. 7, 1066-8(Jul 1971).**

A method of obtaining the explicit form of the gravitational field of multipoles in the second approximation is furnished. The generalization of this method to any superposition of multipoles is straightforward. As an example, the second-order metric for the superposition of a monopole and a quadrupole is obtained. (auth)

53351 EQUAL-TIME COMMUTATION RELATIONS BETWEEN COMPONENTS OF A CURRENT AND THE ENERGY–MOMENTUM TENSOR. **Bergstroem, K.; Yngstroem, S. (Inst. of Theoretical Physics, Goteborg). J. Math. Phys. (N. Y.); 12: No. 7, 1083-7 (Jul 1971).**

An arbitrary physical system possessing a set of currents and an energy-momentum tensor is considered. Without the use of canonical commutation rules equal-time commutation relations between the components of the currents and the energy–momentum tensor are derived in a unified way. The currents and energy–momentum tensor are defined by the response of the physical system to the variations of external fields. The formalism of infinite-dimensional continuous transformation groups is utilized. (auth)

53352 INVARIANT APPROACH TO SPACE–TIME SYMMETRY. **Debney, George C. Jr. (Virginia Polytechnic Inst., Blacksburg. Virginia State Univ., Blacksburg). J. Math. Phys. (N. Y.); 12: No. 7, 1088-98(Jul 1971).**

A study is made of Killing vector fields in vacuum Einstein spaces with a restriction primarily to those fields whose associated bivector is nonnull. However, a well-known theorem of Robinson is modified slightly to show that if such a space admits a null bivector associated with a Killing vector, the space must be algebraically special. Consequently, all algebraically general spaces admit a nonnull Killing bivector (KBV) if they admit a symmetry at all. Furthermore, it is shown that if a vacuum Einstein space admits a spacelike or timelike Killing vector field whose associated KBV is nonnull, the Killing trajectories are not geodesics. Computation of invariants from the curvature tensor and the KBV allows an approach which gives a general classification to such spaces which admit at least one hypersurface orthogonal Killing vector field. A few geometrical properties involving the principal null directions of the KBV are also derived for the hypersurface orthogonal cases. In addition, a topological result follows immediately from the behavior of the invariant T. (auth)

53353 PARTICLES WITH SPIN IN A GRAVITATIONAL FIELD. **Mashhoon, Bahram (Princeton Univ., N. J.). J. Math. Phys. (N. Y.); 12: No. 7, 1075-7(Jul 1971).**

Papapetrou's covariant equations of motion for a spinning particle in a gravitational field are discussed. The equations of motion for the spin of a particle at rest outside a rotating mass are derived using the Kerr metric. It is shown that Schiff's formula for the mass–current effect follows from these equations in the lowest approximation. (auth)

53354 CLASSIFICATION OF THE HARRISON METRICS. **D'Inverno, R. A.; Russell-Clark, R. A. (Kings Coll., London). J. Math. Phys. (N. Y.); 12: No. 7, 1258-63(Jul 1971).**

Harrison's 40 space–time metrics were checked to see if they represent vacuum solutions. Four of them are found to be nonvacuum. The Petrov classification is found for all the metrics, and those of type D are placed in their (invariantly defined) Kinnersley classes. (auth)

53355 GRAVITATIONAL WAVES IN THE GENERAL THEORY OF RELATIVITY. III. ONE WAVE TYPE-III SOLUTIONS. **Dozmorov, I. M. (Moscow Higher Technical School). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 11, 121-5(1969). (In Russian).**

Methods and possibilities of the invariant theory of gravitational

XUM

radiation (IVUZ, Fizika, No. 10, (1968)) are demonstrated, using as an example an accurate solution of Kaigorodov type III. Analysis of this solution permits the conclusion that it describes gravitational radiation with sources. (tr-auth)

53356 COMPLEX 2-FORM REPRESENTATION OF THE EINSTEIN EQUATIONS: THE PETROV TYPE III SOLUTIONS. Brans, Carl H. (Loyola Univ., New Orleans). J. Math. Phys. (N. Y.); 12: No. 8, 1616-19(Aug 1971)

The geometric structure equations of a manifold satisfying the vacuum Einstein equations are expressed in terms of a complexification of the space of 2-forms adapted to the Petrov classification. The Petrov type III problem is invariantly reduced to the solution of one partial differential equation. Examples of solutions containing one arbitrary function are given, corresponding to spaces with groups of motions of dimensions 0, 1, and 2. (auth)

Scattering Theory

Refer also to abstracts 53163, 53281, and 53844.

53357 (IAE-1970) SOLUTION OF THE INTEGRAL PEIERLS EQUATION. Sobolev, S. L.; Brudno, A. L.; Lavrova, M. S.; Mukhina, G. V.; Khodakov, V. A. (Institut Atomnoi Energii, Moscow (USSR)). 1970. 22p. (In Russian). Dep. NTIS (U. S. Sales Only).

One of the methods of solving the problem of the "black" cylinder located in a nonabsorbing medium is presented. The source of the particles is placed at infinity, and scattering is postulated as spherically symmetrical. The distribution of particle density is described by an integral equation (Peierl's equation). The method of solving such an equation is given. (tr-auth)

53358 PROPERTIES OF DUAL MULTILOOP AMPLITUDES. Alessandrini, V. (CERN, Geneva. Univ., Geneva); Amati, D. Nuovo Cim.; 4A: No. 4, 793-844(21 Aug 1971).

Previous results on the dual multiloop amplitude are extended by obtaining, from the unitarization procedure, the measure and domain of integration. The singularities of the amplitude, which arise from end points in the integration domain, are discussed by exploiting the simple geometrical interpretation of the theory. In particular, the singularities are investigated which give rise to divergences in planar diagrams as well as Pomeranchuk-like singularities in nonplanar ones. (auth)

53359 TWO- AND FOUR-PARTICLE CORRELATIONS IN THE MULTIPERIPHERAL MODEL. Ahmed, M. A. (Univ. of Khartoum, Sudan). Nuovo Cim.; 4A: No. 4, 932-56(21 Aug 1971).

A multiperipheral model that incorporates two- and four-particle correlations is studied. Integral equations for the forward absorptive two-particle scattering amplitude are derived, in the equal-mass case, both formally and explicitly. A Regge-pole model is then assumed for the absorptive part when only four-particle correlations are present and the shift in the intercept of the Regge trajectory due to the insertion of two-particle correlations is found. Numerical evaluations are also given. (auth)

53360 FIXED-ANGLE LIMITS OF MULTIPARTICLE AMPLITUDES. White, A. R. (Cambridge Univ., Eng.). Nuovo Cim.; 4A: No. 4, 957-82(21 Aug 1971).

Fixed-angle limits of multiparticle amplitudes are defined in terms of group variables. The behavior of invariant variables in these limits is calculated. It is shown that exponential decrease of multiparticle amplitudes in certain limits is desirable to avoid the generation of non-Regge multiangular-momentum singularities due to the presence of physical-region poles in multiparticle amplitudes. These limits are then shown to be precisely the fixed-angle limits. Possible generalizations to production amplitudes of the Orear and Krisch phenomenological fits to the fixed-angle behavior of the four-particle amplitude are also discussed. (auth)

53361 PARTIAL-WAVE PRODUCTION AMPLITUDES AND THE DIAGONALIZATION OF THE UNITARITY RELATIONS IN THE HELICITY FORMALISM. Wang, Kuo-hsiang (Pennsylvania State Univ., University Park). Phys. Rev., D; 4: No. 2, 489-516(15 Jul 1971).

A general study is made of the partial-wave amplitudes and their unitarity relations for the general N-body-to-N-body process in the helicity formalism. The partial-wave amplitude is so defined that it is a function of the subenergies that correspond to the noncoincident poles in a tree diagram. The partial-wave unitarity relations introduced here are diagonalized, and may supply the basis for introducing new models or improving others. The Wigner rotations and the crossing angles in the partial-wave expansion are explicitly given in terms of invariant variables. Some related topics such as the partial-wave recoupling condition, recoupling coefficients, etc., are discussed. The expressions obtained here can be applied to multiperipheral models and others. As a simple example, the contributions, elastic and inelastic, to the partial-wave amplitude via unitarity are obtained in a model of direct-channel scalar-meson dominance, with some approximations. (auth)

53362 PROJECTION OPERATOR IN THE DUAL-RESOANCE MODEL. Kikkawa, K. (City Coll., New York). Phys. Rev., D; 4: No. 2, 340-2(15 Jul 1971).

It is proved that the projection operator of the nonspurious states has a well-defined property in a certain space if and only if the Regge intercept is noninteger. A discussion is also given on the off-mass-shell extrapolation. (auth)

53363 ANALYTIC PROPERTIES OF THREE-PARTICLE AMPLITUDES IN THE SCATTERING-ANGLE VARIABLE. Avishai, Y. (Argonne National Lab., Ill.). Phys. Rev., D; 4: No. 2, 400-6(15 Jul 1971).

The elastic amplitude describing a scattering of a free particle on a two-particle bound state is here considered as a function of cos θ, where θ is the scattering angle. The two-body interactions were taken to be s-wave and separable. The results are: (1) The on-shell amplitude is analytic inside a Lehmann ellipse for all real energies, except for a finite interval on the negative E axis, and (2) for negative energy, the off-shell amplitude is analytic in the whole cos θ plane, apart from possible real left and right cuts, and in the Lehmann ellipse. Its asymptotic behavior in cos θ is determined by the leading Regge trajectory. (auth)

53364 T-MATRIX PERTURBATION THEORY FOR THE FADDEEV EQUATIONS. Becker, Stephen F.; Harrington, David R. (Rutgers—The State Univ., New Brunswick, N. J.). Phys. Rev., D; 4: No. 2, 411-15(15 Jul 1971).

A T-matrix perturbation theory for the Faddeev equations is developed in two different ways giving slightly differing results for the first-order correction to the ground-state energy of the three-body system, and both expressions differ from the result recently obtained by Fuda. The application of the theory to the system of three identical spinless particles is discussed. (auth)

53365 PROPERTIES OF SCATTERING AMPLITUDES AT HIGH ENERGY AND NONZERO MOMENTUM TRANSFER DEDUCED FROM SPECIFIED FORWARD BEHAVIOUR. Cornille, H.; Simao, F. R. A. (CEN de Saclay, Gif-sur-Yvette, France). Nuovo Cim.; 5A: 138-62(1 Sep 1971).

Assuming that the modulus of the forward symmetric and antisymmetric scattering amplitudes for large energy are of the type const $s(\log s)^{\beta\pm}$, $\gamma_0 = \sup(\beta^+, 2\beta^- - \beta^+)$ and γ ($\gamma_0 \leq \gamma \leq 2$) linked to the logarithmic part of the maximum number of contributing partial waves near the forward direction are so defined. For given γ_0 and γ, without further assumptions, rigorous results are deduced for the scattering amplitudes at nonzero momentum transfer t. Taking into account the assumption that the ratios of the physical scattering amplitudes to the forward ones are bounded for negative t by constants, improved results are obtained. The possibility is studied that as s approaches infinity the radios of the scattering amplitudes to the forward ones have the following property: at fixed tg(s), where g(s) is well defined, there exist nontrivial limits for these ratios. The properties of the absorptive parts of the scattering amplitudes in the complex t-plane, deduced from a specified forward behavior, are also studied. (auth)

53366 FACTORIZATION AND OPERATOR FORMALISM IN THE GENERALIZED VIRASORO MODEL. Del Giudice, E.; Di Vecchia, P. (Massachusetts Inst. of Tech., Cambridge). Nuovo Cim.; 5A: No. 1, 90-102(1 Sep 1971).

The properties of duality and factorization of the generalization to N-particle scattering—recently given by Shapiro for $\alpha(0) = 2$—of the Virasoro model are studied. In particular this fully symmetric model (FSM) is written using the usual operator formalism with the addition of another infinite set of harmonic oscillators b_n. The residue of each pole is shown to factorize in a finite number of terms independently of the number of external particles. The spectrum increases exponentially with the energy by a factor $\sqrt{2}$ more than in the generalized Veneziano model (GVM). Two infinite sets of Ward operators are shown to be present and the physical states on mass shell are defined as in the GVM. (auth)

53367 HIGH-ENERGY SCATTERING ON A SMOOTH POTENTIAL. Mestvirishvili, M. A.; Rcheulishvili, G. L. (Inst. of High-Energy Physics, Serpukhov, USSR). Teor. Mat. Fiz.; 8: No. 2, 206-14(Aug 1971). (In Russian).

The high-energy behavior of the scattering amplitude is studied for the smooth quasipotential $V(r) = V_0(k)\ [\exp(-\alpha\sqrt{r^2 + \alpha^2})/\sqrt{r^2 + \alpha^2}]$. (auth)

53368 LAGRANGIAN AND SCATTERING MATRIX. Medvedev, B. V.: Pavlov, V. P.; Sukhanov, A. D. (Mathematics Inst., Moscow. Moscow Mining Inst.). Teor. Mat. Fiz.; 8: No. 2, 153-60(Aug 1971). (In Russian).

It is demonstrated by a number of concrete examples that in realistic field theories there is no direct correlation between the property of the Lagrangian to be Hermitian (resp., local) and the unitarity (resp., causality) of the scattering matrix. (auth)

53369 QUASICLASSICAL APPROXIMATION IN THE INVERSE SCATTERING PROBLEM. Khudyakov, S. V. Zh. Eksp. Teor. Fiz.; 60: No. 6, 2040-4(Jun 1971). (In Russian).

An approximate solution of the inverse scattering problem for a central field with a fixed energy is derived for the case of strongly oscillating cross sections. The imaginary part of the potential is determined in the quasiclassical approximation on the basis of the real part of the potential of the optical model and the differential cross section. (auth)

53370 COORDINATE ASYMPTOTICS OF THE THREE-PARTICLE WAVE FUNCTION. Merkur'ev, S. P. (Leningrad State Univ.). Teor. Mat. Fiz.; 8: No. 2, 235-50(Aug 1971). (In Russian).

Coordinate asymptotics of the wave function is studied for the nonrelativistic three-particle system, taking into account the processes (3 → 3). The main attention is paid to the double scattering effects. It is shown that in the coordinate space regions where the formally constructed scattering amplitude tends to infinity the asymptotics of the wave function of (3 → 3) process is described by means of the Frenel integrals. (auth)

53371 AMPLITUDE FOR EXCITED NONSPURIOUS PARTICLES IN DUAL-RESONANCE MODELS WITH ARBITRARY INTERCEPT. Napolitano, E.; Sciuto, S. (Univ., Turin). Lett. Nuovo Cim.; 1: No. 26, 1095-8(26 Jun 1971).

The generalization of the amplitude for N nonspurious excited particles is discussed in the case of an arbitrary value of the intercept a, releasing the on-mass-shell condition for the external states. (L.B.S.)

53372 SCATTERING AMPLITUDES FOR PHYSICAL STATES IN DUAL-RESONANCE MODELS. Friedman, K. A.; Rosenzweig, C.; Sukhatme, U. P. (Massachusetts Inst. of Tech., Cambridge). Contract AT(30-1)-2098. Lett. Nuovo Cim.; 1: No. 26, 1109-13 (26 Jun 1971).

Operators that have the property of generating only physical states in the Virasoro case (a = 1) were recently found by Di Vecchia and Fubini (Lett. Nuovo Cimento, 1: 823(1971). The operators are used to compute scattering amplitudes for excited particles, in particular, for physical states coupled to two scalars. (L.B.S.)

53373 QUASI-TWO PARTICLE EQUATIONS FOR THE SCATTERING OF TWO BOUND STATES (AND OTHER FOUR-PARTICLE PROBLEMS). Riordan, F. (Univ. of Birmingham, Eng.). Lett. Nuovo Cim.; 2: No. 7, 359-62(14 Aug 1971).

The Faddeev method for solving the four-particle equation by expressing the four-particle transition operator T(z) in terms of transition operators for the subproblems is considered. An operator function of complex subenergies with the same matrix elements as T(z) on the energy-subenergy shell is defined by an equation whose kernel has no continuous spectrum and involves no convolutions of T(z). The quasi-particle method is used to reduce the equation to a coupled set of two-particle equations. (L.B.S.)

53374 NONRELATIVISTIC S-MATRIX THEORY EQUATIONS. Grashin, A. F. (Moscow Regional Teacher's Inst.). Teor. Mat. Fiz.; 8: No. 1, 73-84(Jul 1971). (In Russian).

The complete set of equations of nonrelativistic S-matrix theory is proposed. The set includes the Ekstein equations as well as new additional equations eliminating the ambiguity in the solutions of the previously known bilinear equations. General relations between various amplitudes are found with the aid of obtained equations. The two-particle case with separable interaction is discussed as a concrete example. (auth)

53375 INVARIANCE GROUPS OF THE PHASE SPACE AND RELATIVISTIC THREE-PARTICLE STATES. Bogoslovskii, G. Yu. (Moscow State Univ.). Teor. Mat. Fiz.; 8: No. 1, 85-96 (Jul 1971). (In Russian).

A new approach to the classification of states of the three relativistic particles is proposed. The basic idea of the method consists in the existence of a finite group H of transformations leaving invariant the energetic surface equation as well as the relativistic three-particle phase-volume. The equations determining a one-parameter subgroup of H are found and the group itself is found in the case of the three identical particles. The specific feature of this group is that the particle exchange is the element of it. The complete set of commuting Hermitian operators, including the exchange operator, is constructed on the basis of the Lie algebra of generators of H. The complete orthonormal system of states is obtained which possesses necessary symmetry properties with respect to the exchange. Kinematical variables used in the problem map the physical region on the Dalitz plot on a ring. (auth)

53376 STURM–LIOUVILLE FUNCTIONS APPLIED TO SOLVING THE SCHROEDINGER EQUATION IN ANISOTROPIC SAXON–WOODS POTENTIAL. Gareev, F. A.; Ivanova, S. P.; Shirikova, N. Yu. (Joint Inst. for Nuclear Research, Dubna, USSR). Teor. Mat. Fiz.; 8: No. 1, 97-108(Jul 1971). (In Russian).

A method of solving the Schrödinger equation in an anisotropic potential with finite depth for bound states E < 0 is proposed. The one-particle wave function is represented as a superposition of the eigen-functions of the Sturm–Liouville problem. The problem of taking into account the influence of the continuous spectra on the bound states is automatically solved. (auth)

53377 GENERALIZED VIRASORO MODELS. Brower, R. C.; Goddard, P. (CERN, Geneva). Lett. Nuovo Cim.; 1: No. 26, 1075-81(26 Jun 1971).

An N-point generalization of the Virasoro amplitude for any positive integer trajectory intercept is presented. The operator formalism, factorization, and the spectrum are discussed. (L.B.S.)

53378 REGGEON AMPLITUDE AND DUALITY SUM RULE. Jen, Chian-li; Kang, Kyungsik; Shen, Pu; Tan, Chung-I (Brown Univ., Providence). Phys. Rev. Lett.; 27: No. 11, 754-7(13 Sep 1971).

Based on the dual amplitude analysis of the "ditriple" Regge limits in inclusive hadronic reactions, the general properties of the Reggeon–Reggeon amplitude are conjectured and a duality sum rule is suggested. From this sum rule, predictions are made on the two-Reggeon-particle and triple-Reggeon couplings for diffraction dissociations. (auth)

53379 DUALITY AND THE POMERANCHUK TRAJECTORY. Potupa, A. S. (Inst. of Physics, Minsk). Vestsi Akad. Navuk BSSR, Ser. Fiz.-Mat. Navuk; No. 1, 100-5(1971). (In Russian).

The hypothesis of the existence of the W-trajectory with its very broad resonances is considered, and its duality with the Pomeranchuk trajectory. The connection between W-resonances with SU_3 classification and fireballs is further examined. (tr-auth)

53380 AZIMUTHAL TWO-PARTICLE CORRELATIONS FROM M = 0 LORENTZ POLES. Bassetto, A.; Toller, M. (CERN, Geneva). Lett. Nuovo Cim.; 2: No. 8, 409-12(21 Aug 1971).

Previous studies of azimuthal two-particle correlations from M = 0 Lorentz poles are extended, releasing the condition that the observed particles are in the pionization region. The investigation is based on the assumption that the pomeron is essentially a Lorentz pole with factorized residues. An expression is obtained for the two-particle inclusive distribution. (L.B.S.)

53381 CROSSED CHANNEL EXCHANGE AND REGGE ASYMPTOTIC BEHAVIOUR OF SCATTERING AMPLITUDES. Kawasaki, Mamoru; Kobayashi, Masanori (Hiroshima Univ. Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 6, 1879-88(Jun 1971).

From the viewpoint that Regge behavior is due to crossed channel exchanges, the infinite one-particle-exchange (IOPE) approach, especially a model which generates cuts in the direct channel variable s, is discussed. At the present stage this model shows Regge behavior locally in the small negative momentum transfer t region. (auth)

53382 DUAL RESONANCE AMPLITUDE CORRESPONDING TO GLOBULAR FEYNMAN DIAGRAMS. Muta, Taizo (Kyoto Univ.). Progr. Theor. Phys. (Kyoto); 45: No. 6, 1935-8(Jun 1971).

Following the conjecture on the correspondence between the dual resonance amplitude and the very high order Feynman diagram, the dual resonance amplitude corresponding to the globular Feynman diagram is calculated. It is found that it develops essential singularities in the Lorentz-invariant variables. (auth)

53383 SELF-REPRODUCING POMERON AND DIFFRACTION SCATTERING. Fujisaki, Haruo (Rikkyo Univ., Tokyo). Progr. Theor. Phys. (Kyoto); 45: No. 6, 1939-43(Jun 1971).

XUM

By the use of the self-reproducing Pomeron, asymptotic behavior of diffraction scattering is investigated, on the assumption of a general form of the discontinuity across the Pomeranchuk branch cut. (auth)

53384 SPLIT-WIDTH DUAL MODEL. Shafee, S.; Shaffe, A. (International Centre for Theoretical Physics, Trieste, Italy). Phys. Lett.; 36B: No. 4, 347-9(20 Sep 1971).

A crossing-symmetric amplitude with asymptotic Regge behavior and second-sheet resonances with different widths for parents and each daughter is proposed. With a suitable choice of a function, ghosts and tachyons can be eliminated. (auth)

53385 PLANAR VS. LOCAL DUALITY. Roy, D. P. (Rutherford High Energy Lab., Chilton, Eng.). Lett. Nuovo Cim.; 2: No. 11, 545-8(11 Sep 1971).

An attempt is made to clarify the distinction between planar and local duality in regard to the underlying assumptions. A number of predictions of local duality which are not shared by the planar version are listed. The implication of the two versions of duality to the perturbative approach to the t-channel Regge cuts is noted. (L.B.S.)

53386 USE OF THE FINITE BORN SERIES IN POTENTIAL SCATTERING. Singh, S. R. (Queen's Univ., Kingston, Ont.). Nuovo Cim.; 5B: No. 1, 1-10(11 Sep 1971).

An analysis of the Born series in potential scattering is presented. Wellner's formula for improving the convergence of a perturbation series is rederived and compared with some similar formulations. Convergence of the original perturbation expansion of the phase shift and its more convergent form obtained from the iterative scheme are studied. The numerical studies are made for S-wave scattering from an exponential potential. It is found that the first two terms of the Born series for the phase shift approximate the exact values quite closely over a fairly wide range of potential strength, except near threshold, where a further application of the iterative method improves the results significantly. (auth)

53387 LEAST-SQUARES TECHNIQUE FOR SCATTERING. Ladanyi, K. (Max-Planck-Institut fuer Physik und Astrophysik, Munich); Szondy, T. Nuovo Cim.; 5B: No. 1, 70-8(11 Sep 1971).

A modified least-squares method is introduced with intent to explore effective numerical techniques for many-body scattering calculations. The least-squares method is illustrated by applications to the nonrelativistic potential scattering. Numerical calculations are carried out for an attractive exponential potential. (auth)

53388 CONTRIBUTIONS OF IRREDUCIBLE FEYNMAN DIAGRAMS TO ENERGY DEPENDENCE OF QUASI-PARTICLE SCATTERING AMPLITUDE. Goeritz, G.-H.; Zint, P.-G. (Justus Liebig-Univ., Giessen, Ger.). Z. Phys.; 246: No. 2, 183-8(1971). (In German).

The evaluation of the Feynman diagrams contributing to the quasi-particle scattering amplitude Γ^{ω} exhibits for special momenta the impossibility of expanding this function into a power series in terms of ω at $\omega = 0$ because of the existence of a branch cut in the complex energy plane. The value of the discontinuity across the cut is proportional to $|\omega|$. (auth)

53389 CONSTRUCTION OF RELATIVISITIC POTENTIALS WHEN THE ENERGY IS FIXED. Coudray, Christiane (Institut de Physique Nucleaire, Orsay, France); Coz, Marcel. J. Math. Phys. (N. Y.); 12: No. 7, 1166-78(Jul 1971).

Generalized translation operators are used for solving the relativistic inverse problem at fixed energy and study the extension of Newton's method. Both the Klein–Gordon equation and the Dirac equation are considered. The determination of the so-called coefficients of interpolation remains a crucial point of the solution. In the case of the Klein–Gordon equation, these coefficients are obtained by the same system of equations as the system obtained for nonrelativistic spinless particles. Therefore, the same singular problem is encountered whether the spinless particles are relativistic or not. In the case of the Dirac equation, the problem with two potentials differs from the problem where only one potential is present. When there are two potentials, a generalized translation operator exists, and the inverse problem can be solved by inverting a singular matrix equation for the coefficients of interpolation. When only one potential is present, the solution of the inverse problem is restricted by a compatibility requirement. (auth)

53390 T MATIX FOR THE EXPONENTIAL POTENTIAL. Fuda, Michael G. (State Univ. of New York, Buffalo). J. Math. Phys. (N. Y.); 12: No. 7, 1163-6(Jul 1971).

An analytic expression for the s-wave part of the exponential potential T matrix is obtained. The separability of the residue of the T matrix at bound or virtual-state poles is demonstrated explicitly. (auth)

53391 ANALYTIC CONTINUATION OF THE REGULAR SOLUTION OF THE SCHROEDINGER EQUATION IN THE COMPLEX ANGULAR MOMENTUM PLANE. Kelemen, P. J. (Indiana Univ., Bloomington). J. Math. Phys. (N. Y.); 12: No. 7, 1142-55(Jul 1971).

A method of performing the analytic continuation of functions that are Stieltjes or Laplace transforms is developed. The method is applied to find the regular solution and its asymptotic behavior in the left half-plane. The irregular solution and the S matrix are briefly discussed. (auth)

53392 NEW TOOL FOR SCATTERING STUDIES. Sabatier, Pierre C. (Indiana Univ., Bloomington). J. Math. Phys. (N. Y.); 12: No. 7, 1303-26(Jul 1971).

In potential scattering, from the transformation kernel, a function $K(\rho)$ is constructed whose Bessel transforms are the Jost functions. $K(\rho)$ contains the whole information on the potential $V(\rho)$. There is a one-to-one correspondence between the two functions, and they are related, in both senses of this correspondence, through integral equations. Since the relation between $K(\rho)$ and the phase shift is very direct, it is a useful tool for all analyses of the relations between the information contained in the dynamics of the problem (viz., the potential) and the measurable information (viz., the phase shifts). Besides, the derivation of $K(\rho)$ makes clear that a similar study can be done in all cases to which the Gel'fand–Levitan scheme applies and therefore in most scattering problems in physics. (auth)

53393 DISPERSION RELATIONS, FROISSART–GRIBOV TRANSFORMS, AND DISTRIBUTIONS. Auberson, G.; Mahoux, G. (CEN de Saclay, Gif-sur-Yvette, France). J. Math. Phys. (N. Y.); 12: No. 7, 1242-57(Jul 1971).

A family of distribution spaces K'_λ is constructed. Each K'_λ completely characterizes the (tempered) distributions which are the discontinuity of functions holomorphic in a cut plane with given boundedness properties and the Froissart–Gribov transforms of which are holomorphic in a half-plane with given asymp totic behavior. The main results are stated in two reciprocal theorems. Such a reciprocity shows the adequacy of the spaces K'_λ. Some mathematical properties of these ones are given after introducing the proper test function spaces K_λ. In particular, a representation theorem for the distributions in K'_λ is proven. (auth)

53394 SOME PROPERTIES OF A DUAL MULTILOOP PLANAR OPERATOR FREE OF SPURIOUS STATES. Cremmer, E. (CERN, Geneva). Nucl. Phys.; B31: No. 2, 477-511 (1971).

Some properties of a dual multiloop planar operator free of spurious states are studied. For this aim, it is constructed by a simple iterative method in a form which allows direct proof of some duality properties, such as the possibility of a tree to go around one tadpole, or in the two-loop case the transformation of one tadpole into a nonplanar self-energy. The relation between some invariance properties of the integration measure and the integration domain is discussed. (auth)

53395 STATIONARY-STATE SCATTERING THEORY. Amrein, W. O.; Georgescu, V.; Jauch, J. M. (Univ., Geneva). Helv. Phys. Acta; 44: No. 3, 407-34(15 May 1971).

A rigorous mathematical derivation of the stationary state scattering theory from the time-dependent theory is given. The basic tool used is the spectral integral for operator-valued functions with an operator-valued measure. The chief result is the correct interpretation and validation of the formal expressions often used in stationary-state scattering theory. (auth)

53396 REMARKS ON THE EXISTENCE OF SOLUTIONS OF THE TWO-PARTICLE LIPPMANN–SCHWINGER EQUATION. Rajagopal, A. K.; Shastry, C. S. (Louisiana State Univ., Baton Rouge). J. Math. Phys. (N. Y.); 12: No. 8, 1515-20(Aug 1971).

The following is proven: The kernel K_l of the partial wave Lippmann–Schwinger equation for the lth partial wave with complex energy having positive- or negative-definite imaginary part belongs to the Hilbert–Schmidt (L^2) class if the potential V is spherically symmetric and such that $\lim r^{\delta}V(r) = 0$, $-\infty < \delta < 3/2$, $V(r)_{r\to\infty} = O(r^{-\eta})$, $\eta > 1/2$, for $V(r) = g/r^{\alpha}$, $1 < \alpha < 3/2$, the kernel K of the full Lippmann–Schwinger equation satisfies $\mathrm{Tr}\,\{(K^{\dagger})^m K^m\} < \infty$, if $\alpha > (2m + 1)/2m$, $m = 2, 3, \ldots$. For $1/2 < \alpha \leq 1$, $\mathrm{Tr}\,\{(K^{\dagger})^m K^m\}$ is not absolutely convergent for any finite m, even though, for each partial wave, K_l belongs to L^2 class. Obtaining expressions for the T matrix in terms of eigensolutions of the mth iterated kernel when it belongs to L^2 class is also considered. (auth)

53397 S MATRIX AND LOW ENERGY THEOREM IN THE THEORY OF CORRELATION FUNCTIONS. Dashen, Roger; Ma, Shang-keng (Inst. for Advanced Study, Princeton, N. J.). J. Math. Phys. (N. Y.); 12: No. 8, 1449-71(Aug 1971).

The current correlation functions in statistical mechanics were examined from a scattering theory viewpoint. In the light of low energy theorems, the connection between the long wavelength, low-frequency correlation functions of conserved currents and the on-shell scattering matrix elements are studied which describe the collision processes taking place in the thermodynamical system of interest. Explicit general formulas are derived for the leading correction terms to the ideal gas correlation functions. These correction terms include the effect of two-body scatterings and double scatterings in three-body events. They are expressed in terms of two-body cross section, time delay, and the quantum analog of the distance of closest approach. Their connection to the second virial coefficient is established through sum rules. The relation between the results and the Boltzmann equation is discussed. (auth)

53398 FREDHOLM METHODS IN THE THREE-BODY PROBLEM. I. Newton, Roger G. (Indiana Univ., Bloomington). J. Math. Phys. (N. Y.); 12: No. 8, 1552-67(Aug 1971).

It is shown that, for three particles interacting via potentials that are bounded and decrease at least as fast as $r^{-7/2}$, the Green's function of the Schroedinger equation at physical energies can be calculated by the classical Fredholm methods for $\mathfrak{L}^2$ kernels. (auth)

53399 REGGE TRAJECTORIES AT HIGH ENERGIES FOR A CLASS OF ANALYTIC POTENTIALS. Johnson, Porter W. (Illinois Inst. of Tech., Chicago). J. Math. Phys. (N. Y.); 12: No. 8, 1610-16(Aug 1971).

Scattering by nonsingular, energy-independent, central potentials $V(r)$ which are analytic in r in a sector of half-angle θ about the real positive axis is considered. Simple considerations show that at high energies all Regge trajectories leave the sector of the angular momentum plane given by $|\arg l| \leq \theta$. One finds in general, however, that Regge trajectories remain in the right half l plane at sufficiently high energies for potentials of the above type. The Wood–Saxon potential is analyzed numerically. It is found that Regge trajectories which represent bound states remain in the right half l plane at high energies. (auth)

Topics include buildings and site, center region model, research and development, and machine components. (W.H.K.)

53401 (A/CONF.49/P-1) VALUE OF A LOW-ENERGY ACCELERATOR IN ADVANCING NUCLEAR TECHNOLOGY IN DEVELOPING COUNTRIES. McCallum, G. J. (Institute of Nuclear Sciences, Lower Hutt (New Zealand)). May 1971. 18p. (CONF-710901-365). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The use of a 3-MeV Van de Graaff accelerator in the nuclear research program in New Zealand is described. The research program is outlined and specific research including isotope production and charged particle activation analysis and related techniques are discussed. (W.H.K.)

53402 (A/CONF.49/P-442) ACCELERATORS IN MEDICINE, INDUSTRY, AND AGRICULTURE. Komar, E. G. (State Atomic Energy Committee, USSR). Jun 1971. 17p. (CONF-710901-384). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Characteristics of various betatrons, electrostatic accelerators, and linear accelerators in the USSR for use in medicine, defectoscopy, activation analysis, development of new technological processes, increasing the productivity of agriculture, and other practical purposes are described. (W.H.K.)

53403 (A/CONF.49/P-449) SERPUKHOV PROTON ACCELERATOR AND PHYSICAL INVESTIGATIONS USING PARTICLE BEAMS WITH ENERGY UP TO 70 GeV. Logunov, A. A. (Institute for High Energy Physics, Serpukhov (USSR)). Jun 1971. 13p. (CONF-710901-385). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The operating parameters and capabilities of the Serpukhov Synchrotron are described, and the high-energy research program is outlined. (W.H.K.)

53404 (A/CONF.49/P-695) NEW TOOL IN PHYSICS OF ELEMENTARY PARTICLES. Sarantsev, V. P. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). Apr 1971. 13p. (In Russian). (CONF-710901-497). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The report discusses a modern status of works on the collective ion acceleration and perspectives of their development in near future. On the basis of experiments set up in various institutes in the USSR, forecasts are given of the development of the methods using electron rings, the plasma method and the high current electron beam method. (auth)

53405 (AD-714141) NRL VAN DE GRAAFF OPERATION, JANUARY 1–JUNE 30, 1970. Dunning, K. L. (Naval Research Lab., Washington, D. C.). Aug 1970. 33p. (NRL-MR-2173). NTIS.

The report is the fifth of a series of semiannual summaries on the use of the 5-MV Van de Graaff accelerator and associated instruments. The period 1 January 1970 to 30 June 1970 is covered. A brief statistical summary is presented, a few important developments concerning the maintenance and improvement of apparatus are discussed, and brief accounts of on-going and recently completed research projects are given. (auth) (USGRDR)

53406 (AD-722472) OPERATION OF THE ACCELERATOR STORAGE RING TO PROVIDE ULTRAVIOLET RADIATION. Interim Report, December 1, 1969–November 30, 1970. Rowe, Ednor M. (Wisconsin Univ., Stoughton. Physical Sciences Lab.). 30 Nov 1970. Contract F44620-70-C-0029. 76p. (AFOSR-TR-71-794). NTIS.

It was proposed to operate the electron storage ring as the source of ultraviolet radiation for the performance of experiments in solid state, atomic, and surface physics. In addition to operating the storage ring as a source of ultraviolet radiation for physical and chemical experimentation, it was proposed to set up a permanent experimental station at the north port of the storage ring. This was to be accomplished through the acquisition of a normal incidence monochromator, experimental chamber and a focusing system. The installation of a parallel beam line at the west port was planned as a means for accommodating more experiments at the ring. A study of the wave shifter was to be undertaken in order to determine the feasibility of enriching the synchrotron radiation spectrum in the shorter wavelength range through the use of orbit perturbing magnets. In addition, several improvements in the storage ring and the injector synchrotron were planned. These included the completion of a high power RF supply, and the replacement of several trimmer coil power supplies on the injector synchrotron and beam transport line. The progress made on these projects is detailed. (auth) (USGRDR)

53407 (CEA-CONF-1766) CONTAMINATION OCCURRING WITH A LINEAR ACCELERATOR AS A RESULT OF THE FAILURE OF THE NATURAL URANIUM TARGET SHEATH. MEASUREMENTS MADE AND EQUIPMENT TO ENSURE ENVIRONMENTAL PROTECTION. Vialettes, H. (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). 1971. 17p. (In French). (CONF-710423-3). Dep. NTIS (U. S. Sales Only).

From International congress on protection against accelerator and space radiation; Geneva, Switzerland (26 Apr 1971).

Activity measurements were effected at Saclay using the 60-MeV linear accelerator in order to estimate the hazards presented by contamination due to the release of fission products. About twenty radioelements with half-lives lying between 30 min and 30 years were detected. Discharge into the atmosphere of ^{138}Cs, ^{139}Ba, and ^{91}Sr–^{91}Y was observed. Sampling performed in the target room indicated the presence of the following fission products: ^{133}I, ^{122}Sb, ^{132}Te, ^{141}Ce, ^{124}Sb, and ^{131}I. ^{135}I, ^{133}I, ^{99}Mo, ^{131}I, and ^{135}Xe were discharged into the water circuits. In order to estimate the hazard presented by an incident with similar target, the mass activity of the fission products with average or long half-lives found in the target was determined. The equipment ensuring the radiation protection of the installation and environment is described: control of air contamination in the target room, discharge of the contaminated air, and cooling of the target are considered. (France)

53408 (CONF-701002–, pp 377-84) HIGH-ACCURACY TOTAL-CROSS-SECTION MEASUREMENTS WITH THE NBS LINAC. Schwartz, R. B.; Heaton II, H. T.; Schrack, R. A. (National Bureau of Standards, Washington, D. C.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

A high-accuracy fast-neutron time-of-flight spectrometer used for neutron energies between 0.5 and 20 MeV is described. The neutrons are produced by a 2-nsec-wide electron-beam pulse from the National Bureau of Standards Linac. The resolution, with a 40-m flight path, is approximately 0.1 nsec/m, and the accuracy of the measurements is estimated to be 1%. (auth)

53409 (DESY-R-1-70/5) INVESTIGATIONS ON DISTURBANCES IN THE STORAGE RING CAUSED BY THE DETECTOR FIELD AND THEIR CORRECTIONS. Ripken, Gerhard ([Deutsches Elektronen-Synchrotron, Hamburg (West Germany)]). Jun 1970. 44p. (In German). Dep. NTIS (U. S. Sales Only).

The solenoid acting as particle detector distorts the electron–positron beams in the storage ring. It is shown that the distortions can be corrected through homogenous magnetic fields that are arranged perpendicular to the beam. Especially beam-bump-fields at the two crossing points and solenoid fields that are counterdirected to the detector field eliminate closed-orbit-shift at the crossing points as well as the coupling of betatron oscillations. These corrections also eliminate torsion of the beam around its axis and distortions of dispersion. (H.B.G.)

53410 (IFVE-SKU-70-51) PHYSICAL SUBSTANTIATION ON THE PROTON SLOW EJECTION SYSTEM AT IHEP 70 GeV ACCELERATOR. Myznikov, K. P.; Tatarenko, V. M.; Fedotov, Yu. S. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Serpukhov. Institut Fiziki Vysokikh Energii). 1970. 44p. (In Russian). Dep. NTIS (U. S. Sales Only).

The results of detailed investigation of particle movement at slow ejection are presented. The physical substantiation for the choice of the main elements of the system that will allow proton beam extraction at the IHEP accelerator to be performed with 90% efficiency during 1 sec in the energy range from 20 up to 70 GeV is discussed. The correction mode of the accelerator magnetic field at slow extraction is proposed. The conditions of the extracted beam focusing and a system that allows the extracted beam to be focused into a spot with 2 mm diameter and angular divergence ±3 mrad is considered. The main requirement and tolerances on the ejection and focusing system are formulated. (auth)

53411 (JINR-P-13-5803) NANOSECOND LIFETIME MEASUREMENTS OF EXCITED NUCLEAR STATES OF THE HEAVY ION CYCLOTRON U-300. PART II. BEAM HANDLING. Hagemann, U.; Neubert, W.; Stary, F.; Schulze, W. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1971. 10p. (In Russian). Dep. NTIS (U. S. Sales Only).

The beam lay-out at the heavy ion cyclotron U-300 for performing in-beam measurements of prompt and delayed gamma spectra is described. (auth)

53412 (JINR-P9-5873) MEASUREMENT OF THE ACCELERATED BEAM PHASE IN THE ELECTRON MODEL OF THE RING CYCLOTRON. Anosov, V. N.; Kochkin, V. A.; Novikov, D. L.; Onishchenko, L. M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). Jul 1971. 21p. (In Russian). Dep. NTIS (U. S. Sales Only).

The apparatus is described for measurement of the beam phase with respect to the accelerating device. The method of the absolute binding of the beam phase is described, and the experimental data on the phase behavior depending on the accelerator parameters are given. The accuracy of the absolute beam phase measurement obtained in the experiments is not worse than ±5°. The devices for the beam phase measurement were designed in the Laboratory of Nuclear Problems of the Joint Institute for Nuclear Research. (auth)

53413 (LA-4586) LAMPF USERS HANDBOOK (PRELIMINARY VERSION). Agnew, Lewis E. Jr. (Los Alamos Scientific Lab., N. Mex.). Jan 1971. Contract W-7405-eng-36. 55p. Dep. NTIS.

Descriptions of the LAMPF accelerator; experimental facilities and beams; and experimental equipment, accessories, and services are presented to provide the experimenter with the basic information to make a realistic research proposal at LAMPF. (auth)

53414 (LA-DC-12942) GADGETS DEMONSTRATING PRINCIPLES INVOLVED IN POLARIZED ION SOURCES. McKibben, J. L. (Los Alamos Scientific Lab., N. Mex.). [1971]. 7p. (CONF-711012-4). Dep. NTIS.

From Symposium on ion sources and formation of ion beams; Upton, N. Y. (19 Oct 1971).

A pair of spheres 15 cm in diameter and simulating a polarized particle in the restricted sense that they have angular momentum and magnetic dipole moment have been fabricated. Each is supported on an air bearing and when placed close to each other interact. An external magnetic field has also been made so that aspects of the Breit-Rabi diagram can be visualized. A single sphere placed in the field can be shown to follow the field if it is rotated slowly with respect to the precessional frequency. Another device is a triple pendulum and is used to dramatize the nature of the 3 level quantum mechanical interaction involved in the nuclear spin filter. (auth)

53415 (LA-DC-12943) BENEFICIAL EFFECT OF AN AIR LEAK INTO THE DUOPLASMATRON OF THE LASL POLARIZED SOURCE. McKibben, J. L. (Los Alamos Scientific Lab., N. Mex.). [1971]. 4p. (CONF-711012-5). Dep. NTIS.

From Symposium on ion sources and formation of ion beams; Upton, N. Y. (19 Oct 1971).

The output beam from a Lamb-shift type of polarized ion source has been approximately doubled by a small leak of various types of gases strange to the normal output. A description of the positive ion source, accel-decel system, magnetic lens, and cesium cell is given. Test results suggest that the space charge is more completely neutralized if ions having distinctly different velocities are present simultaneously in the beam. (auth)

53416 (LA-DC-12995) LAMPF (LOS ALAMOS MESON PHYSICS FACILITY) AS A NEUTRON SOURCE FOR RADIATION DAMAGE EXPERIMENTS. Green, W. V.; Dudziak, D.; Zukas, E. (Los Alamos Scientific Lab., N. Mex.). [nd]. 2p. (CONF-710624-1). Dep. NTIS.

From International working session on fusion reactor technology conference; Oak Ridge, Tenn. (28 Jun 1971).

An experimental facility at LAMPF for high temperature radiation damage experiments for fusion reactor development is proposed. (W.H.K.)

53417 (LA-DC-13014) LAMPF H^- ION SOURCE DEVELOPMENT. Allison, Paul W.; Emigh, C. Robert (Los Alamos Scientific Lab., N. Mex.). [1971]. 3p. (CONF-711012-1). Dep. NTIS.

From Symposium on ion sources and formation of ion beams; Upton, N. Y. (19 Oct 1971).

The design, operation, and performance of the H^- ion source are discussed. The proton source and charge exchange canal with a spherical Pierce geometry are described. (W.H.K.)

53418 (LA-DC-13015) LASL EXPERIENCE WITH A DUOPLASMATRON FEEDING A 750-kV EXACT PIERCE COLUMN. Emigh, C. Robert; Meyer, Earl A.; Mueller, Donald W.; Stevens, Ralph R. Jr. (Los Alamos Scientific Lab., N. Mex.). [1971]. 7p. (CONF-711012-2). Dep. NTIS.

From Symposium on ion sources and formation of ion beams; Upton, N. Y. (19 Oct 1971).

The LAMPF H^+ ion source and 750-kV Pierce accelerating column are designed on the basis of a plane parallel beam of protons 1.4 cm in diameter. Performance meets theoretical expectations within a few percent when account is taken of the extra space charge loading by slower moving molecular ions which make up one-fourth of the beam current. Fast-rising, fast-falling, flat-topped pulses of 500 μsec duration and 50 mA beam current are obtained at 120 Hz. The beam has reasonably uniform density, low aberration, and an emittance area under 2π mrad cm. Experiences with plasma apertures are described. X-ray radiation in the 30 to 50 mA beam current range is very low and is correlated with zero beam current to the Pierce electrodes. Radiation increases sharply outside this design range as expected. (auth)

53419 (LA-DC-13016) CURRENT STATUS OF POLARIZED ION SOURCES. McKibben, J. L. (Los Alamos Scientific Lab., N. Mex.). [1971]. 24p. (CONF-710815-1). Dep. NTIS.

From second international conference on polarized targets; Berkeley, Calif. (30 Aug 1971).

The characteristics of the conventional type of polarized ion source and of the Lamb-shift type of source are compared as a source of positive ions for a cyclotron or terminal of a Van de Graaff. The characteristics of the same sources adapted to deliver negative ions for a tandem Van de Graaff are also compared. Specific examples are chosen to illustrate the comparison. A brief discussion of the potentiality of the Kaminsky concept (whereby deuterons channeled through a monocrystalline Ni foil have been found to be polarized) is made. Finally, the use of the polarized source to produce polarized neutrons is discussed briefly. (auth)

53420 (LA-DC-13017) LAMB-SHIFT POLARIZED ION SOURCE FOR THE LOS ALAMOS MESON PHYSICS FACILITY. Lawrence, G. P. (Los Alamos Scientific Lab., N. Mex.). [1971]. 4p. (CONF-711012-3). Dep. NTIS.

From Symposium on ion sources and formation of ion beams; Upton, N. Y. (19 Oct 1971).

Design objectives and considerations for the Los Alamos Meson Physics Facility polarized proton source are presented. A source of the Lamb-shift type is planned, which in addition to its attractive beam intensity, polarization, and emittance characteristics, possesses other capabilities which considerably increase the potential usefulness of the device. (auth)

53421 (LA-DC-13019) STATUS OF LOS ALAMOS MESON PHYSICS FACILITY. Rosen, Louis (Los Alamos Scientific Lab., N. Mex.). [1971]. 26p. (CONF-710911-8). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

Design parameters of the LAMPE are given; experimental facilities are described; and proposals for various experiments are listed. (W.H.K.)

53422 (NP-18906) ANNUAL REPORT, 1970. (European Organization for Nuclear Research, Geneva (Switzerland)). 1971. 179p.

CERN SYNCHROTRON—development of, 1970
HIGH-ENERGY PHYSICS—research at CERN, 1970
NUCLEAR PHYSICS—research at CERN, 1970
RADIATION DETECTORS, BUBBLE CHAMBER—development at CERN, 1970
STORAGE RINGS—development and testing of ISR, 1970 (R.W.R.)

53423 (RHEL/R-214) INFORMATION ON THE NIMROD EXPERIMENTAL PROGRAMME. Salter, D. C. (comp.) (Rutherford High Energy Lab., Chilton (England)). Apr 1971. 35p. Dep. NTIS (U. S. Sales Only). UK 40p.

A list of experiments completed, in progress, or accepted for running at Nimrod is presented. The details given include a very brief description of the aims of the experiment, the group concerned, the relevant beam line and, where appropriate, the publications resulting from the experiment. A list of experiments carried out at C.E.R.N. (Geneva) by Nimrod Groups is also included. (auth)

53424 (RHEL/R-219) NIMROD OPERATION AND DEVELOPMENT QUARTERLY REPORT, JANUARY 1-MARCH 31, 1971. Gray, D. E. (ed.) (Rutherford High Energy Lab., Chilton (England)). May 1971. 24p. Dep. NTIS (U. S. Sales Only). UK 27p.

The Nimrod beam was on for High Energy Physics Research for 66.9% of HEP scheduled operating time. Four experiments continued through and two commenced in this quarter. Some notes on personal dosimetry are given. The computer control system, associated with Nimrod's third extracted proton beam, X3, is reviewed. (auth)

53425 (RHEL/R-221) USE OF INTERPRETIVE SOFTWARE IN HIGH ENERGY PHYSICS EXPERIMENTS. Hyman, J. T. (Rutherford High Energy Lab., Chilton (England)). Jun 1971. 8p. Dep. NTIS (U. S. Sales Only). UK 13p.

Some new ideas for the use of small computers in HEP experiments are put forward. The use of interpretive software is proposed as the means of realizing the potential of computers at all stages of an experiment up to the final analysis. The possibility of long-distance remote control of experiments is noted. (UK)

53426 (SLAC-Trans-133) NONLINEAR COLLIDING-BEAM EFFECT. Jejcic, A.; Le Duff, J. (Paris Univ., Orsay (France). Laboratoire de l'Accelerateur Lineaire). Translated by R. Williams for Stanford Linear Accelerator Center, Calif., from report LAL-RT-10-71. 47p. Dep. NTIS.

An analytical approach to nonlinear space charge effects in electron-positron colliding beam rings is presented. In particular, the distribution function of the betatron frequencies is computed for some special cases of interest, such as head-on collisions, incomplete compensation with four beams, and crossing at an angle. Moreover a qualitative study of the amplitude evolution is made, taking into account the dispersion which can bring some particles into dangerous nonlinear resonances and which might lead to beam enlargement and losses. (auth)

53427 (TRI-71-2) REVMOC: A MONTE CARLO PROGRAM FOR CALCULATING CHARGED PARTICLE TRANSMISSION THROUGH SPECTROMETERS AND BEAM LINES. Kitching, P. (TRI-Univ. Meson Facility, Vancouver (British Columbia)). Apr 1971. 75p. Dep. NTIS (U. S. Sales Only).

REVMOC is a Monte Carlo computer program, written in FORTRAN IV, for the design and analysis of magnetic spectrometers and beam transport systems. In tracing charged particles through a system of magnets, first order theory is used by the program, that is, in a Taylor's series expansion about the principal trajectory, second and higher order terms are neglected. The program attempts to simulate the physical processes, such as decay, multiple scattering, nuclear scattering absorption, and calculates corrections for any loss or gain of particles from these causes. The program will also give distributions of particles accepted by the system as a function of a variety of variables, if this is desired. (auth)

53428 (UCRL-20655, pp 2-37) NIMROD EXPERIMENTAL PROGRAMME. Manning, G. (Rutherford High Energy Lab., Chilton (England)). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

A summary is given of the current experimental program and the experiments planned in the immediate future for the Nimrod accelerator. A brief description is also given of the available beams. The proposed improvements in Nimrod and its facilities are discussed. (L.B.S.)

53429 (UCRL-20655, pp 38a-58) ZGS PROGRAM. Jovanovic, Drasko; Cork, Bruce (Argonne National Lab., Ill.). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

The brief description of the ZGS program is given in two parts: a discussion of the experimental beam configuration; and a list of experiments that either were completed in the last year or are presently set up in the experimental area. (L.B.S.)

53430 (UCRL-20655, pp 59-71) BEVATRON PROGRAM. Lofgren, Edward J.; Holley, William R.; Sah, Richard C. (California Univ., Berkeley. Lawrence Radiation Lab.). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

The operating capabilities of the Bevatron, the planned improvement program, and the experimental program are described. (L.B.S.)

53431 (UCRL-20655, pp 72a-90) INTERMEDIATE ENERGY PROGRAM AT THE AGS (LESS THAN 8 GeV). Berley, David (Brookhaven National Lab., Upton, N. Y.). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

Summaries are given of the experimental facilities available for counter spark chamber experiments, the particles available to bubble chambers, and the experimental program in the intermediate energy region. (L.B.S.)

53432 (UCRL-20655, pp 91-116) CERN PROGRAMME. Muller, F. ([California Univ., Berkeley. Lawrence Radiation Lab.] European Organization for Nuclear Research, Geneva (Switzerland)). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

A general description is given of the experimental facilities and of the evolution of the CERN physics program. (L.B.S.)

53433 (UCRL-20655, pp 117-28) POLARIZED TARGET TECHNIQUES. Shapiro, Gilbert (California Univ., Berkeley). Jun 1971.

From Workshop on particle physics at intermediate energies; Pasadena, Calif. (29 Mar 1971).

A review is given of experiments that have been performed using polarized targets according to three categories: measurement of the normal polarization parameter in elastic scattering; tests of discrete symmetries and measurement of intrinsic parity in hadron interactions; and analyses of the polarization of the recoil particle after elastic scattering in a plane containing the target polarization vector—the so-called R and A measurements. (L.B.S.)

53434 (UCRL-Trans-1451) COUPLING RESONANCES OF THE TRANSVERSE OSCILLATIONS OF TWO CIRCULAR BEAMS. Zenkevich, P. R.; Koshkarev, D. G. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Moscow. Institut Teoreticheskoi i Eksperimental'noi Fiziki). Translated by F. D. Jones for Univ. of California, Lawrence Radiation Lab., Berkeley, Calif., from report ITEF-841. 33p. Dep. NTIS.

It is shown that a system of two circular beams will exhibit coupling resonances analogous to the well known resonances which occur under the influence of external perturbations in circular beams of singly-charged particles. The general resonance condition is of the form $nq_1 + mQ_2 = k$, where Q_1 and Q_2 are the

XUM

natural oscillation frequencies of particles in the first and second beams respectively and m, n, and k are integers. Formulae are obtained for the widths of the resonance bands from a resonance of arbitrary order, and passage through resonances is investigated. Analysis of these results shows that two-beam interactions provide a stringent restriction on the upper frequency limit of self-stabilized Bennett–Budker beams. (auth)

53435 (UCRL-Trans-1453) NUMERICAL ANALYSIS OF THE NONLINEAR STAGE OF DEVELOPMENT OF THE RADIATIVE INSTABILITY OF RELATIVISTIC ELECTRON RINGS. **Bonch-Osmolovskii, A. G.; Makhan'kov, V. G.; Tsytovich, V. N.; Shchinov, B. G.** (Joint Inst. for Nuclear Research, Dubna (USSR)). Translated by B. Thayne for Univ. of California, Lawrence Radiation Lab., Berkeley, from report JINR-P9-5622. 26p. Dep. NTIS.

An abstract of this paper, prepared from the original language, appeared as NSA 25: 28110. (auth)

53436 MONTE CARLO TECHNIQUES IN EVALUATION OF HIGH-INTENSITY MAGNET FLUXES AND FIELDS. **Shepherd, Marian Margaret.** Saskatoon,; Univ. of Saskatchewan (1971). 111p. University Microfilms Order No. 71-20,633.
Thesis.

The design of the pole pieces required by the Intense Neutron Generator (ING) led to the described investigations of numerical methods for magnetic field calculations. Ways of improving the rate of convergence are explored for the relaxation method. A consideration of the Monte Carlo method of random walks leads to a new method of carrying out walks in a region. Also, the introduction of an accelerating factor, analogous to the overrelaxation factor, gives "oversweeping"; which is substantially faster than sweeping. It is found that the region being swept can be divided into sub-regions which can be treated separately. If the sub-regions are rectangular, the boundary distributions can be found analytically with a great saving in time. The method combines the solution from the sub-regions whether these solutions are found by sweeping or by the analytic expressions. A new Mixed Analytic-Numeric method is investigated. (TSS) (Diss. Abstr. Int., B)

53437 REPORT ON THE ENGINEERING OF BUILDINGS FOR ELECTRON LINAC OF TOHOKU UNIVERSITY. **Okajima, Nobuo; Yamamoto, Moriyuki; Mizushina, Tomoyuki; Maeda, Hidenori; Kitamura, Takeshi** (Taisei Construction Co. Ltd., Tokyo). Taisei Kensetsu Gijutsu Kenkyusho-Ho; No. 3, 93-127(Oct 1970). (In Japanese).

The main assembly of accelerator and beam transport systems is located 6 m under the ground and extends 71 m. One of the beam transport systems is perpendicular to the direction of the accelerator, branching 11m. The accelerator room is 57 m in length and 3 m in width with 2.3 m width side space for the piping system. The load distribution is unbalanced due to irregular configuration of the layout together with massive and heavy shieldings. Shielding design problems are discussed. (TSS) (Japan)

53438 RADIATION AREA SAFETY INTERLOCK SYSTEM FOR A 3-MeV ACCELERATOR. **Hummer, Goerge J.** (Brookhaven National Lab., Upton, N. Y.). Health Phys.; 21: No. 3, 453-6(Sep 1971).

Multiple target-room facilities now in use at numerous research centers are potential health hazards. A fail-safe interlock system servicing four independent target areas and a particle-accelerator complex now in use at Brookhaven National Laboratory are described. (auth)

53439 STUDY OF THE FIELD OF AN ELECTROMAGNET USED AS A MAGNETIC PRISM. **Ringhiopol, I.** (Inst. of Atomic Physics, Bucharest). Rev. Roum. Phys.; 16: No. 3, 349-59(1971). (In French).

An analytical and experimental study of the plane parallel field produced by an electromagnet is presented. The results are used in solving the motion of charged particles in an iron gap. (auth)

53440 PRECISE CENTER-SETTLING DEVICE FOR QUADRUPOLE MAGNETS. **Kobayashi, Masaaki** (Tokyo Univ.); **Tanaka, Jiro; Baba, Hitoshi; Yamashita, Sukeaki.** Jap. J. Appl. Phys.; 10: No. 9, 1195-1202(Sep 1971).

An apparatus for centering drift tube quadrupole magnets and measuring their harmonic field contents is described together with the search coil and its calibration method. Sensitivity within 0.5 μm and reproducibility within ±2 μm can be obtained for the magnetic center location. Harmonic field components in four types of model magnets are measured for different pole shapes. (auth)

53441 LIFE-TIME OF TRITIUM TARGETS AND RELEASE OF TRITIUM FROM D–T NEUTRON GENERATORS. **Broerse, J. J.; Engels, A. C.; Groen, J. S.** (Radiobiological Inst. TNO, Rijswijk, Netherlands). Int. J. Appl. Radiat. Isotop.; 22: No. 8, 486-9(Aug 1971).

Health physics problems result from tritium releases from targets of D–T neutron generators. Neutron yield from the target is found to depend on the length of bombardment and the energy of the bombarding deuterons. The mechanism of target deterioration, especially in relation to the tritium which might be lost by the target, was investigated by measuring the tritium content of the oil of the accelerator vacuum pumps. Tritium activity in released gas in the accelerator room is found always to be $<10^{-4}$ μCu/ml. Data produced are compared with those of previous experimenters and possible types of filters for the forepump exhaust are noted. (UK)

53442 PRODUCTION OF ^{15}O USING A RELATIVELY LOW ENERGY PARTICLE ACCELERATOR WITH A VACUUM GRADIENT SYSTEM AS A WINDOW. **Mantel, J.; Damico, C. J.; Kurtzman, R. S.** (Wayne State Univ., Detroit). Amer. J. Roentgenol., Radium Ther. Nucl. Med.; 112: No. 4, 707-14(Aug 1971).

A vacuum gradient system has been developed which can replace the conventional window of a particle accelerator, allowing the use of relatively low energy deuterons to bombard gaseous targets. This system consists of 4 communicating chambers which can be evacuated to produce a high vacuum at the accelerator end with a poor vacuum at the level of the gaseous target. Using this device with a 400 keV Van de Graaff generator and a nitrogen target, a significant quantity of oxygen 15 was produced. With relatively minor modifications to the system, clinically useful quantities of the isotope can be obtained. (auth)

53443 NANOSECOND PULSED ELECTRON ACCELERATOR. **Yamamoto, Takayoshi; Ohkuma, Juzo; Kawanishi, Masaharu** (Osaka Univ.). Rev. Sci. Instrum.; 42: No. 9, 1366-7(Sep 1971).

A mercury switch pulse generator for nanosecond pulsing of a high-current electron accelerator is described. (W.H.K.)

53444 NOTE ON THE DESIGN AND CONSTRUCTION OF A SCATTERING CHAMBER. **Hussain, M.** (Univ. of Dacca, Pakistan); **Rahman, F.; Sabir, A.** Nucl. Sci. Appl., Ser. B; 5: 45-6 (Oct 1969).

The 11 × 5 inch scattering chamber for studying charged particle reactions at the Dacca Van de Graaf accelerator is described. (W.H.K.)

53445 AUTOMATIC LIQUID AIR REPLENISHER. **Hussain, Emdad; Alam, Nurul** (Atomic Energy Centre, Dacca, Pakistan). Nucl. Sci. Appl., Ser. B; 5: 31-2(Oct 1969).

An automatic liquid air filler involving no moving parts as made and being used in topping cold traps of Van de Graaff accelerator is reported. It is simple, cheap and easy to operate. (auth)

53446 NONLINEAR WAVES IN UNCOMPENSATED ELECTRON BEAMS. **Fainberg, Ya. B.; Shapiro, V. D.; Shevchenko, V. I.** (Physical-Technical Inst., Kharkov). Zh. Eksp. Teor. Fiz.; 61: No. 1, 198-207(Jul 1971). (In Russian).

Nonlinear stationary waves propagating along the axis of a ring electron beam similar to the E layer of a self-stabilized electron beam are investigated. Dispersion relations for nonlinear periodic waves are obtained and the maximal electric field amplitudes in them are determined. Conditions of existence of solitary waves are considered. (auth)

53447 γ RAY ANALYSIS ON RADIOACTIVE AEROSOL AND DUST IN THE MACHINE HALL OF A CYCLOTRON. **Katao, K.; Ohata, T.** (National Inst. of Radiological Sciences, Chiba, Japan). Health Phys.; 21: No. 3, 475-9(Sep 1971).

The radionuclides in the working environment of the machine hall of the IPCR 160 cm variable energy cyclotron were studied with a high resolution Ge(Li) γ-ray spectrometer. The sampling procedure is explained and the spectrometer described. Measurements were delayed until 20 days after sampling so that short lived isotopes had decayed and longer lived radionuclides were evident. Airborne nuclides found were ^{54}Mn, ^{56,57,58,60}Co, ^{65}Zn, ^{182}Ta, ^{183,184}Re, and ^{185}Os. ^{7}Be and ^{22}Na were found by the smear method. Using a NaI(Tl) crystal counting equipment, the deposition of ^{65}Zn in various positions around the cyclotron was measured. The γ spectra for various regions in the cyclotron were compared and their characteristics tabulated. In the air, a noticeable amount of radionuclides, produced by bombardment of tungsten-made parts, were found. Their activities depended on the operating conditions and schedule of the cyclotron. The significance of these to the internal exposure of personnel is not well known. (UK)

53448 CALCULATIONS ON BUNCHING OF AN ION BEAM WITH A MULTIPLE-APERTURE KLYSTRON SYSTEM. **Seeliger,**

D.; Seidel, K.; Weder, W. (Technische Hochschule, Dresden). Exp. Tech. Phys.; 18: No. 4-5, 287-99(1970). (In German).

By means of sine wave voltages, exact phase relationships are calculated for the bunching of a stationary ion beam in a multiple aperture klystron system for a Van de Graaff accelerator. Of special practical significance are the cases of both synchronous and asynchronous bunching on double and triple aperture systems which are computed and compared to single aperture bunching. Results show that through a triple aperture system, with appropriate position and strength of the modulation planes, more than 40% of the stationary ion current can be compressed to ion impulses of 2 nsec duration and 20 nsec pulse intervals. Changes of ion energy are examined with respect to effects on bunching properties. (tr-auth)

53449 STUDY OF THE OSCILLATING ELECTRON SOURCES DISCHARGE AND ION BEAM. Marghitu, Silvia (Institutul de Fizica Atomica, Bucharest). Stud. Cercet. Fiz.; 23: No. 2, 145-59(1971). (In Rumanian).

Penning ion sources are frequently employed in accelerators. It is difficult to establish a mathematical model of the discharge, since there is a great number of geometrical and physical parameters acting on the discharge and ion beam current values. Experimental studies on a Penning ion source which permit changing the cathodes to modify the discharge geometry and to vary the functional parameters are described. Some conclusions about suitable design and the functional regime for sources used in neutron generators are pointed out. (auth)

53450 INDUCTION LINEAR ACCELERATOR. Bosamykin, V. S.; Gerasimov, A. I.; Pavlovskii, A. I. Russian Patent 242,287. 17 Mar 1970. Filed 15 May 1967. (In Russian).

An induction linear accelerator in the form of a group of iron-free transformers is described. One end of the primary is open and provided with a magnetic screen, in order to simplify construction of the accelerator. (R.W.R.)

53451 ION LINEAR ACCELERATOR. Vladimirskii, V. V.; Kapchinskii, I. M.; Teplyakov, V. A. Russian Patent 265,312. 9 Mar 1970. Filed 25 Oct 1968. (In Russian).

An ion linear accelerator with a quadrupole acceleration and focusing system is described. This system consists of four conductors, running along the accelerating cavity every 90°. The conductors are shaped such that their distances from the axis of the accelerator varies: when one pair is at its minimum distance, the opposite pair is at its maximum distance. This quadrupole design helps eliminate unwanted low-energy ions from the source. (R.W.R.)

53452 EXPERIENCES DURING THE EARLY RUNNING-IN PHASE OF THE ISR. Johnsen, Kjell (CERN, Geneva). J. Inst. Nucl. Eng.; 12: No. 4, 101-5(Jul-Aug 1971).

The CERN Intersection Storage Rings (ISR) produced the first proton collisions at 15 GeV on January 27, 1971. These tests and other earlier ones with beam in only one ring are described. Further data and observations during the continuing running-in period are included. (auth) (UK)

53453 ENERGY RECOVERY IN AN ELECTRON BEAM. Arenshtam, A. I.; Meshkov, I. N.; Ponomarenko, V. G.; (and others) (Inst. of Nuclear Physics, Novosibirsk, USSR). Sov. Phys.-Tech. Phys. (Engl. Transl.); 16: No. 2, 252-3(Aug 1971).
Translated from Zh. Tekh. Fiz.; 41: No. 2, 336-8(Feb 1971).

A device is described in which the particle energy is recorded in an electron beam ($U = 100$ kV, $I = 1$ A). Using electrostatic and magnetic shields in the collector, it is possible to achieve $\Delta I/I \gtrsim 10^{-3}$, $\Delta U/U \lesssim 1.3 \cdot 10^{-2}$ (ΔI is the current loss, and ΔU is the recovery potential), which is appreciably better than results published in the literature. An original method is described for measuring the transverse components of electron velocity in the beam; the method is based on pulsed beam deflection. (auth)

53454 NEXT GENERATION OF HIGH ENERGY PHYSICS. Cole, Francis T. (National Accelerator Lab., Batavia, Ill.). New Sci. Sci. J.; 51: No. 767, 508-10(2 Sep 1971).

The world's largest particle accelerator, a 500 GeV separated function synchrotron, will soon start operations at Illinois. The design of the facility and associated laboratories is outlined. It is stated that 150 requests for experimental facilities have been received and of these 30 to 40 proposals have been accepted and preparatory work is under way. Examples of these experiments are given including: observation of neutrino reactions, searches for quarks and magnetic monopoles proton–proton scattering, and scattering of muons by protons. (UK)

53455 HIGH-INTENSITY SOURCE OF He^- IONS. D'yachkov, B. A.; Zinenko, V. I. Sov. Phys.-Tech. Phys. (Engl. Transl.); 16: No. 2, 305-6(Aug 1971).
Translated from Zh. Tekh. Fiz.; 41: No. 2, 404-6(Feb 1971).

The choice of material for a charge-exchange target in a high-intensity source of negative helium ions is discussed. Study of the transformation $He^+ \rightarrow He^-$ shows that a charge-exchange target of sodium vapor is to be preferred. At the optimum energy of 12 keV the maximum yield in sodium vapor is 1.7 ± 0.1%. (auth)

53456 PHASE-ENERGY CHARACTERISTICS OF AN ACCELERATOR BUNCHER. Ostrovskii, E. K.; Zykov, A. I. Sov. Phys.-Tech. Phys. (Engl. Transl.); 16: No. 2, 260-2(Aug 1971).
Translated from Zh. Tekh. Fiz.; 41: No. 2, 347-9(Feb 1971).

A method is proposed for measuring the energy dependence of bunches used in linear electron accelerators. Monoenergetic bunches with small phase spread are used as probes. (auth)

53457 DEPENDENCE OF BEAM INTENSITY ON CHARGE DISTRIBUTION IN A BUNCH. Khlestkov, Yu. A.; Tereshkin, Yu. M. Sov. Phys.-Tech. Phys. (Engl. Transl.); 16: No. 2, 254-9(Aug 1971).
Translated from Zh. Tekh. Fiz.; 41: No. 2, 339-46(Feb 1971).

The maximum beam intensity in linear and cyclic proton accelerators as a function of charge distribution in the bunches, assuming incomplete shielding of the beam by the walls, is studied. The calculated value of the maximum intensity depends significantly on the distribution. Consideration of wall effects leads to an increase in maximum intensity. With a distribution decreasing sharply toward the edge of the bunch, the beam is essentially completely shielded. (auth)

53458 TARGET HANDLING SYSTEM FOR THE 200-GeV PROTON ACCELERATOR. Grimson, J. H.; Lindberg, J. F.; Maschke, A. W.; Simanton, J. R.; Simon, J. P. (National Accelerator Lab., Batavia, Ill.). pp 135-42 of Proceedings of the 18th Conference on Remote Systems Technology, Washington, D. C., November 1970. /Farmakes, Ruth (ed.). Hinsdale, Ill.; American Nuclear Society, Inc. (1970).
From eighteenth conference on remote systems technology; Washington, D. C. (Nov 1970). See CONF-701132.

Proton beam-line equipment and shielding in the 200-GeV accelerator external target areas will become radioactive. A shielded target laboratory equipped with a remote handling system will service these target areas. Radioactive equipment will be brought to the laboratory on transporters, resembling train-cars, for service. In this way, targets and associated equipment can be remotely maintained or modified without extensive accelerator downtime. (auth)

53459 LAMB-SHIFT SOURCES. Donnally, Bailey L. (Lake Forest Coll., Ill.). pp 295-316 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).
From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

The design and operation of Lamb-shift polarized ion sources are described. The production of H(2S) states, polarization schemes, selective ionization, and the performance of Lamb-shift sources are discussed. (46 references) (W.H.K.)

53460 POLARIZED SOLID TARGETS. Jeffries, C. D. (Univ. of California, Berkeley). pp 351-72 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).
From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

Three methods for dynamic polarization of solid targets are discussed including microwave dynamic polarization, optical pumping in solids, and spin refrigerators. Also, a brief discussion of recent advances in thermal equilibrium methods is presented. (72 references) (W.H.K.)

In Neutron standards and flux normalization.

High-intensity of 2-, 24.5-, and 144-keV neutrons have been produced with filtered-beam techniques. The beams of neutrons are produced by placing thick filters of scandium, iron, and silicon into beam holes of the Materials Testing Reactor. Development work has consisted in determining optimum lengths, finding techniques to deal with backgrounds, and making some pilot total neutron-cross-section measurements. The filtered beams constitute a distinctive set of neutron sources and should assist greatly in the understanding of neutron cross sections in the important thousand-electron-volt energy region. (auth)

53487 (CONF-701002–, pp 410-14) SOME VIEWPOINTS ON CROSS-SECTION STANDARDS AND RELATED PROBLEMS FOR FAST-NEUTRON ELASTIC- AND INELASTIC-SCATTERING MEASUREMENTS. Holmqvist, B. (Aktiebolaget Atomenergi, Studsvik (Sweden)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Problems connected with accurate measurements of fast-neutron elastic- and inelastic-scattering cross sections include a need for standard cross sections. In this paper the interest is concentrated on cross-section standards that can be used in the 100-keV energy range. But, in addition, problems concerning the million-electron-volt energy range are briefly discussed. Usually elastic and inelastic cross-section experiments are performed relative to the n-p and C(n,n) cross sections. However, the large recoil effect of the (n,p) reaction makes carbon a better standard below a neutron energy of about 1.5 MeV. Some comments are also made about the general properties of organic scintillation detectors and lithium glass scintillation detectors used for measurements of fast-neutron fluxes. (auth)

53488 (CONF-701002–, pp 417-36) FISSION-NEUTRON SPECTRA: MACROSCOPIC AND INTEGRAL RESULTS. Grundl, James A. (National Bureau of Standards, Washington, D. C.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Certain integral measurements performed with pure fission neutrons and with macroscopic systems that are dominated by the fission spectrum identify an important area of disagreement with differential microscopic data. The classic measured value for the ^{238}U average fission cross section for ^{235}U thermal-neutron-induced fission neutrons is $\overline{\sigma}_f(\chi_{25},{}^{238}\mathrm{U}) = 310 \pm 4$ mb and is in serious disagreement with predicted values that fall between 270 and 282 mb, depending on the choice of ^{238}U fission cross section and fission-spectrum shape. Critical consideration is given to direct absolute determinations of $\overline{\sigma}_f(\chi_{25},{}^{238}\mathrm{U})$ and to indirect values obtained from fission-ratio measurements with activation detectors. The latter substantiate the classic value and also provide a new value for the ^{239}Pu fission spectrum. Equivalent disagreements with prediction occur in the interpretation of fission-ratio measurements performed in ^{235}U and ^{239}Pu metal critical spheres, and, in a related area of measurement, the discrepancy between calculated and measured age-to-indium resonance of fission neutrons in water is in a direction consistent with the fission-spectrum discrepancy. The growing importance of integral measurements for the technology of nuclear energy and the consequent need for fast-neutron standardization to serve it underline the difficulties summarized in this paper. (auth)

53489 (CONF-701002–, pp 437-51) MICROSCOPIC FISSION-NEUTRON-SPECTRA MEASUREMENTS. Wiedling, T. (Aktiebolaget Atomenergi, Studsvik (Sweden)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

A detailed knowledge of the shape of a fission-neutron spectrum is of great importance in predicting the reactivity of a nuclear reactor. A number of measurements exist of neutron spectra of isotopes fissionable at thermal and fast incident-neutron energies as well as of spontaneously decaying nuclei. However, recent macroscopic measurements of fission-neutron spectra have cast some doubt on the reliability and accuracy of the microscopic measurements made up to now. This review of microscopic measurements is mainly concerned with recent measurements on a number of fissionable isotopes. Some comments are made on the status of the results of published data, on experimental techniques, and on future needs. (auth)

53490 (IAE–1969) URS PROGRAM FOR CALCULATING SLOW NEUTRON SPECTRA BY DIFFERENTIAL EQUATIONS. Fedulov, M. V. (Institut Atomnoi Energii, Moscow (USSR)). 1970. 20p. (In Russian). Dep. NTIS (U. S. Sales Only).

A program was written in ALGOL-60 and M-20 machine code for approximate calculation of the slow-neutron velocity distribution in an infinite homogeneous medium. The calculation procedure is based on solving a system of two first-order linear differential equations. Thermalization in the zirconium hybrid was investigated as an example. (JPRS)

53491 (JINR–P-3-5902) MAGNETIC SYSTEMS FOR TRANSPORTATION AND ACCUMULATION OF SLOW NEUTRONS. Matora, I. M.; Strelina, O. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Neutron Physics). 1971. 14p. (In Russian). Dep. NTIS (U. S. Sales Only).

With the aid of the exact equations of the slow neutron motion in the six-pole magnetic field it is shown that the application of such a field to the transportation and accumulation of the neutrons gives a number of advantages as compared with the fields of other symmetry. The estimates performed show that in a straight horizontal neutron beam tube of the type under consideration the polarized neutron flux of about 10^8 n/sec with $\lambda \geq 4$Å does not depend on the distance from the constructed pulse fast reactor IBR-2, and a ring accumulator can hold up to 10^5 neutrons and keep them during the time of the order of their half-life. The loss of neutrons due to the spin inverting was neglected. (auth)

53492 (ORNL-TM-3518) XCHEKR: MULTIGROUP CROSS-SECTION EDITING AND CHECKING CODE. Burgart, C. E.; Straker, E. A. (Oak Ridge National Lab., Tenn.). 13 Aug 1971. Contract W-7405-eng-26. 35p. Dep. NTIS.

XCHEKR is a multigroup cross-section editing and checking code. Cross sections in either ANISN or DTF–IV format may be read from cards or binary magnetic tape. These cross sections may be neutron only, gamma-ray only, or coupled neutron–gamma-ray with full or partial downscatter and/or upscatter. XCHEKR produces a highly readable edit of the P_0 portion of the cross sections, as well as tables of evaluated angular distributions for each group-to-group transfer. Checks are performed to determine if the Legendre coefficients are possible. (auth)

53493 (TID–25736) CINDA 71: AN INDEX TO THE LITERATURE ON MICROSCOPIC NEUTRON DATA. (Division of Technical Information Extension (AEC), Oak Ridge, Tenn. Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut. ENEA Neutron Data Compilation Centre, Gif-sur-Yvette (France). International Atomic Energy Agency, Vienna (Austria). Nuclear Data Unit). 1 Jan 1971. 1270p. IAEA $24.00.

CINDA 71 contains bibliographical references to all microscopic neutron data in the CINDA files as of December 31, 1970. It supersedes all previous issues of CINDA. Instructions for the use of CINDA are provided. (J.W.R.)

53494 EVALUATION OF GRAIN SHIELDING FACTORS FOR COATED FUEL PARTICLES. Waelti, P. (Gulf General Atomic

Inc., San Diego, Calif.). Nucl. Sci. Eng.; 45: No. 3, 321-30 (Sep 1971).

The calculation of effective cross sections for materials with grain structure has been investigated. A method is outlined based on Sauer's formalism that is not restricted to loosely packed grains and small ratios of scattering to total cross sections, in contrast to the treatment based on isolated grains reported earlier by Dyos and Pomraning. The method is applicable for GAROL-type resonance calculations, i.e., resonance treatments based on an explicit calculation of the detailed energy spectrum, as well as for reactor cell calculations at thermal energies. As an example, the grain shielding factors for 400-μ ThC_2 grains in a carbon moderator have been calculated as energy-dependent quantities through the 21.8- and 23.5-eV thorium resonances at 300°K. The results are compared with a GAROL reference calculation (set up for the grains) and with the method given by Dyos and Pomraning. The maximum error for the energy-dependent grain shielding factors in the present method is 1.3% compared with 11.3% in the method of Dyos and Pomraning. Application of the present method at thermal energies on 200-μ PuO_2 grains embedded in a carbon moderator yields energy-dependent grain shielding factors that differ by <1% from a $S_8 - P_1$ multigroup reference calculation. (auth)

53495 BEAM ENRICHMENT BY THE MULTILAYERED NEUTRON-REFLECTING CONICAL TUBE. Shimooke, T. (Japan Atomic Energy Research Inst., Tokai). Nucl. Sci. Eng.; 45: No. 2, 117-25(Aug 1971).

A theoretical study is made of the reflection of neutrons by a multilayered conical tube which extends the concept of reflection by a single-layer tube. Such a device is useful for producing an intense neutron beam. Two types of this tube are discussed: One produces a high quality beam of greater intensity than obtainable with a conventional collimator. The study shows that the intensity of the thermal neutron beam is 8 to 30 times as strong as that by simple collimation. The other type is for neutron spot-irradiation and is illustrated by establishing a beam of 6100 n/(cm^2 sec) at a focal point from a source flux of 10^6 n/(cm^2 sec). (auth)

53496 PRODUCTION AND SHIELDING OF 15 MeV NEUTRONS. Broerse, J. J.; Engels, A. C.; Groen, J. S. (Radiobiological Inst. TNO, Netherlands). Eur. J. Cancer; 7: No. 2-3, 105-14(May 1971).

From Meeting held at the Radiobiological Institute TNO; Rijswijk, Netherlands (22 Jun 1970). See CONF-700655.

The characteristics of various types of D−T neutron generators are described; and the current status of the development of fast-neutron therapy machines reviewed. For clinical applications, a minimum average yield of 4 × 10^{12} neutrons/sec is required. It is concluded that at present no 15-MeV neutron radiotherapy system can produce this output for a reasonable period of time, e.g., 50 hr. The properties of tritium targets are discussed with respect to the target life time and the radiation hazards. Experimental data are presented on the neutron yield as a function of the energy of the bombarding deuterons and target age. The tritium contents of the oil of the accelerator vacuum pumps and the tritium contents of the gas released at the exhaust opening of the rotary pump were measured. Only a small fraction of the total amount of tritium originally present in the target was expelled through the forepump exhaust. A summary was made of attenuation data for various materials used for shielding 15-MeV neutrons. (auth) (UK)

53497 COLLIMATION OF 14 MeV NEUTRON BEAMS. Greene, D.; Major, D. (Christie Hospital and Holt Radium Inst., Manchester, Eng.). Eur. J. Cancer; 7: No. 2-3, 121-7(May 1971).

From Meeting held at the Radiobiological Institute TNO; Rijswijk, Netherlands (22 Jun 1970). See CONF-700655.

Measurements on 14-MeV neutron beams defined by a number of different collimator designs were made. Differences produced in the beam definition, under scattering conditions, were fairly small and limited in their effect by the presence of a large component of scattered radiation outside the main beam, in a phantom. A high proportion of the scattered radiation was gamma-rays. (auth) (UK)

53498 ANALYSIS OF DIFFUSION-LENGTH PROBLEM IN THE PRESENCE OF LARGE ABSORPTION. Singh, Om Pal; (Indian Inst. of Tech., New Delhi); Bansal, N. K.; Ghatak, A. K.; Bhushan, Vidya. J. Nucl. Sci. Technol. (Tokyo); 8: No. 6, 309-13(Jun 1971).

The propagation of a thermal neutron beam into a water assembly containing various concentrations of Cd has been studied by solving the diffusion equation in the multigroup formalism. The Nelkin model has been used for the scattering kernel. It is observed that for very high Cd concentrations the experimentalist measures a pseudomode which dominates at small distances from the source. This pseudomode decays very slowly to reach the asymptotic distribution at very large distances from the thermal neutron source and at such large distances the neutron density would become so small that it would be difficult to detect these neutrons. (auth)

53499 COLD NEUTRON EFFECT IN NEUTRON WAVE PROPAGATION. EXPERIMENT IN THE LEAD SYSTEM. Takahashi, Akito (Osaka Univ., Suita, Japan). Nippon Genshiryoku Gakkai Rochuseishi Kenkyu Senmon Iinkai Hokoku; No. 27, 1-23(Mar 1970). (In Japanese).

Many theoretical works have been done on the eigenvalue problems of neutron propagation in crystalline moderators. This paper concerns the behavior of the propagating wave in the crystalline media like lead, in which discrete eigenvalues are not expected, the theoretical and experimental analyses of interference phenomena in the pulse transport experiment of graphite system, and so on. An approximate formula of pulse form was obtained as a function of space and time. The effect of scattering kernel was discussed. An experiment was carried out with the system of a square pillar of lead (99.99%), the dimensions of which were 30 × 30 × 70 cm. A neutron pulse with 85 μs pulse width and 230 Hz of repetition rate were employed. The background due to epithermal neutrons, which was considerable in graphite system, was negligible in the lead system. The measurement of pulse propagation wave form was done at every 1.5 cm interval. The result was compared with that of graphite system. The peak of the wave form was round in the lead system, whereas it was sharp in the graphite system. This fact was qualitatively explained by the calculation of three groups. It was also found that the variation of neutron spectra with position and time was large, and that the effect of diffusion cooling was also large. (Japan)

53500 NEUTRON WAVE PROPAGATION IN FINITE CRYSTALLINE MEDIA. Nishina, Kojiro (Nagoya Univ., Japan). Nippon Genshiryoku Gakkai Rochuseishi Kenkyu Senmon Iinkai Hokoku; No. 27, 1-23(Mar 1970). (In Japanese).

The solutions of neutron wave density in finite crystalline media were derived by using Watson transformations, Laplace transformations, or Poisson's sum formula, and numerical calculations were carried out to obtain detector response and to analyze experimental results. From the obtained expression, various decaying modes were calculated for a 100 cm thick graphite slab, in which the position of poles and cuts was taken into consideration. Dispersion relations were investigated, and the maximum frequency was obtained. The result of a resonance experiment was analyzed with these solutions. The result showed that the frequency of resonance was higher by 300 cps than the experimental value. The reason for this discrepancy was not clear. The observed minimum was also a little different from the calculated value, and the detector size was responsible for this fact. Finally, it was found that the three methods were equivalent, and the choice depends on the purpose of analysis, the size of medium, detector size, and so on. (Japan)

53501 NEUTRON SPECTRA AND THE RESULTING FLUENCE-KERMA CONVERSIONS FOR ^{241}Am–Li (α,n) AND ^{210}Po–Li (α,n) SOURCES. Geiger, K. W.; Van Der Zwan, L. (National Research Council of Canada, Ottawa). Health Phys.; 21: No. 1, 120-3(Jul 1971).

Differential ^{7}Li(α,n)^{10}B cross sections were determined, and from these data, neutron spectra were calculated for ^{241}Am−Li H(α,n) and ^{210}Po−Li H(α,n) sources over the energy range 0−5 MeV. The results are tabulated, together with the conversion from fluence to kerma in wet tissue. (UK)

53502 CORRECTION OF THE FINITE VOLUME OF SCATTERER EFFECT ON THE MEASUREMENT OF DIFFERENTIAL ELASTIC AND INELASTIC NEUTRON CROSS SECTIONS. PART III. EXECUTION OF THE CORRECTIONS. Hermsdorf, D.; Hoehn, J.; Seeliger, D. (Technische Univ., Dresden). Kernenergie; 13: 324-9(Oct 1970). (In German).

Mathematically treated are the following problems: correction of the multiple scattering effect on the measured differential elastic cross section of neutrons; examples for the correction of multiple elastic scattering; correction of the multiple scattering effect on the differential cross section for inelastic scattering; examples for correction of the inelastic differential cross section; and inclusion of absorption during multiple scattering. At the present time, a Monte Carlo method is being developed for multiple scattering effects on inelastic scattered neutrons that cannot be subdivided into various groups according to energy. (H.B.G.)

53503 DEVICE FOR THE MONOCHROMATIZING OF SLOW NEUTRONS. Ruchkov, V. E.; Konstantinov, A. P.; Solov'ev,

XUM

S. P.; Kukhto, O. L. Russian Patent 252,491. 10 Nov 1970. Filed 2 Apr 1965. (In Russian).

The device contains a crystal monochromator, an exit collimator for the neutron beam, and a support for the sample being studied. The device is designed to produce a continuous, monoenergetic beam of neutrons incident on the same point of the sample, regardless of energy fluctuations in the incoming neutron beam. (R.W.R.)

53504 SLOW-NEUTRON SCATTERING BY LIGHT AND HEAVY WATER. Gotoh, Yorio (Japan Atomic Energy Research Inst., Tokai; Takahashi, Hiroshi. Nucl. Sci. Eng.; 45: No. 2, 126-40(Aug 1971).

Since the model in which the water molecules form partially "ice-like" clusters explains the thermodynamic properties, the so-called itinerant oscillator model is applied to the motion of water molecules. The assumption is made that the atoms in a molecule receive stochastic forces from the neighboring molecules. The model of water with the stochastic force, of which the correlation functions are a delta function and a simple exponential, is discussed. The generalized frequency distributions of light and heavy water are derived from the model. The incoherent calculations of scattering laws of light and heavy water are compared with measurements. The model predicts well the total scattering cross section of light water, but the average cosine of scattering angle is slightly higher than that of the experiment. Further refinements in the model are discussed. (auth)

53505 TWO-DIMENSIONAL NEUTRON TRANSPORT IN A QUARTER SPACE. Sanchez-Gutierrez, Julian. Los Angeles; Univ. of California (1970). 118p. University Microfilms Order No. 71-14,008.

Thesis.

The two dimensional quarter-space problem of neutron transport theory is considered by using the Fourier transformation. Starting from the time independent integro-differential form of the Boltzmann Equation, a functional relation for the transform of the neutron density is developed. The introduction of the restrictions of the neutron density to the four quarter-spaces yields a functional relation between their transforms and three different approaches for the determination of the transform of the neutron density in the quarter-space are given. The use of the Bochner's decomposition translates the problem of the determination of the transform of the neutron density in the quarter-space into the solution of a singular integral equation. An iterative scheme for the solution of this integral equation is given and its convergence is proven. The interpretation of the functional relation between the transforms of the restrictions of the neutron density as a Hilbert boundary value problem yields an integral equation for the density of a Cauchy type integral over the real axes (in two complex variables) which defines a sectionally analytic function of two complex variables. The four components of this sectionally analytic function are (except for the signs in two of them) the transforms of the restrictions of the neutron density. An iterative procedure for the solution of the singular integral equation satisfied by the kernel is given and its convergence is proven. An explicit comparison of the two iterative procedures mentioned above is given and, by specializing the source and making several approximations in the evaluation of some integrals, the first order iterate of the neutron density at the edges of the quarter-space is found. By exploiting the structure of the dispersion function appearing in the functional relation satisfied by the transforms of the restrictions of the neutron density, the Hilbert boundary value problem in two complex variables is solved in closed form. This makes it possible to give the transform of the neutron density in the quarter-space in an explicit form, which involves a finite number of integrals of known functions. A comparison with a recent work on the same problem is effectuated and suggestions are given for the application of the procedures followed to other two dimensional problems. (Diss. Abstr. Int., B)

53506 SOURCES OF POLARIZED FAST NEUTRONS. Walter, Richard L. (Duke Univ., Durham, N. C. Triangle Universities Nuclear Lab., Durham, N. C.). pp 317-49 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug–Sep 1970). See COO-7-593; CONF-700811.

Methods for obtaining polarized neutrons, including some of the current best sources and some promising sources for the future are discussed. The methods include nuclear reactions using unpolarized incident beams, polarization transfer reactions, and small-angle scattering. The advantages and disadvantages of each method are described. From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Fast-neutron total cross sections of hydrogen have been determined with uncertainties between 0.7 and 1.6% at 27 energies from 1.5 to 27.5 MeV. The measurements were carried out in good geometry with monoenergetic neutron sources and with liquid hydrocarbon samples. (auth)

53511 (CONF-701002–, pp 51-6) MEASUREMENT OF THE NEUTRON–PROTON TOTAL CROSS SECTION BETWEEN 0.5 AND 21 MeV. Langsford, A. (Atomic Energy Research Establishment, Harwell (England)); Clements, P. J. (Oxford Univ. (England)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The neutron–proton total cross section between 0.5 and 21 MeV was measured with the 48-m time-of-flight spectrometer on the Harwell 2.8-m synchrocyclotron. The neutrons were produced in an evaporation spectrum by the deflection of the 140-MeV internal proton beam onto a tungsten target. The total cross section was determined from the ratio of transmission of pairs of samples containing the same amount of carbon, the samples being toluene (C_7H_8), trimethylpentane (TMP) (C_8H_{18}), and reactor-grade graphite. The results were combined into 17 continuous energy groups; the weighted mean cross section in each group varied in accuracy from 0.2% at 1 MeV to 3% at 20 MeV. From a fit to the data over the energy range 0.5 to approximately 7 MeV, a value of the singlet effective range parameter, r_{os}, of 2.59 ± 0.09 ± 0.05 fermis was obtained. (auth)

53512 (CONF-701002–, pp 57-62) SEARCH FOR STRUCTURE IN THE N–P TOTAL CROSS SECTION. Schwartz, R. B.; Schrack, R. A.; Heaton II, H. T. (National Bureau of Standards, Washington, D. C.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

High-precision measurements of the n-p total cross section below 30 MeV show no evidence of any structure. A careful measurement of the differential scattering cross section also shows no evidence of any anisotropy. (auth)

53513 (CONF-701002–, pp 63-73) ANGULAR DISTRIBUTION OF 29-MeV NEUTRONS SCATTERED BY PROTONS. Burrows, Thomas W. (Wisconsin Univ., Madison).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Proton-recoil spectra from n-p elastic scattering were measured with a counter telescope for an incident neutron energy of 29.0 MeV at mean laboratory proton-recoil angles of 9.4°, 17.6°, 31.1°, and 45.6°, corresponding to center-of-mass neutron scattering angles of 161°, 145°, 117°, and 91.3°, respectively. The ratio $\sigma(161^\circ)/\sigma(91.3^\circ)$ was 1.201 ± 0.025 where the uncertainty quoted was based on counting statistics only. The center-of-mass relative angular distribution was normalized to a total cross section of 317.7 ± 3.2 mg with $A(1 + B \cos^2 \theta)$, $A_1(1 - B_1 \cos \theta + B_1 \cos^2 \theta)$, and $A_2[1 - (B_2/2) \cos \theta + B_2 \cos^2 \theta]$ fits. The preliminary results were $A = 22.4 \pm 0.7$ mb/sr, $B = 0.260 \pm 0.062$, $A_1 = 23.6 \pm 0.8$ mb/sr, $B_1 = 0.143 \pm 0.009$, $A_2 = 23.1 \pm 0.08$ mb/sr, and $B_2 = 0.189 \pm 0.007$, where the uncertainties quoted were based on counting statistics and the error in the total cross section. (auth)

53514 (CONF-701002–, pp 74-9) REVIEW OF ^{3}He(n,p)T REACTION. Costello, Donald G. (Gulf General Atomic, Inc., San Diego, Calif.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Experimental measurements concerning the ^{3}He(n,p)T reaction are reviewed. In the past there has been a discrepancy between measurements of the n-p reaction based on indirect measurements from the inverse reaction, T(p,n)^{3}He, and those based on direct measurements by ^{3}He proportional counters. Some recent data are presented which resolve this disagreement. The cross section is estimated to be known to 0.2% (1 eV), 1% (1 keV), 3% (10 keV), and 10% (>100 keV). (auth)

53515 (COO-1120-128) REALISTIC AND EFFECTIVE INTERACTIONS IN LIGHT NUCLEI. II. SELF-CONSISTENT CALCULATION OF THE G-MATRIX WITH HARD CORE POTENTIALS. Tripathi, Ram K.; Goldhammer, Paul (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1970]. Contract AT(11-1)-1120. 45p. Dep. NTIS.

Brueckner self-consistent calculations are performed for ^{16}O, ^{3}H, and ^{4}He nuclei, with various modern hard-core interactions. Elements of the G matrix are calculated by the reference-spectrum method, while Q-1 corrections are made by matrix inversion in the proper single-particle space. Thus, it is not assumed that Q commutes with the center-of-mass motion. The prescription for selecting the appropriate spectrum of single-particle excited states is investigated by comparing results of the Brueckner method to other calculations. These comparisons indicate that the particle spectrum should be left unperturbed. One then finds that the Hamada–Johnston, Yale, and Reid (hard-core) interactions yield about one-half the binding energy of ^{16}O. The calculated results are dissected into shell-model components. This analysis indicates that the short-range part of the hard-core interaction is too strongly repulsive. (auth)

53516 (JINR–P1-5893) INVESTIGATION OF THE $\mu^- + {}^{12}C \rightarrow {}^8Li + {}^3He + n + \nu$ REACTION. Batusov, Yu. A.; Bunyatov, S. A.; Gulkanyan, H. R.; Kurz, N.; Sidorov, V. M.; Chernev, Ch. M.; Eramzhyan, R. A.; Yarba, V. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Problems). 1971. 18p. (In Russian). Dep. NTIS (U. S. Sales Only).

The capture of μ^--mesons by carbon, nitrogen and oxygen nuclei with the production of the ^{8}Li nuclei was studied using the photoemulsions. The relative probabilities of the possible reaction channels were measured. It is shown that the main channel is the capture of μ^--mesons by the ^{12}C nuclei over the reaction $\mu + {}^{12}C \rightarrow {}^8Li + {}^3He + n + \nu$ with the relative probability within $(1.1 \pm 0.2) \cdot 10^{-3} < W < (1.6 \pm 0.2) \cdot 10^{-3}$. The energy spectra and angular correlations of secondary particles of this channel are compared with the calculations made according to the scheme of the resonance capture of μ^--mesons and the capture by few-nucleon associations. (auth)

53517 (LNF–71/23) TWO BODY PHOTODISINTEGRATION OF ^{3}He WITH LINEARLY POLARIZED GAMMA RAYS. Fabbri, F. L.; Picozza, P.; Schaerf, C. (Comitato Nazionale per l'Energia Nucleare, Frascati (Italy). Laboratori Nazionali di Frascati). 11 May 1971. 4p. Dep. NTIS (U. S. Sales Only).

The asymmetry parameter for the reaction $\gamma + {}^3He \rightarrow p + d$ at 90° cms was measured at gamma energies between 180 and 300 MeV. An experimental electric dipole cross section is calculated from these results. (R.W.R.)

53518 (SRO–474-2) FEASIBILITY OF OBSERVING INVERSE BETA DECAY BY DIRECT COINCIDENCE TECHNIQUES. Final Report. Avignone III, F. T.; Darden III, C. W. (South Carolina Univ., Columbia. Dept. of Physics and Astronomy). [1971]. Contract AT(38-1)-474. 37p. Dep. NTIS.

The investigation was a study to determine whether or not reactions of the general form $\bar{\nu}_e + {}^AX_z \rightarrow e^+ + {}^AX_{z-1}$ can be identified by detecting only the two annihilation γ rays from the subsequent reaction $e^+ + e^- \rightarrow 2\gamma$, and the pulse in a target scintillator caused by the slowing of the positron. The results of the experiments indicate that such experiments are very probably feasible if performed inside a cosmic ray live shield. It is estimated, from the data, that (~80 to 100) per cent of the background events are in prompt coincidence with cosmic-ray muons entering into the shielded target region. This discovery was made using a partial cosmic ray live shield located on top of the lead- and boron-loaded polyethylene-shielded target region. A more accurate statement of feasibility would be possible only after further study involving a live shield placed outside the γ-ray and neutron shielding, the live shield covering the top and sides of the shielded region. An unsuccessful attempt to measure the cross section for above reaction, when ^AX_z is a proton, was made by the method mentioned above. (auth)

53519 TRINUCLEON BOUND STATE PROPERTIES AND FORM FACTORS WITH THE B. K. R. POTENTIAL. Malfliet, R. A. (Univ. of Groningen, Netherlands); Tjon, J. A. Phys. Lett.; 35B: No. 6, 487-9(5 Jul 1971).

The triton binding energy and S′- and D-state probabilities are determined using the B.K.R. potential. With mesonic corrections neglected, the charge and magnetic form factors are computed for ^{3}H and ^{3}He. They show a diffraction minimum at $q^2 = 14.4$ fm^{-2}. (auth)

53520 ^{3}H AND ^{3}He FORM FACTORS WITH THE REID POTENTIAL. Yang, S. N.; Jackson, A. D. (State Univ. of New York, Stony Brook). Phys. Lett.; 36B: No. 1, 1-3(9 Aug 1971).

Electromagnetic form factors for ^{3}H and ^{3}He are calculated with the Reid potential and found to be in agreement with experimental data. (auth)

53521 MICROSCOPICALLY SUBSTANTIATED LOCAL OPTICAL POTENTIAL FOR $\alpha-\alpha$-SCATTERING. Neudatchin, V. G.; Kukulin, V. I. Korotkikh, V. L.; Korennoi, V. P. (Moscow State Univ.). Phys. Lett.; 34B: 581-3(12 Apr 1971).

A deep l-independent local potential of the Woods–Saxon form for the description of the energy dependence of all $\alpha-\alpha$ phase shifts measured is proposed. Wave functions in the $\alpha-\alpha$ overlap region have the oscillator form 4S, 4D,etc. The range of the S-phase shift variation equals 3π. Application of the approach proposed to the ^{16}O–^{16}O and NN-systems is discussed. (auth)

53522 MUON CAPTURE IN ^{11}B. Bernabeu, J. (Univ., Valencia). Nuovo Cim.; 4A: No. 4, 715-30(21 Aug 1971).

The partial-capture rates of muons in ^{11}B going to ^{11}Be(g.s.) and ^{11}Be(320 keV), as well as the hyperfine effect in the transition to ^{11}Be*, are studied. Comparing these results with the beta-decay of ^{11}Be and the electromagnetic transition $^{11}Be^* \rightarrow {}^{11}Be$, some conclusions are derived on the nuclear structure of the bound states of ^{11}Be. Some possible experiences which can give information on the pseudoscalar form factor in weak interactions are also discussed. (auth)

53523 ANOMALIES IN QUASIFREE SCATTERING FROM p + ^{3}He REACTIONS. Slaus, Ivo (Univ. of California, Los Angeles. Inst. Rudjer Boskovic, Zagreb); Epstein, M. B.; Paic, G.; (and others). Phys. Rev. Lett.; 27: No. 11, 751-4(13 Sep 1971).

The reactions ^{3}He(p,pd)p and ^{3}He(p,2p)d were studied at 35 MeV. A dominant feature of these data is p–p and p–d quasi-elastic scattering. A plane-wave impulse approximation gives a qualitative fit to the ^{3}He(p,2p)d data, but fails to explain the ^{3}He(p,pd)p data. Various possible explanations are discussed. (auth)

53524 FINAL-STATE INTERACTIONS IN THE REACTION ^{2}H(p,2p)n. Takeutchi, F.; Sakamoto, Y.; Yuasa, T. (Institut de Physique Nucleaire, Orsay, France). Phys. Lett.; 35B: No. 6, 498-500(5 Jul 1971).

The cross sections for the reaction ^{2}H(p,2p)n are calculated by taking into account final-state interactions including S, P, and D waves for all pairs of outgoing nucleons. The D-state wave functions of the deuteron are also included in the calculation. The angular correlation distributions of the cross sections are compared with data for 156-MeV protons. (auth)

XUM

53525 ^{4}He PHOTOSPLITTING AND TWO-PARTICLE UNITARITY. Gur'ev, V. N. (Physical-Technical Inst., Kazan). Yadern. Fiz.; 13: No. 6, 1219-24(Jun 1971). (In Russian).

Multipole analysis of reactions ^{4}He(γ,p)^{3}H and ^{4}He(γ,n)^{3}He is considered using two-particle unitarity and isotopic phase shifts of the nucleon scattering on nucleus A = 3. The agreement of the phase shift analysis with the experimental estimate of phase differences of the E1 and E2 amplitudes for reaction ^{4}He(γ,p)^{3}H and with the vanishing of the asymmetry coefficient in the photoneutron angular distribution at 28 MeV photon energy in lab. system is studied. The behavior of the recoil proton polarization at an angle of 90° in cms is qualitatively considered. (auth)

53526 ANALYSIS OF REACTIONS ^{3}He(n,n)^{3}He, ^{3}H(p,n)^{3}He, ^{3}H(p,p)^{3}H AT LOW ENERGIES AND ^{4}He LEVELS. Barit, I. Ya.; Sergeev, V. A. (Lebedev Inst. of Physics, Moscow). Yadern. Fiz.; 13: No. 6, 1230-42(Jun 1971). (In Russian).

Charge-invariant phase-shift analysis of differential cross sections of reactions ^{3}He(n,n)^{3}He, ^{3}H(p,n)^{3}He, ^{3}H(p,p)^{3}H and of neutron polarization in reaction (p,n) is fulfilled at energies corresponding to the ^{4}He nucleus excitation energies from 19.8 up to 23.2 MeV. The contribution from all the states produced at $l \leq 2$ is taken into account. The phase shifts and modula of the S-matrix elements describing experimental data are determined. Particle polarization in pH^3 and nHe^3 scattering is calculated. The results of the analysis make it possible to establish that at ^{4}He excitation energies 20.3, 21.1, and 22.1 MeV there are the levels 0^+, 0^-, and 2^- with T = 0 with single-particle reduced widths and that in the triplet s and d states and in the singlet p state there are no levels with T = 0. (auth)

53527 EXCHANGE MECHANISM CONTRIBUTION TO THE BACKWARD PROTON SCATTERING ON LIGHT NUCLEI AND REACTION d + ^{4}He → ^{3}He + ^{3}H. Kopeliovich, B. Z.; Potashnikova, I. K. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 13: No. 5, 1032-8(May 1971). (In Russian).

The role of the exchange mechanism in backward proton scattering on ^{4}He and ^{3}He is discussed. The simplest exchange graph for the backward proton scattering on ^{4}He is calculated by means of the wave function of ^{4}He, the parameters of which are fixed by the electron scattering data. A good agreement of the calculations with experiment is obtained. In the energy dependence of cross section of the backward proton scattering by the ^{4}He nuclei a characteristic "dip" at 200 MeV protons is expected. The parameters which determine the behavior of the ^{3}He wave function at small distances are estimated. The reaction d + ^{4}He → ^{3}He + ^{3}H is considered. The connection between its cross section and the cross sections of the backward proton scattering on the ^{3}He and ^{4}He nuclei is obtained assuming that the pole graphs dominate. Experiments for revealing the mechanism responsible for the processes under consideration are proposed. (auth)

53528 BREMSSTRAHLUNG IN PROTON–α-PARTICLE SCATTERING. Woelfli, W.; Hall, J.; Mueller, R. (Eidgenoessische Technische Hochschule, Zurich). Phys. Rev. Lett.; 27: No. 5, 271-3(2 Aug 1971).

An experiment to determine the bremsstrahlung cross section in proton–α-particle scattering was performed for incident proton energies between 7.0 and 12.0 MeV. It was found that, in order to obtain agreement with the measured coplanar values, the theoretical calculation must include the contribution of the so-called "rescattering term." (auth)

53529 THREE-NUCLEON GROUND STATE WAVE FUNCTION. II. THE PROPERTIES OF THE RADIAL PART OF THE WAVE FUNCTION. THE INCLUSION OF THE SOFT CORE. THE ELECTRIC CHARGE FORM FACTOR. THE μ-MESON CAPTURE. Bijedic, N.; Maric, Z.; Zlatarov, V. (Boris Kidric Inst. for Nuclear Science, Belgrade). Fizika (Zagreb); 3: No. 1, 11-28(1971).

Determination of the radial part of the total three-body nuclear wave function, which depends on the symmetric scalar argument, is discussed. The complete soft core is included in the known Irving–Gunn radial function. With this function electric-charge form factors for the ^{3}H and ^{3}He nuclei are calculated using different percentages of the S, S′, and D components; the dependence of the single-nucleon charge form factor on the momentum transfer is also found. Comparison with the experimental results is discussed. With the same function μ-meson capture by the ^{3}He nucleus is calculated using the nonrelativistic limit of V–A theory. The usually accepted percentages of S, S′, and D states give very good agreement with the experiment. (auth)

53530 POLARIZATION IN THE SCATTERING OF 16.2-MeV NEUTRONS BY PROTONS. Garrett, R.; Chisholm, A.; Duder, J. C.; Brown, D.; Buergisser, H. N. (Univ. of Auckland, N. Z.). pp 427-9 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

53591 (CONF-701002-, pp 80-106) REVIEW OF THE DATA ON THE ^{6}Li CROSS SECTIONS BELOW 1.7 MeV. Uttley, C. A.; Sowerby, M. G.; Patrick, B. H.; Rae, E. R. (Atomic Energy Research Establishment, Harwell (England)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The data on the total, n-α, n-n, and n-γ cross sections of ^{6}Li below a neutron energy of 1.7 MeV are reviewed. The data on the differential (n,α) and (n,n) reactions have not been considered, but particular emphasis has been placed on obtaining the variation

XUM

of the n-α cross section with neutron energy. The best values of this cross section are indicated, and it is estimated that the values are known (one standard deviation) to ±0.5% at thermal energies, ±1% from thermal to 10 keV, ±2% at 100 keV, ±5% from 150 to 300 keV, ±10% at 500 keV, ±15% from 700 to 1000 keV, and ±10% at 1.7 MeV. (auth)

53592 (CONF-701002–, pp 107-20) STUDY OF ^{10}B CROSS SECTIONS. Lane, R. O.; Hausladen, S. L. (Ohio Univ., Athens); Monahan, J. E. (Argonne National Lab., Ill.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The results of most of the neutron-scattering, polarization, n-α reactions, total cross section and other related reactions leading to states in ^{11}B that are observed in ^{10}B + n have been interpreted in one consistent R-matrix calculation for neutron energies up to $E_n \simeq 2$ MeV. The calculated results are in good agreement with most of these data, including elastic and inelastic alpha scattering from ^7Li. Furthermore, both the level parameters and calculated reaction results in ^{11}B are consistent with corresponding mirror quantities in ^{11}C. A quantitative explanation of the well-known large 1/v $^{10}B(n,\alpha)^7Li$ cross section, as well as the α_0/α_1 branching ratio, is given. (auth)

53593 (CONF-701002–, pp 121-4) PRELIMINARY MEASUREMENTS OF THE RELATIVE $^6Li(n,\alpha)$ CROSS SECTION. Coates, M. S.; Hunt, G. J.; Uttley, C. A. (Atomic Energy Research Establishment, Harwell (England)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Preliminary measurements of the $^6Li(n,\alpha)$ cross section in the energy range 1.5 to $\gtrsim$700 keV have been made with thin lithium glass scintillation detectors on the 45-MeV electron linac booster spectrometer at Harwell. The flux was measured with a new flat-response detector whose detection efficiency has been calculated by a Monte Carlo method to an accuracy of 1 to 2% over the energy region 10 eV to >700 keV. (auth)

53594 (CONF-701002–, pp 125-8) THERMAL CROSS SECTION OF $^6Li(n,\alpha)$ AND RATIO OF $^{10}B(n,\alpha)$ TO $^6Li(n,\alpha)$. Becker, W.; Deruytter, A. J.; Wartena, J. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Transmission experiments were performed with a known (previously measured) neutron beam on quartz cells filled with helium (blank), D_2O, a solution of $^6Li_2SO_4$ in D_2O, and a solution of natural Li_2SO_4 in D_2O. From the transmission values for the enriched solution, a preliminary result was calculated for the ^6Li absorption cross section of 944 b with an accuracy of only a few percent. This result will be improved considerably by making time-of-flight experiments and by more precise measurements of the ^6Li content. Trial experiments to determine the ratio of $^{10}B(n,\alpha)$ to $^6Li(n,\alpha)$ cross sections up to 30 keV are briefly discussed. (auth)

53595 (CONF-701002–, pp 129-35) THERMAL CAPTURE CROSS SECTIONS OF ^6Li AND ^{10}B BY THE PULSED NEUTRON METHOD. Meadows, J. W. (Argonne National Lab., Ill.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The pulsed-neutron method was used to measure the thermal-neutron capture cross sections of ^6Li and ^{10}B. An analysis of the errors yielded an uncertainty of 0.3%, but the consistency of the results indicated a larger value. The final capture cross sections, evaluated at 2200 m/sec, were 936 ± 4 b for ^6Li and 3842 ± 18 b for ^{10}B. (auth)

53596 (CONF-701002–, pp 136-40) STUDY OF THE PARASITIC EFFECTS IN CROSS-SECTION MEASUREMENTS OF $^6Li(n,\alpha)T$. Filippi, G.; Fort, E.; Le Rigoleur, C.; Leroy, J. L. (Commissariat a l'Energie Atomique, Cadarache (France). Centre d'Etudes Nucleaires).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Several investigators have measured the $^6Li(n,\alpha)T$ cross section in the 10- to 600-keV energy region by comparing results obtained with a flux of monochromatic neutrons incident on a "long counter" and those obtained with a detector containing ^6Li. This paper shows that such a comparison can be subject to rather severe error because of neutron scattering in the target-supporting material associated with the resonance at 250 keV in the $^6Li(n,\alpha)T$ reaction. This effect has been studied in detail with time-of-flight methods, and the experimental results are in good agreement with theoretical evaluations obtained from Monte Carlo calculations. (auth)

53597 (CONF-701002–, pp 141-50) $^{10}B(n,\alpha\gamma)$ CROSS SECTIONS. Tucker, W. E.; Nellis, D. O. (Nuclear-Chicago Corp., Austin, Tex. Texas Nuclear Div.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Cross sections for the production of gamma rays by neutron bombardment of ^{10}B have been measured between 45 keV and 5 MeV and at 14.8 MeV. The results of the measurements of the 478-keV gamma ray from the $^{10}B(n,\alpha)^7Li$ reaction are emphasized. The $^{10}B(n,\alpha_1)^7Li^*$ cross section showed a departure from 1/v dependence above a neutron energy of 100 keV. (auth)

53598 (CONF-701002–, pp 151-65) RECOMMENDED VALUES OF THE $^{10}B(n,\alpha)$ CROSS SECTION BELOW 200 keV. Sowerby, M. G.; Patrick, B. H.; Uttley, C. A.; Diment, K. M. (Atomic Energy Research Establishment, Harwell (England)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The energy variation of the $^{10}B(n,\alpha)$ cross section below 200 keV has been investigated in two ways: first, by subtracting measurements of the scattering cross section from the total cross section and, second, by measuring the ratio of the $^{10}B(n,\alpha)$ and $^6Li(n,\alpha)$ cross sections in the same neutron spectrum on the Harwell 45-MeV electron linear accelerator. In the second method a recent calculation of the $^6Li(n,\alpha)$ cross section, determined largely from a measurement of the total cross section, was used in conjunction with the ratio measurements to obtain the $^{10}B(n,\alpha)$ cross section. The data are all consistent with the $^{10}B(n,\alpha)$ cross section falling below the $1/\sqrt{E}$ level, reaching a minimum at approximately 25 keV, where the deviation is about 4%. Above this energy the cross section relative to the $1/\sqrt{E}$ level rises and passes through a resonance at approximately 170 keV. The complete set of data has been fitted by an expression that represents the net effect at low energy of s-states outside the energy region under discussion together with an s-wave resonance at 170 keV. A least-squares fitting procedure was used with five free parameters, two of which are the energy and total width of the resonance. It is concluded that the $^{10}B(n,\alpha)$ cross section up to 200 keV can be represented by $\{\sigma_{n\alpha} = (13.837/\sqrt{E}) - 0.312 - 1.014 \times 10^{-2}\sqrt{E} + (2.809 \times 10^5/\sqrt{E}[(170.3 - E)^2 + 2.243 \times 10^4]) \text{ b}\}$ where E is in thousand electron volts. This expression has an estimated accuracy ranging from approximately 1.5% at low energies to approximately 3% at the high-energy end. (auth)

53599 (CONF-701002–, pp 190-200) MEASUREMENT AND ANALYSIS OF THE TOTAL NEUTRON CROSS SECTION OF CARBON FROM 0.5 TO 30 MeV. Cierjacks, S. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Angewandte Kernphysik).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The total neutron cross section of carbon was measured with the time-of-flight spectrometer at the Karlsruhe isochronous cyclotron. Below 2 MeV the total cross section of carbon was analyzed in the framework of s-wave effective-range theory. Between 2 and 6 MeV the total neutron cross section has been analyzed using standard multilevel R-matrix formulas for a single open channel to provide neutron resonance parameters. In the latter region new differential data for carbon from our laboratory have been used to verify the l-values obtained by fitting the resonances in the total neutron cross section. (auth)

53600 (CONF-701002–, pp 201-7) ANALYSIS OF THE TOTAL CROSS SECTION OF CARBON FROM 70 eV TO 1.5 MeV. Uttley, C. A.; Diment, K. M. (Atomic Energy Research Establishment, Harwell (England)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The total cross section of carbon has been measured between 70 eV and 7 MeV, and therefore the energy range between 1 and 100 keV, where few measurements exist, is covered. The cross section below 100 keV is useful as a standard for scattering-cross-section measurements on linacs; and this was the main purpose of the measurement. The data at higher energies are also useful for comparison with the large number of measurements that now exist above 100 keV, and the cross section over the whole energy range is currently of interest for calculations of the age-to-indium resonance of fission neutrons. The total

XUM

cross section up to 1.5 MeV has been analyzed to determine the reduced neutron width of the bound $\frac{1}{2}^+$ state, which accounts for almost all the cross section, and the small p-wave scattering contribution observed is shown to be in reasonable agreement with differential scattering data. (auth)

53601 (CONF-701002–, pp 208-17) MEASUREMENTS OF NEUTRON ELASTIC SCATTERING FROM CARBON IN THE ENERGY REGION OF 0.50 TO 2.00 MeV. Ahmed, N.; Coppola, M.; Knitter, H.-H. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Thirty-one differential cross-section angular distributions for the elastic scattering of neutrons from carbon were measured at primary-neutron energies between 0.50 and 2.00 MeV using fast-neutron time-of-flight techniques. The fully corrected points of each angular distribution were fitted with a five-term Legendre polynomial expansion. The B_L coefficients obtained were then fitted with suited functions of the energy to obtain a smooth dependence of the differential neutron-scattering cross sections on the primary-neutron energy using a limited number of parameters. A phase-shift analysis based on the present experimental B_L coefficients was performed. The phase shifts obtained are compared with those predicted by a coupled-channel calculation of ^{12}C neutron scattering and with phase shifts resulting from neutron polarization measurements. (auth)

53602 (CONF-701002–, pp 331-40) INTERPRETATION AND INTERCOMPARISON OF STANDARD CROSS SECTIONS. Poenitz, W. P. (Argonne National Lab., Ill.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Interpretations of experimental values in data evaluations are critically considered. An evaluation has been carried out to obtain consistent data for $\sigma_\gamma(^{197}Au)$, $\sigma_\gamma(^{238}U)$, $\sigma_\alpha(^6Li)$, and $\sigma_f(^{235}U)$. The experimental data fit well with the exception of $\sigma_f(^{235}U)$, where the agreement with experimental data is marginal. (auth)

53603 (CONF-701002–, pp 452-64) PRESENT MEASUREMENTS OF THE ^7Be BRANCHING RATIO. Mutterer, M. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The $4\pi\,\beta\,\gamma$ coincidence measurements that are actually being made at the Central Bureau for Nuclear Measurements to determine a precise value of the ^7Be branching ratio are briefly described. The influence of second-order effects, such as Internal Bremsstrahlung, Internal Ionization, and ^7Li recoils, is discussed. Internal Bremsstrahlung spectra for both branches in the ^7Be decay have been calculated following the theory of Martin and Glauber. Theoretical electron spectra due to the Internal Ionization process have been computed. A spectrum measured with a proportional counter is in fair agreement with the theories of Primakoff and Porter and Intemann in the energy interval from 1 to 4 keV; the theory of Stephas yields values higher by one order of magnitude. Electron spectroscopy in the electron-volt energy region with a retarding-field-type spectrometer shows that nearly all electrons leaving our ^7Be sources are slow secondary electrons with energies lower than about 5 eV. The fractional part of the ^7Li Auger electrons retaining their original energy of about 45 eV after leaving the source is extremely small. All investigations are being continued, and all results reported are only preliminary ones. (auth)

53604 (COO–1120-113) REALISTIC AND EFFECTIVE INTERACTIONS IN LIGHT NUCLEI. I. PARAMETERS OF THE 1p-SHELL. Norton, John L.; Goldhammer, Paul (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1969]. Contract AT(11-1)-1120. 47p. Dep. NTIS.

An intensive study is made of the shell-model effective interaction in the 1p shell, with particular emphasis on determining the importance of high-order G-matrix diagrams. Forty-nine levels, with principal configuration $(1s)^4(1p)^{A-4}$, are used to fit the interaction parameters. Feingold's three-body vector interaction, arising from second-order effects of the tensor force, is verified to be manifestly important in this fit. A simple four-body interaction, designed to simulate α clustering, is also tested. The best fit obtained yields a root-mean-square deviation from experiment of 270 keV. (auth)

53605 (COO-1120-120) GAMMA DECAYS OF THE FIRST TWO T = 3/2 STATES OF ^{15}N. Kuan, H. M.; Umbarger, C. J.; Shirk, D. G. (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1970]. Contract AT(11-1)-1120. 23p. Dep. NTIS.

Gamma transitions from the first two T = 3/2 states of ^{15}N were studied via the reaction $^{14}C(p,\gamma)^{15}N$. The angular distributions of the three transitions from the lowest T = 3/2 state at $E_x = 11.61$ MeV are isotropic, in agreement with the $J^\pi = 1/2^+$ assignment for the state. For the second T = 3/2 state at $E_x = 12.52$ MeV the angular distributions are in agreement with $J^\pi = 5/2^+$. The transitions 12.52 → 5.27 and 12.52 → 6.33 MeV are essentially pure M1 and pure E1, respectively. A comparison of the strength of the allowed β^- decay of the ^{15}C ground state (the supposed parent analog state of the 11.61-MeV state of ^{15}N) to the 5.30-MeV state of ^{15}N with the strength of the 11.61 → 5.30 MeV gamma transition in ^{15}N suggests a considerable contribution from the orbital part in the M1 matrix element. The Zuker–Buck–McGrory shell-model wave functions for ^{15}N give a qualitative description of the observed γ decay, but the disagreement in decay strengths between theory and experiment and the omission of the known $1P_{1/2}$ hole state (6.33 MeV) suggest the need of ^{12}C core excitation in the ZBM calculation. (auth)

53606 (COO–1120-130) CALCULATION OF ISOSPIN MIXING IN ^8Be WITH CORRELATED WAVEFUNCTIONS. Anderson, R. K.; Goldhammer, Paul (Kansas Univ., Lawrence. Dept. of Physics). [1970]. 8p. Dep. NTIS.

Isospin mixing in the 2^+, 1^+, and 3^+ states of ^8Be is calculated with correlated radial wavefunctions obtained from reference-spectrum solutions of the Bethe–Goldstone equation. The off-diagonal matrix elements are approximately a factor of two larger than those calculated with oscillator wavefunctions and provide a very reasonable interpretation of the experimental data. (auth)

53607 (JINR–P2-5861) TRANSITION TOROIDAL FORM FACTORS OF LIGHT NUCLEI. Bluvshtein, R. E.; Dubovik, V. M.; Cheshkov, A. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 25p. (In Russian). Dep. NTIS (U. S. Sales Only).

In the long-wave approximation the transverse electrical multipole form factors (f.f.) $E_1(-k^2)$ are usually replaced by the charge f.f. $Q_1(-k^2)$. In reality $E_1(-k^2)$ have the exact form $E_1(-k^2) = \omega Q_1(-k^2) + k^2T_1(-k^2)$, where $T_1(-k^2)$ are the independent f.f. corresponding to static moments with special physical properties and are called toroidal. The transition of the nucleus ^9Be $J^P = \frac{3}{2}^- \rightarrow \frac{1}{2}^+$, induced by high-energy electrons scattered at large angles is considered. This example shows that the ordinary replacement $E_1 \rightarrow \omega Q_1$ is not justified quantitatively. A set of experiments for separate determination of the f.f. of the transition $\frac{3}{2}^- \rightarrow \frac{1}{2}^+$ is discussed in detail. (R.W.R.)

53608 (NP–18698) LABORATORI NAZIONALI DI LEGNARO (PADOVA) ANNUAL REPORT, 1969. Bizzeti, P. G.; Ricci, R. A.; Vingiani, G. B. (Istituto Nazionale di Fisica Nucleare, Padua (Italy)). 54p. Dep. NTIS (U. S. Sales Only).

CALCIUM-40— alpha reactions (α,γ) at 4.1 to 4.9 MeV, γ spectra from, (E)
CARBON-12—neutron elastic scattering at 1.9 to 5.2 MeV, cross sections and polarization for, (E)
CHLORINE-34—energy levels from phosphorus-31 $(\alpha,n\gamma)$ reactions, lifetimes of low lying, (E)
CHLORINE-35—energy level at 3.16 MeV from sulfur-34 (p,γ) reactions, lifetime of, (E)
HELIUM-3—reactions $(He\text{-}3,\alpha)$ with nitrogen-14 at 5 to 10 MeV, angular distributions and excitation functions for, (E)
LITHIUM-6—neutron elastic scattering at 4.1 MeV, angular distribution and optical-model parameters for, (E/T)
MANGANESE-55—proton reactions (p,n) at 1.3 to 3 MeV, neutron yield from, (E)
NITROGEN-14—helium-3 reactions $(He\text{-}3,\alpha)$ at 5 to 10 MeV, angular distribution and excitation function for, (E)
PHOSPHORUS-30—energy level scheme from silicon-29 (p,γ) reactions, (E)
SCANDIUM-45—energy levels from alpha Coulomb excitation, transition probabilities for, (E)
  —energy-level scheme from proton inelastic scattering, (E)
  —proton inelastic scattering at 2 to 5 MeV, p-γ coincidence spectra from, (E)
TITANIUM-44—energy level scheme from calcium-40 (α,γ) reactions, (E)
TITANIUM-48—proton elastic scattering at 1358 to 1370 keV, excitation function for, (E)
  —proton reactions (p,γ) at 1358 to 1370 keV, excitation function for, (E)
TITANIUM-50—proton elastic scattering at 1363 to 1379 keV, excitation function for, (E)

—proton reactions (p,γ) at 1363 to 1379 keV, excitation function for, (E)
—proton reactions (p,n) at 3.4 to 3.7 MeV, neutron yield from, (E)
—proton elastic scattering at 3.4 to 3.7 MeV, excitation functions for, (E)
VANADIUM-49—energy-level scheme from titanium-49 (p,nγ) reactions, (E)
VANADIUM-50—energy levels from alpha Coulomb excitation, transition probabilities for, (E)
VANADIUM-51—energy levels from alpha Coulomb excitation, transition probabilities for, (E) (J.W.R.)

53609 SUPERALLOWED FERMI DECAY OF ^{14}O AND ITS RELEVANCE TO WEAK INTERACTION THEORY. **Clark, G. J.** (Atomic Energy Research Establishment, Harwell, Eng.); **Freeman, J. M.; Robinson, D. C.; (and others).** Phys. Lett.; 35B: No. 6, 503-6(5 Jul 1971).

A new measurement of the half-life for ^{14}O decay was made, giving the result 70.580 ± 0.035 s. This brings the ft value for the pure Fermi decay of ^{14}O into agreement with the value for ^{26m}Al, and gives support to the recent estimate of a lower limit to the mass of the intermediate vector boson. (auth)

53610 STABILITY OF THE EVEN He-ISOTOPES. **Lombard, R. J.** (Institut de Physique Nucleaire, Orsay, France). Phys. Lett.; 35B: No. 6, 493-4(5 Jul 1971).

The energy-density formalism is used to calculate the total binding energy of the even He isotopes up to mass number 10. The results underline the importance of the symmetry energy and the 1 · s force in determining the stability of these nuclei against particle emission. (auth)

53611 PROJECTED HARTREE-FOCK CALCULATIONS FOR LIGHT NUCLEI WITH PHENOMENOLOGICAL AND REALISTIC EFFECTIVE INTERACTIONS. **Bouten, M.** (International Centre for Theoretical Physics, Trieste, Italy); **Bouten, M. C.; Depuydt, H.; Schotsmans, L.** Phys. Lett.; 35B: No. 6, 464-6 (5 Jul 1971).

Results of PHF calculations, carried out with the phenomenological force B1 of Brink and Boeker [Nucl. Phys., A91: 1(1967)] and with the realistic matrix elements of Faessler, et al. [Nucl. Phys. A155: 465(1967)], are compared; and the differences are analyzed in terms of differences in the oscillator matrix elements of the two potentials. (auth)

53612 ABSOLUTE VECTOR POLARIZATION CALIBRATION IN THE ELASTIC SCATTERING OF DEUTERONS ON CARBON AT MEDIUM ENERGIES. **Seibt, E.; Weddigen, C.** (Univ., Karlsruhe, Ger. Kernforschungszentrums, Karlsruhe, Ger.). Phys. Lett.; 35B: No. 6, 509-11(5 Jul 1971).

At medium energies and under certain circumstances double-scattering experiments can be used for absolute calibration of deuteron vector polarization. By this method the vector polarization (or analyzing power) iT_{11} was calibrated for the elastic scattering of deuterons by carbon at $\theta_{CM} = 39°$ as a function of deuteron energy; iT_{11} was found to be −0.160, −0.171, and −0.198 at 51, 46, and 41 MeV, respectively. The relative experimental errors are 11%. The small energy dependence makes carbon a useful polarizer and analyzer for deuteron vector polarization at medium energies. (auth)

53613 EXACT FINITE-RANGE DWBA ANALYSIS OF MULTI-NUCLEON TRANSFER REACTIONS. **Perrenoud, J.-L.; Devries, R. M.** (Univ. of California, Los Angeles). Phys. Lett.; 36B: No. 1, 18-20(9 Aug 1971).

Exact finite-range DWBA calculations were made both for a (d,p) process and for the reaction ^{9}Be(p,α)^{6}Li. In the case of the single-nucleon stripping, a very good agreement with the zero-range evaluation was found. For the multi-nucleon transfer, however, the exact results exhibit features that cast serious doubt upon the validity of the zero-range approximation. (auth)

53614 ^{16}O FIRST ROTATIONAL BAND FROM THE ^{12}C(^{6}Li, d)^{16}O REACTION. **Bassani, G.; Pappalardo, G.; Saunier, N.; Traore, B. M.** (CEN, Saclay, France). Phys. Lett.; 34B: 612-14(12 Apr 1971).

The most prominent peaks in the ^{12}C(^{6}Li,d)^{16}O spectra at energies up to 32 MeV correspond to levels in ^{16}O at 6.910 ± 0.006 MeV ($J^{\pi} = 2^{+}$), 10.346 ± 0.006 MeV (Γ_{CM} < 50 keV, $J^{\pi} = 4^{+}$), 16.304 ± 0.020 MeV (Γ_{CM} = 360 ± 40 keV) and 20.88 ± 0.06 MeV (Γ_{CM} = 720 ± 100 keV). The last two states are probably the higher members of the first rotational band with $J^{\pi} = 6^{+}$ and 8^{+}, respectively. A comparison with recent theoretical calculations is given. (auth)

53615 21.7 AND 22.1 MeV STATES IN ^{17}O. **Keyser, R. M.; Blue, R. A.; Weller, H. R.** (Univ. of Florida, Gainesville). Phys. Lett.; 34B: 602-4(12 Apr 1971).

Recently reported measurements of the ^{14}C(^{3}He,n)^{16}O and ^{14}C (^{3}He,γ)^{17}O cross sections have shown a strong resonance in ^{17}O at 22.17 ± 0.05 MeV. Detailed measurements of the ^{14}C(^{3}He,α) ^{13}C cross sections indicate that there are two broad levels having J^{π} values of ($5/2^{\pm}$, $7/2^{\pm}$) in this region. With the results of previous γ-ray measurements, the parity ambiguity can be resolved. The assignment was found to be ($5/2^{+}$, $7/2^{-}$). The level at 22.1 MeV appears to be a 3p-2h quasi-bound state. (auth)

53616 MONOPOLE FORM FACTORS AND THE α-CLUSTER MODEL. **Dutta, S.; Tomusiak, E. L.** (Univ. of Saskatchewan, Saskatoon). Phys. Lett.; 35B: No. 7, 554-6(19 Jul 1971).

It is shown that both the ground-state form factor and the inelastic form factor for the $0^{+} \rightarrow 0^{+}$ (6.06-MeV) transition in ^{16}O are well accounted for by the fully antisymmetrized α-cluster model. This model is applied to ^{12}C: the linear-chain intrinsic cluster structure is unable to give both the monopole matrix element and the form factor at higher q. (auth)

53617 DETERMINATION OF THE DEFORMATION IN ^{12}C FROM ELECTRON SCATTERING. **Nakada, A.** (Tohoku Univ., Sendai); **Torizuka, Y.; Horikawa, Y.** Phys. Rev. Lett.; 27: No. 11, 745-8(13 Sep 1971).

The elastic and inelastic form factors for the 0^{+}, 2^{+}, and 4^{+} states in ^{12}C were measured. The data were analyzed by treatment of the rotational excitation in the framework of the Nilsson model. A single intrinsic state that satisfies simultaneously the observed form factors for the intraband transitions was obtained. The deformations were extracted directly from the charge distribution of the intrinsic state. (auth)

53618 FORM FACTORS AT HIGH ENERGIES FOR ^{9}Be NUCLEUS AND SEPARATION OF π-MESON ABSORPTION BY NUCLEON PAIRS IN THE P STATE OF THE RELATIVE MOTION. **Golovanova, N. F.; Neudachin, V. G.** (Moscow State Univ.). Yadern. Fiz.; 13: No. 6, 1248-58(Jun 1971). (In Russian).

The C0, C1, C2, M1, and M3 form factors are calculated for elastic and inelastic electron scattering and quasielastic nucleon knock-out from 1s and 1p states. Nucleon cluster model was used with the wave functions based on the conception of two-center one-nucleon orbitals. The calculated results are in reasonable agreement with experiment. Various π-meson form factors are also calculated. The two-nucleon absorption of the π mesons on the 1s and 1p nucleons in the P state of the relative motion was under particular investigation. The form factors for the relative motion of the nucleon absorbing the π meson are discussed. (auth)

53619 INTENSIVE HIGH-ENERGY NEUTRON FLUXES BY CYCLOTRON BOMBARDMENT OF THICK LITHIUM AND BERYLLIUM TARGETS WITH 22-MeV DEUTERONS. **Daruga, V. K.; Krasnov, N. N.** At. Energ. (USSR); 30: No. 4, 399-400(Apr 1971). (In Russian).

The authors' earlier studies on the angular distribution of neutrons from the d + Li reaction were extended, measuring the absolute neutron yields at all energies in the 0 = 0° direction (with respect to the bombarding 22 ± 1 MeV deuteron beam) from thick lithium, beryllium, niobium, and uranium targets by means of a BF_3 counter. A stilbene scintillation spectrometer was used to measure the neutron spectra. The mean energy data and the estimated neutron yields are tabulated. A ZnS(Ag) + Plexiglas detector was used to measure the Y(0°)/Y(90°) neutron yield ratio at $E_n > 1.8$ MeV and to estimate the angular distribution for $E_n > 4$ MeV. (TTT)

53620 STUDIES OF THE INTERNAL BREMSSTRAHLUNG IN ATOMKI, DEBRECEN. **Varga, D.** ATOMKI (At. Kut. Intez.) Kozlem.; 12: 165-73(Nov 1970). (In Russian).

Study of the internal bremsstrahlung (IB) at the Atomic Research Institute, Debrecen was started in 1962. The annihilation radiation interfered strongly with the measurements and only in 1968 did D. Berenyi and his co-workers succeed in measuring the IB spectrum in the decay of ^{11}C. The following transitions have been studied: ^{11}C (β^{+}), ^{32}P (β^{-}), ^{55}Fe (ϵ), ^{36}Cl (ϵ), ^{143}Pr (β^{-}), ^{204}Tl (β^{-}), ^{54}Mn (ϵ). In the case of ^{11}C, the differential spectrum, i.e., the β^{+}–γ (B) coincidence was measured at an angle of 90°. By carefully chosing the experimental conditions, the effect of the annihilation radiation could be removed. In case of ^{32}P, the absorption method was used, together with the method based on the magnetic deviation of primary electrons. It was found that the external bremsstrahlung could not be completely eliminated; this accounts for the scatter of the experimental results. The theory is able to give the shape of the IB spectrum with a deviation of not more than 15%. No anomalies could be found in the spectrum of ^{36}Cl; earlier anomalies were attributed to the calculation method

XUM

used. ^{143}Pr exhibited an ambiguous first-order, forbidden transition. The differential IB spectrum of ^{204}Tl was found to differ from both permitted and forbidden theoretical curves. The relative intensity of the $(1.9 \pm 0.3) \cdot 10^4$ of ^{54}Mn agrees with the calculated value of $2.0 \cdot 10^4$. Additional details of these studies are presented in a paper by D. Berenyi (Magy. Fiz. Folyoirat, 18: 23(1970)). (TTT)

53621 ENERGY AND ANGULAR DISTRIBUTION OF RECOIL NUCLEI IN THE REACTION $^{12}C(p,pn)^{11}C$. Denisov, F. P.; Bulatov. B. P.; Volkov, A. A.; Dudkin, V. E.; Filin, L. N. Yadern. Fiz.; 13: No. 5, 925-7(May 1971). (In Russian).

Integral energy distributions of the recoil nuclei in the reaction $^{12}C(p,pn)^{11}C$ at the incident proton energy of 660 MeV are measured at the angles of 30, 105, and 135° to the beam direction. The obtained results are in satisfactory agreement with the results calculated by Benioff and Person in the impulse approximation with distorted waves and the exponential radial wave function. (auth)

53622 ~12.6 MeV DEUTERON VECTOR POLARIZATION IN ELASTIC SCATTERING ON ^9Be, ^{11}B, AND Ti NUCLEI. Zaika, N. I.; Kibkalo, Yu. V.; Levshin, E. B.; (and others) (Inst. of Nuclear Research, Kiev). Yadern. Fiz.; 13: No. 5, 928-33(May 1971). (In Russian).

Deuteron polarization angular dependences in the region of 15 to 70° cms are determined from the measurements of the left–right asymmetry in elastic scattering of the vector-polarized deuterons by ^9Be, ^{11}Be, and Ti nuclei. A polarized deuteron beam was obtained in the elastic scattering by C nuclei at angle 25°. The data are compared with the calculations from optical model. (auth)

53623 STUDY OF RESIDUAL INTERACTION ACCOUNTING FOR A LARGE NUMBER OF CONFIGURATIONS. Vinogradov, B. N.; Nemirovskii, P. E. (Inst. of Atomic Energy, Moscow). Yadern. Fiz.; 13: No. 5, 1016-21(May 1971). (In Russian).

The population number of particle and hole states in ^{16}O, ^{18}O, ^{40}Ca, ^{42}Ca, ^{48}Ca, ^{206}Pb, ^{208}Pb, and ^{210}Pb are calculated by the configuration interaction method. The question of the choice of phenomenological parameters of the residual interaction is discussed. (auth)

53624 POSSIBLE NATURE OF 0^+ LEVELS IN ^{16}O. Afanas'ev, G. N.; Bal'butsev, E. B. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 13: No. 5, 1022-5(May 1971). (In Russian).

Monopole excitations in a nucleus generated by fluctuations in the radial mass distribution are investigated. The energy of the vibrations connected with the rms radius fluctuations in ^{16}O is calculated, the result being in agreement with that of the recent estimate by Brueckner. The possibility of explaining in a similar way the 0^+ level at 6.06 MeV in ^{16}O is discussed. (auth)

53625 NARROW STRUCTURE NEAR 39 MeV IN ^{28}Si OBSERVED IN THE REACTION $^{12}C(^{16}O,\alpha)^{24}Mg$. Gastebois, J.; Ballini, R.; Charles, P.; Fernandez, B.; Fouan, J. (CEN, de Saclay, Gif-sur-Yvette, France). Lett. Nuovo Cim.; 2: No. 3, 90-4(17 Jul 1971).

Excitation functions for the reaction $^{12}C(^{16}O,\alpha)^{24}Mg$ were measured at several angles from 45 to 56 MeV. Structures that are relatively narrow and correlated with each other were observed in the excitation functions of the 15.15- and 16.55-MeV states of ^{24}Mg. It is suggested that these are observations of a doorway state consisting of three α particles interacting with an ^{16}O core. This interpretation yields a simple explanation for the selective population of highly excited states of ^{24}Mg by α-particle emission, if these states are of a two-α-cluster type. These data may constitute direct experimental evidence for the extreme case of the quartet model in sd-shell nuclei. (R.W.R.)

53626 POLARIZATION OF NEUTRONS EMITTED FROM THE REACTION $^{12}C(d,n)^{13}N$ UNDER 20^0 LAB. AT 2.75 AND 3.0 MeV. Jaccard, S.; Germond, J.-F.; Piffaretti, J.; Weber, J. (Univ., Neuchatel, Switzerland). Helv. Phys. Acta; 44: No. 4, 502-4(7 Jan 1971). (In French).

As a check of results published earlier and as a test of a liquid He polarimeter, two measurements of the polarization of the neutrons from the $^{12}C(d,n)^{13}N$ reaction at $\bar{E}_d = 2.71$ and 2.96 MeV were performed. Monte Carlo techniques are used for multiple scattering corrections. The results are $P_1 = (-36.5 \pm 2.2)\%$ and $P_1 = (-37.0 \pm 1.8)\%$, respectively, in good agreement with the results of Walter et al. [Phys. Rev., 141: 825 and 150: 821(1966)]. (auth)

53627 REACTION $^{13}C(^3He,\alpha)$ IN THE ENERGY RANGE 1.8 TO 5.4 MeV. Boehle, K.; Meyer, V.; Mueller, H. H. (Univ., Zurich). Helv. Phys. Acta; 44: No. 3, 367-86(15 May 1971). (In German).

Excitation curves in the energy range $E_{^3He} = 1.2$ to 5.4 MeV were measured in steps of 75 keV at $\theta_{lab} = 23$ or 40° and $\theta_{lab} =$ 150 or 157°. In the energy range $E_{^3He} = 2$ to 5 MeV angular distributions for the reaction $^{13}C(^3He,\alpha)^{12}C$ were measured in steps of 140 keV for the alpha particles α_0, α_1, and α_2, which correspond to the ground state and first and second excited states of ^{12}C. Absolute excitation cross sections are given and compared with results of other authors. Compound-nucleus formation is the primary reaction mechanism, which leads to overlapping levels in the ^{16}O nucleus with excitation energies of 24 to 26 MeV. Indications of isolated levels exist for $E_x = 25.3$, 25.6, and 26 MeV. Attempts are made to describe the angular distributions by means of a Hauser–Feshbach calculation as well as through interference between the mechanisms for compound-nucleus formation and direct reactions. (tr-auth)

53628 FORM FACTOR OF ^6Li. Chowdhury, S. M. M. R. (Atomic Energy Centre, Dacca, Pakistan); Afzal, S. A.; Suhrabuddin, S. Nucl. Sci. Appl., Ser. B; 5: 1-3(Oct 1969).

The charge form factor of ^6Li is calculated using the α–d cluster model of ^6Li. The wave functions for the alpha particle and the deuteron, which give correct binding energies and rms radii, are taken as the exponential and Hulthen forms, respectively. The theoretical results obtained with the model agree well with experiment. (auth)

53629 SOME FURTHER COMMENTS ON THE μ CAPTURE MECHANISM. Pratt, T. A. E. C. (Illinois State Univ., Normal). Lett. Nuovo Cim.; 2: No. 1, 1-6(3 Jul 1971).

Several aspects of μ-meson capture are considered. Study of the Doppler effect indicates a two-step process: $\mu^- + (A,Z) \rightarrow (A,Z-1) + \nu$ followed by the decay of the recoiling nucleus $(A,Z-1) \rightarrow (A-1,Z-1) + n + \nu$. Information on neutron decay widths confirms this conclusion. The radiative-capture process resulting in internal bremsstrahlung is also discussed. (R.W.R.)

53661 (COO-1120-119) STUDY OF $^{88}Sr(p,\gamma)^{89}Y$ AND $^{89}Y(p,\gamma)^{90}Zr$ FROM E_p = 2.3 TO 3.0 MeV. Umbarger, C. J.; Close, D. A.; Sievers, W. L.; Bearse, R. C. (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1970]. Contract AT(11-1)-1120. 30p. Dep. NTIS.

The $^{88}Sr(p,\gamma)^{89}Y$ and $^{89}Y(p,\gamma)^{90}Zr$ reactions were investigated in the energy range E_p = 2.3 to 3.0 MeV. Excitation functions for the transition to the ground state, with a total resolution of 2 keV, were determined for each reaction over this energy region. With the help of thick targets and both a single Ge(Li) detector and a Ge(Li) detector incorporated into a pair spectrometer, total summed spectra for the 700-keV region were obtained. The average total cross sections for the $^{88}Sr(p,\gamma_0)^{89}Y$ and $^{89}Y(p,\gamma_0)^{90}Zr$ reactions were 12 ± 5 μb and 17 ± 7 μb, respectively. These total summed spectra, which represent the total gamma-ray yield in this region, were examined for a possible dependence of the intensity on the J^π of the final state. The data suggest such a J-dependence hypothesis, but detailed theoretical analysis of the $^{88}Sr(p,\gamma)^{89}Y$ reaction does not completely agree with experiment. A spectrum from a Ge(Li) detector in coincidence with a NaI(Tl) detector was accumulated for the $^{88}Sr(p,\gamma)^{89}Y$ reaction. The decay scheme of the states of ^{89}Y up to an excitation energy of 3.621 MeV was determined, and the implications about spins and parities are consistent with accepted assignments. (auth)

53662 (COO-1468-9) PROGRESS REPORT [ON NUCLEAR PHYSICS], JANUARY 1970-DECEMBER 1970. Donahue, D. J.; McCullen, J. D.; McIntyre, L. C. Jr. (Arizona Univ., Tucson). 1971. 12p. Dep. NTIS.

Research in nuclear physics at the University of Arizona during 1970 is reported. Some of the completed but previously unreported work includes lifetime measurements for levels in ^{57}Ce, ^{29}P, ^{33}S, and ^{35}S. (J.W.R.)

53663 (COO-1505-48) DEEXCITATION PROCESSES IN NUCLEAR REACTIONS. Progress Report, May 1970-April 1971. Porile, Norbert T. (Purdue Univ., Lafayette, Ind. Dept. of Chemistry). May 1971. Contract AT(11-1)-1505. 26p. Dep. NTIS.

53664 (INP-751) FORMATION OF ^{8}Be: A POSSIBLE EXPLANATION OF SOME BROAD RESONANCES IN THE ELASTIC SCATTERING OF α PARTICLES. Budzanowski, A.; Grotowski, K.; Strzalkowski, A. (Institute of Nuclear Physics, Krakow (Poland). Jagellonian Univ., Krakow (Poland). Inst. of Physics). Mar 1971. 8p. Dep. NTIS (U. S. Sales Only).

A model is proposed explaining the broad resonances in elastic scattering of α particles by some light nuclei with the formation of ^{8}Be cluster. (auth)

53665 BREAKDOWN OF THE EXTREME STATISTICAL MODEL IN NEUTRON CAPTURE. Mughabghab, S. F. (Brookhaven National Lab., Upton, N. Y.). Phys. Lett.; 35B: No. 6, 469-71(5 Jul 1971).

Gamma-ray intensities due to thermal-neutron capture in ^{58}Ni can be predicted in terms of the valency-neutron model, in which an s-wave neutron is scattered "directly" into a low-lying $p_{1/2}$ or $p_{3/2}$ orbit in ^{59}Ni. Radiative width of the bound level at −28.5 ± 5 keV is determined to be 8.19 eV. (auth)

53666 ANGULAR MOMENTUM PROJECTION FROM NON AXIAL INTRINSIC STATES IN ^{28}Si. Watt, A. (Univ of Glasgow). Phys. Lett.; 35B: No. 6, 490-2(5 Jul 1971).

States of definite angular momentum projected from seven Hartree-Fock solutions of ^{28}Si are used as a basis in which to diagonalize the Hamiltonian. It is found that each of these HF solutions contributes appreciably to the low-energy spectrum. (auth)

53667 SYSTEMATICS OF NUCLEAR SINGLE PARTICLE STATES. Millener, D. J.; Hodgson, P. E. (Nuclear Physics Lab., Oxford). Phys. Lett.; 35B: No. 6, 495-7(5 Jul 1971).

The energies of 2s single-particle states are found to vary in a regular and systematic way from nucleus to nucleus in the range $35 \leq A \leq 65$. (auth)

53668 g-FACTOR OF THE ISOMERIC 9/2$^+$ STATE OF ^{81}Br. Christiansen, J.; Ingwersen, H.; Johann, H. G.; (and others) (Univ., Erlangen, Ger.). Phys. Lett.; 35B: No. 6, 501-2(5 Jul 1971).

The g factor of the isomeric $\frac{9}{2}^+$ state of ^{81}Br at 541 keV ($T_{1/2}$ = 32 μs) was measured by the stroboscopic method. The experimental value g = 1.261 ± 0.010 is compared with shell-model calculations. (auth)

53669 NEAR-VANISHING $0^+ \rightarrow 0^+$E0 MATRIX ELEMENT IN ^{58}Ni. Warburton, E. K.; Alburger, D. E. (Brookhaven National Lab., Upton, N. Y.). Phys. Lett.; 36B: No. 1, 38-40(9 Aug 1971).

The branching ratio of the 0^+ state of ^{58}Ni at 2.94 MeV for decay by e^+-e^- pair emission to the 0^+ ground state is measured to be $(2.2 \pm 0.5) \times 10^{-4}$. This corresponds to a matrix element of 3.5×10^{-5} single-particle units, which is three orders of magnitude smaller than any previously measured E0 matrix element. The near-vanishing of this matrix element is discussed. (auth)

53670 TENSOR SPIN-SPIN POTENTIAL IN THE ^{59}Co + n REACTION. Fisher, T. R. (Lockheed Palo Alto Research Lab., Calif.). Phys. Lett.; 35B: No. 7, 573-5(19 Jul 1971).

The strength of the tensor spin-spin potential in the reaction ^{59}Co + n is estimated from recent measurements of the spin-spin effect in the total cross section. (auth)

53671 DEFORMATIONS IN ^{20}Ne, ^{24}Mg, AND ^{28}Si FROM ELECTRON SCATTERING. Horikawa, Y. (Tokyo Univ.); Torizuka, Y.; Nakada, A.; (and others). Phys. Lett.; 36B: No. 1, 9-11(9 Aug 1971).

The data of elastic and inelastic electron scattering from 0^+, 2^+, 4^+ states in ^{20}Ne, ^{24}Mg, and ^{28}Si were analyzed within the framework of the rotational model. The fits to the data are achieved by extending the Nilsson orbits to include higher oscillator states and introducing an additional Y_4 deformation into the Nilsson field. (auth)

53672 ^{47}Ca FIRST EXCITED-STATE ANALOGUE. Vingiani, G. B. (Univ., Padua. INFN, Padua); Chilosi, G.; Rossi-Alvarez, C. Phys. Lett.; 34B: 597-8(12 Apr 1971).

The ^{46}Ca(p,p) ^{46}Ca reaction was investigated at seven angles in the E_p = 1845 – 1880 keV region, corresponding to the position of the analog of the ^{47}Ca first excited state. The analog is split into several components. Gamma rays from ^{46}Ca(p,γ) ^{47}Sc were detected with a Ge(Li) counter. Partial widths are deduced. The analog-to-antianalog M1 transitions are strongly inhibited. (auth)

53673 QUADRUPOLE QUINTET IN ^{57}Co. Covello, A. (Univ., Naples. Istituto Nazionale di Fisica Nucleare, Naples); Manfredi, V. R. Phys. Lett.; 34B: 584-6(12 Apr 1971).

A quintet of states with $I^\pi = \frac{3}{2}^-, \frac{5}{2}^-, \frac{7}{2}^-, \frac{9}{2}^-, \frac{11}{2}^-$ in ^{57}Co is studied by coupling the $f_{7/2}$, $s_{1/2}$ and $d_{3/2}$ proton-hole states with quadrupole and octupole core vibrations. The single-hole energies and the deformation parameters β_λ are taken from experiments on ^{58}Ni. Most of the observed features of the quintet are successfully reproduced. (auth)

53674 ANGULAR DEPENDENCE OF HALF LIFE MEASUREMENTS IN ^{75}As AND ^{197m}Hg. Baeverstam, U.; Hoejeberg, M. (Univ. of Stockholm). Nucl. Instrum. Methods; 95: No. 3, 611-13(1971).

It is shown that delayed coincidence measurements of the life times of nuclear levels can be influenced by perturbations of the angular correlation of the measured cascade. The true half life of the 280 keV level in ^{75}As is determined to $T_{1/2}$ = 0.289 ± 0.010 ns. (auth)

53675 BRANCHING IN THE β^+ DECAY OF THE ^{42}Sc GROUND STATE. Garvey, G. T. (Brookhaven National Lab., Upton, N. Y. Princeton Univ., N. J.); Jones, K. W.; Schwalm, D.; Warburton, E. K. Phys. Lett.; 35B: No. 7, 563-6(19 Jul 1971).

The β^+ branch of the decay of the ^{42}Sc 0^+ ground state to the 1.83-MeV 0^+ state in ^{42}Ca is estimated to have an intensity of 0.06%. A preliminary measurement is reported showing $\Gamma_{0_2^+}/\Gamma_{0_1^+} < 1.2 \times 10^{-3}$. (auth)

53676 $J^\pi = 5^-$ LEVEL IN ^{34}S AT 5.689 MeV. Greene, M. Wayne; Keuhner, J. A.; Pilt, A. A. McMaster Univ., Hamilton, Ont.). Phys. Lett.; 35B: No. 7, 560-2(19 Jul 1971).

A polarization--direction correlation measurement at two angles, θ_γ = 60° and 90°, resulted in an unambiguous spin assignment of $J^\pi = 5^-$ for the 5.69-MeV level of ^{34}S. (auth)

53677 MASS OF ^{25}Si AND THE ISOBARIC MULTIPLET MASS EQUATION. Trentelman, G. F.; Proctor, I. D. (Michigan State Univ., East Lansing). Phys. Lett.; 35B: No. 7, 570-2(19 Jul 1971).

The mass excess of ^{25}Si was measured as 3,832 ± 12 keV via determination of the Q value for the ^{28}Si(^{3}He, ^{6}He)^{25}Si reaction. The results are used to test the isobaric-multiplet mass equation for A = 25. (auth)

53678 ^{28}Si AND ^{32}S IN A CONTINUUM SHELL-MODEL CALCULATION. Barrett, R. F. (Univ., Frankfurt am Main); Rabie, A.; Delsanto, P. P.; Piazza, A. Phys. Lett.; 35B: No. 7, 551-3 (19 Jul 1971).

The total photo-absorption cross sections of ^{28}Si and ^{32}S are calculated in a 1p–1h continuum-shell-model approximation by using the eigenchannel reaction theory. (auth)

53679 COULOMB ENERGIES AND THE ANOMALY IN NUCLEAR MATTER RADII. Friedman, E. (Rutherford High Energy Lab., Chilton, Eng.). Phys. Lett.; 35B: No. 7, 543-5 (19 Jul 1971).

The extra symmetry potential due to isospin impurity is included in single-particle calculations of Coulomb displacemen energies. When a surface enhancement is included, the radii of the potential wells for the neutrons are found to be only very slightly smaller than the corresponding values for the protons. (auth)

53680 DISTORTION EFFECTS ON THE RECOIL MOMENTUM DISTRIBUTIONS IN (p,2p) REACTIONS. Gustafsson, C.; Berggren, T. (Lund Inst. of Tech., Sweden). Phys. Lett.; 35B: No. 7, 546-8(19 Jul 1971).

A DWIA analysis of recent measurements of the recoil momentum distributions in ^{28}Si(p,2p)^{27}Al shows that the observed variation can be explained within the framework of the optical model. (auth)

53681 STUDY OF DENSITY AND MOMENTUM DEPENDENT DELTA FUNCTION FORCES. Lassey, K. R. (McMaster Univ., Hamilton, Ont.); Volkov, A. B. Phys. Lett.; 36B: No. 1, 4-8 (9 Aug 1971).

The suitability of density- and momentum-dependent delta-function forces in nuclear calculations is studied using Hartree–Fock calculations in the 2s–1d shell. The effect of the compressibility upon deformation and rms radius is investigated. (auth)

53682 ISOSPIN NON-CONSERVING NUCLEON DECAYS OF T = $\frac{3}{2}$ LEVELS IN A = 21 NUCLEI. Cameron, J. M.; Neilson, G. C.; Sharma, T. C. (Univ. of Alberta, Edmonton). Phys. Lett.; 36B: No. 1, 35-7(9 Aug 1971).

The nucleon-decay branching ratios for the second T = $\frac{3}{2}$ states of the mass 21 system were measured. The ratios of the reduced widths to the ground state and 1.63-MeV state of ^{20}Ne show a marked asymmetry. (auth)

53683 K-MESON ABSORPTION ON NUCLEAR SURFACE. Komarov, V. A.; Krasnov, L. V.; Litvin, V. F. (Leningrad State Univ.). Yadern. Fiz.; 13: No. 6, 1189-91(Jun 1971). (In Russian).

By means of numerical solution of the Schroedinger equation with the Woods–Saxon potential with account of the spin–orbit interaction the proton and neutron density distributions in nuclei ^{16}O, ^{107}Ag, ^{58}Ni, ^{64}Ni are obtained that are used to estimate the proton–neutron ratio of the K^--meson absorption. It is shown that 75% of the effect of increase of the neutron-proton density ratio in the surface region for the heavy nuclei, as compared with the light nuclei, may be explained in framework of the simple shell model. This ratio for ^{64}Ni and ^{58}Ni is obtained to be ~2. (auth)

53684 STRUCTURE OF THE CROSS SECTION OF THE REACTION ^{40}Ca(γ,n) IN THE REGION OF THE GIANT RESONANCE. Ishkhanov, B. S.; Piskarev, I. M.; Kapitonov, I. M.; (and others) (Moscow State Univ.). Yadern. Fiz.; 13: No. 6, 1141-8(Jun 1971). (In Russian).

Yield curve is measured for the photoneutron reaction on ^{40}Ca nucleus in the region of the giant dipole resonance. The obtained cross section of the (γ,n) reaction has a number of maxima with widths of 300–600 keV. The experimental data are compared with the results of theoretical calculations. (auth)

53685 ELASTIC SCATTERING OF ELECTRONS FROM ^{40}Ar. Groh, J. L.; Singhal, R. P.; Caplan, H. S. (Saskatchewan Accelerator Lab., Saskatoon). Can. J. Phys.; 49: No. 15, 2073-5(1 Aug 1971).

The r.m.s. charge radius of argon-40 was measured by elastic electron scattering in the momentum transfer range $0.5 < q < 0.85$

fm^{-1}. The result obtained using a phase shift code and assuming a Fermi distribution was 3.473 ± 0.045 fm. (auth) (Canada)

53686 SPIN AND PARITY ASSIGNMENTS IN ^{77}As. Long, D. D.; Onega, R. J.; Sauer, R. C. (Virginia Polytechnic Inst., Blacksburg). Can. J. Phys.; 49: 2082-5(1 Aug 1971).

A directional correlation of the 0.56−0.63 MeV gamma rays following the beta decay of ^{77}Ge was obtained. The spin of the 1.19 MeV level of ^{77}As was determined as $^7/_2$. Parity assignments were made on the basis of the mixing ratios of the observed correlation for the 0.63 and 1.19 MeV levels. (auth) (Canada)

53687 MECHANISM OF THE REACTIONS ^{24}Mg(d,p)^{25}Mg AND ^{26}Mg(d,p)^{27}Mg IN THE DEUTERON ENERGY RANGE 1.3 TO 2.5 MeV. Omar, H. M.; Gontchar, V. Y.; Bakr, M. H. S.; Ali, M. A. (Atomic Energy Establishment, Cairo). Ann. Phys. (Leipzig); 26: No. 1, 8-22(1971).

The differential excitation functions of the low-lying levels for the reactions ^{24}Mg(d,p)^{25}Mg and ^{26}Mg(d,p)^{27}Mg have been measured in steps of 10 keV in a deuteron energy range 1.3 to 2.5 MeV and at angles 20° to 160° in steps of 20°. Thin isotopic targets (0.45 μ gm/cm^2) on Ni backing (0.5 micron) were used. Auto-correlations, angular and group cross-correlations, and probability distributions were calculated in terms of ERICSON's theory of statistical fluctuations. The mean coherence width Γ for both reactions was found to be equal to 32 keV which corresponds to a life time $\tau = 2.1 \times 10^{-20}$ sec of the compound nucleus formation. (auth)

53688 ENERGY AND ANGULAR CHARACTERISTICS OF ^{8}Li FRAGMENTS FROM FISSION OF ALUMINUM BY 660-MeV PROTONS. Azimov, S. A.; Aripov, R.; Beter, E. V.; Lozhkin, O. V. (Inst. of Nuclear Physics, Tashkent). Dokl. Akad. Nauk Uzb. SSR; No. 9, 22-4(1970). (In Russian).

The fragmentation of aluminum nuclei by 660-MeV protons results in ^{8}Li fragments. By drawing an analogy with reaction diagrams involving ^{9}Be and ^{12}C target nuclei, and disregarding spin effects, the energy spectra for ^{8}Li fragments was calculated and plotted for angles from 0° to 90°, and the angular distribution of such fragments was derived for small and large velocities. (K.S.W.)

53689 ELASTIC SCATTERING OF ALPHA PARTICLES BY ^{20}Ne AND ^{24}Mg. Takeda, Minoru; Kato, Syohei; Yamazaki, Takashi (Osaka Univ.). J. Phys. Soc. Jap.; 31: No. 3, 625-31 (Sep 1971).

Differential cross sections for the elastic scattering of alpha particles by ^{20}Ne and ^{24}Mg have been measured at laboratory angle of 176° as a function of incident energy in the range 20 to 24.5 MeV. In alpha−^{20}Ne scattering seven resonances have been observed. Angular distributions have been obtained at nine energies. Tentative spin and parity assignments have been made for five resonances, corresponding to the compound ^{24}Mg nucleus, by phase shift analysis. In the case of alpha−^{24}Mg scattering, many peaks appeared in the excitation curve which shows rather complicated features. Angular distributions have been measured at nine energies. (auth)

53690 LIFETIME MEASUREMENTS FOR ^{23}Na STATES BELOW $E_x = 4$ MeV. Bister, M.; Anttila, A.; Piiparinen, M. (Helsinki Univ.). Ann. Acad. Sci. Fenn., Ser. A VI; No. 349, 1-8 (1970).

The mean lives of seven ^{23}Na states below $E_x = 4$ MeV were measured with the Doppler-shift attenuation method in the ^{22}Ne(p, γ)^{23}Na reaction. Targets were prepared by implanting Ne ions into tantalum, molybdenum, and titanium. Excitation energies and branchings of the states in ^{23}Na are also presented. (auth) (Finland)

53691 SPIN AND PARITY OF THE 4458 keV STATE IN ^{32}S. Viitasalo, M.; Forsblom, I. (Helsinki Univ.). Commentat. Phys.-Math.; 40: 149-54(1970).

The resonance state spin and parity in the $E_p = 1949$ keV resonance in the ^{31}P(p,γ)^{32}S reaction were determined as 3^+. By measuring the angular distribution on the strong (66%) transition from the resonance state to the 4458-keV state, the spin and parity of this state was determined as 4^+. The 5410-keV level is proposed as a 3^+ level. A precise determination gave the energy values of the first and fourth excited states in ^{32}S as 2229.8 ± 0.3 keV and 4458.1 ± 0.7 keV. (auth) (Finland)

53692 ^{22}Ne(p,γ)^{23}Na REACTION AT PROTON ENERGIES FROM 1300 TO 2600 keV. Weckstroem, K.; Oesterlund, K. (Helsinki Univ.). Commentat. Phys.-Math.; 40: 141-7(1970).

In an investigation of the ^{22}Ne(p,γ)^{23}Na reaction, 34 unreported (p,γ) resonances were found in the energy region $E_p = 1300$ to 2600 keV. The gamma decay of ten selected resonances was determined at $E_p = 1588$, 1618, 1625, 1718, 1726, 1760, 1834, 1859, 1905 and 1997 keV, respectively. (auth) (Finland)

53693 NEUTRON INELASTIC SCATTERING CROSS SECTIONS FOR IRON, NICKEL, NIOBIUM, AND TANTALUM FROM THRESHOLD TO 1.8 MeV. Rogers, V. C.; Beghian, L. E.; Clikeman, F. M. (Massachusetts Inst. of Tech., Cambridge). Nucl. Sci. Eng.; 45: No. 3, 297-307(Sep 1971).

Gamma-ray production cross sections were measured for (n,n′γ) reactions in ^{56}Fe, ^{58,60,62}Ni, and ^{181}Ta for neutron energies from threshold to 1.8 MeV. Neutron inelastic scattering level excitation functions were then obtained from the gamma-ray production cross sections by correcting for internal conversion and for cascading transitions. A 17-cm^3 Ge(Li) spectrometer system was used to measure the gamma-ray spectra. The experimental results were compared with statistical model calculations using optical model transmission coefficients. Corrections for resonance interference and width fluctuations were also included in the computations. In general, the calculated results agreed with experiment to within the quoted error. Furthermore, the results for the deformed nucleus ^{181}Ta indicated that a spherical optical model potential may be used successfully to obtain the level excitation functions for this nucleus. (auth)

53694 INELASTIC INTERACTION CROSS SECTION OF NUCLEAR-ACTIVE PARTICLES WITH NUCLEI OF ALUMINUM AND LEAD ATOMS. Vardumyan, D. T.; Marikyan, G. A.; Matevosyan, K. A. (Inst. of Physics, Erevan). Izv. Akad. Nauk Arm. SSR, Ser. Fiz.; 5: 342-6(1970). (In Russian).

An experimental arrangement is described consisting of an ionization calorimeter and wide-gap spark chambers of 106 × 60 cm^2 operating area with aluminum and lead targets placed between them. Combined operation of the calorimeter and spark chambers allows one to investigate inelastic nuclear interactions, detecting primary and secondary particles in the chambers and measuring the primary particle energy in the calorimeter. Preliminary results are presented which are in good agreement with the data of other authors. (auth)

53695 ENERGY AND ANGULAR CHARACTERISTICS OF ^{8}Li FRAGMENTS FROM THE SPALLATION OF ALUMINUM NUCLEI BY 660 MeV PROTONS. Azimov, S. A.; Aripov, R.; Beter, E. V.; Lozhkin, O. V. (Inst. of Nuclear Physics, Tashkent). Izv. Akad. Nauk Uzb. SSR, Ser. Fiz.-Mat. Nauk; No. 5, 66-9(1970). (In Russian).

The release of ^{8}Li fragments from aluminum nuclei by 660 MeV protons was studied with a vacuum chamber and photoemulsion as a detector. In a single irradiation of the thin (2.4 mg/cm^2) aluminum foil, approximately 10^{13} protons/cm^2 yielded about 100 ^{8}Li traces. Differential energy spectra of the ^{8}Li fragments were obtained at various angles. The angular distribution was determined for slow and fast fragments of ^{8}Li. (K.S.W.)

53696 EMISSION OF CHARGED PARTICLES AFTER THE CAPTURE OF SLOW NEUTRONS IN ^{22}Na. Ehehalt, R.; Morinaga, H.; Shida, Y. (Technical Univ., Munich). Z. Naturforsch.; 26a: 590-1(Mar 1971). (In German).

The energy spectrum of charged particles was studied for ^{22}Na exposed to a slow-neutron beam of 3×10^6 n/sec · cm^2. The charged particles were analyzed with a Si detector. Protons of 2.25 MeV formed a strong line in the spectrum that resulted from the decay of the compound nucleus ^{23}Na to the first excited state of ^{22}Ne. Neither the protons belonging to the ground level of ^{22}Ne nor the α particles originating from the reaction ^{22}Na(n,α)^{19}F could be detected. Two energy lines at 1.43 and 1.77 MeV were identified as α particles from the undesired reaction ^{10}B(n,α)^{7}Li. (H.B.G.)

53697 COMPLETE EXPERIMENT IN BETA DECAY (A SURVEY OF CONTEMPORARY EXPERIMENTAL DATA). Gaponov, Yu. V. Usp. Fiz. Nauk; 102: 211-38(Oct 1970). (In Russian).

According to current theories of the universal weak interaction, beta decay of the neutron and complex nuclei is described as a weak process of the lepton−hadron type with conservation of strangeness, and knowledge of its Hamiltonian permits conclusions concerning the fundamental properties of the weak interaction as a whole. Theoretically, the effective Hamiltonian of beta interactions is obtained from the general relativistically-invariant form by assumptions concerning the practicability of three additional hypotheses—concerning the realization in weak interactions of V-A invariances, the helicity of neutrinos, and CP invariance. The form of such a Hamiltonian is determined from the sum total of experiments for determination of the spectrum and the angular and polarization correlations of the decay products; combining the results of all these experiments permits evaluation of all of the constants of the general relativistically-invariant Hamiltonian. The collection of such experiments forms a complete experiment. The main types of experiments constituting a complete experiment in the case of beta decay are examined and analyzed in detail. Numerical estimates of different parameters of general Hamiltonian are obtained. The degree of practicability of each of the enumerated hypotheses in beta decay is evaluated. (77 references) (tr-auth)

53698 QUARTET STRUCTURE AND COLLECTIVE EFFECTS IN THE SCANDIUM ISOTOPES. Spicer, B. M. (Catholic Univ. of America, Washington, D. C. National Bureau of Standards, Washington, D. C.); Danos, M. Z. Phys.; 246: No. 2, 97-103 (1971).

The systematics of the excitation energies of the nonnormal parity states of the scandium isotopes is interpreted in terms of the formation of a quartet of $1f_{7/2}$ nucleons. Calculation of the B(E2) value for a typical radiative transition between nonnormal parity states in ^{43}Sc, using this model, shows that the transition must involve more than the single quartet formed in the $1f_{7/2}$ shell; that is, core polarization is an important factor in determining the B(E2) value. (auth)

53699 EXCITATION FUNCTIONS OF REACTIONS INDUCED BY ALPHA PARTICLES WITH MAXIMUM ENERGY OF 38 MeV ON COPPER ISOTOPES. Zhukova, O. A.; Kanashevich, V. I.; Laptev, S. V.; Chursin, G. P. Izv. Akad. Nauk Kaz. SSR, Ser. Fiz.-Mat.; No. 4, 1-8(Jul-Aug 1970). (In Russian).

By using the method of induced activity of stacked foils, excitation functions for the reactions ^{63}Cu(α,n)^{66}Ga, ^{63}Cu(α,2n)^{65}Ga + ^{63}Cu(α,pn)^{65}Zn, ^{65}Cu(α,2n)^{67}Ga, and ^{65}Cu(α,3n)^{66}Ga were measured from threshold to the maximum α-particle energy of 38.0 ± 0.3 MeV. The results of the measurements are compared with those of other authors. (tr-auth)

53700 DECAY OF ^{28}Si. Ahmed, N. (Atomic Energy Centre, Dacca, Pakistan); Rahman, M. A.; Awal, M. A.; (and others). Nucl. Sci. Appl., Ser. B; 5: 11-17(Oct 1969).

The ^{27}Al(p,γ)^{28}Si reaction in the energy range of E_p = 0.850 to 3.00 MeV was investigated. Gamma-ray spectra for five resonances at E_p = 0.922, 1.326, 1.799, 2.044, and 2.197 MeV were measured and analyzed by the "peeling off" method. Attempts are made to propose decay schemes at these resonance energies. (auth)

53701 PROTON SPIN FLIP IN INELASTIC SCATTERING. Ahmed, M. (Atomic Energy Centre, Dacca, Pakistan). Nucl. Sci. Appl., Ser. B; 5: 18-22(Oct 1969).

Proton spin-flip probabilities for the reactions ^{54}Fe(p,p') (Q = −1.41 MeV) and ^{60}Ni(p,p') (Q = −1.33 MeV) were measured at an incident energy of 10 MeV. The results are compared with the predictions of vibrational-collective-model coupled-channels calculations and Hauser–Feshbach statistical-model calculations. (auth)

53702 FLUCTUATIONS IN TOTAL CROSS SECTION OF Fe FOR 1- TO 2-MeV NEUTRONS. Hussain, M. (Univ. of Dacca, Pakistan); Islam, E.; Ameen, N.; Musa, Md. Nucl. Sci. Appl., Ser. B; 5: 23-7(Oct 1969).

Total neutron cross sections for Fe were measured between 1 and 2 MeV neutron energy at intervals of ~25 keV with statistical uncertainties ~2%. The data show fluctuations with energy in agreement with Agodi and Pappalardo's theory [Nucl. Phys., 47: 129(1963)] based on fluctuations in widths and spacings of compound-nucleus levels. The autocorrelation technique is used to estimate the ratio of average level width to level spacing, $\langle\Gamma\rangle/D$, from the observed fluctuations. The value seems to be higher than expected. Structures with widths intermediate between those of compound-nucleus resonances and single-particle resonances also seem to appear. (auth)

53703 RESONANCE STRENGTHS, BRANCHING RATIOS, AND MEAN LIFETIMES OF NUCLEAR ENERGY LEVELS IN ^{23}Na. du Toit, Z. B.; de Kock, P. R.; Mouton, W. L. (Univ. of Stellenbosch, S. Afr.). Z. Phys.; 246: No. 2, 170-82(1971).

The gamma decay of the ^{22}Ne(p,γ)^{23}Na resonances in the proton energy range E_p = 1.0 → 2.0 MeV was investigated with a 20-cm^3 Ge(Li) detector. Implanted targets were used. The absolute strengths of the strongest resonances were determined, and the branching ratios of twenty resonance levels and several bound states are reported. Mean lifetimes of the levels at E_x = 2.078 MeV (18.7 ± 3.5 fs), 2.393 MeV (580^{+370}_{-190} fs), 2.641 MeV (88^{+20}_{-11} fs), 2.985 MeV ($4.0^{+1.3}_{-1.0}$ fs), 3.679 MeV (24^{+7}_{-4} fs), 3.915 MeV ($7.4^{+3.5}_{-2.0}$ fs), and 4.775 MeV (<2.0 fs) were obtained from measurements of the gamma-ray Doppler shifts. (auth)

53704 SPIN DETERMINATION OF VARIOUS NUCLEAR LEVELS BY MEASUREMENT OF THE CIRCULAR POLARIZATION OF GAMMA RAYS AFTER CAPTURE OF POLARIZED THERMAL NEUTRONS. Knerr, R.; Vonach, H. (Technische Univ., Munich). Z. Phys.; 246: No. 2, 151-69(1971). (In German).

The circular polarization of the gamma radiation following capture of polarized slow neutrons in natural titanium, chromium, nickel, zinc, and selenium was investigated by means of a polarimeter using transmission of magnetized iron as polarization-sensitive effect. A large Ge diode was used for measurement of capture gamma spectra. By this way the spins of 55 levels in ^{49}Ti, ^{51}Cr, ^{53}Cr, ^{54}Cr, ^{59}Ni, ^{61}Ni, ^{63}Ni, ^{65}Zn, ^{67}Zn, ^{68}Zn, ^{77}Se, and ^{78}Se were determined. In 37 cases existing spin determinations were confirmed, in 1 case out results contradict earlier spin determinations, and 17 new spin assignments are made. (auth)

53705 EXPERIMENTS ON TRANSFER REACTIONS. Haeberli, W. (Univ. of Wisconsin, Madison). pp 235-66 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

Experimental research on transfer reactions performed in the period 1965 to 1970 is reviewed. The progress made in the measurement of polarization effects in transfer reactions is described in detail. The interplay that has occurred between experiment and theory as polarization data has become available is pointed out. Some areas where additional experiments are needed are discussed. 53727 (A/CONF.49/P–447) SEARCH AND SYNTHESIS OF FAR TRANSURANIUM ELEMENTS. Flerov, G. N. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). Apr 1971. 14p. (In Russian). (CONF-710901–488). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Methods of producing and investigating new transuranium elements are analysed. The analysis of three research development stages of transuranium elements is briefly presented. The experimental results of the synthesis and investigations of 102-105 isotopes obtained in the Laboratory of nuclear reactions are discussed. It is shown that the physical and chemical investigations of these elements made it possible defining the bound of actinide element group and getting information about the properties of their radioactive decay. The progress in search and synthesis methods of far transuranium elements for a new stability region from $108 \le Z \le 128$ $N \sim 184$ is considered. The results of searching of spontaneous fission super heavy elements by means of dielectric detectors and large proportional counters are discussed. Possible trends of the progress in searching of far transuranium elements and identifying methods of these elements are considered. These methods are: measurement of the number of neutrons per spontaneous fission of superheavy elements; determination of mass number of the isotopes of these elements by means of an electromagnetic separator, etc. Some possibilities of synthesis and identification of far transuranium elements using accelerated heavy argon ions (Zn, Kr, Xe, etc.) are presented. It is shown that by using ions heavier than Xe, fission may be the most promising method of synthesis of superheavy elements. (auth)

53728 (AECD/EP-18) NEUTRON TOTAL CROSS SECTION DATA MEASURED WITH THE 3-MeV A.E.C.D. VAN-DE-GRAAFF ACCELERATOR. Ameen, Nurul; Husain, Mozammel (comps.) (Atomic Energy Centre, Dacca (Pakistan)). Dec 1970. 21p. Dep. NTIS (U. S. Sales Only).

A compilation of the neutron total cross-section data measured with the 3-MeV Van de Graaff accelerator at Atomic Energy Centre, Dacca, is presented. The measurements were made using the transmission method with the d-c beam from the machine. The neutrons were separated from the gamma rays by using n–γ discrimination methods. (R.W.R.)

53729 (AECL-3865) PHYSICS DIVISION PROGRESS REPORT, OCTOBER 1–DECEMBER 31, 1970. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.). 98p. (PR-P-88). Dep. NTIS (U. S. Sales Only). AECL $2.00.

Research progress at the Physics Division of AECL from Oct. 1 to Dec. 31, 1970 is reported. Brief sketches of the activities of the nuclear physics branch, the general physics branch, the neutron physics branch, the theoretical physics branch, and the mathematics and computation branch are provided. (J.W.R.)

53730 (AWRE-O-44/71) EVALUATION OF $\bar{\nu}$ FOR ^{238}U. Mather, D. S.; Bampton, P. F. (Atomic Weapons Research Establishment, Aldermaston (England)). Jul 1971. 17p. Dep. NTIS (U. S. Sales Only). UK 15p. (EANDC(UK)-136-AL).

An evaluation using data available up to December 1970 was made of direct measurements for $\bar{\nu}$ for the neutron-induced fission of ^{238}U. A set of three straight lines is found to give the best representation of the variation of $\bar{\nu}$ with neutron energy, and values specifying this evaluation were produced for entry in a new Data File DFN-272. (auth)

53731 (CONF-701002–, pp 221-45) PRECISE LOW-ENERGY FISSION CROSS SECTIONS. Deruytter, A. J. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

This paper deals with precise 2200 m/sec fission-cross-section measurements, especially for ^{235}U and ^{239}Pu. Direct and indirect (spectrum dependent) data and their main sources of errors are discussed: (1) the determination of the absolute amount of fissile atoms; (2) the absolute counting of the number of fission events; (3) the precise knowledge of a reference cross section and its use; and (4) the spectrum dependence of indirect measurements. Based on this discussion, average values for the 2200 m/sec values of 587.4 ± 2.7 b for ^{235}U and 742.1 ± 3.2 b for ^{239}Pu and a σ_f ratio for ^{239}Pu/^{235}U of 1.263 ± 0.008 are proposed. The normalization of ^{235}U and ^{239}Pu fission cross sections in the resonance region is also discussed, and a common normalization of ^{235}U data based on a fission integral from 7.8 to 11 eV of 240.0 ± 2.1 b · eV is suggested. (auth)

53732 (CONF-701002–, pp 246-56) FAST FISSION CROSS SECTIONS AND FLUCTUATIONS. Bowman, C. D. (California Univ., Livermore. Lawrence Radiation Lab.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The effect of fluctuations in the ^{235}U fission cross section on absolute fission-cross-section measurements in the thousand-electron-volt and million-electron-volt range is considered. It is shown that present techniques using primarily charged-particle-induced neutron sources and spot-normalization techniques probably are inadequate to provide the ≤2% accuracy requested for most fissile isotopes. A program of experiments involving, primarily, white-source techniques is proposed for obtaining the required accuracy. It circumvents most of the problems of absolute fission and flux monitoring and also properly handles the effects of intermediate structure. (auth)

53733 (CONF-701002–, pp 257-71) NEW ABSOLUTE MEASUREMENT OF THE NEUTRON-INDUCED FISSION CROSS SECTIONS OF ^{235}U, ^{239}Pu, AND ^{241}Pu FROM 17 keV TO 1 MeV. Szabo, I.; Filippi, G.; Huet, J. L.; Leroy, J. L.; Marquette, J. P. (Commissariat a l'Energie Atomique, Cadarache (France). Centre d'Etudes Nucleaires).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The fast-neutron-induced fission cross sections of ^{235}U, ^{239}Pu, and ^{241}Pu have been measured from 17 keV to 1 MeV with monoenergetic neutrons from the Cadarache Van de Graaff. Neutron flux was measured with standard counters, which were calibrated by three independent absolute methods. Fluctuation in the response time of the fission chambers was reduced to less than 7 nsec with a special electronic arrangement. This fast response made it possible to use the time-of-flight method to separate fission events due to background neutrons. Monte Carlo calculations were used to obtain corrections for neutron scattering from the walls of the fission chamber and from the neutron source. The total error in the measured cross sections was of the order of 3%. Comparison is made with the results of other laboratories. In addition to the cross sections, a new value for the spontaneous fission half-life of ^{240}Pu was determined: $T_{½} = 1.18 \pm 0.024 \times 10^{11}$ years. (auth)

53734 (CONF-701002–, pp 281-4) MEASUREMENTS OF THE ^{235}U FISSION CROSS SECTION AT 552 AND 644 keV. Poenitz, W. P. (Argonne National Lab., Ill.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The fission cross section of ^{235}U has been measured at 552 and 644 keV using the associated activity method. The ^{51}Cr activity associated with the neutrons from the ^{51}V (p,n) source reaction has been used to determine the neutron flux. The fission events have been measured in a spherical ionization chamber that surrounds the neutron source. The results are 1.085 ± 0.043 b at 552 keV and 1.066 ± 0.042 b at 644 keV. (auth)

53735 (CONF-701002–, pp 285-312) NEUTRON-CAPTURE-CROSS-SECTION STANDARDS. Carlson, A. D. (Gulf Radiation Technology, San Diego, Calif.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

Techniques employed in measuring capture cross sections are reviewed to determine what conditions should be satisfied by capture-cross-section standards. The elements satisfying most of these conditions are Rh, Ag, In, I, Tb, Ho, Tm, Ta, Re, Ir, and Au. For each of these elements, the measurements of the capture cross section are examined to determine the status of the cross section as a working standard. (auth)

53736 (CONF-701002–, pp 313-19) ROLE OF SELF-SHIELDING AND MULTIPLE SCATTERING IN CAPTURE-STANDARDS WORK. Froehner, F. H. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Angewandte Kernphysik).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

A short review is given on the self-shielding and multiple-scattering corrections in capture-standards work. Three areas are treated in detail: (1) multiple-interaction corrections to thermal capture data, (2) yield calculations for "saturated resonance" normalization, and (3) correction of average capture cross-section and shell-transmission data for effects of unobserved resonances. (auth)

53737 (CONF-701002–, pp 320-6) ABSOLUTE CROSS SECTIONS OF ^{197}Au AND ^{238}U. Poenitz, W. P. (Argonne National Lab., Ill.).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The absolute cross-section measurements of ^{197}Au(n,γ) and ^{238}U(n,γ) are discussed. Very good agreement is found in the data taken in the last 10 years. The uncertainty of average cross sections has been estimated to be about 5% for ^{238}U(n,γ) and 3% for ^{197}Au(n,γ). (auth)

53738 (CONF-701002–, pp 465-9) MEASUREMENTS OF THE HALF-LIVES OF THE URANIUM ISOTOPES. De Bievre, P.; Lauer, K. F.; Le Duigou, Y.; Moret, H.; Mueschenborn, G.; Spaepen, J.; Spernol, A.; Vaninbroukx, R.; Verdingh, V. (European Atomic Energy Community, Geel (Belgium). Central Nuclear Measurements Bureau).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

At the Central Bureau for Nuclear Measurements in Geel, a long-term program in the field of accurate determination of uranium half-lives is under way. At the moment only the measurements on ^{234}U are worth mentioning. A recapitulation of the many results obtained using different source materials and assay techniques is given. The results are briefly discussed, and possible systematic errors are mentioned. A "best" value of 2.445 × 10^5 years is calculated, to which for the moment a maximum error of ±0.7% is attributed. Further measurements to improve the accuracy together with an extension of the studies to ^{235}U and ^{233}U will be undertaken. (auth)

53739 (FEI–195) VARIATIONS OF CUMULATIVE YIELD OF FRAGMENTS OF PRECURSORS OF DELAYED NEUTRONS OF ^{232}Th. Maksyutenko, B. P. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Obninsk. Fiziko-Energeticheskii Institut). 1970. 18p. (In Russian). Dep. NTIS (U. S. Sales Only).

The relative yields of delayed neutrons from the fissioning of thorium-232 were determined for neutron energies of 1.7, 1.9, 2.1, 2.3, and 3.0 MeV. The measurements were conducted on a van de Graaff machine, by using the T(p,n)^{3}He reaction on a target of 1.6 mg/cm^2 thickness. Ten groups were distinguished, of which seven were pure precursors of delayed neutrons. The charge distribution for fission was established from the yields of delayed neutrons from bromine isotopes. The original charge distribution had the same width at all energies, viz. 0.537 ± 0.016 units of charge. Between 1.7 and 2.5 MeV, an increase in the yield of bromine isotopes was observed; between 2.5 and 3.0 MeV, a decrease occurred on account of the contribution from the beta decay of selenium isotopes. This effect was associated with a displacement of the charge in fission. The maximum displacement for the transition from 1.9 MeV to 2.3 MeV amounted to 0.17 units of charge. The values of the largest probable charge was determined for mass numbers at the energies indicated. (tr-auth)

53740 (FRNC-TH–41) STUDY OF NEUTRON HOLE STATES IN THE N = 82 NUCLEI. Chaumeaux, Alain (Paris Univ., Orsay (France). Faculte des Sciences). [dn]. 43p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

A systematic study was made of neutron hole states in the closed N = 82 shell by investigating (p,d) pick-up reactions at 24.55 MeV with ^{138}Ba, ^{140}Ce, ^{142}Nd, and ^{144}Sm resulting in the formation of the following N = 81 nuclei: ^{137}Ba, ^{139}Ce, ^{141}Nd, and ^{143}Sm, respectively. The angular distributions measured are compared to those predicted by distorted-wave calculations using the DWUCK program. The spectroscopic factors are deduced from this comparison. In order to obtain sufficiently precise values for the spectroscopic factors a high resolution device was used; this device is described. (France)

53741 (IAE–1976) MEASURING THE γ-RAY SPECTRA OF ^{150}Sm(n,γ)^{151}Sm AND ^{151}Sm(n,γ)^{152}Sm REACTIONS IN A SAMPLE IN WHICH ^{149}Sm IS BURNED OUT AND ^{151}Sm IS ACCUMULATED. Groshev, L. V.; Demidov, A. M.; Leonov, V. F.; Sokolovskii, L. L. (Institut Atomnoi Energii, Moscow (USSR). 1970. 15p. (In Russian). Dep. NTIS (U. S. Sales Only).

The γ-ray spectra from radiative capture of thermal neutrons by ^{150}Sm nuclei and radioactive ^{151}Sm nuclei were measured by means of a monocrystalline Ge(Li) γ spectrometer. The required purity of the sample with respect to ^{149}Sm was achieved by burning out the ^{149}Sm in an integral neutron fluence of 2.2 × 10^{20} n/cm^2. The binding energies of the neutron in the ^{151}Sm (5,596 ± 1 kiloelectron volt) and in the ^{152}Sm (8,258 ± 1 kiloelectron volt) were determined. The energies and intensities were determined for the γ lines separated from the spectrum. Schematics were constructed for the γ transitions of ^{151}Sm and ^{152}Sm. (JPRS)

53742 (INR–1275) (n,α) REACTIONS ON DYSPROSIUM ISOTOPES INDUCED BY 14.2 MeV NEUTRONS. Jaskola, M.; Osakiewicz, W.; Turkiewicz, J.; Zemlo, L.; Madej, M.; Stodolska, A. (Institute of Nuclear Research, Warsaw (Poland)). 1971. 17p. Dep. NTIS (U. S. Sales Only).

The energy distributions of alpha particles from (n,α) reactions with ^{160}Dy, ^{161}Dy, ^{163}Dy, and ^{164}Dy induced by 14.2-MeV neutrons at 0° were measured using a semiconductor-detector technique. They cannot be accounted for by the evaporation theory. The shapes of the experimental spectra suggest the presence of the direct effect with strong excitation of single-neutron levels in the final nucleus. (auth)

53744 (JINR-P-7-5814) SEARCH FOR TRACKS OF THE SPONTANEOUS FISSION FRAGMENTS OF FAR TRANSURANIUM ELEMENTS IN NATURAL MINERALS. Otgonsuren, O.; Perelygin, V. P.; Tretiakova, S. P.; Vinogradov, Yu. A. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Nuclear Reactions). 1971. 14p. (In Russian). Dep. NTIS (U. S. Sales Only).

Using the dielectric track detector method a search was made for the tracks of spontaneous fission fragments of far transuranium elements in a great number of minerals containing an admixture of heavy elements. An excessive density of the fission fragment tracks was observed for two samples—mica and quartz containing the pyrite inclusions. The hypothesis on spontaneous fission of unknown transuranium nuclide can be one of the explanations of this effect. The problem is discussed about identification of the above-mentioned tracks in natural minerals and, in particular, in minerals from meteorites. (auth)

53745 (JINR-P4-5872) STUDY OF THE E1-INTRANUCLEAR CONVERSION ON THE BASIS OF THE SAXON-WOODS POTENTIAL. Feresin, A. P.; Shul'ts, G.; Fainer, U. M. (Joint Inst. for Nuclear Research, Dubna (USSR). Lab. of Theoretical Physics). 1971. 19p. (In Russian). Dep. NTIS (U. S. Sales Only).

The experimental values for the matrix elements of γ radiation and intranuclear conversion for a number of strongly hindered E1 transitions are compared with the theoretical calculations made on the basis of the Saxon-Woods potential with pair correlations and the Coriolis interaction taken into account. For the comparison of experimental and theoretical values of the penetration matrix elements, the g_s-factors are found for the E1 transitions investigated. (auth)

53746 (KFK-1393) SYSTEMATICS OF THE HALF LIVES OF THE ACTINIDES AND DECAY OF ^{235}Pu. Keller, K. A. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Radiochemie). Apr 1971. 42p. (In German). Dep. NTIS (U. S. Sales Only).

Semiempirical relationships were derived for the prediction of partial half-lives for α decay and electron capture. By use of mean excitation energies of the daughter nuclides an improved accuracy could be obtained. The decay of ^{235}Pu was investigated to extend the systematics of the mean excitation energies. (auth)

53747 (MIT-3944-2) GAMANL: A COMPUTER PROGRAM APPLYING FOURIER TRANSFORMS TO THE ANALYSIS OF GAMMA SPECTRAL DATA. Harper, T.; Inouye, T.; Rasmussen, N. C. (Massachusetts Inst. of Tech., Cambridge. Dept. of Nuclear Engineering). Aug 1968. Contract AT(30-1)-3944. 87p. (MITNE-97). Dep. NTIS.

GAMANL, a computer code for automatically identifying the peaks in a comple· spectrum and determining their centers and areas, is described. The principal feature of the method is a data-smoothing technique employing Fourier transforms. The smoothing eliminates most of the random fluctuations without affecting the spectral resolution, and makes identification of maxima using a zero-slope criterion possible. If the same Fourier transform is used with different constants, it is possible with a second transformation to improve the spectral resolution. The computer program is written in FORTRAN IV for the M.I.T. IBM 360, model 65 computer and also for the Toshiba Electric Company G.E. 635 computer. The complete analysis of a 4096-channel spectrum containing one hundred twenty peaks requires about 75 seconds of computation time. (auth)

53748 (NP-18872) NUCLEAR PHYSICS INSTITUTE ANNUAL REPORT 1970. (Paris Univ., Orsay (France). Institut de Physique Nucleaire). 1970. 170p. (In French). Dep. NTIS.

A review is made of the principal activities of the Orsay nuclear physics institute in 1970. The following broad topics are covered: nuclear physics, high energy physics, radiochemistry, theoretical physics. A list is given of the seminars, publications, communications, and theses. (France)

53749 (NP-18927) NUCLEAR STRUCTURE OF THE 107 AND 115 ISOTOPES OF INDIUM AND CORRELATIONS IN THE GROUND STATE OF CADMIUM TARGET NUCLEI FROM Cd(^{3}He,d)In REACTIONS. Thuriere, Evelyne (Paris Univ. (France). Faculte des Sciences). 1970. 117p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

The reactions ^{114}Cd(^{3}He,d)^{115}In, ^{106}Cd(^{3}He,d)^{107}In, and ^{115}In(d,d′) ^{115}In were studied. The experimental equipment is described. The principal characteristics of the DWBA method of analysis and the approximations it implies are recalled. The structure of the ^{115}In levels with positive parities is discussed, and a tentative explanation in the framework of spherical orbitals, deformed orbitals, and weak coupling is given. (France)

53750 (NYO-73-340) DIVISION OF NUCLEAR SCIENCE AND ENGINEERING PROGRESS REPORT, JANUARY 1-DECEMBER 31, 1970. (Columbia Univ., New York. School of Engineering and Applied Science). Contract AT(30-1)-73. 61p. Dep. NTIS.

RADIATION DETECTORS, SCINTILLATION—design and operation of Maxon-Rae, for neutron capture measurements below 100 keV
THORIUM-229—neutron fission up to 50 eV, cross section and resonance parameters for, (E)
THORIUM-232—neutron total cross section up to 10 keV, (E)
URANIUM-233—neutron fission at 15 to 30 eV, cross section for, (E)
URANIUM-235—neutron fission at 17 to 22 eV, cross section for, (E)
—neutron fission at 10 to 40 keV, cross section for, (E)
URANIUM-238—neutron total cross section and resonance parameters up to 10 keV, (E) (J.W.R.)

53751 (ORNL-4655) GRAPHICAL COMPARISON OF CALCULATED INTERNAL CONVERSION COEFFICIENTS: HAGER-SELTZER VS SLIV-BAND. Ewbank, W. B. (Oak Ridge National Lab., Tenn.). Jul 1971. Contract W-7405-eng-26. 101p. Dep. NTIS.

The calculated Hager-Seltzer and Sliv-Band internal conversion coefficients are compared graphically and tabulated. For each multipolarity (E1 to E4, M1 to M4) and for each shell (K, L1, L2, L3) the percentage difference is calculated for every energy given by Sliv and Band and for atomic numbers Z = 35, 40, 45, ... 95. The comparison is made for the coefficients themselves and for shell ratios. Over two-thirds of the compared values agree within less than 10%. (R.W.R.)

53752 (ORNL-4659) PHYSICS DIVISION ANNUAL PROGRESS REPORT FOR PERIOD ENDING DECEMBER 31, 1970. Obenshain, Felix E. (ed.) (Oak Ridge National Lab., Tenn.). May 1971. Contract W-7405-eng-26. 137p. Dep. NTIS.

BROMINE-81—energy levels from oxygen-16 Coulomb excitation, lifetimes of, (E)
CADMIUM-116—oxygen-16 reactions at 140 MeV charged-particle energy spectra from, (E)
CALCIUM-40—proton inelastic scattering at 30 MeV, analysis using realistic interaction, (T)
CARBON-13—alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E)
ELECTRON MICROSCOPY—use for DNA sequence determination, feasibility of
FLUORINE IONS—electron spectra and lifetimes from fast beams of
HELIUM-4—binding energy of, calculation using renormalized Brueckner-Hartree-Fock method with center-of-mass corrections, (T)
INDIUM-111—energy levels from cadmium-111 (p,n) reactions, lifetimes of, (E)
INDIUM-113—energy levels from cadmium-113 (p,n) reactions, lifetimes of, (E)
MESONS (π^+)—interactions $\pi^+ + N \rightarrow \rho + \Delta$ at 8 GeV/c in deuterium bubble chamber, (E)
MOLYBDENUM-98—oxygen-16 reactions (O-16,xn) at 80 MeV, γ spectra from, (E)
NEON-21—alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E)
NEON-22—alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E)
NUCLEIC ACID, DEOXYRIBO—sequence determination using electron microscopy, feasibility of
NUCLEONS—interactions $\pi^+ + N \rightarrow \rho + \Delta$ at 8 GeV/c in deuterium bubble chamber, (E)
OXYGEN IONS—electron spectra and lifetimes from fast beams of
OXYGEN-16—reactions with cadmium-116 at 140 MeV, charged-particle energy spectra from, (E)
—binding energy of, calculation using renormalized Brueckner-Hartree-Fock method with center-of-mass corrections, (T)
—neutron total cross section at 1.7 to 4.4 MeV, (E)
OXYGEN-17—alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E)
SELENIUM-72—energy-level scheme from bromine-72

decay, (E)
SELENIUM-74—energy level scheme from bromine-74 decay, (E)
STRONTIUM-86—proton elastic and inelastic scattering at 12 MeV, differential cross sections for, (E)
TIN-117—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
TIN-118—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
TIN-119—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
TIN-120—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
TIN-122—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
TIN-124—proton reactions (p,n) at 3 to 7 MeV, strength function for, (E)
URANIUM-236—neutron fission at 0.5 to 8 MeV, cross section for, (E)
YTTRIUM-89—proton inelastic scattering at 61 MeV, analysis using realistic interaction, (T)
ZIRCONIUM-90—proton inelastic scattering at 61 MeV, analysis using realistic interaction, (T) (J.W.R.)

53753 (ZFK-172) NUCLEAR SPECTROSCOPY WITH A DEUTERON BEAM. Bonitz, Manfred (Zentralinstitut fuer Kernforschung, Rossendorf bei Dresden (East Germany)). Mar 1969. 81p. (In German). Dep. NTIS (U. S. Sales Only).

The application of the two-dimensional technique to nuclear spectroscopic investigations of isomeric states produced with a deuteron beam is described. The pulsed-beam technique and the associated-particle method applied to protons from the (d,p) reaction were used. The following final nuclei were subject to investigations: ^{171}Er, ^{173}Yb, ^{169}Er, ^{159}Gd, ^{170}Tm, ^{208}Bi, ^{198}Au, ^{115}Cd, ^{151}Sm, ^{155}Gd, ^{160}Tb, ^{161}Gd, ^{163}Dy, ^{165}Dy, ^{167}Er, ^{171}Yb, ^{175}Yb, ^{nat}Hf + n, ^{nat}W + n, and ^{210}Bi. Five new isomeric states were found, and several isomeric decays were successfully cleared up and interpreted. In doubly odd nuclei the Ω-selection rule was discovered, and first evidence for the j-selection rule was found. (auth)

53754 SMALL-ANGLE SCATTERING OF NEUTRONS BY DEFORMED NUCLEI. Palla, G. (Central Research Inst. for Physics, Budapest). Phys. Lett.; 35B: No. 6, 477-9(5 Jul 1971).

It has recently been suggested that long-range interactions may be responsible for the "anomalous" small-angle elastic scattering by ^{232}Th and ^{238}U. It is shown that the existence of an anomaly must be considered as a misinterpretation of the effect of nuclear deformation on the values of the differential cross section. (auth)

53755 ATTEMPT TO OBSERVE EXPERIMENTALLY THE (n,γf) PROCESS IN RESONANCE NEUTRON INDUCED FISSION OF ^{235}U. Panteleev, Ts., (Joint Inst. for Nuclear Research, Dubna, USSR); Ryabov, Yu. V.; Tyan San, Kak; (and others). Phys. Lett.; 35B: No. 6, 507-8(5 Jul 1971).

The multiplicity of prompt γ radiation in resonance-neutron-induced fission of ^{235}U was measured. The energy of recorded γ rays ranged from 0.4 to 2.0 MeV. To estimate the contribution of the (n,γf) process, it was assumed that the multiplicity of prompt γ rays from fission fragments is independent of the spin of the compound state. At the accuracy achieved, it was established that the difference of the average widths of the (n,γf) process for fission through the compound states with spins $J^\pi = 3^-$ and 4^- does not exceed $\approx$3 MeV. (auth)

53756 CHARGE DISTRIBUTION AROUND A NUCLEUS WITH $Z > 137$. Panchapakesan, N. (Univ. of Delhi). Phys. Lett.; 35B: No. 6, 522-4(5 Jul 1971).

The effect of vacuum polarization for nuclei with $Z > 137$ is studied on the basis of a Bethe-Salpeter-type model that ignores spins. The increase of the effective extension of charge distribution is seen to ensure a gap in the electron energy spectrum and thus avoid a breakdown of the theory. (auth)

53757 NUCLEAR DATA SHEETS FOR A = 109. Bertrand, F. E. (Oak Ridge National Lab., Tenn.). Nuclear Data, Sect. B; 6: 1-37(Jul 1971).

Level schemes, level properties, and decay characteristics are presented for all known members of the A = 109 mass chain. This revision of the 1960 Nuclear Data Sheets is based upon experimental data received before April 1971 and contains data from $\approx$110 papers. Little spectroscopic information is available for the nuclei ^{109}Ru, ^{109}Rh, and ^{109}Sn, while ^{109}Sb is unobserved and the assignment of ^{109}Te is questionable. Spins and parities of many of the levels found in ^{109}Pd, ^{109}Ag, and ^{109}Cd are known from decay and/or reaction data. The J^π values for levels in ^{109}In are, however, undetermined except for the ground state and first excited state. The compilers have used footnotes throughout the compilation to point out discrepancies, uncertainties, and the lack of data. (auth)

53758 OPTICAL PUMPING OF NEUTRON DEFICIENT ^{187}Hg. Bonn, J.; Huber, G.; Kluge, H. J.; (and others) (CERN, Geneva. Univ., Heidelberg). Phys. Lett.; 36B: No. 1, 41-3 (9 Aug 1971).

An experimental technique for polarizing mass-separated isotopes far from stability by means of optical pumping is reported. It was used to determine nuclear moments and volume from the atomic spectrum. Results for ^{187}Hg are $I = {}^3\!/_2$, $\mu = (0.58 \pm 0.03)$ nm, $Q \approx -1$b, IS(187-198, $\lambda = 2537$ Å) $\approx$ 22 GHz. (auth)

53759 TWO-PROTON MULTIPLETS IN ^{210}Po. Tickle, R.; Bardwick, J. (Univ. of Michigan, Ann Arbor). Phys. Lett.; 36B: No. 1, 32-4(9 Aug 1971).

The ^{209}Bi(α,t)^{210}Po reaction at 45 MeV was used to study ^{210}Po. Many new levels were observed, and proton configurations are suggested for the lowest three multiplets. (auth)

53760 CONFIGURATION MIXING EFFECTS ON M1 TRANSITIONS AND MAGNETIC MOMENTS IN Pb REGION. Vergados, J. D. (State Univ. of New York, Stony Brook). Phys. Lett.; 36B: No. 1, 12-17(9 Aug 1971).

Configuration-mixing effects on M1 transitions and magnetic dipole moments are studied for ^{207}Pb, ^{207}Tl, ^{208}Pb, ^{208}Tl, and ^{206}Pb by using realistic interactions and diagonalizing large shell-model matrices. Appreciable deviations from the single-particle values are found. The results are in good agreement with experiment. (auth)

53761 MAGNETIC DIPOLE HYPERFINE STRUCTURE IN MUONIC ATOMS. Cheng, S. C.; Chen, M. Y.; Kast, J. W.; (and others) (Columbia Univ., New York). Phys. Lett.; 34B: 615-17(12 Apr 1971).

The nuclear finite-size effect in the M1 hyperfine structure of muonic atoms of ^{93}Nb and ^{139}La has been studied experimentally. Systematic differences of the finite-size effect between nuclei in which the spin and the orbital angular momentum of the odd proton are parallel or anti-parallel are discussed. (auth)

53762 EVIDENCE FOR SINGULARITY IN THE NUCLEAR ROTATIONAL BAND STRUCTURE. Johnson, A.; Ryde, H.; Sztarkier, J. (Research Inst. for Physics, Stockholm). Phys. Lett.; 34B: 605-8(12 Apr 1971).

A drastic change in the moment of inertia as a function of the rotational frequency is observed in the region of $I \approx 16$ for the deformed nucleus ^{160}Dy. This may be interpreted as a phase transition from a superfluid state to a non-superfluid state. (auth)

53763 $9/2^-$ [514] STATE IN ^{185}Re. Evans, M.; Ellis, A. E.; Leigh, J. R.; Newton, J. O. (Univ. of Manchester, Eng.). Phys. Lett.; 34B: 609-11(12 Apr 1971).

Gamma rays following the ^{186}W(d,3n)^{185}Re reaction have been observed. Evidence is given for rotational bands based on the ${}^5\!/_2{}^+$[402] and ${}^9\!/_2{}^-$[514] states. The half-life of the ${}^9\!/_2{}^-$ state has been measured and found to be 33 ± 3 ns. (auth)

53764 EVIDENCE OF MULTIPLE EXCITATIONS OF DEEP ELECTRONIC STATES IN THE INTERNAL CONVERSION SPECTRA OF THE ISOMERIC TRANSITION IN ^{109}Ag. Briancon, C.; Valadares, M.; Walen, R. (CNRS, Orsay, France). Phys. Lett.; 34B: 599-601(12 Apr 1971). (In French).

The conversion spectrum of the 88 keV nuclear isomeric transition in ^{109}Ag shows behind every conversion line the presence of several bands superimposed on the tail of the line. For the interpretation, it is necessary to take in account multiple excitation of deep electronic shells. (auth)

53765 BETA-DELAYED PROTON EMISSION FROM $^{115\ 117}$Xe AND $^{179\ 181\ 183}$Hg. Hornshoej, P. (Univ. of Aarhus, Denmark); Wilsky, K.; Hansen, P. G.; (and others). Phys. Lett.; 34B: 591-3(12 Apr 1971).

Light odd-mass isotopes of xenon (A = 115, 117) and mercury (A = 179, 181, 183) exhibit beta-delayed proton emission. No appreciable fine structure is observed in the proton spectra, which have been measured on isotope-separated samples in on-line experiments at the CERN ISOLDE facility. The proton branches observed vary in intensity from 3.4×10^{-3} (^{115}Xe) to 2.7×10^{-6} (^{183}Hg). (auth)

53766 DIRECT MEASUREMENT OF THE TOTAL PROTON DECAY WIDTH OF AN ISOBARIC ANALOG STATE. Woods, T. J.; Igo, G. J.; Whitten, C. A. Jr.; Dunlop, W.; Hoffmann, G. W.

(Univ. of California, Los Angeles). Phys. Lett.; 34B: 594-6 (12 Apr 1971).

Differential cross sections for the ^{208}Pb(p,n) reaction populating the isobaric analog state (IAS) of the ^{208}Pb ground state in ^{208}Bi have been measured at a proton bombarding energy of 30.5 MeV. The experimental technique utilized the proton ($\tilde{p}$) decay of the IAS to obtain neutron time-of-flight spectra. When these differential cross sections are compared to those obtained for the same reaction at 30.5 MeV using the pulsed-beam technique to obtain neutron time-of-flight spectra, the percentage of the IAS decay through $\tilde{p}$ channels is obtained. This comparison indicates that the $\tilde{p}$ decay of the IAS to the first three states of ^{207}Pb accounts for almost all of the IAS width (0.97 ± 0.28). (auth)

53767 EVIDENCE FOR DIPOLE–QUADRUPOLE–OCTUPOLE MIXING IN THE 902 keV $2^- \rightarrow 2^+$ TRANSITION IN ^{180}W. Konijn, J. (Instituut voor Kernfysisch Onderzoek, Amsterdam); Meijer, B. J.; Van Middelkoop, G. Phys. Lett.; 35B: No. 7, 567-9(19 Jul 1971).

From known conversion coefficients and angular correlations combined with the γ-ray decay deduced from the ^{181}Ta(p,2n)^{180}W reaction, it is found that the 1007 → 104 keV ($2^- \rightarrow 2^+$) transition in ^{180}W has mixing parameters $\delta_1 = -0.16 \pm 0.07$ and $\delta_2 = -0.64 \pm 0.17$ for M2/E1 and E3/E1, respectively. (auth)

53768 IMPLICATIONS OF THE HYPOTHESIS OF EXTINCT FISSIONING ISOTOPE IN THE PRIMITIVE METEORITES. Dakowski, M. (Joint Inst. for Nuclear Research, Moscow). Phys. Lett.; 35B: No. 7, 557-9(19 Jul 1971).

It is shown that, if the carbonaceous-chondrite xenon anomaly was really caused by fission, its progenitor was the longest living isotope of superheavy elements (SHE) with a half-life of 2×10^8y < $T_{½} \lesssim 6 \times 10^7$y. Then the search for SHE synthesized prior to the solar system formation would be fruitless. (auth)

53769 ROTATION–VIBRATION INTERACTION IN ^{152}Sm. Stokstad, R. G.; Greenberg, J. S.; Fraser, I. A.; Sie, S. H.; Bromley, D. A. (Yale Univ., New Haven). Phys. Rev. Lett.; 27: No. 11, 748-51(13 Sep 1971).

The angular-momentum dependence of the matrix element that couples the rotational and vibrational bands in deformed nuclei is determined from the measured energies of ground-state band levels. A calculation involving three bands and matrix diagonalization produces excellent overall agreement with experimental E2 transitions between the β-vibrational, γ-vibrational, and ground-state-rotational bands, and for transitions within the ground-state band. (auth)

53770 EFFECT OF CONTINUOUS SPECTRUM IN THE THEORY OF PHOTONUCLEAR REACTIONS. Bunatyan, G. G.; Fayans, S. A. (Moscow Engineering Physics Inst.). Yadern. Fiz.; 13: No. 6, 1209-18(Jun 1971). (In Russian).

On basis of the theory of the finite Fermi systems a method of accounting for the continuous spectrum in the theory of nuclear photoabsorption is developed. Formulas are obtained that enable one to extract and calculate the cross section for the absorption with transition into the continuous spectrum of the nucleons from the definite states (subshells). The (γ,n) and (γ,p) reactions for ^{91}Zr and ^{209}Bi near the threshold are calculated as examples of the approach. (auth)

53771 POLARIZATION OF THE ^{8}Li FRAGMENTS IN NUCLEAR REACTIONS INDUCED BY SLOW π^- MESONS. Varfolomeev, A. T. (Lebedev Inst. of Physics, Moscow). Yadern. Fiz.; 13: No 6, 1157-61(Jun 1971). (In Russian).

Nuclear fissions with production of ^{8}Li fragments were studied by means of the nuclear emulsions. A strong asymmetry in the angular distribution of electrons from the β decay of the ^{8}Li fragments with respect to the fragment momentum direction is detected. (auth)

53772 TIME-OF-FLIGHT MEASUREMENTS OF PAIR FRAGMENTS OF ^{244}Cm AND ^{252}Cf SPONTANEOUS FISSION. Barashkov, Yu. A.; Vasil'ev, Yu. A.; Maslov, A. N.; (and others). Yadern. Fiz.; 13: No. 6, 1162-9(Jun 1971). (In Russian).

Mass and kinetic energy distributions of initial fragments of ^{244}Cm and ^{252}Cf spontaneous fission are measured by the time of flight method. The mean values of the summary kinetic energy $E_k = 184.9 \pm 2.0$ MeV and of the heavy fragment mass $M_T = 143.54 \pm 0.15$ a.m.u. obtained for ^{252}Cf are in good agreement with the available data. The values of these quantities for ^{244}Cm are $E_k = 183.7 \pm 2.0$ MeV, $M_T = 139.53 \pm 0.15$ a.m.u. The yield of fragments of the ^{244}Cm symmetric fission amounts to approximately 40^{-3} from that of the most probable masses. Mass and kinetic energy distribution reveals the same main properties as for other cases of the low-energy fission. (auth)

53773 STRUCTURE OF ENERGY DEPENDENCE OF THE NEUTRON YIELD AT ^{235}U (n,f) FISSION. Prokhorova, L. I.; Smirenkin, G. N. Yadern. Fiz.; 13: No. 6, 1170-9(Jun 1971). (In Russian).

On the basis of the model of discrete variation of excited quasiparticle number in transient state of fissile ^{236}U, a possibility is studied to explain uniquely the correlating irregularities in the energy dependence of the neutron, fragment yields, and differential and integral cross sections of ^{235}U (n,f). (auth)

53774 POTENTIAL ENERGY OF ^{236}U AT ASYMMETRICAL FISSION IN PARAMETRIZATION OF THE NUCLEAR SHAPE BY MEANS OF THE CASSINI OVALOID-TYPE FIGURES. Adeev, G. D.; Gamalya, I. A.; Cherdantsev, P. A. (Tomsk Polytechnic Inst., USSR). Yadern. Fiz.; 13: No. 6, 1180-8(Jun 1971). (In Russian).

Three-dimensional energy surface of ^{236}U in the fission process is calculated using the Strutinsky method. In calculation of the shell correction a one-nucleon potential was used with three independent parameters, s, c_2 and k (k is the fragment mass asymmetry parameter). The nuclear surface shape, necessary to calculate the droplet energy, is determined by the Fermi surface in the configuration space. The contour diagrams in the s, c_2 coordinates are constructed at constant k. The lowest fission barrier occurs at k = 0.65. (auth)

53775 MEASUREMENT AND NORMALIZATION OF THE RELATIVE ^{235}U FISSION CROSS-SECTION IN THE LOW RESONANCE REGION. Deruytter, A. J. (CBNM–EURATOM, Geel, Belgium); Wagemans, C. J. Nucl. Energy; 25: No. 7, 263-72 (Jul 1971).

Measurements were performed with the Linac of the C.B.N.M. to below thermal energy for a direct normalization of fission cross sections to the 2200 m/sec reference cross-section. The measurements were performed at a well-collimated short flight-path with low repetition-rate and long burst-width of the Linac. The fission reaction rate and the neutron spectrum were determined simultaneously with solid state detectors on each side of a back-to-back ^{235}U and ^{10}B layer. From the counting-rate ratios σ_f-curves were calculated assuming a 1/v behavior of the ^{10}B(n,α)^{7}Li cross-section. Several fission integrals were calculated from the normalized σ_f curve and compared with other published results. It is shown that the large discrepancies (up to 35%) which exist between the different results can be considerably reduced by a common normalization procedure, e.g., using the fission integral $\int_{7.8\,eV}^{11\,eV} \sigma_f(E)dE = 240.2 \pm 2.1$ barn eV obtained from this measurement. (auth)

53776 γ-RAY SPECTRA AND LEVEL SCHEMES OF ^{130}Xe AND ^{132}Xe FROM (n,γ) REACTION. Groshev, L. V.; Govor, L. I.; Demidov, A. M.; Rakhimov, A. S. (Inst. of Atomic Energy, Moscow). Yadern. Fiz.; 13: No. 6, 1129-34(Jun 1971). (In Russian).

Spectra of γ rays emitted at thermal neutron capture in natural mixture of Xe isotopes and in a sample enriched by ^{129}Xe are measured by means of a spectrometer with Ge(Li) detector. Energies and intensities of the γ lines selected in the spectra are determined. On basis of the obtained data, schemes are constructed of the γ transitions in even–even nuclei ^{130}Xe and ^{132}Xe to the levels lying below the energy of about 4.5 MeV. (auth)

53777 INVESTIGATION OF α DECAY ^{253}Es AND ENERGY LEVELS OF ^{249}Bk. Baranov, S. A.; Shatinskii, V. M.; Kulakov, V. M.; Rodionov, Yu. F. (Inst. of Atomic Energy, Moscow). Yadern. Fiz.; 13: No. 6, 1135-40(Jun 1971). (In Russian).

Scheme of exciting states of the ^{249}Bk nucleus arising from the α decay of ^{253}Es is investigated by means of deviation of the charged particles in a magnetic field. A carefully purified einsteinium sample was used in the experiment. The α spectrum of Es is presented where more than 19 lines belonging to the ^{253}Es isotope are detected. Analysis of the experimental data indicates a presence of three rotational bands with quantum numbers $7/2^+$ [633↑], $3/2^-$ [521↑], and $5/2^+$ [642↑] in the level scheme of ^{249}Bk. The constants $\hbar^2/2J$ in the known Bohr–Mottelson formula for the rotational bands are found to be 4.7, 6.4 and 5.5 keV, respectively. (auth)

53778 ENERGY LEVELS OF ^{133}Xe. Saxena, R. N.; Sharma, H. D. (Univ. of Waterloo, Ont.). Nucl. Phys.; A171: No. 3, 593-602(1971).

The energies and relative intensities of the γ-rays following the decay of ^{133}I and ^{135}I have been measured using a Ge(Li) detector. The decay of 21 h ^{133}I was found to involve 29 γ-rays and to populate 13 excited states in ^{133}Xe. A comparison of positive-parity states found in this study has been made with those predicted by the intermediate coupling model. (auth)

53779 MAGNETIC MOMENTS OF THE 8^+ ISOMERIC STATES OF ^{90}Zr AND ^{92}Mo. Nagamiya, Shoji; Katou, Takeo; Nomura, Toru; Yamazaki, Toshimitsu (Tokyo Univ. Inst. of Physical and Chemical Research, Hirosawa, Japan). J. Phys. Soc. Jap.; 31: No. 2, 319-25(Aug 1971).

The g-factors of the $[\pi g_{9/2}^2]8^+$ states of ^{90}Zr ($t_{1/2}$ = 130 nsec) and ^{92}Mo ($t_{1/2}$ = 190 nsec) have been determined to be 1.355 ± 0.018 and 1.409 ± 0.016, respectively, by the time-differential spin rotation method in (α,2n) reactions. The results together with the known g-factors in the A = 88 region are compared with theoretical values derived from the M1 spin polarization and the mesonic exchange current. It turns out from the analysis that (1) the difference between the observed g-factors of the two 8^+ states is well accounted for by the M1 spin polarization mechanism and that (2) the mesonic effect of $\Delta g_l = 0.10$ and $\Delta g_s < 0$ explains the absolute values of the observed moments in this region. (auth)

53780 OPTICAL-MODEL ANALYSIS OF ELASTIC SCATTERING OF ALPHA PARTICLES USING A SURFACE-ABSORPTION POTENTIAL. El-Nadi, M.; El-Kharadly, L. (Univ. of Cairo). Ann. Phys. (Leipzig); 26: No. 1, 1-7(1971).

The optical model analysis has been applied to the elastic scattering of α particles on silver at energies of 18.7, 22, and 24.7 MeV. Using a volume absorption potential for the real part and a surface absorption potential for the imaginary part, the several sets of parameters giving satisfactory fits to the experimental data are obtained. The effect of varying these optical model parameters on the differential cross section is discussed. (auth)

53781 ABSOLUTE ELECTROMAGNETIC TRANSITION RATES BETWEEN MIXED QUASI-PARTICLE STATES IN ^{155}Gd. Tuurnala, T. (Helsinki Univ.). Ann. Acad. Sci. Fenn., Ser. A VI; No. 360, 1-17(1971).

Absolute transition probabilities for E1, M1, E2, and M2 gamma rays between the lowest quasiparticle states in ^{155}Gd were calculated according to the Nilsson model with pairing corrections making use of the mixed wave functions proposed previously. A detailed comparison between theory and experiment was carried out which showed that the theoretical results agree with the observed values to within a factor of two except for some magnetic dipole transitions. Reasons for these small discrepancies as well as the validity of the Nilsson model in describing more complex phenomena in odd mass nuclei are discussed. The half-life of the $^{7}/_{2}^{+}$ level at 118.0 keV was estimated to be about 2 ns. (auth) (Finland)

53782 PROPERTY OF THE 1622.41-keV LEVEL AND THE M1-E2 MIXINGS OF SOME OF THE TRANSITIONS IN ^{156}Gd. Fujioka, Manabu (Tokyo Inst. of Tech.). J. Phys. Soc. Jap.; 31: No. 3, 632-8(Sep 1971).

From the M1-E2 mixing of the 111.93-keV transition which connects the 1622.41 keV 5^+ and 1510.48 keV 4^+ levels in ^{156}Gd the former level is established to be a rotational state built on the latter. The upper limits of the magnitude of M1 component of the 262.54 and 267.07 keV transitions from the 1510.48 and 1622.41 keV levels are obtained to be q(M1) ≤ 2.0% and 6.5%, respectively. These values together with the M1-E2 mixings of other transitions deexciting the two levels are discussed. (auth)

53783 K FORBIDDEN ISOMERISM OF THE $^{11}/_{2}^{-}$[505] NILSSON ORBITAL IN THE ODD A, N = 91 ISOTONES. Kime, Milford Burton. Ithaca, N. Y.; Cornell Univ. (1971). 72p. University Microfilms Order No. 71-15,635.

Thesis.

K-forbidden isomerism due to the $^{11}/_{2}^{-}$[505] Nilsson orbital has been studied in the three odd A, N = 91 isotones ^{153m}Sm, ^{155m}Gd, and ^{157m}Dy. The half-lives of the isomers are 10.6 ± 0.3 msec for ^{153m}Sm, 31 ± 1 msec for ^{155m}Gd, and 24 ± 1 msec for ^{157m}Dy. The transitions have three degrees of K-forbiddeness and yield a hindrance factor of almost three orders of magnitude per degree of forbiddeness over the Weisskopf single particle estimates. Decay of the previously unobserved ^{153m}Sm isomer proceeds from the $^{11}/_{2}^{-}$ isomeric level at 98.4 keV through the 32.9 keV isomeric line to the $^{9}/_{2}^{+}$ level at 65.5 keV. Two transitions branch from this level, one an 11.9 keV M1 (assumed, as the L x-ray excess is all that is observed of this transition) to a $^{7}/_{2}^{+}$ level at 53.6 keV and the others a 58 keV E2 to a $^{5}/_{2}^{+}$ level at 7.5 keV level and by a 53.6 keV E2 transition to the $^{3}/_{2}^{+}$ ground state. A 7.5 keV M1 from the $^{5}/_{2}^{+}$ level is also indicated. The ^{155m}Gd decay proceeds from the $^{11}/_{2}^{-}$ state at 121.5 keV via the 13.9 keV isomeric E1 line to the $^{9}/_{2}^{+}$ state at 107.6 keV. A 21 keV E2 (seen via L x-rays) then proceeds to a $^{5}/_{2}^{+}$ state at 86.6 keV. This level decays via an 86.6 keV E1 to the $^{3}/_{2}^{-}$ ground state. Also indicated is a weak branch via a 26.6 keV E1 to a $^{5}/_{2}^{+}$ level at 60 keV which then should decay by a 60 keV M1 to the ground state. The ^{157}Dy isomer is at 199 keV. The 14.2 keV E1 isomeric transition feeds 35% of the isomeric decay to the $^{9}/_{2}^{+}$ level at 162 keV. It is assumed that the 51.5 keV isomeric transition to the $^{7}/_{2}^{-}$ level carries the remaining intensity. The $^{9}/_{2}^{+}$ level decays via a 37.3 keV E1 to the $^{7}/_{2}^{-}$ level at 148 keV. From this level a 148 keV E2 populates the $^{3}/_{2}^{-}$ ground state directly. Eighty nine percent of the $^{7}/_{2}^{-}$ level decay proceeds through an 87 keV M1 to a $^{5}/_{2}^{-}$ level at 61 keV. This then decays via a 61 keV M1 to the ground state. The thermal neutron cross-section ratio for the isomeric state ^{155m}Gd vs the ground state was found to be 0.57×10^{-3}. Qualitative evaluations of the isomeric cross-section ratio for ^{153m}Sm and ^{157m}Dy indicate that they are similar to that found for Gd. These values are several orders of magnitude below the value predicted by statistical theories. Attempts were made to find an isomer in ^{151}Nd. No isomeric activity was found in the millisecond range. Possible activities in longer half-life ranges were severely masked by the 12 min ground state decay. Thus if the cross-section ratio is of the order of that found for the other isomers, a long half-life isomer cannot be ruled out. Also, a microsecond isomer is a distinct possibility and this possibility was not ruled out either. (Diss. Abstr. Int., B)

53784 RADIATION TYPES AND INTENSITIES IN THE DECAY OF ^{235}Np. McConnon, D. (Battelle Memorial Inst., Richland, Wash.). Health Phys.; 20: No. 6, 644-5(Jun 1971).

A computation was made of energy emitted per disintegration, resulting from x rays and Auger electrons of varying intensities, following electron-capture decay of ^{235}Np. Dillman's method of calculation was used and a tabular summary made of radiations of dosimetric interest. (UK)

53785 α-PARTICLE SPECTRA FOR DECAY OF RESONANCE STATES OF ^{146}Nd. Popov, Yu. P.; Pshitula, M.; Rodionov, K. G.; (and others) (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 13: No. 5, 913-17(May 1971). (In Russian).

Results are presented of the first measurements of the α-particle spectra for the reaction ^{145}Nd(n,α)^{142}Ce on the resonance neutrons. For the resonance states with E_0 = 4.36 and 43.1 eV the partial α-decay widths are determined for transitions to the ground and the first excited states of the daughter nucleus. On the basis of these, as well as other data for a number of nuclei, a comparison is carried out of mean values of the reduced neutron and α widths that indicates an approximate character of the Bethe hypothesis that the widths are equal. (auth)

53786 CROSS SECTIONS OF REACTIONS (n,p) AND (n,α) AT THE NEUTRON ENERGY OF 14.8 MeV. Levkovskii, V. N.; Artem'ev, O. I. (Inst. of Nuclear Physics, Alma-Ata, USSR). Yadern. Fiz.; 13: No. 5, 923-4(May 1971). (In Russian).

25 cross sections of the reactions (n,p) and (n,α) on the isotopes of Pd, Sb, and Te are measured by means of the activation method. 11 of the cross sections are measured for the first time. The results are compared with the systematics of (n,p) reactions. (auth)

53787 PHOTOFISSION CROSS SECTION OF ^{226}Ra. Zhagrov, E. A.; Nemilov, Yu. A.; Nikitina, N. V.; Selitskii, Yu. A. Yadern. Fiz.; 13: No. 5, 934-8(May 1971). (In Russian).

The photofission cross section of ^{226}Ra was measured in the energy range 9 to 20 MeV. The ratio of the neutron emission width to the fission width is estimated on basis of the obtained results. The value of Γ_n/Γ_f is compared with the value calculated using the statistical model. (auth)

53788 POLARIZATION PHENOMENA IN NUCLEAR REACTIONS. Proceedings of the Third International Symposium, Madison, Wisconsin, August 31–September 4, 1970. Barschall, H. H.; Haeberli, W. (eds.). Madison, Wis.; University of Wisconsin Press (1971). 956p. $15.00. (COO-7-593; CONF-700811).

Separate abstracts were prepared for 18 of the 19 invited survey papers included. One hundred and sixty-five of the 176 research contributions are listed by title only. The remaining papers have previously appeared in NSA. (J.W.R.)

For abstracts of individual papers see: 51874, 51875, 52604, 52926, 53459–53484, 53506–53509, 53530–53590, 53630–53660, 53705–53726, 53789–53793, and 53831–53860.

53789 ATTEMPT TO RESOLVE THE OPTICAL MODEL SPIN-ORBIT RADIUS ANOMALY FROM p + ^{197}Au ELASTIC SCATTERING POLARIZATION DATA NEAR THE COULOMB BARRIER. Eck, J. S. 53794 KINETIC ENERGIES OF FRAGMENTS AND ANGULAR DISTRIBUTIONS OF α PARTICLES AT TRIPLE SPONTANEOUS FISSION OF ^{252}Cf. Adamov, V. M.; Drapchinskii, L. V.; Kovalenko, S. S.; Petrzhak, K. A.; Tyutyugin, I. I. Yadern. Fiz.; 13: No. 5, 939-43(May 1971). (In Russian).

By means of silicon detectors the following quantities were measured: kinetic energies of fragments and α particles, angular distributions of α particles and variations of the kinetic energies of both fragments as well as of the light and the heavy fragment groups, at variation of E_α from 10 up to 26 MeV. Shifts are determined of the quantities $\bar{E}_k$, $\bar{E}_l$, and $\bar{E}_h$ for ternary fission from their values for binary fission. The α-particle angular distributions are approximated by Gaussians with the value of 92° for the most probable emission angle to the fragment motion direction. The maximum of the energy distribution is moved by 5 MeV to higher energies when the angle is changed from 90 to 45°, while the relative yield of high energy α particles is increased. (auth)

53795 ESTIMATE OF THE LIFETIME OF THE EXCITED COMPOUND NUCLEUS IN REACTION W(^{22}Ne,f) (EXPERIMENT). Karamyan, S. A.; Melikov, Yu. V.; Normuratov, F.; Otgonsuren, O.; Solov'eva, G. M. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 13: No. 5, 944-9(May 1971). (In Russian).

A device is described for measuring the lifetime of compound nuclei using monocrystalic targets and observing shadows in the angular distributions of reaction products. It is shown that when exposing the W monocrystal to 174 and 98 MeV Ne ions, in the angular distributions of the fission fragments there are shadows in the directions of crystallographic axes and planes. Possibilities and advantages for measuring lifetimes of compound nuclei in reactions with heavy ions are discussed. The upper limit is presented of the lifetime of the compound nucleus for reaction W + ^{22}Ne which is found to be $\sim 10^{-17}$ sec. (auth)

53796 ANGULAR ANISOTROPY AND EFFECTS OF NUCLEON PAIRING AT THE FISSION OF ^{239}Pu BY NEUTRONS. Shpak, D. L.; Ostapenko, Yu. B.; Smirenkin, G. N. Yadern. Fiz.; 13: No. 5, 950-62(May 1971). (In Russian).

The dependence of the angular anisotropy of the ^{239}Pu(n,f) fission on the neutron energy in the range 0.05–7.20 MeV is studied. A considerable effect of the nucleon pair correlation of the superconducting type on the spectrum of the ^{240}Pu transient states is shown. The critical energy of the phase transition is estimated to be $E^*_{cr} = 12 \pm 2.5$ MeV, the energy gap is $2\Delta_0^f = 1.7 \pm 0.2$ MeV. Conclusions on the structure of the fission barrier are made. (auth)

53797 OSNOVY EKSPERIMENTAL'NYKH METODOV YADERNOI FIZIKI. (Principles of Experimental Methods for Nuclear Physics). Abramov, A. I.; Kazanskii, Yu. A.; Matusevich, E. S. Moscow; Atomizdat (1970). 560p.

The book, based on a lecture course, is divided in 4 sections. The introductory first section (Chapters 1 to 3) contains a description of radiation sources, examination of statistical fluctuations encountered in recording of measurements, and a summary review of the basic principles of the interaction of radiation and matter. The second section (Chapter 4 to 9) is devoted to physical detection methods, while measurement of the radiation energy is described in the third section (Chapters 10 to 12). In the final section (Chapters 13, 14 and the appendix) the techniques used for the determination of the activity of sources and of the interaction cross section of neutrons with nuclei are discussed; calculation of the variation of the γ spectrum emitted by excited nuclei is presented as an example of the treatment of experimental data. As accelerators and electronic devices used in these experiments are usually taught in other courses, only their basic principles are reviewed; for the same reason, instruments, such as mass spectrometers or oscillators which are not strictly related to the study of the interaction of radiation with matter, have also been excluded. (TTT)

53798 STRENGTH FUNCTIONS FOR s AND p NEUTRONS IN ^{235}U AND ^{239}Pu. Ryabov, Yu. V.; Fenin, Yu. I. (Joint Inst. for Nuclear Research, Dubna, USSR). Yadern. Fiz.; 13: No. 5, 1039-41(May 1971). (In Russian).

Average summary cross sections of fission and radiative neutron capture for ^{235}U and ^{239}Pu are analyzed for the energies from 0.1 up to 30 keV. The strength functions S_0 and S_1 for ^{235}U and ^{239}Pu are calculated on a computer by means of the least-squares method with account of the small corrections for the neutron compound elastic scattering. The values of S_0 are in agreement with the quantities obtained analyzing the observable resonances in the energy region up to 100 eV. (auth)

53799 INELASTIC ALPHA-PARTICLE SCATTERING FROM THE N = 82 ISOTONES ^{140}Ce AND ^{139}La. Baker, Francis Todd. Ann Arbor, Mich.; Univ. of Michigan (1970). 123p. University Microfilms Order No. 71-15,085.

Thesis.

Inelastic scattering of 45-MeV alpha-particles has been used to study the nuclear structure of the closed neutron shell nuclei ^{140}Ce and ^{139}La. Excitation energies and differential cross sections for observed alpha-particle groups were measured. Spectroscopic information was extracted from these data using the distorted wave Born approximation theory. Microscopic analysis of the data was performed utilizing the eigenfunctions of the generalized pairing Hamiltonian. The results of this analysis indicate that the collectively enhanced states cannot be adequately described by considering only the "valence" protons and that core contributions are therefore important. The spectrum of ^{139}La included the seniority v = 3 states which are inaccessible by proton transfer reactions. The characteristics of this spectrum are in qualitative agreement with zeroth order microscopic calculations. Transitions violating the $\Delta B = 0$ selection rule, B being the total pseudo-spin, were found to be relatively weak for both nuclei. (Diss. Abstr. Int., B)

53800 MEASUREMENTS OF ABSOLUTE FISSION PRODUCT YIELDS FROM THE THERMAL FISSION OF ^{235}U USING GAMMA-RAY SPECTROSCOPY METHODS. McLaughlin, Thomas Patrick. Tucson, Ariz.; Univ. of Arizona (1971). 118p. University Microfilms Order No. 71-14,509.

Thesis.

Calibrated fission foils and a Ge(Li)-NaI Compton-suppressed gamma-ray spectrometer have been used to determine cumulative fission product yields from the thermal neutron fission of ^{235}U. The mass chains 85, 87, 88, 91, 92, 93, 95, 97, 99, 103, 106, 131, 132, 133, 134, 135, 137, 138, 139, 140, 141, 142, 143, 144, 147, and 149 were investigated by observing the gamma-ray spectra from numerous thin ^{235}U samples. Due to the widely varying decay rates of the fission products, irradiation flux-times were varied to selectively enhance the different full-energy peaks. Half-lives of the useful fission products were in the range, 30 minutes $\leq T_{1/2} \leq$ 30 years, and their prominent gamma-rays in the range, 80 keV $\leq E \leq$ 1600 keV. This method provides an independent determination of data which was previously obtained by either radio-chemical or mass-spectrometric studies. In addition to the speed and convenience of this technique, the accuracy of yield determinations obtained for some mass chains is comparable to that of other methods and the agreement is generally good. (Diss. Abstr. Int., B)

53801 EXTERNAL MAGNETIC FIELD (Fe + Gd) AND MAGNETIC MOMENTS OF SOME EXCITED STATES (^{155}Gd,^{156}Gd).

Gaffarov, D. G.; Il'khamdzhanov, N. A.; Muminov, A. I. (Inst. of Nuclear Physics, Tashkent). Izv. Akad. Nauk Uzb. SSR, Ser. Fiz.-Mat. Nauk; No. 5, 81-3(1970). (In Russian).

The external magnetic field originating at Gd nucleus sites in an iron carrier was measured, making it possible to measure the magnetic moments for the short-lived nuclear states. The magnetic moments of the 4+ states at 288 and 1513 keV in ^{156}Gd were determined. For this work, samples of ^{155}Tb and ^{156}Tb were prepared by irradiating enriched ^{155}Gd and natural metallic gadolinium with 18-MeV protons. The value obtained for the magnetic moment of the 4+ state (1513 keV) differed considerably from the one found from the probability of the M1 transition but corresponds well with the theoretical prediction for the condition that this level is characterized by the structure $p_{5/2} = [413] + p_{3/2}\ [411]$. (K.S.W.)

53802 ISOTOPE SHIFT OF ^{151}Eu, ^{152}Eu, ^{153}Eu, ^{154}Eu, AND THE NUCLEAR MOMENTS OF THE RADIOACTIVE ISOTOPES ^{152}Eu AND ^{154}Eu. Heinecke, P. (Technische Univ., Hanover). Z. Phys.; 245: No. 5, 411-24(1971). (In German).

The isotope shift of the stable ^{151}Eu and ^{153}Eu, and the radioactive ^{152}Eu and ^{154}Eu isotopes and the hyperfine splitting of the ^{152}Eu isotope were investigated using a digital recording Fabry–Perot spectrometer. From isotope-shift measurements on the line λ 5765Å ($4f^76s6pz^6P_{7/2} - 4f^76s^2a^8S_{7/2}$) the relative isotope shift was derived: ^{151}Eu,0; ^{152}Eu,0.923(8); ^{153}Eu,1; ^{154}Eu,1.197(8). The results show that there is a strong increase in the change of the mean square nuclear charge radius $\delta\langle r^2\rangle$ when only one neutron is added to the 88 neutrons of the ^{151}Eu nucleus, whereas the change of $\delta\langle r^2\rangle$ between ^{152}Eu and ^{153}Eu is of the same order of magnitude as that between ^{153}Eu and ^{154}Eu. From the hyperfine splitting of the radioactive isotope ^{152}Eu in the line λ 6865Å ($4f^76s6pz^{10}P_{7/2} - 4f^76s^2a^8S_{7/2}$) the sign of the magnetic dipole moment $\mu_I(^{152}\text{Eu})$ was found to be negative, and with this result and earlier experimental data the signs of the nuclear quadrupole moments $Q(^{152}\text{Eu})$ and $Q(^{154}\text{Eu})$ could be determined to be positive. (auth)

53803 RELATIVE MEASUREMENTS OF THE LONGITUDINAL ELECTRON POLARIZATION IN THE β DECAY OF ^{90}Y AND ^{32}P. Johannsen, J.; Wisshak, K.; Loehken, R.; Rebel, H. (Univ., Heidelberg). Z. Phys.; 245: No. 5, 442-50(1971).

The ratio of the longitudinal polarization values of ^{90}Y and ^{32}P was measured at two energies by the method of Moeller scattering. The results obtained are $P(^{90}Y)/P(^{32}P) = 0.992 \pm 0.036$ at 0.725 MeV electron energy and $P(^{90}Y)/P(^{32}P) = 0.984 \pm 0.030$ at 1.0 MeV. For the decay of ^{90}Y, polarization and spectrum shape measurements are discussed in the framework of a form-factor coefficient analysis. (auth)

53804 DECAY OF ^{163}Tb. Kaffrell, N.; Herrmann, G. (Univ., Mainz). Z. Phys.; 245: No. 5, 451-70(1971). (In German).

The beta and gamma radiations of ^{163}Tb were investigated employing scintillation and semiconductor spectrometers and coincidence techniques. The sources were produced by the ^{163}Dy(n,p)^{163}Tb reaction. A half-life of 19.5 min was measured without evidence for an isomeric state in the half-life range of 2 sec to 7d; especially, a 6.5-h activity previously assigned to ^{163}Tb could not be confirmed. Seventy-six of the total of 82 gamma-ray transitions, representing 99.6% of the gamma-ray intensity, could be assigned to 23 levels in ^{163}Dy. From beta and beta–gamma coincidence measurements a Q_β value of 1.7 ± 0.1 MeV was determined. Spin and parity of $3/2^+$ are deduced for the ground state of ^{163}Tb with the Nilsson configuration [411↑]. The level at 884 keV is interpreted as a $J^\pi = 1/2^+$ state with a high contribution of the three-quasi-particle configuration p[411↑]–p[523↑]–n[523↓] because of an allowed, unhindered beta-ray transition to this level. (auth)

53805 SPECTRUM OF THE REACTION ^{208}Pb(n,γ)^{209}Pb AND SEMIDIRECT CAPTURE THEORY. Bergqvist, I.; Drake, D.; McDaniels, D. K. (Los Alamos Scientific Lab., N. Mex.). Phys. Rev. Lett.; 27: No. 5, 269-71(2 Aug 1971).

Measurements of the spectrum of γ rays from the reaction ^{208}Pb(n,γ)^{209}Pb were made at incident neutron energies of 9.2, 11.2, and 13.2 MeV. The observed spectral shapes disagree strongly with the predictions of compound-nucleus theory and agree quite well with those predicted by semidirect (collective) capture theory. (auth)

53806 PHOTOFISSION CROSS-SECTION OF Bi AND Pb BETWEEN 300 AND 1000 MeV. Emma, V.; Lo Nigro, S.; Milone, C. (Univ., Catania, Italy. Istituto Nazionale di Fisica Nucleare, Catania, Italy. CNR, Catania, Italy). Lett. Nuovo Cim.; 2: No. 3, 117-20(17 Jul 1971).

Cross sections were measured by using a layer of fissionable target between two glass plates, and the dose was measured with a Wilson quantameter. Cross sections per equivalent quantum and per photon were extracted for Bi and Pb targets; errors on σ_q are taken as 5%. The averaged cross sections $\bar{\sigma}_k$ obtained were 7.9 ± 1.3 mb for Bi and 3.2 ± 1.5 mb for Pb. (R.W.R.)

53807 INVESTIGATION OF LEVEL DENSITIES OF CERIUM AND STRONTIUM. Schacher, J.; Huber, P.; Wagner, R. (Univ., Basel). Helv. Phys. Acta; 44: No. 4, 487-501(7 Jan 1971). (In German).

Neutron time-of-flight spectra resulting from 14-MeV neutron bombardment of cerium and strontium were observed. Calculations based on the statistical model, with the superconductor and the Fermi-gas model used for the nuclear level density, describe the experimental spectra well. Two contributions, (n,n') and (n,2n), were included. Fermi-gas level-density parameters are obtained from fitting of the data. The analysis of the experimental spectra according to LeCouteur and Lang is also discussed. (auth)

53808 MOESSBAUER INVESTIGATIONS IN ^{195}Pt AND ^{201}Hg. Walcher, Dorothee (Technische Hochschule, Darmstadt, Ger.). Z. Phys.; 246: No. 2, 123-50(1971). (In German).

By using the Moessbauer technique the magnetic hyperfine splitting of the 130-keV transition in ^{195}Pt was observed in a Pt–Fe alloy. The derived magnetic moment is $\mu_{130} = (0.81^{+0.13}_{-0.25})\mu_N$. Isomer-shift measurements with the 130-keV and the 99-keV transitions in alloys yielded $\Delta\langle r^2\rangle_{130}/\Delta\langle r^2\rangle_{99} = 1.5 \pm 0.2$ for the ratio of the changes in the mean square charge radius of the two excited states. From isomer shifts of the 99-keV transition in compounds an estimate of $\Delta\langle r^2\rangle_{99}/\langle r^2\rangle = -(1.6^{+4.4}_{-0.9}) \cdot 10^{-4}$ is made for the change in radius of the first excited state. The line width of the Moessbauer spectrum of the 32.2-keV transition in ^{201}Hg gives a lower limit of 0.1 ns for the half-life of the second excited state. The results are compared with values for other nuclides in this mass region. (auth)

53809 STATISTICAL (α,n) REACTIONS. Tatiana-Magda, Margareta (Univ., Bucharest). Stud. Cercet. Fiz.; 23: No. 2, 161-83(1971). (In Rumanian).

The statistical model and nuclear level densities are first discussed. The experimental setup is described, including the beam characteristics, experimental geometry, targets, time-of-flight spectrometer, and method of calculating the continuous neutron spectra. Level densities and nuclear temperatures are reported for targets of ^{27}Al, ^{51}V, ^{52}Cr, ^{55}Mn, ^{56}Fe, ^{59}Co, ^{103}Rh, Ag, ^{115}In, ^{139}La, and ^{209}Bi at various energies between 13.6 and 23.6 MeV. The dependence of statistical parameters on mass number and bombarding energy is discussed, as well as level densities in (α,n) reactions, neutron cross sections of the excited nuclei, and nuclear moments of inertia. The paper concludes by considering the mechanism of (α,n) reactions at intermediate energies. (103 references) (R.W.R.)

53810 (COO–1120-123) HIGHER ORDER DEFORMATIONS AND ELECTRIC MONOPOLE TRANSITIONS. Aveledo, Claude (Kansas Univ., Lawrence. Nuclear Structure Lab.). [1970]. Contract AT(11-1)-1120. 36p. Dep. NTIS.

Internal conversion due to E0 transitions with $J \rightarrow J\ (J \neq 0)$ is considered. To facilitate comparison of the theoretical results for these transition probabilities with experiment, a dimensionless ratio X is defined. Calculational results are given for eight rare earth nuclei. The effect of the inclusion of a rotation–vibration term in the Hamiltonian on the different transition probabilities is then considered. Finally, the effects of higher-order deformations on the isotope shift of the mean square nuclear radius are discussed. (R.W.R.)

53811 (FRNC-TH–27) NILSSON HAMILTONIAN ON AN ASYMPTOTIC BASIS. Quentin, Philippe (Paris Univ., Orsay (France). Faculte des Sciences). 1970. 51p. (In French). Dep. NTIS (U. S. Sales Only).

Thesis.

A simple and exact method is proposed for resolving the problem of diagonalizing a Nilsson hamiltonian. An asymptotic basis is introduced which is a powerful tool for the treatment of deformed nuclei. (France)

53812 (LA-DC–12577) ELASTIC SCATTERING AND BREAKUP OF 15-MeV POLARIZED DEUTERONS. Keaton, P. W. Jr.; Armstrong, D. D. (Los Alamos Scientific Lab., N. Mex.). [1971]. 8p. (CONF-710708–1). Dep. NTIS.

From Symposium on the nuclear three body problem and related topics; Budapest, Hungary (7 July 1971).

A beam of highly polarized deuterons was obtained from the Los Alamos Scientific Laboratory polarized-ion source and accelerated by an FN tandem Van de Graaff. The cross section and four analyzing tensors for elastically scattered 15-MeV deuterons from ^{4}He, ^{52}Cr, ^{56}Fe, ^{90}Zr, and ^{197}Au were measured. The data are compared with predictions of a deuteron optical potential that is generated by folding the optical potentials of the nucleons with their internal motion in the deuteron. The tensor part of the optical potential contains a real and an imaginary part, each with a strength of about 1 MeV. The analyzing tensors for elastically scattered deuterons are sensitive to deuteron inelastic processes, such as breakup; and, perhaps, will provide a rigorous test of models. Results of a simple experiment are given which imply that a model for deuteron breakup cannot ignore the deuteron spin. (auth)

53813 (LA-DC-12780) NEW QUANTITY IN NUCLEAR MUON CAPTURE BY RADIOCHEMICAL TECHNIQUES. Silbar, R. R. (Los Alamos Scientific Lab., N. Mex.). [1971]. 4p. (CONF-710911-7). Dep. NTIS.

From fourth international conference on high energy physics and nuclear structure; Dubna, USSR (7 Sep 1971).

It is pointed out that using radiochemical techniques it will be possible to measure the capture rate to all particle-stable final states in nuclear muon capture. (J.F.P.)

53814 (LBL-209) DROPLET MODEL. Myers, William D. (California Univ., Berkeley. Lawrence Radiation Lab.). Jul 1971. Contract W-7405-eng-48. 27p. Dep. NTIS.

Some examples of the effectiveness of the liquid drop model are first considered, and then the ways in which this model and leptodermous approaches in general are related to other methods in many-body theory are discussed. Next, the example of the Hill–Wheeler box is used to show that the leptodermous approach is applicable to quantum systems even with relatively small numbers of particles. The smooth part of the total energy is then separated from the shell effects, and it is clear that an $A^{1/3}$ term must be included. After a brief introduction to the methods used to obtain the droplet model energy equation, a simplified version is used to display the most important new terms that enter. Finally, some applications of the theory are given, and it is pointed out that comparison with a much wider range of phenomena is planned once the coefficients of the theory have been better determined. (auth)

53815 (RLO-1388-140) NOTE ON THE EFFECT OF WEAK MAGNETISM ON THE MIRROR $(ft)^{+}/(ft)^{-}$ RATIO. Wilkinson, D. H. (Washington Univ., Seattle). [1971]. 6p. Dep. NTIS.

The role of weak magnetism in the mirror-asymmetry of Gamow–Teller β decay is considered. For Z = 0 the interference between weak magnetism and the chief axial term vanishes identically, while for finite Z over the range of experimental interest the contribution to the mirror asymmetry does not exceed about 2×10^{-3}, against experimental effects of the order 0.13. (auth)

53816 CONFIGURATION MIXING AND MYSTERIOUS SECOND ZERO STATES. Irvine, J. M. (Univ. of Manchester, Eng.). Phys. Lett.; 36B: No. 1, 21-3(9 Aug 1971).

A simple schematic model is used to highlight the difficulty of obtaining a low-lying excited state in doubly closed-shell nuclei having the same quantum numbers as the ground state in a nuclear-shell-model configuration-mixing calculation. (auth)

53817 SECOND CLASS CURRENTS AND MIRROR BETA DECAYS. Wolfenstein, L. (Univ. of Michigan, Ann Arbor); Henley, E. M. Phys. Lett.; 36B: No. 1, 28-31(9 Aug 1971).

Answers are given to some questions raised by Lipkin [Phys. Lett., 34B: 202(1971)] concerning the relation between mirror asymmetry in beta decay and second-class currents. Mirror asymmetry (not of electromagnetic origin) is evidence for second-class currents, even if possible CP violation is taken. A nonvanishing mirror asymmetry can be calculated in terms of single-nucleon transition matrices, but there is no unique relation between the mirror asymmetry and the matrix elements of the second-class current for free nucleons. (auth)

53818 Q-VALUE DEPENDENCE OF HEAVY-ION TRANSFER REACTIONS ABOVE THE COULOMB BARRIER. Siemens, P. J.; Bondorf, J. P.; Gross, D. H. E.; Dickmann, F. (Univ. of Copenhagen). Phys. Lett.; 36B: No. 1, 24-7(9 Aug 1971).

Heavy-ion cross sections above the Coulomb barrier exhibit a very strong dependence on reaction kinematics. When one or more particles are transferred, recoil effects are essential to understanding the Q dependence. On the average, heavy-ion transfer reactions occur preferentially at values of the kinematical variables corresponding to a classical grazing collision between "soft" or highly absorptive bodies. (auth)

53819 ASYMPTOTICALLY CORRECT SHELL MODEL FOR ASYMMETRIC FISSION. Mosel, U. (Univ. of Tennessee, Knoxville. Oak Ridge National Lab., Tenn.); Maruhn, J.; Greiner, W. Phys. Lett.; 34B: 587-90(12 Apr 1971).

The two center shell model has been generalized to asymmetric configurations. This model is able to describe the correct transition from the shell structure of one nucleus to that of two fragments with unequal mass. This is illustrated by the complete level spectra for this transition. (auth)

53820 TRIAXIALITY IN NUCLEAR ROTATIONAL STATES. Tanabe, K.; Sugawara-Tanabe, K. (Yale Univ., New Haven). Phys. Lett.; 34B: 575-8(12 Apr 1971).

Non-axially symmetric deformation of a nucleus is introduced to account for the admixture of the collective rotational bands and the distribution of the yrast levels. A new rotational level scheme and an approximate formula for the yrast are derived. (auth)

53821 NUMERICAL SOLUTION OF THE FADDEEV–AMADO INTEGRAL EQUATION WITHOUT DEFORMATION OF CONTOURS. Sohre, F.; Ziegelmann, H. (Univ., Tuebingen, Ger.). Phys. Lett.; 34B: 579-80(12 Apr 1971).

A method for solving the Faddeev equation in the separable potential approximation is presented in which numerical and analytical integration are mixed to account for the singular structure of the kernel. Numerical results are compared to those obtained by the usual contour deformation method. (auth)

53822 THREE BODY CALCULATIONS. Amado, R. D. (Univ. of Pennsylvania, Philadelphia). pp 1-28 of Eighth Annual Eastern Theoretical Physics Conference Proceedings. /Rohrlich, F. (ed.). Syracuse, N. Y.; Syracuse Univ. (1969).

From eighth eastern theoretical physics conference; Syracuse, N. Y. (10 Oct 1969). See CONF-691033.

After a summary of some recent developments in the formal understanding of the three-body problem, dynamical calculations for a wide range of three-body systems are reviewed. These include n + d, d + α, and a hypothetical 0^{+} particle that decays weakly into three identical 0^{+} particles. The equations that these systems must obey are derived nonrelativistically, and their relativistic extension is indicated. Of particular interest is the final-state interaction (FSI), and how FSI information gets distributed over a three-body state. (R.W.R.)

53823 SPECTRAL DISTRIBUTIONS IN NUCLEI. French, J. B. (Univ. of Rochester, N. Y.). pp 29-54 of Eighth Annual Eastern Theoretical Physics Conference Proceedings. /Rohrlich, F. (ed.). Syracuse, N. Y.; Syracuse Univ. (1969).

From eighth eastern theoretical physics conference; Syracuse, N. Y. (10 Oct 1969). See CONF-691033.

Most theoretical work on nuclear structure involves the shell model and single-particle states. Nucleons are distributed over a finite set of these states to produce a finite vector space in which wave functions are found (the many-body problem is reduced to a spectroscopic one). The general problems which come after this reduction are considered: whether the general distribution of levels and of various kinds of transition strengths can be matched, what features of the interaction are responsible for certain features of the experimental results, whether certain group symmetries are good or badly broken, whether the reductions that have been made are allowable, etc. (R.W.R.)

53824 (d,p) REACTION ANOMALY AT THE THRESHOLD OF THE NEUTRON ANALOG CHANNEL. Graw, G.; Hategan, C. (Univ., Erlangen, Ger.). Phys. Lett.; 35B: No. 7, 541-2 (19 Jul 1971).

The difference between a cusp and the (d,p) threshold anomaly due to the presence of the single-particle l = 1 resonance in the neutron analog channel is analyzed. (auth)

53825 COMPARISON OF THE MOST OFTEN USED UNBOUND STATE WAVE FUNCTIONS IN A SQUARE WELL MODEL. Gyarmati, B. (Inst. of Nuclear Research, Debrecen, Hungary); Lovas, R. G.; Zimanyi, J. Phys. Lett.; 35B: No. 7, 549-50 (19 Jul 1971).

From a square-well-model calculation it is concluded that the use of pole functions (Gamow or Weinberg functions) or resonant-scattering wave functions as form factors in calculating nuclear reactions leading to unbound states may give rise to differences in the matrix elements when the external region contributes significantly to the integral unless an arbitrary cut-off is used. (auth)

53826 COULOMB REPULSION IN DIFFRACTION THEORY OF STRIPPING REACTIONS. Shebeko, A. V. (Physical-Technical Inst., Kazan). Yadern. Fiz.; 13: No. 6, 1259-61(Jun 1971). (In Russian).

On the basis of the diffraction model of direct reactions an analytical expression is obtained for the (d,p)-reaction amplitude. The consideration is carried out with account of the Coulomb repulsion in the initial and final channels of the reaction. (auth)

53827 APPEARANCE OF THE ROTATIONAL SPECTRUM IN THE NUCLEAR PHONON MODEL. Medvedev, B. I. (Moscow Metallurgical Inst.). Yadern. Fiz.; 13: No. 6, 1192-5(Jun 1971). (In Russian).

Possible appearance of the rotational spectrum in the nuclear phonon model is considered. It is shown that the rotational spectrum arises in the system of the dipole phonons in presence of a strong anharmonism. The moment of inertia is found. (auth)

53828 LOW ESTIMATE FOR THE SELF-ENERGY OF SYSTEM WITH A HARD CORE. Savchenko, O. Ya. (Inst. of Nuclear Physics, Novosibirsk, USSR). Yadern. Fiz.; 13: No. 6, 1196-8(Jun 1971). (In Russian).

A simple method is presented to get a low estimate for the energy of the system of particles with a hard core. The method is used for upper estimate of the bound energy of the nucleons in a nucleus where the nucleon cores are almost compactly packed. (auth)

53829 CONTRIBUTION FROM VARIOUS TYPES OF THE NUCLEAR INTERACTIONS TO THE NUCLEAR BINDING ENERGY. Sadovoi, A. A. Yadern. Fiz.; 13: No. 6, 1199-1208 (Jun 1971). (In Russian).

The Talmi–Moshinsky transformation is used to calculate the matrix elements (ME) of various local nucleon–nucleon potentials in the K-harmonics method. The result is that in the most general case the ME between arbitrary angular harmonics may be expressed in terms of simple integrals. Explicit expressions are presented for ME of central, tensor, spin-orbit, and l^2-dependent nuclear forces. The obtained formulas make the calculations of ME of the nuclear potential energy much simpler, and, besides, enable one to investigate the contributions from various types of the nuclear interactions to the nuclear binding energy. (auth)

53830 OFF-SHELL T MATRIX CORRESPONDING TO A SUM OF COULOMB AND SEPARABLE POTENTIALS BY EXPANSION IN O(4) HARMONICS. Zachary, W. W. (Naval Research Lab., Washington, D. C.). J. Math. Phys. (N. Y.); 12: No. 7, 1379-86 (Jul 1971).

Using a group-theoretic approach similar to methods previously used in the pure Coulomb problem, representations are derived for the off-shell "nuclear" T matrix—the difference between the complete T matrix and the Coulomb T matrix—corresponding to the sum of Coulomb and separable potentials, in particular, for the sum of Coulomb and Yamaguchi potentials. These representations have some analogous properties to those representations already known for the pure Coulomb T matrix, especially in the on-shell limit. (auth)

53831 POLARIZATION AND SYMMETRY PROPERTIES. Weidenmueller, Hans A. (Univ., Heidelberg. Max-Planck-Institut fuer Kernphysik, Heidelberg). pp 15-28 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

The importance of nuclear polarization experiments in testing symmetry properties of the fundamental interactions and conversely, the importance of symmetry principles in correlating and analyzing nuclear polarization experiments, are discussed. The status and consequences of P and T invariance, and the consequences of isospin invariance are reviewed. (63 references) (J.W.R.)

53832 POLARIZATION PHENOMENA IN NUCLEAR REACTIONS. Feshbach, Herman (Massachusetts Inst. of Tech., Cambridge). pp 29-38 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

Two aspects of polarization phenomena in nuclear reactions are reviewed. The first aspect discussed is the problem of the polarization observables and their representation in terms of partial waves. The second is the use of polarization experiments for the probing of nuclear structure and nuclear reaction mechanisms. (21 references) (J.W.R.)

53833 DESCRIPTION OF POLARIZATION AND SUGGESTIONS FOR ADDITIONAL CONVENTIONS. Darden, S. E. (Univ. of Notre Dame, Ind.). pp 39-56 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

The expressions relating polarization, cross sections, and analyzing power are summarized, using spherical and Cartesian tensors most frequently employed in the literature. Emphasis is placed on coordinate systems and the relation between analyzing power and polarization produced in the inverse reaction. For the spherical tensors the expressions are generalized to include the effect of third-rank polarization. Simple surfaces containing multipole deformations are used to aid in vizualizing second- and third-rank polarization. (auth)

53834 NUCLEON–NUCLEON INTERACTION. Mac Gregor, Malcolm H. (Univ. of California, Livermore). pp 57-72 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

The present understanding of the nucleon-nucleon interaction is surveyed. The experimental data are reviewed and some recent theoretical work is discussed. Some recent data on polarization and cross sections of elastic interactions are highlighted. (39 references) (J.W.R.)

53835 THREE- AND FOUR-NUCLEON SYSTEM. McKee, J. S. C. (Univ. of Birmingham, Eng.). pp 73-93 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

The available experimental data on polarization phenomena in three- and four-nucleon systems is surveyed. (55 references) (J.W.R.)

53836 FIVE-NUCLEON SYSTEM AND THE CALIBRATION OF POLARIZATION OF BEAMS OF NEUTRONS, PROTONS, AND DEUTERONS. Striebel, H. R. (Univ., Basel). pp 95-106 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

The recent experimental work on polarization effects in five-nucleon systems is surveyed. This work includes nucleon–^{4}He elastic scattering, ^{3}He(d,p) and T(d,n) reactions, and deuteron scattering from ^{3}He and T. In addition, the possibilities of calibrating the polarization of nucleons and deuterons are discussed. (58 references) (J.W.R.)

53837 POLARIZATION AND COMPOUND NUCLEAR STATES IN LIGHT NUCLEI. Plattner, G. R. (Univ., Basel). pp 107-30 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

Several experiments on polarization and compound nuclear states in light nuclei which have attracted strong interest recently are surveyed in detail. These studies include elastic scattering from spin-zero nuclei, elastic scattering from nuclei with spin, and nuclear reactions. Some of the problems associated with this type of nuclear spectroscopy are reviewed, and possibilities for overcoming them are discussed. (154 references) (J.W.R.)

53838 NUCLEON–NUCLEUS OPTICAL MODEL POTENTIAL. Perey, F. G. (Oak Ridge National Lab., Tenn.). pp 131-42 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO–7-593; CONF-700811.

A few areas of optical model studies which are of current interest are reviewed. An optical-model analysis of proton scattering by ^{208}Pb at 30 to 60 MeV is discussed in detail. (J.W.R.)

53839 ELASTIC SCATTERING OF DEUTERONS AND HEAVIER PROJECTILES. Johnson, R. C. (Univ. of Surrey, Guildford, Eng.). pp 143-53 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

The recent data on polarization effects in the elastic scattering of deuterons, tritons, and helium-3 are reviewed. The value of using polarized beams in experiments performed for the formulation and testing of optical-model parameters is discussed. (J.W.R.)

53840 PROTON INELASTIC SCATTERING. Satchler, G. R. (Oak Ridge National Lab., Tenn.). pp 155-77 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

The results of recent polarization measurements, including the so-called spin-flip measurements, on the inelastic scattering of protons are reviewed. These indicate that a "collective" or deformed potential model gives a good account of most of the data, provided both the absorptive and the spin-orbit coupling components of the optical potential are deformed. For the latter, partly on experimental and partly on theoretical grounds, the so-called Thomas form of deformed spin-orbit coupling is to be preferred over the simplified form used earlier. Further, there are indications that the spin-orbit part should have a greater deformation than the central part. A microscopic description of the polarization in terms of shell-model wave functions and effective nucleon-nucleon interactions has not so far been successful. It is most likely that nucleon-nucleon spin-orbit and tensor interactions will have to be introduced. (auth)

53841 ISOBARIC ANALOG RESONANCES. Graw, G. (Univ., Erlangen, Ger.). pp 179-203 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

Polarization experiments on proton scattering near isobaric analog resonances are discussed. The usefulness of these experiments in analyzing nuclear structure and the nuclear reaction mechanism is pointed out. Some recent measurements of polarization and analyzing power for both elastic and inelastic scattering are reviewed. (J.W.R.)

53842 THEORY OF TRANSFER REACTIONS. Goldfarb, L. J. B. (Univ. of Manchester, Eng.). pp 205-34 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

The theoretical treatment of polarization in (d,p) reactions is described. Some of the current theoretical developments are examined in detail. (J.W.R.)

53843 POLARIZED NEUTRONS ON POLARIZED TARGETS. Postma, H. (Rijksuniversiteit, Groningen, Netherlands). pp 373-87 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

Several recent developments which have increased possibilities for nuclear reaction and scattering studies using polarized beams and polarized targets are discussed. Some developments in cryogenics relating to nuclear orientation are described. Techniques for the production of polarized neutrons are also described. Some of the available experimental data on polarized neutron interactions with polarized targets are reviewed. (J.W.R.)

53844 COMPLETE DETERMINATION OF THE SCATTERING AMPLITUDES FROM POLARIZATION MEASUREMENTS. Simonius, M. (Eidgenoessische Technische Hochschule, Zurich). pp 401-5 of Polarization Phenomena in Nuclear Reactions. /Barschall, H. H. (ed.). Madison, Wis.; Univ. of Wisconsin Press (1971).

From third international symposium on polarization phenomena in nuclear reactions; Madison, Wis. (Aug-Sep 1970). See COO-7-593; CONF-700811.

53861 ALGEBRAICHESKIE METODY V TEORII YADRA. (Algebraic Methods in Nuclear Theory). Vanagas, V. Vilnyus, USSR; Izdatel'stvo Minitis (1971). 380p.

The book is intended for the use of scientists interested in the application of the group theory to many-particle systems. Only selected problems, related to the supermultiplet approximation, and more specifically, to the use of the unitary symmetry properties of the zero order Hamiltonian model of the nucleus, have been treated. The theory based on the algebraic methods of symmetrical and classical continuous groups attempted to explain characteristics of nuclear spectra on the basis of the kinematic properties of the model nuclear wave function. The subjects treated include allowed β transitions in the supermultiplet approximation, nuclear magnetic dipole moments, energy spectra of SU_3-invariant interactions, dependence of the energy level splitting on the quantum number of the orbital momentum, etc. (TTT)

53862 DECOMPOSITION OF CHARACTERISTICS OF PARTICLES EMITTED IN TWO STAGES OF NUCLEAR SPALLATION INTO PARTIAL CHARACTERISTICS. Levkovskii, A. A.; Serebrennikov, Yu. I. (Leningrad Polytechnic Inst.). Izv. Vyssh. Ucheb. Zaved., Fiz.; No. 8, 95-9(1970). (In Russian).

A method of analysis of experimental data on secondary particles that correspond to two stages of nuclear fission is set forth. Angular isotropy in the scattering of particles emitted by a residual nucleus in its center-of-mass system is assumed. Polar-coordinate graphs simplify the determination of the velocity of the particles as a function of the experimentally measured radius. Tables are given for a universal correction of the photoemulsion geometry used in fission experiments. (tr-auth)

53863 RADIATIVE CAPTURE OF ORBITAL ELECTRONS. Zon, B. A. (Voronezh State Univ., USSR). Yadern. Fiz.; 13: No. 5, 963-74(May 1971). (In Russian).

General expressions are obtained for the inner brehmsstrahlung probabilities of the electron capture from any shell, as well as for various correlation and polarization effects. The obtained formulas are used for numerical calculations and are compared with experimental data for ^{37}Ar, ^{119}Sb, ^{165}Er. (auth)

53864 ACCOUNT OF HIGHER HARMONICS IN THE HYPERSPHERICAL FUNCTION METHOD. Sadovoi, A. A.; Simonov, Yu. A. (Inst. of Theoretical and Experimental Physics, Moscow). Yadern. Fiz.; 13: No. 5, 990-1004(May 1971). (In Russian).

A method is developed to construct the higher harmonics in terms of the hyperspherical functions (K-harmonics) proposed for solution of the many-body problem. The method allows one to obtain harmonic polynomials of arbitrary degree K, satisfying the Pauli principle and possessing definite values of the total orbital moment, spin and isospin as well as their projection. The expression for the matrix element from one-particle and two-particle operators is described in a simple form convenient for calculations and close to corresponding expressions of the usual shell model. (auth)

53865 THREE-BODY PROBLEM IN THE OSCILLATOR BASIS. Macharadze, T. S.; Mikhelashvili, T. Ya. (Inst. of Physics, Tbilisi, USSR). Yadern. Fiz.; 13: No. 5, 981-9(May 1971). (In Russian).

Total classification of the intrinsic states of three particles moving in the harmonic oscillator field is carried out. Expressions for the fractional parentage coefficients are presented that enable one to construct the three-particle wave function with an arbitrarily given symmetry. General problems are discussed of the calculation method based on the expansion of the wave function over the total orthonormalized set of wave functions of the translation—invariant shell model. Calculations are performed for the case of a square well potential. A binding energy of 8.73 MeV is obtained for the ^{3}H nucleus. (auth)

53866 ON AN EXACT SOLUTION OF THE BETHE–GOLDSTONE EQUATION FOR FINITE NUCLEI. Dzhibuti, R. I. (Inst. of Physics, Tbilisi, USSR). Yadern. Fiz.; 13: No. 5, 1008-15 (May 1971). (In Russian).

The Bethe–Goldstone equation for finite nuclei is solved exactly with an effective potential resulting from modification of the Serber force. It is shown that the obtained analytic form of the correlated pair relative motion wave function is reasonable. The results are applied to study the structure of the energy spectrum of the ^{16}O nucleus. Diagonalizing the Brueckner t matrix in the basis of spherical field functions with application of the Brueckner–Hartree–Fock method, the ^{16}O nuclear levels are calculated. Reasonable agreement with the experimental data is obtained. (auth)

53867 POLARIZATION OF NUCLEONS ELASTICALLY SCATTERED ON NUCLEI. Pasechnik, M. V.; Prokopenko, V. S. (Inst. of Nuclear Research, Kiev). Yadern. Fiz.; 13: No. 5, 1026-31(May 1971). (In Russian).

Nucleon elastic scattering at ~4 to 30 MeV on a large number of nuclei within the $40 \leq A \leq 210$ region is considered. The connection is established between the differential cross section of nucleon elastic scattering and the angular dependence of polarization in the process of elastic scattering. This connection leads to reasonable agreement with experiment for protons but to considerably worse agreement for neutrons. The question on the applicability limits of the formula obtained is discussed. (auth)

53868 CLUSTER-TRANSFER IN NUCLEAR COLLISION. Abelishvili, T. L. (Tbilisi State Univ., USSR). Yadern. Fiz.; 13: No. 5, 1042-51(May 1971). (In Russian).

The cluster-transfer is analytically calculated in a nuclear collision in the framework of quasiclassical approximation at energies below and above the Coulomb barrier. (auth)

53869 ANGULAR CRITERIA OF CHOICE OF COHERENT INTERACTIONS OF PARTICLES WITH COMPLEX NUCLEI. Azimov, S. A.; Gulyamov, U. G.; Gulyamov, K. G.; Chernov, G. M. (Inst. of Nuclear Physics, Tashkent). Izv. Akad. Nauk Uzb. SSR, Ser. Fiz.-Mat. Nauk; No. 6, 47-52(1970). (In Russian).

Experiments were undertaken for the purpose of developing new effective angular criteria of selection of reactions of coherent particle generation with complex nuclei. A formula is developed which provides a satisfactory estimate of the upper limits of a longitudinal impulse of secondary particles for the pion reaction $\pi^- + A \rightarrow A + \pi^-\pi^-\pi^+$ and for the proton reaction $p + A \rightarrow A + p\pi^+\pi^-$. Approximately equal numbers of these two coherent events were observed, evidencing good agreement with well-chosen values of the upper limits of longitudinal and transverse impulses of secondary particles. (K.S.W.)

53870 EXCITED STATES OF DEFORMED ODD-MASS NUCLEI. Begzhanov, R. B. (Inst. of Nuclear Energy, Tashkent). Izv. Akad. Nauk Uzb. SSR, Ser. Fiz.-Mat. Nauk; No. 5, 62-5(1970). (In Russian).

This article gives a short review of various papers devoted to models which explain some of the properties of odd-mass nuclei. The energies of excited states of deformed odd-mass nuclei are mathematically defined. (K.S.W.)

53871 NUMERICAL METHOD OF ANALYZING BETA-DECAY MEASUREMENTS AND APPLICATION TO THE $1^- \rightarrow 0^+$ TRANSITIONS OF ^{170}Tm, ^{186}Re, AND ^{210}Bi. Loehken, R. (Univ., Heidelberg); Rebel, H.; Schatz, G. Z. Phys.; 245: No. 5, 425-41(1971).

A numerical method is proposed for determining nuclear matrix elements from beta-decay measurements. The method is based on the least-squares principle, and its main application is the analysis of beta-ray spectra. Its main result is to show that a spectrum shape measurement usually determines only a second-order polynomial of the matrix elements to a high precision whereas each of the matrix elements can vary within wide limits. The method is applied to the first-forbidden nonunique transitions ($1^- \rightarrow 0^+$) of ^{170}Tm, ^{186}Re, and ^{210}Bi (RaE). The 3 contributing matrix elements and their ranges of error are determined from recent measurements. (auth)

53872 SYMMETRY BREAKDOWN IN THE NUCLEAR-FISSION PROCESS. Ohta, K. (Tokyo Univ.). Lett. Nuovo Cim.; 2: No. 3, 95-8(17 Jul 1971).

An explanation for the breakdown of symmetry in nuclear fission is given. For a slightly excited nucleus to divide into two unequal fragments, asymmetric deformations must develop in the dynamic descent from the saddle point to the scission point. At saddle the nucleus is cold and may be in the symmetric mode. As fission proceeds, the Coulomb energy between the two nascent fragments decreases. Free-energy arguments show that, in the vicinity of the scission point, there exists only the asymmetric mode of oscillation, which leads to divisions into unequal fragments. (R.W.R.)

53873 GEOMETRIC SHAPES OF LIGHT NUCLEI. Specht, J. (Kernforschungszentrum, Karlsruhe, Ger.). Lett. Nuovo Cim.; 2: No. 3, 126-8(17 Jul 1971).

An empirical formula for the deformation parameters of light nuclei is obtained and compared with experimental data for quadrupole and hexadecapole deformations. It is also shown that the deformed nuclei touch the surface of the two next-lying double-magic nuclei. (R.W.R.)

53874 INFLUENCE OF THE CHEMICAL ENVIRONMENT ON β DECAY. Alder, K.; Baur, G.; Raff, U. (Univ., Basel). Helv. Phys. Acta; 44: No. 4, 514-18(7 Jan 1971).

The influence of a change of the electron screening on β decay is discussed. The results are used to calculate the change of the half-life of various β decays in different chemical environments. (auth)

53875 GRUPPENTHEORETISCHE METHODEN IM SCHALENMODELL DER KERNE. TEIL II. (Group-Theoretical Methods for the Shell Model of Nuclei. Part II). Doenau, Friedrich; Flach, Guenter. Berlin; Akademie-Verlag (1969). 256p. 42.- M.

Application of the shell model involving many particles encounters two characteristic difficulties. First, an asymmetrical set of wave functions must be classified and constructed. Second, spin coupling must be handled to compute matrix elements. The two problems are discussed in detail. Traditional procedures have recently been enriched by graphical techniques. Application of these modern techniques not only leads to simplification of computations but also to solubility of all problems involving the shell model. (H.B.G.)

53876 NUCLEAR CORE RENORMALIZATION AND SCALING PROPERTIES OF SOME RESIDUAL INTERACTIONS. Camiz, P. (Univ., Rome. Istituto Nazionale di Fisica Nucleare, Rome); D'Andrea, A.; Oliveri, E.; Scalia, M. Lett. Nuovo Cim.; 2: No. 1, 33-5(3 Jul 1971).

The coupling constants of a generalized pairing interaction with A dependence are considered. It is assumed that the presence of the valence nucleons induces a modification of the core such that the coupling constants may be written $G_i(A) = G_i(A_0)\,[1 + \lambda f_i(A - A_0)]$, where λ is a renormalizing parameter and f_i depends on the form of the interaction. The model is based on the hypothesis that the leading modification experienced by the core when nucleons are added can be described by a pure variation of the core radius; other effects, such as deformations, are neglected. It is shown that $dk/k = \lambda(A - A_0)$, where k is the oscillator constant and A_0 is the core mass number. (R.W.R.)

53877 QUASI-ELASTIC (p,n) SCATTERING. Rahman, M. (Atomic Energy Centre, Dacca, Pakistan); Sen Gupta, H. M. Nucl. Sci. Appl., Ser. B; 5: 4-6(Oct 1969).

A survey of the theoretical interpretation of quasi-elastic (p,n) scattering is made. Inclusion of a term like $t \cdot T$ in the optical potential gives rise to the quasi-elastic (p,n) process. The effect of various form factors used in the analyses on the (p,n) angular distribution is also discussed. (auth)

53878 REAL PART OF A NONLOCAL OPTICAL MODEL POTENTIAL. Suhrabuddin, S. (Univ. of Dacca, Pakistan); Chowdhury, S. M. M. R. Nucl. Sci. Appl., Ser. B; 5: 7-10 (Oct 1969).

The variation of the real part of the well depth in the case of elastic scattering of nucleons by a nucleus as a function of target mass is examined in the framework of the energy-independent nonlocal potential. Analysis indicates that the well depth for neutrons is almost constant with the mass number A and the well depth for protons may be obtained from that of neutrons by using the relation $V^p = V^n + \Delta(Z/A_{1/3})$, where V^p and V^n correspond to proton and neutron respectively, and $\Delta = 1.005$ for a nonlocal potential with Gaussian kernel and $\Delta = 0.817$ for a potential with Yukawa kernel. 53885 (A/CONF.49/P-9) PERSPECTIVES OF DEVELOPMENT OF NUCLEAR ENERGY IN THE PEOPLE'S REPUBLIC OF BULGARIA. Ruskov, Simeon May 1971. 10p. (In Russian). (CONF-710901-483). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The reserves of Bulgaria in organic fuel (coal, gas, petrol) and in hydraulic energy are limited and in order to fill up the deficit of its energetic balance, our country has to bend towards the nuclear energy. The building of the first Bulgarian Nuclear Power Station near Kozloduy, a small Danube riverside city, started in 1970. The capacity of this station will be 880 MW(el) two water moderator reactors, each of 440 MW(el). In 1972 will begin the extension of the station with another 880 MW(el), increasing the total capacity to 1760 MW(el). As the channel for the steam condensation is foreseen for a 2000 MW(el) Nuclear Power Station, it is possible to proceed in the future to a further increasing of its capacity. In 1980 another Nuclear Power Station should be built with a capacity of 1000 MW(el). It is possible, after reconsideration of the estimations, to increase the capacity of this station to 2000 MW(el). However, it is not yet definitely decided on the basis of which reactor type should be developed in the future of the Nuclear Power Station System. The forecasting of electricity consumption in Bulgaria for the year of 2000 has been calculated to be about 200 billions of kWh. It is expected, that 60% of this energy will be from nuclear source. (auth)

53886 (A/CONF.49/P-135) PROJECTED ROLE OF NUCLEAR ENERGY IN MEETING THE FUTURE ENERGY NEEDS OF AUSTRALIA. Carr, F. H. (Australian Atomic Energy Commission, Sydney). May 1971. 27p. (CONF-710901-166). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A summary is given of the fuel resources including a description of the development of new deposits of oil, gas, and nuclear fuels over the last several years. Existing electricity generating arrangements are described for each State including the types of fuel used and the outlook for the use of black and brown coal, oil, hydro, and natural gas. Electricity demand and demand growth are summarised. The introduction of nuclear power into Australia is discussed. The proposed nuclear power station at Jervis Bay will be the first commercial nuclear plant installed and the station is expected to be in operation by 1976. Nuclear power should be competitive with conventional stations in the majority of States by the mid nineteen eighties when additional nuclear power stations are expected to be in operation. 53887 (A/CONF.49/P-155) CANADIAN NUCLEAR INDUSTRY. Howieson, J. (Canadian Westinghouse Co., Ltd., Hamilton (Ontario)). May 1971. 12p. (CONF-710901-173). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Industrial planning in Canada is based on the projections of the growth of the nuclear power requirements in the country—with some small allowances for export. Other major factors are the projections of Canadian resources of manpower and capital. These resources and projections are summarized for the "direct" nuclear industries. These cover the production or fabrication of heavy water, zirconium, steam generators, pumps, fueling machinery and other reactor components—and, of course, reactor design. "Indirect" industry—the manufacture of turbines, electrical generators, transformers, switchgear, control and instrumentation, plus construction and service industries—is also discussed. The cumulative expenditures in the next 20 years on CANDU systems in Canada is predicted at $\$10^{10}$ as against $\$10^{9}$ in the last 20 years. The information presented shows that the choice of the CANDU system should be specially attractive to other countries with a growing industrial capability similar to that of Canada. (Canadian General Electric Co., Ltd., Peterborough (Ontario)); Howieson, J.; (and others) (Canadian Westinghouse Co., Ltd., Hamilton (Ontario)). May 1971. 15p. (CONF-710901-174). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Canada's heavy-water-moderated power reactors (CANDU reactors) fueled with natural uranium dioxide are known for their low fuel cost and good neutron economy. The simple design of the fuel bundles permitted economic mass production at an early stage and facilitated irradiation schedules that give uniform burnup. The excellent performance of this fuel in pressurized heavy water can also be exploited in boiling-light-water and organic coolants. Fuels other than UO_2 are being developed for potential savings. The Hydro-Electric Power Commission of Ontario (Canada's major nuclear utility) buys natural uranium on long-term contracts and procures fabrication of finished fuel on shorter-term contracts. Methods for scheduling the fuel through the reactors, using computer programming, have been developed from work done by the reactor designers. Fixed-price contracts for 19,000 bundles (375 tonnes U) for the four-unit 2000 MW(e) Pickering Generating Station yield a total finished fuel cost of $44/kg U (1967 Canadian dollars) or an equilibrium fueling cost of 0.7 m$/kWh. For accounting, spent fuel is assigned zero value, so its future sale or use would constitute a bonus. The current price for natural-UO_2 28-element 10-cm-diameter CANDU fuel bundles (excluding only the U_3O_8 cost) is

XUM

about $30/kg U (1970 Canadian dollars) and is expected to decrease by one-third by 1980. This price is one-third or one-fourth that of fuel assemblies for light-water reactors. The simplicity of the CANDU fuel design accounts for much of the price differential. There are no channel or control-rod components in CANDU fuel; the short bundle and large element diameter contribute significant cost reductions. The involvement of only natural uranium accounts for the remainder. Experience in Canada is sufficiently extensive to establish confidence in the reality of the fabrication prices. Nearly half a million elements had been fabricated by the end of 1970. (14 references) (auth)

53889 (A/CONF.49/P-188) ITALIAN EXPERIENCE ON FUEL PERFORMANCE. Ariemma, A.; Belelli, U. (ENEL, Rome, Italy); Bionda, E. (CAMEN, Pisa, Italy); Bozzoni, T.; (and others) (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). May 1971. 18p. (CONF-710901-190). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The performance of fuel assemblies in nuclear reactors is analyzed in the light of the experience acquired by ENEL with the operation of Garigliano, Latina and Trino Vercellese power plants, and by CNEN and Agip Nucleare within their development programs. The performance of the Trino Vercellese fuel assemblies is discussed in relation to the well-known inconvenience experienced with the reactor internals. Information is provided on the Garigliano fuel performance with an indication of the type and magnitude of observed faults, on the problem of crud buildup and remedial action taken. The main results of the Plutonium Recycle Demonstration Program under way at the Garigliano are described specifically as concerns irradiation of a mixed core containing prototype plutonium assemblies which have now reached a burnup of 7000 MWd/t. Development activities that have been carried out within CNEN Plutonium Program are reviewed. The most significant tests concern fuel designed and manufactured in Italy, which is being irradiated in Ågesta and Kahl reactors. Thermohydraulic parameters and vibration have been verified in out-of-pile tests. In the field of advanced reactors, activities for the CIRENE fuel and fast reactor fuel are described. Fuel elements for the 40 MW(e) CIRENE prototype reactor (BHWR type) are being irradiated in the Halden BWR, Avogadro, Essor CART loop and Ågesta reactor. Within the Fast Reactor Program, two types of in-pile experiments are being carried out to test fuel pins and subassemblies for the PEC reactor in the Dounreay and Rapsodie facilities up to burnups of 70,000 MWd/t; and to verify the feasibility of venting the fuel assembly directly to the coolant, in thermal reactors (Avogadro, Siloè) and in Dounreay fast reactors for burnups in the range of 20,000 to 100,000 MWd/t. The performance of small specimens of binary and tertiary uranium alloys irradiated up to a burnup of 6,000 MWd/t is also described. (13 references) (auth)

53890 (A/CONF.49/P-212) INTRODUCTION OF NUCLEAR ENERGY IN AUSTRIA: EXPERIENCES GAINED DURING TENDER EVALUATION INTERCONNECTION INTO THE AUSTRIAN GRID. Nentwich, A. A.; Staudinger, F.; Oszuszky, F. J. P.; Renner, W. May 1971. 11p. (CONF-710901-192). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The main considerations for introducing nuclear energy in Austria are discussed and the needs to secure high availability coupled with an optimum operational flexibility when introducing nuclear power into a hydropower orientated system are highlighted. The experiences gained during the evaluation period are analyzed. There are certain problems which turn out to be of great importance to the purchaser of a nuclear power plant, especially if this is going to be the first nuclear installation in a country. Economical problems encountered specifically with the fuel cycle are discussed in detail. This concerns mainly the recycling of plutonium in thermal reactors and the problem of securing long term uranium supply. Several studies are described which have been undertaken for selecting the optimum reactor site, preliminary in respect of the entire Austrian grid taking also into consideration the effects of being coupled to the vast European power transmission-system (UCPTE) and its economic influence on different sort of outages combined with the problem of keeping then adequate power to be interchanged at any time (reserve pool). Some ways for operational flexibility of a nuclear power station when introduced into a hydropower orientated system are described. (auth)

53891 (A/CONF.49/P-270) PROBLEM OF INTRODUCING NUCLEAR POWER IN A FAST GROWING ELECTRICAL ENERGY SYSTEM. Brellas, N.; Cassapoglou, C. B.; Margaritides, P.; (and others) (Public Power Corp., Athens, Greece). May 1971. 15p. (CONF-710901-102). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Greece is an example of a country with a relatively small electrical power system (present total installed capacity 2700 MW) which is growing very fast. The problem of the introduction of nuclear power to such a system is examined. The electrical energy situation of the country with the up to date existing power stations and demands is given as background information. The estimated future energy requirements both for the industry demands and other applications and needs are described to the year 2000. The known energy resources of the country for the operation of conventional power stations are also presented in relation with the problem of covering the present and future demands. The cost analysis of the conventional power stations is further reported together with a technoeconomical evaluation of various alternatives. The need for the introduction of nuclear power into the grid is discussed. A study concerning the size of the nuclear power plants in connection with the national and interconnected electrical system is given as well as the economical integration of nuclear power into the system. Domestic uranium deposits are also taken into account. An attempt is made to establish a time schedule scale for the introduction of various reactor types (Thermal-Converter-Breeder) into the system. 53892 (A/CONF.49/P-278) IN-CORE FUEL MANAGEMENT IN PWR PLANTS. A PRACTICAL APPROACH. Melice, M.; Hunin, C. (Electrobel, Brussels (Belgium)); Vielvoye, A. (Societe de Traction et d'Electricite, Brussels (Belgium)). Jun 1971. 24p. (CONF-710901-371). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Two main problems form the basis of core management in a PWR: (1) The follow-up and the simulation of the core in order to know its safety margins during the cycle and to predict its condition at the cycle end, for fuel management calculations. (2) Management of core cycles: optimization at the successive cycles of the number and enrichment of fresh assemblies ("external" optimization) as well as the configuration ("internal" optimization) of the core reloading pattern. Codes of the CMDBE series are being worked out which are diffusion-evolution programs with 2 neutron groups. Internal optimization is done through the OMEGA code using iteratively a routine of linearization of the problem and a routine of optimization of the linearized problem. External optimization uses DBE1 and DBE2. It is performed in 2 steps: optimization of the equilibrium cycle and optimization of the return or attainment of equilibrium. (22 references) (auth)

53893 (A/CONF.49/P-294) ADVANCES IN CONTROL AND SUPERVISION OF POWER REACTOR PLANTS USING ON-LINE COMPUTERS, BASED ON EXPERIENCE FROM HBWR EXPERIMENTS AND OPERATION. Lunde, J. E.; Grumbach, R.; Oevreeide, M. (Institutt for Atomenergi, Halden (Norway). OECD Halden Reaktor Prosjekt). May 1971. 20p. (CONF-710901-263). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The OECD Halden Reactor Project has since 1967 conducted a research and development program on the application of advanced methods for control and supervision of nuclear power plants, implemented with extensive usage of on-line computers. The feasibility of such methods is tested on the Halden Boiling Heavy Water Reactor (HBWR), which is a 25 MW(t) experimental reactor. The objective of the development work is to demonstrate that improved plant reliability and reduced downtime, as well as improved core performance and fuel utilization can be achieved for large nuclear stations when using advanced supervision and control approaches. The application of large process computer systems has been adopted for functions like supervision of process variables, data collection and reporting, and direct digital control of nuclear power, including power ramps, and of other variables. Emphasis has also been placed on computer-based operator and process communication, using consoles and displays. (16 references) (auth)

53894 (A/CONF.49/P-322) INTEGRATION OF NUCLEAR AND CONVENTIONAL HEATING POWER STATIONS IN DISTRICT HEATING SYSTEMS AND IN ELECTRIC GRIDS. Levai, A. (Technical Univ., Budapest, Hungary). May 1971. 16p. (CONF-710901-108). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Economics and safety aspects concerning the use of nuclear reactors for power generation and space heating applications are discussed. (7 references) (D.C.C.)

53895 (A/CONF.49/P-347) PROJECTION OF A LONG-TERM DEVELOPMENT OF NUCLEAR POWER IN YUGOSLAVIA.

Salom-Suica, J. (Yugoslav Nuclear Energy Commission, Belgrade). May 1971. 24p. (In French). (CONF-710901-486). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The paper summarizes a number of studies of the past development of power in Yugoslavia which all consider the main factors that determined the structure and the growth of power. It provides long-term projections of the generation and consumption of electric energy by the use of several methods of forecasts and optimization. Conclusions have been drawn as to the conditions of competitiveness of nuclear power stations and the possibilities of their integration into the country's power system. The analyses deal with the problem of the choice of reactor concept, the feasibility of different reactor strategies from the point of view of economics, the use of domestic nuclear raw materials and the conditions for an optimal employment of the national scientific, technical and industrial potentials in the implementation of a long-term nuclear program. The paper deals in particular with the analysis of the competitive determination of the optimal structure of power stations for the supply of the consumers in the system of the western part of Yugoslavia. The analysis will be conducted by the method of selecting optimal plants taking into account the needs of power and energy, the oscillation of hydro power plant productibility, the need to secure spinning reserve capacities and the time necessary for the usual overhaul of the units, and also the necessary allowances for plant black-outs. 53896 (A/CONF.49/P-417) PLANNING AND CONTROL INVOLVED IN THE GOVERNMENTAL PROMOTION OF NUCLEAR ENERGY PROGRAMMES. Schuster, G.; Rembser, J. (Bundesministerium fuer Bildung und Wissenschaft, Bonn (West Germany)). May 1971. 27p. (CONF-710901-146). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In the Federal Republic of Germany, governmental promotion in the field of nuclear energy is primarily given to advanced sectors of nuclear technology; near-industrial development is carried out by private industry. The development of nuclear technology is carried on in governmental nuclear research establishments and by industrial companies. The emphasis in governmental activities is placed mainly on tasks of planning and control. (auth)

53897 (A/CONF.49/P-418) IMPORTANCE OF NUCLEAR TECHNOLOGY FOR THE DEVELOPING NATIONS. Boettcher, A. (Kernforschungsanlage, Juelich (West Germany)). Apr 1971. 6p. (CONF-710901-147). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The necessity of nuclear energy production is distinctly imposed on all countries. For developing countries requirements starting at the latest by the end of this decade with a following very rapid increase are to be expected, because of the generally very short doubling time of energy needs (6 to 7 years) and the relative shortage, respectively geographically unfavorable location of conventional energy sources. Scarcity of foreign exchange stimulates the rapid growth of self-supply of the nuclear fuel cycle and a growing participation in the setting up at least of the conventional parts of nuclear power plants. The relatively high demands as to precision and liability of production form an important stimulation for establishing industrial control and development laboratories. Nuclear science and technology are moreover suitable starting points for promoting scientific education as they need advanced experimental techniques and careful theoretical evaluation, giving at the same time new impetus to other faculties owing to the manifold applicability of nuclear methods. Nuclear technology stimulates the necessary cooperation of research institutes and industry and the integration as well of national efforts into international development. (auth)

53898 (A/CONF.49/P-460) DEVELOPMENT OF FUEL ELEMENTS FOR BOR-60 REACTOR. Leipunskii, A. I.; Zaimovskii, A. S.; Kasachkovskii, O. D.; Golovin, I. S.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 33p. (CONF-710901-388). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Presented are data on deformation property of steel, used for fuel element claddings, and on mechanical effect of swelling fuel core on the fuel element cladding. The calculated fuel element model with due regard for evolution of the core shape depending on fuel burn-up is presented. Given are descriptions of fuel element design, fuel element fabrication technology and fuel element working conditions in the reactor. Calculation results on fuel element working ability are presented. The experimental data on UO_2 and OX16H15M3 steel characteristics, stated in a number of Soviet and foreign works are used for calculations. Some general problems of oxide core fuel elements design for the fast power reactors are discussed. (12 references) (auth)

53899 (A/CONF.49/P-467) NUCLEAR POWER IN THE UNITED KINGDOM. Hill, John (United Kingdom Atomic Energy Authority). Jun 1971. 13p. (CONF-710901-473). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The changes that have taken place and the progress that has been made since the last Geneva Conference in 1964 are discussed. It considers the changing attitudes of industry to the problems of an advanced technology not only in the United Kingdom, but in many countries. The operating experience of the eleven nuclear power stations now in operation in the U.K. is discussed in detail. The six large nuclear stations now under construction are compared with the stations that preceded them. (16 references) (auth)

53900 (A/CONF.49/P-469) DESIGN AND PERFORMANCE OF HEAVY PLANT COMPONENTS FOR GAS-COOLED REACTORS. Southwood, J. R. M. (Nuclear Power Group Ltd., Knutsford (England)). May 1971. 12p. (CONF-710901-210). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Gas cooled reactor construction has required novel solutions to the engineering of components such as pressure vessels, boilers and circulators. Not only have the duties of these components been unusual but there has also been a demand for access for inspection and maintenance in an active environment. The U.K. Mk I Gas Cooled Reactor (Magnox) program, which is now complete, has provided a number of alternative solutions to these problems. As some of these reactors have now been in operation for several years, the relative success of different solutions can be judged from the experience gained. Various design features are described. The operational experience is reviewed to illustrate the success of these features. In particular, the design and construction of concrete pressure vessels and the problems encountered with the steel liners and internal insulation for these vessels are discussed. Reference is made to the success in achieving inspection and maintenance in areas which were originally considered inaccessible. The U.K. has followed the first Mk I G.C.R. program with plans for the installation of a number of Mk II Gas Cooled Reactors (A.G.R.s) with a capacity of at least 8,000 MW. Three such stations, each with twin reactors, are in an advanced stage of construction. Construction of a fourth station was started in 1968. The design features of the heavy internal components in these reactors reflect the experience gained during the Mk I G.C.R. program. Changes in design philosophies are described. The adoption of the concrete pressure vessel led immediately to a greater integration of the primary circuit components. This has in turn led to the use of a podded boiler construction on a recent station which permits the use of more readily removable boiler units. (7 references) (auth)

53901 (A/CONF.49/P-470) HANDLING OF FUEL AND REACTOR COMPONENTS IN GAS COOLED REACTORS. Lawson, D. S.; Slack, M. R.; Walker, A. (British Nuclear Design and Construction Co. Ltd., Leicester, Eng.). May 1971. 12p. (CONF-710901-283). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design objectives in pursuing on-load refueling methods for the U.K. gas cooled reactors are illustrated by brief descriptions of typical fueling routes for Mk I Gas Cooled Reactors (Magnox). Two types of fuel handling emerge. The first uses two machines, one for preparing the route for fueling and the other for handling fuel; whereas the second has one composite machine for all functions. The fueling equipment at Hinkley Point "A" is used as an example of the former, with Sizewell "A" and Wylfa as developments of this; and that at Trawsfynydd as an example of the latter. A summary of the operating performance is given. The major problems that arose in design, development and at site are described together with their solutions. The experience gained from the successful development of refueling methods on the Mk I G.C.R.s has been applied to the development of simple refueling systems for Mk II Gas Cooled Reactors (A.G.R.s). The fueling philosophy that has emerged, together with its benefits, are seen in the design development for the Windscale A.G.R. and in the designs for Hartlepool and Heysham. (6 references) (auth)

53902 (A/CONF.49/P-478) INTEGRATION OF NUCLEAR PLANT INTO THE COMBINED HYDRO/THERMAL SYSTEM IN SCOTLAND. Barclay, R. S. (South of Scotland Electricity Board, Glasgow); Cochran, A. M. (North of Scotland Hydro-

XUM

Electric Board, Edinburgh). Jun 1971. 11p. (CONF-710901-287). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The introduction of nuclear plant into an existing electricity supply system requires consideration from both economic and operational aspects. Problems of integration vary with the proportion of different types of plants, which can range from all thermal to all hydro electric and may include existing nuclear and pumped storage. At present in Scotland electricity generated from nuclear plant forms about $\frac{1}{6}$th of the total. Nuclear plant accounts for 8% of generating capacity. Hydro and pumped storage form 25% of generating capacity. Operational arrangements are described and the transmission network outlined. This system, formerly consisted of hydro electric and coal fired plants and has been developed by the introduction of nuclear, pumped storage, oil fired plant, and some gas turbine plant for peak load use. Operational experience, including the performance of existing nuclear plant, is reviewed. The current development program of new generating plants is outlined with the economic and operational considerations leading to the choice of each main project. The connection with load development is considered. When the nuclear and pumped storage plants now under construction are commissioned the proportion of each on the system will be nuclear 18%, hydro and pumped storage 19%. Operational procedures being prepared to meet these conditions are described. Looking to the long term development the prospects for inclusion of further nuclear, pumped storage and other types of plant are reviewed taking account of the operational considerations and trends of costs. 53903 (A/CONF.49/P-500) PERFORMANCE OF THE FUEL ELEMENTS IN THE MK I GAS COOLED (MAGNOX) REACTORS OF THE CENTRAL ELECTRICITY GENERATING BOARD. Harris, J. E.; Duckworth, F. C.; Hines, G. F.; Uglow, A. G. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.). May 1971. 13p. (CONF-710901-221). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Twelve of the sixteen C.E.G.B. Mk I Gas Cooled Reactors (Magnox) have now reached the end of the lifetime of the first charge and an equilibrium fuel cycle has been established. Operational experience relates to 75 reactor years (1.5×10^6 fuel element years) and the performance of the fuel has been assessed by post-irradiation examination of more than 4,500 selected fuel elements. A critical review of the results of this fuel element monitoring program is presented. The monitoring data have enabled recommendations to be made for the equilibrium reject irradiation to be raised progressively to the present level of 3,600 MWd/t channel average. Additionally, on an experimental scale, channels have been taken to 4,600 MWd/t average irradiation without any failure occurring. Contrary to earlier expectations, the magnesium cladding is not significantly embrittled by irradiation and the load-bearing magnesium components have adequate creep strength to withstand much longer residence times. At the lower operating temperatures, the fine grained cladding has sufficient ductility to accommodate the low strains induced from irradiation growth in the fuel. It appears that, while there has been no failure due to this cause, the occurrence of breakaway swelling in the most highly rated fuel is likely to prove life-limiting if considerable increases in target irradiation are adopted. Although the fuel element failure rate has been small, averaging about 0.07% per fuel element year, the associated post irradiation examination studies have been invaluable in identifying the reason for failure and in defining the hazards they present in the period prior to discharge. 53904 (A/CONF.49/P-532) INTEGRATED PLANNING OF NUCLEAR INDUSTRY. Sethna, H. N.; Fareeduddin, S.; Meckoni, V. N.; Srinivasan, N.; (and others) (Bhabha Atomic Research Centre, Bombay (India)). May 1971. 17p. (CONF-710901-234). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

It has been proposed by the Indian Atomic Energy Commission that a total of 2.7 million KW of nuclear generating capacity would be installed by 1980. The program has been further planned such that the nuclear generating capacity doubles every five years so that it can contribute significantly to the total energy needs of the country. The program of construction of power reactors in the first and subsequent phases as well as the possible fuel cycles that could be adopted are presented. Based on this program, the nuclear industry, particularly with reference to the anticipated demand for and supply of uranium, plutonium, and heavy water as well as fuel fabrication and reprocessing services, is discussed. (auth)

53905 (A/CONF.49/P-571) PRESTRESSED CONCRETE PRESSURE VESSELS AND THEIR THERMAL INSULATION. Bordet, R.; Costaz, J. L.; Lida, M. (Electricite de France, Clamart). Jun 1971. 21p. (CONF-710901-397). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The characteristics of the Bugey-I pressure vessel are described. Operation measurements on the linings of Chinon III and St. Laurent II pressure vessels are given and interpreted. Prestressing of St. Laurent II and Bugey I pressure vessels is analyzed. Research and development programs on prestressed concrete pressure vessels are reviewed. (6 references) (J.M.J.)

53906 (A/CONF.49/P-584) PHENIX: FIRST FRENCH FAST NEUTRONS POWER PLANT. Carle, R.; Negy, J. (Commissariat a l'Energie Atomique, Paris (France)); Crette, J. P.; (and others) (Groupement Atomique Alsacienne Atlantique, le Plessis-Robinson (France)). Apr 1971. 15p. (In French). (CONF-710901-248). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The main options which prevailed during the design phase and the construction of the PHENIX 250 MW(e) fast power plant are described. The difficulties experienced in the design phase and the corresponding modifications are shown in detail: main vessel temperature, primary sodium flow pattern, and post-shutdown reactor cooling. The main components: control-rod driving gear, fuel handling mechanisms, steam generator, etc., have undergone full-scale tests, most of them in sodium. The results of these tests are shown. The difficulties encountered during the plant components construction or assembling are briefly listed. The plant testing sequence is presented. This testing period will cover about one year due to the prototype nature of the plant. (8 references) (auth)

53907 (A/CONF.49/P-676) SWISS PUBLIC OPINION AND NUCLEAR ENERGY. Feuz, P. (Swiss Association for Atomic Energy, Bern); Meichle, A. (Bernische Kraftwerke AG, Bern (Switzerland)); Winkler, W. (Bern Univ. (Switzerland)). Jun 1971. 14p. (CONF-710901-411). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Swiss public greeted the construction of the first nuclear power stations of Beznau and Mühleberg as a modern supplement to the practically exhausted hydro-electric sources and as a welcome alternative to the oilfired power stations, which it was feared would cause air and water pollution. Since the end of the 1950s the Swiss Association for Atomic Energy (SVA) had carried on a systematic public information program with various means and at various levels in order to prepare the introduction of nuclear energy. For a long time it seemed that these efforts had been entirely successful. However, in connection with the Kaiseraugst project there appeared for the first time a significant opposition which at first seemed to be restricted to a local scale, but which has since spread very rapidly to wider sections of the population. It is attempted to analyze the complex reasons for this opposition—which range from politics to serious concern over danger to the environment and to philosophical + ideological causes—and to classify the active opponents into groups. In addition the most important arguments used by the opponents are summarized both as to subject matter and according to their origin. (auth)

53908 (A/CONF.49/P-705) RADIATION RESISTANCE INVESTIGATIONS OF 48 TC HIGH-STRENGTH STEEL FOR REACTOR HIGH-PRESSURE VESSELS OF ATOMIC POWER STATIONS. Amaev, A. D.; Gorynin, I. V.; Efimov, A. V.; Kapyrin, G. I.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 26p. (CONF-710901-481). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The radiation resistance of 48TC steel (the basic metal and the metal of welded joints) was investigated after irradiation under different conditions. Special attention was given to the effect on increased embrittlement of dose and temperature of irradiation. The neutron radiation effect on material resistance to brittle rupture is estimated by different methods. Simultaneously, inpile radiation effects on steel under mechanical stresses was studied. The radiation resistance of 48TC steel is given in comparison with the radiation resistance of other steels. Estimates of reactor vessel reliability are given in relation to the design temperature margin of ductility. (11 references) (auth)

Dollezhal, N. A.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 38p. (CONF-710901-419). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The technical and economic parameters of the Leningrad Atomic Power Station are described. The station includes twin 1000 MW(e) boiling water-cooled graphite-moderated reactors with nuclear superheat. The potential of this type reactor as a converter when fueled with both enriched and natural uranium is examined. (8 references) (H.D.R.)

53910 (A/CONF.49/P-718) PROBLEM OF THE INTEGRATION OF NUCLEAR PLANTS INTO THE ELECTRICITY SUPPLY SYSTEM. Dollezhal, N. A.; Beschinsky, A. A.; Baturov, B. B.; Bacanov, A. V.; (and others) (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, [Moscow]). Jun 1971. 16p. (CONF-710901-363). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The limits of nuclear power plant development are analyzed from the economic and technical viewpoint as a function of time. The role of thermal and fast reactors in nuclear power plant development is studied. The influence of nuclear power plants on general development of power systems is discussed. Optimum operating conditions and types of nuclear power plants are analyzed for power systems. (auth)

53911 (A/CONF.49/P-729) NUCLEAR ENERGY IN THE SPANISH ELECTRIC SYSTEM. Pascual, F.; Palacios, L. (Junta de Energia Nuclear, Madrid (Spain)); Ortega, J.; Gaitan, I. (Junta de Energia Nuclear, Madrid (Spain). Direccion General de la Energia y Combustibles). May 1971. 15p. (In Spanish). (CONF-710901-501). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Spanish electric system includes currently two nuclear units in operation and one more under advanced construction. The experience obtained thus far enables planners to program the economic integration of nuclear power plants into the Spanish grid over the near future. It is estimated that 71,000 MW of nuclear plant will be installed by the year 2000, accounting for 60.7% of the total installed power. Light water reactors are expected to be the main contributors, with fast breeders being progressively introduced. (auth)

53912 (A/CONF.49/P-757) NUCLEAR REACTORS IN LATIN AMERICA. Velez, C. (Inter-American Nuclear Energy Commission, Washington, D. C.). May 1971. 13p. (In Spanish). (CONF-710901-509). Dep. NTIS (U. S. Sales Only).

53914 (A/CONF.49/P-780) GROWTH OF DEMAND FOR ENERGY AND PROJECTED ROLE OF NUCLEAR POWER IN TURKEY. Aybers, N. (Technical Univ. of Istanbul); Kakac, S. (Middle East Technical Univ., Ankara, (Turkey)). May 1971. 26p. (CONF-710901-328). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Existing power system, energy requirements up to year 2000, and power development in Turkey are reviewed. Available conventional energy resources such as fossil fuels and hydropotential for meeting long term energy requirements are considered. From the estimated costs, the competitiveness of nuclear power and the influence of local conditions on capital cost are discussed. It is shown that, in view of the limited amount of fossil fuel in Turkey, nuclear power would be very promising source of electricity for sustaining and accelerating the country's economic development. Projected role of nuclear energy is expected to play in meeting near-term energy requirements for electric power and desalination is also summarized. 10 references. (auth)

53915 (A/CONF.49/P-788) DEFINITION OF A POWER REACTOR PROGRAM FOR MEXICO. Velez, C. (Comision Nacional de Energia Nuclear, Mexico City). Jun 1971. 13p. (CONF-710901-330). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In order to define a program for technology assimilation and development, it was necessary to consider the possible reactor evolution in the world and the prospects for their utilization in Mexico. With this purpose, probabilities were assigned to the use of different reactor types in Mexico, including fusion reactors, at several dates up to year 2000. It was thus possible to construct an ensemble of "futures" and to assign relative weights to development plans within a comprehensive policy, taking into consideration in as much as possible the economic aspects of associated costs and benefits. (auth)

53916 (A/CONF.49/P-793) NUCLEAR ENERGY IN MEXICO'S ECONOMIC DEVELOPMENT. Galvez, L.; Trevino, R. (Comision Nazional de Energia Nuclear, Mexico City). Jun 1971. 13p. (CONF-710901-332). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The history of nuclear energy activities in Mexico is reviewed. Recommendations for a federal program to encourage the development of nuclear energy applications are presented. (H.D.R.)

53917 (A/CONF.49/P-798) THERMAL ENERGY STORAGE IN ROCK CHAMBERS. A Complement to Nuclear Power. Margen, P. H. (Aktiebolaget Atomenergi, Studsvik (Sweden)). Jun 1971. 17p. (CONF-710901-429). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Studies have been made of storing hot high pressure water in rock cavities with a simple thermal insulation. One method of utilizing this water is as feed water for a nuclear power station, the water in the store being heated from about 73°C to 217°C at night, and the stored hot water being fed directly to the Nuclear Steam Supply System (NSSS) during the day. An increase in turbine output by about 25% can then be achieved at peak periods due to the elimination of the h.p. steam bleeding for unchanged reactor power. About 35 kWh of electricity can be recovered per m^3 of storage volume, i.e. 30 times as much as if one m^3 of cold water had been allowed to descend 450 m under gravity to the lower magazine of a pumped storage plant. The circuit proposed and the design of the accumulator to meet the requirements concerning thermal insulation (to avoid exposing the rock walls to daily temperature cycles), avoidance of risk of leakage of slightly active feed water to the surrounding ground water even under severe accident conditions such as pipe and tank ruptures, and water chemistry to avoid water containing impurities or dissolved gases from reaching the feed water circuit is described. A preliminary cost analysis is given which shows that the proposal allows the generation of additional blocks of peak load power at annual load factors of 15 to 40% at generation costs which are about half that of the best fossil fuel plants at typical fossil fuel costs. 6 references. (auth)

53918 (A/CONF.49/P-811) REPAIR AND RESTORATION TO POWER OF SAINT-LAURENT 1 AFTER AN INCIDENT OF FUEL MELTING. Knockaert, A.; Teste du Bailler, A. (Electricite de France, Saint-Laurent-des-Eaux). Jun 1971. 16p. (CONF-710901-433). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

An incident which occurred on October 17th, 1969, in the Saint-Laurent 1 reactor, and of the following recovery actions and start up of the reactor is described. This natural uranium, gas, graphite reactor, nominal output 480 MWe, was started up on March 1969 and the first six months of operation were very satisfying from all points of view. On October 19th, 1969, following an erroneous handling procedure, a graphite block with a restricted flow passage was loaded in one of the channels. This resulted in the meltdown of five of the fifteen fuel elements of the channel and the dispersion of the uranium in the reactor vessel. The repairs have included a debris recovery, mostly performed by direct access of 105 workers, on a time limit basis, close to the reactor core, and the erection of a total filtration equipment for the carbon dioxide circuit inside the pressure vessel. Also the burst cartridge detection system has been modified, as well as the fuel handling procedures. The reactor has been reconnected to the grid on October 16th, 1970, and has reached in November a power of 430 MWe. 15 references. (auth)

53919 (JPRS-53800, pp 252-7) INVESTIGATION OF FUEL ELEMENT ASSEMBLY IN THE VK-50 BOILING REACTOR. Andreev, A. B.; Belokopytov, V. S.; Votinov, S. N.; Derebizov, M. D.; Petin, B. P.; Pakhomov, Z. I. Translated from pp 252-7 of Radiatsionnaya Fizika Tverdogo Tela i Reaktornoye Materialovedeniye, Atomizdat, Moscow, 1970.

Results are presented of materials research studies of fuel element assemblies used up to 5000 hr in the VK-50 core. The fuel element cores are UO_2, and the shell material is Zr-1% Nb alloy. An assembly with detected gas radioactivity was examined. Microstructures of the shells of defective and nondefective fuel

XUM

elements were examined for hydride phase, and their strength and plastic properties were determined. The results indicate a good stability of the Zr−1% Nb alloy and satisfactory fuel element efficiency. (D.L.C.)

53920 (TID-8200(24th Rev.)) NUCLEAR REACTORS BUILT, BEING BUILT, OR PLANNED IN THE UNITED STATES AS OF JUNE 30, 1971. (Office of the Assistant General Manager for Reactors (AEC), Washington, D. C.). 37p.

Data on U. S. facilities capable of sustaining a nuclear chain reaction are tabulated. The reactors and critical assemblies are categorized by primary function, and statistics tabulated include name, owner, location, principal contractor, type, power, startup date, and shutdown date. (D.C.C.)

53924 NUCLEAR POWER PLANTS AS TECHNOLOGICAL AND PHYSICAL SYSTEMS. Rambusch, K. (VEB Kombinat Kraftwerksanlagenbau, Berlin); Meyer, K.; Gruellich, G. (Kernenergie; 13: 305-9(Oct 1970). (In German).

Following a brief discussion of nuclear power plant development in the capitalistic countries, the situation in East Germany is described. Industry is permitted only to construct and to operate nuclear facilities but not to carry out research and development. Therefore, this aspect must be performed by German universities in close cooperation with their Russian counterparts. Two new fields are described: reactor physics and health physics. Reactor physics mainly establishes computer programs for calculations of reactor behavior. Because of such computations, the testing time for new reactors can be accelerated. 12 references. (H.B.G.)

53926 (A/CONF.49/P-8) NUCLEAR POWER PLANT RELIABILITY AS A FACTOR INFLUENCING THE POWER SYSTEM PLANNING IN FINLAND. Viheriaevaara, H.; Ervamaa, J. (Atomic Energy Commission, Helsinki (Finland)). May 1971. 22p. (CONF-710901-63). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The relation between the size and reliability of large power plants and the power system dimensioning is discussed with the aid of risk of consumption restriction. A reliability analysis is performed for nuclear power plants on the basis of functional schemes. The nuclear power plant reliability is described by a probability distribution, which is calculated with the aid of the operation experiences from the main components. Calculation methods for the reliability estimation of power systems as well as nuclear power plants are presented. (auth)

53927 (A/CONF.49/P-21) INTEGRATION OF NUCLEAR POWER IN AN ELECTRICITY PRODUCTION SYSTEM WITH AN INTERCONNECTING TRANSMISSION NETWORK. Clason, R. J. (Samenwerkende Electriciteits-Productiebedrijven, N. V., Arnhem (Netherlands)); Rienstra, F.; Wiechers, W. K. (Keuring van Electrotechnische Materialen, N. V., Arnhem (Netherlands)). May 1971. 19p. (CONF-710901-71). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The introduction of nuclear power and other power production facilities, such as gas turbines, with completely different cost characteristics compared with conventional thermal units, emphasizes the need to determine the optimum combination of different types of production facilities in an electricity supply system. This should be determined by calculating the optimum way of expanding an existing system over a number of years, possibly by taking future developments into account. Calculations presented show that, with present day expansion rates of electricity systems, the need to look far ahead in determining the optimum expansion scheme is not very great. Furthermore there seems to be a large number of alternatives leading to very different compositions of the expanded system with only small cost differences. This result is to a large extent caused by the fact that the economic benefits of nuclear units are partly offset by less favorable load-factors for the other units in the system. (auth)

53928 (A/CONF.49/P-148) COMMISSIONING AND OPERATING EXPERIENCE WITH CANADIAN NUCLEAR-ELECTRIC STATIONS. Woodhead, L. W. (Hydro-Electric Power Commission of Ontario, Toronto); Milley, D. C. (Hydro-Electric Power Commission of Ontario, Rolphton); Elston, K. E. (Hydro-Electric Power Commission of Ontario, Tiverton); Horton, E. P. (Hydro-Electric Power Commission of Ontario, Pickering); (and others). May 1971. 19p. (CONF-710901-167). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Fourteen Canadian-designed nuclear-electric generating units are operating or under construction, with a total capacity of more than 6000 megawatts. NPD has operated reliably for nine years both as an energy producer and as a facility for training and technical development. An average capacity factor of 96% was achieved in five successive winters. In 1968 the NPD heat-transport system was converted from pressurized heavy water to boiling heavy water. During the four years of operating experience at Douglas Point, data have been collected on heavy-water upkeep, heat-transport chemistry, radiation fields, performance of mechanical components (pumps, valves, turbine) and the main causes of lost production. Gentilly, the first CANDU reactor with a direct-cycle heat-transport system (boiling light water), went critical on 12 November 1970. Low-power reactivity characteristics and early experience at high power, particularly transient behavior, are described. Discussion of Pickering and KANUPP concentrates on the experience obtained during commissioning, particularly the containment system operating under negative pressure at Pickering, and the initial operating experience. At both NPD and Douglas Point, severe failures of pumps in the heat-transport systems have been experienced. Corrective action has, however, been very effective. On-power refuelling has been routine at NPD since November 1963 and at Douglas Point since March 1970. In November 1969 improved "Mark II" fuelling machines were installed at NPD and resulted in easier maintenance and greatly improved reliability. Heavy-water management has continued to receive priority attention. Experience with mechanical equipment, containment methods and recovery equipment at NPD and Douglas Point has provided the information on which to base improved systems for Pickering and Bruce. 4 references. 53929 (A/CONF.49/P-149) COSTING OF CANADIAN NUCLEAR POWER PLANTS. Bate, D. L. S.; Mayes, P. F.; Philip, W. S. (Atomic Energy of Canada Ltd., Sheridan Park (Ontario)). May 1971. 15p. (CONF-710901-168). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Techniques have been developed for estimating the costs of nuclear power plants and for recording and monitoring the actual expenditures. Comparative costs of stations under construction in Ontario show that nuclear power is competitive. Cost reduction programs are being implemented, but their results are not always apparent because of inflation and the rise in interest rates. Although nuclear still offers a lower unit energy cost when stations are operated at a high capacity factor, the economic climate, together with a desire for peaking plant capacity, is leading to a mix of fuels (fossil and nuclear) in the Ontario network. Foreign-exchange requirement is a factor for most countries to consider before committing construction of a nuclear power plant. In a developing country, the foreign exchange required for an imported

CANDU power station might run to 80% of the total direct equipment costs, although with a series of such stations—allowing opportunity for local industry to develop—this percentage could quickly drop. Even in Canada, a minimum of 20% of the equipment costs represents necessary imports. However, in Ontario, which has to rely largely on imported coal and oil, fuels for an equivalent fossil-fired plant would soon run up much larger foreign-exchange requirements. To reduce capital costs of CANDU reactors, emphasis needs to be placed not so much on design refinements as on indirect items: interest during construction, engineering, construction overheads. The control of cash flow is important, and a shortened construction period is vital. Beneficial effects will result as the reactor size and the manufacturing volume increase. Designing for better reliability will also help keep down unit energy costs. 10 references. (auth)

53930 (A/CONF.49/P–171) SPECIAL TECHNIQUES FOR INSPECTION, REPAIRS AND SURVEILLANCE OF ENEL NUCLEAR PLANTS. Cioli, F.; D'Anna, G.; Velona, F. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)). May 1971. 13p. (CONF-710901–182). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The techniques adopted during plant shutdown to verify the actual conditions of the main components, particularly those affecting safety, are described. Since the radiation levels of these components is generally high, recourse to remote-inspection methods was necessary, which involved the use of a TV camera and borescope and the adaptation of common industrial techniques (ultrasonics, dyes, etc.). Some of the techniques adopted to perform special repair or modification work and the means to ascertain the adequacy of the repairs are discussed. Techniques that were developed recently to supervise the reactor operating conditions in order to detect the onset of abnormal conditions are described. One major example of these techniques is the noise analysis through signals from the ion chambers, accelerometers or other transducers installed in the primary circuit. 6 references. (auth)

53931 (A/CONF.49/P–172) OPERATING EXPERIENCE IN ITALIAN NUCLEAR POWER PLANTS. Angelini, Arnaldo M. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)). May 1971. 16p. (CONF-710901–86). Dep. NTIS (U. S. Sales Only).

Operating statistics are tabulated for the Latina, Garigliano, and Trino Vercellese nuclear power plants for 1963 to 1971. (H.D.R.)

53932 (A/CONF.49/P–300) LONG-TERM PLANNING FOR NUCLEAR POWER IN THE NORDIC COUNTRIES. Nevanlinna, L.; Stroemme, R.; Nordstroem, B.; Nordloef, G. (Swedish State Power Board, Stockholm). May 1971. 12p. (CONF-710901–264). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Between the Nordic countries there is a very close electricity supply cooperation taking place within Nordel which is the cooperation organization of the Nordic power companies. Several long-term studies have been carried out in the Nordic countries as to the future development of the consumption of electric energy. Studies have also been made of how to cover the increasing demand for energy in an optimum way. These studies have primarily concerned the period up to 1980 but outlooks have also been made towards 1985 and 1990. Nuclear power in the Nordel system is expected to rise to a share of about 20% of the production of electric energy up to 1980. The share of hydro power will then decrease to 50 to 60% whereas conventional thermal power will remain at some 25%. (auth)

53933 (A/CONF.49/P–301) OPERATING EXPERIENCE OF THE AGESTA NUCLEAR POWER PLANT. Sandstedt, K. E. (Swedish State Power Board, Stockholm); Mogard, H.; (and others) (Aktiebolaget Atomenergi, Studsvik (Sweden)). May 1971. 15p. (CONF-710901–199). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Agesta is a PHWR used for production of electricity (12 MW) and district heat (68 MW). The reactor achieved criticality in July 1963. Power operation began in March 1964. The reactor has been in operation for 31,000 hours up to and including October 1970. The availability figures for 1964 and 1965, 50 and 64.5 percent, are low because of the repair of a severe heavy water leak through some inspection pipes in the reactor vessel lid. In 1966 and 1967 high availability figures, 95.5 and 99.5 percent, were reached. Indications of fission gas release resulted in reactor shut down for inspection in March 1968. It was apparent that the core was severely damaged. All assemblies had to be unloaded for inspection. It appeared that some assemblies had lost their bottom cone and part of the shroud tube in the reactor. Fuel pin segments and shroud tube pieces had fallen to the bottom of the reactor. Some assemblies showed extensive shroud tube crackings, particularly spacer penetrations. An extensive cleanup operation had to be performed before the reactor could be put into operation again. About 1 kg of the fuel still remained in the reactor primary system, out of reach for a cleanup operation. The cause of the fuel failure was attributed to fretting corrosion, probably initiated by an unscheduled reactor power cycling during a shut-off period of the cooling tower. Availability 1968: 45 percent. In May 1969 a non-return valve in the recooler system broke and caused an extensive flood. Water reached a relay cubicle, where an earthing fault resulted in undesirable automatic operation of pumps and motor valves in emergency systems. Availability 1969: 97.7 percent. Up to and including 1969 the total non-collectable heavy water losses have been approximately 1100 kg. The collectable amount about 1600 kg. Total heavy water weight in the primary system: 73,000 kg. 13 references. (auth)

53934 (A/CONF.49/P–302) COMMISSIONING OF THE OSKARSHAMN NUCLEAR POWER STATION, UNIT NO. 1. Gimstedt, C.; Hilding, S. O.; Rydell, N.; Sandberg, O. (Oskarshamnsverkets Kraftgrupp A.B., Stockholm (Sweden)). May 1971. 17p. (CONF-710901–200). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Oskarshamn I is the first large scale nuclear power unit in Sweden. The utility assumes responsibility for the nuclear safety of the plant and for the conventional pressure system safety whereas the main contractor Asea–Atom has the technical responsibility for the start-up and trial operation of the plant. Preoperational inspection of the reactor vessel, training and organization of plant personnel, and nuclear licensing of the plant are described. The preoperational inspection was carried out with remotely controlled ultrasonic equipment. The programme for the inspection was settled before the new ASME code was published but conforms largely with it. Experience with the equipment and from the inspection are presented. Recruitment and training of plant operating personnel has required special attention, since Sweden has few thermal power plants and only one, fairly small, nuclear plant. The organization scheme and the training programme is presented, and also some considerations on a training center with a nuclear plant simulator for the increasing number of reactor operators which must be trained over the next 5 to 10 years. The approach to licensing of this plant, the first of its kind, for operation has been to proceed by steps. The problems with coordination of the final stages of installation work, of submission of final safety analysis documents, of carrying out and reporting of tests and measurements, and of coordination of the interests of the utility and of the contractor during the start-up activities are reviewed. 8 references. (auth)

53935 (A/CONF.49/P–303) OSKARSHAMN I: A SWEDISH 440 MW(e) BWR NUCLEAR PLANT. Pind, Christen (ASEA-ATOM, Vasteras (Sweden)). May 1971. 7p. (CONF-710901–265). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Experience from the construction and commissioning of the Oakarshamm I boiling water reactor plant is reviewed. Some features intended to improve plant availability and reliability are also described. Results are presented from the pre-critical test runs with major components and nuclear plant systems. The physical measurements during the loading of the reactor are reviewed. A review is also made of the plant system performance testing while bringing the plant to power. Correlations are made with the extensive predictive calculations made with codes for static and dynamic behavior respectively. 8 references. (auth)

53936 (A/CONF.49/P–338) ON THE FUNDAMENTAL ECONOMIC AND NATIONAL ENERGY BALANCE CONSIDERATIONS UNDERLYING THE FUTURE DEVELOPMENT OF THE NUCLEAR POWER INDUSTRY IN POLAND. Fiszer, Waclaw May 1971. 8p. (CONF-710901–276). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The competition of nuclear power plants in comparison with thermal ones with coal combustion are of course essential for the development of the nuclear power industry. A preliminary analysis indicates that at the stage of 1980, when the first nuclear power plant is to be started, such competition can only be afforded by power plants equipped with large power reactors assuring a high availability. Therefore, the application of pressurized water reactors (PWR) rated at 1000 MW(e) is foreseen for the first nuclear electric power plant. The 400 kV supergrid

XUM

allows without difficulty the integration of blocks of this capacity. At the next stage, basing on the fuel cycle, a proportional development of electric power plants equipped with fast breeder reactors and thermal reactors should follow. (auth)

53937 (A/CONF.49/P-390) OPTIMIZED FUEL MANAGEMENT IN NUCLEAR POWER STATIONS. Schenk, H. Apr 1971. 16p. (CONF-710901-136). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The decision on the pattern of the fuel cycle to be followed must be taken about two years or more in advance of the loading. This can be done through the optimum selection of enrichment of the respective fuel loading and by long-term planning for those fuel elements which are to be used for standby purposes in between two refueling actions. The choice of the type and number of used fuel elements for standby purposes for one or two operating periods is significant in this context. The second category of possibilities of influencing the time of refueling so as to approach the optimum is offered by those steps which can be taken in the period between two years and half a year in advance of the respective refueling date, such as influencing through the load factor, the medium-term possibilities constituted by the proper choice of used standby fuel elements, and the best shuffling pattern, for instance, through the most advantageous choice of the fuel elements to be exchanged. The third category of parameters of influence determine the extent of short-term flexibility in adapting refueling to the requirements of the power grid. This can be achieved through an optimum choice of the quantities discharged, i.e., if necessary by way of a change at short notice of the number of fuel elements to be discharged or through the possibility of shortening or extending the target burnups of the respective core loading. Stretch-out operation may be rather important in optimization. (auth)

53938 (A/CONF.49/P-425) FUEL MANAGEMENT PROBLEMS IN THE SWEDISH POWER SYSTEM. Ahlstroem, P.-E.; Edman, R. (Swedish State Power Board, Stockholm); Almgren, B. (Oskarshamnsverkets Kraftgrupp A.B., Stockholm (Sweden)); Segerberg, F. (ASEA-ATOM, Vasteras (Sweden)). May 1971. 14p. (CONF-710901-279). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A transition from an almost pure (95%) hydroelectric power supply system to a mixed thermal (nuclear and fossil) and hydroelectric system will take place in Sweden in the 1970's. This will create some special fuel management problems in the light water reactors which are being and will be constructed to meet the increasing power demand during the next decade. Owing to the seasonal variation in the supply of water and the power demand there is a very strong incentive to refuel the reactors in July or at least during the three summer months (mid-June to mid-September). Metrological fluctuations from one year to another will cause a variation in the optimum load factor per year for nuclear power of about ±15%. Superimposed on these variations in demand the availability of any one nuclear generating unit will vary in an unpredictable way. The changes in energy production per year thus obtained for any LWR must be handled by a flexible fuel management scheme in order to avoid refuelling shut down during the unfavorable part of the year. Principles for the fuel management in this situation are discussed. It is pointed out that the long lead time for ordering of enriched uranium implies that short time variations cannot be met by varying the fuel enrichment. Another method is to keep spare fuel assemblies and to adjust the number of replaced assemblies in accordance with the energy production during the previous cycle. It will be shown that this method can be adapted to a BWR in a favorable way. In order to avoid power shortage due to lack of water or shut down of big plants the power system requires reserve capacity. An energy reserve can be secured either by using peak power stations e.g. gas-turbines or by the loading to a higher reactivity than otherwise planned for. An energy reserve special for nuclear power is the possibility to use stretch out i.e. extract more energy by reduction of the power. 3 references. (auth)

53939 (A/CONF.49/P-468) PERFORMANCE OF NUCLEAR POWER PLANTS. Rutter, R. L. (Central Electricity Generating Board, London (England)). May 1971. 12p. (CONF-710901-209). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The C.E.G.B. has operated nuclear power stations since 1962 and now has 76 reactor years of operating experience. About 11% of total generation is provided by nuclear power stations in the C.E.G.B. network. Despite the large installation few changes in organization have been found necessary, either at stations or elsewhere in the Board. Nuclear power station staffing is compared with that for a comparable modern conventional power station. Because of their low generating cost and high availability C.E.G.B. nuclear power stations are run at high load factors. Two technical matters are discussed. The first is concerned with the extension of the fuel element failure detection system to include delayed neutron sensing. The second is the discovery of steel oxidation at higher rates than were originally anticipated. The operational effects of the latter have been to limit gas outlet temperatures and to require very detailed inspection of the steel work affected. Output has been marginally reduced but availability remains high. (auth)

53940 (A/CONF.49/P-473) ECONOMIC ASSESSMENT OF NUCLEAR POWER PLANT. Gibbs, K. P. (Central Electricity Generating Board, London (England)); Carruthers, H. M.; (Associated Nuclear Service, London); Maybrey, A. (Kleinwort Benson Ltd., London). May 1971. 11p. (CONF-710901-212). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The ground rules which have been and are currently being used for the economic evaluation of nuclear power stations in the U. K. are reviewed. The effects of financing aspects in the U. K. and overseas are discussed. The basis for selecting amortization periods is considered together with the problem of forecasting lifetime load factors for new nuclear stations and their effects on the operating costs of the system as a whole. The relative importance of accuracy in the various assumptions is discussed. Examples of nuclear projects are then quoted, and the actual expenditure and its incidence compared with the assumptions used in the initial evaluations. 3 references. (auth)

53941 (A/CONF.49/P-474) SAFETY OF NUCLEAR POWER PLANTS. Dale, G. C.; Harrison, J. R. (General Electricity Generating Board, London (England)). May 1971. 11p. (CONF-710901-213). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The operation of the U.K. nuclear power stations is such that defined safety standards are adhered to. This requirement is related to operation under normal (non-fault) conditions, and to the unlikely condition of a significant plant fault which might lead to fission product release into the pressure circuit and subsequently to the atmosphere. The design of the stations must ensure that operation at the design power permits the safety standards to be maintained. Design standards are outlined with particular reference to the steel pressure vessels and to the development of the concrete vessels. The protection standards of independent parameter tripping with adequate redundancy are described and the development of later system designs given. The extent of surveillance necessary during construction to ensure that design standards are achieved is analyzed. The criterion for plant operation is that in the event of the maximum credible accident occurring, the probability of a fuel can temperature in the reactor greater than 640°C must not exceed 0.01. Operating conditions consistent with this standard are defined in Operating Rules. Plant maintenance is summarized in a Maintenance Schedule and the significance of this maintenance in ensuring satisfactory plant conditions is described. Appropriate limits on radioactive discharges during routine operation are placed on the Board by the authorizing Ministries. A review of the experience in this area is presented. Examples of unusual incidents which have occurred are given. 5 references. (auth)

S.; Tyrrell, J. F. (British Nuclear Design and Construction Ltd. [Whetstone (England)]); Perrin, A. J. (Babcock and Wilcox Ltd., London (England)). May 1971. 12p. (CONF-710901-149). Dep. NTIS (U. S Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

While nuclear power stations currently under construction in the U.K. will not be required to load cycle to a significant extent, future designs undoubtedly will have this duty. To examine the future operational requirements of nuclear plant it is necessary to evaluate the nature of system load variations in terms of size, frequency and rate of change. Such an evaluation has been carried out by analysis of the U.K. load characteristics over a number of years and is summarized. The suitability of the Mk II Gas Cooled Reactor (A.G.R.), the Mk III Gas Cooled Reactor (H.T.R.), the Steam Generating Heavy Water Reactor and the Fast Reactor in meeting this requirement is discussed. In general the daily part-load and grid frequency regulation duties could give rise to excessive thermal cycling of the fuel, reactor components, boilers and turbines. The conflicting constraints of these various components are discussed. By suitable adjustment of the control system set points a satisfactory compromise can be achieved in reducing the effects of thermal cycling. Although the demand for maximum emergency pick-up response is relatively infrequent, it does place a most onerous demand on the station control system to achieve a rapid and sustained change in power without, at the same time, creating disturbances which would lead to the plant tripping. The capabilities of the four reactor types are considered. (auth)

53943 (A/CONF.49/P–519) INTEGRATION OF NUCLEAR POWER STATIONS INTO A SMALL POWER SYSTEM WITH LARGE HYDRO CAPACITY. ECONOMICS OF IMPORTING ENERGY TO ALLOW THE SPACING OF NEW CAPACITY ADDITIONS. Sergio, R.; Amaro, A.; Honorio, L.; Redol, A.; (and others) (Junta de Energia Nucleare, Lisbon (Portugal)). May 1971. 18p. (CONF-710901–231). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A power system simulation model was built for the study of the nuclear power role in the long term expansion of the Portuguese system. A characteristic feature is the management of the hydro-storage capacity receiving natural in-flows and pumped energy in the presence of thermal power with proportional costs varying over a wide range. In the medium term, modest annual increases in energy requirements hinder the integration of nuclear power stations in economic sizes. Spacing new capacity additions creates the room for large stations. With an installed hydro capacity designed to accommodate flows typical of wet periods, the main risk to the security of supply is the occurrence of a dry year during the periods preceding the addition of a new nuclear station. The interconnection with the European system through Spain whose power capability is no longer strongly limited during dry periods opens the possibility of economically covering that risk. An interconnection is simulated by a power station with appropriate proportional costs whose availability is not considered during the high loads of the winter months. Some examples are shown where the costs of importing energy are compared with the savings of spacing new capacity additions. (auth)

53944 (A/CONF.49/P–526) PERFORMANCE OF THE TARAPUR ATOMIC POWER STATION. Dayal, M. (Department of Atomic Energy, [Bombay] (India)). Jun 1971. 17p. (CONF-710901–394). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Tarapur Power Station, India's first Atomic Power Station, uses sea water for condenser and auxiliary cooling. It consists of two boiling water reactors, each with associated turbo-generator unit. The unit capacity is 210 MW. In February 1969 both the reactors were critical. Power started flowing from April 1, 1969. A comprehensive program of tests of various plant systems including transient tests and power interruption tests was carried out. The Station started producing power on a regular basis from October 9, 1969. The startup test program, the performance of the plant during tests, and the performance after the plant turnover are described. Until the planned outages of the units during the monsoon of 1970 for the annual inspection/maintenance, the on-line availability of the two Units taken together was more than 90%. Various technical problems, and how they were resolved as they arose, are described. The behavior of the fuel and various parts of equipment, as well as the radiation and activity release are described. Survey of some of the primary system piping and inspection of the turbine done during the monsoon outage and certain special problems that were attended to are also described. (auth)

53945 (A/CONF.49/P–527) COSTING OF NUCLEAR POWER STATIONS IN INDIA AND RECENT COST TRENDS. Meckoni, V. N.; Rao, V. Surya (Department of Atomic Energy, [Bombay] (India)). Jun 1971. 8p. (CONF-710901–395). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Elements of cost, as applicable to four reactor units of generally the same design, but which are being built at two different locations in India under varying conditions, are presented. The experience gained towards maximizing import substitution by encouraging local industry to take up manufacture of specialized nuclear components is described. The general effect of escalation in cost on account of varying construction periods is brought out, and the sensitivity of the unit energy cost to future escalation in prices of coal and uranium is presented. (auth)

53946 (A/CONF.49/P–528) PLANNING FOR OPTIMUM PHASING AND ABSORPTION OF POWER PLANTS IN GRIDS. Parikh, K. S.; Shiralkar, S. S. (Department of Atomic Energy, Bombay (India)); Seshagiri, N.; Mehndiratta, S. L.; (and others) (Tata Inst. of Fundamental Research, Bombay (India)). May 1971. 22p. (CONF-710901–232). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The introduction of a nuclear power plant in a system is dependent on the total size of the electrical system and also on the expected growth of the system. A multi-regional inter-temporal programming model is developed to investigate the question of optimal timing. The model permits in each time period in each region the choice of either a coal-based thermal plant or any one of different types of nuclear power plants. The objective is to minimize the present discounted cost of meeting the requirements of power. The interactions of the fuel cycle and the need to build up fuel inventory for breeder reactors are also taken into account. To demonstrate the applicability of the model, a plan for power development for India for the next thirty years is prepared. (auth)

53947 (A/CONF.49/P–542) PHYSICAL EXPERIMENTS INVOLVED IN THE PROGRAM OF THE START-UP OF THE FIRST CZECHOSLOVAK NUCLEAR POWER PLANT A-1. Paulicka, I.; Vorisek, M. (Ceskoslovenska Akademie Ved, Rez. Ustav Jaderneho Vyzkumu); Wagner, K. (Skoda Works, Pilsen (Czechoslovakia)). Jun 1971. 18p. (CONF-710901–359). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The physical startup of the A-1 reactor follows after individual and complex testing of the equipment. The primary power plant circuit, including the reactor, is tested with respect to leakage and pressure, the operation of circulation pumps is checked, etc. Each fuel element is substituted by the mock-up fuel element of corresponding weight and hydraulic resistance, equipped with non-standard measuring instrumentation. The physical startup, which is described, is carried out after finishing these tests and after the elimination of the imperfections. During the physical startup the reactor criticality is reached for the first time. After the physical startup the stage of a stepwise power increase follows until the nominal thermal power of the reactor is reached. During this process an operational checking of the equipment is carried out. The physical startup is planned to be accomplished approximately during 6 weeks. The operational staff of the power plant organize the work connected with the startup. 4 references. (auth)

53948 (A/CONF.49/P–575) INCIDENTS THAT OCCURRED TO THE REACTOR OF THE ARDENNES NUCLEAR POWER PLANT. Kiefer, J.; Erkes, P. (Societe d'Energie Nucleaire Franco-Belge des Ardennes, Chooz-lez-Givet (France)); Aboud-haram, L.; Evenepoel, R.; (and others) May 1971. 23p. (In French). (CONF-710901–244). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Ardennes nuclear power plant (P.W.R.–266 MW(e)) was shut down during two years six months after it was connected to the grid when in early 1968 damages were detected in the internals of the reactor. The origin of the hydrodynamic vibrations which, when applied to the internal structure of the reactor in service, caused an unsteady rocking of the "thermal shield" and the stress rupture of several assembling parts is analyzed. The remote repair methods to dismantle the thermal shield, replace the broken or doubtful bolts, and check the fuel elements are described. After completion of these tasks and before putting the plant effectively back into service, a campaign of static and then dynamic tests was performed. (auth)

53949 (A/CONF.49/P–673) START-UP AND OPERATIONAL EXPERIENCE WITH THE FIRST TWO SWISS NUCLEAR POWER STATIONS BEZNAU AND MUEHLEBERG. Kueffer, K. (Nordostschweizerische Kraftwerke A.G., Baden (Switzerland)); Lutz, H. R.; Rognon, J.; Stoll, P. (Bernische Kraftwerke A.G., Bern (Switzerland)). Jul 1971. 27p. (CONF-710901–494). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The preliminary acceptance run of the first commercial nuclear power plant in Switzerland, Beznau I (350 MWe) was started on September 6, 1969 after a construction period of 48 months. On December 24, 1969 Beznau I started commercial power production. Accumulated power production delivered into the NOK (Nordostschweizerische Kraftwerke AG) grid was more than $2.5 \cdot 10^9$ KWh by the end of 1970. The startup of Beznau I was accomplished without significant problems. The test results of the startup program compared very favorably with the calculated values. A sudden increase of the radioactivity level in the primary coolant system was detected. The radioactivity increase was a result of the defects in the Zircaloy cladding. This radioactivity increase led to the first

XUM

significant operational difficulties of the power plant: relatively high air contamination and an increase of the radioactivity level in certain areas of the primary plant building was found. The collection and disposal system for radioactive waste (liquid and gas) imposed some impasses. The commercial operation of Beznau I was quite satisfactory during the first quarter of 1970, regardless of the above mentioned difficulties. The availability of turbosets 1 and 2 was 98.2 and 99.2%, respectively. In the middle of October 1970 a radioactivity increase in the secondary system was detected. The plant was shut down at the beginning of November to repair the approx. 200 l/day leak in one of the steam generators. The repair was completed very fast, i.e., within 10 days. The plant however could not get started before January 1971. The reasons for the startup delay were as follows: leaks in the steamgenerator man ways, fracture in a main turbine stop valve shaft, the sealrings of the main reactor coolant pumps were jammed and a corrosion spot on the reactor vessel head was detected. The corrosion on the reactor vessel head was thoroughly investigated. The construction of Beznau II nuclear power plant, in principle a duplicate of Beznau I, is on schedule and so far all the construction stages have been completed without problems. The total construction time of Beznau II is expected to be a couple of months less than that of Beznau I. The beginning of the preliminary acceptance run is expected for fall 1971. (3 references.) 53950 (A/CONF.49/P–675) ROLE OF NUCLEAR PLANT IN A WATER POWER SYSTEM: EXPERIENCE AND PROSPECTS IN SWITZERLAND. Goldsmith, K. (Electro-Watt Engineering Services Ltd., Zurich (Switzerland)); Luder, H. A. (Laufenburg Electricity Supply Co., (Switzerland)). Jun 1971. 14p. (CONF-710901–410). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Two nuclear stations are now in operation and one is under construction. Three additional stations are being planned, giving an aggregate output capacity of 3500 MW (around 40% of the country's total demand) by the end of this decade. The introduction of this large block of base-load plant will have a significant effect on the national power production pattern. Careful phasing is required to achieve proper operational coordination between nuclear and run-of-river hydro plants and to ensure that surpluses can be exported and output restrictions avoided. The demand of intermediate merit, between baseload and peak-load, calls for prudent managment of hydro storage coupled with the import of thermal energy surpluses from neighboring countries. Finally, the role of the storage schemes for peak load coverage, both inland and abroad, requires re-appraisal to safeguard their optimum use. The need to extend their capability by more pumped storage requires examination. This paper deals with these matters and considers in particular in what way the growing proportion of nuclear plants in the Swiss system will influence the power exchanges with neighboring countries. (auth)

53951 (A/CONF.49/P–716) OPERATION OF CHANNEL-TYPE URANIUM-GRAPHITE REACTORS WITH NUCLEAR STEAM SUPERHEATING. Aleshchenkov, P. I.; Veselkin, A. P.; Dollezhal, N. A.; Evdokimov, J. V.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 20p. (CONF-710901–420). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The principal results of seven years operation of the Beloyarsk Nuclear Power Station (BNPS) with nuclear steam superheating are presented. The factors of installed power and time utilization, planned and accidental shutdowns, and an analysis of shutdown reasons are included. The fuel channel (FC) operating conditions are considered. The conditions and operation results are discussed for graphite, water treatment and water-chemical operating conditions of the nuclear power station, and the experience in adjustment and mastering of the automated "Karat" system at the 2nd unit of the BNPS. The statistics and reasons are analyzed for fuel channel failures, and different improvements to increase the FC reliability are discussed. Data are presented on radiation conditions under power operation and during shutdowns. The coolant radioactivity and radioactive deposits on equipment surfaces are considered. Data are reported on the nuclear power station radioactivity discharges into the atmosphere, on radioactive wastes, and the effects of both on the environment. The peculiarities and some advantages of this reactor type are considered from the viewpoint of nuclear power station radiation safety. (auth)

53952 (A/CONF.49/P–735) EXPERIENCE WITH NUCLEAR POWER PLANTS IN SPAIN. Cervera, J. (Comision Nacional de Energia Atomica, Buenos Aires (Argentina)); Lopez-Rodriguez, M. (Junta de Energia Nuclear, Madrid (Spain)); Pardo, J. J. (Union Electrica, S. A.). Jun 1971. 11p. (In Spanish). (CONF-710901–506). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The experience derived from the operation of the Jose Cabrera Reactor until the end of the first fuel cycle, in April 1971, and the subsequent refueling operation is described. The plant has produced more than 2000 million kWh during this first cycle. The nominal rating of 160 MWe, maximum authorized power, was first attained in November 1969. This is the power guaranteed by the vendor three years after start of operation. The station has operated at the maximum power for extended periods of time. After one and one half years of commercial operation the performance of the José Cabrera Plan can be considered very successful. The Santa Maria de Garoña plant, owned by Nuclenor, is of the BWR type and has been built by General Electric. Construction work started in November 1966 and full power was reached last April. This paper deals with the problems that developed during preoperational testing and startup, the solutions adopted and the experience obtained during the early months of operation. (auth)

53954 (A/CONF.49/P–764) PRACTICAL ASPECTS OF NUCLEAR FUEL SERVICES MANAGEMENT. Avery, D. G.; Carter, P. E. (British Nuclear Fuels Ltd., Risley (England)). Jun 1971. 13p. (CONF-710901–425). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The provision of fuel services to a nuclear power program involves a number of processing stages, all of which require, on an industrial scale, capital intensive plants. Furthermore, the high intrinsic value of the material being processed places a substantial premium on maintaining minimum inventory. In addition, the nuclear industry is still at a stage where frequent changes in technology as well as wide fluctuations in demand are major characteristics. Substantial economies in processing costs can be achieved by optimizing production programs, by careful planning of capital investment, and by the integration of the various processing stages to give maximum operational flexibility. The particular problems associated with each processing stage from purification through to fabrication and reprocessing are reviewed. The techniques available for scheduling and stock optimization of the various stages are examined and some of the lessons learned from experience to date are noted. An account is then given of the overall method by which nuclear fuel production is controlled in an organization which includes all the stages within the nuclear fuel cycle. Finally, the planning of capital investment in this field is discussed with particular reference to the uncertainties that have to be faced in forward forecasting and the extent to which modern techniques for investment appraisal can be utilized in this field. 53955 (A/CONF.49/P–802) NUCLEAR POWER FORECAST FOR BRAZIL. Castro, J. C.; Lepecki, W. P. S.; Marques de Souza, J. A.; de Moraes Filho, J. E. (Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro). Jun 1971. 25p. (CONF-710901–431). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A forecast of nuclear power development in Brazil up to the end of the century is given. The main requirements to back up such a nuclear program are outlined. Owing to its overwhelming importance in the electric energy market in Brazil, the South-Central Region is chosen as the area under study, but the results are largely representative of the country as a whole. The generating capacity of the region relies heavily on hydro power, but both the coming exhaustion of economic hydro sites, and the need for firming the continuous energy of the system, point to the necessity of a program of thermal power plants, in which a considerable portion could be nuclear. A mathematical model of the expanding electric system is employed in order to determine the optimum mix of hydro, conventional and nuclear power plants. The relative location of hydro sites along a river basin is taken into account in order to assess their mutual influence through the regulation of the river. A parametric study is made in order to assess the influence of input data on the resulting nuclear program. Taking one of the thermal complement programs as a reference case, different reactor strategies are analyzed. The industrial support necessary to carry out the reference nuclear program is discussed. 23 references. (auth)

53956 (A/CONF.49/P–803) INTEGRATION OF SECOND NUCLEAR POWER PLANT IN ELECTRIC NETWORK OF TAIWAN, REPUBLIC OF CHINA AS A MEANS OF LOWERING THE COST OF DELIVERED POWER. Chu, David S. L. (Taiwan Power Co., Taipei). Apr 1971. 14p. (CONF-710901-335). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Taiwan Power Company has started construction of its first and second BWR nuclear units each rated at 636 MW(e) gross, scheduled for commercial operation by the end of 1975 and 1976 respectively. These two units will represent about 20% of the total installed capacity of the 1976 Taipower system. The economic and financial studies that led to the above decision are presented. Three alternative expansion plans each with different date of nuclear application were contemplated to meet the projected load. The revenue, operation expenses, and investment schedule of each alternative plan were assessed to evaluate the future company-wide financial status. The comparative service cost at consumer's end demonstrates an advantage of earlier nuclear implementation in lowering the system production cost. (auth)

53957 (A/CONF.49/P-806) EXPERIENCE GAINED IN THE OPERATION OF THREE DEMONSTRATION NUCLEAR POWER STATIONS IN THE FEDERAL REPUBLIC OF GERMANY AND PROGRESS IN THE DEVELOPMENT OF NEW PLANTS UNDER CONSTRUCTION. Deublein, O. (Kernkraftwerk Lingen G.m.b.H., (West Germany)); Keller, W. (Siemens A.G., Erlangen (West Germany)); Kornbichler, H. (Allgemeine Elektricitaets-Gesellschaft, AEG-Telefunken, Frankfurt am Main (West Germany)); Schenk, H.; (and others) Apr 1971. 18p. (CONF-710901-336). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

To the development of light-water reactors the Federal Republic of Germany has contributed ten plants having a total capacity of about 5000 MW(e), which are either already operative or in course of construction. Four of these plants with a total capacity of 800 MW(e) will, by the middle of this year, have given about 20 years of most valuable experience in the operation of reactors. Particular importance is attached to the experience gained with the three large demonstration power plants at Gundremmingen (250 MW(e)), Obrigheim (345 MW(e)) and Lingen (254 MW(e)) because these represent the transition to the present commercial utilization of nuclear energy for the supply of electricity. With these plants it has been demonstrated that their operational behavior guarantees the successful use of nuclear power stations for the public power supply. Defects which occurred occasionally in the nuclear steam generating systems proved capable of being quickly and easily repaired and were shown to be avoidable for future plants. Thus a very high degree of availability can justifiably be expected for the nuclear power stations under construction and on order. (auth)

53958 (A/CONF.49/P-849) EXPERIENCE IN CONSTRUCTION AND OPERATION OF COMMERCIAL NUCLEAR POWER STATION IN JAPAN. Nomura, Akio; Tsukuda, Toshio; Yoshioka, Toshio (Japan Atomic Power Co., Tokyo). May 1971. 14p. (CONF-710901-350). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The advent of commercial nuclear power stations in Japan began with construction of the Tokai Power Station, and as of March 1971, four stations with a total generating capacity of 1,323 MW(e) are in operation and nine stations with a total generating capacity of 5,803 MW(e) are under construction. The Tokai Power Station, which is of British GCR type, owned by the Japan Atomic Power Company, started commercial operation in July 1965 with a max. output capacity of 166 MW. The Tsuruga Power Station, which is of U. S. BWR type, owned by the Japan Atomic Power Company, started commercial operation in March 1970 with an output capacity of 357 MW. The Mihama Power Station, which is of U. S. PWR type, owned by the Kansai Electric Power Co., Inc., started commercial operation in November 1970 with an output capacity of 340 MW. The Fukushima Power Station, which is of U. S. BWR type, owned by the Tokyo Electric Power Co., Inc., commenced operation in March 1971 with an output capacity of 460 MW. Out of these, as for the Tokai Power Station, a description is made mainly of its operational experience, particularly of various troubles which occurred on the reactor primary circuit and tube corrosion problem of the steam rising units, touching on briefly how these problems have been solved. As regards the Tsuruga Power Station, the experience gained through the operation and annual inspection of almost one year period after start of its commercial operation is discussed. Lastly, referring to the Mihama and Fukushima Power Stations, major events encountered during the construction and pre-operational test periods are described in some detail. (auth)

53967 (WAPD-PWR-TE-206) SHIPPINGPORT PWR CORE 2, SEED 1 PHYSICS TEST RESULTS FROM MIDLIFE TO END-OF-LIFE TEST EVALUATION. Smith, F. E. (Bettis Atomic Power Lab., West Mifflin, Pa.). Mar 1970. Contract AT(11-1)-Gen-14. 49p. Dep. NTIS.

The results of physics tests conducted during the second half of PWR Core 2 Seed 1 lifetime are presented. The period of these tests covers operations from December 1966 to the completion of 13,652 equivalent full power hours in March 1969. These tests have provided information on critical rod positions and reactivity worths, temperature coefficients, xenon transient characteristics and reactivity loss rates. Calculated characteristics of the core were found in general to be in good agreement with the measured nuclear characteristics. (9 references) (auth)

53968 (WAPD-PWR-TE-260) SHIPPINGPORT PWR CORE 2, SEED 2 PHYSICS TEST RESULTS FROM BEGINNING-OF-LIFE THROUGH 172 EQUIVALENT FULL POWER HOURS OF OPERATION TEST EVALUATION. Smith, F. E. (Bettis Atomic Power Lab., West Mifflin, Pa.). Feb 1970. Contract AT(11-1)-Gen-14. 33p. Dep. NTIS.

The results of physics tests conducted with PWR Core 2 following replacement of the expended Seed 1 with Seed 2 and during the first 172 equivalent full power hours of operation are presented. These tests, which were performed between June 16 and July 20, 1969, have provided information on critical rod positions and reactivity worths, reactivity coefficients, xenon transient characteristics and reactivity symmetry. Measured results are compared with calculated data and with measured data for PWR Core 2 Seed 1. (7 references) (auth)

53969 SPECIAL ASPECTS OF RELIABILITY AND MAINTAINABILITY IN NUCLEAR STATIONS. Wolfe, W. A. (Atomic Energy of Canada Ltd., Chalk River, Ont.). Microelectron. Rel.; 10: No. 3, 217-23(Jun 1971).

Failure of pumps in a hypothetical heat transport system is considered to illustrate the importance of reliable constituent components in keeping a nuclear power station operational. The time before failure of the pump components, and thus the probability of a pump completing its run without failure, is considered. The effect on the reliability of the system of standby pumps and the repair time needed for those which failed are discussed. The problem of impedance of repair work by radiation hazards to personnel is also considered. Remedies for maintenance difficulties are suggested, chiefly through greater understanding of the problem at all levels in design work. Desirable information about the reliability and maintainability of components is listed and exchange of suitable information between customer and supplier as an aid to reliability assessment suggested. (UK)

53970 OPERATING EXPERIENCE AT THE DRESDEN 2 REACTOR. Steele, Myrna L. (Atomic Energy Commission, Oak Ridge, Tenn.). Reactor Technol.; 14: No. 3, 225-32(Fall 1971).

The highlights of operation of Unit 2 of the Dresden Nuclear Power Station from startup through December 1970 are summarized, and maintenance and repair activities are listed. 9 references. (auth)

53972 (A/CONF.49/P-173) SOLUTIONS OF SAFETY PROBLEMS ENCOUNTERED IN THE OPERATION OF THE ITALIAN NUCLEAR POWER PLANTS. Iansiti, Enzo (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)); Lepore, Ro molo (Ente Nazionale per l'Energia Elettrica, Rome (Italy)). May 1971. 33p. (CONF-710901-183). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The operation of the Italian nuclear power plants has allowed ENEL and CNEN to gain a considerable amount of experience in the field of nuclear plant safety. Some of the main problems encountered during the operation are described. The solutions adopted are presented. In solving these problems, including the most critical ones, the main scope has been to continue the plant operation maintaining the safety margin at a level comparable with the design values. Some modifications are described which have been introduced in the plants in order to improve their safety standards. (auth)

53973 (A/CONF.49/P-191) RADIATION PROTECTION EXPERIENCE IN ITALIAN NUCLEAR POWER PLANTS. Cometto, M.; Toccafondi, G. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)); Ilari, O.; Tagliati, S. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). May 1971. 29p. (CONF-710901-157). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A summary is provided of the provisions of the Italian legislation for protection of workers and population against the hazards of ionizing radiation, with special reference to nuclear plants. The breadth of the experience acquired in Italy with radiation protection problems in nuclear plants is presented and discussed in relation to the operating experience accrued over nearly ten years of operation of the three ENEL power plants. The methods and main criteria adopted at the Garigliano, Latina and Trino Vercellese plants for radiation protection under normal operating conditions and during major maintenance jobs are described, with emphasis on the milestones in the evolution of operational health physics and protection procedures, and the present criteria for dosimetric checks on the personnel and work areas are discussed in relation to the latest ICRP recommendations. Also discussed is the evolution of the radiation protection criteria concerning radioactive waste disposal and control of ambient contamination. The positive results of the precautionary provisions adopted are examined in terms of individual and collective doses of environmental pollution. 8 references. (auth)

53974 (A/CONF.49/P-226) STATE OF ARTS IN ASEISMIC DESIGN OF NUCLEAR POWER PLANTS IN JAPAN. Udoguchi, Teruyoshi (Tokyo Univ. (Japan)); Ohsaki, Yorihiko; Shibata, Heki. May 1971. 13p. (CONF-710901-91). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A method for determining the design ground movements which have been applied to Japanese power plants, a summary of the criteria for earthquake resistant design in practice, and a proposal for improving the practice which involves subjects needing further studies are presented. Important subjects among the latter are the dynamic analysis of equipment and piping and their allowable stresses under earthquake loading. (auth)

53975 (A/CONF.49/P-272) SAFETY ASPECTS OF THE DOEL AND TIHANGE POWER PLANTS. Dozinel, P.; Dresse, H. May 1971. 15p. (CONF-710901-194). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The DOEL (2 × 390 MW(e)) and TIHANGE (870 MW(e)) nuclear power plants are being built in densely populated areas, as will be the case for numerous nuclear power plants to be erected in industrialized countries. Examination of the studies undertaken in Belgium and of the solutions adopted in the choice of equipment and protection systems is therefore a matter of general interest. At DOEL, the twin units lay-out has important consequential effects as to safety circuits and devices. Reactor containments have double envelopes: a pressure-resistant steel sphere and a concrete shield cylinder. The safety equipment peculiar to the plant (emergency power and coolant water supply, etc.) are treated in detail, as are the solutions provided for the accessibility with a view to periodical checks, for the sections containing the pipe supports and welds of the reactor vessel. Concrete structures inside the containment have been designed so as to take into account the latest safety criteria for avoiding an aggravation of the consequences of a pipe-rupture. At TIHANGE, as the plant is located in a relatively narrow valley, detailed meteorological investigations have been undertaken. It is shown how the systematic use of measurements carried out for several years by means of a high mast, confirmed by traced releases, has made it possible to define the atmospheric dilution coefficient applicable to the plant effluents. The solution adopted for the reactor containment and associated systems (cooling pool, fuel transfer, spray system, filtration, chimney, etc.) is described. The advantages shown by a double containment, whose inner envelope is of pre-stressed concrete and the outer one of reinforced concrete, are put forward and the original character of this conception is emphasized. (auth)

53976 (A/CONF.49/P-304) NUCLEAR POWER STATION SAFETY AND THE RESPONSIBILITY OF UTILITIES. Jungnell, D.; Nistad, J.; Schultz, G. (Swedish State Power Board, Stockholm). May 1971. 9p. (CONF-710901-266). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

It is shown with examples what the approach of the Swedish State Power Board has been in specific cases. Among these can be mentioned, in particular, the release policy for gaseous radioactivity and the principle of complete separation between redundant trains in safety systems which implies features in the layout and structure that goes beyond most current practice. (auth)

53977 (A/CONF.49/P-305) CONTAINMENT AND SAFETY IN SWEDISH NUCLEAR POWER PLANTS. Isberg, Pelle (ASEA-ATOM, Vasteras (Sweden)). May 1971. 8p. (CONF-710901-267). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

ASEA-ATOM has been requested by the Swedish Reactor Safety Committee to follow the USAEC ground rules for nuclear safety. A review is given of the possibilities and difficulties encountered when utilizing in this way the standards of a foreign body to which access for review is not granted. In the area of normal operation at release of radioactive matter from nuclear power plants the Swedish policy is developing somewhat differently from that in some other countries. Where the current trend is to lower the permissible exposures of the nearest man, Swedish rules will probably concentrate on the lowering of population exposures. What this means to the nuclear plant designer is discussed. One contribution of ASEA-ATOM to nuclear safety is in the field of reactor containment vessel integrity. The background of the imbedded liner concept and other features of the concrete pressure suppression containment vessel are reviewed. The basic philosophy of the Värtan underground plant design is also presented. (auth)

53978 (A/CONF.49/P-306) INTEGRATION OF NUCLEAR UNITS IN THE SWEDISH POWER SYSTEM. Holmin, N.; Johansson, T.; Jungnell, D.; Wedeen, A. (Swedish State Power Board, Stockholm). May 1971. 9p. (CONF-710901-268). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

As most of the economic hydro power resources are now harnessed, the future power increase in Sweden will be covered by thermal power. The nuclear power is forecast to be about 7000 MW at the end of the 1970's. An optimization study shows the economic size of the nuclear power units in the Swedish network during 1970's will be up to 800 MW. It is important that the large nuclear units have a good regulation capability during normal operation as well as during disturbances, that they have short starting times, and that they can survive voltage and frequency changes. The extent the nuclear power stations can fulfill these demands from the network is described. Since increased demands will cause larger costs the reasonableness of these demands is also discussed. (auth)

53979 (A/CONF.49/P-396) ACTIVITY RELEASE AND CONTROL AT THE NUCLEAR POWER STATIONS. Boedege, R. (Kernkraftwerk Lingen G.m.b.H. (West Germany)); Eickelpasch, N. (Kernkraftwerk RWE-Bayernwerk G.m.b.H., Gundremmingen (West Germany)); Grau, A.; Stephan, W. Apr 1971. 18p. (CONF-710901-140). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The activities to be handled at these stations are shown in diagrams differentiating them by origins and concentrations. The methods applied in measuring the activities in the released waters and gases, and also those applied in surveying the environments, are described. Special problems of these measurements are mentioned. The activities released from these stations are given from the beginning of their operation up to 1970 and are compared to the limiting values fixed by the licences. The influences of special operation states on the activity releases are illustrated. The activity concentration in the primary water (e.g. in case of can damages) and the leakages from those loops containing primary water roughly determine the release. The interdependency of the licence conditions and the operation of a nuclear station are discussed. The sensitivities in measuring the environmental contamination are sufficiently high, and no marked influences of these stations on their environments are established. (auth)

53980 (A/CONF.49/P-399) ENVIRONMENTAL EXPOSURE BY RADIONUCLIDES IN GASEOUS AND LIQUID EFFLUENTS FROM NUCLEAR POWER PLANTS IN THE FEDERAL REPUBLIC OF GERMANY. Aurand, K. (Bundesgesundheitsamt, Berlin (West Germany)); Ruf, M.; Schikarski, W.; Schwibach, J. Apr 1971. 24p. (CONF-710901-141). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The operating experience of the nuclear power plants in the Federal Republic of Germany is reviewed. An assessment of the expected environmental exposure by radionuclides in effluents from nuclear power plants is presented. As to the expected increase in the number of nuclear power plants in the next decades radionuclides in effluents will certainly cause only a comparatively low radiation exposure of the population. 7 references. (auth)

53981 (A/CONF.49/P-505) RADIOLOGICAL CONDITIONS AND EFFLUENT RELEASES AT CENTRAL ELECTRICITY GENERATING BOARD NUCLEAR STATIONS: A COMPARISON BETWEEN DESIGN FORECASTS AND OPERATIONAL EXPERIENCE. Pepper, R. B. (Central Electricity Generating Board, London (England)); Carter, P. A. (Central Electricity Generating Board, Somerset (England)). May 1971. 11p. (CONF-710901-224). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

During the design and early construction stages of seven commercial Mk I Gas Cooled Reactor (Magnox) power stations, estimates were made of dose-rates that would occur on and around the site and in operational and maintenance areas of the reactor buildings. Existing data were used in calculations to predict the quantities of radioactive liquid and gaseous effluents, and proposals were made for contamination control systems. Comparisons made between these various estimates and the values measured during operation, show that the shielding proved to be more effective than anticipated. The doses received by classified workers are presented and discussed. The system of contamination control was found to be over-cautious and a description is given of the simpler arrangements adopted. Liquid waste arisings have contained unexpected quantities of caesium, tritium and sulphur and the consequences of this are reported. Gaseous effluent discharges have not presented problems. A brief discussion is given of the implications of this experience for health physics control and for aspects of design of future power reactors. 9 references. (auth)

53982 (A/CONF.49/P-536) NUCLEAR OPERATIONS IN RURAL INDIA AND CONSERVATION OF AQUATIC ENVIRONMENT. Kamath, P. R.; Bhat, I. S.; Ganguly, A. K. (Bhabha Atomic Research Centre, Bombay (India)). May 1971. 28p. (CONF-710901-299). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

There is great enthusiasm for nuclear power in the less developed but populated regions in the country. There exists at the same time a genuine concern regarding deleterious effects from radioactive releases. This imposes the responsibility of selection of proper sites and demands careful safety evaluation of a project. Safety criteria ensure that populations are not likely to be exposed above the permissible levels and no undue restrictions are imposed on utilization of the environment. Development of nuclear resources in the widely scattered operational sites in the country also pose problems of disposal of effluents containing sulphates, manganese, and radium from uranium ore milling and tailings disposal; nitrate, fluorides and ammonium salts from fresh fuel manufacture and fission products from fuel reprocessing. Enforcement of controlled release is effected by site Environmental Survey Laboratory (ESL), working independently of the operating organization. Offshore and ground waters receiving effluents often move beyond exclusion area. Large volumes of coolants and processing effluents for discharge impose severe restrictions because of thermal and other kinds of pollution specially into inland waters which are generally in short supply to meet the local and irrigational demand. Alternate arrangements for complete containment are enforced at places. Field investigations are conducted to determine dilution, dispersion and ecological reconcentration of pollutants and to determine safe recipient capacity of an environment. Monitoring of indicator matrices shows up an approaching build up of pollution long before unacceptable conditions can be reached. Whole body radiation monitoring of selected groups of population is a routine at ESL and has received enthusiastic response from local population. Demographic and site studies at Tarapur and other areas have enabled ESL to establish an enlightened rapport with the public and study regional peculiarities. Easy accessibility of ESL for free discussions, and availability of environmental data and findings, have contributed to inspire trust and receive valuable public co-operation. 8 references. (auth)

53983 (A/CONF.49/P-543) NUCLEAR POWER PLANTS SITING IN THE CZECHOSLOVAK SOCIALIST REPUBLIC. Beranek, J.; Kriz, Z. (Ceskoslovenska Akademie Ved, Prague); Chochlovsky, I.; Raisigl, C.; (and others) May 1971. 36p. (CONF-710901-237). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Czechoslovakia as a country with high population density and extended industry prefers to develop nuclear power plants with maximum reliability and safety. In all phases of design, construction, and operation of nuclear power plants, standards and regulations issued by the Ministry of Health and the Czechoslovak Atomic Energy Commission are strictly and carefully followed. For actual siting two different approaches are used: (1) the siting in relatively isolated locations, i.e., nuclear power plants without containment, surrounded by exclusion areas, with maximum emphasis on reliability of all components; and (2) the siting of nuclear power plants (particularly for heating purposes) directly in highly populated areas. This approach demands the use of a well-proven type of reactor with double containment and all engineered safeguards. (auth)

53984 (A/CONF.49/P-579) FRENCH TENDANCIES ABOUT REACTOR SAFETY. Bourgeois, J.; Candes, P.; Clement, B.; Costes, D.; (and others) (Commissariat a l'Energie Atomique, Saclay (France). Centre d'Etudes Nucleaires). Jun 1971. 10p. (CONF-710901-398). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

After the "maximum hypothetical accident" method followed around the world until recent years, and wating the moment when the British probability method will be made very fruitful through improvements in reliability information, accident processes knowledge and risk level acceptability in accordance to public opinion, we have chosen an analytical method for safety evaluations. Our method allows objective pointing out of safety choices and easy permanent exchanges at each stage between design, construction and operation teams and safety responsibilities; it is based on a continuous analysis of availability and potential accident behavior of each barrier provided between dangerous products and public. The review is quantified when possible and qualitative in other cases. (auth)

53985 (A/CONF.49/P-660) FORECASTING THE ROLE OF NUCLEAR ENERGY IN SOUTH AFRICA. Tremeer, G. E. B.; Maunders, E. J. (Atomic Energy Board, Pelindaba, Pretoria (South Africa)). May 1971. 15p. (CONF-710901-313). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Several features of the South African situation make the forecasting of the role of nuclear energy more complex than in the highly developed countries of Western Europe. The unique features which contribute to this are (1) the existence of five geographically

XUM

well-separated load centers averaging over 500 km apart (two inland and three on the coast), (2) only one large low-cost coal reserve, this being at one of the inland centers, and (3) limited inland water resources. A computer model was therefore developed to simulate, under these conditions, the present electrical generation system, and its possible expansion over the next 30 years. The model uses the present worth method to evaluate alternative modes of system expansion, based on forecasts of regional load growth. Transmission line costing is treated quite generally, for example, intermediate load take-off points on long lines and discontinuous cost functions are considered. Dry-cooled units can be added to the system from a specified date. Plant items are sorted in order of merit, although, if desired, hydro units can be run at specified annual load factors. The introduction of natural and enriched uranium reactors with and without fast breeders was studied. The results show that it will be economic to aim for a relatively large nuclear installation program commencing in 1980. Based on locally produced plutonium, fast breeders cannot be installed until the last decade of the century. Details are given of the sensitivity of the results to variations in coal price and nuclear fuel cycle costs. (auth)

53986 (A/CONF.49/P-681) ENVIRONMENTAL EFFECTS: PUBLIC RELATIONS. Robin, A.; Leo, B. (Electricite de France, Paris); Renou, J.; Gauvenet, A. (Commissariat a l'Energie Atomique, Paris (France)). Aug 1971. 9p. (CONF-710901-458). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Nuclear power plants are equipped with efficient safety devices and various containment buildings which, in fact, completely protect the public against any radioactivity hazard. No industrial facility is so thoroughly controlled and inspected during both construction and operation. No notable radioactivity dispersion has been observed around the nuclear power plants, even on the occasion of the very few incidents which have occurred in the first experimental plants. Some uneasiness has spread out into the public, obviously not able to make a judgement about the degree of safety. Opposition campaigns have been launched. They are very often based on false or incomplete interpretation of actual or plausible facts. They sometimes make use of statistical data which is wrongly interpreted. It is necessary, to avoid the spreading of this opposition, to inform the public at large of the conditions in which the nuclear power plants are built and operated. This information is disseminated by public relations departments and must, to be understood, adopt common language and be based on comparison with known facts. (auth)

53987 (A/CONF.49/P-687) RADIATION MONITORING SYSTEM FOR WATER-COOLED NUCLEAR POWER PLANTS. Zhernov, V. S.; Kiselev, B. L.; Matveev, V. V.; Pologih, B. G.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 25p. (CONF-710901-414). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Radiation control system functions are grouped as follows: coolant condition estimate (fuel element sealing control, efficiency of purification system, decontamination efficiency, corrosion products activity etc.), check-up of equipment pressurization (pressurization control of steam generators and auxiliary heat exchangers primary circuits pump and vessel pressurization etc.), check-up of waste discharge levels (control of gaseous-aerosol mixture release, water discharge of purification system efficiency etc.), radiation conditions estimation in and out of premises (surface contamination control, analyses of liquid, loose and solid samples etc.), check-up of exposure rates (chronic external irradiation planned increased external radiation, internal personnel irradiation etc.). The control is mostly provided by centralized information and measuring system of radiation control, ensuring operational remote control of radiation characteristics. Coolant conditions are estimated by means of krypton-88 gamma emission measurement, pressurization of steam generator primary circuit is checked by means of N-16 beta-ray measurement directly in secondary circuit; pressurization of pumps and vessels is checked by beta-active gas measurement. Radiation conditions are estimated by the use of gamma-ray and neutron remote measurements, radiation rates are controlled by personal dosimeters with automatic measurement and recording as well as personal teledosimeters and man radiation counter. Control of equipment surface contamination as well as of body and clothes is carried on with portable and stationary instruments; sample isotopic composition is determined by the use of pulse-height analyzer. 5 references. 53988 (A/CONF.49/P-734) NUCLEAR SAFETY IN SPAIN. de los Santos, Alfonso; Corretjer, Luz (Junta de Energia Nuclear, Madrid (Spain)); Bellido, Pedro Trueba; de Buergo, Luis Alvarez; Santos, Agustin Alonso (Junta de Energia Nuclear, Madrid (Spain). Seccion de Seguridad Nuclear). May 1971. 9p. (In Spanish). (CONF-710901-505). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The report describes the basic principles followed in Spain to assure that siting, design, construction and operation of Nuclear or Radioactive Installations is done without undue risk. The safe transport of radioactive materials and nuclear fuels is also included. The 25/1964 law on nuclear energy establishes these basic principles, the law also regulates the administrative ways to be followed in requesting and granting licenses. The basic principles in the law are fully developed in corresponding detailed regulations. (auth)

53989 (A/CONF.49/P-799) DECONTAMINATION OF EQUIPMENT AND SURFACES, CONTAMINATED DURING THE OPERATION OF NUCLEAR POWER PLANTS WITH WATER-COOLED REACTORS. Sedov, V. M.; Simanovskii, Yu. M.; Smirnov, V. V.; Ugryumov, M. V. (State Atomic Energy Committee, USSR). Aug 1971. 24p. (CONF-710901-466). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

53990 (A/CONF.49/P-848) CURRENT TRENDS IN RADIOLOGICAL PROTECTION BY ELECTRICITE DE FRANCE IN ITS NUCLEAR POWER PLANTS. Delpla, M.; Beau, P.; Bertron, L.; Martin, J. J.; (and others) (Electricite de France, [Paris]). Jun 1971. 23p. (CONF-710901-436). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

By the end of this year, Electricite de France will be operating eight nuclear power plants distributed over five different locations and representing an installed power in excess of 2500 MWe. Although they belong to different types, the radiation protection organization in all of these nuclear plants is based upon the same principle: set at the same level as all other risks, the nuclear hazards are treated according to the same guiding principles as the others. The experience enabled an overall consideration and an analysis of the real hazards created by a nuclear plant in operation. 5 references. (auth)

53991 (DOCKET-50010-94) DRESDEN NUCLEAR POWER STATION, UNIT 1. Technical Specifications, Change No. 23 Allowed. (Division of Reactor Licensing (AEC), Washington, D. C.). 8 Sep 1971. 8p. Dep. NTIS.

Revised technical specifications are presented concerning the use of respiratory protective equipment for personnel in restricted areas of the reactor site. Protection factors concerning the respiratory equipment are listed. (D.C.C.)

53992 (DOCKET-50237-144) DRESDEN NUCLEAR POWER STATION, UNIT 2. Technical Specifications, Proposed Change No. 14. (Commonwealth Edison Co., Chicago, Ill.). 31 Aug 1971. 30p. Dep. NTIS.

Revised technical specifications concerning startup test procedures are presented. The revised specifications provide for a 120% high flux average power range monitoring scram to determine the warranted load response capability of the reactor. (D.C.C.)

53993 (DOCKET-50237-197) DRESDEN NUCLEAR POWER STATION, UNIT 2. Technical Specifications, Proposed Change No. 15. (Commonwealth Edison Co., Chicago, Ill.). 1 Sep 1971. 7p. Dep. NTIS.

Revised technical specifications are presented concerning a substitution of the steam jet air ejector off-gas monitors to perform the monitoring function of the plant chimney monitoring system. This substitution would be effective only during steady state operation and testing. (D.C.C.)

53994 (DOCKET-50237-198) DRESDEN NUCLEAR POWER STATION, UNITS 2 AND 3. Technical Specifications, Change Nos. 5 and 13. (Division of Reactor Licensing (AEC), Washington, D. C.). 9 Sep 1971. 14p. (DOCKET-50249-100). Dep. NTIS.

Revised technical specifications are presented concerning the use of respiratory protective equipment for personnel in restricted areas of the reactor site. Protection factors concerning the respiratory equipment are listed. (D.C.C.)

53995 (DOCKET-50249-99) DRESDEN NUCLEAR POWER STATION, UNIT 3. Technical Specifications, Proposed Change No. 6. (Commonwealth Edison Co., Chicago, Ill.). 31 Aug 1971. 30p. Dep. NTIS.

Revised technical specifications concerning startup test procedures are presented. The revised specifications provide for a 120% high flux average power range monitoring scram to determine the warranted load response capability of the reactor. (D.C.C.)

53996 (DOCKET-50271-62) VERMONT YANKEE NUCLEAR POWER STATION. Final Safety Analysis Report, Amendment 30. (Vermont Yankee Nuclear Power Corp., Rutland). 1 Sep 1971. 20p. Dep. NTIS.

Revised and additional data are presented concerning the quality assurance program. (D.C.C.)

53997 (DOCKET-50277-23) PEACH BOTTOM ATOMIC POWER STATION, UNITS 2 AND 3. Final Safety Analysis Report, Amendment 10. (Philadelphia Electric Co., Pa.). 8 Sep 1971. 207p. (DOCKET-50278-23). Dep. NTIS.

Proposed technical specifications for the Peach Bottom Power Reactor Units 2 and 3 are presented. (D.C.C.)

53998 (DOCKET-50282-39) PRAIRIE ISLAND NUCLEAR GENERATING PLANT, UNITS 1 AND 2. Environmental Monitoring and Ecological Studies Program 1970 Annual Report. (Northern States Power Co., Minneapolis, Minn.). 30 Aug 1971. 398p. (DOCKET-50306-38). Dep. NTIS.

Information concerning radioactive and thermal discharges from the reactor is presented. The effects of reactor operations on the environment are analyzed. Radiation monitoring data for June to December 1970 are included. (D.C.C.)

53999 (DOCKET-50358-26) WM. H. ZIMMER NUCLEAR POWER STATION, UNIT 1. Preliminary Safety Analysis Report, Amendment 19. (Cincinnati Gas and Electric Co., Ohio. Columbus and Southern Ohio Electric Co., Columbus, Ohio. Dayton Power and Light Co., Ohio). 8 Sep 1971. 89p. Dep. NTIS.

Revised and additional data are presented concerning design parameters and operations aspects of the William H. Zimmer Power Reactor Unit 1. (D.C.C.)

54000 (DOCKET-50395-11) VIRGIL C. SUMMER NUCLEAR STATION, UNIT 1. Preliminary Safety Analysis Report, Amendment 1. (South Carolina Electric and Gas Co., Columbia). 27 Aug 1971. 73p. Dep. NTIS.

Requested additional information is presented concerning design parameters and operations aspects of the reactor. (D.C.C.)

54001 (DOCKET-50404-4) NORTH ANNA POWER STATION, UNITS 3 AND 4. Preliminary Safety Analysis Report, Vol. 2. (Virginia Electric and Power Co., Richmond). 15 Sep 1971. 233p. (DOCKET-50405-4). Dep. NTIS.

Information on the North Anna Power Reactor Units 3 and 4 is presented under the following broad topics: coolant system; containment systems; engineered safeguards; and instrumentation and control. (D.C.C.)

54002 (UCLA-ENG-7151) RESPONSE OF SAN ONOFRE NUCLEAR GENERATING STATION TO EARTHQUAKES. Smith, C. B.; Ibanez, P.; Matthiesen, R. B.; Vasudevan, R. (California Univ., Los Angeles. School of Engineering and Applied Science). Jul 1971. 41p.

A series of forced vibration tests at the San Onofre Power Reactor Unit 1 as part of a research program on the response of nuclear reactor systems to earthquakes is described. The intention of the forced vibration tests is to develop a mathematical model of the system. The mathematical model is then used to evaluate the response of the system to earthquake inputs for comparison to actual measured responses to earthquakes. A review of the earthquake activity for the San Onofre Power Reactor Unit 1 site is presented. 9 references. (D.C.C.)

54003 ENVIRONMENTAL CONSIDERATIONS AT NUCLEAR POWER PLANTS. Goldman, Morton I. (Nuclear Utilities Services Corp., Washington, D. C.). pp III.1-23 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

The basic working principles of nuclear power plants are described. The sources, control, and release of radioactive materials and of heat are discussed and compared to waste effluents from other sources of electric power. (H.D.R.)

54004 RELEASE OF RADIOACTIVITY FROM NUCLEAR INSTALLATIONS DURING ROUTINE OPERATION. Kahn, Bernd (Public Health Service, Washington, D. C.). pp V.1-20 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

Radiological surveillance results from a study of the Dresden Nuclear Power Station are presented. Radioactivity was measured on-site to obtain the effect of station operation on releases, at the point of release to analyze the constituents of the gross activity, and in the environment where they come in contact with people. Recommendations for improved monitoring of nuclear power station release are summarized. (H.D.R.)

54005 THERMAL EFFECTS OF POWER PLANTS ON ECOLOGY. Mount, Donald I. (Dept. of the Interior, Washington, D. C.). pp IX.1-16 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

Some of the various definitions people apply to pollution of water are described. Some potential beneficial effects of thermal discharges are discussed. The negative effects of temperature increases on aquatic life are examined in detail. (H.D.R.)

54006 ROLE OF THE PUBLIC IN THE DEVELOPMENT AND REGULATION OF NUCLEAR POWER. Ramey, James T. (Atomic Energy Commission, Washington, D. C.). pp X.1-22 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

The role of the Atomic Energy Commission in the regulation of nuclear power is examined. The provisions in the AEC regulatory procedures for public participation in both the rulemaking and the licensing processes for nuclear power plants are described. (H.D.R.)

54007 BENEFITS VS. COSTS: THE REAL WORLD. Smith, Stephen C. (Univ. of Wisconsin, Madison). pp XIII.1-4 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

The need for more thorough investigations into the consequences of technological innovations such as nuclear power is discussed. It is suggested that the concept of environmental economics be added to the benefit-cost evaluations of proposed projects. (H.D.R.)

54008 PROBABILITY TREATMENT OF ATMOSPHERIC DISPERSION FOR DOSE CALCULATIONS. Woodard, Keith (Pickard, Lowe and Associates, Inc., Washington, D. C.). Nucl. Technol.; 12: No. 3, 281-9(Nov 1971).

The atmospheric dispersion characteristics in the vicinity of a nuclear power plant are important in establishing criteria for safety features, reactor containment, and site boundaries so that there is reasonable assurance that radiation dose guidelines would not be exceeded should a major accident occur. Large quantities of meteorological data are available from many sites which provide a good statistical base for evaluating the effect of local site weather conditions on the total dose risk. A model for determining dose level versus probability based on combining time variant weather data with the time variant fission product release following an accident was developed. The results obtained using this model to evaluate several sites indicate that the probability of any individual receiving a dose in excess of regulatory guidelines is quite low, given that an accident has occurred and that the resulting fission product releases are evaluated using conservative AEC licensing assumptions. These results also show a large variation in dose among facilities at a given probability level. Other applications of this model for evaluating doses due to hydrogen purging, for predicting the most favorable time to make routine effluent releases and for assessing total dose risk of a given site are also discussed. (auth)

54009 (70-CNA-654) INDUSTRY'S ROLE: A UTILITY VIEW. Morison, W. G. (Hydro-Electric Power Commission of Ontario, Toronto). 1970. 12p. (CONF-700564-14). Dep. NTIS (U. S. Sales Only).

From tenth annual international conference of the Canadian Nuclear Association; Toronto, Canada (24 May 1970)

Development of the power reactor industry in Canada is reviewed. Arguments for not developing a fuel reprocessing capability are given. (J.M.J.)

54010 (A/CONF.49/P-7) APPROACH TO REGIONAL (NORDIC) CO-OPERATION IN THE NUCLEAR ENERGY FIELD. Marcus, F. R. (Atomic Energy Commission, Helsinki (Finland)). May 1971. 13p. (CONF-710901-62). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

XUM

Work in the nuclear energy field in Denmark, Finland, Norway, and Sweden has been organized in quite different manners to suit the individual needs of each country. The national nuclear energy institutes and their programs in relation to the nuclear power schedules are briefly described. Collaboration was intensified in 1968 through the foundation of the Nordic Coordination Committee for Atomic Energy. Whenever a scheme for practical collaboration between two or more institutes has been worked out, the committee proposes the conclusion of an agreement on this particular item between the institutes involved. In this manner important joint ventures have been carried through, mainly in fields related to reactor technology. These are enumerated and described. Schemes for Nordic cooperation in related fields are also mentioned such as Nordel (the electricity producers' organization), and the collaboration organized around the large-size Swedish nuclear power station Ringhals. Finally, an official collaboration scheme between the four countries has been set up in the field of reactor safety. Its initial aim is to make recommendations for uniform rules concerning reactor licence applications, and to promote, as far as possible, the harmonization of safety criteria. (auth)

54011 (A/CONF.49/P-23) SOME DESIGN AND SAFETY ASPECTS OF GAS BREEDER REACTORS. Gratton, C. P.; Burgsmueller, P.; Chermanne, J.; (and others). May 1971. 17p. (CONF-710901-72). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design and assessment work carried out on a 1000 MW(e) helium cooled fast reactor is reported. The overall characteristics of this indirect steam cycle plant are described together with the main considerations leading to particular design solutions. Comparisons are made with earlier published work and any important points of difference are discussed. This reference system which uses pin type fuel is the first of two concepts studied. The second concept is based on coated particle fuel and the main features of this alternative are outlined. A review of the safety principles of the reactor design is given and the engineering safeguards specified for the plant are described. Particular emphasis is given to the various aspects of the depressurization fault including the transient behavior of the system. The nuclear characteristics of the reactor are described together with the proposed fuel management scheme. The influence of different nuclear data libraries is examined and the possible uncertainty in breeding performance considered. The fuel technology needed for this reactor is reviewed and comparisons made with the metallurgical conditions suggested for the sodium-cooled fast reactor. The incentive to reach higher clad surface temperatures is considered and the associated economic benefits indicated from the results of optimization calculations are discussed. (auth)

54012 (A/CONF.49/P-106) TRAINING OF PERSONNEL IN RELATION TO THE DEVELOPMENT OF THE NUCLEAR ENERGY PROGRAM IN THE REPUBLIC OF CHINA. Cheng, Chen-Hwa (National Tsing Hua Univ., Hsinchu (Taiwan). Inst. of Nuclear Science). Apr 1971. 13p. (CONF-710901-78). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The steps by which a program was developed for training personnel are described. The first step was the establishment of the Institute of Nuclear Science at National Tsing Hua University. The Institute was part of the graduate school and was to serve the double purpose of training personnel and promoting the application of nuclear energy. Besides courses offered toward the Master of Science Degree in Nuclear Science and Technology, special courses were offered to train personnel in techniques of medical and industrial applications of nuclear energy. Gradually both undergraduate and graduate courses were offered and finally the center withdrew from the academic program altogether to concentrate on the program for practical application of atomic energy. (auth)

54013 (A/CONF.49/P-116) GAS-COOLED FAST BREEDER REACTOR. Fritzsche, A. F.; Lys, L. A.; Sarlos, G. (Swiss Federal Institute for Reactor Research, Wuerenlingen). May 1971. 16p. (CONF-710901-160). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The development of gas-cooled fast breeder reactors is discussed. Design parameters and operation aspects for gas-cooled fast reactors with pin-type fuel elements are described. 7 references. (D.C.C.)

54014 (A/CONF.49/P-127) SURVEY OF AUSTRALIA'S DEMAND AND RESOURCES TO YEAR 2000. McCay, F. L.; Deas, R. D. (Department of National Development, Canberra (Australia)). May 1971. 23p. (CONF-710901-165). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The effects of Australia's geography, population distribution, type of economy and political organization on the energy situation in the country are analyzed. Energy resources are reviewed and statistics are given for historic consumption of the various sources of primary energy. Forecasts are given for future requirements, based on researched data up to the year 1979/80 and on subjective extrapolation beyond this up to the year 2000. A separate section on electricity identifies the features of each of the separate State systems significant in consideration of the prospects for nuclear power in each. The extent and, where available the cost, of known reserves of basic energy resources are given, together with some discussion of the apparent prospects of future significant discoveries. (auth)

54015 (A/CONF.49/P-137) POSSIBILITIES OF INTRODUCING AND INTEGRATING NUCLEAR POWER IN THE UNITED ARAB REPUBLIC POWER SYSTEM. El Koshairy, M. A.; El Guebeily, M. A.; Hamamsy, A.; Effat, K. E.; (and others) (Atomic Energy Establishment, Cairo, Egypt). Jun 1971. 20p. (CONF-710901-352). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Estimates of the new power generation capacity required, and the choice of the type of plants in the U.A.R. are governed to a large extent by comparative economic considerations between the remaining hydro-potential and the construction of thermal stations with the possibilities of integrating nuclear power plants in the grid system. In the light of power system considerations and of comparative economic studies of nuclear power plants with alternative conventional thermal plants, the prospects of integration of nuclear plants in the system are discussed. 10 references. Chalk River Nuclear Labs.); Wilson, R.; Wong, K.; (and others) (Hydro-Electric Power Commission of Ontario, Toronto). May 1971. 12p. (CONF-710901-177). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A modern 1000-MW(e) coal-fired station burns 10,000 tons of coal a day. Coal in storage covers 15 hectares of land to a height of 15 m. Every day the station produces 1,000 tons of slag and fly ash, which in 35 years will cover 40 hectares to a height of 8 m. An equivalent nuclear station requires less than a half a ton of UO_2 per day and in 35 years produces only enough wastes to fill an Olympic-size swimming pool. Nuclear stations cause far less disruption to the landscape than do either hydroelectric stations or fossil-fueled stations. In addition, legislation requires that nuclear stations be operated to very conservative levels of safety, particularly in respect of releases of radioactivity. Canadian experience with prototype nuclear stations indicates that these conservative levels can be met in practice and, as the nuclear power program expands, we are establishing progressively more precise guidelines to ensure that they will be met in the future. A useful concept is a limit of dose to the public expressed in man-Rem per unit of electric power. Nuclear stations currently produce more waste heat than fossil-fueled stations of the same capacity. However, in Canada and other countries with cold climates waste heat may be put to useful purposes. 7 references. (auth)

(Atomic Energy Control Board, Ottawa (Ontario)); Woolston, John E. (Atomic Energy of Canada Ltd., Chalk River (Ontario)). May 1971. 20p. (CONF-710901-261). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The activities of public, private, and educational institutions in the development and application of nuclear energy in Canada are reviewed. 60 references. (H.D.R.)

54018 (A/CONF.49/P-169) DEVELOPMENT OF NUCLEAR ENERGY AND THE ROLE OF CNEN. Salvetti, Carlo (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). May 1971. 15p. (CONF-710901-85). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

CNEN—The Italian Commission for Nuclear Energy—has outlined its programs considering Italy's economic and industrial potential, as well as all the technological aspects involved. Effort and research have been concentrated in a few special programs which could find the widest common interest both of industries and of ENEL—the Italian Electricity Generating Board. (auth)

54019 (A/CONF.49/P–175) ITALIAN FAST REACTOR PROGRAMME. Fogagnolo, Giorgio (SNAM Progetti S.p.A., Milan (Italy)); Pierantoni, Ferrante (Comitato Nazionale per l'Energia Nucleare, Bologna (Italy)). May 1971. 17p. (CONF-710901–184). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The short- and long-term prospects and objectives for the fast reactors development program carried out in Italy by CNEN together with Italian industry are presented. A cost-benefit analysis based on a chosen hypothesis of electronuclear development in Italy over a period of 40 years is described. Particular stress has been given to the part played by fast reactors on the economy of the systems studied and the importance of a correct fuel policy during the years prior to the entry of fast reactors. Account has been taken of the results of the studies of the optimum parameters for the reference commercial plant for which sodium as primary coolant, and UO_2-PuO_2 as fuel, have been chosen. The research and development program, based on the conclusions drawn from this general assessment, is discussed. The principal tool in the fuel element development is the PEC (fuel elements test facility) reactor, the completion of which is expected in 1975, and which forms the main short-term objectives of the Italian Program. Some general considerations about the role that PEC will play in the national and international development of fast reactor fuel are discussed. (auth)

54020 (A/CONF.49/P–176) CIRENE PROJECT. Silvestri, M.; Casagrande, I. (Centro Informazioni Studi Esperienze, Milan (Italy)); Broggiato, A.; (and others) (Ente Nazionale per l'Energia Elettrica, Rome (Italy)). May 1971. 13p. (CONF-710901–87). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The basic design parameters and the economics of the CIRENE heavy-water-moderated boiling-water-cooled reactor concept are presented. (H.D.R.)

54021 (A/CONF.49/P–232) DEVELOPMENT OF PROTOTYPE HEAVY WATER REACTOR (FUGEN) IN JAPAN. Shima, Shiro; Nakata, Seibei; Sawai, Sadamu (Power Reactor and Nuclear Fuel Development Corp., Tokyo (Japan)). May 1971. 17p. (CONF-710901–92). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The heavy water-moderated boiling light water-cooled reactor and the construction of its prototype, named FUGEN, are described. One of the main objects of this project is to demonstrate a "plutonium self-sustaining cycle" in which natural uranium enriched with plutonium (recovered from own spent fuel) is to be loaded in the reactor, and the fuel to be supplied will be only natural uranium. At the same time, the reactor is so designed that it could be economically operated not only with slightly enriched uranium oxide fuel, but also with mixed oxide fuel without any modification of the core. FUGEN is designed to generate 165 MW(e), and on-power refueling is considered. (auth)

54022 (A/CONF.49/P–285) STANDARD MODELS OF NUCLEAR PLANTS OF 200 MWe AND 400 MWe FOR DEVELOPING COUNTRIES. Klees, P.; Mommen, E.; Pierard, A. May 1971. 20p. (CONF-710901–105). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The selection of the technical parameters can be guided by an optimization calculation. From its participation to the first PWR's of medium power built in Europe and the progresses realized in the core technology, ACEC developed the parameters of a 200 MW(e) power plant. The core description, the selection of primary equipments and the auxiliary systems are described. The worldwide inventory of small power grids, their growth and interconnection prospects, show that a 200 MW(e) unit size meets the requirements of numerous countries and can be integrated in the investment decisions to be taken henceforth 1975. Considering that the general tendency of doubling in 10 years, the 200 MW(e) unity enables them to take advantage of the nuclear 10 years earlier than the present classical size of 400 MW(e), other things being equal. A 200 MW(e) station in eastern Pakistan is an example. 9 references. (auth)

54023 (A/CONF.49/P–298) PROSPECTS FOR ATOMIC ENERGY DEVELOPMENT IN JAPAN. (Atomic Energy Commission, Tokyo (Japan)). May 1971. 13p. (CONF-710901–107). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Atomic Energy Commission of Japan drew up, in April 1967, a long-range program on the peaceful uses of atomic energy in Japan. The program takes a look into the future shape of the various fields of peaceful uses of atomic energy for about twenty years up to 1985, clarifying the policy for the priority measures for about ten years from fiscal 1967. Based upon this long-range program, national ways to nuclear power generation, the promotion of development of power reactors, procurement of nuclear fuels, construction of Japan's first nuclear ship "MUTSU," promotion of the use of radiation research on nuclear fusion, and finally the safety measures are explained. (auth)

54024 (A/CONF.49/P–333) EDUCATION AND TRAINING IN THE FIELD OF PEACEFUL USES OF ATOMIC ENERGY IN POLAND. Kroh, J. (Technical Univ., Lodz, Poland). May 1971. 11p. (CONF-710901–113). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Polish educational program in the field of atomic energy includes training at secondary schools, universities, post-graduate courses, and PhD studies. The training programs are described. (auth)

54025 (A/CONF.49/P–359) RESOURCES OF PRIMARY ENERGY. Mandel, Heinrich (RWE-Aktiegesellschaft, Essen, Ger.). Apr 1971. 27p. (CONF-710901–123). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Taking the present requirements as a basis, the fossil fuels would be sufficient for about 460 years, the basic materials for nuclear fission even sufficing for 25,000 years. This consideration, however, leads to false conclusions. It is necessary to take into account the world's population growth as well as the increasing per capita consumption. The result is that the reserves of fossil fuels—a constant upward trend to the world's economy in the hitherto known way provided—would, e.g., be sufficient for some more years only towards the end of the 21st century, whereas nuclear fuels would suffice for about 300 years. This means that, on one hand, the world will be dependent upon nuclear fusion at long sight, but that, on the other hand, sufficient time will be left to develop it. (auth)

54026 (A/CONF.49/P–366) BASE PROGRAMME OF THE DeBeNeLux FAST BREEDER PROJECT. Engelmann, P.; Haefele, W. (Kernforschungszentrum, Karlsruhe (West Germany)). Apr 1971. 28p. (CONF-710901–206). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The bases for industrial design work on prototype reactors from 1966 on were led initially in Karlsruhe. Work within the base program was carried through until 1967 in association with Euratom and since 1968 in conjunction with Belgium and Holland. Numerous questions which were open in 1964 could be clarified. The experiments in SNEAK and SEFOR have contributed to improving and ensuring the nuclear design data and safety parameters (Doppler and void effects). The fuel element and material research and the work on coolant technology led in 1969 to the decision to limit the design work on the sodium cooled prototype SNR and to suspend the work on the steam cooled prototype. The intermediate results of work on steam at AEG are reported, while a separate contribution of the industry consortium gives information on the design of the SNR. Here the path is shown that led to the SNR 300 through the design studies Na-1 and Na-2. Conceptual studies for large sodium cooled breeder power plants with oxide and carbide fuel were made during 1969–1970 in order to investigate the influence of the most important design parameters on economy, safety and reactor strategies. They were also allowed to fix the design parameters of the SNR and the future R&D Program. Since plant costs depend on the extent of safety precautions the course of incidents is investigated experimentally and analytically in the base program. This enables a judgement of necessary protective measures (in core instrumentation, core catcher, etc.). The fuel cycle costs depend strongly on the specific power, the burnup and the fabrication costs of the fuel elements. The possibilities of a modern test reactor for the development of fuel elements of all kinds of fast breeders are shown on the example of the preliminary FR3 design. 150 references. (auth)

54027 (A/CONF.49/P–369) FAST BREEDER DEVELOPMENT PROGRAM OF THE CONSORTIUM SNR. Guthmann, Elmar A.; Mante, Alexander J. H.; Morelle, Jean M. Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The decision for the construction of a 300 MW(e) THTR indicates a progress in realizing high-temperature reactors in the Federal Republic of Germany, due to a successful AVR operation. This project involves all the AVR characteristics as well as all the characteristics of international HTR concepts. Its task is to demonstrate the technical realization of big THTR units and their safe operation. Information is presented on main design characteristics and status of construction and on first results of the R and D construction program which is being performed. This program includes the further development and testing of main equipment, in particular, feed system, absorber rods, fuel elements, prestressed concrete pressure vessel, and core. (auth)

(British Nuclear Design and Construction Ltd., Leicester (England)); Thorn, J. D. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group). Jun 1971. 12p. (CONF-710901–474). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

What will be expected of reactors built in the next 20 years and the extent to which high temperature reactors should fulfill the requirements is established. The main characteristics of helium cooled reactors in comparison with other systems are given, illustrating features common to the pebble bed, tubular pin and integral brick designs of thermal reactors. The essentials of the helium cooled fast reactor are also mentioned. There is an account of the design trends in high temperature reactors to meet the requirements. There is also an up-to-date report on the experimental work now going forward in the U.K. to support this system when commercial reactors begin to be ordered late in 1971. (auth)

54030 (A/CONF.49/P–481) REVIEW OF THE PROGRESS OF SODIUM-COOLED FAST REACTORS IN THE UNITED KINGDOM. Cartwright, H. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group); Campbell, R. H. (Nuclear Power Group Ltd., Knutsford (England)); Wolff, P. H. W. (British Nuclear Design and Construction Ltd., Leicester, Eng.). May 1971. 8p. (CONF-710901–214). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The construction of the 250 MW(e) Prototype Fast Reactor (P.F.R.) now nearing completion at Dounreay on the north coast of Scotland, the continuing operation of the existing Dounreay Fast Reactor, and the extensive supporting research and development work are all part of a well established and comprehensive program directed towards the early introduction of economic fast reactors in the U.K. as part of a combined fast reactor/thermal reactor nuclear power program. Design studies for large commercial units of 1320 MW(e) gross capacity are an integral part of this work. These design studies which take account of the operational requirements that will be demanded of power stations in the future, together with the work on P.F.R., not only provide data for cost assessment purposes but also highlight the important areas and features to be studied in the development program. The development of the P.F.R. core and core components is described. The design of the early large commercial stations from the P.F.R. design is analyzed. The work in support of fuel transportation, reprocessing and refabrication is described. 6 references. (auth)

54031 (A/CONF.49/P–483) STEAM GENERATING HEAVY WATER REACTOR: A MODULAR REACTOR SYSTEM YIELDING ECONOMIC POWER OVER A WIDE RANGE OF OUTPUT. Brown, G. (British Nuclear Design and Construction Ltd., Whetstone (England)); Moore, J. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group); Smith, D. R. (Nuclear Power Group Ltd., Knutsford (England)). May 1971. 12p. (CONF-710901–288). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The direct cycle Steam Generating Heavy Water Reactor (S.G.H.W.R.) is a pressure tube system permitting a range of outputs to be obtained from standard components manufactured away from the site. Increase in reactor output involves no extrapolation in technology as is the case with pressure vessel systems. The calandria which contains the heavy water moderator and the shield tanks operate at atmospheric pressure only; other reactor plant components are conventional. The system is capable of fast refueling off-load two or three times a year during a two day or week-end shutdown. The pressure tubes provide direct access to each fuel element for withdrawal into the simple fueling machine. Larger reactors involve only a larger number of identical operations. Flexibility in fuel management ensures minimum operating cost to meet operational requirements or unexpected outage. The pressure tube concept permits direct injection of water on to the fuel pins through orifices in a tube which passes down the center of each fuel cluster. This water can be supplied continuously in operation as a part of the feed. Under fault conditions therefore, the fuel is cooled immediately and directly along the entire length of the fuel element. Current S.G.H.W.R. designs are conservatively rated compared with other water reactor systems and may thus be regarded as having considerable development potential. The S.G.H.W.R. is unique in that the parameters currently adopted are fully supported in actual operation on the 100 MW(e) demonstration reactor at Winfrith Heath and by the large 9 MW experimental heat transfer rig on which comprehensive tests have been made. The system is suitable for construction in a range of outputs in those countries without advanced technological resources because of its modular form and high conventional engineering content. 4 references. 54032 (A/CONF.49/P–504) GRAPHITE AND COOLANT CHEMISTRY OF GAS COOLED THERMAL REACTORS. Wright, J.; Linacre, J. K. (Atomic Energy Research Establishment, Harwell (England)); Dominey, D. A. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.); Jaquiss, M. T.; (and others) (United Kingdom Atomic Energy Authority, Springfields (England). Reactor Group). May 1971. 13p. (CONF-710901–223). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

After eight years' experience of operating the Windscale Advanced Gas Cooled Reactor, it is possible to compare the chemical behavior of coolant and moderator with that expected from experiments in Materials Test Reactors. The agreement is a measure of the confidence with which the behavior in commercial reactors of this type can be predicted. Graphite weight changes during long periods of steady operation in three different coolant gas compositions are compared with the radiolytic oxidation predicted by C-14 evolution from labeled specimens and from weight changes in Materials Test Reactor experiments. In some coolants a correction must be applied for the carbon deposited in the graphite, a quantity determined by differential thermal oxidation of the sample. This deposition process has been observed and studied in a number of laboratory and Materials Test Reactor experiments. Methane is a constituent of some coolants and is added to inhibit the radiolytic oxidation of graphite. To be effective at the center of large moderator blocks, it must reach that region by diffusion before it is destroyed by radiolysis. Measurements in the Windscale Advanced Gas Cooled Reactor are described which confirm the calculations based on diffusion characteristics of the graphite and on the methane radiolysis rate as determined in Materials Test Reactor and laboratory experiments. These experiments also show that radiation is less effective in destroying methane in gas which is within the graphite pores than in "free" gas some distance from a graphite surface. The total rate of methane destruction in the Windscale Advanced Gas Cooled Reactor is the sum of processes occurring in the two regions. A brief summary is given of the changes in graphite properties which accompany radiolytic oxidation. These are derived from accelerated Material Test Reactor studies because the removal of structural carbon in the Windscale Advanced Gas Cooled Reactor in eight years is so small that no measurable changes have been observed directly. The approach to graphite and coolant chemistry for helium cooled systems is illustrated by examples from the U.K. experimental program for the development of high temperature gas cooled reactors. 41 references. Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Electricité de France has started a large experimental nuclear program within the natural uranium, graphite, CO_2 layout. When the Saint-Laurent-des-eaux plant was put into service and proved that the selected layout was technically satisfactory, considerations of essentially economic nature brought Electricité de France, in agreement with the Public Authorities, to "diversify" its nuclear program and, while waiting for the realization of industrial breeders, to mainly engage itself towards enriched uranium reactors, moderated by water. Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54037 (A/CONF.49/P-585) WORK DONE IN FRANCE ON HIGH-TEMPERATURE REACTORS. Tanguy, P.; Loriers, H.; Maillet, E. (Commissariat a l'Energie Atomique, Saclay (France). Nuclear Research Centre); Buisson, A.; (and others) (French Industrial Group for High-Temperature Reactors). Jun 1971. 17p. (CONF-710901-400). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Based on the experience gained in France on natural uranium fueled–graphite moderated–gas cooled reactors, an extensive program of research and development has been started both in CEA and in industry. French work is taking advantage of the various facilities developed for the gas-graphite program, both for out-of-pile tests and for irradiation experiments, with the CEA reactors Osiris, Pegase, Siloe and Rapsodie. The emphasis is put mainly on the following: 1. fuel development and irradiation, starting with coated particles and compacts (with investigations on a new compacting process by gas carbon cracking) and extending to tests of complete fuel elements of the tubular interacting type; 2. graphite, with studies on irradiation behavior of various types, and research on stability of graphite core structures under seismic conditions; 3. various tests in helium atmosphere: seals, thermal insulation, refractory materials, and steels; and 4. reactor physics using critical facilities Marius (room temperature) and Cesar (400°C). 54038 (A/CONF.49/P-693) DEVELOPMENT OF NUCLEAR POWER STATIONS WITH WATER MODERATED AND WATER-COOLED REACTORS IN THE SOVIET UNION. Denisov, W. P.; Markov, Y. W.; Sidorenko, W. A.; Skwortzov, S. A.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 33p. (CONF-710901-415). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The experience in operation and development of the new nuclear power plant projects with the water-moderated water-cooled reactors has shown that the possibilities of their improvement are far from being exhausted. The ways of simplification of and improvements in the individual members, assemblies, schematic and operational solutions are shown in the report for the development of a nuclear power plant with the VVEhR-1000 reactor. A special attention is paid to the problems of increasing the equipment reliability and nuclear power plant safety. In conclusion an attempt is made to generalize the experience gained in projecting and operation of the nuclear power plants with water-moderated water-cooled reactors and the ways of their further improvements. 6 references. 54039 (A/CONF.49/P-712) PROSPECTS OF DEVELOPMENT OF NUCLEAR POWER INDUSTRY IN THE USSR. Petrosyants, A. M.; Alexandrov, A. P.; Dollezhal, N. A.; Leipunskii, A. I. (State Atomic Energy Committee, USSR). Aug 1971. 25p. (CONF-710901-498). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54040 (A/CONF.49/P-738) DEVELOPMENT OF HIGH TEMPERATURE REACTOR TECHNOLOGY IN THE DRAGON PROJECT. Shepherd, L. R. (Atomic Energy Establishment, Winfrith (England)). Apr 1971. 14p. (CONF-710901-325). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The development and status of the Dragon Project helium cooled high temperature reactor are briefly outlined. (H.D.R.)

54041 (A/CONF.49/P-796) JCEA PLANS FOR THE DEVELOPMENT OF NUCLEAR SCIENCE AND TECHNOLOGY IN PERU. (Junta de Control de Energia Atomica, Lima (Peru)). Apr 1971. 10p. (In Spanish). (CONF-710901-333). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In order to cope with growing energy needs, JCEA, with the approval and support of the Peruvian Government, has drawn up a plan consisting of two basic programs to be implemented simultaneously: (1) the training of scientific and technical personnel at home and abroad in specific aspects of the most urgent problems facing the country; and (2) the construction, over a period of six years, of a nuclear center with functional facilities suitable for study and research. (auth)

54042 (A/CONF.49/P-818) FORECASTS OF ITALY'S ENERGY REQUIREMENTS UP TO THE YEAR 1990 AND ROLE OF NUCLEAR ENERGY. Angelini, Arnaldo M. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)); Marinone, Franco May 1971. 18p. (CONF-710901-340). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The growth of power demand related to the individual sources of energy in Italy in the past fifteen years is analyzed. The main problems associated with the energy situation in the country, particularly as concerns reliability and economy of fuel procurement, are discussed. Based on this analysis and on the anticipated development of Italy's economy, predictions of the energy demand up to the year 1990 are made and a brief discussion follows on the contribution that each primary source will be able to make to cover the demand, in the light of the domestic energy resources, the foreseeable trend of the world fuel market, and the anticipated technical and economic evolution of the processes applied for the transformation and utilization of the sources. The past history of the Italian electric power system is reviewed. The electric energy and power requirements are predicted to the year 1990. The potential for development of hydroelectric, geothermal and pumped-storage stations is considered, as well as the role that nuclear energy may be called upon to play in order to meet the increased requirements. Factors involved in the development of nuclear power plants are analyzed. 3 references. (auth)

54043 (A/CONF.49/P-819) PROGRAM AND THE PRESENT STATUS OF FAST BREEDER REACTOR DEVELOPMENT IN JAPAN. Oyama, A.; Ichino, I.; Miki, R.; Mochizuki, K. (Power Reactor and Nuclear Fuel Development Corp., Tokyo (Japan)). May 1971. 16p. (CONF-710901-341). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The development of fast breeder reactors is discussed. Two sodium-cooled fast reactors, using mixed oxide fuel, will be constructed within 10 years. One reactor is the experimental fast reactor named "Joyo," with a designed power of 100 MW(t), intended to give the necessary technological experience for developing a prototype reactor, and also to serve as an irradiation facility for fuel and other materials. "Joyo" is now under construction, with criticality set for in 1974. The other project is the prototype fast breeder reactor named "Monju," for generating electric power of about 300 MW(e). Conceptual design is now under way, in collaboration with Japanese industrial companies. The loop type with a single rotating plug, with fixed arm fuel handling mechanism, was selected for the design. The sum of about $108 million will be invested by the end of 1971 FY in construction and associated research and development. 15 references. (auth)

54044 (A/CONF.49/P-852) DEVELOPMENT AND POWER TESTS OF THE THERMIONIC REACTOR-CONVERTER "TOPAZ". Gryaznov, G. M.; Eltsov, A. I.; Kuznetsov, V. A.; Malykh,

V. A.; (and others) (State Committee for Atomic Energy, USSR). Sep 1971. 20p. (CONF-710901-513). Dep. NTIS (U.S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Thermionic reactor "Topaz" start-up was carried out in the USSR in 1970. This reactor-converter steadily generated electric power of 5-10 kW during more than 1000 hours depending on operating conditions. Design parameters and test results are given. (auth)

54045 NUCLEAR PLANT. **Isberg, Per Gustaf; Sundqvist, Cnut Herbert; Pind, C. W. (to Allmanna Svenska Elektriska Aktiebolaget). French Patent 2,004,986. 5 Dec 1969. Priority date 28 Mar 1968, Sweden. (In French).**

A nuclear power plant is described containing a nuclear reactor provided with a reactor vessel under pressure, a primary system containing this reactor vessel, a circuit under pressure connected to the vessel and containing the coolant, and a primary sealed enclosure with a lateral wall. This primary sealed enclosure surrounds the reactor and a part of the primary system. A secondary sealed enclosure surrounds the primary enclosure and is a rock chamber. (J.S.R.)

54046 INITIATIVES FOR THE FUTURE OF ENERGY. **David, Edward E. Jr. Proc. Nat. Acad. Sci. U. S. A.; 68: No. 8, 1920-2(Aug 1971).**

Predicted growth of energy demands in the U. S. is described. Comparison of all power sources including nuclear power is presented. Proposed development plans for power reactors in the U. S. are outlined. (D.C.C.)

54047 ELECTRIC POWER FROM NUCLEAR FISSION. **Benedict, Manson (Massachusetts Inst. of Tech., Cambridge). Proc. Nat. Acad. Sci. U. S. A.; 68: No. 8, 1923-30(Aug 1971).**

The types of power reactors used in the U. S. are described. The advantages, deficiencies, and problems with the present generation of reactors are analyzed. Proposed development plans for future U. S. power reactors are presented. 6 references. (D.C.C.)

54048 ROLE OF NUCLEAR POWER IN FILLING THOSE NEEDS. **Hubbert, M. King (Geological Survey, Washington, D. C.). pp II.1-36 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).**

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

A comprehensive view of the world's energy resources appropriate for large-scale industrial power production is presented. The entire energy budget of the world as of a given time and the changes of the energy budget as a function of human energy uses are examined. The potential effects on human development of utilization of fossil, solar, and nuclear energy resources at various rates are discussed. (H.D.R.)

54049 TEMPERATURE MONITORS FOR UNINSTRUMENTED IRRADIATION EXPERIMENTS. **Bramman, J. I. (United Kingdom Atomic Energy Authority, Caithness, Scotland); Fraser, A. S.; Martin, W. H. J. Nucl. Energy; 25: No. 6, 223-40(Jun 1971).**

The construction, use of and the interpretation of data from temperature monitors developed for incorporation in uninstrumented irradiation facilities are surveyed. Depending on the choice of monitor, it is shown that maximum, mean, or end-of-run irradiation temperatures in positions inaccessible to thermocouple leads can be estimated with acceptable accuracy for most practical purposes. 54050 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 1. REACTOR CORE. PART D. FUEL ELEMENTS. **Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commision of the European Communities (1971). 200p. (In German and English). (CONF-710903–(Vol.1)(Pt.D)).**

Included are papers on stress analysis for nuclear reactor fuel elements and graphite core components. Specific topics discussed include: (1) Response of a tightly clustered nuclear fuel element bundle to arbitrary initial thermal and mechanical loading conditions; (2) Stress analysis of a bimetallic cylindrical joint; (3) Finite element analysis of stresses in fuel elements of a high-temperature gas-cooled reactor; (4) Thermal stresses in a circular cylinder with a rectangular hole under heat generation; (5) Elastic-plastic theory for artificial graphite; (6) Anisotropic, elastic-plastic-thermal stress analyses of solid structures; (7) Three dimensional transient thermoelastic stresses in constrained spherical fuel elements; (8) Stresses in spherical fuel elements of a HTR; (9) Stresses in the graphite structures of the THTR prototype; and (10) Core wall and bottom stresses in a pebble bed reactor during control rod insertion. (H.D.R.)

54051 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 2. REACTOR COMPONENTS. PART E. SHOCK AND VIBRATION ANALYSIS OF REACTOR COMPONENTS. **Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 318p. (In German and English). (CONF-710903–(Vol.2)(Pt.E)).**

Papers presented on methods for analysis of shock and vibration in reactor core and structural components include: (1) Viscous damping of rapidly heated reactor fuel rods; (2) Influence of finite duration pressure pulses on transient response of cylindrical and spherical shells; (3) Stress on fuel element boxes through sodium boiling and condensation impact; (4) Transient response of linear elastic structures; (5) Impact stress waves in composite structures; (6) Pressure vessel loading due to a channel rupture in a pressure tube reactor; (7) Eulerian study of propagation of fast reactor excursions; (8) Reliability of computer predictions of the hydrodynamics of reactor excursions; (9) Dynamic response of reactor containment to high-energy excursions; (10) Energy absorption by the concrete biological shield under shock loading; (11) Dynamic response of a structure subjected to explosive loading; (12) Vibration behavior of fast breeder fuel elements; (13) Self-sustained vibration of rods in parallel flow; (14) Response of a cylindrical cantilever to axial air water flow; (15) Vibration of reactor internals; (16) Vibrations induced by two phase (gas-liquid) coolant flow in pressure tube reactors; and (17) Reactor engineering effects as sources of stochastic noise in neutron reaction rates. (H.D.R.)

54052 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 2. REACTOR COMPONENTS. PART F. STRUCTURAL ANALYSIS OF CORE SUPPORT AND COOLANT CIRCUIT STRUCTURES. **Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 385p. (In several languages). (CONF-710903–(Vol.2)(Pt.F)).**

Papers presented on methods for the analysis of static and dynamic stresses in reactor components include: (1) Reactor internals response under a blowdown accident; (2) Stresses and fatigue strength of a bolted core support structure; (3) Design analysis for LMFBR core restraints; (4) Optimization of a reactor vessel internal support flange; (5) Dynamic analysis of a reactor head plate design; (6) Lateral deformations of coupled tubular structures; (7) Design of FR-3 reactor coolant loop tubes; (8) Elastic stability of hexagonal shells; (9) Elastic instability of edge-reinforced annular plates; (10) Stresses in a circular disk containing a pair of holes; (11) STRAP code for the static and dynamic analysis of reactor structural systems; (12) Dynamic analysis of nuclear equipment supports; (13) Plastic strain in heat exchanger tubesheets; (14) Analysis of pipework systems under creep conditions; (15) Design of expansion bellows using the collocation method; (16) Limit pressure of branch-pipe tee connections; (17) Stress analysis of a steam generator head; (18) Stress analysis of the hot box pressure dome and skirt for the Hartlepool reactor pressure vessels; (19) Acoustic stress in gas coolant circuit components; (20) Stress analysis of piping tee joints; (21) Stress analysis of coolant circulation pumps; and (22) Design of PWR coolant system support structures. (H.D.R.)

54053 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 3. REACTOR PRESSURE VESSELS. PART G. STEEL PRESSURE VESSELS. **Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (ed.). Luxemburg; Commission of the European Communities (1971). 374p. (In German and English). (CONF-710903–(Vol.3)(Pt.G)).**

Included are 22 papers on stress analysis methods for steel pressure vessels. Topics discussed are: stresses at nozzle to shell junctions; flange (bolted closure) design; materials properties and radiation effects on fracture mechanics; stress relief cracking in welds; acoustic emission analysis of crack propagation; and surface crack detection. (H.D.R.)

54054 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 4. REACTOR PLANT STRUCTURES AND CONTAINMENT. PART J. ANALYSIS OF SHELL STRUCTURES; CONTAINMENT. **Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 222p. (In German and English). (CONF-710903–(Vol.4)(Pt.J)).**

Papers on stress analysis in reactor containment shells include: (1) Stress analysis in shells of revolution; (2) Curved finite element analysis of shells; (3) Loading of circular cylindrical shells; (4) Finite element analysis of anisotropic viscoelastoplastic shells;

(5) Elastic-plastic analysis of shells of revolution; (6) Large deflections of viscoelastic orthotropic cylindrical shells; (7) Finite element analysis of containment vessels; (8) Thermal gradient effects in containment vessel walls; (9) Dynamic analysis of prestressed concrete vessels; (10) Loading response of prestressed concrete containment structures; and (11) Structural analysis of Rajasthan and Madras power reactor containment structures. (H.D.R.)

54055 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 5. STRUCTURAL ANALYSIS AND DESIGN. PART L. THERMAL AND MECHANICAL ANALYSIS. Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 538p. (In several languages). (CONF-710903-(Vol.5)(Pt.L)).

Papers are presented on techniques used for thermal and mechanical analyses of reactor components and structures. Discussions are included on: heat conduction; deformation; temperature distribution; creep; mechanical and thermal loading; stress limits; application of finite element methods; strain cycling; fatigue strength; fracture mechanics; and radiation effects. (H.D.R.)

54056 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 5. STRUCTURAL ANALYSIS AND DESIGN. PART M. DESIGN, RELIABILITY, COMPUTATION METHODS. Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 419p. (In several languages). (CONF-710903-(Vol.5)(Pt.M)).

Papers are presented on methods for design and stress analysis of reactor components and systems. The analytical methods discussed include: reliability and probability analyses; finite element techniques; orthogonal projection in the Hilbert space; and analytic continuation. (H.D.R.)

54057 IMPROVEMENTS IN AND RELATING TO CIRCULATION OF CORE ELEMENTS IN PEBBLE-BED REACTOR. Rausch, William; Von der Decken, C. D.; Huhndorf-Richter, B. (to Brown Boveri/Krupp Reaktorbau, GmbH). Australian Patent 290,347. 21 Apr 1969. Priority date 12 Sep 1964, Germany.

A description is given of the shaping of the inside wall of a pebble-bed reactor core vessel in such a way as to prevent creation of an ordered structure in the marginal zones. The inside wall of the vessel is predominantly cylindrical and the axis of the cylinder is parallel to the direction of movement of the core elements. These elements may be circulated by means of a device in which core vessel guide surfaces preventing creation of an ordered element structure in the marginal zones are arranged. The arrangement consists of at least 2 rows acutely angled to the cylinder axis and located around the periphery of the inside wall. The guides formed create a boundary surface for the pebble-bed, and have a quasi-conical development. (Australia)

54058 NUCLEAR REACTORS. Velez O, C. Rev. Mex. Fis.; 19: FA41-50(1970). (In Spanish).

A brief review is given of the history of the studies of reactors in Mexico, reactor theory, present status, achievements in the field of reactors and the perspectives of reactor construction in Mexico. 42 references. (R.V.J.)

54059 TASKS OF THE PHYSICIST IN MASTERING POWER-GENERATING NUCLEAR REACTORS. Adam, E.; Collatz, S.; Falkenberg, D.; (and others). (Zentralinstitut fuer Kernforschung, Rossendorf, Ger.). Kernenergie; 13: 310-16(Oct 1970). (In German).

The role of physicists within the framework of nuclear power stations is discussed. Covered are: behavior of material under intensive ionizing radiation, physical problems within the core, computer methods for reactor physics, measuring techniques for control of reactor operation, control of burnup and content of fissionable material, measurements for radiation protection, instrumentation and automatization of reactors. (H.B.G.)

54061 DOPPLER TEMPERATURE COEFFICIENTS OF FAST REACTORS. Nakamura, Kunihiko (Kyoto Univ., Uji, Japan). Nippon Genshiryoku Gakkai Rochuseishi Kenkyu Senmon Iinkai Hokoku; No. 21, 1-5(Mar 1969). (In Japanese).

A method to calculate Doppler temperature coefficients is presented. A new formula was derived, which is useful for the intermediate region between separable and nonseparable regions of resonance. The overlapping effect of resonances is discussed. Three cases are considered: the overlapping of resonances which belong to the same series of the same nuclide; the overlapping of resonances which belong to the different series of the same nuclide; and the overlapping of resonances which belong to different nuclides. A method was used in which X^2 distribution is assumed for nuclear constants and the average values are taken by weighting the distribution function. The calculated temperature dependency of the effective cross-section of ^{235}U is shown. Numerical calculation was also performed for the homogeneously mixed system of ^{235}U and ^{238}U, and the result is shown in figures. It was concluded as the result of calculation that the effect of overlapping is not so large, and the part of overlapping correction factor for ^{235}U is a little larger in case of $N_{235}/N_{238} = 1$. The effect of overlapping of the resonances belonging to different series can be neglected when the Doppler reactivity effect is considered. (Japan)

54062 EFFECT OF A METALLURGICAL PHASE CHANGE IN FUEL ON THE POWER COEFFICIENT OF EBR-II. Long, John K. (Argonne National Lab., Idaho Falls, Idaho). Nucl. Technol.; 10: No. 1, 17-21(Jan 1971).

Except for irradiation experiments, EBR-II is fueled with a metal alloy of U and fission products called fissium. At room temperature and up to 550°C the metallurgical phase of the fuel corresponds to the phase designated as α-uranium. Recent operations with EBR-II up to 62.5 MW have raised some fuel temperatures to levels at which the metal fuel undergoes a phase change from the α phase to the γ phase. The γ phase of fissium has a significantly lower density, which is reflected in the calculated power coefficient of the reactor. A calculation of the internal fuel temperature, taking into account the variation of thermal conductivity with irradiation-induced swelling, has led to a calculated effect of the γ phase on the power coefficient. This calculated effect agrees with observations during reactor operation. (8 references) (auth)

54063 SPATIAL BEHAVIOR OF NEUTRON FLUX DURING POWER REACTOR TRANSIENTS AS EFFECTED BY THE XENON-IODINE CHAIN. Sumpter, James Robert. College Station, Tex.; Texas A and M Univ. (1970). 303p. University Microfilms Order No. 71-17,841.

Thesis.

A study was undertaken of the characteristics of spatial neutron flux variations, induced by the xenon-iodine chain, occurring during power reactor transient behavior. Using the physical model of a uniform ring reactor, and the mathematical techniques of pertur-

XUM

bation theory and modal analysis, azimuthal oscillatory variations in power were examined as a function of the design and operating parameters of a nuclear power plant system. The types of transient behavior studied included power startups and power decreases of a step and ramp function form. The nature of the resulting xenon-induced spatial power oscillations was discovered to be quite unique when compared to their counterparts occurring during steady-state operation. Their behavior was affected by the time during a power level change when they were initially induced and the rate of the power level change. Distinct initial power-tilts also appeared in their behavior that were relatively short in duration and occurred within a few hours after the completion of the power level change. These were most prominent in reactors of large size operated at relatively high equilibrium thermal neutron flux levels or high power densities. The power-tilts were conspicuous even in asymptotically stable systems and therefore presented a serious control problem. The presence of various temperature feedback coefficients was found to cause a significant reduction in the magnitude of the oscillations, and in fact, was found to be necessary to maintain reactor stability in the cores being presently designed. Various methods of remedial control through the use of a soluble chemical poison were studied, and it was found that with proper procedures, xenon-induced spatial flux oscillations occurring during power reactor transients could be safely controlled without sacrificing the power capability of the core. (Diss. Abstr. Int., B)

54064 SEFOR MINIMUM CRITICAL CORE. Noble, L. D.; Greebler, P.; Pflasterer, G. R. Jr.; Sarma, B. U. B.; Wintzer, D. (General Electric Co., Sunnyvale, Calif.). Nucl. Technol.; 10: No. 1, 5-10(Jan 1971).

The minimum critical core size for the Southwest Experimental Fast Oxide Reactor (SEFOR) was predicted prior to the initial fuel loading using the results of a critical mockup in ZPR-III. The predicted minimum critical loading was 519 PuO_2-UO_2 fuel rods containing 285 kg of fissile ($^{239}Pu + ^{241}Pu$) plutonium, with one beryllium oxide tightener rod for each six fuel rods. The actual minimum critical loading was equivalent to a core containing 518 standard fuel rods and the nominal 6-to-1 ratio of fuel-to-tightener rods. The calculations used in the prediction are described and the agreement between experiment and calculation is discussed. (23 references) (auth)

Control Systems

54065 NUCLEAR REACTORS. Martin, Dudley James Victor (to United Kingdom Atomic Energy Authority). British Patent 1,233,832. 3 Jun 1971. Filed 9 May 1969.

Reference is made to means of flux shaping and control of heterogeneous reactors. By flux shaping is meant depression of higher intensity regions to achieve a substantially uniform intensity across the core. Conventional means for achieving this consist of introducing neutron absorbing material into selected regions of the core and removing it progressively as burn-up proceeds; such means usually require additional structure by way of guides or ducts in the core, involving an economic penalty. In the system described the absorbing material is contained in structures already provided for another purpose, thereby reducing the requirement for additional structural material. The absorbing material is located within fuel assemblies and there is access to the material while the fuel assemblies are in their operating position, without breaching the coolant circuit. With cluster type fuel assemblies a thimble tube, such as is provided for a flux scanning wire, may be provided for containing the absorbing material. The latter may be Kr or Xe gas, ducted to the thimble tube from control equipment, the gas being pressurised to vary its density and thereby its neutron absorption. The material may also be liquid or solid, contained in a replaceable capsule contained in the thimble tube. (UK)

54066 GAS-COOLED NUCLEAR REACTORS. Walker, Alexander (to British Nuclear Design and Construction Ltd.). British Patent 1,234,568. 3 Jun 1971. Filed 3 Jul 1967.

Reference is made to reactors having multiple access standpipes through the top of the pressure vessel. In such a reactor undesirably thin webs of material may be left between the standpipes. In the design described each control rod standpipe is of just sufficient size to accommodate the control rod flexible support member, and a further aligned standpipe for each control rod channel is provided in the bottom of the pressure vessel, normally closed by a plug, and of sufficient size to permit the control rod to pass through. The closure plug may be provided with a control rod shock absorber. (UK)

54067 CONTROL DEVICE FOR PEBBLE-BED NUCLEAR REACTORS. (to Brown Boveri/Krupp Reaktorbau GmbH). British Patent 1,236,330. 23 Jun 1971. Priority date 20 Dec 1968, Germany.

REACTOR CONTROL ELEMENTS—design parameters of helical grooved rod type, for pebble bed reactors
—drives for helical grooved rod type, description of coaxial shaft threaded gear
REACTORS, PEBBLE-BED—control rods for, description of helical grooved
—control rod drives for, description of coaxial shaft threaded gear (D.C.C.)

54068 SAFETY DEVICE FOR NUCLEAR REACTORS WITH MEANS FOR PREVENTING CONTROL ROD EJECTION. Handel, Karlheinz (to Gesellschaft fuer Keinforschung mbH). U. S. Patent 3,580,805. 25 May 1971. Priority date 8 Nov 1966, Germany.

A safety device for nuclear reactors is described wherein the reactor comprises a housing or containment surrounding a core having moveable control rods therein and a pressure tube extending from the housing in which the control rod and the control rod movement mechanisms are contained or to which they are attached. A safety locking device is provided within the housing which comprises pawl means proximate to mating-engagement means extending from the control rod. The pawl is held away from the extended engagement means under tension. In the event that the pressure tube is forced away from the reactor, the means holding the pawl away from the extended engagement means is removed, whereby permitting the pawl to engage the engagement means and prevent the ejection from the core of the control rod. (auth)

54069 METHOD AND APPARATUS FOR CONTINUOUS MONITORING AND CONTROL OF NEUTRON ABSORPTION PROPERTIES OF CHEMICAL SHIM. Johnson, Loering M.; Yuile, Arthur M. (Combustion Engineering Inc.). U. S. Patent 3,578,562. 11 May 1971. Filed 23 Oct 1968.

An apparatus is described to continuously monitor and control the neutron absorption properties of chemical shim used in regulating reactivity of a pressurized water nuclear reactor. Coolant-moderator fluid, including the soluble neutron absorption property in the chemical shim, is continuously passed through a chamber having plural neutron detectors surrounding a neutron source of known strength. Utilizing the neutron absorptiometry principle, a signal representative of the concentration of the absorption properties of the chemical shim in the coolant-moderator is derived. This signal is then applied through signal conditioning means to a readout and alarm device so that constant monitoring of the shim concentration absorption properties may be accomplished; additionally, the signal may be applied to maintain the concentration of neutron absorption properties of the chemical shim in the coolant-moderator at a desired level. 54070 (A/CONF.49/P-307) NORDIC STUDIES ON PRESTRESSED CONCRETE PRESSURE VESSELS FOR WATER REACTORS. Margen, P. H. (Aktiebolaget Atomenergi, Studsvik (Sweden)); Ferd, G. (Institutt for Atomenergi, Kjeller (Norway)); Haga, I. (ASEA-ATOM, Vasteras (Sweden)); Jensen, A.; (and others) (Danish Atomic Energy Commission, Risoe. Research Establishment). May 1971. 17p. (CONF-710901-201). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A survey of Nordic efforts on development of prestressed concrete pressure vessels for water reactors is presented. A joint project study of an 800 MW(e) BWR-plant with concrete pressure vessel is presented. The vessel is designed for normal operation at 70 bars, and equipped with a full-diameter, removable top closure and a special insulation system. Internal dimensions are 7 m diameter × 17 m height. Design features, safety characteristics, and economy are described and comparisons made with a conventional BWR-plant with steel pressure vessel. Another joint Nordic activity was the design, construction and testing of a 1 : 3, 5 scale model of the BWR vessel. The model was thoroughly instrumented with ~1000 gauges. The structural response of the vessel has been investigated in the elastic region up to 1.5 × design pressure, creep rates were measured under realistic operating conditions and valuable information was gained on the behavior under overload and transient conditions. The feasibility of the top closure design even after sustained overload operation was demonstrated. The insulation system has been tested both under steady state conditions (max. 85 bar, 298°C hot-side temperature) and under transient conditions involving rapid depressurization of the vessel. The insulation was tested both with N_2-gas and water as filling medium. Some of the basic research activities are described. Among these a series of model vessel experiments, carried out by the Technical University of Norway, and Danish concrete irradiation experiments are mentioned. 22 references. (auth)

54071 (A/CONF.49/P-482) DEVELOPMENT AND MANUFACTURE OF SOME IMPORTANT COMPONENTS FOR THE PROTOTYPE FAST REACTOR AT DOUNREAY. **Bowles, L. F.; Hastwell, B. T.; Lockney, E. V.; Oliver, K. E.; (and others)** (Babcock and Wilcox Ltd., London (England)). May 1971. 11p. (CONF-710901-215). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The aspects described are mainly those which stem from their application to Na systems and include such subjects as development, materials selection and quality assurance. The burst pin detection system, which detects and locates leaking fuel pins, includes high temperature electromagnetic pumps and a rotating selector valve. The techniques used during the development, manufacture and inspection of this system are described. The diagrid supports the reactor core, ducts Na coolant to the fuel carriers and must be fabricated with dimensional accuracy and high integrity welds. For this component, and some of the larger Na valves, the methods adopted for overcoming weld distortion, for welding in highly constrained conditions, and for heat treatment are presented. The stainless steel reactor jacket is a hot Na duct of unusual geometry. Its manufacture is described. Its insulation system is required to minimize temperature degradation of the Na coolant being delivered to the intermediate heat exchangers and to protect it from thermal stress and shock. The insulation, together with the welding and nondestructive testing techniques developed and used, are discussed. The modifications introduced in the heat exchanger design and in the procedures of a heavy engineering works to maintain the tubing standards during subsequent manufacture are described. 5 references. (auth)

54072 (A/CONF.49/P-548) CONTRIBUTION TO THE QUESTION OF PRESSURE VESSEL SAFETY AGAINST BRITTLE FAILURE. **Kalna, K.; Brumovsky, M.** (Skoda Works, Pilsen (Czechoslovakia)); **Vacek, M.** (Ceskoslovenska Akademie Ved, Rez. Ustav Jaderneho Vyzkumu). Jun 1971. 18p. (CONF-710901-360). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Safety criteria and fracture analysis for reactor pressure vessels are discussed. Effects of specimen size and accumulated energy quantity on the fracture analysis diagram are studied. Neutron radiation effects on mechanical properties of pressure vessel steels are analyzed. 18 references. (D.C.C.)

54073 METHOD OF OPERATING A NUCLEAR REACTOR FACILITY WITH A STEAM COOLED FAST BREEDER REACTOR AS THE HEAT SOURCE. **(to Gesellschaft fuer Kernforschung mbH). British Patent 1,235,446. 16 Jun 1971. Priority date 16 Apr 1969, Germany.**

REACTORS, BREEDER—cooling system for heavy water steam cooled fast
REACTORS, FAST—cooling system for heavy water steam cooled breeder
REACTORS, SUPERHEATING—cooling system for heavy water steam cooled fast breeder (D.C.C.)

54074 IMPROVEMENTS IN OR RELATING TO GRAPHITE MODERATED NUCLEAR REACTORS. **Hutcheon, John Malcolm; Prince, Norman (to United Kingdom Atomic Energy Authority). British Patent 1,242,718. 11 Aug 1971. Filed 22 Jul 1968.**

Reference is made to means adopted to inhibit the radiolytic reaction between graphite and CO_2 by the use of CH_4, and to certain problems that arise, including radiolysis of the CH_4 and diffusion of coolant into the interior of the graphite blocks forming the moderator. Where access of coolant to the interior of the blocks is by diffusion, the CH_4 concentration will be less and the graphite reaction greater than at the exterior surfaces of the blocks; this problem increases with diffusion resistance. In the method described the composition of the coolant is such that it first encourages increase in porosity by radiolytic oxidation and is subsequently adjusted to inhibit such oxidation. The initial period during which CH_4 is omitted may be several years, and means are described for calculating this period. Hole drilling in the graphite blocks may with advantage be combined with the method described. (UK)

54075 THREE-DIMENSIONAL STRESS ANALYSIS OF A CONCRETE REACTOR VESSEL. **Tucakov, Joza. Nukl. Energ.: 5: No. 6, 30-7(1968-69). (In Serbo-Croatian).**

A review of a method called "dynamic relaxation" is presented which enables a numerical analysis of the stress in thick-walled vessels with no simplifications whatsoever. A description of the method for the analysis of the reactor vessel stress and strain distortion is also presented. The thermal stress in the concrete reactor vessel due to varying distribution and changes in the temperature over the vessel walls is analyzed. (auth)

54076 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. **Hooper, Alan Thomas (to United Kingdom Atomic Energy Authority). British Patent 1,241,441. 4 Aug 1971. Filed 7 Feb 1968.**

Reference is made to reactors employing porous fuel, the aim of which is to improve heat transfer between fuel and coolant. In the system described the coolant emerging from the fuel channels passes into a flow path extending radially to the core periphery. The coolant flow path in the core is axial into the open ends of tubular fuel elements and then radially with respect to the core axis, then through the tube walls and through the interconnecting interspaces between the fuel elements. A heat utilisation plant may be located at the core periphery, and the core periphery may comprise the shell side of a tube in a shell heat exchanger. Means may be provided for recirculating coolant leaving the heat exchanger shell to re-enter the core axially. (UK)

54077 FLUID COOLANT APPARATUS FOR A NUCLEAR REACTOR. **Strohmeyer, Charles Jr. (to Electrodyne Research Corp.).** U. S. Patent 3,578,563. 11 May 1971. Filed 22 Dec 1967.

The invention provides an apparatus for cooling a nuclear reactor wherein there are two systems for flowing a coolant fluid, one system having multiple conduits in parallel relationship with and individually encompassing a portion of the longitudinally disposed nuclear fuel elements, the other system cooling the exterior walls of the multiple conduits and wherein means are provided for controlling fluid flow selectively in each of the two systems. (auth)

54078 NEUTRONIC-ACOUSTIC DETECTION OF THE ONSET OF BULK BOILING IN LIQUID SODIUM. **Bonnet, J. A. Jr.; Osborn, R. K.** (Univ. of Michigan, Ann Arbor). Nucl. Sci. Eng.: 45: No. 3, 314-20(Sep 1971).

A method is proposed to determine the initiation of bulk boiling in a sodium-cooled fast reactor. The technique could also be used to study two-phase single-component fluid behavior. The method consists of introducing a standing acoustic wave in a coolant channel of the core. This changes the coolant density, fission rate, and gamma-ray production by fission. The gamma rays leaking out of that region of the core are monitored with and without the acoustic waves. It is shown that this ratio is strongly coupled to the acoustic velocity, and this depends sensitively on the average void fraction in the channel. A drastic reduction in the acoustic velocity (by a factor of the order of one hundredth for sodium at 1830°F) with the formation of the first sodium voids makes this ratio very sensitive to the initiation of bulk boiling. (auth)

54079 IMPROVEMENTS IN OR RELATING TO EXPANSION JOINTS. **(to Gebr., Boehler and Co., Aktiengesellschaft). British Patent 1,242,986. 18 Aug 1971. Priority date 16 May 1969, Austria.**

JOINTS—design characteristics of telescoping tube bellows type expansion, for liquid metal cooled reactor piping system
REACTORS, LIQUID METAL-COOLED—piping system for, description of telescoping tube bellows type expansion joints for (D.C.C.)

54080 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. **Nichols, Ronald William (to Atomic Power Constructions Ltd.). British Patent 1,243,371. 18 Aug 1971. Filed 30 Nov 1967.**

Reference is made to integral reactors having auxiliary heat exchangers for removing substantially all the heat from the coolant during operating conditions that would otherwise give rise to excessive thermal transients in secondary systems associated with the main exchangers. A method of operation is described that is claimed to give improved reactor cooling, particularly during shutdown. This comprises shutting off the supply of secondary coolant to the main exchangers, shutting off the main turbine throttle valve, ensuring circulation of secondary coolant through the secondary exchangers, and adjusting the flow rate of coolant to a value such that the quantity of heat renewed by the secondary exchangers is such that steam is generated in the main exchangers at reducing temperature. (UK)

54081 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. Shires, George Lister; Raven, Leonard Frederick Albert (to United Kingdom Atomic Energy Authority). British Patent 1,238,849. 14 Jul 1971. Filed 30 Oct 1967.

Reference is made to reactors employing cluster type fuel assemblies, cooled by fluid that is allowed to boil. The arrangement described seeks to avoid the condition known as "dryout." The fuel bodies are spaced apart in an annular cluster about an inner axial passage within which the coolant flows with a forced vortex motion, and imparts a free vortex motion to coolant passing through the cluster. A co-axial centrifugal separating device is preferably incorporated in the channel so as to effect the required forced vortex flow; this may take the form of a helical baffle, disposed to produce a swirl in the coolant flow, which in turn creates a radial pressure gradient providing a driving force for the inward migration of steam bubbles and a centrifugal action tending to throw water droplets radially outwards on to the fuel bodies. (UK)

54082 (A/CONF.49/P-158) IRRADIATION EXPERIENCE WITH FUEL FOR POWER REACTORS. MacEwan, J. R.; Bain, A. S.; Notley, M. J. F. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.); Jones, R. W. (Atomic Energy of Canada Ltd., Pinawa (Manitoba). Whiteshell Nuclear Research Establishment). May 1971. 17p. (CONF-710901-260). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

NPD and Douglas Point fuels have worked well to burnups of 12.5 MWd/kg U (natural U) and 18.5 MWd/kg U (enriched experimental fuel). By the end of 1970 more than 7200 bundles of Zircaloy-sheathed fuel had been installed: of these, <0.5% had defected and were discharged without difficulty. The features of these 80-mm-diameter 19-element bundles have been incorporated into the 100-mm-diameter 28-element bundles for Pickering reactors. In loop tests of Pickering bundles, elements operated at a peak power of 580 W/cm length have produced 8.2 MWd/kg U with a fission-gas release from the oxide of 15%. Instrumented fuel elements have shown how fission-gas release and sheath strain are related to power cycling and have enabled us to predict fuel behavior, even with power transients. Improved designs, including hollow pellets, may further reduce sheath strain. $(U,Pu)O_2$ and $(Th,U)O_2$ fuels have been studied for possible application to advanced fuel cycles. Uranium monocarbide is an acceptable fuel for organic-cooled power reactors. Clad in zirconium alloy or sintered aluminum powder, it has successfully achieved burnups of 11 and 14 MWd/kg U at ratings of 550 and 700 W/cm length respectively. Volumetric swelling averaged 2.0% per 10 MWd/kg U. Fission-gas release was <0.1%. Carbon-coated fully-enriched UO_2 microspheres, dispersed in a graphite matrix and sheathed in Zircaloy, are being developed for special applications in CANDU reactors. A burnup of 45% of the ^{235}U has been achieved at peak ratings of 720 W/cm length. Performance was excellent with negligible hydrogen pickup in the Zircaloy sheath. Extruded U_3Si fuel is potentially cheaper than UO_2 by several $/kg U, and ratings of 800 W/cm length have been achieved. Axial voids have accommodated the U_3Si swelling giving a diametral sheath strain <1% for exposures to 16 MWd/kg U at ratings of 500 W/cm length. 45 references. (auth)

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The optimization of core design and fuel management requires accurate calculational methods based on a detailed description of relevant neutronic and thermohydraulic processes. Since 1964 AB Atomenergi and AB ASEA-ATOM have carried out a joint research and development program for improving the understanding of the physics, heat transfer and fluid flow in boiling-water reactor cores. The program included a series of lattice experiments in a high temperature critical facility and full scale testing of fuel elements in a 9 MW heat transfer circuit. Experiments have also been performed in connection with the start-up of the 400 MWe Oskarshamn reactor. A summary of experimental results is given. Hand-in-hand with the experiments, a system of calculational methods were developed, including multigroup transport programs for the calculation of cell parameters, subchannel analysis of fuel element heat transfer and two-phase flow, and three-dimensional group diffusion programs for prediction of the overall static and dynamic core performance. The main characteristics of the methods are described, and some results of comparison with experiments are given. The accuracy of the calculational methods in relation to the requirements for core design and fuel cycle calculations is discussed. Possibilities of narrowing design margins by improving calculational methods are pointed out. 11 references. (auth)

Institut fuer Material- und Festkoerperforschung. Allgemeine Elektricitaets-Gesellschaft, Grosswelzheim (West Germany)). Apr 1971. 16p. (CONF-710901-137). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The requirements of fuel pins for fast reactors with sodium, steam or helium cooling are discussed. Radiation effects on stresses shown to act upon fuel elements with respect to the fuel material, cladding, fuel pin, and bundle are studied. The results attained so far refer exclusively to oxide fuel. 41 references. (J.M.J.)

54087 (A/CONF.49/P-494) DEVELOPMENT OF A MANUFACTURING ROUTE FOR FUEL FOR THE MARK III GAS-COOLED REACTOR (HTR). D'Eye, R. W. M. (United Kingdom Atomic Energy Authority, Springfields (England). Reactor Group); Heal, T. J. (United Kingdom Atomic Energy Authority, Springfields (England). Production Group). May 1971. 8p. (CONF-710901-219). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The fuel element for the U.K. Mk III Gas Cooled Reactor (H.T.R.) comprises graphite blocks, pierced with holes which carry both the helium coolant and the fuel pin. The fuel pin contains annular fuel compacts of coated particles in a graphite matrix, clad in graphite sleeves. An initial fuel charge for a 600 MW(e) reactor contains typically 10^{10} coated particles and 10^6 compacts. With respect to fission product release, each coated particle is an individual fuel pin and ideally, at completion of manufacture, less than 2 in 10^4 should be defective. The implications of the combinations of large numbers, high standards and small size of the complex multi-coated particle are appraised and discussed from the product quality and hence process control aspect. Current development of the number of potentially relevant fabrication processes is outlined. A powder agglomeration and a wet method have been investigated for the fabrication of "green" UO_2 or UO_2/C kernels. These can be treated to form porous or dense oxide kernels or carbide kernels. The multiple coatings are deposited on the kernels in fluid beds and a range of coated particle specifications has been made in 5 in. diameter beds. Scale-up studies have been made with circular beds of larger diameter than this, as well as other designs such as a linear bed. In the final stage the coated particles are dispersed in a graphite matrix and the technology of forming such compacts in a variety of sizes has been established. A large scale irradiation program to support this reactor system and confirm the technology is well under way covering coated particles through to complete fuel pins. On a smaller scale the practicability of a coated particle fuel for a CO_2-cooled reactor system has been assessed. This led to the establishment of a production method for the manufacture of high quality SiC cans. An exploratory irradiation program has been completed. (auth)

54088 (A/CONF.49/P-495) DESIGN OF FUEL PINS FOR THE MARK III GAS COOLED REACTOR (HTR) SYSTEM. Cunningham, C. (British Nuclear Design and Construction Ltd., Whetstone (England)); Merrett, D. J. (Nuclear Power Group Ltd., Knutsford (England)); Prince, K. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group). Jun 1971. 12p. (CONF-710901-291). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The selection of a fuel pin design embraces not only the consideration of technical criteria but also economic constraints on fabrication costs in order to achieve an optimum balance of performance, capital and fuel costs for the reactor design as a whole. Demonstration that the design targets can be reached is achieved by an extensive supporting program of research and development. This includes both laboratory and irradiation experiments on component materials and complete fuel pins as well as preproduction manufacturing development. The selection of the Tubular Interacting fuel pin for the U.K. low enriched Mk III Gas Cooled Reactor (H.T.R.) is discussed. The results of parametric surveys leading to the choice of its leading parameters are analyzed. The evolution of the detail design is illustrated by considering in turn the principal technical constraints. These include the assessment of fuel and clad temperatures and temperature gradients, fast neutron effects and burnup and their influence on the mechanical and chemical behavior of the fuel pin. Particular attention is concentrated on the limitation of fission product release and on analyzing the stresses which can arise due to interaction between the graphite fuel tube and the fuel compacts it contains. The stability and vibration characteristics of the fuel pins during their residence in the core and during charge/discharge operations are also examined. (auth)

54089 (A/CONF.49/P-498) IRRADIATION TESTING OF FUEL FOR THE BRITISH PROTOTYPE FAST REACTOR. Lawton, H.; Parkinson, N. (Atomic Energy Establishment, Winfrith (England)); Bagley, K. Q. (United Kingdom Atomic Energy Authority, Dounreay (Scotland). Reactor Group); Bellamy, R. G.; (and others) (Atomic Energy Research Establishment, Harwell (England)). Jun 1971. 12p. (CONF-710901-293). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Irradiation work in support of the development of a fuel design for the British Prototype Fast Reactor (P.F.R.) is described. Most of the experiments were performed in the Dounreay Fast Reactor (D.F.R.), with occasional supporting data supplied by irradiations in Material Testing Reactors. Main emphasis is placed on the results from D.F.R. subassembly experiments in which clusters of 77 pins of P.F.R. diameter fueled with mixed UO_2-PuO_2 have been irradiated to peak burnups in the range 5.4 to 7.3%. With certain reservations these demonstrate the soundness of the P.F.R. fuel element design and its ability to achieve reliably a peak burnup of 7.5%. Supporting single or 3-pin irradiations provide evidence of behavior up to 10% peak burnup, and include tests of different cladding, different fuel densities or maximum can temperature. Mixed carbide fuel has also been tested, both in individual pin tests and as a part-load for one subassembly. The data are discussed and correlated, general patterns of behavior demonstrated, failure mechanisms considered, and comparisons drawn between different fuel and clad types. Plans for the use of P.F.R. as an irradiation tool are described. These will enable the fuel element design to be optimized so that it can be used with confidence in the first British commercial fast reactor. (auth)

54090 (A/CONF.49/P-501) URANIUM DIOXIDE FUEL IN THE MK II GAS COOLED REACTOR (AGR). Greenough, G. B. (United Kingdom Atomic Energy Authority, Springfields (England). Reactor Group); Nairn, J. S. (United Kingdom Atomic Energy Authority, Sellafield (England). Reactor Group); Sayers, J. B. (Atomic Energy Research Establishment, Harwell (England)). May 1971. 12p. (CONF-710901-295). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

During its use as a nuclear fuel, UO_2 undergoes a complex series of changes resulting from a combination of the thermal and irradiation effects to which it is exposed. The various effects produced in this fuel under those operating conditions specific to the Mk II Gas Cooled Reactor (A.G.R.) program are described. 10 references. (auth)

54091 (A/CONF.49/P-608) IMPROVED FUEL ELEMENTS FOR GAS-COOLED, GRAPHITE-MODERATED, NATURAL URANIUM REACTORS: THE GRAPHITE-CORED ELEMENT. Faussat, A.; Millet, P.; Ollier, H.; Peray, R.; (and others) (Commissariat a l'Energie Atomique, Cadarache (France). Centre d'Etudes Nucleaires). Jul 1971. 13p. (CONF-710901-405). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The fuel element of the N.U.G.G. reactor series at first contained a tube of uranium alloy U Mo 1.1% which was then changed to the alloy U Mo 1.1%-Al 0.05%-Sn 0.05%, of better mechanical properties and irradiation resistance. In order to increase the working temperatures, specific power and discharge burn-up a fuel element possessing a tube with a graphite core was designed, the other components of the cartridge remaining unchanged. The uranium alloy in this case is Sicral F.1, less absorbant neutronically than the alloys containing molybdenum. The irradiation results obtained on these fuel alloys in the range 300°C to 700°C and up to 8,000 MWd/t burn-up, using samples and actual fuel elements, together with the theoretical swelling processes are described. The performance obtained with the graphite-core element is discussed. Finally a new method of preparation of the graphite-core fuel tube by continuous casting is described: in a single operation it gives tubes with a very good metallurgical structure. 15 references. (auth)

54092 (A/CONF.49/P-609) FUEL ELEMENT OF THE REACTOR PHENIX. Dupouy, Jm.; Ginier, R.; Lallement, R.; Pajot, J.; (and others) (Commissariat a l'Energie Atomique, Cadarache (France). Centre d'Etudes Nucleaires). Jul 1971. 24p. (CONF-710901-406). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Developmental research on the Phenix Reactor fuel elements is described. Included are studies on mixed UO_2-PuO_2, its physical and chemical properties, both in- and out-of-pile, and compatibility and structural properties of austenitic steel cladding. Thermal and hydrodynamic testing on the proposed fuel elements is discussed. Irradiation studies were carried out in the Rapsodie Reactor, approximating proposed Phenix conditions. Fabrication and testing equipment has been set up. 5 references. (J.M.J.)

54093 (A/CONF.49/P-610) NEUTRONIC STUDY ON FUEL BURN-UP IN THERMAL NEUTRON REACTORS. Laponche, B.; Brunet, M.; Chabrillac, M.; (and others) (Commissariat a l'Energie Atomique, Paris (France)). Apr 1971. 16p. (In French). (CONF-710901-252). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Since 1958, the Commissariat à l'Energie Atomique has made a large series of studies aiming to a better knowledge of the properties of plutonium bearing fuels, and particularly those of fuels irradiated in thermal power reactors. These studies dealt with integral measurements in heavy water graphite lattices on uranium-plutonium alloys, by progressive replacement and oscillations techniques, and with chemical and isotopic analyses as well as integral measurements (oscillations) on samples of irradiated fuels. Theoretical models have been developed in order to analyze the series of experiments, to take correctly into account spectrum effects, effective cross-section variations as a function of temperature (experiments up to 400°C) and changes in the isotopic composition of plutonium during burnup. A consistent set of cross sections has been defined. Compared to the values of the UKAEA 1967 library normalized to the last recommended values at 2,200 m/sec (WESTCOTT 1970), ^{240}Pu absorption and the ratio of η of plutonium-239 to η of uranium-235 have been decreased and the resonance amplitude of ^{239}Pu absorption and fission cross-sections is modified. The main parameters of the changes in the fuel during irradiation, such as the ^{238}U resonance integral and plutonium isotopes capture cross-sections, are adjusted on the results of analyses of irradiated fuels. Oscillations of irradiated fuels give the total absorption of fission products, from the knowledge of plutonium values. Methods and results thus obtained are applied to the study of the fuel burnup in French power reactors and to the estimation of plutonium production and of its isotopic composition. A direct application can also be made to plutonium recycle studies. 9 references. (auth)

54094 (A/CONF.49/P-821) PLUTONIUM FUEL DEVELOPMENT IN JAPAN FOR FAST AND THERMAL REACTORS. Nakamura, Y.; Suzuki, S.; Uematsu, K. (Power Reactor and Nuclear Fuel Development Corp., Tokai (Japan)); Shimokawa, J.; (and others) (Japan Atomic Energy Research Inst., Tokai). May 1971. 12p. (CONF-710901-343). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Studies on mixed Pu-U fuels of different enrichment are required in the Japanese nuclear power development programs. Mixed oxide fuel is designed as the initial core fuel of the experimental fast breeder "JOYO" now under construction and the prototype fast breeder "MONJYU." Studies are being carried out on fabrication techniques and physical properties that are necessary for fuel element design and for the estimation of irradiation behavior. Test samples are irradiated as capsules, fuel pins and small test assemblies in the fast test reactors. As for mixed carbide and nitride, the potential future fast reactor fuels, preliminary studies have begun. Recent activities concentrated on fundamental investigations on preparation, physical and chemical properties, compatibility and irradiation effects of these fuel materials. Mixed oxide fuel will be used as the recycling fuels in light water reactors. Together with fuel design studies and nuclear experiments, fabrication studies and their assessment irradiation on conventional pellet fuel and vibratorily compacted fuel have been performed. The Japanese experimental reactors, GETR, Halden HBWR and Saxton PWR, were used as the irradiation facilities. A partial Pu core experiment in the JPDR is being planned. Slightly Pu-enriched mixed oxide is to be used in the Japanese advanced thermal reactor with a heavy water moderated system. More than six hundred kilograms of mixed oxide have been fabricated and used for nuclear experiments. 49 references. (auth)

54095 (EURFNR-903) STUDY OF NATURAL FREQUENCIES, NORMAL AND EXPANSION MODES AS WELL AS DAMPING OF FUEL PINS OF INSTRUMENTED SUBASSEMBLY MOCK-UP OF FAST BREEDER REACTOR DESIGN Na-1/2. Krueger, W.; Schwemmle, R. (Kernforschungszentrum, Karlsruhe (West Germany). Institut fuer Reaktorentwicklung). Translation of report KFK-1337. 55p. Dep. NTIS.

Work Performed under United States-Euratom Fast Reactor Exchange Program.

Investigations on free lateral vibration of fuel pins of the instrumented subassembly mock-up of the sodium-cooled fast breeder reactor design Na-1 are reported. The influence of the axial distribution of spacer grids on natural frequencies and the corresponding vibration modes was calculated and verified by experiments. The influence of the radial clearance in cells of spacer grids on the change of the normal modes was investigated experimentally. The frequency response functions were measured for the miniature pressure transducers which were mounted in one pin and in the subassembly sheath for the detection of the boundary layer pressure fluctuations in the subassembly. Experimental arrangements, results of investigations as well as instrumentation of the subassembly mock-up are described in detail. 8 references. (auth)

54096 (GEAP-10028-38) SODIUM-COOLED REACTORS FAST CERAMIC REACTOR DEVELOPMENT PROGRAM. Thirty-Eighth Quarterly Report, February 1971-April 1971. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). Jun 1971. Contract AT(04-3)-189. 98p. Dep. NTIS.

FAST CERAMIC REACTOR — fuel elements for, development during February to May 1971

— core for, design and kinetics analyses of

— safety of, transient overpower and coolant loss effects on

INCOLOY 800 — radiation effects on swelling and mechanical properties of, fast neutron, (E)

LIQUID METAL FAST BREEDER REACTOR — fuel elements for, development of stainless steel clad plutonium oxide (PuO_2)-uranium oxide (UO_2)

NEUTRONS, FAST — effects on mechanical properties and swelling of Incoloy 800 and stainless steel, (E)

PLUTONIUM OXIDES PuO_2 — PuO_2-UO_2, radiation effects testing of fuels of

— PuO_2-UO_2, development of stainless steel clad fuel elements of

REACTOR FUEL ELEMENTS — performance of defected mixed oxide, in flowing sodium, (E)

— cladding for mixed oxide fast, development and testing of

— radiation effects testing of mixed oxide fast

STAINLESS STEEL — radiation effects on swelling and mechanical properties of Types 304, 316, and 347, fast neutron, (E)

— cladding for plutonium oxide (PuO_2)-uranium oxide (UO_2) fuel elements, development of

URANIUM OXIDES UO_2 — PuO_2-UO_2, properties of fuels of, mechanical, physical, and thermal, (E) (H.D.R.)

54097 (JAERI-Memo-4346) JPDR-II CORE DESIGN REPORT. (Japan Atomic Energy Research Inst., Tokyo). Jan 1971. 147p. (In Japanese). Dep. NTIS (U. S. Sales Only).

The processes and result of the nuclear, thermal and hydraulic core performance calculations which have been done as core design studies of JPDR-II project (to double the JPDR thermal capacity) are outlined. Following parameter studies from 1964 to 1966, detailed core performance calculations were carried out. The desired thermal output will be obtained by changing the fuel numbers in an assembly from 6 × 6 to 7 × 7, and by setting the assembly coolant inlet velocity at about 1.8 m/sec. The overall core design calculations were done by using the parameters listed. It was concluded that with minor changes of a few design conditions obtained at the parameter study stage, the JPDR-II corecan, with integrity of the fuel, maintains satisfactory core thermal output through core life. (auth) (Japan)

54098 (NEDO-10017) FIELD TESTING REQUIREMENTS FOR FUEL, CURTAINS AND CONTROL RODS. Jones, D. R.; Hersum, T. G. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). Jun 1969. 9p.

Analyses and experimental data are presented to show that the testing of nuclear properties of core components in the field is not necessary. This conclusion is substantiated by analyses which show that the present pattern of quality control measures on fuel, curtains, and control rods provides sufficient assurance that the fuel and control-worth conform to design for both value and uniformity. (auth)

54099 (NP-18955) MOLTEN SALT BREEDER REACTOR CONCEPT. Quarterly Report for the Period Ending April 30, 1971. ([Bhabha Atomic Research Centre, Bombay (India)]). 8p. Dep. NTIS (U. S. Sales Only).

An experiment was carried out on the solubility of PuF_3 in $LiF-BeF_2-ThF_4$ (71.3, 15.5, 13.2 m/o) in the temperature range of 510° to 787°C. The solubility of PuF_3 in the salt mixture of the above composition was found to be between 0.7 m/o at the lowest temperature and around 4 m/o at the highest temperature. Analysis of the salt samples withdrawn from equilibrated melts using 10 micron and 15 micron porosity filter frits at the same temperature agreed within 5% thereby indicating that the measured solubility values are true within the limits of experimental errors. (auth)

54100 (NP-18956) MOLTEN SALT BREEDER REACTOR CONCEPT. Quarterly Report for the Period Ending January 31, 1971. ([Bhabha Atomic Research Centre, Bombay (India)]). 10p. Dep. NTIS (U. S. Sales Only).

The solubility of PuF_3 in $LiF-BeF_2-ThF_4$ mixtures of the composition of 68.2, 20.5, 11.3 m/o was determined in the temperature range of 550° to 775°C. The solubility was found to vary from about 0.8 m/o at 550°C to 5.6 m/o at 775°C. The preliminary values obtained on the solubility of PuF_3 are encouraging, as they are higher than the minimum solubility required to justify a detailed consideration of MSBR (Pu) concept. (auth)

54101 (WCAP-3385-28) SAXTON PLUTONIUM PROJECT. Quarterly Progress Report for the Period Ending June 30, 1971. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Fuel Div.). Contract AT(30-1)-3385. 20p. Dep. NTIS.

PLUTONIUM — utilization in pressurized water reactor fuels, (E/T)

REACTOR FUEL ELEMENTS — performance of Zircaloy clad mixed oxide, in pressurized water reactors, (E)

REACTORS, PRESSURIZED WATER — fuel elements for, performance of Zircaloy clad mixed oxide, (E)

— fuels for, utilization of plutonium in, (E/T)

SAXTON POWER REACTOR — operation during April through June 1971

— fuel elements for, midlife handling and examination of core 3 (H.D.R.)

54102 (WCAP-4167-1) EEI-WESTINGHOUSE PLUTONIUM RECYCLE DEMONSTRATION PROGRAM. Progress Report for the Period Ending April 1970. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Fuel Div.). May 1970. Contract AT(30-1)-4167. 158p. Dep. NTIS.

Progress on the EEI-Westinghouse Plutonium Recycle Demonstration Program for the period ending April, 1970 is reported in four sections. A separate abstract was prepared for each section. (G.M.C.)

For abstracts of individual sections see: 51675, 52429, 54103, and 54104.

54103 (WCAP-4167-1, pp 3.1-30) PRELIMINARY REGION DESIGN. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Fuel Div.).

In EEI-Westinghouse plutonium recycle demonstration program.

A preliminary region design study was conducted as part of the program to demonstrate plutonium recycle in pressurized water reactors. A 1000 MW(e) four-loop plant using a mixed-core of both plutonium and uranium fuels was selected as the basis for the preliminary design effort. The analysis consisted of calculations for a reference core fueled with both plutonium and uranium and for an identical core fueled with uranium. The results of the power distribution and depletion calculations are summarized. (H.D.R.)

54104 (WCAP–4167-1, pp 4.1-35) DEMONSTRATION ASSEMBLY DESIGN. (Westinghouse Electric Corp., Pittsburgh, Pa. Nuclear Fuel Div.).

In EEI–Westinghouse plutonium recycle demonstration program. The plutonium recycle demonstration fuel assemblies are composed of fuel rods containing PuO_2-UO_2 pellets clad with Zircaloy-4. Each assembly contains fuel rods with three different plutonium enrichments. The mechanical and nuclear design of the assemblies and the assembly thermal-hydraulic parameters is summarized. (H.D.R.)

54105 NUCLEAR REACTOR FUEL ELEMENT WITH NON-ALIGNED CHANNELING. Lofroth, Enar (to Aktiebolaget Atomenergi). U. S. Patent 3,580,808. 25 May 1971. Filed 26 Feb 1968.

A known type of a nuclear reactor contains vertical fuel elements in which a vertical channel is provided in the fissile fuel. It has been found that small particles or drops of fissile fuel collect on the bottom of the vertical channel. The inconvenience resulting from the collection of fissile fuel can be reduced if the vertical channel is divided into a plurality of shorter sections. (auth)

54106 PRESSURE TUBE TYPE FUEL ASSEMBLY FOR NUCLEAR REACTOR. (to Hitachi Ltd.). British Patent 1,236,331. 23 Jun 1971. Priority date 9 Feb 1968, Japan.

REACTOR FUEL ELEMENTS—design parameters of pressure tube assemblies, for heavy water moderated boiling water cooled reactors
REACTORS, HEAVY WATER-MODERATED—fuel element assemblies for boiling water cooled, description of pressure tube
REACTORS, WATER-COOLED—fuel element assemblies for heavy water moderated boiling, description of pressure tube (D.C.C.)

54107 IMPROVEMENTS IN OR RELATING TO PLUGS OR CLOSURES. West, Derek (to Flight Refuelling Ltd.). British Patent 1,241,802. 4 Aug 1971. Filed 28 Sep 1967.

Reference is made to plugs or closures for openings such as nuclear reactor fuel element stack pipes, and the object is to provide a plug having positive locking means for retaining it in position. A valve arrangement is provided for equalizing pressure on both sides of the plug before it is unlocked. (UK)

54108 REACTOR TECHNOLOGY. VOLUME 14, NUMBER 3. One of Four Technical Progress Reviews Published for the Division of Technical Information, USAEC. Washington, D. C.; Atomic Energy Commission (Fall 1971). 316p. GPO $0.75.

Operations and maintenance requirements for Dresden Power Reactor Unit 2, Fermi Fast Breeder Reactor, and SEFOR are reviewed. Radiation effects on swelling and creep in fast reactor fuels and fuel element cladding materials are studied. Separate abstracts are included for 6 of the articles presented. (D.C.C.)

For abstracts of individual papers see: 53970, 53971, 54109, 54110, 54218, and 54219.

54109 MINIMIZING SWELLING AND EMBRITTLEMENT OF FAST-REACTOR FUEL CLADDINGS. Kangilaski, Mihkel (Battelle Memorial Inst., Columbus). Reactor Technol.; 14: No. 3, 213-24(Fall 1971).

Liquid-metal-cooled fast breeder reactors (LMFBRs) are expected to produce most of the nuclear power in the near future. However, experimental results have indicated that stainless steel will undergo both swelling and embrittlement in the nuclear environment that is expected in LMFBRs. Implications of this swelling and embrittlement to the reactor design are discussed. Also, the numerous variables that affect the two phenomena are considered, along with approaches to alleviate or at least minimize them. 53 references. (auth)

54110 IN-REACTOR CREEP OF REACTOR MATERIALS. Gilbert, E. R. (Hanford Engineering Development Lab., Richland, Wash.). Reactor Technol.; 14: No. 3, 258-85(Fall 1971).

Irradiation creep is an important phenomenon in fast reactors. It affects the diameter changes and stress distributions in the cladding and in the nuclear fuel. It can also ameliorate distortions in structural components by allowing stress relaxation. Deformations that would lead to failure in postirradiation tests can be achieved by irradiation creep. Models are reviewed whereby irradiation either enhances creep or induces new mechanisms. The relative importance of these models is estimated. Data do not cover a sufficient range of temperature, flux, time, and stress to permit reliable prediction of materials behavior for the design goals of future liquid-metal-cooled fast breeder reactors (LMFBRs). 105 references. (auth)

54111 STRESS ANALYSIS OF COATED FUEL PARTICLES FOR DETERMINATION OF THEIR BURNUP BEHAVIOR IN HIGH TEMPERATURE REACTORS. Bongartz, K. (Kernforschungsanlage, Juelich, Ger.). pp C1/2.1-8 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Stresses are induced into the coatings of a spherical coated fuel particle in a HTR mainly by dimensional changes of the material cuased by the fast neutron flux and by fission gas pressure and swelling of the fuel material caused by burnup. By these stresses the lifetime of the fuel in the reactor is limited. Using a model established by H. Walther (SORIN) the lifetime of a multilayer particle for a power reactor was calculated. The calculation results indicate how the lifetime depends on the geometry of such a particle. Furthermore the results of an irradiation test with practically no burnup were compared with the calculation result. This led to an understanding of the mechanisms induced by the fast dose which most probably should have caused the disintegration of the particle in the test. 3 references. (auth)

54112 THEORETICAL STUDIES ABOUT SPECIAL COMPACT MODELS WITH RESPECT TO THE IRRADIATION BEHAVIOR OF BONDINGS AND COMPACTS OF COATED REACTOR FUEL PARTICLES. Drittler, K. (Institut fuer Reaktorsicherheit, Cologne). pp C1/3.1-18 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

In all high temperature reactors planned, built or under operation, fuel particles are used. In order to prevent the escape of fission products these particles are coated with different layers of pyrolitic carbon or silicon carbide. Due to various reasons, mainly due to safety aspects, these coated particles (having a diameter in the range of 0.4 to 1 millimeter) are compacted. Under irradiation the particles and the matrix material generally have different length changes which cause internal stresses. During normal operation time of power reactors these stresses can rise to an extent that the compact is destroyed. In order to determine what properties of coated particles and matrix material have to be changed so that these internal stresses are reduced to the lowest possible value, the internal stresses of compact models with spherical particles were calculated by analytical methods. It was assumed that the absolute value of the differences of the elastic properties of particles and matrix is not too large compared to that of the absolute values of the properties themselves. The evaluation of the derived formulae was done numerically. The results show that regarding the stresses there is only a weak influence of the geometrical dimensions and parameters. 11 references. (auth)

54113 STRESS AND STRAIN CALCULATIONS ON COATED PARTICLE FUEL AND COMPARISON WITH IRRADIATION RESULTS. Thomson, J. M. (Belgonucleaire, Brussels). pp C1/4.1-14 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The use of a computer code, written for a spherical geometry and based on the mechanical and physical properties of the materials used for the coated particle fuel, allows the prediction of the mechanical behavior of the HTR fuel concept. 9 references. (auth)

54114 CLADDING STRENGTH ANALYSIS UNDER COMBINED CREEP AND PLASTICITY EFFECTS IN FAST REACTOR ENVIRONMENT. Guyette, M. (Belgonucleaire, Brussels). pp C2/1.1 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

An analysis of the clad behavior of oxide fuel elements is performed by means of the CRASH III computer program, which constitutes an improved version of the early CRASH II B program. The CRASH III program, allowing the calculation of tri-axial stress and strain in an axisymmetrical sheath, takes into account the combined effects of the creep and the plasticity of the material. The creep and plastic strains can be any functions of the temperature, the generalized stress and the time. (auth)

XUM

54115 MECHANICAL STRESS OF FUEL ROD BUNDLES THROUGH AZIMUTHAL TEMPERATURE GRADIENTS IN FUEL ELEMENTS WITH ECCENTRIC GEOMETRY. Fischer, M.; Hofmann, F.; Kreig, R. (Kernforschungszentrum, Karlsruhe, Ger.). pp C2/2.1-15 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

A theoretical analysis of the temperature and elastic stress distribution in symmetrical and asymmetrical triangular rod clusters is presented. The analysis is applied to sodium as a coolant with fully developed turbulent flow. The temperature and stress analysis was carried out at axial sections where both the volume increase by swelling as function of temperature and temperature gradients in radial and peripheral direction lead to the critical conditions. Numerical results are presented for some specific cases (i.e. for a rod bundle with pitch to diameter ratio 1.21 and displacements $\xi = 0$; 0.1; 0.2 mm). The results show that already small displacements of the fuel rod in tightly packed rod bundles cause considerable temperature and axial stress variations in the cladding in circumferential direction. 9 references. (auth)

54116 FAILURE CHARACTERISTICS OF ZIRCALOY CLAD UO_2 FUEL RODS UNDER LOSS-OF-COOLANT CONDITIONS. Lorenz, R. A.; Osborne, M. F.; Parker, G. W. (Oak Ridge National Lab., Tenn.). pp C3/5.1-14 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Studies of the effects of a loss-of-coolant accident on the fuel rods are of primary importance in assessing the safety of water-cooled power reactors. A program to investigate the behavior of Zircaloy cladding in rapid thermal transients is described. The results of fuel rod failure experiments performed in steam on both irradiated and unirradiated fuel rods are presented. These results are compared with the mechanical properties of Zircaloy and a failure model. Fuel rod cladding expansions of 15 to 75% were observed with rods that ruptured in the temperature range 800 to 1400°C with internal pressures varying from 3.5 to 70 atmospheres. At fast neutron exposures of $\sim 1 \times 10^{21}$ nvt (>1.0 MeV) the average expansion of irradiated rods was about 70% that of unirradiated rods. Steam oxidation limited expansion at the higher temperatures (>1100°C), and the cladding exposed to steam at >1200°C was severely embrittled. The data correlated reasonably well with a failure model based on secondary creep which permits reliable predictions of failure temperature. The results of these tests indicate that fuel rod expansion may seriously impair the efficiency of emergency cooling in a reactor accident. 21 references. (auth)

54117 IMPORTANCE OF DESIGN: SAFETY INTERACTIONS ON RATE OF FUEL FAILURE PROPAGATION. Khan, E. U. (Babcock and Wilcox Co., Lynchburg, Va.). pp C4/6.1-20 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Under normal or near normal operating conditions there are potentially four causes of fuel failure propagation in LMFBR's. These are briefly described. Models have been developed to predict the possibility of fuel failure propagation within the core. These have shown that fission gas-blanketing should not lead to failure propagation beyond one assembly. It appears that the detrimental affect of nuclear transients occurring during normal operation on fuel failure propagation can be designed out. Thus, small scale flow blockage caused by pin motion, cladding deformation of an initially defective pin, fuel swelling and fuel debris is the most serious mechanism which could lead to fuel failure and to fuel failure propagation. A reactor core with good coolant mixing and strong, well designed assembly cans may delay propagation of failure to other assemblies. Any delay in failure propagation may be as good as preventing it if there are adequate detection devices with timely operation of counteraction systems. 18 references. (auth)

Auxiliary and Emergency Systems

54118 (NEDO-10320) THE GENERAL ELECTRIC PRESSURE SUPPRESSION CONTAINMENT ANALYTICAL MODEL. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). Apr 1971. 47p.

The analytical model used to evaluate the short term response of pressure suppression containments to loss-of-coolant accidents is presented. Comparisons are made between model predictions and available experimental data. The various assumptions involved are listed. The conservatisms of the model presented are discussed. It is demonstrated that the model over predicts available test data by a considerable margin. Since all the conservatisms will be present when full scale containments are being evaluated, it can be concluded that the resultant peak calculated pressures will be considerably greater than those which would actually occur. This over-prediction must be kept in mind when design margins are being selected. The overall analytical modeling of the pressure containment design can conveniently be considered in terms of the various components of the model. These components are: the vessel blowdown model; the drywell pressure model; the vent clearing model; the vent flow model; and the suppression chamber model. Each of these is described in detail. 8 references. (auth)

54119 (RT/ING-(71)2) METHOD OF LIMITING THE DEGREE OF CONTAMINATION OF THE PRIMARY CIRCUIT PROCEEDING FROM THE OPEN FUEL IN SODIUM FAST POWER REACTOR. Barilli, L.; Bruzzi, L.; Cicognani, G.; Gondoni, G. R. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). [1970]. 42p. (In Italian). (CONF-700970-1). Dep. NTIS (U. S. Sales Only).

From Symposium on the applications of transport theory; Oxford, England (1 Sep 1970).

The operating conditions of the fission gas discharge device for the PCC sodium cooled fast power reactor fuel element are analyzed. The conditions of sodium non-reentry in a typical operating sequence are particularly examined. On the basis of the radioactivity production rate released to the primary circuit as fission gas, a preliminary design of a clean-up system capable of reducing considerably the cover gas specific activity is also carried out. 7 references. (auth)

54120 CRITERIA FOR EMERGENCY CORE COOLING SYSTEMS FOR LIGHT-WATER POWER REACTORS. New York; American National Standards Institute (1971). 3p. Available from American National Standards Institute, New York.

Reevaluation of performance requirements for water cooled power reactor emergency core cooling system is presented. (D.C.C.)

54121 NUCLEAR CONTAINMENT SYSTEM. (to Westinghouse Electric Corp.). British Patent 1,235,648. 16 Jun 1971. Priority date 3 Apr 1969, United States.

REACTOR CONTAINMENT SYSTEMS—design characteristics of ice condenser, for pressurized water reactor
REACTORS, PRESSURIZED-WATER—containment system for, description of ice condenser (D.C.C.)

54122 INSPECTION OF THE JPDR PRESSURE VESSEL WITH A BORESCOPE. Okuma, Akira; Hashimoto, Takashi (Japan Atomic Energy Research Inst., Tokai). Hihakai Kensa; 18: 517-22(Nov 1969). (In Japanese).

Cracks had occurred in the clad inside the top of JPDR pressure vessel. In this connection, the bottom and nozzle parts near the pressure vessel were observed with a borescope. Because of the peculiar location etc., the observation encountered considerable difficulties. The borescope and polishing techniques employed, the procedure, and the results are described. Polishing devices were specifically designed for the nozzle parts and the vessel bottom; nylon brushes with alumina were employed to minimize the closure of cracks. The borescope technique consisted of iodine-lamp illumination, objective, relay lenses, eyepiece and photography. The results of observation (direct, photographic, etc.) were analyzed. Cracks were detected in one nozzle part; but, overall, abnormal cracks were observed. Problems in the observation, such as the coloring of lenses due to radiation, etc., are also described. (Japan)

54123 INSPECTION OF THE JPDR PRESSURE VESSEL BY THE ULTRASONIC FLAW DETECTION METHOD. Takada, Minoru; Futamura, Yoshiaki (Japan Atomic Energy Research Inst., Tokai). Hihakai Kensa; 18: 523-8(Nov 1969). (In Japanese).

Prior to the actual inspection of the JPDR pressure vessel, preliminary experiments were made: calibration-use test specimens with artificial flaws, and nozzle-part mockups also with similar flaws. The supersonic device employed was BRANSON SONORAY 301. Flaw detection was made for those on the inside surface of the pressure vessel from the outside. The contact of probes, their movement, etc. were all made manually. The beam scanning was for the shell, nozzle part, corner at the nozzle inside, and its vicinity. A beam was incident on a point of observation from four directions. The results by the supersonic technique were compared with those by a borescope and a smeck gauge. The cracks determined by the three techniques were those on the inside surface of the vessel body, close to a nozzle; these did not reach the base metal. One feature of the supersonic technique is the detection of internal flaws; it is its shape for a borescope; and its depth for a smeck gage. (Japan)

Operation and Economics

54124 (A/CONF.49/P–151) CANDU NUCLEAR POWER SYSTEM: COMPETITIVE FOR THE FORESEEABLE FUTURE. Hart, R. G. (Atomic Energy of Canada Ltd., Pinawa (Manitoba). Whiteshell Nuclear Research Establishment); Haywood, L. R. (Atomic Energy of Canada Ltd., Chalk River (Ontario). Chalk River Nuclear Labs.); Pon, G. A. (Atomic Energy of Canada Ltd., Sheridan Park (Ontario)). May 1971. 15p. (CONF-710901–170). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The CANDU system is based on heavy-water-moderated pressure-tube reactors noted for their good neutron economy. A major attribute of the system that has not been internationally recognized is its ability to become even more economically attractive with more advanced coolants or fuel cycles. The technologies of three coolant options, pressurized heavy water, boiling light water and organic liquid, are now developed, and preliminary work on a fourth option, liquid metal, has commenced. The natural-uranium fuel cycle has reached the commercial stage and work has started on plutonium recycle and thorium options. Operation of NPD and Douglas Point and construction of Pickering have shown that the pressurized-heavy-water natural-uranium option is competitive with other power sources. Low fuelling costs, on-power fuelling, easy control and acceptable capital costs have been demonstrated; methods of handling heavy-water leakage have been learned. The boiling-light-water natural-uranium option, now being demonstrated at Gentilly, provides reduced capital and operating costs by reducing heavy-water inventory, eliminating steam boilers and eliminating heavy-water upkeep costs. These savings are partially offset by higher fuelling costs, but there is a net energy cost gain and the system is less sensitive to increased interest rates. The organic-cooled natural-uranium option, now being demonstrated in WR-1, also provides lower capital and operating costs by reducing heavy-water inventory, increasing efficiency, eliminating heavy-water upkeep costs and providing an inactive heat-transport circuit. With uranium monocarbide fuel these savings are partially offset by higher fuelling costs, but if uranium metal can be developed as fuel, lower fuelling costs will also be obtained. In all options, capital costs can be further reduced by more fuel sub-division thus achieving increased channel power. In all but the uranium-metal option, the fuelling cost rise resulting from increased sub-division can be minimized by recycling plutonium or using thorium. 13 references. (auth)

54125 (A/CONF.49/P–157) LARGE-SCALE NUCLEAR ENERGY FROM THE THORIUM CYCLE. Lewis, W. Bennett; Duret, M. F.; Craig, D. S.; Veeder, J. I.; (and others) (Atomic Energy of Canada Ltd., Chalk River (Ontario)). May 1971. 15p. (CONF-710901–175). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Nuclear reactors with capacities of several thousand megawatts offer great promise for water desalination, for agro-industrial complexes and for very large electrical power networks, but various delays have so far prevented the vision from becoming a practical reality. The attraction of large capacity is the prospect of very low fuelling, operating and maintenance costs — less than 1 m$/kWh (electric). An essential requirement is high availability; this demands simplicity of the plant and all auxiliaries, easy access to keep maintenance time short, and a long unattended life for all components. Energy from thorium is very promising, especially in conjunction with organic-cooled heavy-water-moderated reactors. A new design of thorium-oxide fuel promises ratings as high as 50 to 80 kW(+)/kg Th, yielding 35 MWd/kg Th over irradiations of two to four years with high neutron economy. Such a near-breeder fuel cycle requires a small ancillary supply of neutrons. Several cycles are discussed. A major advance in plant availability can be achieved by using organic-liquid coolant. Good neutron economy is preserved with cool heavy-water moderator. It is envisaged that large reactors with these features could be completed by about 1985. The capital cost would depend on the state of technology in the industry undertaking the work, but analysis of the component specifications indicates a substantially lower cost per kilowatt than for the CANDU reactors of today. When the initial provision of the reactor, fuel reprocessing plant and generating equipment is clearly separated from the subsequent low-cost operating and maintenance, such reactors are seen to be well suited to programs of capital aid. 28 references. (auth)

54126 (A/CONF.49/P–185) PLUTONIUM UTILIZATION IN THERMAL AND FAST REACTORS. Sani, L. (Ente Nazionale per l'Energia Elettrica, Rome (Italy)); Schileo, G. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). May 1971. 16p. (CONF-710901–88). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In 1966, ENEL, in cooperation with EURATOM, launched an extensive research program to establish the feasibility of recycling plutonium in thermal reactors by means of UO_2-PuO_2 fuel assemblies. These assemblies were manufactured to standard fabrication techniques and were loaded in one of the ENEL reactors to verify their performance in actual operating conditions. The behavior of these assemblies in normal operation combined with the results of criticality experiments and gamma scanning confirmed the validity of this approach. In that same year, CNEN launched the Plutonium Program and the Fast Reactor Program. The former aimed at acquiring know-how in the manufacture of ceramic-grade plutonium fuel in a purposely built laboratory. As part of the development work, an extensive series of irradiation experiments on plutonium fuel was performed in prototype reactors. The Fast Reactor Program included research and development activities concerning fuel for fast reactors with a view to obtain the necessary know-how to fabricate fuel elements capable of operating reliably at high specific power and high burnups. (auth)

54127 (A/CONF.49/P–186) CNEN ACTIVITIES ON THE URANIUM–THORIUM CYCLE APPLIED TO WATER REACTORS. Baldetti, S.; Doria, F.; Gabaglio, M.; Grifoni, S. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)). May 1971. 17p. (CONF-710901–189). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A program aimed at assessing the economics of the thorium–^{233}U cycle in water reactors is described. The program includes: (1) economic evaluation; (2) neutron physics experiments; (3) fuel fabrication and irradiation experiments; and (4) reprocessing and remote refabrication. 15 references. (H.D.R.)

54128 (A/CONF.49/P–277) PLUTONIUM RECYCLE IN LIGHT WATER REACTORS. Bairiot, H. (Societe Belge pour l'Industrie Nucleaire, Brussels); Van Den Broeck, H. (Centre d'Etude de l'Energie Nucleaire, Mol (Belgium)). May 1971. 19p. (CONF-710901–195). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Belgian plutonium recycle program, started in 1958, was gradually increased to cover most aspects of plutonium utilization in LWR's. Prospective studies dealt with plutonium availability, manufacturing costs and cost of interim storage to benefit by large scale facilities. The incentives to use plutonium in first generation PWR's (stainless steel cladding, cruciform rods, flexibility for progressive conversion to plutonium fuelling) and in BWR's (separate fuel element channels, multiple enrichment elements), and the simultaneous recycling in both reactor types of the enriched uranium recovered from reprocessed fuel were examined in detail. The nuclear PANTHER code chain was tested on results of about 130 critical experiments in the VENUS facility, from simple lattices to mock-ups of recycle configurations, using almost 3000 pelleted or vibrated oxide fuel rods. The thermohydraulic codes were calibrated for special situations encountered in plutonium fuel environments. COMETHE and CRASH, fuel rod design codes, were checked against many irradiation experiments. The fuel development was backed by the irradiation of over 80 specimens in BR2 and DIORIT, covering heat ratings up to 1300 W/cm, cladding temperatures up to 600°C and burnups up to 50.000 MWd/t. Both pelletizing and vibrocompaction manufacturing techniques were developed, from laboratory to pilot stage; a large plant is now under construction. These activities were backed by a diversified assessment and demonstration program. BWR plutonium recycle assemblies were designed for KAHL and DODEWAARD, fuel was fabricated for GARIGLIANO and DODEWAARD and there was a close collaboration with ENEL's experimental program in GARIGLIANO. As for PWR's, various recycle schemes, covering four reactor cycles, were studied for SENA and TRINO type plants; shut-down margins and control rod worths were investigated. Plutonium fuel was gradually introduced in the BR3 from 1963 on; at the end of 1970, a peak burnup of 40.000 MWd/t was reached in a UO_2-PuO_2 assembly. 18 references. (auth)

54129 (A/CONF.49/P-293) MULTILEVEL DATA-BASED COMPUTER CODE SYSTEM FOR IN-CORE FUEL MANAGEMENT IN LIGHT WATER REACTORS. Sauar, T. O.; Boerresen, S.; Haugen, J.; Nitteberg, E.; (and others) (Institutt for Atomenergi, Kjeller (Norway)). May 1971. 18p. (CONF-710901-197). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Utility requirements for in-house fuel management capabilities are met by providing an automated multilevel computational system which is tailored to the characteristics of LWR cores and their fuel cycles. Adequate treatment of important nuclear and thermodynamic effects is ensured in integrated computer codes at various levels of calculational sophistication. Emphasis has been placed on automation by the use of a common data-base for transfer of data between codes and easy access to previous data. 16 references. (auth)

54130 (A/CONF.49/P-346) FUEL MANAGEMENT STUDIES FOR PRISMATIC TYPE HIGH TEMPERATURE REACTORS. Gutmann, H.; Daub, J.; Hansen, U.; Mandl, F.; (and others) (Atomic Energy Establishment, Winfrith (England)). Jun 1971. 18p. (CONF-710901-278). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The basis of these studies is a realistic prismatic core design proposed by the OECD High Temperature Reactor DRAGON Project for a station of 640 MW(e) with helium cooling and a secondary steam cycle. The core is made up of 264 fuel element columns each consisting of 5 hexagonal fuel blocks. Each block contains compacted coated particle fuel in inside and outside cooled fuel pins. The fuel columns are replaced on-load. The fuel management for the approach to equilibrium and for the equilibrium itself is investigated. The use of zero-, one- and two-dimensional studies is discussed and the conclusion drawn to which degree of costly core representation one has to go to achieve satisfactory predictions. Typical utility requirements, e.g., electricity demand curves, were the basis of the xenon override capacities and safe shut down margins incorporated in these studies. The investigations concentrate on low enriched fuel cycles because these are the ones which are considered for the first prismatic HTR power station in Europe. They include fuel cycle cost estimates which assist in deciding which of the investigated running-in approaches should be chosen for real operation. The particular points and restrictions which have to be heeded in working out fuel management schemes for HTR's are described. These include limiting features like fast neutron dose for structural graphite and graphite consolidated fuel compacts, burnup of coated particle fuel and local power peaks. (auth)

54131 (A/CONF.49/P-389) COMPARISON OF HIGHLY ENRICHED AND LOW-ENRICHED URANIUM FUEL CYCLES IN HIGH TEMPERATURE REACTORS. Ehlers, K.; Schloesser, J. (Brown Boveri/Krupp, Cologne, Ger.); Hackstein, K. G. (Nuklear-Chemie und-Metallurgie G.m.b.H., Wolfgang bei Hanau (West Germany)); Merz, E. (Kernforschungsanlage, Juelich (West Germany)). Apr 1971. 20p. (CONF-710901-135). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

For a 600 MW(e) high temperature reactor the thorium fuel cycle with reprocessing of the breed elements and recycling of the bred fissile material, as well as the uranium cycle with reprocessing of the fuel and sale of the spent uranium and the bred plutonium were optimized with regard to fuel cycle cost. In selecting the reference cycles, special emphasis was placed on a comparable status of the fuel element development. Hence the design data were chosen so that the constraints regarding fast dose, burn-up, heavy metal density of the fuel matrix, maximum fuel and wall temperatures, and maximum power output per fuel element are not exceeded. For both reference designs, the costs of the outer fuel cycle for fabrication and reprocessing at an installed capacity of 5000 MW(e) were determined. Due to the influence of the specific costs on the fuel cycle parameters, a reoptimisation proved to be necessary. It is shown that the thorium cycle leads ultimately to lower fuel cycle costs whereas the uranium cycle could be introduced with less development effort. (auth)

54132 (A/CONF.49/P-471) OPERATIONAL CHARACTERISTICS OF THE STEAM GENERATING HEAVY WATER REACTOR. Smith, D. (Atomic Energy Establishment, Winfrith (England)); Dickson, G. K. (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group); Pickman, D. O. (United Kingdom Atomic Energy Authority, Springfields (England). Reactor Group). Jun 1971. 12p. (CONF-710901-284). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Steam Generating Heavy Water Reactor (S.G.H.W.R.) is a direct cycle, light water boiling reactor using pressure tube construction. Ready access is therefore possible to the fuel with consequent flexibility in fuel management. Additional moderation is provided by heavy water which operates at atmospheric pressure so that leakage problems are negligible. A 100 MW(e) reactor designed to prove full size fuel and pressure tube units appropriate to larger sized reactors of 600 MW(e) and above has successfully operated at Atomic Energy Establishment Winfrith since January 1968. The operating and maintenance experience is described, together with an analysis of component performance and a summary of the materials monitoring program. Examples are presented to show how the operational experience has led to modifications of the Winfrith reactor which will be relevant to the design of the later larger plants. Particular reference is made to maintenance work on active components. A brief description is given of the removal of six experimental pressure tubes and their replacement by units of standard material. (auth)

54133 (A/CONF.49/P-472) REVIEW OF EXPERIENCE RELEVANT TO THE OPERATION OF COMMERCIAL FAST REACTORS. Mummery, P. W.; Barclay, F. J.; Evans, A. D. (United Kingdom Atomic Energy Authority, Dounreay (Scotland). Reactor Group). Jun 1971. 12p. (CONF-710901-211). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Reliability, availability, maintainability and ease of control are the most important aspects to be considered in any assessment of the operational viability of commercial fast reactor (C.F.R.) power stations. From studies of operating experience on nuclear and conventional power stations within the U.K. and the rest of the world it is possible to establish the factors which have most relevance to performance under these general headings and the more important factors are identified. These include the periodic and relatively prolonged outages for plant overhaul and inspections; the significance of off-load charge/discharge arrangements on nuclear stations; the ability to remove and replace plant items and the reliability of key items; and the likely level of spurious trips. Experience from operation of the Dounreay Fast Reactor and from extensive component development rigs has been used to make detailed assessments of the likely operational performance of the 250 MW(e) Prototype Fast Reactor (P.F.R.). This has established the influence of the performance of such key features as the primary and secondary liquid metal pumps and the steam generators and the advantages of the ability to continue operation with some of these units isolated. The reliability and speed of operation of the off-load fuel handling equipment has been assessed including the influence of fuel performance particularly in the context of continued operation following fuel failures. From these assessments for P.F.R. some general conclusions on the operational performance of C.F.R. stations will be drawn. The maintenance implications arising from the use of liquid metal coolant are considered against the background of the very considerable experience available in the U.K. For removable plant items it has shown that no major problems should arise and for fixed components, particularly within the primary circuit, the view is put forward that fast reactor power station designs should permit good access for repair of major faults. 8 references. 54134 (A/CONF.49/P-497) OPTIMISATION OF FUEL CYCLES AND THE INFLUENCE OF ECONOMIC GROUND RULES. Dickinson, N.; Rutherford, R.; Scott, J. (Nuclear Power Group Ltd., Knutsford (England)). May 1971. 11p. (CONF-710901-292). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The ground rules which affect the choice of uranium fuel cycles are discussed under three headings: financial, fissile material costs, and system conditions. Typical examples are given. Detailed descriptions of fuel cycles for the Steam Generating Heavy Water Reactor (S.G.H.W.R.), the Mk II Gas Cooled Reactor (A.G.R.) and the Mk III Gas Cooled Reactor (H.T.R.) are given and attention is drawn to the way in which both reactor features and economic rules introduce differences in fuel cycles. Examples, for on-load refuelling, are the just-critical cycle for the Mk II G.C.R. which is not economic for Mk III G.C.R.; for off-load refuelling, the S.G.H.W.R. has channel access suited to frequent refuelling and has a liquid moderator, permitting the use of soluble poisons for the control of reactivity variations during burnup. The reasons for the choice of on-load cycles and the features of off-load cycles are discussed. A simplified model of the fuel cycle is used to show the effect of variations in economic ground rules on fuel cycle costs. Important examples are in the increased importance of the early phases of the fuel cycle if the amortization period is short; the effect of load factor, uranium and fabrication costs on the incentive to delay the onset of refuelling and the influence of the credit given for plutonium. A breakdown of the costs is used to explain how, using the combination of ground rules appropriate to a particular environment, the optimum cycle can be selected for each system. The adjustments to the fuel cycle, which are necessary as a result of uncertainties in nuclear calculations, are discussed in the light of the fuel and reactor performance guarantees required by a utility. 54135 (A/CONF.49/P–709) EFFICIENT UTILIZATION OF FUEL IN NUCLEAR FAST POWER REACTORS. Leipunskii, A. I.; Orlov, V. V.; Lytkin, V. B.; Troyanov, M. F.; (and others) (State Atomic Energy Committee, USSR). Aug 1971. 34p. (CONF-710901–460). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Fast sodium cooled power reactors play an important role almost in all long-range nuclear power development programs. Recent accurate data show, that in spite of the fact that some reactor performances have become worse, in general, fast reactors preserved their advantages over thermal reactors. Several aspects of atomic power development with fast reactors are considered. The effect of data on reactor performance and fuel cycle parameters on power plant development is discussed. 16 references. (auth)

54136 (A/CONF.49/P–750) EXPERIENCE IN FAST REACTOR OPERATION AND DESIGN IN THE USSR. Leipunskii, A. I.; Kazachkovskii, O. D.; Mitenkov, F. M.; Orlov, V. V.; (and others) (State Atomic Energy Committee, USSR). Aug 1971. 29p. (CONF-710901–462). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In the USSR, sodium-cooled fast breeder-reactors are considered as the basis of future development of the national atomic power. The BR-1, BR-2, BR-3, BR-5 and BFS experimental reactors were built for development of scientific and technical foundations and accumulation of required experience, the results thus obtained are well known. The construction of the first large 150 MW(e) nuclear power station with the BN-350 fast reactor, designed for both production of electric power and sea water desalination (120 10^3 m^3/d), is being completed now in Shevchenko. The second 600 MW(e) BN-600 reactor is under construction now as the Beloyarsk nuclear power station sixth unit. The state of construction, equipment, fabrication, tests and mounting for these nuclear power stations and BD-350 commissioning program is described. Experience of 60 MW(th) BOR-60 reactor construction and commissioning at Melekess is summarized. Characteristics and research results, attained at BFS-P critical assembly, constructed in 1969 at Obninsk for physical modeling of large fast reactors, are reported. (auth)

54137 (A/CONF.49/P–761) NUCLEAR ENERGY AND ELECTRIC POWER PROGRAMS IN THE DEVELOPING COUNTRIES. Jul 1971. 8p. (CONF-710901–447). Dep. NTIS (U. S. Sales Only).

54138 (A/CONF.49/P–822) STUDIES ON PLUTONIUM UTILIZATION IN POWER REACTORS AND SYSTEM ANALYSIS OF LONG-TERM FUEL CYCLE. Nozawa, S.; Yasukawa; S. (Japan Atomic Energy Research Inst., Tokyo); Furuhashi, A. (Tokyo Univ. (Japan)). May 1971. 12p. (CONF-710901–344). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Studies on Pu utilization in power reactors and system analysis of long-term fuel cycle are reviewed. The evaluation of nuclear data and their conversions to group constants were processed on the basis of ENDF-A and B data. Design assessments of plutonium recycling in LWRs are studied on the basis of direct substitution both in full core and in partial core. For HWR design, a computer code system ATRASS is developed and the accuracy of the system is checked against experimental data. Through the assessment works on HWR, Pu self-sustaining cycle has a merit of reducing positive void reactivity, and may attain about 15000 MWD/T fuel burnup with natural U feeding. As for HTGR, its fuel cycle cost based on low enriched U or on Th mixed with highly enriched U becomes comparable to each other, when the price of natural U and the cost of separative work rise. When LWR and FBR are installed, about 6×10^5 metric tons of natural U will be consumed before 2030 when the nuclear power generating system will become self-standing. To reduce the demand for natural U, it is effective to improve the characteristics of FBR and to introduce HWR as well as to reduce the fuel burnup of LWR after the introduction of FBR. Time delay in the re-use of fissile material has a very large effect on natural U demand, so that the suppression of it becomes very important in the expanding power generating program. The role of Pu-recycled thermal reactors is discussed with strategic evaluation of ATR and FBR in reducing U demand. Introductions of Pu-recycled thermal reactors have the effect of reducing Pu-pile-up, however these result in much more consumption of natural U. Also the effects of introducing Th loaded HWR (or HTGR) and MSBR, into the LWR-FBR system are presented. 30 references. (auth)

54139 (JUL–759–RG) STROKOOP: A PROGRAM ON LONG-TERM INVESTIGATION OF COST-OPTIMUM NUCLEAR POWER SYSTEMS. INPUT DESCRIPTION (STATUS, APRIL 1971). Voss, Alfred (Kernforschungsanlage, Juelich (West Germany). Institut fuer Reaktorentwicklung). Apr 1971. 53p. Dep. NTIS (U. S. Sales Only).

The cost-optimum capacity distribution of up to 10 different power plants is examined in a national grid under consideration of annual load growth and of various restrictions, e.g., limitation of capacity increase of fast plutonium breeders by limited availability of plutonium. The optimization is carried out for each period of time. Nuclear power plants were exclusively selected according to economic view points. The calculational model is described, and an illustration is given for input and output. (auth)

54140 PRESENT WORTH EVALUATIONS AS AN AID TO NUCLEAR POWER DECISIONS. Searby, P. J. (United Kingdom Atomic Energy Authority, London). Atom (London); No. 178, 185-98(Aug 1971).

Nuclear power is considered as a classic case for investment appraisal, contrasting it with the conventional alternative power sources, and for discounted cash flow analysis. The evaluation of the investment project over time is particularly applicable to the electricity industry as the stations operate over long periods (up to 40 years or more) and have a more or less guaranteed market. The complication of assessment by the diverse nature of cash flows, resulting from the different sources of generation, is discussed in detail and the most reliable methods of assessing a project's worth considered. The development programs and importance of time scale are discussed and explanation of the discounted cash flow system, with reference to differences in growth rate, operating requirements and availability assumptions, given. R and D assessment is also considered. The usual assumption that risk can be accounted for by incorporating it into the discount rate is challenged generally and further questioned with reference to the 1969 Government decision to increase the test rate of discount from 8 to 10%. (UK)

A number of fuel pin irradiations were carried out to obtain information about the mechanisms and consequences of pin failures in case of a disturbance in the sodium cooling. In addition experiments were performed to investigate the mode of sodium boiling. Instrumentation was developed for sodium expulsion experiments. The experiments are considered to belong to the class of minor accidents which, if undetected, may hypothetically lead to a major accident by which part of the core will be vaporized. To evaluate this kind of accident, knowledge of the behavior of aerosols in closed systems is required. Investigations on this behavior were carried out at Petten. Different materials were dispersed by the exploding wire technique. The aerosol formation as well as the decay of concentration were studied. 15 references. (auth)

Chalk River Nuclear Labs.); Boyd, F. C. (Atomic Energy Control Board, Ottawa (Ontario)). May 1971. 13p. (CONF-710901-169). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

For siting and safety of nuclear plants, Canadian authorities base their judgments on upper limits set for (1) radiation exposures in routine and accident situations and (2) plant failure rates and non-availability for safety systems. These factors are given special emphasis in Canada, but approval also requires that the barriers to fission-product release be protected by design margins and safety devices. Component quality is specified in designing a system for a particular level of availability. It is embodied in procurement specifications and checked before installation. However, the attainment of the level of availability must be demonstrated by periodic in-service tests. Severe accidents are postulated, including the simultaneous failure of a process system and a safety system (a "double accident"). Under such conditions, safety devices must limit fuel failures and the shut-down capability keep radiation exposures within the set limits. A description of the environment, including population distribution, plays its usual role in studies leading to site approval, but Canada is now seeking to define a standard site in terms of a statistical diffusion parameter. 15 references. 54144 (A/CONF.49/P-290) UNDERGROUND SITING OF NUCLEAR PLANTS IN NORWAY. Jamne, E. (Institutt for Atomenergi, Kjeller (Norway)). May 1971. 18p. (CONF-710901-262). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A broad program in connection with the siting of nuclear power plants underground is being undertaken in Norway. Results so far show that it is technically feasible to site large commercial nuclear power plants in rock caves. The benefits that can be derived from this method are listed. Economic assessments indicate that only a marginal cost penalty is associated with this method of siting compared to standard siting. Considerable practical experience on various problems in connection with underground construction of nuclear power stations has been accumulated in Norway. Thus the 25 MW(t) power test reactor in the city of Halden, the HBWR, is using rock as primary containment and has been in operation since 1959. The majority of new hydro electric power plants in Norway are also located in rock caves. The research and development program, now underway, aims at an improved understanding of the ability of different kinds of rock to retain fission products, identification of problems connected with the possible contamination of ground water, and the civil engineering limitations in constructing large caverns in different rock structures. Based on the results of this program, further technical and economical assessment of underground nuclear power plant siting will be made with a view to take full advantage of the added safety offered by this method of siting. 2 references. 54145 (A/CONF.49/P-364) REACTOR SAFETY IN THE FEDERAL REPUBLIC OF GERMANY. Birkhofer, A.; Kellermann, O.; Tscherner, M.; (and others). Apr 1971. 16p. (CONF-710901-124). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Licensing practices in the Federal Republic are most advanced for light water reactors. Safeguards primarily are for the control of basic accidents. For their definition, reliability considerations play an important part. Advantages and limits of the basic accident and the probability concept are discussed and explained by some examples. The permissible maximum risk for the individual person is discussed and compared to the actual exposure at certain incidents. Licensing of light water reactors has been standardized to a great extent and has led to safety criteria. Many of them apply to components of the pressure system. Other items are the design and fabrication of the containment interior, the redundancy and diversity of the emergency cooling system, the design and testing of the containment and penetrations, the internal ventilation, the post accident instrumentation, the pressure suppression system etc. For the high temperature reactor and the fast reactor the criteria are still under development. The requirements for repeated inspections and tests of the plant are explained. Actual incidents of relevance to safety are described. 10 references. (auth)

54146 (A/CONF.49/P-365) SAFETY OF GERMAN DESIGNED LIGHT WATER-REACTORS. Braun, W. (Siemens A. G., Erlangen (West Germany)); Traube, K. (Allgemeine Elektricitaets-Gesellschaft, AEG-Telefunken, Frankfurt am Main (West Germany)). Apr 1971. 20p. (CONF-710901-125). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Design principles and special quality standards of German PWRs and BWRs under construction are reported by which, compared to international practice, the safety against a rupture of the primary coolant system is increased. Further, some specialties of containment design and emergency cooling systems are presented. The efficiency of gaseous and liquid waste-systems is demonstrated by the release rates experienced with operating German light water reactor-plants. Finally, a survey is given of the aims of programs on reactor safety. (auth)

54147 (A/CONF.49/P-475) DESIGN FOR SAFETY OF GAS COOLED REACTORS. Kirk, J. (British Nuclear Design and Construction Ltd. [Whetstone (England)]); Taylor, R. S. (Taylor Woodrow Construction Ltd., Southall (England)). May 1971. 12p. (CONF-710901-148). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The important safety characteristics of the Mk II Gas Cooled Reactors (A.G.R.s) and Mk III Gas Cooled Reactors (H.T.R.s) are described with particular reference to the safety margins inherent in the canning materials and in the large thermal capacities of the graphite moderators. A few typical fault transients are presented to illustrate these properties. The operating Mk I Gas Cooled Reactors (Magnox) have given confidence in the predictions of core physics and fault transient models as accurate design tools for gas cooled reactors. The reactor protection and essential cooling systems are typical of gas cooled reactors requiring high reliability. The design, construction and testing of these systems for the Hartlepool Mk II G.C.R. station are described. The use of the probability approach to safety is discussed as a useful design tool for synthesizing complex systems. It is demonstrated that reliability assessments of such systems are essential to achieve reliabilities which are appropriate to the consequences of their failure and to give consistency of design between systems. The way of choosing the number of guard lines and trip parameters for reactor protection using a reliability assessment is described. Similarly, the number of pumps, valves and pipework sections for one of the essential cooling water systems, described above, is determined by specifying a target failure rate for the total system. The probability approach is of limited value in dealing with the design of mechanical structures. While the required reliability of structures whose failure could be catastrophic can be determined from a probability criterion, actual failure rates are difficult to substantiate because of lack of relevant statistical data. Instead, agreement between designers and safety assessors is essential to arrive at an acceptable design by applying sound engineering principles, model testing, redundancy of components, monitoring for faults and periodic inspection. An illustration of these principles is given by reference to the design, construction and testing of the prestressed concrete pressure vessel. 3 references. (auth)

54148 (A/CONF.49/P-476) DESIGN OF NUCLEAR PLANT WITH INTEGRAL COOLANT CIRCUITS AS RELATED TO THE MAXIMUM CREDIBLE ACCIDENT APPROACH. Coxon, T. (Nuclear Power Group Ltd., Knutsford (England)). Jun 1971. 14p. (CONF-710901-285). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In general throughout the world, the current safety criteria with regard to hazards to the public are based on defined limits to these hazards. By definition therefore, most designs are assessed in relation to a maximum credible accident (M.C.A.) type of approach. The engineering philosophies and data which lead to the design of plant features which then quantify the M.C.A. approach against limiting criteria are discussed. Faults are considered in two categories: those which can be considered highly improbable or incredible, due to basic design provisions and aims, and those remaining, which can be considered credible. In these arguments, the aspects of reliability of plant items and the probability of fault occurrences are considered. The logical development of potential accident sequences is explored and utilized in the analysis taking into account that credible occurrences could happen at any time. Thus, the implications of the M.C.A. approach are illustrated and the necessary engineered features of the design are described. In summary, the integral design concept as defined, can be engineered to meet the various interpretations and definitions of the M.C.A. criteria which exist throughout the world. (auth)

54149 (A/CONF.49/P–477) REACTOR SAFETY PHILOSOPHY AND EXPERIMENTAL VERIFICATION. Farmer, F. R.; Gilby, E. V. (United Kingdom Atomic Energy Authority, Risley (England). Authority Health and Safety Branch). May 1971. 14p. (CONF-710901–286). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

All reactors are provided with equipment to prevent dangerous situations arising or to modify the potential consequences. For such measures to be effective it must be possible to predict the behavior of the reactor under many conditions and to know whether the equipment supplied has the capability of performing adequately and reliably. On the one hand this requires the systematic use of experience relating to the performance of components and equipment and on the other hand a co-ordinated research and development program to give advanced knowledge in heat transfer, fluid flow, nucleonics, fracture mechanics etc. Ideally the synthesis of safety by design and the analysis by experiment are finally confirmed by some measure of demonstration on the completed reactor. Some examples are described. The first example is concerned with the margins to dryout in the Steam Generating Heavy Water Reactor in the event of flow failure, channel blockage or maldistribution of channel heating. Initial out-of-pile experiments led to confirmatory in-pile dry-out experiments on an actual fuel assembly. This confirmed the substantial margin of safety and showed that dry-out was a more stable and reversible process than might have been expected. The second example is concerned with the possibility of can rupture in a Mk II Gas Cooled Reactor (A.G.R.) following a rapid accidental loss of pressure. In-pile measurements on the rate of rise of can temperature following a slower planned depressurization were combined with out-of-pile observations on the statistical rate of failure of over-heated irradiated cartridges. Together, these provided a convincing picture of the probable result of an actual depressurization on a highly irradiated fuel charge. The third example is concerned with the kinetic behavior of the Prototype Fast Reactor (P.F.R.) which is governed largely by the magnitudes of various reactivity coefficients such as those due to doppler effects and sodium voiding. Experiments in the zero energy fast reactor ZEBRA have reduced the uncertainties in the coefficients and the results will finally be confirmed by experiments during the commissioning of P.F.R. 11 references. 54150 (A/CONF.49/P–671) DISCUSSION OF NUCLEAR PLANT SAFETY WITH REFERENCE TO OTHER HAZARDS EXPERIENCED BY THE COMMUNITY. Tattersall, J. O.; Simpson, D. M.; Reynolds, R. A. (Atomic Energy Board, Pelindaba, Pretoria (South Africa)). May 1971. 14p. (CONF-710901–317). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Nuclear installation safety assessment and the comparison of risk due to the pressure of the installation with the existing hazards facing society are discussed. Reference is made to the continuous trend, particularly noticeable in the evolving technologies such as the aerospace and nuclear industries, of more positive and quantitative evaluation at the design stage. Noting that a probability approach to reactor safety is being actively studied by other workers in the field, the need to define a relationship between the magnitude of an activity release and the probability of the event is examined. Methods for achieving this by consideration of the reactor hazard and the frequency of other hazards normally tolerated by the community are discussed. The problem of detailed evaluation of the reactor design to ensure that it conforms to the limits so established is also mentioned. Recognizing that public acceptance of hazards is continuously changing, the limitations of applying standards accepted in the past to the risks that may arise in the future are already evident. Some mention is made of attempts to overcome this difficulty by consideration of the factors involved in the process whereby society establishes a tolerance level. (auth)

54151 (A/CONF.49/P–672) EARTHQUAKE PROTECTION FOR NUCLEAR REACTORS. Hentschel, G.; Novak, W. (Brown, Boveri and Co., Ltd., Baden (Switzerland)); Orth, F. (Brown, Boveri und CIE A. G., Mannheim (West Germany)). May 1971. 23p. (CONF-710901–318). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design features of a rocking support for nuclear power plant structures are described. Application of this support concept to an earthquake resistant plant with a gas cooled high temperature reactor is discussed. (H.D.R.)

54152 (BMI–1915) MIRA: METHODS FOR IODINE-REMOVAL ANALYSIS IN REACTOR CONTAINMENT SYSTEMS. Ritzman, Robert L. (Battelle Columbus Labs., Ohio). Aug 1971. Contract W-7405-eng-92. 59p. Dep. NTIS.

A computerized method for analyzing the removal of fission-product iodine from containment-system atmospheres under reactor accident conditions is described in detail. The method considers the simultaneous removal by natural deposition on surfaces or absorption in water, by engineered spray system operations, by flow through filters, and via leakage from the containment system. In addition, the simultaneous behavior of three iodine forms is modeled; specifically, elemental iodine, methyl iodide, and particulate iodine. The computer program is composed of two versions; one which is applicable to a conventional PWR dry containment system, and the other which is applicable to a BWR pool pressure-suppression-type containment system. Both versions are designed to accept containment thermal transient data generated by an independent heat-transfer analysis code. The programming logic is also designed to facilitate subsequent additions or modifications to the analytical models which presently describe the problem. Sample input and output for each version of the program are provided. 23 references. (auth)

54153 (BNWL–1587) REMOVAL OF AIRBORNE FISSION PRODUCTS BY RECIRCULATING FILTER SYSTEMS IN THE CONTAINMENT SYSTEMS EXPERIMENT. McCormack, J. D.; Hilliard, R. K.; Postma, A. K. (Battelle Pacific Northwest Labs., Richland, Wash.). Jun 1971. Contract AT(45-1)-1830. 128p. Dep. NTIS.

Five large-scale demonstration tests were carried out in the 26,500 cubic foot Containment Systems Experiment vessel, using an internal recirculating filter loop to remove airborne fission product simulants. Loop components were nominal 2 ft by 2 ft, commercially available units including a heat exchanger, demister, roughing filter, high efficiency particulate filter, and impregnated charcoal adsorbers. Flow through the loop was either 1000 or 1800 CFM and in four of the tests the containment atmosphere was saturated steam-air at 250°F, 48 psig. This system performed satisfactorily, removing both particulate and gaseous fission products, including methyl iodide. Elemental iodine was removed initially at a rate somewhat faster than predicted for 100% efficiency, due to wall deposition. Particles were removed with an efficiency of 100%, and methyl iodide with an efficiency of 80%. At long times, the airborne concentration of all fission products approached equilibrium levels equivalent to decontamination factors greater than 10,000. (23 references) (auth)

54154 (BNWL–1591) EFFECT OF SPRAY FLOW RATE ON WASHOUT OF GASES AND PARTICLES IN THE CONTAINMENT SYSTEMS EXPERIMENT. Hilliard, R. K.; Postma, A. K. (Battelle Pacific Northwest Labs., Richland, Wash.). Jul 1971. Contract AT(45-1)-1830. 64p. Dep. NTIS.

The results of a large-scale containment spray experiment are reported in detail. This experiment was performed in the 26,500 cubic foot Containment Systems Experiment (CSE) vessel in a steam-air environment. The spray flux was 0.3 gal/min per ft^2 which is higher than that of current PWR containment system designs. All of the fission product simulant materials were washed out very rapidly with the exception of methyl iodide. Correlation of these results with those of earlier experiments showed that the initial removal rates of elemental iodine vapor and cesium and uranium particles were nearly linear with spray flow rate over the range of conditions investigated. (18 references) (auth)

54155 (BNWL–1592) CONTAINMENT SYSTEMS EXPERIMENT FINAL PROGRAM SUMMARY. Postma, A. K.; Johnson, B. M. (Battelle Pacific Northwest Labs., Richland, Wash.). Jul 1971. Contract AT(45-1)-1830. 104p. Dep. NTIS.

A technical summary of the Containment Systems Experiment (CSE) Program is presented. The program was directed toward obtaining data in support of safety analyses on the transient response of several aspects of the reactor containment system during and following a loss of coolant accident. Emphasis was placed on the study of fission product transport and removal in the containment structure, and on fluid behavior in the reactor vessel during the blowdown event. The scale of these experiments was approximately a one fifth linear scale of a 1000 MW(e) nuclear reactor. Data was obtained on methods of detecting and measuring leakage from large containment systems; on fission product removal (following a simulated major release resulting from a loss of coolant accident) via natural deposition, spray action, and recirculation of the containment atmosphere through a cleanup sys tem; and on fluid behavior in the reactor vessel during blowdown. 23 references. 54156 (DOCKET-RESARA-3) [WESTINGHOUSE NUCLEAR STEAM SUPPLY SYSTEM]. Reference Safety Analysis Report, Revision I, Volume 1. (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.). 15 Sep 1971. 338p. Dep. NTIS.

Information required in Preliminary Safety Analysis Report for U. S. power reactors is presented under the following broad topics: reactor design characteristics; and reactor cooling system. (D.C.C.)

54157 (DOCKET-RESARA-4) [WESTINGHOUSE NUCLEAR STEAM SUPPLY SYSTEM]. Reference Safety Analysis Report, Revision I, Volume 2. (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.). 15 Sep 1971. 350p. Dep. NTIS.

Information required in Preliminary Safety Analysis Report for U. S. power reactors is presented under the following broad topics: engineered safety features; instrumentation and control; and auxiliary systems. (D.C.C.)

54158 (DOCKET-RESARA-5) [WESTINGHOUSE NUCLEAR STEAM SUPPLY SYSTEM]. Reference Safety Analysis Report, Revision I, Volume 3. (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.). 15 Sep 1971. 390p. Dep. NTIS.

Information required in Preliminary Safety Analysis Report for U. S. power reactors is presented under the following broad topics: initial tests and operations; safety analysis; quality assurance program; and quality control tests. (D.C.C.)

54159 (IN-ITR-108) MEASUREMENTS OF THE REACTION OF UO_2 WITH WATER FOR TRANSIENT ENERGY DEPOSITIONS TO 550 CAL/G OF UO_2. Olsen, C. S. (Idaho Nuclear Corp., Idaho Falls). Nov 1969. Contract AT(10-1)-1230. 33p. Dep. NTIS.

Transient tests were performed in the Capsule Driver Core on 10%-enriched UO_2, glass clad fuel rods. The primary objective of these tests was to determine the extent of the UO_2-water reaction under conditions of a rapid dispersion of molten fuel into water. The fuel rods were placed in a capsule containing water at ambient temperature and subjected to power bursts with nuclear energy depositions ranging from 330 to 550 cal/g of UO_2. The hydrogen release (cc of H_2/g of UO_2) varied from 5.32 cc/g at 330 cal/g of UO_2 to 14.32 cc/g at 550 cal/g of UO_2. The maximum hydrogen release corresponds to an oxidation product with an oxygen–uranium ratio of 2.161. 8 references. (auth)

54160 (NEDO-10349) ANALYSIS OF ANTICIPATED TRANSIENTS WITHOUT SCRAM. Michelotti, L. A. (General Electric Co., San Jose, Calif. Atomic Power Equipment Dept.). Mar 1971. 44p.

The consequences of the failure of a BWR scram protection system are evaluated. Potential design innovations to ease the severity of the consequences of the failure-to-scram are identified. (auth)

54161 (ORNL-TM-3546) PRELIMINARY EVALUATION OF AN ASSUMED CORE MELTDOWN ACCIDENT IN A 1000 MW(e) GAS-COOLED FAST BREEDER REACTOR. Holcomb, R. S. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 26p. Dep. NTIS.

The consequences of the meltdown of the core of a 1000 MW(e) gas-cooled fast breeder reactor are evaluated and methods for containing and cooling the molten core are presented. Three methods are considered: spreading the material in a thin layer and cooling from one side, collecting the material in narrow vertical passages cooled from both sides, and collecting the material as a pool in the reactor vessel with cooling on all surfaces. The third method appears to be the most attractive from a cost and structural standpoint. It is estimated that if the vessel liner cooling water capacity were increased to 16,000 gpm the molten material could be contained within the vessel liner. If the vessel liner were insulated with a 6-in. thick layer of graphite on the floor and 3 ft of the sidewall, the required cooling capacity would be 11,000 gpm. (7 references) (auth)

54162 (TID-25603(Suppl.)) PUERTO RICO ENERGY CENTER STUDY. SITE SELECTION SUPPLEMENT. (Burns and Roe, Inc., New York. Dow Chemical Co., Midland, Mich.). Jul 1970. 157p. Dep. NTIS.

Preliminary site requirements were compiled and tentative layouts were prepared for each proposed site. The site requirements were updated in keeping with developments in the industrial and agricultural studies. Site layouts were made. Descriptions of each site were prepared covering geology, seismology, hydrology, agronomy, demography, meteorology, transport, finance and socio-economics. Estimates of the relative capital cost of the sites were prepared including cost of acquiring the land and buildings, levees for flood protection, land filling and compaction, pump stations where required, harbor dredging, electrical transmission lines, power plant foundations and circulating water system. Operating costs were capitalized for pumping stations and for the cost of industrial water. The total relative estimated costs for capital and capitalized operating costs indicated the Aguirre area was lower in cost than Guayanilla and the Arecibo site exceeded both by a wide margin. On the basis of the general undesirability as well as costs, Arecibo was dropped from further consideration. Qualitative factors were compared for Guayanilla and Aguirre including land availability, meteorological safety, conservation aspects and agronomical considerations. (auth)

54163 (WCAP-7750) COMPREHENSIVE SPACE-TIME DEPENDENT ANALYSIS OF LOSS-OF-COOLANT (SATAN-4 DIGITAL CODE). Bordelon, Frank M. (Westinghouse Electric Corp., Pittsburgh, Pa. PWR Systems Div.). Aug 1971. 77p.

A comprehensive model of the reactor coolant system is presented. It is able to treat all phases of the loss-of-coolant accident and it could also be applied to the simulation of other transients. Fluid conditions may be subcooled, two-phase or superheat in any part or all of the system. Flow reversals are allowed at any location. Feedback effects are incorporated in the analysis. Pump coast down and cavitation, core and steam generator heat flow including DNB, reactivity insertion resulting from voids, and doppler effects are included. The geometrical model is variable and hence able to simulate non-standard reactor systems as well as various experimental apparatus. The model has been applied to available experimental data and the agreement is satisfactory. The applicability of the analysis would be further extended by the addition of steam separation calculations. 22 references. (auth)

54164 POWER GENERATION AND THE ENVIRONMENT. Eliassen, Rolf (Stanford Univ., Calif. Metcalf and Eddy, Inc., Palo Alto, Calif.). Proc. Nat. Acad. Sci. U. S. A.; 68: No. 8, 1938-43(Aug 1971).

Environmental factors will play an ever-increasing role in planning for the location and design of future power generating plants. This planning must include all phases of furnishing electric power, such as the exploration for and mining of fossil and nuclear fuels; the transportation and storage of these fuels; power plant siting; the disposal of solid wastes from power plants; and the transmission and distribution of electric power. Systems analysis will be of assistance in realistic decision-making and planning. Simulation models can be used to evaluate social, economic, and technological inputs, in order to reach engineering decisions that will assure meeting reasonable environmental standards. Management must look beyond the metropolitan areas presently served by specific electric utilities and must adopt new concepts of both urban and regional planning that will help meet the electric power requirements in the decades ahead and minimize adverse effects on the air, water, and land environment. 7 references. (auth)

54165 SAFETY OF NUCLEAR REACTORS. Palladino, Nunzio J. (Pennsylvania State Univ., College Park). pp VI.1-20 of Nuclear Power and the Environment. Madison, Wis.; Univ. of Wisconsin (1970).

From Conference on nuclear power and the environment; Madison, Wis. (3 Apr 1970). See CONF-700415.

Basic concepts of reactor safety are discussed, and engineered safeguards used to limit the effects of potential accidents are described. The licensing and regulatory process for nuclear power plants in the U. S. is briefly examined. (H.D.R.)

54166 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 4. REACTOR PLANT STRUCTURES AND CONTAINMENT. PART K. SEISMIC RESPONSE ANALYSIS OF NUCLEAR POWER PLANT SYSTEMS. Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 238p. (CONF-710903-(Vol.4)(Pt.K)).

Included are 13 papers on methods for analysis of soil-structure interactions and the response of nuclear power plant structures to seismic motion. (H.D.R.)

54167 STUDIES ON SODIUM BOILING ACCIDENTS IN A LARGE FAST BREEDER REACTOR. II. RADIAL PROPAGATION OF SODIUM BOILING BY REACTIVITY EFFECT. Nagashima, Kunio; Tezuka, Masaji (Nippon Atomic Industry Group Co., Ltd., Kawasaki, Japan). J. Nucl. Sci. Technol. (Tokyo); 8: No. 7, 382-93(Jul 1971).

A computer code BORE was developed, with which analyses were performed on channel plugging accidents that would occur on a 1,500 MW(e) LMFBR. The BORE code calculated the dynamic characteristics of coolant boiling and fuel failure propagation radially in the core, and the requirements of core instrumentation systems were also analyzed. The results show that coolant boiling and/or fuel failure in a channel plugging accident are propagated only to a limited number of adjacent channels when sensors are installed that detect anomalies in channel flow, channel outlet temperature, boiling or reactivity. It is also concluded that the coolant void effect is not serious from the standpoint of safety when the time required for boiling propagation to adjacent channels can be made longer than 0.15 sec. 8 references. (auth)

54168 STUDIES ON THE LOSS-OF-COOLANT ACCIDENT IN WATER-COOLED NUCLEAR POWER REACTORS. 3. Nishiwaki, Ichiro; Shimizu, Sadaaki; Inami, Kuniaki; Kasuga, Yasuhiro (Electrotechnical Lab., Tokyo). Denshi Gijutsu Sogo Kenkyusho Iho; 34: No. 7, 540-71(Jul 1970). (In Japanese).

The blowdown test facility was used to develop information on core-heatup phenomena associated with a loss-of-coolant accident in water-cooled nuclear power reactors. The research program consists of blowdown and core-heatup experiments during the loss-of-coolant accidents. The entire primary coolant system includes both BWR and PWR loops. Instrumentation is provided to measure the transient thermal behavior of the electrically heated reactor core. Parametric blowdown tests were performed to evaluate the influence of the break size and the break location on the transient core-heatup phenomena during the blowdown. The major experimental results are stated as follows: (1) Top blowdown experiments show that the time required for uncovering the reactor core is shorter for large break as compared with that for small break, and that the clad temperature after uncovering is relatively high for larger break. (2) Bottom blowdown experiments indicate the reverse situations as compared with the top blowdown ones, namely, the time required for uncovering is rather shorter and the clad temperature is relatively high in the case of smaller break. These results are mainly attributed to the phase-separation phenomena in the reactor vessel, that is, the separated steam during the bottom blowdown is likely to be accumulated in the top portion of the core and this possibly makes the faster uncovering of the core as compared with that for the blowdown. Simulated double-ended blowdown experiments show that the transient thermal response of the reactor core for the double-ended blowdown is similar to that for the top blowdown. This result indicates that heat removal from the reactor core during the double-ended blowdown is mainly predominated by the behavior of the coolant discharged from the top break located close to the outlet nozzle of the reactor vessel. Power Conversion Systems

54169 (A/CONF.49/P-582) POWER INCREASE WHICH CAN BE ACHIEVED WITH CERTAIN REACTORS BY HEAT PUMPING AND ACCUMULATION. Pacault, P.; Mary, F.; Gaussens, J. (Societe Babcock-Atlantique, Paris (France)). Apr 1971. 18p. (In French). (CONF-710901-246). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The process allows the primary circuit of a P.W.R. to be maintained at full rating, while during the whole full load time and without any appreciable loss of efficiency, it generates about 1.8 times more power than at low load time. To do this, a fraction of the steam generated a low-load time passes through a compressor coupled to the turbines. It is then desuperheated, condensed and subcooled in a heat exchanger G, until it reaches the temperature of the feedwater, with which it is mixed after throttling. The exchanger G is used to heat a medium at atmospheric pressure, divided into two loops. The first closed loop passes through an exchanger S, designed to dry and superheat the exhaust steam from the H.P. turbine. The second closed loop passes through an accumulator, composed of stacked elements specially arranged for storing a specific part of the heat content of the medium. At low-load time, the power of the generator is thus reduced because of the smaller steam flow through the turbine and the need to drive the compressor. At full load time, the compressor and exchanger G are stopped. The circuit of the medium is reversed in the accumulator, and coils through the single exchanger S which in this way receives the accumulated heat. The available electric power is greatly increased, as the turbine receives the full steam flow, and the L.P. steam is dried and reheated by the accumulator and heat exchanger S. Furthermore, in emergency conditions, the heat reserve provided by the accumulator allows the operation of the main auxiliary equipments by steam turbines. (auth)

54170 NUCLEAR POWER STATIONS. George, Brian Victor; Appleby, John Rand (to British Nuclear Design Construction Ltd.). British Patent 1,241,811. 4 Aug 1971. Filed 14 Mar 1968.

Reference is made to nuclear power stations of the type employing a fluid cooled reactor supplying heat to a unit for generating steam from pressurized water for use with a steam turbine. During required power output changes with such a system changes may occur in the temperature of the steam at admission to the turbine nozzles, and with turbines utilizing very high pressure and temperature steam large changes of steam temperature downstream of the throttle valves will, if occurring rapidly, give rise to significant thermal gradients, and differential thermal expansion, in the structure comprising the inlet section of the turbine, causing strains and stresses in the affected structures, possibly leading to failure. In the system described provision is made to vary the temperature of the reactor coolant circuit and/or the steam pressure upstream of the turbine throttle valve, in response to power demand signals, in such a manner that the steam temperature downstream of the throttle valve is maintained within acceptable limits. Where canned fuel elements are employed, this temperature is adjusted so as to maintain the differential strain cycles that would normally be induced in the fuel elements as a result of changes in power output, also within acceptable limits. The application of this system to the operation of a typical nuclear power station employing an advanced gas-cooled reactor is described in detail. (UK)

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Apart from fuel salt solutions or molten salts, aqueous fuel suspensions based on the ^{233}U-Th cycle could be used in homogeneous liquid fuel reactors. The possibilities and limitations of the aqueous suspensions have been studied extensively for this purpose. On the basis of the results of these studies a 1 MW(t) facility has been constructed to explore the dynamic behavior of a reactor system operating with different types of fuel suspensions. The facility is described with its experimental possibilities and its program. Several specific features and technical and fundamental limitations of the application of different suspensions are discussed on the basis of existing knowledge and experience with non-critical loops. (auth)

54175 (A/CONF.49/P-280) UTILIZATION OF THE MATERIAL TESTING THERMAL REACTOR BR2 FOR FAST NEUTRON IRRADIATIONS. Debrue, J.; DeRaedt, Ch.; Lenders, H.; (and others) (Centre d'Etude de l'Energie Nucleaire, Mol (Belgium)). May 1971. 23p. (CONF-710901-104). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The high flux thermal reactor BR2 is utilized for the irradiation of fast reactor fuel. The rigs devised for the irradiation of fast reactor fuel pins are described. The irradiations are performed under cadmium screens either in capsules with stagnant NaK or in loops with forced sodium circulation. The irradiation conditions obtained are described and compared to those existing in the fast reactors as to the fission density, the radial power depression in the pins, the neutron spectrum, the burnup rate in the irradiated fuel, and the damage suffered by the cladding material. Modifications which can easily be brought to the BR2 reactor are evaluated (optimized fuel elements, power increase, loop concept) with a view to creating such new irradiation conditions that the ratio of the damage suffered by the cladding material to the burn-up rate of the irradiated fuel be nearer to that obtained in the fast reactors. 18 references. 54176 (A/CONF.49/P-326) ROLE OF A RESEARCH REACTOR IN SCIENCE TECHNOLOGY AND EDUCATION IN HUNGARY. Szabo, F.; Csom, Gy.; Oerdoegh, M.; Szabo, E.; (and others) (Central Research Inst. for Physics, Budapest). Jun 1971. 16p. (CONF-710901-274). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The range of influences exerted by the Institute's research reactor on the development of basic research in the Institute is discussed. The provision of a research reactor was instrumental in initiating research in the fields of nuclear chemistry and reactor physics and hastened the development of the nuclear physics and electronics research. The devices and methods originally developed in the fields of reactor physics and nuclear physics coupled with the nuclear chemical know-how were rapidly brought into an applied research program and were successfully adapted into the production of semi-conductors, steel-making and the refining of nonferrous metals. The financing of the different stages of this program is also given. The experiences gained at the Institute's research reactor in helping the design of a reactor construction suitable for the intended educational and research program are reviewed. Since it must fulfill the needs of several universities, the characteristic feature of this reactor is that it has to support a complex educational program as well as ensure wider research possibilities. 8 references. 54179 (A/CONF.49/P-485) UTILISATION OF BRITISH UNIVERSITY RESEARCH REACTORS. Duncton, P. J. (Fairey Co. Ltd., Heston (England)); Bridge, H. (Liverpool Univ. (England). Manchester Univ. (England)); Edwards, J.; (and others) (Royal Naval Coll., Greenwich (England)). May 1971. 11p. (CONF-710901-150). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Relevant British experience relating to the employment of university research reactors and sub-critical assemblies in the education of nuclear scientists and technologists, in the training of reactor operators and for fundamental pure and applied research in this field is reviewed. The facilities available in a number of British universities and the uses which have been made of them for undergraduate training and for postgraduate and postdoctoral research are described. Reference is made to the possibilities of work in collaboration with industrial, medical and other nuclear establishments and laboratories. Statistics are given not only of the size of the various departments and of the throughput of students, but also of the division of reactor operating time between the various types of work and classes of user. These latter have included physicists, engineers, chemists, metallurgists, geologists and several classes of biologists. Increasing attention is being given to the possibility of providing an activation analysis service and of the local production and use of short-lived radioisotopes. Concise details are given of the nature and results of a typical range of research projects which have been carried out in the university laboratories. 48 references. (auth)

54180 (A/CONF.49/P-486) USE OF RESEARCH REACTORS IN THE U.K. FOR NEUTRON BEAM STUDIES OF CONDENSED MATTER. Low, G. G. (Atomic Energy Research Establishment, Harwell (England)); Mitchell, E. W. J. (Reading Univ. (England). J. J. Thomson Physical Lab.). May 1971. 8p. (CONF-710901-151). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Neutron beam research is carried out at the U.K. Atomic Energy Authority Research Reactors at Harwell and Aldermaston. The neutron beam experiments presently mounted at U.K. reactors are: DIDO (Harwell) with two twin rotor time-of-flight spectrometers, one with a liquid hydrogen source, a 3-axis spectrometer and six 2-axis spectrometers for diffraction measurements; PLUTO (Harwell) with a twin rotor time-of-flight spectrometer, a 3-axis spectrometer, two polarized neutron spectrometers, three spectrometers for measurements of diffuse scattering (from, for example, defects) and three 2-axis spectrometers for diffraction; and HERALD (Aldermaston) with two instruments for defect studies, one with a liquid hydrogen-deuterium source, two 2-axis spectrometers for diffraction and two time-of-flight instruments, one also on the above cold source. A number of examples illustrating the range of recent experiments are given: among these are measurements of defect scattering at long wavelengths and studies of molecular energy levels by inelastic neutron scattering. 30 references. 54181 (A/CONF.49/P-559) ROLE OF RESEARCH REACTORS IN THE ARGENTINE NUCLEAR PROGRAM. Cosentino, Jorge Oscar (Comision Nacional de Energia Atomica, Buenos Aires (Argentina). Gerencia de Energia). May 1971. 8p. (In Spanish). (CONF-710901-490). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A description of the research reactors existing in Argentina is given. The program of utilization of these reactors is analyzed together with its relation to the Argentine nuclear program. The connection with the Argentine program for power reactors is particularly emphasized. (auth)

54182 (A/CONF.49/P-580) TESTS ON NUCLEAR FUEL SAFETY CARRIED OUT ON THE PEGASE REACTOR. Lurie, R.; Housseaux, O. (Commissariat a l'Energie Atomique, Cadarache (France). Centre d'Etudes Nucleaires); Souch, A. E. (Central Electricity Generating Board, Berkeley (England). Berkeley Nuclear Labs.); Dodds, R.; (and others) (United Kingdom Atomic Energy Authority, Chapelcross Works). Jun 1971. 15p. (CONF-710901-399). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The safety experiments carried out in the nuclear fuel testing pile PEGASE are described. They are divided into two categories: fuel resistance tests under abnormal conditions, to define the limits of use of this fuel and consequently to increase the yield of power piles without prejudice to their safety; and tests aimed at improving the conditions of detection of events liable to compromise seriously the working condition of a power reactor. (auth)

54183 (A/CONF.49/P-591) USE OF SILOE REACTOR IN PROMOTING NUCLEAR TECHNIQUES CO-OPERATION WITH OTHER COUNTRIES. Merchie, F.; Rossillon, F. (Commissariat a l'Energie Atomique, Grenoble (France). Centre d'Etudes Nucleaires). Apr 1971. 15p. (In French). (CONF-710901-247). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The SILOE reactor is used for both fundamental and applied research and has a major part to play in the development of nuclear techniques. Ever higher performances are being sought to meet the needs of experimenters whose work is increasing in complexity and requires increasingly high thermal or fast flux intensities. The variety of research and experimental programs carried out in the neutron, hydraulic and thermal fields has led to improved familiarity with this type of reactor and enabled relatively high power densities to be obtained. Parallel development of increasingly sophisticated fuel elements is the outcome of research into new production techniques. A complete range of advanced experimental systems has been developed around this reactor. Some of their applications are as follows: resonance cavity determination of changes in the length or diameter of metallurgical specimens under conditions of creep, or of uranium or plutonium-based fuel samples, with parallel analysis of the relevant fission products; and production of high temperatures for thermionic conversion experiments. The experiments are controlled and monitored by an on-line computer which can handle 500 measuring channels. Development of non-destructive testing techniques based on neutrography has made particularly rapid strides and valuable results have been obtained with regard to cold neutron testing of very thick steels. Work programs developed around this reactor involve successful co-operation with a number of countries, especially the developing countries, in the fields of training and development of reactors and experimental systems. 54184 (A/CONF.49/P-593) IRRADIATION FACILITIES FOR SPECIALIZED RESEARCH. Millies, P. (Commissariat a l'Energie Atomique, Grenoble (France). Centre d'Etudes Nucleaires); Saulnier, A. (Societe Industrielle de Combustible Nucleaire, Veurey (France)). Jul 1971. 19p. (CONF-710901-443). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The most advanced systems and techniques developed by the various departments of the Commissariat à l'Energie Atomique with the help of industry are described. Included are continuous equipment for monitoring of axial transverse dimensional changes of structural materials and fuels (creep, swelling, expansion, etc...); an irradiation loop at the temperature of liquid neon; a high temperature furnace using high frequency control; a high power irradiation loop utilizing circulating liquid sodium and heat pumps; a high temperature loop using helium circulation, and a gas loop for radiochemical research. Techniques include continuous monitoring of deformation (hyperfrequency); testing seals and Na level, using eddy currents; and heat barrier fabrication processes: flame spraying and casting of molten metals. (auth)

54185 (A/CONF.49/P-594) FRANCO-GERMAN HIGH-FLUX REACTOR HISTORY AND CONSTRUCTION. Chatoux, J.; Bregeon, L.; Schwartz, J. P. (Commissariat a l'Energie Atomique, Paris (France)); Reutler, H.; (and others) (Gesellschaft fuer Kernforschung m.b.H., Karlsruhe (West Germany)). Jul 1971. 18p. (CONF-710901-444). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design of the High Flux Reactor of the Franco-German Institute Max von Laue-Paul Langevin is based on a compact annular cylindrical core. It is externally moderated from one side of the heavy water in a reflector vessel, where safety rods act as a shutter between core and reflector, and from the other side, by the heavy water of the central cavity, which is large enough to allow control rod insertion. Channels are provided to extract neutrons of various grades from the reflector. The maximum available flux is 1, 5.10^{15} n/cm^2.s for a total power of 57 MW. A liquid deuterium source and a very hot graphite source characterize several channels. The same heavy water flows through the core and the reflector. The whole vessel is in a pool, allowing for reloading and disassembling. Experimental and operational areas are at different levels independently ventilated. The whole facility is enclosed in a double-walled containment, with intermediate pressurization. 6 references. (auth)

54186 (A/CONF.49/P-655) RESEARCH PROGRAM AT THE IRR-2. Bar-Or, A.; Degani, N.; Gvion, R.; Moreh, R.; (and others) (Nuclear Research Centre-Negev, Beer-Sheba, Israel). May 1971. 20p. (CONF-710901-311). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Research performed at the IRR-2 reactor is reviewed. The research includes studies of irradiated fuel elements, comparative studies of the radiosensitivity of tissue cultures to different types of radiations, isotope productions, nuclear levels via nuclear photoexcitation, and magnetic structures of various compounds via neutron diffraction. 17 references. (auth)

54187 (A/CONF.49/P-720) USE OF THE MP RESEARCH REACTOR FOR TESTING FUEL ELEMENTS AND MATERIALS FOR THE POWER REACTOR. Goncharov, V. V.; Ryazantsev, E. P.; Kruglov, A. B.; Goncharov, L. A.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 25p. (CONF-710901-482). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The problems of using the MP Materials Testing multiloop reactor for needs of atomic power industry are discussed. The means of extending the MP reactor experimental potentialities and increasing the reactor efficiency in developing testing and investigations in loops of experimental fuel assemblies, materials and the working parameters of developing nuclear power reactor primary circuits are described. The conditions are now provided in the MP reactor for simultaneous testing at ten loop facilities in 20-25 experimental channels. A new MP reactor core, some loop facilities and methods of reactor experiments in pressurized water and boiling coolant with high weight % of vapor, are described. The methods of improving conditions for testing fuel assemblies and materials in MP reactor and loop facilities are discussed. Results of testing sintered Zr alloy clad UO_2 fuel assemblies are presented. (auth)

54188 (A/CONF.49/P-732) EXPERIMENTAL REACTORS IN SPAIN. Vigon, M. A.; Montes, J.; Manas, L.; Verdaguer, F.; (and others) (Junta de Energia Nuclear, Madrid (Spain)). May 1971. 7p. (In Spanish). (CONF-710901-503). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Spain has five experimental reactors: Two swimming pool reactors JEN-1 and JEN-2, a fast reactor CORAL-1, and two Argonant-type reactors ARGOS and ARBI. In the description of the main applications of these reactors special attention will be given to those aspects whose contribution to the nuclear science and technology has been more effective. 39 references. 54189 (A/CONF.49/P-774) (IBR-2) REACTOR, REACTIVITY PULSE DEVICE DESIGN AND ITS OPTIMIZATION. Ananjev, V. D.; Blokhintsev, D. I.; Bondarenko, V. V.; Bulkin, Yu. M.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 19p. (CONF-710901-426). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The pulsed fast reactor with injector (IBR-2) which will be built at the Joint Institute for Nuclear Research (Dubna) is designed as a multipurpose unit for performing experiments in nuclear physics, solid state physics and several applied branches with the use of flight time spectrometry. The main requirement to the source of this type is to provide high neutron intensities on wide energy scale beginning from fractions of ev up to hundreds of kev with the pulse duration in the range from 1 to 100 msec. The most rational solution of this problem is to build a unit consisting of a pulsed fast reactor with high current electron accelerator-injector the target of which is in the core of the reactor. The pulsing of the reactor is provided by periodical change of the reactivity of the system achieved by transference of the movable part of the reflector regarding the core. The results of neutron and physical calculations of the reactor are given, as well as the justification for the reactor parameters from the point of view of physics, heat engineering, limitation in solidity and experimental requirements. The pulse characteristics of IBR-2 reactor for reactor and booster regime are considered. The designs of the main units of the reactor are given including the core, reactor vessel, target channel, stable and movable reflectors, moderator blocks, biological shielding. The problems connected with kinetics, control and safe work of the reactor are discussed. 6 references. (auth)

54190 (A/CONF.49/P-776) EXPERIENCE OF D.R.C. CONCERNING THE DEVELOPMENT OF A RESEARCH REACTOR IN THE TRICO NUCLEAR CENTER. Malu, Felix; Congo, R. D. Apr 1971. 10p. (In French). (CONF-710901-512). Dep. NTIS (U. S. Sales Only).

XUM

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The experience gained during the construction, operation and utilization of a research reactor in the TRICO Nuclear Centre in Democratic Republic of Congo is described. The experience gained during construction is certainly important for the daily running, operational programs, and future development. The current efforts which are made in order to transform the TRICO Nuclear Centre into a regional Centre for benefit of all African countries are presented. (auth)

54191 (A/CONF.49/P–787) THE PRR-1 AND DEVELOPMENT OF ATOMIC ENERGY IN THE PHILIPPINES. Afable, Pedro G. (Philippine Atomic Energy Commission, Manila); Ibe, Librado D. (Philippine Atomic Research Center, Manila). May 1971. 9p. (CONF-710901–329). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The Philippine Research Reactor (PRR-1) is an open pool type obtained by the Philippine Government under its Bilateral Agreement with the United States. It attained criticality in August 1963 and operated at full power of one megawatt a year later. Since the attainment of criticality, PRR-1 has been used particularly in the production of radioisotopes; studies in nuclear science and engineering; and training of the PAEC personnel, university faculty, science teachers, engineers and scientists of public and private institutions, and graduate students in nuclear science and technology. In radioisotope production mainly short- and medium-half-life isotopes are produced. These are in great demand by local medical practitioners as well as by researchers in agriculture and industry. Another PAEC activity utilizing PRR-1 is the provision of technical services to research and industrial institutions. Projects such as mercury inventory in electrolytic cells, determining clogged or leaking pipelines, and hydrographic studies of Manila Bay were made using radioisotopes produced from PRR-1 Neutron activation analysis is now an accepted method of trace elemental analysis of mineral ores. The PRR-1 also served as the principal equipment in the India-Philippines-International Atomic Energy Agency (IPA) project. This regional cooperative project in neutron spectrometry research was conducted from 1964 to 1969 with 14 participants from Indonesia, Korea, Taiwan, Thailand, and the Philippines. PAEC looks forward to the early establishment of a nuclear power plant in the country as well as the utilization of large radiation sources. Towards this end, greater utilization of PRR-1 for training nuclear power plant personnel is expected. (auth)

54192 (A/CONF.49/P–820) ADVANCED RESEARCH REACTOR USES FOR BASIC RESEARCH IN JAPAN. An, Shigehiro; Kihara, Hiroshi (Tokyo Univ. (Japan)); Kimura, Motoharu (Tohoku Univ., Sendai (Japan)); Okamura, Seizo; (and others) (Kyoto Univ. (Japan)). May 1971. 16p. (CONF-710901–342). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Nuclear Engineering Research Laboratory of Tokyo University has established the Fast Neutron Source Reactor (YAYOI) (2 kW, fast reactor), to perform research in the field of fast and intermediate neutron. YAYOI has the following original features to enhance the flexibility and the originality of research, a horizontally movable core assembly, a neutron field of fast, intermediate and thermal energy spectrum can be obtained by moving the core assembly, and pulsed and modulated neutron fields can be provided using accelerators in combination with the reactor. At present, Research Reactor Institute of Kyoto University is operating 5 MW tank type reactor (KUR). The research work using KUR is as follows: neutron physics study with various choppers, reactor physics with thermal columns, neutron diffraction study, low temperature irradiation study, activation analysis, radiochemistry, and radiation biology. Recently the preliminary works on KUR-2 of high flux reactor (thermal neutron peaking type, 30 MW) have been finished. For the fundamental core design study of the new type reactor, and for general reactor physics studies, a multi-purpose critical assembly is also in plan. The major activities to attain higher intense pulsed neutrons in Japan have been carried out through two categories of pulsed neutron sources; one is thermal pulsed reactor, and another is electron linear accelerator. This work is extended to develop fast repetitive pulsed reactor with electron LINAC as advanced neutron source. An intermediate stage, dynamic booster, proposed to serve a large variety of laboratory programs, will be developed in a high-intensity electron LINAC with Na-cooled fission multiplication assembly and rotating reflector to produce neutron bursts of 10^{15} n/cm^2 · sec in less than 10 μsec. 12 references. 54193 (A/CONF.49/P–823) STUDIES ON RADIATION EFFECTS AT JAERI. Ishihara, Takehiko; Taketani, Kiyoaki; Yatsurugi, Tatsuo; Watanabe, Katsutoshi; (and others) (Japan Atomic Energy Research Inst., Tokyo). May 1971. 19p. (CONF-710901–345). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The studies on radiation effects of reactor fuels and structural materials have been conducted by mainly utilizing the reactors JRR-2, JRR-3, and JPDR in irradiation and hot laboratories at either Tokai or Oarai site in post-irradiation examinations. Several recent research projects by JAERI for fuel element materials and also the program in JMTR are introduced. The fundamental joint research for structural materials or pressure vessel steel by both University of Tokyo and JAERI is shown. The irradiation test for fuels was conducted by using the Experimental Fuel Test Loop-2 installed in JRR-2, Fission Gas Release Loop in JRR-3, and others. Concerning the reactor materials, Magnox alloys, graphite and others were studied, and more emphasis is placed on stainless steel either for cladding of FBR fuel or for reactor pressure vessels. During the fuel development program for the JPDR-II Project (to double the JPDR's power), several test fuel assemblies were irradiated in JPDR. High-power irradiation tests of four fuel assemblies were successfully conducted at HBWR in Norway. JMTR, Japan's first full-scale material testing reactor, became critical in 1968 and has been continuously operated since 1970. It will be the prime irradiation reactor for future activities. As for the fundamental research for pressure vessel steels, the role of alloying elements in irradiation effects of iron alloys have been investigated since 1966. The materials used were zone melted Fe, pure Fe, Fe–Ni, Fe–Al and Fe–Cr. They were irradiated at JRR-2 and BR-2 in Belgium by 1 ~ 3 × 10^{19} nvt. The relation between irradiation hardening and micro-structures was discussed. The role of solute N_2 (or C) was very important and the role of alloying elements in irradiation effect was interpreted by the interaction between alloying elements and solute N_2 (or C) atoms. 23 references. (auth)

54194 (AE–427) STUDIES OF FINE STRUCTURE IN THE FLUX DISTRIBUTION DUE TO THE HETEROGENEITY IN SOME FRO CORES. Andersson, T. L.; Haeggblom, H. (Aktiebolaget Atomenergi, Studsvik (Sweden)). Jun 1971. 30p. Dep. NTIS (U. S. Sales Only).

The core of the fast critical assembly FRO is built up of a large number of small parallelepipedic pieces of various materials. Due to the core heterogeneity there is a fine structure in the spatial neutron flux distribution. This heterogeneity effect was studied by foil activation techniques in four FRO cores — three uranium cores and one plutonium core. The main interest was devoted to the fine structure in the rate distribution of the important reactions ^{235}U(n,f), ^{238}U(n,f), ^{238}U(n,γ) and ^{239}Pu(n,f). Comparison is made with calculations based on the slab-geometry program FLIS. It is concluded that a reasonably good agreement between the calculated and measured fine structure variations is obtained for the uranium reactions in the uranium cores, whereas for the plutonium core large discrepancies occur. (auth)

54195 (ANCR–1019) PBF TRAINING AND QUALIFICATION PROGRAM. (Aerojet Nuclear Co., Idaho Falls, Idaho). Jul 1971. Contract AT(10-1)-1375. 50p. Dep. NTIS.

Specific training responsibility and organizational relationships are discussed. Training and qualification outline, individual qualification prerequisites and requirements, and individual training and qualification records requirements are given. (6 references) (auth)

54196 (ANL–7757) EBR-II INSTRUMENTED-SUBASSEMBLY SYSTEM: TESTS 1 AND 2. Smaardyk, A.; Dickman, R. J.; Folkrod, J. R.; Forster, G. A.; Knox, A. E.; Poloncsik, J.; Thompson, W. M.; Walker, D. E. (Argonne National Lab., Ill.). Jul 1971. Contract W-31-109-eng-38. 143p. Dep. NTIS.

An instrumented-subassembly system for measuring operating parameters of specimen fuels, instruments, and related components in the core of EBR-II has been developed, fabricated, and operated successfully in the reactor. The fueled subassembly, which contained 23 instruments for measuring six different parameters, was irradiated for 140 days (3856 MWd) in the fifth row of the core, where it replaced a control rod. It was cooled by 700 to 900°F flowing sodium and exposed to a total flux of ~1.9 × 10^{15} n/cm^2-sec at a reactor power of 50 MW(t). The complete system consists of the subassembly, which is similar to a standard EBR-II assembly; an extension tube with an internal coupling; a terminal box through which electrical leads and tubes from the sensors are connected to readout equipment; a drive system for raising and lowering the subassembly during fuel handling; and appropriate data-recording equipment. Before the irradiation of the fueled subassembly, the operational integrity of the system was verified by tests with a nonfueled subassembly while the reactor was subcritical. (10 references) (auth)

54197 (ANL-EBR-19) PROSPECTUS: ROUTINE OPERATION OF EBR-II AT 62.5 MWt. Cushman, R. A.; Loewenstein, W. B.; Smith, R. R.; Walter, C. M. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Jul 1970. Contract W-31-109-eng-38. 85p. Dep. NTIS.

The effect of routine operation of the EBR-II at 62.5 MW(t) has been evaluated. The most important areas reviewed were: capability of existing heat-removal systems to accommodate the power increase; effects of the increase on existing irradiation experiments; and effects, if any, of the increase on nuclear safety. Temperatures of fuel, cladding, coolant, and blanket will be within the guidelines of the original safety documents. Experimental subassemblies, if necessary, can be accommodated by relocation or reconstitution. The performance of driver-fuel and blanket elements will be satisfactory at 62.5 MW(t), as indicated by irradiations and fuel-element modeling studies. The cladding strain at 62.5 MW(t) will be only slightly higher than at 50 MW(t). Rod-drop and power-coefficient measurements provide information on the safety and stability of the reactor. For example, the results indicate that the feedback can be interpolated with reasonable accuracy from data obtained at power levels below 62.5 MW(t). Experience shows that operation with some defective driver-fuel elements can be tolerated for at least a short time. (13 references) (auth)

54198 (ANL-EBR-26) COOLTEMP: COMPUTER CODE FOR CALCULATING COOLANT TEMPERATURES IN EBR-II SUBASSEMBLIES. Wallin, W. R.; Blomberg, P. E.; Koenig, J. F. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). May 1971. Contract W-31-109-eng-38. 57p. Dep. NTIS.

COOLTEMP is a FORTRAN IV computer code that has been developed for use on the IBM 360/75 computer to calculate flow rate, power, and coolant temperature of each subassembly in rows 1–7 of EBR-II. The temperatures calculated are average values at three points above the core. The code is used to predict temperatures for 19 subassembly locations where outlet temperatures are measured by thermocouples. Signals from these thermocouples are used to initiate alarm and, in a few cases, shutdown circuits. Changes in reactor loading resulting from installation of experiments in the reactor cause considerable variation in the temperatures measured. Power in each subassembly, as calculated by COOLTEMP, agrees within a few percent of the power calculated by other codes, except for a few cases where the difference is a maximum of 10%. Flow is believed to be calculated to an accuracy of better than 10%, although comparison with flow measurements in an instrumented subassembly indicated a 12% difference. Subassembly outlet temperature, as measured by the thermocouple, is predicted within about 13°F for the central core position (i.e., a maximum error of about 10% in the 135°F temperature rise in the subassembly). Although power and flow in experimental-irradiation subassemblies may be as much as 90% less than in a normal driver subassembly, the effects of loading changes are represented fairly well. (auth)

54199 (ANL/EBR-28) COLLECTION AND EVALUATION OF KINETICS DATA FROM EBR-II RUN 46A. EBR-II Project. Larson, H. A.; Engen, I. A. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Jan 1971. Contract W-31-109-eng-38. 35p. Dep. NTIS.

Information from rod-drop experiments for run 46A of the EBR-II reactor is analyzed. Experiments were performed at several power levels during the start-of-run approach to 62.5 MW(t) and during the end-of-run reduction in power. By using an XDS Sigma-5 computer system, rod-drop data were collected on line and numerically reduced by an inverse-kinetics procedure to produce drop-rod calibration information, time-dependent reactivity feedback, and frequency-dependent reactivity feedback. After the accuracy of the calculations performed with the XDS Sigma-5 computer system was verified, data and calculations were graphically summarized and comparisons were made with results of run 38A, the previous 62.5 MW(t) run. At the end of run 46A, data were recorded with both compensated and uncompensated ion chambers, thus allowing a comparison of information from the two types of chambers. (9 references) (auth)

54200 (ANL/EBR-36) EBR-II NOISE-SIGNATURE ANALYSIS DURING THE FIRST HALF OF FISCAL YEAR 1971. EBR-II Project. Price, C. C.; Karvinen, J. R. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Feb 1971. Contract W-31-109-eng-38. 58p. Dep. NTIS.

The noise-signature analysis done to date (Feburary 1971) on EBR-II and its auxiliary systems is presented. This effort began with a search for the source of the "10-Hz" noise present in the ion-chamber signals. The search provided a signature of primary-sodium pump No. 1 which could be compared with the signature after an apparent binding of the pump. The comparison indicated more-eccentric rotation of the pump after the apparent binding. The cause was apparently failure of the lower labyrinth seal. On November 4, 1970, an unusual noise was discovered emanating from the intermediate heat exchanger (IHX). A signature obtained on the secondary-sodium outlet pipe of the IHX on August 21, 1970, had not shown any unusual noise present. Further signature-analysis work, described with preliminary results, helped identify the cause of the noise. (4 references) (auth)

54201 (ANL/EBR-37) OPERATION OF EBR-II AS AN IRRADIATION FACILITY AT 62.5 MWt: AN EVALUATION OF PLANT AND REACTOR DATA FROM RUN 46A. EBR-II Project. (Argonne National Lab., Ill. Argonne National Lab., Idaho Falls, Idaho). Feb 1971. 42p. Dep. NTIS.

The initial operation of EBR-II at 62.5 MW(t) occurred during run 38A in September 1969, with a core containing no fueled experimental subassemblies. Run 38A indicated that the reactor and plant were capable of sustained operation at 62.5 MW(t). After interim operation at 50 MW(t), during which minor adjustments were made to the plant and experimenters were informed of the plan to operate continually at 62.5 MW(t), run 46A was scheduled as the first to contain fueled experimental subassemblies and operate routinely at the higher power level. Experimental subassemblies were modified and relocated as required to match the higher-power conditions, and run 46A was begun. The reactor and plant were monitored during the run, and several special tests were carried out. As a result of the tests, the recommendation is made to continue operation of EBR-II at 62.5 MW(t). (7 references) (auth)

54202 (HEDL-TME-71-18) FEASIBILITY OF LITHIUM ADDITION AS AN ALTERNATE SHUTDOWN METHOD FOR THE FAST TEST REACTOR. Schively, D. P. (Hanford Engineering Development Lab., Richland, Wash.). Feb 1971. Contract AT-(45-1)-2170. 53p. Dep. NTIS.

A soluble liquid metal poison system in conjunction with a mechanical system has the advantage of providing diversification and would thus preclude common-mode faults associated with two mechanical shutdown systems which are similar. The potential use of lithium as a neutron absorber for FTR shutdown was suggested by J. Herb early in 1968. Other investigators since have explored the large variety of available possibilities and have concluded that molten lithium is the only logical choice of liquid poison for use in a sodium system. This choice was accepted after a review of these and other prior investigations. An examination of lithium as a potential liquid poison for usage in alternate shutdown systems for the FTR is presented. The advantages of lithium are: high neutron absorption cross-section, miscibility with sodium, low melting point (~180°C) and high boiling point (1317°C), and high specific heat. Four shutdown methods utilizing lithium were considered: addition of lithium to the primary coolant, a closed loop, and an empty thimble; and a lithium-antimony fuse. The relative worth of the first three of these methods is presented. Reactivity transients were not calculated. 17 references. (auth)

54203 (HEDL-TME-71-30) SUMMARY OF COMPUTER CODES USED FOR FFTF CONTAINMENT AND SITING STUDIES. (Hanford Engineering Development Lab., Richland, Wash.). Feb 1971. Contract AT(45-1)-2170. 60p. Dep. NTIS.

Containment and siting studies for the Fast Flux Test Facilities were conducted to assure adequate margins for public protection against unforeseen events. These studies consisted of analyses of postulated events of an extreme nature beyond any realistic probability for occurrence. Consequences were then investigated analytically to assess the design margins against such unlikely events. Because of the complex nature of these analytical models, it was necessary to use computer codes for these evaluations. The scope of these codes covers the initiation of a hypothetical accident, its immediate consequences in terms of energy, pressure and temperature effects and long term consequences involving the potential for leakage of radioisotopes from containment to the environs and the potential dose at the site boundary. Because the codes utilized in these assessments are in various stages of documentation, a summary description of each is presented. (auth)

54204 (HEDL-TME-71-34) ASSESSMENT OF MAGNITUDE AND UNCERTAINTIES OF HYPOTHETICAL ACCIDENTS FOR FFTF. Simpson, D. E.; Walter, A. E.; Padilla, A. Jr. (Hanford Engineering Development Lab., Richland, Wash.). 27 Mar 1971. Contract AT(45-1)-2170. 144p. Dep. NTIS.

XUM

The performance of mechanistic analyses of a wide variety of hypothetical accident-initiating events and postulated propagating phenomena has been undertaken to determine the sensitivity of calculated results to assumptions and uncertainties in input data. An objective of these analyses was to establish whether the uncertainties and assumptions were bordering on a threshold such that the calculated energy release was highly sensitive to any of the parameters involved. Thus, many of the calculations represent assumptions made solely for the purpose of exploring sensitivities and are not to be considered as having significant realism attached. In the overpower cases, the energy in molten fuel ranges up to about 1400 MW-sec for an extreme ramp reactivity input of 5$/sec. For purposes of providing a test of containment, a work energy of 150 MW-sec was arbitrarily selected, corresponding to 580 MW-sec in molten fuel. This event is taken to be characteristic of a class of overpower accidents in the low hundreds of MW-sec range. In the loss-of-cooling cases, no nuclear core disassembly is calculated to occur, and the energy in molten fuel in the seconds after the core becomes subcritical due to voiding is of the order of 100 MW-sec. The corresponding work energy is very small. The case of passage of an optimum geometry sodium bubble, which has been shown experimentally to be impossible in the initial assumption but is analyzed on an otherwise mechanistic basis, leads to a calculated energy in molten fuel of up to about 1120 MW-sec and a corresponding work energy of 280 MW-sec. 54205 (HEDL-TME-71-35) REVIEW OF TORNADO CONSIDERATIONS FOR FFTF. Simpson, D. E. (Hanford Engineering Development Lab., Richland, Wash.). Jan 1971. Contract AT(45-1)-2170. 32p. Dep. NTIS.

W. L. Dotson of HEDL reviews the likelihood and potential severity of tornadoes in the Hanford region. A more detailed study of tornado occurrences in the Northwest is presented by T. Fujita for Jersey Nuclear Corporation. Dotson's and Fujita's work shows that tornadoes to which the Hanford region might be subject are of much lower severity than the 300 mph tornadoes commonly considered in reactor safety evaluation for the middle-Western and Eastern U. S. Also, the indicated probability of being struck by a tornado at any point is approximately 2 or 3×10^{-6} per year, based on both Dotson's and Fujita's information. Analysis of potential wind forces, pressure transients, and missiles from tornadoes is presented. (auth)

54206 (HEDL-TME-71-50) MECHANICAL CONSEQUENCES OF HYPOTHETICAL CORE DISRUPTIVE ACCIDENTS. Stepnewski, D. D.; Fox, G. L.; Peak, R. D.; Merckx, K. R. (Hanford Engineering Development Lab., Richland, Wash.). 19 Apr 1971. Contract AT(45-1)-2170. 125p. Dep. NTIS.

A description is presented of the potential consequences of hypothetical core disruptive accidents on the primary coolant boundary. The effects of the postulated accidents on containment structures are analyzed in the event of energy releases beyond the primary coolant boundary. The objective of this treatment of the accident mechanisms is to demonstrate the capability of FFTF design features, both inherent in the primary boundary and in containment structures to effectively isolate limiting severe accidents from the environs of the facility. The basic input upon which this mechanical assessment is made is taken from hypothetical accident energy release information developed for the FFTF reactor. Detailed analyses of the reactor vessel and primary boundary have been performed in order to identify accident induced loads. The systems are designed to withstand these loads without loss of required capability. The basic functional requirement is that the reactor coolant system retain the capability to cool the core under any accident conditions, including those hypothetical conditions involving disassembly and melting of the core. 54207 (HEDL-TME-71-81) CALCULATION OF THE ISOTHERMAL DOPPLER COEFFICIENT FOR THE SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR (SEFOR). O'Dell, L. D. (Hanford Engineering Development Lab., Richland, Wash.). May 1971. Contract AT(45-1)-2170. 29p. Dep. NTIS.

A series of one-dimensional calculations are described for the Southwest Experimental Fast Oxide Reactor, SEFOR. These calculations were performed in order to determine the model requirements for calculating the SEFOR Doppler coefficient. Selected whole core sodium worths were also calculated. (6 references) (auth)

54208 (HEDL-TME-71-89) DOPPLER COEFFICIENT MODELS AND CALCULATIONS FOR THE FAST TEST REACTOR (FTR). O'Dell, L. D. (Hanford Engineering Development Lab., Richland, Wash.). Jun 1971. Contract AT(45-1)-2170. 28p. Dep. NTIS.

A series of Doppler coefficient calculations are described for the Fast Test Reactor (FTR). These calculations were performed to determine model requirements for calculating the FTR Doppler coefficient and to ascertain how the FTR Doppler coefficient varies with core burnup and temperature. The effect of changes in core volume and reflector material on the Doppler coefficient are also presented. (4 references) (auth)

54209 (NP-18981) VARIATION WITH SPACE AND TIME OF THE NEUTRON ENERGY DISTRIBUTION IN PULSED BeO ASSEMBLIES. Ritchie, A. I. M. (Wollongong Univ. Coll. (Australia)). Apr 1970. 182p. Dep. NTIS (U. S. Sales Only).

Thesis.

Time dependent spatial distributions were measured in BeO assemblies covering the buckling range 0.0083 to 0.0399 cm^{-2} referred to a density of 2.96 gm cm^{-3}. The extrapolated length did not change with time if $\lambda < \lambda^*$; changed by $(0.5 \pm 0.25)\%/10^3$ μs in the time range 1.4 to 2.9 ms at buckling of 0.0292 cm^{-2}; and by $(2.0 \pm 0.5)\%/10^3$ μs over a similar range of 0.0399 cm^{-2} $(\lambda < \lambda_K)$. The decay constant of the next higher spatial mode (211) did not lie on the $\lambda(B^2)$ curve of the fundamental. In the region $\lambda^* < \lambda < \lambda_K$ decay constants were generally higher than the fundamental. For $\lambda > \lambda_K$ the constants tended to lie below the $\lambda(B^2)$ curve. Marginal space dependence was found for the effective decay constant of the lowest mode of decay for $\lambda > \lambda_K$. Calculations were made, based on a multigroup diffusion code which approximated leakage by a DB^2 term. The term dependent energy spectra corresponding to a number of Fourier modes were used to give the energy spectrum. Spatial distributions corresponding to a 1/v reaction rate were compared with experimental results. The cross section set ranged from 1.125 to 9.36×10^{-6} eV with 18 groups below the 23 above Bragg cut-off. Other comparisons with theory indicated good agreement with decrease of extrapolation distance with buckling seen in the assemblies with $\lambda < \lambda^*$; an overestimation of the amplitude of asymmetric modes; differing dependence of decay constant with both time and position; and an extrapolated length of a factor of 4 too small to correlate with experimental results. 70 references. 54210 (ORNL-TM-3559) OAK RIDGE RESEARCH REACTOR QUARTERLY REPORT: APRIL, MAY, AND JUNE OF 1971. Hurt III, S. S.; Tabor, W. H. (Oak Ridge National Lab., Tenn.). 27 Aug 1971. 44p. Dep. NTIS.

An average power level of 29.8 MW was maintained at the ORR for 86.9% of the time during April, May, and June of 1971. An unusually large number of shutdowns (21) were recorded; however, ten of these followed special test runs during the end-of-cycle 99 shutdown. Only three of the shutdowns were unscheduled. Fuel usage continued to be quite satisfactory, with the average burnup (decrease of ^{235}U) of 15 fuel elements at 52.9%. Sixty-six Nuclear Engineering Test Reactor fuel elements were received from Wright-Patterson Air Force Base, completing a total shipment of 90 elements. These elements are being held for future modification for use in the ORR. Additional monitoring circuits for the No. 3 dc unit were installed to complete the work described in instrumentation and controls design change memo No. ORR-96. Procedures and checks (tests) were revised to include the new monitoring circuits. New fission chamber assemblies (snakes) of the HFIR type were installed for the counting-rate channels. Monitoring circuits for the battery charger associated with the diesel starter battery were installed as specified in mechanical change memo No. ORR-12. An inspection of the exterior of the poolside facility revealed only surface scratches and very shallow pits. (auth)

54211 (ORNL-TM-3560) BULK SHIELDING FACILITY QUARTERLY REPORT: APRIL, MAY, AND JUNE OF 1971. Tabor, W. H.; Hurt III, S. S.; Lance, E. D. (Oak Ridge National Lab., Tenn.). 1 Sep 1971. 31p. Dep. NTIS.

The BSR operated at an average power level of 1,759 kW for 20.2% of the time during April, May, and June of 1971. Water-quality control in both the reactor primary and secondary cooling systems was satisfactory. There were no unscheduled shutdowns during the quarter. Changes as authorized by reactor instrument and controls design change memo No. BSR-2Mw-30 were completed. The changes on shim-rod assemblies Nos. 1, 2, 3, 5, and 6 were completed during the first quarter of 1971. The changes on shim-rod assembly No. 4 were completed this quarter as follows: removal of the guide tube 16-in. extension and replacement of the high-voltage, unplated magnet with the low-voltage, high-current, nickel-plated magnet. The No. 5 control-rod-drive unit nickel-plated magnet was inspected for corrosion. The magnet, which had been in service since October 27, 1970, showed no evidence of corrosion. The BSR and PCA were used in conducting the annual experiments for students of the Nuclear Engineering Departments of the University of Tennessee, the University of Kentucky, and Mississippi State University. 54212 (RFP–1489) MIXTURES OF PLUTONIUM AND ENRICHED URANIUM IN SLAB GEOMETRY. Schuske, C. Lee; Coonfield, Donald C. (Dow Chemical Co., Golden, Colo. Rocky Flats Div.). 10 Aug 1971. Contract AT(29-1)-1106. 8p. Dep. NTIS.

The multiplication factors have been calculated for several systems composed of alternate slab regions of plutonium and enriched uranium. The slab systems are unreflected and consist of either pure metal or metal-water solutions at a hydrogen-to-fissile element atomic ratio of 50. The calculations were done with the Computer Code DTF in the S_4 approximation. Slab geometry is used as a simplifying model to simulate possible complex array-storage combinations of plutonium and enriched uranium. The analysis indicates that certain combinations of pure metal are much more reactive than others. For the pure metal case with plutonium surrounded by uranium, the reactivity is 12 percent greater than when the plutonium surrounds the uranium. It is concluded that criticality safety limits for metal storage should include safety margins to account for the effect. For similar hydrogenous systems of plutonium and enriched uranium, only a slight effect was noted. (auth)

54213 (SC-M–710227) OPERATING MANUAL FOR SANDIA PULSED REACTOR II. Snyder, John A. (Sandia Labs., Albuquerque, N. Mex.). Jun 1971. 87p. Dep. NTIS.

The operating manual for the Sandia Pulsed Reactor 2 includes: facility description; reactor description; SPR 2 control system; SPR 2 interlock system; procedures for operations and experiments; facility supervision; and fuel-handling procedures. (D.C.C.)

54214 (TID–25779) COMPARISON OF METHODS FOR HETEROGENEITY ANALYSIS. Quarterly Technical Progress Report, June–September 1970. Page, E. M. (Atomic Power Development Associates, Inc., Detroit, Mich.). Contract AT(11-1)-865. 24p. Dep. NTIS.

Calculations of heterogeneity effects in Assembly 6 of ZPR-6 are presented. Effects on sodium void analysis are studied. (15 references) (D.C.C.)

54215 NEUTRON SPECTRA AND KINETIC PROPERTIES IN FAST SUBCRITICAL ASSEMBLIES CONTAINING ^{235}U, ^{238}U, AND CARBON. d'Oultremont, P.; Young, J. C.; Neill, J. M.; Preskitt, C. A. (Gulf Radiation Tech., San Diego, Calif.). Contract AT(04-3)-167. Nucl. Sci. Eng.; 45: No. 2, 141–55 (Aug 1971).

A subcritical time-of-flight spectrum facility (STSF) was used to study the neutron spectra and kinetics of two fast assemblies designated STSF-2 and STSF-2A. Neutron spectra were measured by the time-of-flight method between 5 MeV and 500 eV in the core and the reflector of the STSF-2 which is essentially the same as the ZPR-3 Assembly 17. The STSF-2 core was loaded with plate type elements and the neutron spectrum was determined at the surface of a graphite plate, an enriched uranium plate, and a depleted uranium plate. Detailed transport calculations were performed with ENDF/B version 1 cross sections and compared to the experimental data which had been reduced by an original method. Finally, kinetic measurements were performed on assembly STSF-2A which confirm the validity of the time-dependent calculations involved in the time-of-flight data analysis. 21 references. (auth)

54216 NUCLEAR REACTORS. Everson, Ivor; George, Maurice William (to United Kingdom Atomic Energy Authority). U. S. Patent 3,580,803. 25 May 1971. Priority date 21 Sep 1966, Great Britain.

A nuclear reactor is described comprising a plurality of nuclear fuel elements grouped to form a core assembly within a reactor vessel. Means are provided to transfer the core assembly between its reactor operating station and a second non-operating station within the vessel. (auth)

54217 DUAL SPECTRUM CONCEPT FOR LMFBR FUEL ASSAY. Kelber, Charles (Argonne National Lab., Ill.). Nucl. Technol.; 10: No. 1, 85-90(Jan 1971).

One of the methods considered for fuel assay in a nuclear safeguards program is analysis of reactivity response. For uranium-plutonium LMFBR fuels, such an assay is complicated by the similar response of the various fissile isotopes and the relatively large fast fission contribution from the fertile isotopes. The proposal is explored to separate the responses, thereby promoting more accurate analysis, through design of an assay reactor which would be critical in two distinct modes having different spectra (hard and soft). The constraint is that the change in spectrum be obtained with little mechanical change in the system so as to avoid excessive reactivity renormalization. The solution examined is a concept of a dilute fast spectrum fast reactor (zero-power) which is also critical when flooded with borated water. The response matrix is computed and the errors analyzed; problems in securing greater accuracy arise from the need to attain very low powers to measure spontaneous fission sources in the presence of fission product gammas, and the need for a better low energy neutron filter than cadmium. 54218 OPERATING EXPERIENCE AT SEFOR. Steele, Myrna L. (Atomic Energy Commission, Oak Ridge, Tenn.). Reactor Technol.; 14: No. 3, 237-40(Fall 1971).

The highlights of operation of SEFOR from August 1970 to January 1971 are summarized. Maintenance and repair activities for this period are reported. 4 references. (auth)

54219 EBR-II: AN EXPERIMENTAL LMFBR POWER PLANT. Koch, Leonard J. (Argonne National Lab., Ill.). Reactor Technol.; 14: No. 3, 286-311(Fall 1971).

Experimental Breeder Reactor II (EBR-II) is an experimental liquid-metal-cooled fast breeder reactor (LMFBR) power-generating station designed to operate on a utility-system network. It is the only operational pool-type LMFBR, and through 1970 it had produced more than 40,000 MWd(t) of power and had generated over 250 million kWh of electricity. The primary mission of the EBR-II has been shifted to an experimental irradiation facility for potential LMFBR fuels and structural materials. The experimental irradiation program has had a significant effect on operating schedules and on the amount and character of fuel-handling operations. Nevertheless, power operation of the EBR-II normally includes electric-power generation and relevant experience as an experimental power station. Many difficulties arose during preoperational testing and the early operating phases of the EBR-II. These were corrected, and since 1967 the reactor and power system have operated very well, simultaneously increasing the number and variety of experimental irradiations conducted in the reactor. The EBR-II has demonstrated the technical feasibility of the pool-type LMFBR concept and provides a technological basis for the major commitments made to this concept. 7 references. (auth)

54220 (N–71-15163) NUCLEAR ROCKET SHIELDING METHODS, MODIFICATION, UPDATING, AND INPUT DATA PREPARATION. VOLUME 2. COMPILATION OF NEUTRON AND PHOTON CROSS SECTION DATA. Final Progress Report. Soltesz, R. G.; Kaiser, R. S.; Disney, R. K. (Westinghouse Electric Corp., Large, Pa. Astronuclear Lab.). Aug 1970. Contract NAS8-24919. 130p. (NASA-CR–102965; WANL–PR(LL)–34(Vol.2)). NTIS.

The compilation and preparation of neutron and photon cross section data are described with the material being subdivided into the following categories: (1) neutron cross sections for the ANISN-W DOT-2W discrete ordinates transport codes and their auxiliary codes; (2) photon cross sections for the ANISN-W and DOT-2W discrete ordinates transport codes, KAP-6 point kernel code, and the SCAP single- and albedo-scatter code; (3) preparation of multigroup cross section sets (with upscatter removed, if desired), using a modified version of the ANISN code or the APPROPOS cross section preparation code; and (4) basic, nuclear data for nuclear and radiation analysis of a nuclear system. (auth) (STAR)

54221 (N–71-15164) NUCLEAR ROCKET SHIELDING METHODS, MODIFICATION, UPDATING, AND INPUT DATA PREPARATION. VOLUME 3. CROSS SECTION GENERATION AND DATA PROCESSING TECHNIQUES. Final Progress Report. Soltes, R. G.; Disney, R. K.; Zeigler, S. L. (Westinghouse Electric Corp., Large, Pa. Astronuclear Lab.). Aug 1970. Contract NAS8-24919. 419p. (NASA-CR–102966; WANL–PR(LL)–34(Vol.3)). NTIS.

A description of the cross section generation and data processing techniques for analyzing nuclear reactor systems is given. These techniques include: (1) the GAMLEG-W code for generating multigroup photon cross sections for use in discrete ordinate and Monte Carlo transport codes; (2) the APPROPOS code for preparing multigroup, simultaneous, neutron-photon cross section data and neutron reaction cross section data for radiation transport codes; (3) the NAGS code for processing the output fluxes from one- and two-dimensional discrete ordinate transport codes to provide neutron and gamma ray distributed source data as well as nuclear energy deposition; and (4) the SATURN code for processing master library cross section data including optional transverse leakage corrections, adjoint reversals, and mixture operations. Detailed user information is supplied for each code. This information includes problem setup, running time, required input data, and tape and core storage requirements. A sample problem card input and printout as well as a

XUM

description of printed, punched and tape output are included for each code. (auth) (STAR)

54222 (N–71-15165) NUCLEAR ROCKET SHIELDING METHODS, MODIFICATION, UPDATING, AND INPUT DATA PREPARATION. VOLUME 4. ONE-DIMENSIONAL, DISCRETE ORDINATES TRANSPORT TECHNIQUE. Final Progress Report. Soltesz, R. G.; Disney, R. K. (Westinghouse Electric Corp., Large, Pa. Astronuclear Lab.). Aug 1970. Contract NAS8-24919. 103p. (NASA-CR-102967; WANL-PR(LL)-34(Vol.4)). NTIS.

The proposed version of the ANISN computer code for solving the one-dimensional, energy dependent, linear Boltzmann transport equation with general anisotropic scattering is described. The major improvements of the ANISN-W code over the ANISN code are: (1) the inclusion of automated tape linkage of input and output data, and (2) the capability to input a distributed or shell source from cards and/or from tape. Detailed user information including problem setup, running time, boundary conditions, quadrature data, and mesh spacing requirements is described. In addition, requirements for cross section weighting, search calculations, activities, and stacked problems are given. Typical problem setup information is supplied as well as a description of the printed output. A sample problem card input and printout are included. (auth) (STAR)

54223 (N–71-15166) NUCLEAR ROCKET SHIELDING METHODS, MODIFICATION, UPDATING, AND INPUT DATA PREPARATION. VOLUME 5. TWO-DIMENSIONAL, DISCRETE ORDINATES TRANSPORT TECHNIQUE. Final Progress Report. Soltesz, R. G.; Disney, R. K.; Jedruch, J.; Zeigler, S. L. (Westinghouse Electric Corp., Large, Pa. Astronuclear Lab.). Aug 1970. Contract NAS8-24919. 426p. (NASA-CR-102968; WANL-PR(LL)-34(Vol.5)). NTIS.

The proposed version of the DOT computer code for solving the two-dimensional, energy dependent, linear Boltzmann transport equation with general anisotropic scattering, and the MAP computer code for solving for the annular, spatial, and energy dependent flux external to a nuclear system are described. The major improvements of the DOT-2W code over the DOT code are the inclusion of acceleration techniques on the group flux solution, improved convergence logic, asymmetric quadrature capability, and improved tape operations. Detailed user information involving problem setup, running time, quadrature data, and mesh spacing requirements is described for both codes. In addition, requirements for eigenvalue, fixed volume distributed source, boundary source, and search calculations are given for the DOT-2 code. Typical problem setup information is supplied for both codes as well as a description of the printed output. A sample problem card input and printout are included for each code. The appendix describes the DOQ and ADOQ quadrature coefficient calculation codes. (auth) (STAR)

54224 (N–71-15167) NUCLEAR ROCKET SHIELDING METHODS, MODIFICATION, UPDATING, AND INPUT DATA PREPARATION. VOLUME 6. POINT KERNEL TECHNIQUES. Final Progress Report. Disney, R. K. (Westinghouse Electric Corp., Large, Pa. Astronuclear Lab.). Aug 1970. Contract NAS8-24919. 286p. (NASA-CR-102969; WANL-PR(LL)-34(Vol.6)). NTIS.

The KAP 6 computer code for solving energy dependent radiation transport external to a radiation source is described. KAP 6 is a revised version of the KAP 5 code and is written in standard USASI FORTRAN 4. Revisions include the data input interface with the GAMLEG-W and NAGS code, as well as options to preferentially exclude multiple scatter buildup approximations in certain zones. The KAP 6 (Point Kernel Attenuation Program) code employs the point kernel method to calculate neutron and gamma ray radiation levels at detector points located within or outside a complex geometry describable by a combination of quadratic surfaces. The attenuation function, or kernel, for gamma rays employs exponential attenuation along with a buildup factor to account for multiple scales. Three optional fast neutron attenuation functions are included: (1) a modified Albert–Welton function for calculating fast neutron dose rate using removal cross sections; (2) a bivariant polynomial expression for computing neutron spectra using infinite media moment data; and (3) a monovariant polynomial expression for computing neutron spectra using infinite media moments data. The code also handles either cylindrical, spherical, disc, line, or point sources. A variety of options are available for describing neutron or gamma ray source distributions in complex geometries. (auth) (STAR)

54225 (N–71-22511) SNAP 8 REFRACTORY BOILER DEVELOPMENT PROGRAM: MERCURY THERMAL SHOCK TESTING OF 2 $1/2$-INCH-DIAMETER BIMETALLIC JOINTS FOR SNAP 8 APPLICATIONS. Topical Report No. 4. Thompson, S. R. (General Electric Co., Cincinnati, Ohio. Nuclear Systems Programs). [1970]. Contract NAS3-10610. 45p. (NASA-CR-72829; GESP-587). NTIS.

Coextruded and brazed tubular transition joints, between 2.5-inch-outside diameter tantalum and Type 316 stainless steel, were evaluated for usage in the SNAP-8 Mercury Power Conversion System. Representative joints were exposed to repeated thermal shocks by flowing 300°F mercury through the joints which were initially heated to 1300°F. Failure of the coextruded specimen occurred after 55 thermal shocks; no brazed joint failure was noted after testing to 100 and 155 cycles (two brazed samples). Posttest destructive and nondestructive examination of the sample assemblies indicated that the braze method produced assemblies which were essentially unaffected by the shock testing. The results of the above testing, and other severe thermal shock tests of this type of joint, show that the brazing method for effecting transitions between tantalum and stainless steel will produce a reliable joint for SNAP-8 applications. (auth) (STAR)

54226 (N–71-22512) SNAP 8 REFRACTORY BOILER DEVELOPMENT PROGRAM: SHELL SIDE HYDRAULIC CHARACTERISTICS OF A FULL SCALE SNAP 8 MULTIPLE TUBE MODEL BOILER. Topical Report No. 5. Hsia, E. S.; Fuller, R. A. (General Electric Co., Cincinnati, Ohio. Nuclear Systems Programs). [1970]. Contract NAS3-10610. 95p. (NASA-CR-72830; GESP-589). NTIS.

Shell side hydraulic characteristics of a full-scale SNAP-8 multiple-tube model boiler were thoroughly investigated over a turbulent Reynolds number range from 18,000 to 38,000. Friction factors for flow parallel to a tube bundle with or without turbulence promoters were determined experimentally. Loss coefficients for tube supporting spacers and exit or inlet manifolds were also measured experimentally. In addition, the effect of the incoming flow condition on these loss coefficients was investigated. With the aid of upstream dye injections, a visual study was made on the shell side flow distribution affected by turbulence promoters and the exit hole-slotted baffle. Results are presented in graphical forms. (auth) (STAR)

54227 (N–71-22618) MISSION PERFORMANCE POTENTIAL OF REGENERATIVELY COOLED GAS CORE NUCLEAR ROCKETS. Fishbach, Laurence H. (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Apr 1971. 19p. (NASA-TM-X-2256). NTIS.

The performance of regeneratively cooled gas-core nuclear rockets is compared to that of solid-core nuclear rockets for four missions: a reusable lunar ferry; a slingshot, in which an orbiting rocket boosts payloads to various hyperbolic excess velocities and then returns to orbit; and manned round trips to Mars and to Jupiter. The results indicate that gas-core nuclear rockets may offer a significant capability improvement for performing these missions, requiring only 50 to 75 percent of the initial mass in earth orbit needed by the solid-core rocket. In addition, high specific impulse, even with a corresponding increase in engine weight, seems desirable. (auth) (STAR)

54228 FISSION PRODUCTS IN REACTOR DYNAMICS. Woyski, Jan S. (McDonnell Douglas Astronautics Co., Santa Monica, Calif.). Nucl. Technol.; 10: No. 1, 11-16(Jan 1971).

An evaluation of fission products decay heating is required to protect a nuclear reactor from overheating after shutdown or to make proper use of this available decay heat. It may, therefore, prove convenient and practical to have the fission product decay heating included continuously in the reactor dynamics model like the delayed neutrons, following any changes in the reactor power level. This would be useful particularly in a multiple start-stop operation. In the method presented, a modified Way–Wigner formulation is used to introduce the fission products decay heat in the reactor heat balance equation, following continuously any changes in operating conditions. A reference graph has been prepared showing computed and normalized fission products power decay after different operating times, with the decay curves arranged in time sequence. Their starting points show the fission products power buildup during reactor operation. Following the delayed neutron pattern, several decay groups are used in order to make the equations fit the graph. The number of decay groups and the amount of detail in the reference graph depend on the desired accuracy. In the results shown of an analog simulation study, satisfactory agreement was reached between the analog plot and the reference decay and buildup curves. The method can be applied to any reactor type and nuclear fission process when a desired dynamics model as well as fission product decay data are available. In addition, xenon poisoning equations are shown adapted to the normalized reactor model. (13 references) (auth)

54229 IN-FLIGHT COOLANT MANAGEMENT CONSIDERATIONS FOR THE NERVA REACTOR COOLDOWN. Misra, B.; Altseimer, J. H.; Hart, G. D. (Aerojet Nuclear Systems Corp., Sacramento, Calif.). Nucl. Technol.; 12: No. 3, 298-306(Nov 1971).

Compared with chemical in-space rocket engines, the NERVA nuclear rocket engine presents several unique operational characteristics. This is particularly true in the post-shutdown phase called "pulse cooldown". At this time liquid hydrogen coolant is tank-pressure fed, the tank being pressurized by gaseous hydrogen. At low reactor cooldown power levels the tank ullage gas can be used as the coolant. Thus, there exists the operational option of using either liquid or gaseous hydrogen for coolant; this can be used to eliminate tank venting and also to minimize fluid residual weight in the tank. For a typical four-burn lunar mission it was found that the proper combination of liquid and gaseous coolant fluids gained 27,000 lbm or 18% in payload delivered to lunar orbit, compared to the case when only liquid hydrogen was used for reactor cooldown. In addition, an increased flexibility of flight operations is indicated because tank conditions can be adjusted enroute by choice of the cooldown fluid modes. (auth)

54230 NUCLEAR POWER PLANTS FOR THE USE IN SPACE. Budnick, D. Siemens-Z.; 44: No. 8, 483-8(1970). (In German).

The development of the in-core thermionic reactor (ITR) opens new perspectives. Its central fuel rods contain thermionic energy converters. Electric power in the range from 20 to 200 kW necessary for satellites, space stations, and space probes can be economically produced by these converters. The development status of this reactor type in the FRG is discussed in detail. (INIS)

Process Heat and Desalination Reactors

54231 (A/CONF.49/P-18) NUCLEAR ENERGY FOR DESALINATION AND AGRO-INDUSTRIAL COMPLEXES IN ISRAEL. Adar, J. (Israel Atomic Energy Commission, Tel Aviv). Apr 1971. 25p. (CONF-710901-68). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In the first part of the review the water resources of Israel and the water consumption are presented. An anticipated gap of 1,000 million cubic meters per year at the end of the century between supply and demand will have to be filled by unconventional sources, mainly seawater desalination. Desalination activities in Israel are reviewed. Desalinated water using present technology being too expensive for agriculture, research and development in view of improved processes are actively being run. Existing prototype units operating or being built in Israel are reviewed, as well as the various processes developed. The large dual-purpose plants studies run are reviewed and the cost of desalted seawater arrived at in each case is stated. The suitability of the power and water grids to large scale dual purpose plants is explained and the various studies presented with their results. A preliminary study made in 1967/68 for a desalting power industrial complex in Israel is reviewed. Eight chemical-metallurgical processes, which together require more than 900 MW(e) at the capacities envisaged were selected for further study. (auth)

54232 (A/CONF.49/P-140) STUDIES FOR THE POTENTIAL USE OF NUCLEAR DESALINATION IN THE UNITED ARAB REPUBLIC. El Guebeily, M. A.; Effat, K. E.; El Fouly, M. F.; (and others) (Atomic Energy Establishment, Cairo (Egypt)). May 1971. 20p. (CONF-710901-80). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The long range water requirements and resources are outlined. Desalination is envisaged as a promising future source. Thus since 1964 in the first nuclear power project (150 MW), a pilot desalination unit of 20,000 m^3/day was included for feasibility studies of the use of desalted water in agriculture. Although the project was not realized, studies concerning economic and technical evaluation of the pilot agricultural scheme continued. Calculations are based on estimated cost of desalted water, engineering requirements of water utilization, distribution system, and on cropping patterns using high cash value, low water consumption crops. This study has shown that for the anticipated cost of desalted water, reasonable returns could be achieved. A study of a prototype single purpose desalination nuclear plant was initiated. In the choice of reactor type and configurations main consideration was given to the need for simple designs, simple materials and cheap construction within the capabilities of developing countries. Study led to a 50 MW(t) natural uranium, heavy water moderated reactor with light water or CO_2 cooling. Reactor power and size of the desalination plant correspond to water needs of the agricultural experiment. The investigations include design studies and research in various reactor disciplines. The choice of concept, plan of studies, supporting research programs and main results are discussed. 13 references. (auth)

54233 (A/CONF.49/P-177) ROVI: DEVELOPMENT FOR INTERMEDIATE CAPACITY DESALTING PLANT DRIVEN BY AN ORGANIC COOLED AND MODERATED REACTOR. Bertoni, C. C.; Di Menza, R. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)); Biondi, L. (Montecatini Edison, Milan (Italy)); Crispino, E.; (and others) (Agip Nucleare, Milan (Italy)). May 1971. 15p. (CONF-710901-185). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The preliminary design parameters and cost evaluation of a reference plant, driven by a 220 MW(t) reactor, producing through multistage flash units around 110,111 cubic meters/d of fresh water are presented. The necessary actions are being carried out to adapt the reference solution to the requirements of a water needy area in Southern Italy and to obtain the necessary financing for the realization there of a demonstration plant. Starting from the results of the original evaluation, the reference plant and the economic considerations related to its construction and operation are described. (auth)

54234 (A/CONF.49/P-299) PROSPECTS OF A DUAL-PURPOSE NUCLEAR PLANT FOR MEETING WATER AND POWER REQUIREMENTS OF THE GREATER KARACHI AREA. Kamal, Ismat (Pakistan Atomic Energy Commission, Karachi). Jun 1971. 17p. (CONF-710901-373). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The results of studies on the feasibility of nuclear desalination and power generation in the coastal areas of Pakistan with particular reference to the Karachi–Sonmiani area are presented. The rapid economic development of the Karachi area over the past two decades is discussed vis-a-vis the water and power supply situation. Projections of water demand are worked out on the basis of the past rate of growth and future expansion of population. Alternative sources of water supply from surface reservoirs are evaluated. The future power demand is considered in terms of integration with the Northern Grid of West Pakistan. It is concluded that there is adequate justification for a detailed feasibility study of a plant producing 400 to 500 Megawatt electric power and 100 to 150 million gallons of fresh water per day to come into operation by 1980. Cost estimates of dual-purpose nuclear plants using proven reactor concepts are given and compared with conventional plants to meet the expected demand. It is concluded that a nuclear plant would provide the cheapest alternative for meeting the power and water requirements. 13 references. (auth)

54235 (A/CONF.49/P-311) COMBINED NUCLEAR HEAT AND POWER PRODUCTION IN SWEDEN AND RELATED SAFETY PROBLEMS. Bergstroem, Stig O. W. (Aktiebolaget Atomenergi, Studsvik (Sweden)); Almqvist, Per; Groop, Sven (Swedish State Power Board, Stockholm); Grossing, Knut; (and others) May 1971. 12p. (CONF-710901-270). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In 1969 a study was started to evaluate safety problems of nuclear units and relate them to the technical economical characteristics of different alternatives. The first part of this official study considers the environmental effects of combined heat and power plants as a function of city population, distance from population center, and exclusion radius. The nuclear alternative is shown to be environmentally more favorable than the oil fired in normal operation. It is suggested that this superiority is quantified in common units of either health effects or money. This annual saving may be used to define permissible accidental effects. These effects are compared with the calculated effects from different standardized short time activity releases. 11 references. (auth)

(Kraftwerk Union A.G., Erlangen (West Germany)); Bugl, J. (Brown, Boveri/Krupp Reaktorbau G.m.b.H., Mannheim (West Germany)); Drude, B. C.; (and others). Apr 1971. 29p. (CONF-710901-128). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The use of nuclear power stations up to 500 MW(e) for combined power and heat generation is examined. Power supply to large-scale fresh-water production plants deserves particular attention

XUM

in this connection. Also outlined is the technology of the reactor concepts proposed, with the reasons being developed from the available operating experience. Light-water reactors of the conventional types, an integrated pressurized-water concept, considerations on the natural-uranium reactor and the high-temperature gas-cooled reactor are dealt with. Economic problems of this group of nuclear power stations are discussed. First, a comparison of overall generating costs with those of other suitable types of energy including the changes in cost having arisen over the past few years is given. The economically promising capacity range for the use of nuclear power stations is derived from the considerations together with the varying cost structures of the suitable types of power stations and the cost changes due to external influences such as changes in fuel costs, interest on capital, etc. 20 references. 54237 (A/CONF.49/P–484) FACTORS INFLUENCING THE INTEGRATION OF NUCLEAR POWER AND WATER DESALINATION PLANT. Chambers, S. (Atomic Energy Establishment, Winfrith (England)); Drake, F. A. (Binnie and Partners, London); Masters, E. F. O. (Preece, Cardew and Rider, Brighton, Sussex, Eng.). May 1971. 12p. (CONF-710901–289). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The situation in which different types of desalting plants are applicable is analyzed. The only nuclear dual-purpose plant which is commercially viable incorporates multi-stage flash distillation plant. Optimization of plant combinations is discussed and technical factors such as nuclear safety, relative plant availabilities and reliabilities, water/power ratios with various sources, and brine disposal problems are commented on. 12 references. 54238 (A/CONF.49/P–529) PROSPECTS AND PLANNING FOR NUCLEAR POWERED AGRO-INDUSTRIAL COMPLEXES IN INDIA. Thomas, K. T.; Sunder Rajan, N. S.; Ramani, M. P. S. (Bhabha Atomic Research Centre, Bombay (India)). May 1971. 32p. (CONF-710901–297). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A summary of a study on the application of the concept of Agro-Industrial Complexes in India based on nuclear energy is presented. One site investigated is the semi arid Kutch–Saurashtra region, where a dual purpose nuclear plant has been studied for production of power and water. The other locale studied is in the Western Gangetic Plains, where a single purpose nuclear power station has been considered. Power is utilized for power intensive industries with special emphasis on power based processes for fertilizer production. Whereas in the Kutch–Saurashtra project the water produced will be used in an attached farm, a part of the power produced in the Gangetic Plain project will be used for massive underground exploitation by energizing tubewells for intensive agriculture. The technical and economic viability of the concept in the two locales is established. The problems that a developing country such as India would have to face in transforming the above concept into physical reality are high-lighted. The need to substantiate certain basic assumptions made by the study, with regard to the availability of the necessary indigenous technical knowhow on the industrial side, the feasibility of multiple cropping, and adoption of modern agricultural practices on the agricultural side, and the scenario contemplated for achieving the above, are presented. The problems of basic infrastructure, limitations of finance and indigenous technical knowhow, regional imbalances, and other socio-political factors that have to be overcome are analyzed. The sequential decision-making steps that need to be taken for successful implementation of the nuclear-powered agro-industrial complexes in India are presented. (auth)

54239 (A/CONF.49/P–552) ALGO-AGRO-INDUSTRIAL COMPLEX. AN AGRO-INDUSTRIAL COMPLEX AT NUCLEAR ENERGY CENTERS WITH ASSOCIATED PRODUCTION OF AUTOTROPHIC MICROORGANISMS. Malek, I.; Bartos, J.; Simmer, J.; Prokes, B. (Ceskoslovenska Akademie Ved, Prague. Inst. of Microbiology). May 1971. 22p. (CONF-710901–240). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The production and technological parameters of cultivation of field crops and autotrophic organisms (AM, particularly algae and blue-green algae) are discussed. It is shown that Am are the most suitable producers of protein under conditions of sufficient electrical energy and insufficient supply of water and availability of agricultural soil. Such conditions will frequently be characteristic of the surroundings of atomic reactors producing electrical energy and desalinated water. A model is presented of an Algo-Agro-Industrial Complex (AAIC), which is balanced in its production and economy and which contains the production of protein bio-mass of Am as a substantial component of its structure. The individual production cycles are developed in some detail with orientative information on material and energy relations. The cultivation of algae in the AAIC will produce 160 tons protein per day on an area of 2,000 hectares, with a consumption of 200,000 tons of water and 4,000 MWh electrical energy. The feasibility of the project is documented by an economic analysis. 10 references. (auth)

54240 (A/CONF.49/P–590) DISTILLATION CYCLE AND THE COMBINATION OF PROCESSES WHICH ARE APPLICABLE TO LARGE-CAPACITY DESALINATION PLANTS. Balligand, P.; Huyghe, J.; Lauro, F.; Vignet, P. (Commissariat a l'Energie Atomique, Grenoble (France). Centre d'Etudes Nucleaires). Jun 1971. 15p. (CONF-710901–401). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design features of a 25,000 m^3/d fresh water unit, the multiplication of which can provide several hundreds of thousands m^3/d of desalted water, in a dual-purpose reactor are described. The units can operate independently to give the maximum flexibility and reliability. Two classical processes are combined multiple-effect with L. T. V. evaporators in the high temperature part of the unit, and multi-flash in the cold part. The multiple-effect process in the high temperature part allows heating sea water up to 135°C without important scaling risk; the multi-flash process in the cold part of the unit allows the use of concrete flash chambers with long tube condensers. The two parts of the unit are connected through a condenser heater, in which the vapor coming from the last L. T. V. effect condenses and heats the brine to be partly recycled into the multi-flash part of the unit. The addition of vapor compression systems to the high temperature effects allows for water distillation during off-peak hours. 12 references. (J.M.J.)

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Four fossil-fired flash distillation desalting units are in operation in Spain. Great experience has thus been obtained on this basic technology. Other complementary processes are also being studied and developed. This paper shows the main features of the units and the data derived from their operation. Two studies have been of the application of nuclear energy in desalination: one corresponds to the possibility of supplying the water needs of Barcelona; the other deals with an agro-industrial-touristic complex in the Almeria area. Updated results from these studies are presented which take into account the latest technical and economical information on both the nuclear and the desalting plant areas. The technical research and development programs conducted in Spain in the field of desalination are covered, as well as the future programs. 12 references. (auth)

54242 (TID–25603(Vol.2)) PUERTO RICO ENERGY CENTER STUDY. VOLUME II. (Burns and Roe, Inc., New York. Dow Chemical Co., Midland, Mich.). Jul 1970. 401p. Dep. NTIS.

The selection of a group of product modules for the planned agro-industrial complex in Puerto Rico is reviewed. Cost considerations and production efficiency are analyzed. Process heat applications and products considered include: chemical refinery, ethylene, ethylbenzene, cumene, ethylene glycol, propylene glycol, chlorine-caustic, ethylene dichloride, calcined coke, salt, magnesium hydroxide, hypochlorite, aluminum, hydrogen and ammonia, elemental phosphorus, phosphoric acid wet, magnesium, silicon metal, acetylene and vinyl chloride, fuel reprocessing, electric furnace iron, copper refining, and heavy water. (D.C.C.)

54243 METHODS OF OPERATING A NEUTRONIC REACTOR FOR PERFORMING GAS MIXTURES AND PRODUCING HEAT FOR MULTIPURPOSES. Miller, Edward Francis. Australian Patent 406,872. 19 Oct 1970.

A method of operating a neutronic reactor to simultaneously produce chemicals and generate heat for electric power production and water desalination is described. A neutronic reactor is cooled by passing a mixture of steam and a low boiling point hydrocarbon through its active core region where they react endothermically in the presence of a catalyst to form hydrogen and carbon monoxide. The hot reformed coolant gas which discharges from the reactor is converted to carbon dioxide and hydrogen before being passed through a heat-exchange boiler where it gives up heat to generate steam. The generated steam is used as a source for the gas reforming reaction within the reactor, for power generation, and for other purposes including water desalination using known distillation techniques. (auth) (Australia)

54244 ECONOMIC IMPLICATIONS OF NUCLEAR DESALINATION ON SEAWATER CHEMICAL RECOVERY. Yee, William C. (Oak Ridge National Lab., Tenn.). pp 121-32 of Third Symposium on Salt. Vol. 2. /Rau, Jon L. (ed.). Cleveland; Northern Ohio Geological Society, Inc. (1970).

From third international symposium on salt; Cleveland, Ohio (22 Apr 1969). See CONF-690456-(Vol.2).

An economic analysis is made of several possible salt complexes that recover chemicals from the brine discharge of a nuclear desalination plant producing 1000 mgd of fresh water with a seawater concentration factor of 2. Primary product recovery involves using solar energy at an arid desert site to separate out sequentially gypsum, salt, potash and magnesium chloride by fractional crystallization. Secondary product production involves using electrical and steam energy from the desalination plant to obtain cement and sulfuric acid, caustic soda and chlorine, and magnesium metal. Caustic soda and chlorine (as hydrochloric acid) can be used to remove bicarbonate ion from seawater prior to freshwater production. Land requirements for solar evaporation are reduced by the availability of evaporator effluent as a starting material. Starting with two times concentrated (2×) seawater there is a 40% reduction in acreage for the production of solar salt; with 3× seawater, a 60% reduction. At a 10% cost of money, the cost of salt production is reduced 15% and 25%, respectively; this assumes that the cost of the undeveloped land is negligible in comparison to the land improvement cost. The processing of 3% of the brine discharge (2× seawater concentration) from a 1000 mgd plant would consume 400 MW(e) of electric power, would require a capital investment of $95 million exclusive of the nuclear reactor station, would generate an income of $40 million and would have a break-even power cost of 5.3 mills/kwhr. Seawater treatment by the NaOH-HCl method would compete with the conventional sulfuric acid method of treatment at a power cost of 4 mills/kwhr when sulfur costs $50/ton or 2.5 mills/kwhr when sulfur costs $40/ton. A cost analysis is also given for a salt complex that utilizes 6% of the evaporator effluent from the nuclear desalination unit. 21 references. (auth)

54245 PROPOSAL FOR USING NUCLEAR REACTORS AS THERMAL RADIATION SOURCES. Almenas, K. (Univ. of Maryland, College Park). Nucl. Technol.; 10: No. 1, 22-32(Jan 1971).

The feasibility of using a nuclear reactor as a thermally radiating energy source is investigated. Design parameters including radiant energy transmission, attenuation of γ and neutron fluxes, criticality and heat-transfer are evaluated. Since conclusive experimental data for nuclear and high temperature heat transfer properties are lacking, a mathematical relationship between these limiting parameters is derived and the results are presented for the whole range over which they are likely to vary. For some of the designs considered the overlap within which a thermally radiating nuclear reactor can be considered feasible is sufficiently broad to cover all possible uncertainties. It is concluded therefore that a spherical W–UO_2 cermet shell reactor, operating at a surface temperature of 2800°K is, assuming a modest extrapolation of present day materials technology, indeed feasible. 54246 (A/CONF.49/P-178) RESULTS ACHIEVED IN ITALY IN THE FIELD OF NUCLEAR SHIP PROPULSION. Barabaschi, S.; Cavaggioni, M.; Franco, G. (Comitato Nazionale per l'Energia Nucleare, Rome (Italy)); Cesoni, G.; (and others) (FIAT, Turin (Italy). Sezione Energia Nucleare). May 1971. 19p. (CONF-710901-186). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The design and the related development activities which have been performed for the Italian nuclear ship propulsion steam supply system are described. The results regarding the following subjects are described: core nuclear design; core thermal design; core and core support structure mechanical design; plant dynamic behavior; plant systems and equipment; and shielding. (auth)

54247 (A/CONF.49/P-236) ON THE JAPANESE NUCLEAR SHIP "MUTSU". Sasaki, S. (Japan Nuclear Ship Development Agency, Tokyo). May 1971. 15p. (CONF-710901-93). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The N. S. Mutsu was designed based upon principles to construct it with domestic technology and to ensure safety. Not only Japanese regulations but also foreign rules were introduced into the design to have the ship go on foreign routes. The reactor is pressurized water with thermal output of 36 MW, giving the main shaft 10,000 h.p. Low enriched uranium oxide clad with stainless steel is used as fuel elements. Both equipment for emergency cooling and for removal of decay heat was carefully designed to double the safety. (auth)

54248 (A/CONF.49/P-376) FURTHER DEVELOPMENT AND ECONOMIC ASPECTS OF THE INTEGRATED PRESSURIZED WATER REACTOR ON THE BASIS OF THE EXPERIENCES GAINED WITH THE OTTO HAHN. Ulken, D.; Kolb,, M.; Schumacher, W.; (and others) (Gesellschaft fuer Kernenergieverwertung in Schiffbau und Schiffahrt m.b.H., Geesthacht (West Germany)). Apr 1 1971. 22p. (CONF-710901-129). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva Switzerland (6 Sep 1971).

A short description of the FDR integrated pressurized water reactor main design features such as the integration of the primary coolant pumps, the heat exchanger, and the "self-pressurization" into the pressure vessel is presented. The operating experiences of the FDR resulting from more than 10,000 operating hours and voyages of well over 100,000 nautical miles are reported, demonstrating its high reliability. Special emphasis is put on the self-controlling properties of the FDR which led to its fast maneuverability and its excellent behavior during violent motions of the ship in heavy weather. 18 references. (auth)

54249 (A/CONF.49/P-401) SHALL NUCLEAR SHIPS BE STRANDED BY LACK OF RELEVANT LEGAL PROVISIONS? Boulanger, Werner (Bundesministerium fuer Bildung und Wissenschaft, Bonn (West Germany)). Apr 1971. 12p. (CONF-710901-143). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In no field of modern technology has the legal basis been so well prepared internationally as for nuclear ships. Already in 1960, when only one civilian nuclear ship, the USSR "Lenin", was in operation, a special chapter on nuclear ships was included in the London Convention on Safety of Life at Sea. In May 1962, a Diplomatic Conference at Brussels agreed on a Convention on the Liability of Operators of Nuclear Ships. International agreements for the "Savannah" and "Otto Hahn" nuclear ships are described. International legal provisions for future nuclear ships are discussed. 21 references. (auth)

54250 (A/CONF.49/P-713) ROLE OF SMALL NUCLEAR POWER PLANTS AS SOURCES OF ENERGY IN REMOTE REGIONS OF THE USSR. Abramov, V. M.; Andreev, P. A.; Aleksenko, Yu. N.; Barskii, M. L.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 29p. (CONF-710901-418). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The waning enthusiasm regarding the prospects of small-capacity power engineering which was apparent in the middle of the sixties has recently given way to a growing interest in reactors of small and intermediate power; such reactors may be used for combined production of electric energy and heat or solely for heat production, to supply the domestic and industrial needs of isolated areas and areas undergoing development. Regions of this type are generally characterized by small populations and poor industrial development, by the scattering of power consumers and poor communications. All this explains why power for such regions is generally provided by local power systems or even by independent sources not connected to the power network. In addition, it is usually very difficult and expensive to supply fuel to these remote undeveloped areas. In remote areas with small populations, the construction of nuclear power sources offers advantages. Savings effected through the use of nuclear fuel may be sufficient to compensate for the high cost of construction. In recent years, thanks to experience gained in the design, construction and operation of atomic power stations it has become possible to regard the small-capacity power solution as an alternative means of providing energy for isolated districts; this involves the use of nuclear reactors, the technological and production problems of which have already been mastered. A satisfactory solution to the problem of developing small-capacity power production is particularly important in the Soviet Union since the areas in the far north of the USSR are unique as regards their size, the urgency of their power requirements and hence the scale on which atomic energy can be used. 13 references. (auth)

54251 (A/CONF.49/P-722) NEW ATOMIC ICEBREAKER "LENIN". Mitenkov, F. M.; Movshevich, Z. M.; Pologikh, B. G.; Sledzyuk, A. K.; (and others) (State Committee on the Utilization

XUM

of Atomic Energy, USSR). Sep 1971. 13p. (In Russian). (CONF-710901-514). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Operation of the nuclear-powered icebreaker "Lenin" showed distinct advantages of this type with its fuel reserve as compared with a unit operating on organic fuel. Reliable and stable operation of the Lenin's reactors was noted despite pitching, vibration and shock associated with movement through the ice. A new steam-producing unit consists of two identical automatic units, each of which includes a reactor, four steam generators, four circulating pumps in the primary loop, a volume compensator, and associated equipment. Maintenance of the new units has been vastly improved. The water of the inner cooling loop circulates through a biologically shielded reservoir and possesses low activity. More recent design of the installation has made it possible to reduce the volume of liquid and solid wastes handled during maintenance. The reactor core consists of 241 cassettes located in the vertices of a triangular lattice, each cassette being composed of a bundle of rod-shaped zirconium alloy-clad fuel elements. Boron carbide control rods are operated within special zirconium guide tubes. Sixteen absorber rods form an emergency scram system. The weight of an entire steam producing unit is 2,300 metric tons, and is rated at 44,000 horse power. The operating time at full power without recharging is 11,000 to 16,000 hr. The temperature of the primary coolant at normal power level is 273°C entering the core, and 318°C at the exit ports. Operating accomplishments during Artic excursions are summarized. (KSW)

54252 INVESTIGATIONS ON THE PRIMARY REACTOR SHIELDING OF THE NUCLEAR SHIP OTTO HAHN. Fiebig, R.; Frisius, F.; Hackbarth, H.; Richter, G. (Gesellschaft fuer Kernenergieverwertung in Schiffbau und Schiffahrt mbH., Hamburg). Atomkernenergie; 18: No. 1, 71-8(Aug 1971). (In German).

For a comparison to the shielding-calculations results the radiation field was measured within the primary shield of the reactor of the nuclear ship "Otto Hahn." The results of the second part of the investigations concerning the radiation intensities within the shield tank outside the pressure vessel are presented. The measured fluxes and dose rates are compared mainly to the results of the removal diffusion code Restrab. In agreement to the statement of the first part of the investigations it is found that the program is overestimating the high energy part of the fast neutron spectrum but giving a reasonable accuracy for the total fast neutron flux density. For the calculation of the γ-dose rates the lateral distribution of the capture γ-radiation sources is taken into account by a reasonable approximation. By this means a very good agreement with the measured values is obtained. 6 references. (auth)

54253 (DP-1251) ANALYSIS OF XENON OSCILLATION EXPERIMENTS. Vandervelde, V. D. (Du Pont de Nemours (E. I.) and Co., Aiken, S. C. Savannah River Lab.). Aug 1971. Contract AT(07-2)-1. 31p. Dep. NTIS.

Time-dependent, three-dimensional neutron flux calculations have been performed to compare with experimental results of axial xenon oscillations in a Savannah River production reactor. The results of the calculations predict the oscillation behavior for these experiments that were least affected by other driving forces, such as control rod motion. MAPLE SYRUP and other similar codes are applicable for predicting the threshold for and the period of xenon oscillations. (8 references) (auth)

54254 INSTRUMENTATION PERFORMANCE AT THE N REACTOR. Flickinger, J. K. (Douglas United Nuclear, Richland, Wash.). pp 675.1-6 of Proceedings of the 24th Annual ISA Conference. Pittsburgh; Instrument Society of America (1969).

From twenty-fourth annual conference of Instrument Society of America; Houston, Tex. (27 Oct 1969). See CONF-691004-(Pt.4).

A brief description of N Reactor's major plant instrumentation systems is presented and a few of the measurement and control problems, their origin, and resolution are discussed. Measurement and control of water level in 12 large steam generators, 16 dump condensers and a large pressurizer vessel are discussed. Sensor problem in measurement of reactor fuel channel outlet coolant temperatures is also discussed. (auth)

Reactor Theory

54255 (A/CONF.49/P-351) THEORETICAL METHODS FOR CORE PARAMETERS DETERMINATION IN URANIUM-PLUTONIUM LATTICES. Pop-Jordanov, J.; Bosevski, T.: Matausek, M.; (and others) (Institut za Nuklearne Nauk Boris Kidric, Belgrade (Yugoslavia)). May 1971. 12p. (CONF-710901-118). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

A comprehensive review is presented of the methods for core parameters determination in uranium-plutonium lattices developed in Yugoslavia during the last few years. The main feature of these approaches is the tendency to proceed with analytical treatment as far as possible and then to include suitable numerical improvements. Pursuing this philosophy, which is generally overlooked when using large computers, fast and reasonably accurate methods were obtained. The methods contain original developments for adequate treatment of neutron spectra and cell geometry effects, especially suitable for U-Pu systems. In particular, the procedures using the energy dependent boundary conditions, the discrete energy representation, the improved collision probabilities and the Green function slowing down solutions were developed and applied. A number of results obtained by the developed methods are presented and compared with the experiments and other existing methods. 29 references. (auth)

54256 (CONF-701002-, pp 12-24) APPLICATION OF NUCLEAR STANDARDS IN THE DESIGN AND EVALUATION OF NUCLEAR REACTORS. Schmidt, Josef Johannes (International Atomic Energy Agency, Vienna (Austria)).

From Symposium on neutron standards and flux normalization; Argonne, Ill. (21 Oct 1970).

In Neutron standards and flux normalization.

The way standard neutron cross sections and data enter into reactor-design calculations is discussed, and the dependence of fast reactor design parameters, such as effective multiplication factor, breeding ratio, Doppler coefficient, and others, on standard data is investigated. From this, $\bar{\nu}_{sp}(^{252}Cf)$ and the fast ^{235}U fission cross sections are identified as particularly important standards. Furthermore, the need for reliable primary standards and for using mutually consistent standard data in reactor calculations is underlined. (45 references) (auth)

54257 OPTIMAL CONTROL OF NUCLEAR REACTOR DEPLETION. Wade, David C.; Terney, William B. (Knolls Atomic Power Lab., Schenectady, N. Y.). Nucl. Sci. Eng.; 45: No. 2, 199-217(Aug 1971).

The design and operation of a nuclear reactor are posed as optimal control problems in terms of a generalized set of design objectives and a generalized control that influences the nodal material bucklings in a one-group spatially nodalized reactor model. The necessary conditions for optimality are derived by use of the Pontryagin Maximum Principle. An iterative algorithm is worked out for the resulting equations. A useful property of this algorithm is that each iteration produces an improved, consistent reactor life study for the assumed control. Therefore, the iterations may be terminated at any suboptimal yet acceptable stage. Furthermore, the designer may intervene in the iterative convergence toward the optimal control to exercise judgment and intuition not readily included in an algorithm. The approach is verified by solving a number of sample problems with the test code OPTIM. The results of these problems show that the method works and quickly gives significant improvement in the design. (auth)

54258 CONSIDERATION OF EIGENVALUE SENSITIVITY FOR A REACTOR SYSTEM. Kando, Hisashi (Musashino Electrical Communication Lab., Japan); Iwazumi, Tetsuo; Hattori, Yoshio. J. Nucl. Sci. Technol. (Tokyo); 8: No. 7, 363-70(Jul 1971).

If there is a high eigenvalue sensitivity in a nuclear reactor system to variations of the system parameters, the reactor system will be in danger of excursion. A state variable feedback system that reduces the representative eigenvalue sensitivity of the system to simultaneous deviations of the system parameters is derived. The variations of the output sensitivity and of the transient response of the system due to the addition of the feedback system thus derived are analyzed. 20 references. (auth)

54259 ENRICHED URANIUM METAL CRITICALITY CALCULATIONS. Hunt, D. C.; Coonfield, D. C. (Dow Chemical Co., Golden, Colo.). Nucl. Technol.; 12: No. 3, 260-8(Nov 1971).

The effects of varying energy group cross section sets and the space-angle mesh must be understood to evaluate critical parameters computed by the discrete-ordinates S_n method. These effects are investigated using critical mass calculations on several enriched uranium metal systems. Based on the variation of critical mass with refinement of the space-angle mesh, mesh specification criteria are deduced. The most significant criteria established for these systems is that S_n ($n \geq 16$) calculations are required. Next, the literature on fast ($E_n \geq 3$ keV) ^{235}U and ^{238}U neutron cross sections is reviewed and a seven-group cross section set in this energy range is developed. This fast set is found to reproduce to within 0.5% the measured critical masses of several fast uranium systems. Finally, group cross section sets in the resolved resonance energy ranges of ^{235}U and ^{238}U are developed according to several energy self-shielding models. A recommended set is obtained by interpolation between two of these models. This set yields critical masses in good agreement with observed critical masses for several intermediate energy metal critical systems with several ^{235}U enrichments. 26 references. (auth)

54260 PRACTICAL APPROACH TO NUCLEAR CRITICALITY SAFETY. II. CRITIQUE OF A MODEL. Lewis, William Bradley. Nucl. Technol.; 12: No. 3, 276-80(Nov 1971).

A model is fitted to experimental data by means of a normalizing factor, $\lambda(x)$, over a range of material compositions, $x_0 < x < x_1$. The fitting involves certain modifications of data points. The total discrepancy of the modifications is expressed as $\delta(x)$. To an error no greater than $\delta(x)$, a model agrees with experiment. Fitting was made to two-group diffusion theory, but the method has general applicability. (auth)

54261 (A/CONF.49/P-330) NPY-COOPERATION IN REACTOR PHYSICS. Zelazny, R. (Institute of Nuclear Research, Swierk (Poland)). May 1971. 14p. (CONF-710901-203). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The main organizational concepts of the cooperation in reactor physics among Norway, Poland, Yugoslavia and IAEA, called shortly NPY-Project, established in 1964 and concluded this year are described. The scientific objectives which were the goals of this 7 years cooperation are discussed in detail. On the basis of the output of this cooperation the high-lights of the scientific, technical and organizational achievements are presented. Among them the merits of three international advanced summer schools and many seminars organized in the framework of this cooperation are discussed. Physical problems of particular interest for three cooperating parties and for the rest of the scientific community of IAEA state members, which were attacked and solved within the framework of NPY-Project, are formulated and elucidated. (auth)

54262 (IAE-1981) APPLICATION OF THE ALBEDO METHOD TO THE DESIGN AND CALCULATION OF BUNDLES OF RODS. Maiorov, L. V.; Trukhanov, G. Ya.; Frank-Kamenetskii, A. D. (Institut Atomnoi Energii, Moscow (USSR)). 1970. 40p. (In Russian). Dep. NTIS (U. S. Sales Only).

The effectiveness is analyzed of a method for the design and calculation of multiple-rod moderator systems in which each of the micro-cells constituting the system is regarded as a black box and characterized by a set of reflection and transmission coefficients. The Monte Carlo method is used to calculate these coefficients. Various approximations are proposed within the framework of this method, and specific examples are presented to determine their accuracy by comparing them with the direct calculation of the entire system by the Monte Carlo method. All the calculations were performed on an M-220 computer. 3 references. (JPRS)

54263 (ITEF-817) XENON TRANSITION PROCESSES IN NUCLEAR REACTORS. Rudik, A. P. (Gosudarstvennyi Komitet po Ispol'zovaniyu Atomnoi Energii SSSR, Moscow. Institut Teoreticheskoi i Eksperimental'noi Fiziki). 1970. 91p. (In Russian). Dep. NTIS (U. S. Sales Only).

Xenon transition processes are described both mathematically and in terms of the loss of thermal neutrons as a result of the large capture cross section of ^{135}Xe. The problems associated with a shift of reactor power level to another are directly related to this condition. The optimization of xenon transition processes, its mathematical treatment, Pontryagin's principle, the optimum trajectory, and boundary conditions at the terminus of the transition process are discussed. The significance of the time of the transition process and the role of spatial non-uniformity are considered. Xenon fluctuation, the stationary state, and reactor shutdown are also discussed. (K.S.W.)

54264 (JAERI-Memo-4352) EFFECTS OF SPACE DEPENDENCY ON REACTOR KINETIC ANALYSIS. Takeuchi, Eiji; Hatta, Hiroshi; Ishikawa, Michio (Japan Atomic Energy Research Inst., Tokyo). Feb 1971. 35p. (In Japanese). Dep. NTIS (U. S. Sales Only).

Effects of space distribution of power and feedback reactivity weighting factors on reactor kinetics are investigated, using computer code EUREKA (nuclear thermal hydrodynamic point kinetic code) and EUREKA-SPACE-TEMP (modified EUREKA for space kinetics by time variable input). In power transient induced by ramp reactivity insertion, such as control rod withdrawal accident in BWR, power distribution and feedback reactivity weighting factors in core change each second with movement of the control rod, and as a consequence the induced transient power is influenced. 7 references. (auth)

54265 (RPI-328-231) PRINCIPLE OF INFORMATION FLOW FOR THE TREATMENT OF DISCONTINUITIES IN SYNTHESIS TECHNIQUES. Becker, Martin (Rensselaer Polytechnic Inst., Troy, N. Y. Dept. of Nuclear Science). [1971]. Contract AT-(30-1)-328. 22p. Dep. NTIS.

Discontinuous trial function methods are useful in various nuclear engineering applications. One of the problems associated with such methods is the unambiguous specification of interface conditions. The application of the asymmetric discontinuity approach to both initial-value and boundary-value problems is described. (12 references) (D.C.C.)

54266 ANALYTIC SOLUTION TO THE FLAT FLUX PROBLEM. Terney, William B. (Knolls Atomic Power Lab., Schenectady, N. Y.). Nucl. Sci. Eng.; 45: No. 2, 226-30(Aug 1971).

Optimal control theory is applied to select the k_∞ distribution in a reactor core so as to minimize the neutron flux deviation from an average value while k_∞ is restricted by upper and lower bounds. (H.D.R.)

54267 DEGENERATE KERNEL TECHNIQUE AND NEUTRON THERMALIZATION CALCULATIONS IN ASYMPTOTIC REACTOR THEORY. Turinsky, Paul J.; Duderstadt, James J. (Univ. of Michigan, Ann Arbor). Nucl. Sci. Eng.; 45: No. 2, 156-66(Aug 1971).

The substitution of a K-term degenerate kernel expansion (DKE) for the true scattering kernel in the inscattering term for neutron thermalization calculations is shown to recast the solution of the original speed dependent Fredholm integral operator equation into that of a speed-independent $K \times K$ matrix operator equation, which is well suited for numerical calculations. A DKE is constructed that rapidly converges pointwise to the true scattering kernel, preserves the total scattering cross section, and contains the correct speed structure to yield accurate solutions in neutron thermalization calculations. This DKE was employed in the numerical solution of the steady-state, time-moment, time-eigenvalue, and time-dependent neutron thermalization problems within the framework of asymptotic reactor theory. A detailed numerical investigation of the DKE approximation to the free proton gas and polyethylene scattering kernels indicated that accuracy consistent with a 32 discrete speed mesh point treatment was obtained by employing a 10-term DKE. This implies that the degenerate kernel technique reduces the size of the matrix operator equations to be solved to $\sim\frac{1}{3}$ the size required by a discrete approach, hence implying considerable computer cost reductions in neutron thermalization calculations. 27 references. (auth)

54268 APPLICATIONS OF THE DEGENERATE KERNEL TECHNIQUE TO THERMAL NEUTRON SPECTRA CALCULATIONS. Turinsky, Paul J.; Duderstadt, James J. (Univ. of Michigan, Ann Arbor). Nucl. Sci. Eng.; 45: No. 2, 167-81(Aug 1971).

Several applications of the degenerate kernel technique (DKT) for treating the speed dependence in steady-state neutron thermalization calculations are studied both analytically and computationally. An iterative improvement technique is developed for fine thermal spectrum calculations. It is shown that the size of the degenerate kernel expansion (DKE) required to obtain consistent accuracy with a given number of discrete speed mesh points can be decoupled from the speed mesh structure by such a technique. This decoupling allows a more efficient numerical solution and hence a savings in computation time. The solution of the integral transport equation within the isotropic scattering approximation is also studied within the DKT framework. The DKT formalism allows a considerable reduction in the dimensionality of the numerical representation of this problem, hence implying reduced computation costs. Finally, the DKE was employed within the invariant-imbedding transport formalism to calculate the reflection (R) and transmission (T) probabilities for thermal neutrons incident upon a slab. Once again the DKT leads to a very considerable reduction in computation time and storage when compared with

XUM

multigroup approaches. Numerical methods for solving the invariant imbedding-DKT equations for R and T were developed and computationally verified as both accurate and efficient. 20 references. (auth)

54269 SOLUTION OF THE NEUTRON DIFFUSION EQUATION BY SPACE–ENERGY FACTORIZATION. **Stacey, Weston M. Jr.** (Argonne National Lab., Ill.). Nucl. Sci. Eng.; 45: No. 2, 189-98(Aug 1971).

A method is described for solving the energy-dependent neutron diffusion equation by first factorizing the flux into a spatial shape function with weak energy dependence and a spectral function, then developing coupled equations for these two functions which must be solved iteratively. Numerical procedures used to solve these equations combine internally, and in a self-consistent fashion, a fine-group spectrum calculation with a broad-group spatial calculation. Numerical examples, based on representative fast-reactor models, are presented to demonstrate that this space-energy factorization method constitutes an accurate and economical approximation. (auth)

54270 P_1 BLACKNESS THEORY FOR INFINITE CYLINDERS. **Mendelson, M. R.; Storm, M. L.** (Knolls Atomic Power Lab., Schenectady, N. Y.). Contract W-31-109-Eng-52. Nucl. Sci. Eng.; 45: No. 2, 182-8(Aug 1971).

P_1 blackness theory for infinite cylinders is developed in a manner analogous to the case of infinite slabs by defining effective diffusion theory cross sections in the "black" region which reproduce the desired boundary condition at the surface. Results of numerical analysis of a model problem are presented and the relative improvement of P_1 blackness theory over normal P_1 theory is compared with similar results for infinite slabs. (auth)

54271 CALCULATIONS OF THERMAL-NEUTRON GROUP CONSTANTS DURING BURNUP OF LIGHT-WATER-MODERATED LATTICES. **Hron, M.** (Institutt for Atomenergi, Kjeller, Norway). Nucl. Sci. Eng.; 45: No. 2, 230-2(Aug 1971).

54272 EFFECTIVE DIFFUSION COEFFICIENTS IN HETEROGENEOUS MEDIA. PART I. GENERAL THEORY. **Williams, M. M. R.** (Queen Mary Coll., London). Atomkernenergie; 18: No. 1, 31-50(Aug 1971).

Two complementary methods of calculating cell-averaged neutron diffusion coefficients in heterogeneous systems are discussed. One is based upon integral transport theory and the other on the P_N-approximation; the results are used to show the common ancestry of the many, piecemeal treatments of neutron streaming that have appeared over the years. On the basis of image pile theory for an axially uniform medium, exact expressions are derived for the axial and radial diffusion coefficients as functions of energy. A number of limiting cases for slabs and cylindricalized cells are studied, and a working procedure for making cell calculations in the diffusion approximation is discussed in detail. 29 references. (auth)

54273 TRANSPORT THEORETICAL MULTIGROUP SLOWING-DOWN. **Leuthaeuser, Klaus-Dieter** (Univ., Kiel). Atomkernenergie; 18: No. 1, 11-19(Aug 1971).

A general formalism for treating multigroup slowing-down transport equations in nonfissionable media with plane geometry is presented. The method is based on particular solutions for each inhomogeneous group equation. These solutions have to be completed by the well-known set of eigenfunctions of the source-free transport equation such that boundary and symmetry conditions are satisfied. As an example, the infinite medium Green's function problem with plane source in the first group is analyzed in detail for isotropic and linearly anisotropic scattering kernels. Explicit results are obtained for the first two groups. Solutions for higher groups are constructed successively. It is shown in general how to proceed from group i to group $i + 1$. 24 references. (auth)

54274 SPACE–TIME REACTOR KINETICS FOR HETEROGENEOUS REACTOR STRUCTURE. **Raisic, Nenad** (Boris Kidric Inst. of Nuclear Sciences, Vinca, Yugoslavia). Bull. Boris Kidric Inst. Nucl. Sci., Nucl. Eng.; 21: No. 1, 1-10(Jan 1970).

The reactor kinetic equations have been formulated on the basis of the Feinberg–Galanin heterogeneous reactor theory. A set of simultaneous differential equations is obtained in this way, each equation describing the time behavior of the neutron flux at the position of a single fuel element in a heterogeneous reactor structure. The solution for space-time distribution of the neutron flux is given for the step change in reactivity as well as for the pulsed neutron source. On the same principles the zero power reactor transfer function has been derived. 8 references. (auth)

54275 KINETIC DISTORTION EFFECT IN PULSED-NEUTRON REACTIVITY MEASUREMENTS. **El-Zeftawy, Medhat Mahmoud.** **Berkeley, Calif.; Univ. of California (1970). 135p. University Microfilms Order No. 71-15,758.**

Thesis.

A theoretical and experimental investigation was undertaken of the kinetic distortion effect in the TRIGA-Mark-III reactor. The kinetic distortion (or space-dependent) correction factor in pulsed-neutron reactivity measurements results from a difference in shape between the fundamental prompt and delayed modes in the core and in the reflector. The two-dimensional reactor code EXTERMINATOR-2 was used in the (r,θ)-geometry to describe the TRIGA-Mark III with an asymmetric reflector. Measurements were made of the prompt and delayed response of the system with the aid of a pulsed-neutron generator placed external to the core. Calculations indicate that the kinetic distortion effect is relatively small in water-reflected reactors, even in the far subcritical case, and the measurements are in qualitative agreement. It is concluded that standard pulsed-neutron methods yield a less spatially dependent reactivity in the TRIGA-Mark III if a relatively small kinetic distortion correction factor is applied. (Diss. Abstr. Int., B)

54276 NEW CALCULATIONAL METHOD FOR SPACE–ENERGY–ANGULAR DEPENDENT REACTOR KINETICS. **Dodds, Harold Lebron Jr.** **Knoxville, Tenn.; Univ. of Tennessee (1970). 97p. University Microfilms Order No. 71-17,726.**

Thesis.

In order to aid the interpretation of kinetic experiments in nuclear reactors, a new calculational method for solving the zero-power reactor kinetic equations in the frequency domain was developed. The algorithm that was developed is valid for either multigroup diffusion theory or discrete ordinate transport theory in one-dimensional slab geometry. The numerical technique that is used employs a combined transfer-scattering (or response) matrix concept which includes spatially distributed extraneous sources. The technique is explicitly designed to control truncation and round-off error problems. Results calculated using the new technique were compared with experimental results for a D_2O moderated, natural-uranium fueled, subcritical assembly. Good agreement with experiment was achieved. A comparison with results calculated independently using a more conventional calculational technique was also performed. Excellent agreement was achieved in this comparison. Finally, in order to demonstrate its usefulness, the method was utilized in a theoretical investigation into the validity of using the point model to describe the subcritical kinetics of a symmetrically reflected, fast reactor. The results of this theoretical study indicated that, in general, the point model was not valid for interpreting experimental results obtained with a detector located in the reflector and was only approximately valid for a detector located in the center of the core. (Diss. Abstr. Int., B)

54277 NEUTRON WAVES IN REFLECTED REACTORS. **Shani, Gad.** **Ithaca, N. Y.; Cornell Univ. (1970). 223p. University Microfilms Order No. 71-14,594.**

Thesis.

Neutron wave propagation and reflection at the boundary between a water moderated multiplying region and a pure water region were investigated experimentally and compared to calculated results. The neutron waves were produced by two methods; a 5¢ reactivity poison oscillator and a ^{252}Cf neutron source surrounded by a thermalization box and a rotating shutter. Neutron waves propagated across the slab core and were transmitted and reflected by the core-reflector interface. The amplitudes and phases of these waves were measured as a function of position at frequencies from 1 cps to 100 cps. It was found that one group diffusion theory is not adequate to describe neutron wave phenomena in water moderated assemblies. Using two group diffusion theory with an oscillating source, the neutron density is given adequately by the one dimensional form for each group and region: $F_1(X) + F_2(X)\, e^{i\omega t}$. The complex neutron density, $F_2(X)$, is given by an analytic solution for the two region approximation when the decay of the delayed neutron precursors is ignored. A four region, two group, time dependent diffusion theory numerical solution including delayed neutrons also gives good agreement with the experimental results. (Diss. Abstr. Int., B)

54278 DETECTION EFFICIENCY DEPENDENCE OF SUBCRITICALITY MEASUREMENTS BY THE POLARITY SPECTRAL COHERENCE METHOD. **Ackermann, N. J. Jr.; Buhl, A. R.** (Oak Ridge National Lab., Tenn.). Nucl. Technol.; 12: No. 3, 320-3(Nov 1971).

The polarity spectral coherence method (PSCM) of Seifritz has been proposed for measuring the subcritical reactivity of a nuclear reactor. However, due to the nature of the PSCM measurement technique, a systematic error in the subcritical reactivity measurement may occur because of unexpected changes in the neutron detection efficiency. This error is assessed through the development of the appropriate equations, and a hypothetical measurement in a typical liquid-metal fast breeder reactor is numerically evaluated. The results demonstrate that the PSCM is subject to systematic errors which can be quite serious and which must be considered when the PSCM technique is used. 9 references. (auth)

54280 (A/CONF.49/P-310) DEVELOPMENTS IN PULSED NEUTRON SOURCE STUDIES OF HETEROGENEOUS MODERATOR SYSTEMS. Grosshoeg, G.; Sjoestrand, N. J. (Chalmers Tekniska Hogskola, Goteborg (Sweden). Institutionen for Reaktorfysik). May 1971. 12p. (CONF-710901-269). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The conditions for obtaining discrete decay constants in pulsed source experiments on homogeneous and heterogeneous moderator systems are discussed. In heterogeneous systems the neutron flight time in cavities and channels will cause a large influence of the continuum modes on the die away of the neutron population. This makes the interpretation of pulsed experiments difficult, but it also opens up new possibilities for experimental studies of a continuum region, e.g., by using hydrogeneous systems. The influence of the continuum can be varied through the introduction of absorbers in the body under study, and by complete elimination the results from measurements on heterogeneous systems can be evaluated as in the classical pulsed method. A determination of the interaction parameter between two discs shows that the absorber method can be applied to problems of great practical importance. The experimental work performed so far is reviewed, and possible future developments are discussed. 40 references. (auth)

54281 (A/CONF.49/P-295) STUDIES OF FUEL-CLAD MECHANICAL INTERACTION AND THE RESULTING INTERACTION FAILURE MECHANISM. Rolstad, E.; Knudsen, K. D. (Institutt for Atomenergi, Halden (Norway). OECD Halden Reaktor Prosjekt). Jun 1971. 18p. (CONF-710901-471). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Experiments using differential transformer elongation detectors to measure the fuel and cladding length changes of Zircaloy-2 clad UO_2 fuel rods during irradiation support the following explanation: When a fuel rod is brought to power for the first time, the fuel pellets will change shape from flat ended cylindrical bodies to hourglass-shaped bodies with convex ends. Radial cracks will develop and affect the pellet shape. The axial and radial thermal distortion of the crack pieces make their peripheral corners interact first and hardest with the cladding when power is increased. This local application of the interaction forces results in axial and tangential strain concentrations at the pellet to pellet interfaces. Each of these local strains is very small, but they add up to give a measurable increase in the cladding length and in the clad diameter ("bambooridges") near the pellet interfaces. (auth)

54282 (A/CONF.49/P-314) POWER INCREASES AND FUEL DEFECTION. Mogard, H. (Aktiebolaget Atomenergi, Studsvik (Sweden)); Aas, S. (Institutt for Atomenergi, Kjeller (Norway)); Junkrans, S. (ASEA-ATOM, Vasteras (Sweden)). Jun 1971. 15p. (CONF-710901-271). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

In order to establish the safe operating range for power increments a series of fuel irradiation experiments were carried out with fuel rods of standard design and material selection at various burnup levels in the range of 5,000–30,000 MWd/t U. The final power raising tests were carried out on single fuel rods in the pressurized water loops of R2 at Studsvik, while the pre-irradiations were performed in the experimental reactors of Agesta and Halden. A set of defect-development curves is presented, indicating the safe operating limits for incremental power rises at fast and moderate rate of increase. The clad cracking mechanism is discussed in terms of, e.g., design and materials parameters, and related to the irradiation history. Suggestions for improvements of fuel performance from this failure aspect are put forward. 16 references. (auth)

54283 (A/CONF.49/P-315) SOME IRRADIATION STUDIES OF FUEL CLAD INTERACTION AND CLAD CRACKING. Djurle, S.; Lysell, G.; Mogard, H. (Aktiebolaget Atomenergi, Studsvik (Sweden)). May 1971. 15p. (CONF-710901-272). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Summaries are given of a fuel irradiation experiment (IFA-21) which failed after irradiation to a maximum burnup of about 12,000 MWd/t-U in the Halden Boiling Water Reactor, and of irradiation experiments performed in the R2 reactor at Studsvik. These latter experiments were aimed at reproducing the ridge deformation and cracking which was experienced for IFA-21, and to clarify the influence of rod parameters, increased heat rating after embrittlement of the cladding, and rod power cycling. After successful irradiation to a burnup of about 11,000 MWd/t-U with 5,800 power cycles for one 4-rod bundle and only the normal shut-down cycles for another identical bundle, the rods were examined non-destructively. Some of the rods from these two bundles were combined to form a new bundle which was brought to a linear heat rating in excess of that which the rods had experienced earlier. This caused the circumferential ridges to increase and led to failure of one of the rods with cracking at the ridge positions in the same manner as for the test assembly IFA-21. The failure mechanism of the fuel rods is discussed in brief with reference to a metallographic study of the cracked clad regions. (auth)

54284 (A/CONF.49/P-431) PHYSICAL AND TECHNICAL PRINCIPLES OF CREATING ATOMIC POWER STATIONS WITH FAST NEUTRON GAS REACTORS COOLED BY DISSOCIATING N_2O_4. Krasin, A. K.; Nesterenko, V. B.; Sinev, N. M.; Slizov, V. P.; (and others) (State Atomic Energy Committee, USSR). Jul 1971. 23p. (CONF-710901-379). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Theoretical and experimental investigations have revealed a number of important properties of dissociating gases. Physicochemical properties of dissociating N_2O_4 permit an organized condensation cycle with the following lower condensation parameters: pressure range of 1.4 to 1.6 abs. atm., temperature range of 27 to 35°C, and a high thermodynamic efficiency due to inversive chemical reactions participating in heat generation. The condensation cycle parameters, gas density values and heat drop values allow to considerably increase the power at one exhaust in N_2O_4 turbines and to design single-shaft turbines with a metal capacity several times lower than that of a steam turbine. 11 references. (auth)

54285 (A/CONF.49/P-496) TECHNICAL PROBLEMS AND ECONOMIC PROSPECTS ARISING FROM THE ALTERNATIVE METHODS OF USING PLUTONIUM IN THERMAL AND FAST BREEDER REACTOR PROGRAMMES. Marsham, T. N.; Bainbridge, G. R.; Fell, J.; Iliffe, C. E.; (and others) (United Kingdom Atomic Energy Authority, Risley (England). Reactor Group). May 1971. 13p. (CONF-710901-220). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The methods available for calculating fuel requirements for recycling plutonium in thermal reactors are first described, comments are given on their likely accuracy and results presented from calculations on plutonium flows and isotopic concentration effects for a range of gas-cooled and water-cooled thermal reactors. The general conclusions are discussed and related to other practical aspects of the use of plutonium in thermal reactors, including fuel fabrication and reprocessing requirements, reactor design, operational and fuel management problems. Similar information is then presented on the use of plutonium in sodium cooled fast reactors for metal oxide and carbide fuels. The case is considered for initiating fast reactors with ^{235}U. Conclu-

XUM

sions are drawn about the effects of plutonium isotopic compositions on the initial core and feed requirements for different reactor systems and the re-use of rejected material. The logistic and economic consequences of recycling plutonium and its value in thermal or fast reactors are assessed. (auth)

54286 (A/CONF.49/P-704) RADIATION RESISTANCE OF ABSORBER MATERIALS FOR NUCLEAR REACTORS. Goltsev, V. P.; Guseva, T. M.; Ponomarenko, V. B.; Nevrotin, V. K.; (and others) (State Atomic Energy Committee, USSR). Jun 1971. 22p. (CONF-710901-480). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The kinetics of gas evolution is studied: diffusion coefficients for helium in boron materials are determined and gas evolution mechanism under irradiation is suggested. The dependence of swelling upon boron-10 burnup, temperature and annealing time is presented. A diagram of radiation swelling of (n, α) absorbers is proposed as a new characteristic of radiation damage. Some recommendations for the use of studied materials in control systems of nuclear reactors power plants are given. 4 references. (auth)

54287 (BNWL-1608) STUDY OF THE REACTIVITY EFFECTS OF FINITE PuO_2 PARTICLE SIZES IN MIXED PuO_2–UO_2 NUCLEAR FUELS. Vaughn, A. D. (Battelle Pacific Northwest Labs., Richland, Wash.). Aug 1971. Contract AT(45-1)-1830. 104p. Dep. NTIS.

The infinite medium neutron multiplication factors of separate UO_2–2% PuO_2 (8% ^{240}Pu) fuel rods containing plutonium oxide ranging between a solid solution state to particle sizes of 330 microns respectively have been measured in the PCTR. Due to the non-homogeneity of the experimental fuel rods, a special set of aluminum foils containing plutonium oxide particles were utilized to obtain the relative neutron production and absorption rates in the experimental fuel assemblies. The reactivity worths of the mixed oxide rods, measured in the PCTR, and the relative absorption rates determined from the foil data indicated the fuel rods were not uniformly enriched. Therefore, the rods were analyzed for enrichment content by gamma scanning measurements which were normalized to chemistry samples to derive corrected plutonium content in each test rod. A number of theoretical calculations were performed in conjunction with the experimental measurements to aid in the analysis and interpretation of the experimental results. These calculations were repeated for water and graphite lattices other than the experimental model to derive the particle effects that can be expected in different reactor types. A discussion of the theoretical results is presented. 30 references. (auth)

54288 (GEAP-13703) EFFECTIVE THERMAL CONDUCTIVITY OF PuO_2–UO_2 AT HIGH BURNUPS. Craig, C. N.; Krankota, J. L.; Baily, W. E. (General Electric Co., Sunnyvale, Calif. Breeder Reactor Development Operation). Mar 1971. Contract AT(04-3)-189. 49p. Dep. NTIS.

The integral conductivity of $(Pu_{0.2}U_{0.8})O_{2.00}$ from 1200°C to the temperature of melting was determined by re-irradiating a fuel pin at a peak power of 31 kW/ft following a steady-state irradiation to a burnup of 75,000 MWd/Te in the reflector of the Materials Test Reactor (MTR). The final high power irradiation was carried out in the VH-4, "hydraulic rabbit", facility of the MTR. The $\int k d\theta$ calculated from the fuel surface temperature (1200°C) to melting was 42.8 ± 6.4 W/cm. Comparison of this value with data on the $\int k d\theta$ to melting of $(Pu_{0.2}U_{0.8})O_{2.00}$ irradiated to low burnups showed that within the experimental error of the experiments no significant change in the $\int_{1200}^{T_m} k d\theta$ of $(Pu_{0.2}U_{0.8})O_{2.00}$ occurred at a burnup of 75,000 MWd/Te. 6 references. 54289 (JPRS-53800, pp 205-14) FORMING THE STRUCTURE OF THE CORE OF FUEL ELEMENTS OF VIBROPACKED POWDERED URANIUM DIOXIDE IN THE PROCESS OF IRRADIATION. Lebedev, I. G.; Samsonov, B. V.; Spiridonov, Yu. G.; Tsykanov, V. A. Translated from pp 171-8 of Radiatsionnaya Fizika Tverdogo Tela i Reaktornoye Materialovedeniye, Atomizdat, Moscow, 1970.

Short-term irradiations of UO_2 powder were carried out in the SM-2 reactor to determine the time and conditions for forming the core of UO_2. The thermophysical characteristics (temperature distribution, thermal conductivity, density, integrals of thermal conductivity) were determined during the irradiation. The different zones in the cross-section structure are described. The integral of thermal conductivity and the mass transport process are discussed from the viewpoint of minimum axial shift during reactor operation. (D.L.C.)

54290 (N-71-17932) SHAPED THERMAL NEUTRON FLUX FILTERS FOR AN IN-PILE TEST CAPSULE. Ford, C. Hubbard (National Aeronautics and Space Administration, Cleveland, Ohio. Lewis Research Center). Mar 1971. 19p. (NASA-TM-X-2196; E-5756). NTIS.

Flux tailoring filters are necessary to achieve uniform, flat reaction rates for configurations of test capsules to be irradiated in high thermal flux test reactors. The shaping of filters was studied by an experimental method using (alpha,n) neutron sources in water media. The design objective was to achieve acceptably flat reaction rates along the axes of the test capsules when the unperturbed flux has a steep gradient. The flat filtered reaction rates finally attained were only slightly lower than those due to the lowest thermal flux level present before the tailoring filters were introduced. (auth) (STAR)

54291 (RT/ING-71-4) HOW TO DIMENSION A TORISPHERICAL HEAD FOR NUCLEAR CONTAINMENT VESSELS. Cesari, F.; Palmieri, D. (Comitato Nazionale Energia Nucleare, Rome (Italy)). 3 Mar 1971. 51p. Dep. NTIS (U. S. Sales Only).

Information useful in the conceptual project of torispheric heads is presented. Calculation aids needed to rapidly analyze the possible alternatives are included. The knucle radius R′ and the junction torus to crown angle Θ_c are analyzed. Some geometrical quantities, as thickness, weight, surface, and volumes are numerically calculated for various skirt diameter comprised in the range 6 to 30 meters. Graphs of all data calculated are supplied; also, nomographs are proposed to facilitate the immediate evaluation of more geometric alternatives because they are applicable to all the normal torispheric shapes. Considerations deduced by short stress analysis and by approximate cost investigation are presented to guide the technicians to a logical choice of torispherical head. 6 references. (auth)

54292 (UILU-ENG-71-2019) SHEAR STRENGTH OF END SLABS WITH AND WITHOUT PENETRATIONS IN PRESTRESSED CONCRETE REACTOR VESSELS. Civil Engineering Studies: Structural Research Series No. 380. Karlsson, B. I.; Sozen, M. A. (Illinois Univ., Urbana. Oak Ridge National Lab., Tenn.). Jul 1971. Contract W-7405-eng-26; Subcontract 2906. 367p. Dep. NTIS.

The different modes of failure for vessels consisting of a cylinder bounded by flat end slabs were investigated. Small-scale specimens were tested. The major variables were ratio of the thickness of the end slab to the interior diameter of the vessel, penetrations in the end slab, and the longitudinal and circumferential prestressing forces. Presented are the results of six tests of pressure vessels, conducted primarily to investigate the shear strength of the end slab and the effect of penetrations on the shear strength. Observations indicated that the end slab fails in shear as a result of the following mechanism: A critical inclined crack develops tending to transform the end slab into a dome. Collapse occurs by failure of the concrete in the dome. A method was developed to estimate the shape of the dome and the failure load, based on finite-element analyses of the end slab and a failure criterion for concrete subjected to triaxial stresses. 54293 DOUBLE CONTAINER REACTOR VESSEL. Fletcher III, William D. (to Combustion Engineering, Inc.). U. S. Patent 3,578,564. 11 May 1971. Filed 31 Oct 1968.

Means for suspendedly mounting a double container reactor vessel within a vessel cavity formed in a foundation structure in a manner such that, in the event of failure of the outer vessel in any location, the inner vessel will remain secured to the foundation structure are described. The means comprises the provision of radial flanges on the shells and closure covers of the inner and outer container vessels arranged such that the inner vessel flanges are retained in sandwiched relation between the opposing faces of the outer vessel flanges. Annular shoulder means are provided on the foundation wall to vertically support the assembled vessel structure by engagement with the outer vessel shell flange. An annular lock ring releasably attached to the foundation presents a bearing face adapted to engage the outer vessel closure cover flange to prevent upward movement of the retained flanges in the event of a reactor accident. (auth)

54294 NUCLEAR REACTOR INSTALLATION. Isaac, Peter (to Atomic Energy of Canada Ltd.). U. S. Patent 3,583,892. 8 Jun 1971. Filed 15 Apr 1968.

A fueling machine operates in a fueling vault arranged underneath a reactor for loading and unloading fuel channels extending into the fueling vault. A maintenance bay is arranged adjacent to the fueling vault and separated therefrom by a door and a shielding gate. Hydraulic pressure required for the various motions of the fueling machine is supplied via a plurality of cables connecting the fueling machine to a fixed point in the maintenance bay. In order not to impede the motion of the fueling machine, the cables are suspended on a post mounted on a carriage supporting the fueling machine as well as from a trailer engaging a pair of rails that extend across the maintenance bay. The trailer has an extended portion which serves to guide the cables through the passage between the fueling vault and the maintenance bay and to cooperate with the shielding gate, when the fueling machine is in the fueling vault. 54295 MONITORING THE REACTIVITY OF NUCLEAR REACTORS. (to Interatom, Internationale Atomreaktorbau, GmbH). British Patent 1,238,823. 14 Jul 1971. Priority date 13 Mar 1969, Germany.

REACTIVITY—monitoring by reactor control systems, process computer for continuous
REACTOR CONTROL SYSTEMS—reactivity monitoring by, process computer for continuous (H.D.R.)

54296 APPARATUS FOR CONVEYING SPHERICAL FUEL ELEMENTS IN NUCLEAR REACTORS. (to Brown Boveri/Krupp Reaktorbau GmbH). British Patent 1,239,304. 14 Jul 1971. Priority date 1 Jul 1967, Germany.

REACTOR LOADING MACHINES—design with interchangeable component units for handling spherical fuel elements
REACTORS, PEBBLE BED—loading machine for, interchangeable component unit design for (H.D.R.)

54297 LOW PARASITIC CAPTURE FUEL ASSEMBLY STRUCTURE. (to Westinghouse Electric Corp.). British Patent 1,238,143. 7 Jul 1971. Priority date 19 May 1969, United States.

REACTOR FUEL ELEMENTS—design with stainless steel grid members supporting Zircaloy control rod guide tubes (H.D.R.)

54298 IMPROVEMENTS IN OR RELATING TO NUCLEAR REACTORS. Baddley, Albert Harold; Webb, John (to United Kingdom Atomic Energy Authority). British Patent 1,234,570. 3 Jun 1971. Filed 26 Sep 1967.

Reference is made to reactor shutdown means. An object of the system described is to provide shutdown equipment that will be largely unaffected by core damage or distortion. The system is particularly applicable to reactors which have a rotatable shield above or below the core for refueling purposes, such as the Dounreay PFR type. The equipment comprises at least one rigid tube penetrating the shield and reactor core, and a shutdown element that is freely movable in the tube. Mechanism is provided in or on the shield for insertion into or removal of the shutdown element from the core. The tube is withdrawable from the core to enable the shield to be rotated. Means are also provided for preventing withdrawal of the tube from the core unless the reactor is maintained in the shutdown condition by other control means. The shutdown element may be flexible, so as to be movable in the tube despite some distortion. Where the shield is located above the core the lower end of the tube may extend below the core and contain means to arrest the shutdown element after gravity fall for rapid shutdown. With liquid cooled reactors liquid coolant may be used to assist in arresting the shutdown element. (UK)

54299 SHEATHED HEATING ELEMENT. Elberg, Salomon (to Commissariat a l'Energie Atomique). French Patent 2,031,694. 9 Nov 1970. Filed 24 Feb 1969. (In French).

A sheathed, electrical heating element suitable for high thermal flux uses is described. It is designed for the experimental investigation of sheaths suitable for nuclear reactor fuel elements. It consists of a cylindrical sheath, a plug sealing one end of the sheath and current inlets. A heating resistor consisting of two concentric half-tubes, a metallic plug for closing the electric circuit and a cylinder made of a powdered insulating material inserted between the half-tubes are included inside the sheath. An electrically insulating material, with a good thermal conductivity, is inserted between the resistor, the sheath and the powder cylinder. A thermocouple is placed inside the grooves arranged at the periphery of the sheath. (France)

54300 APPARATUS FOR MONITORING MOVING BODIES IN A SELF-CONTAINED DISTRIBUTING SYSTEM. (to Brown Boveri/Krupp Reaktorbau GmbH). British Patent 1,235,453. 16 Jun 1971. Priority date 18 Jan 1969, Germany.

DISPLACEMENT GAGES—design parameters of sound transducer, for reactor loading machines
REACTOR LOADING MACHINES—position indicators for, description of sound transducer (D.C.C.)

54301 COVERS FOR REINFORCED CONCRETE PRESSURE VESSELS. Eggeler, Ewald; Stuger, Rudolf (to Siemens Aktiengesellschaft). British Patent 1,235,149. 9 Jun 1971. Filed 24 Jul 1968.

The cover assembly described has the general shape of a frustum of a cone and comprises a number of separate units that are secured together with the smaller diameter end of the frustum towards the outside of the pressure vessel and with lateral surface positions engaging correspondingly shaped surface portions bounding the access opening of the pressure vessel, each unit having the general shape of a sector of the frustum. Each unit may have teeth that engage in mating recesses in an adjacent unit. The units may be formed with bores through which prestressing cables extend for securing the units together and strutting may be provided to assist in resisting the effect of pressure acting on the cover assembly when the vessel is pressurized. Ram devices may be located inside the pressure vessel for supporting the cover units before they are secured together. (UK)

54302 IMPROVEMENTS RELATING TO SCRAM FACILITIES FOR NUCLEAR REACTORS. Strong, Keith Thomas (to Fairey Engineering Ltd.). British Patent 1,234,190. 3 Jun 1971. Filed 13 Dec 1967.

A control element drive mechanism is described that can be set up for use either as a normal control mechanism with scram fuel element withdrawal means, or by a simple conversion with scram safety element insertion means. The drive mechanism provides normal low speed drive and rapid scram drive. The rapid drive unit is reversible to effect the foregoing conversion. (UK)

54303 FUEL ELEMENT FOR HIGH TEMPERATURE NUCLEAR REACTOR. (to Australian Atomic Energy Commission). British Patent 1,240,250. 21 Jul 1971. Priority date 5 May 1969, Australia.

BERYLLIUM OXIDES, BeO—$BeO-ThO_2-UO_2$, preparation of fine grain matrixes for reactor fuels, process for
—$BeO-PuO_2-ThO_2-UO_2$, preparation of fine grain matrixes for reactor fuels, process for
—$BeO-PuO_2-UO_2$, preparation of fine grain matrixes for reactor fuels, process for
—$BeO-PuO_2-ThO_2$, preparation of fine grain matrixes for reactor fuels, process for
REACTOR FUEL ELEMENTS—production process for spherical, with mixed oxide fuel in beryllium oxide matrix (H.D.R.)

54304 JET FORCE STRENGTH OF REACTOR CONTAINMENT VESSELS. Hamada, Kunio; Yoshinaga, Toshiaki; Hayashi, Tsutomu; Ukaji, Hideo (Hitachi Ltd., Ibaraki, Japan). Hitachi Hyoron; 51: 599-602(Jul 1969). (In Japanese).

When the supposed fracture accident of the piping contained in a containment vessel occurs, it is considered that jet force acts on the container by the release of high-pressure water. A full-sized model experiment was conducted on the resistance to the hypothesized jet force of the steel dry well of pressure-suppression type. For this experiment, the design condition for an actual container vessel was used. Jet force was imposed on two types of spherical plates with and without an eccentric penetration nozzle. Displacement and strain were measured. As a result, when the plates fractured, the center of the plates where the jet force acted was displaced 260 and 236 mm, and the rupturing jet force was 731 and 665t for the plates with and without a nozzle. Considering this result and the fact that the gap between a container and shielding concrete is 50 mm maximum, even if the safety factor is selected as 4, the design of the dry well is reasonable, due to the backup concrete. (Japan)

54305 EFFECTS OF EARTHQUAKES ON NUCLEAR CONTAINER VESSELS. Nakao, Yoshiaki (Mitsubishi Heavy Industries, Ltd., Hiroshima. Hiroshima Technical Inst.); Kimoto, Kenichiro; Katayama, Masatoshi; Satake, Masaru. Koatsuryoku; 8: 1933-8(Mar 1970). (In Japanese).

Four experiments were performed on: (1) reduced-scale ($^1/_{34}$) models made with celluloid substituted for steel and paraffin for concrete, (2) a supplementary experiment examining the effect of reinforcing ring corresponding to annular seal and crane guarder supporting concrete, (3) static experiment on a steel-made $^1/_{20}$ reduced scale model, and (4) artificial earthquake experiment on a steel model. The following results were obtained: (1) For the behavior of container vessel at the time of earthquake, the vibration not only by cantilever, but also by shell must be considered. (2) Vibration as a shell can be calculated by making it to be equivalent to both edges supporting cylindrical shell. (3) Due to the vibration mode as a shell, air-lock at the nozzle suffers about 5 via 6 times larger acceleration than the base. (4) Real local stresses at the nozzle are almost equal to stresses induced by statistically loading the same force as inertia force by earthquake, etc. (Japan)

54306 METHOD OF FITTING A WIRE HELICALLY TO A CYLINDRICAL FUEL ELEMENT Brard, Jean Claude; Cayol, Andre; Saintillan, Joseph (to Commissariat a l'Energie Atomique).

British Patent 1,238,148. 7 Jul 1971. Priority date 19 Jun 1969, France.

REACTOR FUEL ELEMENTS—spacers for, method for securing ends of wire-wrap (H.D.R.)

54307 SYSTEM FOR MARKING OF OBJECTS, IN PARTICULAR FUEL ELEMENTS IN NUCLEAR REACTORS. Crutzen, Serge; Warnery, Michel; Faure, Jacques (to EURATOM). British Patent 1,241,287. 4 Aug 1971. Priority date 10 Jul 1969, Germany.

NUCLEAR MATERIALS MANAGEMENT—fuel element identification marking, system of magnetic inclusions for
REACTOR FUEL ELEMENTS—identification marking of, system of magnetic inclusions for (H.D.R.)

54308 USE OF SMALL MODELS IN DESIGN AND ANALYSIS OF PRESTRESSED-CONCRETE REACTOR VESSELS. Corum, J. M. (Oak Ridge National Lab., Tenn.). Nucl. Eng. Des.: 16: No. 3, 301-42(1971).

A series of small prestressed-concrete reactor vessel (PCRV) models was analyzed and tested to investigate the suitability of small-scale ($\leq$1/20) mortar models and epoxy models for determining elastic stress distributions and cracking and failure modes of concrete vessels, and to demonstrate the relative accuracy of two- and three-dimensional elastic finite-element structural analyses of PCRV's. In addition to a small concrete vessel that served as the prototype, there were two small-scale mortar models, a prestressed epoxy model, and a simple axisymmetric epoxy model. The test results from each model were compared with those from the other models and with finite-element predictions. The prototype and the two mortar models were tested to failure with internal pressure. The prototype and one mortar model were pressurized hydraulically, but the other mortar model was tested pneumatically to examine possible differences in structural behavior. The epoxy models were tested in the elastic range only. Structural behavior of the small-scale mortar models closely duplicated that of the concrete prototype. The behavior characteristics of the two mortar models indicated that failure, whether caused by pneumatic pressure or hydraulic pressure, was gradual and not catastrophic. Both two- and three-dimensional finite-element analyses were used to analyze the models, and comparison of the predicted behavior with test results showed reasonably good agreement, even with the two-dimensional analyses, thus demonstrating the reliability of the finite-element computer analyses currently being used for evaluating PCRV's. (18 references) (auth)

54309 NUCLEAR FUEL ROD HAVING AN OFFSET PLENUM. Hines, Douglas P. (to United States Atomic Energy Commission). U. S. Patent 3,586,603. 22 Jun 1971. Filed 10 Oct 1968.

A plenum design is described for non-vented or vented nuclear fuel which allows for a reduction in the core coolant pumping requirements from the conventional plenum configuration of fuel pins or rods. This is accomplished by offsetting the plenum region of the fuel pin and grouping several of the plena such that they nest together. The flow regions left between the small bundles of plena offer less resistance to flow and thus reduce the core pressure drop. The plenum configuration can be utilized in sodium-cooled, steam-cooled and gas-cooled reactors. (Official Gazette)

54310 STRUCTURAL MECHANICS IN REACTOR TECHNOLOGY. VOL. 1. REACTOR CORE. PART C. FUEL AND CLADDING. Preprints of the First International Conference, Berlin, Germany, 20–24 September 1971. Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). 256p. (In German and English). (CONF-710903-(Vol.1)(Pt.C)).

Separate abstracts are presented for 16 articles on design and performance requirements of reactor fuel elements and reactor fuel element cladding. (D.C.C.)

For abstracts of individual papers see: 54111–54117 and 54311–54319.

54311 NUCLEAR STRUCTURAL GROWTH INDUCED BY RATCHETTING. Hibbeler, R. C. (Youngstown State Univ., Ohio). pp C1/6.1-17 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The progressive growth of a structural material, subjected to a cyclic heat flux and sustaining a load, is called thermal ratchetting. The increment of growth developed during each thermal cycle is caused by either plastic yielding or creep of the material. An investigation of this phenomenon is presented which applies to nuclear structural components in the form of thin cylindrical shells sustaining an internal pressure. Using different models to account for the stresses in the hoop direction, an analysis is presented which forms a useful basis for determining the allowable stress conditions necessary to prevent ratchetting. When ratchetting occurs, this analysis gives a prediction of the ratchetting growth during each thermal cycle. An exact method of analysis accounting for a triaxial stress condition in the material is also presented. The results using the simple models for representing the ratchetting behavior are then compared with the exact analysis. 5 references. (auth)

54312 METHOD OF ANALYSIS FOR THE CREEP BUCKLING OF TUBES UNDER EXTERNAL PRESSURE. Wilson, W. K. (Westinghouse Electric Corp., Pittsburgh). pp C2/3.1-15 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

A numerical method for the creep buckling of long circular thin-walled cylinders which are initially out-of-round and subjected to uniform external pressure is presented. It is assumed that the initial out-of-roundness and subsequent deflections are independent of the axial coordinate and that the initial stress state is elastic. The method eliminates many of the major assumptions previously used and can handle any combination of the strain or time hardening laws and the Mises or Tresca flow rules. The method is easily computerized. A number of specific examples are studied for 15% cold worked Zircaloy-2. The results indicate that the calculated buckling times are highly dependent upon the hardening law and flow rule used. 7 references. (auth)

54313 APPLICATION OF VARIATION PRINCIPLES IN CREEP MECHANICS TO CREEP DISTORTION PROBLEMS IN FUEL ELEMENT CLADDINGS. Malmberg, T. pp C2/4.1-17 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Two general variational principles are discussed which are applicable to creep problems. They are formulated for small strains but finite rotations. The corresponding relations are: a nonelastic viscous solid (e.g. fully developed secondary creep), and a solid having simply additive elastic and creep strain rates. On the basis of these theorems several variational principles for thin shells are formulated assuming small strains but moderately large rotations. The theory is within the frame of the Kirchhoff–Love hypothesis. Using the Ritz method one principle is applied to the problem of creep collapse of a long fuel element cladding under external pressure. The temperature field is assumed to be rotationally as well as nonrotationally symmetric. 20 references. (auth)

54314 STRESS DISTRIBUTION IN LONGITUDINALLY RIBBED FUEL ELEMENT CLADDINGS. Krieg, R. (Kernforschungszentrum, Karlsruhe, Ger.). pp C2/5.1-16 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The stresses in fuel element claddings are produced by fission gas, fuel, and coolant pressures, differential thermal expansions, and possibly by irradiation induced differential swelling of the cladding material. The elastic stress distribution is well known and easily obtained in rotationally symmetric fuel element claddings. However the stress analysis of claddings having integrated fins in the axial direction needs a considerably larger effort; but such an investigation is necessary because of possible stress concentrations at the roots of the fins. A numerical method is presented which is based on Airy's stress function and suitable trigonometric series. The calculations indicate that this method gives good results for the stress distribution, if the root radius of the fins is not too small. 11 references. (auth)

54315 BUCKLING OF A STRIP ON A RIGID HALF-SPACE WITH A TRANSVERSE PRESSURE: WRINKLING OF NON-BONDED CLADDING. Anderson, W. F. (Liquid Metal Engineering Center, Canoga Park, Calif.). pp C2/6.1-23 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

The problem investigated is that of the stability of a uniform strip resting on a rigid half-space as a base while subjected to both a transverse force pressing it against the base, and an axial force or displacement. The system is shown to be completely imperfection-sensitive, with theoretically infinite buckling loads in the absence of imperfections. The behavior of the strip after buckling ensues is highly nonlinear. The effect of both sharp and smooth (cosine wave) imperfections is studied analytically. A numerical method is also developed for solution of the static buckling problem. Results of the analytical and numerical methods agree. The numerical method is used to obtain the static buckling load where the base has uniformly distributed imperfections of random magnitude. Forty-nine cases of buckling, with the base having random imperfections, are studied and a correlation is shown between the magnitude of the axial buckling force and the RMS value of the magnitude of the random imperfections. 14 references. (auth)

54316 THERMAL STRESSES IN CLAD, PELLET STACKS, AND THE PROBLEM OF INTERFACE STRESS STATES. Carey, J. J.; Valentin, R. A. (Argonne National Lab., Ill.). pp C3/2. 1-16 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

An analytical solution is presented for the elastic interaction of fuel pellets and cladding in the limiting case of zero interface shear. In particular, expressions are developed for the contact stress between cladding and fuel in the neighborhood of a pellet-to-pellet interface. The formulation assumes a pellet description which is exact within the classical theory of elasticity while the cladding is approximated by a simple shell theory. Extensive numerical results give interface pressure distributions for various ratios of the occurring elastic and geometric parameters. Of interest are the areas of reduced local pressure slightly away from the pellet edge due to the "bridging" effect of the cladding caused by the local high curvature of the pellet. Deformed shapes of the fuel element are given for various strengths of cladding ranging from very soft to infinitely rigid. Included is the stress concentration factor applicable to the plane strain value of the interface pressure to give the true localized maximum normal stress. 4 references. (auth)

54317 MECHANICAL FUEL-CAN INTERACTION EFFECTS ON FUEL ELEMENT THERMAL FREQUENCY RESPONSE. Thompson, J. J. (Univ. of New South Wales, Kensington, Australia). pp C3/3.1-13 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

A linear thermoelastic model has been used in a study of the effect of including the contact pressure dependence of the fuel can contact conductance in the equations describing both the symmetric thermal frequency response to power and coolant or heat transfer fluctuations and the asymmetric static problem of slightly tilted power and coolant temperature distributions. In the latter, analytical solution was feasible and formulae for the can surface heat flux are given. The former was reduced to coupled equations by Galerkin's method and solved by a general linear analysis computer code. A specific example is discussed. In both cases the inclusion of the pressure dependent conductance was most significant for internal power rather than coolant temperature changes, and was influenced by the temperature dependent fuel conductivity. Errors of the order of 10% due to neglecting this effect were obtained for the example chosen. The Galerkin method, using a third order polynomial for can temperature, and a sixth order even polynomial for the fuel was found to be adequate over a frequency range from 10^{-3} to 10^{2} radians per second. (auth)

54318 THERMAL STRESSES IN CLAD FUEL ELEMENTS PART. I. CYLINDRICAL FUEL ELEMENTS PART. II. SPHERICAL FUEL ELEMENTS. Smith, C. O. (Univ. of Detroit). pp C3/6.1-25 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp). Luxemburg; Commission of the European Communities (1971).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

Equations for the thermal stresses developed in internally and externally clad cylindrical elements with radially symmetric temperature distribution are presented. For illustration, temperature and thermal stress distributions for four fuel element configurations (three cylindrical and one flat plate) with uniform heat generation in the fuel and no heat generation in the cladding are pictured and compared. Some conclusions of practical significance are drawn from this comparison. Equations are presented for the thermal stresses developed in externally clad hollow spheres with radially symmetric temperature distribution. The cases of clad solid and hollow spherical fuel elements, having uniform heat generation in the fuel and no heat generation in the cladding, are used for illustration. The temperature and thermal stresses developed in the clad hollow element are calculated on deterministic and probabilistic bases (taking into account the range of all variables concerned). A comparison of the two sets of values is made with particular reference to reliability in design. 11 references. (auth)

54319 TREATMENT OF MECHANICAL AND THERMAL BEHAVIOR OF FUEL PINS IN SATURN 1. Depisch, F. (AEG-Telefunken, Grosswelzheim, Ger.); Elbel, H.; Kaempf, H. pp C4/2.1-15 of Structural Mechanics in Reactor Technology. Vol. 1, Pt. C. /Jaeger, Thomas A. (comp.). Luxemburg; Commission of the European Communities (1971). (In German).

From 1st International conference on structural mechanics in reactor technology; Berlin, Germany (20 Sep 1971).

In SATURN 1 the time history of a fuel pin concerning the radial distributions of temperature, stress, porosity and geometry changes is calculated. The operating fuel pin conditions such as linear rod power, outside temperature of the cladding and outside pressure are time dependent input data, so steady state and cyclic conditions are taken into account. The following material phenomena essential for the mechanical and thermal behavior are interconnected in SATURN 1: creep of fuel and clad, swelling of fuel and clad, thermal expansion, crack formation, fission gas release, porosity migration, and heat transfer fuel-clad. Three thermal-mechanical states are distinguished: fuel and clad in mechanical interaction, freestanding fuel and clad stressed by gas and coolant pressure, and freestanding stressed clad in contact or not in contact with cracked fuel assumed to be free of stresses. Three fuel zones are distinguished especially with view to different creep and porosity migration behavior. To demonstrate the possibilities of SATURN 1 several illustrative applications are given. 6 references. (auth)

GENERAL

54320 (A/CONF.49/P–108) CONTRIBUTION OF THE NUCLEAR RESEARCH CENTRE INSTALLATION TO THE TECHNOLOGICAL DEVELOPMENT OF URUGUAY. Spitalnik, J. (Nuclear Research Centre Project, Montevideo, Uruguay). Jun 1971. 16p. (CONF-710901–468). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54321 (A/CONF.49/P–200) SIGNIFICANCE OF NUCLEAR SCIENCE AND TECHNOLOGY FOR EDUCATIONAL INSTITUTIONS IN A DEVELOPING COUNTRY. Moreira Bandeira de Mello, Wilson (Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro). Jun 1971. 20p. (CONF-710901–353). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

IAEA Member States were grouped in four categories representing states of nuclear technology development. The methods used within these groups for educating and developing manpower for the production and use of nuclear energy were then analyzed. The analysis resulted in suggestions whereby educational and financial resources might best be used in allowing a member of one group to move into a group more advanced in the nuclear field. (D.E.B.)

54322 (A/CONF.49/P–206) INTERNATIONAL NUCLEAR INFORMATION SYSTEM. AN EXERCISE IN INTERNATIONAL CO-OPERATION AND A SERVICE TO NUCLEAR SCIENTISTS AND ENGINEERS. Pelzer, Charles W.; Turkov, Zhan; Woolston, John E. (International Atomic Energy Agency, Vienna (Austria)). Jul 1971. 14p. (CONF-710901–437). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The International Nuclear Information System (INIS) describes and indexes information published in 36 countries and by 8 international organizations. The descriptions are distributed on computer magnetic tape, in an announcement bulletin and on microfiches. Users of the system can select information on specific subjects from the total file. Thus individual scientists and engineers can be provided with both recent and retrospective information from world-wide sources. The unique and distinctive feature of INIS is its decentralized operation, an approach never attempted before on an international scale. Input to the system is provided by the country or organization in which the information is first published, so the amount of work required of each participant is normally proportional to the scale of its nuclear program. Input is received by the IAEA in Vienna, where it is checked and processed by a computer and by documentalists and output files are distributed for exploitation in participating countries. Also, the IAEA provides the forum in which the participants meet to give overall direction to INIS and to define the modalities of its future development and organizes seminars and other mechanisms of training for the personnel providing input to INIS and exploiting its output. The INIS system design was prepared by an international group of consultants and approved at meetings of experts from the participating countries. The major part of the cost is carried by the various countries and organizations in financing their own participation. The central cost, partly offset by sales of output products, is borne on the regular budget of the IAEA. Participating countries, particularly developing countries without computer-based information-processing capabilities, are encouraged to combine to form centers either for INIS activities alone or for INIS activities in association with information services covering other fields of science and technology. (auth)

54323 (A/CONF.49/P–266) NATIONAL NETWORK OF INIS IN JAPAN. Nagayama, T.; Shichi, D. (Japan Atomic Energy Research Inst., Tokyo). May 1971. 15p. (CONF-710901–101). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54324 (A/CONF.49/P–341) STATE COMMITTEE FOR NUCLEAR ENERGY OF THE SOCIALIST REPUBLIC OF ROMANIA AND ITS ACTIVITIES IN THE FIELD OF INTERNATIONAL CO-OPERATION. Georgescu, A.; Rodean, E.; Manzatu, I.; Ionescu, V.; (and others) (State Committee for Nuclear Energy, Romania). Jun 1971. 18p. (CONF-710901–374). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The organization of the State Committee for Nuclear Energy and its main tasks in achieving the national nuclear program in Romania are described. Taking into account the catalytic role the development of international cooperation plays within the present technical and scientific revolution, some problems connected to its importance for the field of nuclear development in Romania are approached. Romania's experience in the international cooperation, in the peaceful uses of the atomic energy, emphasizing the role of bilateral and multilateral international cooperation is reviewed. The significance of the Articles IV and V of the Treaty on the Non-Proliferation of Nuclear Weapons, which stresses the necessity of international cooperation with the purpose of development, as a legal obligation of the states is emphasized. (auth)

54325 (A/CONF.49/P–420) WORLD ENERGY REQUIREMENTS AND RESOURCES IN THE YEAR 2000. (United Nations, New York. Dept. of Economic and Social Affairs). Jul 1971. 21p. (CONF-710901–439). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Existing long-term projections of energy demand at global and regional levels (for example, developed private enterprise economies, centrally planned economies and developing countries) are reviewed. Long-term factors influencing the demand for energy in countries in various stages of socio-economic development are assessed. Likely shifts in the demand for energy over the long-term period in the light of various assumptions relating, among others (a) to prospective economic growth rates and (b) to technological changes and innovations that may produce major shifts in the long-term pattern of energy consumption are identified. Special attention is paid to the changes in the sectoral composition of output and identify the prospective evolution of energy demand by major consuming sectors (industry, agriculture, transportation). Factors taken into account include the prospective growth rates of population, technical progress, industrialization, urbanization, mechanization of agriculture, electrification, and environmental considerations. Available information on estimates of reserves of conventional sources of energy (fossil fuels, etc.) is brought together and literature relating to prospective exploration activities which may result in the addition to such reserves is examined. Forecasts of technological changes in the energy field affecting the availability of energy supplies with particular accent on new sources of energy are reviewed. 17 references. (auth)

54326 (A/CONF.49/P–421) SCIENCE AND TECHNOLOGY STRATEGY OF THE UNITED NATIONS; THE ROLE OF NUCLEAR TECHNOLOGY. Chatel, B. (United Nations, New York. Office for Science and Technology). Jun 1971. 18p. (CONF-710901–375). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The main elements of the overall strategy of the United Nations are reviewed briefly and the place occupied by nuclear technology within these international plans is discussed. (D.H.M.)

54327 (A/CONF.49/P–511) INTERNATIONAL CO-OPERATION IN NUCLEAR PROJECTS AND EXCHANGE OF INFORMATION. Peirson, D. E. H. (United Kingdom Atomic Energy Authority, London (England)). May 1971. 7p. (CONF-710901–228). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54328 (A/CONF.49/P–516) PEACEFUL USES OF NUCLEAR ENERGY AND PROSPECTS OF NUCLEAR POWER IN IRAN. Afshar-Bakeshloo, A.; Farivar Sadri, N.; Panahandeh, H.; Parnianpour, H.; (and others) (Tehran Univ. (Iran). Nuclear Center). Jun 1971. 26p. (CONF-710901–393). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54329 (A/CONF.49/P–568) POST-GRADUATE STUDIES AND PROFESSIONAL TRAINING WITHIN THE SPHERE OF THE ARGENTINE NATIONAL ATOMIC ENERGY COMMISSION AN EXPERIENCE IN LATIN AMERICAN COOPERATION. Libanati, Nelly Ambrosis de; Baro, Gregorio B. (Comision Nacional de Energia Atomica, Buenos Aires (Argentina)). Jun 1971. 20p. (CONF-710901–396). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The diffusion of new nuclear sciences and techniques in university programs, research centers, and industries is analyzed.

The evaluation of results arising from the postgraduate training program developed in the last 15 years by the Atomic Energy Commission of the Argentine Republic makes evident the importance of this work for such expansion. The communication and collaboration among Latin American countries are shown through the programming of Panamerican activities in the areas of nuclear medicine, metallurgy, radioisotopes applied to industry, nuclear reactors. The possibilities of optimizing postgraduate teaching of nuclear science and technology are studied in order to get them soon introduced in the productive life of the country. (auth)

54330 (A/CONF.49/P–638) ORGANIZATION OF RESEARCH IN THE GRENOBLE NUCLEAR CENTRE IN CONJUNCTION WITH THE UNIVERSITY AND INDUSTRY. Balligand, P.; Mitault, M. (Commissariat a l'Energie Atomique, Grenoble (France). Centre d'Etudes Nucleaires). Apr 1971. 12p. (In French). (CONF-710901–303). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

One of the purposes of the C. E. A. when founding the CEN-G was to develop close connections with the University and Industry. The various laboratories of the CEN-G have come to play an important role as a relay between the University and Industry. The research teams of the CEN-G laboratories include an important proportion of University scientists among whom several professors play the part of scientific advisers. There are more than 150 contracts with public or private organisms. New structures have been and are being created to obtain a more efficient collaboration: the creation of the LETI, the presence in the CEN-G of teams or laboratories from industry. The following fields are principally concerned: desalination, new materials for electronics and metallurgy, low temperatures, irradiation devices. On the international level, the CEN-G welcomes every year about one hundred foreigners from every country, animates study groups, notably in Brazil and Peru and accomplishes missions of scientific cooperation for the IAEA, particularly in Morocco. (auth)

54331 (A/CONF.49/P–683) ACTIVITIES OF THE COUNCIL FOR MUTUAL ECONOMIC ASSISTANCE IN THE PEACEFUL USES OF ATOMIC ENERGY. May 1971. 21p. (CONF-710901–320). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The main principles, experience, organization, and results of the CMEA countries' multilateral collaboration in the peaceful uses of atomic energy are outlined. The initial period of this collaborative work when atomic science and technology were developed and nuclear research centers were organized in socialist countries with Soviet technical assistance is described. In 1960 the growing complexity of problems associated with economic applications of atomic energy led to the formation of the CMEA Standing Commission on Peaceful Uses of Atomic Energy. This Commission organizes multilateral collaboration in the peaceful uses of atomic energy. The main questions, forms, and methods of intra-CMEA collaboration in the major fields of the peaceful uses of atomic energy (atomic power generation, nuclear instruments, isotope production and applications, radiation security and shielding) are considered. The major aspects and forms of intra-CMEA work on the peaceful uses of atomic energy in the current period are considered. This work will promote the implementation of the decisions, taken by the 23rd and 24th CMEA Sessions in 1969–1970, as regards the development of the member countries' collaborative activities and their socialist economic integration. (auth)

54332 (A/CONF.49/P–724) SYNOPSIS OF THE ACTIVITIES OF THE JOINT RESEARCH CENTRE OF THE COMMISSION OF THE EUROPEAN COMMUNITIES. Caprioglio, P.; Schleicher, H. W. (European Atomic Energy Community, Ispra (Italy). [Joint Nuclear Research Center]). May 1971. 14p. (CONF-710901–322). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The research activities at the present time carried out by the Commission of the European Communities comprise research work executed at the JRC and studies made under research contracts signed with public institutions or private organizations or under association agreements between laboratories. These contracts refer in particular to reactor development as well as to biology-health protection, thermonuclear fusion and plasma physics. The activities of the Ispra establishment in the field of nuclear reactors are mainly related to research on materials, reactor physics and safety problems. Concerning materials, particular attention is paid to those exhibiting good resistance to high temperatures and stresses; in reactor physics, among other activities, two and three dimensional codes for fuel management and reactor dynamics have been developed. The safety studies deal in particular with cooling accidents (e.g., interaction between coolant and molten fuel), the behavior of materials and structures under explosive transients, and with problems of reliability. The ESSOR test reactor which was initially built to carry out experiments on organic-cooled fuel elements may be used, after insertion of water-loops, to study fuel elements for the European industries. The activities in fundamental research are mainly in solid state physics and in particular crystallographic studies and neutron optics. A pulsed fast reactor project (SORA) is now in the final design stage and is being considered for construction. This reactor will be a most efficient neutron source for research in solid state and neutron physics. In biology and health protection, studies on irradiation effects related to the risks for living organisms are underway at Ispra. Applications of nuclear techniques in agronomic and medical research are executed under contract with national institutions. The activities of the Petten establishment are focused on problems emerging from the preparation and the development of pyrocarbons, as well as on the properties of graphite and refractory compounds under irradiation. These studies are related to the development of high temperature gas cooled reactors. The HFR-reactor at Petten, whose power was increased recently from 20 to 45 MW, is an important tool for these experiments. The studies carried out at the European Transuranium Institute (Karlsruhe) on the fuel for fast reactors represent a basic program meant to clarify the phenomena which affect fuel materials containing plutonium under irradiation. The activities of sample preparation, chemical and radio-chemical analyses of irradiated fuel require skills and equipment which are frequently used by other laboratories of the Community. The Central Bureau of Nuclear Measurements (Geel) is essentially dealing with high-precision measurements of neutron cross-sections at various energies as well as precision measurements of radioactivity, fissile constants and neutron dosimetry. For these activities and on the request of other institutions samples are prepared and defined. (auth)

54333 (A/CONF.49/P–737) PLACE FOR COOPERATION ON A REGIONAL BASIS. Saeland, Einar (European Nuclear Energy Agency, Paris (France)). May 1971. 14p. (CONF-710901–324). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

Over the past 14 years, European countries of OECD (formerly OEEC) have collaborated through the European Nuclear Energy Agency in joint activities for the development of nuclear energy for peaceful purposes. These activities have included technological and economic studies, the handling and diffusion of nuclear information and data, applications of radioisotopes, and the development of appropriate legal and regulatory measures to ensure the efficient and orderly exploitation of nuclear energy. But most particularly, they have included a number of practical co-operative projects concerned with the development of advanced reactors, with reprocessing technology and with other aspects of the fuel cycle (including radioactive waste management). Thus ENEA has accumulated a wide range of first hand experience of the problems involved in regional co-operation, and of both the scope for and limitations of such co-operation in fields of rapid technical advance and evolving relationships between Governments, governmental institutions and industry. These factors are discussed, with particular reference to their influence on the scope for regional co-operation in the nuclear field between mainly advanced countries in the 1970's. (auth)

54334 (A/CONF.49/P–742) IMPACT OF NUCLEAR TECHNOLOGY IN DEVELOPING COUNTRIES. Sarabhai, Vikram A. (Atomic Energy Commission, Bombay (India)); Thomas, K. T.; Meckoni, V. N. (Bhabha Atomic Research Centre, Bombay (India)); Parikh, Kirit S. (Department of Atomic Energy, Bombay (India)). Jun 1971. 30p. (CONF-710901–423). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The manner in which nuclear technology has been accepted and developed in India for providing to the country a powerful impetus for development is described. New organizational structures, administrative practices, and operating culture have evolved within the framework of traditional Government and Society for meeting the special needs of innovation in applying the peaceful uses of atomic energy. Direct benefits through providing nuclear energy economically in areas where other alternatives are less advantageous, viewing the long term needs of energy for the development of the nation and parallel applications of radiation and isotopes in diverse fields are evaluated. Examples are cited of the widespread implications to and involvement of diverse agencies and segments of national life, in the peaceful uses of atomic energy in India.

The spin off from specialized personnel training and practices as well as technology in the nuclear field to others such as desalination of water, electronics, metallurgy and, above all, application of scientific methods to problems of development are some of the indirect benefits which can permit a developing nation to leap-frog from economic backwardness. The infra-structure that is required for the applications of advanced technology is considered and the impact of national self-confidence and determination to progress is discussed. (auth)

54335 (A/CONF.49/P-743) INTERNATIONAL COOPERATION OF THE USSR IN THE FIELD OF PEACEFUL ATOMIC ENERGY UTILIZATION. Afonin, G. S.; Balasanov, Yu. G.; Morochov, I. D.; Semenov, B. A.; (and others) (State Atomic Energy Committee, USSR). Aug 1971. 28p. (CONF-710901-461). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

International cooperation of the USSR in peaceful utilization of atomic energy over the period between the III and IV Geneva conferences is discussed in the paper. The information on the bilateral and multilateral agreements concluded over this period as well as on the development of cooperation on their basis is given. The progress in the field of such traditional forms of international cooperation as exchange of visits of scientists, exchange of scientific and technical information, participation in the work of international meetings, symposia etc. is considered. The information on the USSR assistance in establishing of scientific research centers and in preparation of specialists for meeting the needs of nuclear science and industry of a number of countries is presented. The perspectives of international cooperation in the frame of the IAEA are given and the information on the contribution of soviet scientists in the activity of international organizations is presented. The information on the further development of the forms of international cooperation is reviewed and the examples of organization and implementation of joint research and development projects carried out by soviet and foreign scientific-research centers and specialists are presented. (auth)

54336 (A/CONF.49/P-755) PROFESSIONAL AND ADVANCED TRAINING OF PERSONNEL IN THE FIELD OF NUCLEAR TECHNOLOGY IN LATIN AMERICA. Quaranta Cabral, U. (Inter-American Nuclear Energy Commission, Washington, D. C.). May 1971. 13p. (In French). (CONF-710901-507). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

54337 (A/CONF.49/P-801) ANGRA NUCLEAR POWER PLANT (BRAZIL). ITS IMPACT ON THE TECHNOLOGICAL ACTIVITIES IN THE COUNTRY. Lyra, F. H.; Simon, D. N.; Ferreira, H. A. Jr. (Comissao Nacional de Energia Nuclear de Brasil, Rio de Janeiro). Jun 1971. 12p. (CONF-710901-430). Dep. NTIS (U. S. Sales Only).

Prepared for 4th international conference on the peaceful uses of atomic energy; Geneva, Switzerland (6 Sep 1971).

The impact of the Angra Nuclear Power Plant on technological activities in Brazil is described. Although Brazil has already acquired considerable experience in hydro-electric power, its experience in thermal power technology still requires further development in design know-how, as well as in general project coordination. The site for the plant location had to be selected by Furnas (the operator of the utility) within its area of responsibility for electrical supply. This selection involved several new and important fields of investigation, including the fields of oceanography, geology, geophysics, meteorology, and radioecology. A specification had to be developed for the NSSS as well as the conventional equipment, covering the several different nuclear reactor types currently being utilized in the world. Several computer programs had to be developed to conduct the financial evaluation of the bids. The regulations in current use by different countries were analyzed and corresponding Brazilian norms were developed. In the absence of any Brazilian codes and standards covering nuclear plant safety, design and construction as well as precautions for fuel force in the country of origin of the equipment supplied, as well as those of the IAEA. The major financial and contractual conditions included in the bidding specifications are discussed. Existing International Agreements to which Brazil is a party concerning fuel supply and related services had to be modified since they were applicable only to research reactors, the general idea being to reach new or modified International Agreements in such a way as to assure Furnas or other operating utilities satisfactory access in the future to fuel supplies and to enrichment and fabrication services within the existing International Agreements. The progress of the negotiations is described in this paper. (auth)

54338 (AAEC/E-217) ANALYSIS OF FLOW STABILITY IN BOILING SYSTEMS WITH THE TOSCLE CODE. Spinks, N. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). May 1971. 30p. Dep. NTIS (U. S. Sales Only).

54339 (AAEC/TM-589) TWO-PHASE PRESSURE LOSSES: FLOW REGIME EFFECTS AND ASSOCIATED PHENOMENA. Beattie, D. R. H. (Australian Atomic Energy Commission Research Establishment, Lucas Heights). May 1971. 35p. Dep. NTIS (U. S. Sales Only).

54340 (ANL-7812) IBM 1403 PRINTER MODIFICATIONS FOR COMPUTERIZED BRAILLE OUTPUT. Kolsto, Elliot L. (Argonne National Lab., Ill.). Jul 1971. Contract W-31-109-eng-38. 7p. Dep. NTIS.

54341 (BDX-613-136) DISTORTION ENERGY FAILURE THEORY FOR ORTHOTROPIC MATERIALS. Forman, G. W. (Bendix Corp., Kansas City, Mo.). Jun 1970. 16p. Dep. NTIS.

54342 (BDX-613-137) STRESS ANALYSIS OF THICK-WALL ORTHOTROPIC SPHERICAL VESSELS. Forman, G. W. (Bendix Corp., Kansas City, Mo.). [nd]. 11p. Dep. NTIS.

54343 (BDX-613-360(Rev.)) STRETCH EFFECTS OF LOAD DEFLECTION AND THICKNESS OF Y-3333 CELLULAR SILICONE SLABS. Interim Report. Aldrich, P. H. (Bendix Corp., Kansas City, Mo.). Aug 1971. Contract AT(29-1)-613. 51p. Dep. NTIS.

54344 (BDX-613-375(Rev.)) A STUDY OF THE SHELF AGING CHARACTERISTICS OF Y-3333 CELLULAR SILICONE. Interim Report. Martinette, G. E. (Bendix Corp., Kansas City, Mo.). Jul 1971. Contract AT(29-1)-613. 51p. Dep. NTIS.

54345 (BDX-613-505) SOLDER SPLATTER CAUSED BY OUTGASSING HOLES IN PRINTED WIRING BOARDS. Lampe, B. T.; Evans, M. E.; Long, C. L.; Snelt, R. B. (Bendix Corp., Kansas City, Mo.). May 1971. Contract AT(29-1)-613. 38p. Dep. NTIS.

54346 (BDX-613-506) SYNTHESIS OF TOLUENE DIISOCYANATE DIMER (TDID). Richardson, W. E.; Baker, G. K.; Jungling, R. K.; Cole, B. C.; Lacy, L. E. (Bendix Corp., Kansas City, Mo.). May 1971. Contract AT(29-1)-613. 27p. Dep. NTIS.

54347 (BDX-613-507) THE BEGGS MMD TEST FOR DETERMINING THE SHELF LIFE OF FILM ADHESIVE. Camp, C. J.; Beggs, R. L. (Bendix Corp., Kansas City, Mo.). May 1971. Contract AT(29-1)-613. 17p. Dep. NTIS.

54348 (BDX-613-508) EVALUATION OF COMMERCIAL POLYARYL POLYISOCYANATES IN A BENDIX KANSAS CITY FOAM SYSTEM. Salary, J. (Bendix Corp., Kansas City, Mo.). May 1971. Contract AT(29-1)-613. 35p. Dep. NTIS.

54349 (BDX-613-509) DESCRIPTION OF VARIOUS METHODS OF PREPARING POLYAMIC ACIDS AND POLYIMIDES. Johnson, E. L.; Daly, J. C.; Ansley, D. R. (Bendix Corp., Kansas City, Mo.). May 1971. Contract AT(29-1)-613. 26p. Dep. NTIS.

54368 (LA-DC-12840) COMPUTATIONAL CONSIDERATIONS IN DIGITAL IMAGE ENHANCEMENT. Hunt, B. R. (Los Alamos Scientific Lab., N. Mex.). [1970]. 7p. (CONF-711006-1). Dep. NTIS.
For Presentation at conference on two-dimensional digital signal processing; Columbia, Mo. (6 Oct 1971).

54369 (NYO-2150-76) STRESS EFFECTS IN THE PARAELECTRIC RESONANCE OF KCl:Li. Report No. 1589. Larson, T. R.; Silsbee, R. H. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1971. Contract AT(30-1)-2150. 20p. Dep. NTIS.

54370 (NYO-3468-20) TUMOR THERAPY WITH RADIOLABELED HETEROLOGOUS ANTIBODY. Seventh Annual Report. Reif, Arnold E. (Boston City Hospital, Mass.). 30 Jul 1971. Contract AT(30-1)-3468. 8p. Dep. NTIS.

54371 (NYO-3699-59) GROUND STATE PROPERTIES AND LOW EXCITED STATES OF SOLID ^{4}He AND ^{3}He. Hansen, J. P.; Pollock, E. L. (Cornell Univ., Ithaca, N. Y. Lab. of Atomic and Solid State Physics). Jul 1971. 73p. Dep. NTIS.

54372 (ORNL-4729) PRELIMINARY ECONOMIC ANALYSIS OF CROSS-FLOW FILTRATION. Wadia, P. H.; Kraus, K. A.; Shor, A. J.; Dresner, L. (Oak Ridge National Lab., Tenn.). Aug 1971. Contract W-7405-eng-26. 42p. Dep. NTIS.

54373 (ORNL-TM-3557) GENERAL PROGRAM FOR CONSTRUCTING MAPS OF KIKUCHI AND KOSSEL LINES. Loh, B. T. M.; Ashbee, K. H. G. (Oak Ridge National Lab., Tenn.). Sep 1971. Contract W-7405-eng-26. 53p. Dep. NTIS.

54374 (ORO-1827-6) PATH OF RADIAL MOVEMENT OF MINERALS FROM SOIL TO XYLEM IN ROOTS. Period Covered: May 1957-April 1971. (Duke Univ., Durham, N. C.). Contract AT(40-1)-1827. 24p. Dep. NTIS.

54375 (ORO-3549-7) ASPECTS OF PHOSPHORUS CYCLING IN BRACKISH WATERS. Kuenzler, Edward J. (North Carolina Univ., Chapel Hill. Dept. of Environmental Sciences and Engineering). [1970]. Contract AT(40-1)-3549. 47p. (CONF-700845-1). Dep. NTIS.
From twenty-first annual meeting of the American Institute of Biological Sciences; Bloomington, Ind. (23 Aug 1970).

54376 (ORO-3630-12) SPECTRAL PROPERTIES OF THE CHROMOPHORIC MATERIAL ASSOCIATED WITH THE DNA-PHOTOREACTIVATING ENZYME ISOLATED FROM BAKER'S YEAST. Minato, Sadamas; Werbin, Harold (Texas Univ., Dallas. Div. of Biology). [1970]. Contract AT(40-1)-3630. 27p. Dep. NTIS.

54377 (RCN-149) FIESTA: FINITE ELEMENT STRESS AND TEMPERATURE ANALYSIS. A DESCRIPTION OF THE THEORY USED FOR THE CODE WITH SOME OTHER FINITE ELEMENT APPLICATIONS. Spreeuw, E. (Reactor Centrum Nederland, Petten). Jun 1971. 65p. Dep. NTIS (U. S. Sales Only).

54378 (SC-CR-715127) RESEARCH ON THE DESIGN OF NEAR-OPTIMAL CONTROLLERS. Technical Report EE-199(71)-SAN-183. Knudsen, Harold K. (New Mexico Univ., Albuquerque. Bureau of Engineering Research). Jun 1971. 54p. Dep. NTIS.
For Sandia Labs., Albuquerque, N. Mex.

54379 (SC-DC-714011) SOME AVERAGED MEASURES OF TORNADO INTENSITY BASED ON FATALITY AND DAMAGE REPORTS. Reed, Jack W. (Sandia Labs., Albuquerque, N. Mex.). [1971]. 7p. (CONF-711007-1). Dep. NTIS.
From seventh severe local storms conference; Kansas City, Mo. (5 Oct 1971).

54380 (SC-DR-710183) DEVELOPMENT OF A VOLUME MEASURING DEVICE. Hayes, Everett G. (Sandia Labs., Albuquerque, N. Mex.). Aug 1971. 8p. Dep. NTIS.

54381 (SC-DR-710384) INSTALLATION OF ELECTRICAL LENGTH STANDARD AND CONSTRUCTION OF IMPROVED ELECTRICAL LENGTH BRIDGE. Moyer, R. D. (Sandia Labs., Albuquerque, N. Mex.). Aug 1971. 45p. Dep. NTIS.

54382 (SC-R-713303) GENERALIZED THEORY OF IMPEDANCE LOADED MULTICONDUCTOR TRANSMISSION LINES IN AN INCIDENT FIELD. Harrison, Charles W. Jr. (Sandia Labs., Albuquerque, N. Mex.). Jul 1971. 25p. Dep. NTIS.

54383 (SC-RR-710146) TECHNIQUES FOR IMPROVING EFFECTIVE RESPONSE TIMES OF INTRINSIC THERMOCOUPLES. Bickle, L. W.; Keltner, N. R. (Sandia Labs., Albuquerque, N. Mex.). Sep 1971. 87p. Dep. NTIS.

54384 (SC-RR-710287) AVERAGE SURFACE PRESSURE AROUND INCLINED BODIES OF REVOLUTION AT HYPERSONIC SPEED. Bennett, M. D.; Barr, G. E. (Sandia Labs., Albuquerque, N. Mex.). Jun 1971. 16p. Dep. NTIS.

54385 (SC-RR-710302) EXTENDING COURANT, FRIEDRICHS, AND LEWY'S (1928) COMPACTNESS RESULT TO NONLINEAR EQUATIONS OF STATE AND NONDIFFERENTIABLE INITIAL DATA. Hicks, D. L. (Sandia Labs., Albuquerque, N. Mex.); Epstein, B. (New Mexico Univ., Albuquerque). Jul 1971. 19p. Dep. NTIS.

XUM

54386 (SC-RR-710341) FRIZZ: A HIGH VOLTAGE IMPULSE TESTER. Martin, T. H. (Sandia Labs., Albuquerque, N. Mex.). Jun 1971. 45p. Dep. NTIS.

54387 (SLAC-134) GEMS: A GRAPHICAL EXPERIMENTAL META SYSTEM. George, James Edward (Stanford Linear Accelerator Center, Calif.). Aug 1971. Contract AT(04-3)-515. 184p. (STAN-CS-71-227). Dep. NTIS.
Thesis.

54388 (SLAC-135) FORMAT: A TEXT PROCESSING PROGRAM. Ehrman, John R. (Stanford Linear Accelerator Center, Calif.). Jul 1971. Contract AT(04-3)-515. 154p. Dep. NTIS.

54389 (UCID-30009) SLOPPY: LEAST-SQUARES SLOPE FINDING IN TABLES OF WEIGHTED DATA. Edwards, Arthur L. (California Univ., Livermore. Lawrence Radiation Lab.). 6 Apr 1971. Contract W-7405-eng-48. 10p. Dep. NTIS.

54390 (UCID-30021) PRELIMINARY USER'S MANUAL FOR THE STAR SYSTEM SOFTWARE. Requa, Joseph E.; Coverston, Harriet G.; Du Bois, Pierre; Emery, Donald R.; Kent, Douglas A.; Richards, Marilyn D.; Storch, David F.; Vranesh, George E. (California Univ., Livermore. Lawrence Radiation Lab.). 1 Sep 1971. Contract W-7405-eng-48. 174p. Dep. NTIS.

54391 (UCRL-51040) IGS: A COMPUTER-BASED STORAGE AND RETRIEVAL SYSTEM FOR BIBLIOGRAPHIC INFORMATION. Pratt, Michael W.; Tandy, Robert K.; Kortan, Gary A. (California Univ., Livermore. Lawrence Radiation Lab.). 16 Apr 1971. Contract W-7405-eng-48. 56p. Dep. NTIS.

54392 (UR-49-1494) METAL ION-INDUCED CHANGES IN THE STRUCTURE OF PROTEINS INVESTIGATED WITH FLUORESCENCE AND FLUORESCENCE POLARIZATION TECHNIQUES. Young, Dolores Koa Ming (Rochester Univ., N. Y. Dept. of Radiation Biology and Biophysics). 1971. 72p. Dep. NTIS.
Thesis.

54393 (Y-DA-4214) INSTRUMENT FOR THE DETERMINATION OF HYDROGEN IN METALS. Powell, G. L.; Condon, J. B.; Strehlow, R. A. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 20 Aug 1971. Contract W-7405-eng-26. 16p. (CONF-710913-1). Dep. NTIS.
From one hundred sixty-second national meeting of the American Chemical Society, Washington, D. C. (12 Sep 1971).

54394 (Y-EC-93) COST OF AUTOMATION. Davidson, D. R. (Union Carbide Corp., Oak Ridge, Tenn. Y-12 Plant). 8 Sep 1971. Contract W-7405-eng-26. 10p. (CONF-711004-1). Dep. NTIS.
From Southeastern engineering conference and tool exposition; Atlanta, Ga. (19 Oct 1971).

54395 AMENDMENT TO THE AGREEMENT BETWEEN THE GOVERNMENT OF THE UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND AND THE GOVERNMENT OF THE UNITED STATES OF AMERICA FOR CO-OPERATION ON THE CIVIL USES OF ATOMIC ENERGY SIGNED AT WASHINGTON ON JUNE 15, 1955. Command 4694, July 1971. London; Her Majesty's Stationery Office (1970). 12p. £0.05.

CORPORATE AUTHOR INDEX

In the Corporate Author Index, technical report literature is indexed by the organization or institution responsible for issuing the report. Entries are given for all report literature and for published literature for which a corporate author approach is especially desirable, e.g., symposium and conference proceedings.

Each entry under a corporate author gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

A

AEROJET NUCLEAR CO., IDAHO FALLS, IDAHO.
PBF Training and Qualification Program, 25:54195 (ANCR-1019)

AEROSPACE CORP., EL SEGUNDO, CALIF.
Aromatic solute molecular-ion and triplet-state formation in polystyrene and polymethylmethacrylate, 25:51507 (AD-722057)

AGIP NUCLEARE, MILAN (ITALY).
Irradiation effects on reactor structural materials, 25:52386 (A/CONF.49/P-189)
Italian activities in the fuel manufacturing field, 25:52421 (A/CONF.49/P-181)
ROVI: development for intermediate capacity desalting plant driven by an organic cooled and moderated reactor, 25:54233 (A/CONF.49/P-177)

AKADEMIYA NAUK SSSR.
Mutagenic effect of fast neutrons on microorganisms, 25:52018 (A/CONF.49/P-690)
Nuclear radiation for automatic sorting of ores, 25:51696 (A/CONF.49/P-455)

AKADEMIYA NAUK SSSR, MOSCOW. INSTITUT FIZIKI.
Plasma containment in Tor-1 stellarator, 25:52772 (NP-18973)

AKADEMIYA NAUK UKRAINSKOI SSR.
Application of nuclear radiations in investigations on plant physiology, 25:51962 (A/CONF.49/P-694)

AKADEMIYA NAUK UKRAINSKOI SSR, KHARKOV. FIZIKO-TEKHNICHESKII INSTITUT.
Effect of high-frequency potential on the propagation of fast waves along a magnetoactive plasma layer, 25:52861 (KHFTI-70/57)
Effect of wave field pressure on longitudinal oscillations in plasma, 25:52862 (KHFTI-70/58)
Experimental determination of the basic characteristics of spatially periodic magnetic configurations, 25:52851 (KHFTI-70/49)
Interaction of plasma streams with stationary, axially symmetric magnetic fields, 25:52793 (KHFTI-70-50)
Study of the turbulence and heating of a plasma with a transverse current, 25:52771 (KHFTI-70-62)
Theory of transformation of surface waves into longitudinal oscillations in surface layer of plasma waveguide, 25:52860 (KHFTI-70/55)
Transformation of electromagnetic waves into longitudinal oscillations in nonhomogeneous plasma in presence of ideally conducting surface, 25:52859 (KHFTI-70/54)

AKTIEBOLAGET ATOMENERGI, STUDSVIK (SWEDEN).
Combined nuclear heat and power production in Sweden and related safety problems, 25:54235 (A/CONF.49/P-311)
Cross-section standards for fast-neutron elastic- and inelastic-scattering measurements, 25:53487 (CONF-701002-, pp 410-14)
Fine structure in flux distribution due to heterogeneity in some FRO cores, 25:54194 (AE-427)
Method for the determination of long-range transport of atmospheric sulphur, 25:51632 (A/CONF.49/P-318)
Microscopic fission-neutron-spectra measurements, 25:53489 (CONF-701002-, pp 437-51)
Nordic studies on prestressed concrete pressure vessels for water reactors, 25:54070 (A/CONF.49/P-307)
Operating experience of Agesta Nuclear Power Plant, 25:53933 (A/CONF.49/P-301)
Power increases and fuel defection, 25:54282 (A/CONF.49/P-314)
Some irradiation studies of fuel clad interaction and clad cracking, 25:54283 (A/CONF.49/P-315)
Techniques for core design and fuel management in boiling water reactors, 25:54085 (A/CONF.49/P-312)
Thermal energy storage in rock chambers, 25:53917 (A/CONF.49/P-798)

ALLGEMEINE ELEKTRICITAETS-GESELLSCHAFT, GROSSWELZHEIM (WEST GERMANY).
Irradiation behavior of fast reactor fuel pins and their components, 25:54086 (A/CONF.49/P-392)

ALLGEMEINE ELEKTRICITAETS-GESELLSCHAFT, AEG-TELEFUNKEN, FRANKFURT AM MAIN (WEST GERMANY).
Experience gained in operation of three demonstration nuclear power stations in Federal Republic of Germany, 25:53957 (A/CONF.49/P-806)
Safety of German designed light water-reactors, 25:54146 (A/CONF.49/P-365)

ALLGEMEINE ELEKTRICITAETS-GESELLSCHAFT, AEG-TELEFUNKEN, GROSSWELZHEIM (WEST GERMANY).
Neutron embrittlement of pressure vessel steels for water-cooled reactors, 25:52387 (A/CONF.49/P-393)

AMES LAB., IOWA.
Crystalline electric fields in some thulium aluminum compounds, 25:52972 (IS-T-479)
Debye temperatures of copper-rich, Cu--Au alloys, 25:54367 (IS-T-478)
Elastic constants of Fe--Ni--C alloys, 25:54366 (IS-T-461)
Magnetoelastic effects in terbium and dysprosium, 25:52948 (IS-T-464)
Microwave absorption in terbium, erbium, and $MnAu_2$ at selected frequencies from 20 to 120 GHz, 25:52949 (IS-T-471)
Neutron activation analysis for osmium and ruthenium in platinum, 25:51409 (IS-T-458)
Superconductivity of Pb--Bi alloys under high pressure, 25:52737 (IS-T-482)

ARGONNE NATIONAL LAB., IDAHO FALLS, IDAHO.
Collection and evaluation of kinetics data from EBR-II run 46A. EBR-II Project, 25:54199 (ANL-EBR-28)
COOLTEMP: computer code for calculating coolant temperatures in EBR-II subassemblies, 25:54198 (ANL-EBR-26)
EBR-II noise-signature analysis during the first half of fiscal year 1971. EBR-II Project, 25:54200 (ANL-EBR-36)
Operation of EBR-II as an irradiation facility at 62.5 MWt: an evaluation of plant and reactor data from run 46A. EBR-II Project, 25:54201 (ANL-EBR-37)
PROSPECTUS: routine operation of EBR-II at 62.5 MWt, 25:54197 (ANL-EBR-19)

ARGONNE NATIONAL LAB., ILL.
Absolute cross sections of ^{197}Au and ^{238}U, 25:53737 (CONF-701002-, pp 320-6)
Absolute source determinations with bath techniques, 25:51852 (CONF-701002-, pp 470-80)
Alloy chemistry of rare-earth and actinide elements, 25:52319 (CONF-710712-3)
Collection and evaluation of kinetics data from EBR-II run 46A. EBR-II Project, 25:54199 (ANL-EBR-28)
Conference on neutron standards and flux normalization, Argonne, Ill., 10/70, 25:53485 (CONF-701002)
COOLTEMP: computer code for calculating coolant temperatures in EBR-II subassemblies, 25:54198 (ANL-EBR-26)
EBR-II instrumented-subassembly system: tests 1 and 2, 25:54196 (ANL-7757)
EBR-II noise-signature analysis during the first half of fiscal year 1971. EBR-II Project, 25:54200 (ANL-EBR-36)
IBM 1403 printer modifications for computerized braille output, 25:54340 (ANL-7812)
Intermediate energy experiments on quasi-two-body production, 25:53132 (UCRL-20655, pp 341-95)
Interpretation and intercomparison of standard cross sections, 25:53602 (CONF-701002-, pp 331-40)
Measurements of ^{235}U fission cross section at 552 and 644 keV, 25:53734 (CONF-701002-, pp 281-4)
Metabolism of monomeric and polymeric plutonium in small animals: radiotoxic implications for man, 25:51969 (CONF-711001-(Vol.2), pp 551-9)
Neutron spectroscopy with proton-recoil proportional counters, 25:51879 (CONF-701002-, pp 385-400)
Operation of EBR-II as an irradiation facility at 62.5

MWt: an evaluation of plant and reactor data from run 46A. EBR-II Project, 25:54201 (ANL-EBR-37)
Prog. rpt. on reactor safety and physical property studies, semiannual, 1--6/71, 25:52318 (ANL-7820)
PROSPECTUS: routine operation of EBR-II at 62.5 MWt, 25:54197 (ANL-EBR-19)
Study of ^{10}B cross sections, 25:53592 (CONF-701002-, pp 107-20)
Thermal capture cross sections of ^{6}Li and ^{10}B by pulsed neutron method, 25:53595 (CONF-701002-, pp 129-35)
ZGS program, 25:53429 (UCRL-20655, pp 38a-58)
ARIZONA STATE UNIV., TEMPE. DEPT. OF CHEMISTRY.
Growth and x-ray studies of single crystals of higher oxides of praseodymium and terbium, 25:51467 (CONF-711001-(Vol.1), pp 84-95)
ARIZONA UNIV., TUCSON. DEPT. OF PHYSICS.
Prog. rpt. on impurity diffusion in solids, 12/70--11/71, 25:54353 (COO-1041-20)
ARKANSAS POWER AND LIGHT CO., LITTLE ROCK.
Prog. rpt. on nuclear physics, 1--12/70, 25:53662 (COO-1468-9)
ARMY TEST AND EVALUATION COMMAND, ABERDEEN PROVING GROUND, MD.
Radiation detection equipment, 25:51849 (AD-871790)
ASEA-ATOM, VASTERAS (SWEDEN).
Containment and safety in Swedish nuclear power plants, 25:53977 (A/CONF.49/P-305)
Fuel management problems in the Swedish power system, 25:53938 (A/CONF.49/P-425)
Nordic studies on prestressed concrete pressure vessels for water reactors, 25:54070 (A/CONF.49/P-307)
Oskarshamn I: a Swedish 440 MW(e) BWR nuclear plant, 25:53935 (A/CONF.49/P-303)
Power increases and fuel defection, 25:54282 (A/CONF.49/P-314)
Techniques for core design and fuel management in boiling water reactors, 25:54085 (A/CONF.49/P-312)
ATOMIC ENERGY BOARD, PELINDABA, PRETORIA (SOUTH AFRICA).
Biostatistical investigation of lung cancer incidence in South African gold/uranium miners, 25:52064 (A/CONF.49/P-659)
Computer techniques available for analysis of gamma-ray spectra obtained with Li-drifted Ge detector, 25:51882 (PEL-204)
Discussion of nuclear plant safety with reference to other hazards experienced by the community, 25:54150 (A/CONF.49/P-671)
Forecasting the role of nuclear energy in South Africa, 25:53985 (A/CONF.49/P-660)
Radiation polymerization of monomer impregnated South African timbers, 25:51504 (A/CONF.49/P-668)
ATOMIC ENERGY CENTRE, DACCA (PAKISTAN).
Aqueous reprocessing of Th--^{233}U fuel cycle by amine solvent from sulfate media, 25:51566 (A/CONF.49/P-650)
Neutron total cross section data measured with 3-MeV AECD Van-de-Graaf accelerator, 25:53728 (AECD/EP-18)
ATOMIC ENERGY CENTRE, LAHORE (PAKISTAN).
Determination of trace elements by neutron activation analysis, 25:51404 (A/CONF.49/P-110)
Radiation polymerization on natural products in Pakistan, 25:51494 (A/CONF.49/P-829)
Sediment study at Karachi by means of radioactive tracers, 25:51606 (A/CONF.49/P-113)
ATOMIC ENERGY COMMISSION, BAGHDAD (IRAQ). NUCLEAR RESEARCH INST.
Inherited sterility in the fig moth, Cadra (Ephestia) cautella walker, 25:52184 (A/CONF.49/P-2)
ATOMIC ENERGY COMMISSION, BOMBAY (INDIA).
Impact of nuclear technology in developing countries, 25:54334 (A/CONF.49/P-742)
ATOMIC ENERGY COMMISSION, HELSINKI (FINLAND).
Approach to regional (Nordic) co-operation in nuclear energy field, 25:54010 (A/CONF.49/P-7)
Nuclear power plant reliability as factor influencing power system planning in Finland, 25:53926 (A/CONF.49/P-8)
ATOMIC ENERGY COMMISSION, TOKYO (JAPAN).
Prospects for atomic energy development in Japan, 25:54023 (A/CONF.49/P-298)
ATOMIC ENERGY COMMISSION, WASHINGTON, D. C.
Conference on innovative applications of radiation, Dallas, Texas, 4/71, 25:51711 (CONF-710428)
Environmental statement radioactive waste repository, Lyons, Kansas, 25:51771 (TID-25729)
ATOMIC ENERGY CONTROL BOARD, OTTAWA (ONTARIO).
Canada judges power reactor safety on component quality and reliable system performance, 25:54142 (A/CONF.49/P-150)
Government, utilities, industry, and universities: partners for nuclear development in Canada and abroad, 25:54017 (A/CONF.49/P-166)
ATOMIC ENERGY ESTABLISHMENT, CAIRO (EGYPT).
Advances in reducing food losses and increasing food production in U.A.R, 25:52278 (A/CONF.49/P-136)
Experience developed in monitoring and control of radiation in U.A.R, 25:52089 (A/CONF.49/P-142)
Newer trends in nuclear materials research in U.A.R, 25:52420 (A/CONF.49/P-146)
Prospects of peaceful applications of nuclear explosions in U.A.R, 25:51655 (A/CONF.49/P-144)
Radiobiological studies and availability of radiopharmaceuticals for medical applications in U.A.R, 25:51965 (A/CONF.49/P-147)
Studies for potential use of nuclear desalination in U.A.R, 25:54232 (A/CONF.49/P-140)
ATOMIC ENERGY ESTABLISHMENT, WINFRITH (ENGLAND).
Analysis of hydrogen and tritium content of graphite and other materials, 25:51358 (AEEW-M-1028)
Development of high temperature reactor technology in the Dragon Project, 25:54040 (A/CONF.49/P-738)
Estimation of tube wall temperatures in evaporator region of subcritical once-through sodium heated steam generators, 25:51670 (AEEW-M-1000)
Factors influencing the integration of nuclear power and water desalination plant, 25:54237 (A/CONF.49/P-484)
Fuel management studies for prismatic type high temperature reactors, 25:54130 (A/CONF.49/P-346)
Irradiation testing of fuel for the British prototype fast reactor, 25:54089 (A/CONF.49/P-498)
Operational characteristics of the steam generating heavy water reactor, 25:54132 (A/CONF.49/P-471)
ATOMIC ENERGY OF CANADA LTD., CHALK RIVER (ONTARIO).
Gentilly status report, May 1970, 25:53880 (70-CNA-619)
Government, utilities, industry, and universities: partners for nuclear development in Canada and abroad, 25:54017 (A/CONF.49/P-166)
Large-scale nuclear energy from the thorium cycle, 25:54125 (A/CONF.49/P-157)
Marketing of nuclear power plants, 25:53884 (70-CNA-647)
Status of the Douglas Point Project, 25:53925 (70-CNA-617)
Status of the Rajasthan Atomic Power Project, 25:53881 (70-CNA-621)
ATOMIC ENERGY OF CANADA LTD., CHALK RIVER (ONTARIO). CHALK RIVER NUCLEAR LABS.
Canada judges power reactor safety on component quality and reliable system performance, 25:54142 (A/CONF.49/P-150)
CANDU nuclear power system: competitive for foreseeable future, 25:54124 (A/CONF.49/P-151)
Fuel for Canadian power reactors, 25:53888 (A/CONF.49/P-156)
Irradiation experience with fuel for power reactors, 25:54082 (A/CONF.49/P-158)
Irradiation facilities: their importance in developing Canadian nuclear competence, 25:51665 (A/CONF.49/P-152)
Metallurgical properties of Zr-alloy pressure tubes and their steel end-fittings for CANDU reactors, 25:52385 (A/CONF.49/P-159)
Nuclear power and the environment, 25:54016 (A/CONF.49/P-160)
Prog. rpt. on physics, 10--12/70, 25:53729 (AECL-3865)
Recovery from radiation damage in biological systems, 25:52175 (A/CONF.49/P-163)
ATOMIC ENERGY OF CANADA LTD., OTTAWA (ONTARIO).
Applications of isotopes for industrial measurements and control, 25:51382 (A/CONF.49/P-164)
Canadian studies on applications of isotopes and radiation in agriculture and food preservation, 25:52279 (A/CONF.49/P-162)
Medical applications of radioisotopes and radiation, 25:52122 (A/CONF.49/P-161)
ATOMIC ENERGY OF CANADA LTD., PINAWA (MANITOBA). WHITESHELL NUCLEAR RESEARCH ESTABLISHMENT.
CANDU nuclear power system: competitive for foreseeable future, 25:54124 (A/CONF.49/P-151)
Irradiation experience with fuel for power reactors, 25:54082 (A/CONF.49/P-158)
Irradiation facilities: their importance in developing Canadian nuclear competence, 25:51665 (A/CONF.49/P-152)
Metallurgical properties of Zr-alloy pressure tubes and their steel end-fittings for CANDU reactors, 25:52385 (A/CONF.49/P-159)
ATOMIC ENERGY OF CANADA LTD., SHERIDAN PARK (ONTARIO).
CANDU nuclear power system: competitive for foreseeable future, 25:54124 (A/CONF.49/P-151)
Costing of Canadian nuclear power plants, 25:53929 (A/CONF.49/P-149)
ATOMIC ENERGY RESEARCH ESTABLISHMENT, HARWELL (ENGLAND).
Analysis of total cross section of carbon from 70 eV to 1.5 MeV, 25:53600 (CONF-701002-, pp 201-7)
Determination of oxygen and nitrogen in some nitrides and carbides by inert gas fusion using an impulse heating furnace, 25:51359 (AERE-R-6537)
Experimental tests with the time-of-flight method on a neutron detector with flat energy response, 25:51880 (CONF-701002-, pp 401-9)
Graphite and coolant chemistry of gas cooled thermal reactors, 25:54032 (A/CONF.49/P-504)
Irradiation damage in carbons and graphites appropriate to MK II Gas Cooled Reactors and to MK III Gas Cooled Reactors, 25:52469 (A/CONF.49/P-503)
Irradiation effects in fast reactor cladding and structural materials, 25:52390 (A/CONF.49/P-499)
Irradiation effects in zirconium alloy pressure tubes, 25:52391 (A/CONF.49/P-502)
Irradiation testing of fuel for the British prototype fast reactor, 25:54089 (A/CONF.49/P-498)
Isotope powered thermoelectric generators, 25:51698 (A/CONF.49/P-487)
Neutron--proton total cross section between 0.5 and 21

MeV, 25:53511 (CONF-701002-, pp 51-6)
- Preliminary measurements of relative ^{6}Li(n,α) cross section, 25:53593 (CONF-701002-, pp 121-4)
- Recommended values of ^{10}B(n,α) cross section below 200 keV, 25:53598 (CONF-701002-, pp 151-65)
- Review of data on ^{6}Li cross sections below 1.7 MeV, 25:53591 (CONF-701002-, pp 80-106)
- Selected environmental studies using radioactive isotopes, 25:51611 (A/CONF.49/P-509)
- Uranium dioxide fuel in the MK II gas cooled reactor (AGR), 25:54090 (A/CONF.49/P-501)
- Use of research reactors in UK for neutron beam studies of condensed matter, 25:54180 (A/CONF.49/P-486)
- Volatilization and deposition of Ru dioxide in relation to FINGAL process, 25:51571 (AERE-R-6418)

ATOMIC ENERGY RESEARCH INST., SEOUL (SOUTH KOREA).
- Projected role of nuclear power in Korea, 25:53913 (A/CONF.49/P-778)

ATOMIC POWER DEVELOPMENT ASSOCIATES, INC., DETROIT, MICH.
- Prog. rpt. on comparison of methods for heterogeneity analysis, 6--9/70, 25:54214 (TID-25779)
- United Kingdom research and development work in aid of future U resources, 25:51640 (A/CONF.49/P-489)

ATOMIC WEAPONS RESEARCH ESTABLISHMENT, ALDERMASTON (ENGLAND).
- Evaluation of ν bar for ^{238}U, 25:53730 (AWRE-O-44/71)

ATOMICS INTERNATIONAL, CANOGA PARK, CALIF.
- Prog. rpt. on LMFBR physics Programs, annual, 1971, 25:54060 (AI-AEC-13005)

ATOMICS INTERNATIONAL, CANOGA PARK, CALIF. LIQUID METAL ENGINEERING CENTER.
- Test and evaluation of Alco/BLH prototype sodium-heated steam generator (final report), 25:51673 (LMEC-Memo-70-20)

AUSTRAL OIL CO., INC., HOUSTON, TEX.
- Project Rulison: new approach to energy shortage, 25:51660 (CONF-710428-, Paper 2)

AUSTRALIAN ATOMIC ENERGY COMMISSION.
- Current status of civil engineering and mineral resources development applications of peaceful nuclear explosions, 25:51656 (A/CONF.49/P-762)
- Environmental monitoring program at A.A.E.C. Research Establishment, Lucas Heights, 25:52065 (A/CONF.49/P-800)

AUSTRALIAN ATOMIC ENERGY COMMISSION RESEARCH ESTABLISHMENT, LUCAS HEIGHTS.
- Analysis of flow stability in boiling systems with TOSCLE code, 25:54338 (AAEC/E-217)
- Two-phase pressure losses: flow regime effects and associated phenomena, 25:54339 (AAEC/TM-589)

B

BABCOCK AND WILCOX LTD., LONDON (ENGLAND).
- Development and manufacture of some important components for the prototype fast reactor at Dounreay, 25:54071 (A/CONF.49/P-482)
- Power system flexibility requirements and their effect on the design of nuclear reactors, 25:53942 (A/CONF.49/P-479)

BALLISTIC RESEARCH LABS., ABERDEEN PROVING GROUND, MD.
- Influence of solution structure on hydrated electron reactions, 25:51506 (AD-721299)

BATTELLE COLUMBUS LABS., OHIO.
- High-temperature creep of uranium dioxide, 25:52438 (BMI-1912)
- MIRA: methods for iodine-removal analysis in reactor containment systems, 25:54152 (BMI-1915)

BATTELLE-NORTHWEST, RICHLAND, WASH. PACIFIC NORTHWEST LAB.
- Fission product rhodium and palladium, 25:51385 (BNWL-CC-2239)
- Prog. rpt. on measurement of radiation exposure of astronauts by radiochemical techniques, 7/6--10/4/70, 25:52071 (N-71-24257)
- Safeguards systems considerations, 25:51761 (BNWL-SA-3904)

BATTELLE PACIFIC NORTHWEST LABS., RICHLAND, WASH.
- Containment systems experiment final program summary, 25:54155 (BNWL-1592)
- Effect of spray flow rate on washout of gases and particles in the containment systems experiment, 25:54154 (BNWL-1591)
- Removal of airborne fission products by recirculating filter systems in the containment systems experiment, 25:54153 (BNWL-1587)
- Study of the reactivity effects of finite PuO$_2$ particle sizes in mixed PuO$_2$--UO$_2$ nuclear fuels, 25:54287 (BNWL-1608)

BELL TELEPHONE LABS., INC., MURRAY HILL, N.J.
- Moessbauer spectroscopy in the rare earths, 25:52971 (CONF-711001-(Vol.1), pp 144-51)

BENDIX CORP., KANSAS CITY, MO.

Irradiation effects on reactor structural materials, 25:52386 (A/CONF.49/P-189)
Italian experience on fuel performance, 25:53889 (A/CONF.49/P-188)
Method of limiting the degree of contamination of the primary circuit proceeding from the open fuel in sodium fast power reactor, 25:54119 (RT/ING-(71)2)
Methods of separation of noble fission gases contained in gaseous effluents, 25:51586 (RT/PROT-(71)8)
Nuclear methods for increasing food production, 25:52014 (A/CONF.49/P-192)
Plutonium utilization in thermal and fast reactors, 25:54126 (A/CONF.49/P-185)
Radiation protection experience in Italian nuclear power plants, 25:53973 (A/CONF.49/P-191)
Results achieved in Italy in the field of nuclear ship propulsion, 25:54246 (A/CONF.49/P-178)
ROVI: development for intermediate capacity desalting plant driven by an organic cooled and moderated reactor, 25:54233 (A/CONF.49/P-177)
Solutions of safety problems encountered in operation of Italian nuclear power plants, 25:53972 (A/CONF.49/P-173)
Survey dosimetry in a field of 1200 curies of gamma rays, 25:52072 (RT/PROT-(71)10)

COMMISSARIAT A L'ENERGIE ATOMIQUE, CADARACHE (FRANCE). CENTRE D'ETUDES NUCLEAIRES.
Fuel element of reactor Phenix, 25:54092 (A/CONF.49/P-609)
Improved fuel elements for gas-cooled, graphite-moderated, natural U reactors, 25:54091 (A/CONF.49/P-608)
New absolute measurement of neutron-induced fission cross sections of ^{235}U, ^{239}Pu, and ^{241}Pu from 17 keV to 1 MeV, 25:53733 (CONF-701002-, pp 257-71)
Nuclear techniques applied to the water cycle in agronomy, 25:51960 (A/CONF.49/P-626)
Parasitic effects in cross-section measurements of ^{6}Li(n,α)T, 25:53596 (CONF-701002-, pp 136-40)
Plants for treatment of enriched uranium at Cadarache, 25:51762 (CEA-CONF-1786)
Present status and predicted development of fast breeder in France, 25:54036 (A/CONF.49/P-583)
Preservation of powdered food products by irradiation, 25:52282 (A/CONF.49/P-628)
Progress in the effluent processing and conditioning techniques in research centres, 25:51564 (A/CONF.49/P-621)
Tests on nuclear fuel safety carried out on Pegase reactor, 25:54182 (A/CONF.49/P-580)

COMMISSARIAT A L'ENERGIE ATOMIQUE, FONTENAY-AUX-ROSES (FRANCE). CENTRE D'ETUDES NUCLEAIRES.
Adapting French reprocessing plants to new types of irradiated fuels, 25:51562 (A/CONF.49/P-601)
Corrosion problems raised by the use of steels in the construction of steam generators for nuclear reactors, 25:52294 (A/CONF.49/P-576)
Electron microprobe analysis of highly radioactive materials, 25:51360 (CEA-CONF-1783)
French ^{238}Pu production and application program, 25:51703 (A/CONF.49/P-637)
French studies on the transport of irradiated fuels for power reactors, 25:51752 (A/CONF.49/P-611)
Irradiation of mixed U and Pu carbide and nitride fuels in fast neutron loop ''MFBS'', 25:52472 (EUR-4347)
Management of radioactive wastes and their long-term storage, 25:51755 (A/CONF.49/P-766)
Method for the economic study of the benefits of desalination in satisfying the need for water, 25:51666 (A/CONF.49/P-589)
Processing of highly irradiated fuels, 25:51563 (A/CONF.49/P-603)
Research on controlled thermonuclear fusion in the Commissariat a l'Energie Atomique, 25:52765 (A/CONF.49/P-813)

COMMISSARIAT A L'ENERGIE ATOMIQUE, GRENOBLE (FRANCE). CENTRE D'ETUDES NUCLEAIRES.
Applications of stable and radioactive isotopes in hydrology and sedimentology, 25:51613 (A/CONF.49/P-634)
Distillation cycle and the combination of processes which are applicable to large-capacity desalination plants, 25:54240 (A/CONF.49/P-590)
Experiments on creep in graphite under neutron irradiation, 25:52470 (A/CONF.49/P-614)
Irradiation facilities for specialized research, 25:54184 (A/CONF.49/P-593)
Nuclear applications in the biomedical field, 25:52129 (A/CONF.49/P-629)
Organization of research in Grenoble Nuclear Centre in conjunction with the university and industry, 25:54330 (A/CONF.49/P-638)
Progress in the effluent processing and conditioning techniques in research centres, 25:51564 (A/CONF.49/P-621)
Radiation effects on the nucleic acids bases, 25:51990 (A/CONF.49/P-633)
Use of SILOE reactor in promoting nuclear techniques co-operation with other countries, 25:54183 (A/CONF.49/P-591)

COMMISSARIAT A L'ENERGIE ATOMIQUE, LIMEIL-BREVANNES (FRANCE). CENTRE D'ETUDES.
Research on controlled thermonuclear fusion in the Commissariat a l'Energie Atomique, 25:52765 (A/CONF.49/P-813)

COMMISSARIAT A L'ENERGIE ATOMIQUE, PARIS (FRANCE).
Aspects of French regulations in the nuclear field, 25:52102 (A/CONF.49/P-624)
Environmental effects: public relations, 25:53986 (A/CONF.49/P-681)
Franco-German high-flux reactor history and construction, 25:54185 (A/CONF.49/P-594)
French development plans regarding the separation of uranium isotopes, 25:51701 (A/CONF.49/P-606)
French know-how in the separation of isotopes, 25:51700 (A/CONF.49/P-605)
Neutronic study on fuel burn-up in thermal neutron reactors, 25:54093 (A/CONF.49/P-610)
PHENIX: first French fast neutrons power plant,

25:53906 (A/CONF.49/P-584)

COMMISSARIAT A L'ENERGIE ATOMIQUE, PIERRELATTE (FRANCE).
- French know-how in the separation of isotopes, 25:51700 (A/CONF.49/P-605)

COMMISSARIAT A L'ENERGIE ATOMIQUE, SACLAY (FRANCE). CENTRE D'ETUDES NUCLEAIRES.
- Applications of stable and radioactive isotopes in hydrology and sedimentology, 25:51613 (A/CONF.49/P-634)
- Behavior of special shielding concretes and their components under neutron irradiation, 25:52486 (A/CONF.49/P-613)
- Contamination occurring with linear accelerator as result of failure of natural uranium target sheath, 25:53407 (CEA-CONF-1766)
- Contribution to development of new renal, pancreatic, thyroid, and cardiac radioisotopic exploration techniques, 25:52130 (A/CONF.49/P-631)
- Criticality of liquid mixtures of highly ^{235}U-enriched uranium hexafluoride and hydrofluoric acid, 25:51545 (Y-CDC-9)
- Development of thermionic conversion with a view to energy production, 25:52703 (A/CONF.49/P-592)
- Electron microprobe analysis of highly radioactive materials, 25:51360 (CEA-CONF-1783)
- Equipment for intervention in a radioactive environment, 25:51753 (A/CONF.49/P-617)
- Experiments on creep in graphite under neutron irradiation, 25:52470 (A/CONF.49/P-614)
- French know-how in the separation of isotopes, 25:51700 (A/CONF.49/P-605)
- French tendancies about reactor safety, 25:53984 (A/CONF.49/P-579)
- Heavy water-research on production processes: plants based on the French process, 25:51702 (A/CONF.49/P-607)
- Present status and predicted development of fast breeder in France, 25:54036 (A/CONF.49/P-583)

COMMISSARIAT A L'ENERGIE ATOMIQUE, VALDUC (FRANCE). CENTRE D'ETUDES.
- Progress in the effluent processing and conditioning techniques in research centres, 25:51564 (A/CONF.49/P-621)

COMMONWEALTH EDISON CO., CHICAGO, ILL.
- Dresden Nuclear Power Station, Unit 2. Partial control rod insertion following spurious reactor scram signal, 25:53963 (DOCKET-50237-199)
- Dresden Nuclear Power Station, Unit 2. Technical specifications, Proposed Change No. 14, 25:53992 (DOCKET-50237-144)
- Dresden Nuclear Power Station, Unit 2. Technical specifications, Proposed Change No. 15, 25:53993 (DOCKET-50237-197)
- Dresden Nuclear Power Station, Unit 3. Technical specifications, Proposed Change No. 6, 25:53995 (DOCKET-50249-99)

CONSOLIDATED EDISON CO. OF NEW YORK, INC., NEW YORK.
- Indian Point Station, Unit No. 1. Control rod position failure, 25:53959 (DOCKET-50003-86)

CORNELL UNIV., ITHACA, N. Y. LAB. OF ATOMIC AND SOLID STATE PHYSICS.
- Ground state properties and low excited states of solid ^{4}He and ^{3}He, 25:54371 (NYO-3699-59)
- Stress effects in paraelectric resonance of KCl:Li, 25:54369 (NYO-2150-76)

D

DANISH ATOMIC ENERGY COMMISSION, RISOE. RESEARCH ESTABLISHMENT.
- Application of radiation techniques for curing of surface coatings and for preparation of wood-polymer and concrete-polymer materials, 25:51503 (A/CONF.49/P-647)
- Extra-corporeal irradiation of blood for immunosuppressive therapy, equipment, dosimetry, and medical experience, 25:52149 (A/CONF.49/P-642)
- Multi-purpose irradiation plant and the quality control of radiation sterilization of medical equipment, 25:51668 (A/CONF.49/P-804)
- Nordic studies on prestressed concrete pressure vessels for water reactors, 25:54070 (A/CONF.49/P-307)
- Secondary high-temperature creep of poly-crystalline magnesium oxide, 25:52439 (RISO-M-1385)

DARESBURY NUCLEAR PHYSICS LAB. (ENGLAND).
- Prog. rpt., annual, 1970, 25:52988 (NP-18909)

DAYTON POWER AND LIGHT CO., OHIO.
- Wm. H. Zimmer Nuclear Power Station, Unit 1. Preliminary safety analysis report, Amendment 19, 25:53999 (DOCKET-50358-26)

DAYTON UNIV., OHIO.
- Crystal structure of intermetallic compounds $Pr_2Co_{1\ 7}$ and $Nd_2Co_{1\ 7}$, 25:52372 (CONF-711001-(Vol.1), pp 96-101)
- Liquid-phase sintering of $PrCo_5$ magnets with Sm--Co additive, 25:52939 (CONF-711001-(Vol.1), pp 252-60)

DAYTON UNIV., OHIO. RESEARCH INST.
- Lattice constants for mixed intermetallic phases of type R_2(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)

DEMOCRITUS NUCLEAR RESEARCH CENTER, ATHENS (GREECE).
- Experiments and other activities with GRR-1, 25:54172 (A/CONF.49/P-3)

DEPARTMENT OF ATOMIC ENERGY, BOMBAY (INDIA).
- Costing of nuclear power stations in India and recent cost trends, 25:53945 (A/CONF.49/P-527)
- Impact of nuclear technology in developing countries, 25:54334 (A/CONF.49/P-742)
- Performance of Tarapur Atomic Power Station, 25:53944 (A/CONF.49/P-526)
- Planning for optimum phasing and absorption of power plants in grids, 25:53946 (A/CONF.49/P-528)

DEPARTMENT OF ATOMIC ENERGY, NEW DELHI (INDIA).
- Uranium and thorium resources and development of technology for their extraction in India. I and II, 25:51641 (A/CONF.49/P-531)

DEPARTMENT OF ENERGY, MINES AND RESOURCES, OTTAWA (ONTARIO). MINES BRANCH.
- Uranium and Th in Canada, 25:51638 (A/CONF.49/P-154)

DEPARTMENT OF NATIONAL HEALTH AND WELFARE, OTTAWA (ONTARIO).
- Medical applications of radioisotopes and radiation, 25:52122 (A/CONF.49/P-161)

DEUTSCHES ELEKTRONEN-SYNCHROTRON, HAMBURG (WEST GERMANY).
- Diffractive inelastic processes at extremely high energies, 25:53050 (DESY-71/36)
- Experiments on the e^+-e^- storage ring, 25:52990 (DESY-71/28)
- Investigations on disturbances in the storage ring caused by the detector field and their corrections, 25:53409 (DESY-R-1-70/5)
- Precise determination of rho, ω interference parameters from photoproduction of vector mesons off nucleon and nuclei, 25:52991 (DESY-71/37)
- Production of pion pairs in electron colliding beams, 25:53048 (DESY-71/30)
- Regge poles for large coupling constants. II, 25:53036 (DESY-71/31)
- Relativistic one-boson-exchange model of nucleon--nucleon interaction, 25:53224 (DESY-71/34)
- Scattering of a charged vector meson in a static field at high energies, 25:53049 (DESY-71/32)

DILWORTH, SECORD, MEAGHER AND ASSOCIATES LTD., TORONTO (ONTARIO).
- TRIUMF status report, 25:53400 (70-CNA-625)

DIVISION OF REACTOR DEVELOPMENT AND TECHNOLOGY (AEC), WASHINGTON, D. C.
- Current pulse preamplifiers for use with fission counters, 25:51857 (RDT-C-15-3-T)

DIVISION OF REACTOR LICENSING (AEC), WASHINGTON, D. C.
- Dresden Nuclear Power Station Unit 1. Technical specifications, change No. 23 allowed, 25:53991 (DOCKET-50010-94)
- Dresden Nuclear Power Station, Units 2 and 3. Technical specifications, Change Nos. 5 and 13, 25:53994 (DOCKET-50237-198)
- West Valley Reprocessing Plant. Technical specifications, Change No. 14 authorized, 25:51576 (DOCKET-50201-85)

DIVISION OF STATE AND LICENSEE RELATIONS (AEC), WASHINGTON, D.C. INDEMNITY AND EXPORT CONTROL BRANCH.
- Export and import of materials and facilities controlled by AEC, 25:51772 (WASH-1163)

DIVISION OF TECHNICAL INFORMATION EXTENSION (AEC), OAK RIDGE, TENN.
- CINDA 71: index to literature on microscopic neutron data, 25:53493 (TID-25736)

DOW CHEMICAL CO., GOLDEN, COLO. ROCKY FLATS DIV.
- Mixtures of plutonium and enriched uranium in slab geometry, 25:54212 (RFP-1489)
- Reaction gamma-ray interferences in the passive assay of plutonium, 25:51386 (CONF-710617-15)

DOW CHEMICAL CO., MIDLAND, MICH.
- Puerto Rico Energy Center Study, 25:54242 (TID-25603(Vol.2))
- Puerto Rico Energy Center Study, 25:53922 (TID-25603(Vol.1))
- Puerto Rico Energy Center Study. Executive summary, 25:53921 (TID-25602)
- Puerto Rico Energy Center Study. Site selection supplement, 25:54162 (TID-25603(Suppl.))

DU PONT DE NEMOURS (E.I.) AND CO., AIKEN, S. C. SAVANNAH RIVER LAB.
- Analysis of xenon oscillation experiments, 25:54253 (DP-1251)

DUKE UNIV., DURHAM, N. C.
- Prog. rpt. on path of radial movement of minerals from soil to xylem in roots, final, 5/57--4/71, 25:54374 (ORO-1827-6)

DURHAM UNIV. (ENGLAND). DEPT. OF PHYSICS.
- Pulsed field magnetization measurements in rare earth-transition metal compounds, 25:52936 (CONF-711001-(Vol.1), pp 229-39)
- Structural, magnetic, and electrical properties of Dy--Nd alloys, 25:52937 (CONF-711001-(Vol.1), pp 240-240k)

PERSONAL AUTHOR INDEX

Authors' names are indexed in the form appearing in the abstracted publication. Each entry under an author's name gives the publication title and the *NSA* volume and abstract numbers. Report numbers, where applicable, are given in parentheses at the end of the entry.

Because of problems involved in the mechanical preparation of this index, all accent marks are omitted. The following changes in spelling have been introduced to reduce some of the confusion which might result from omitting the accents:

Germanic	ä appears as	ae
Germanic	ö	oe
Germanic	ü	ue
Scandinavian	ϕ	oe

A

AAMODT, Roger Louis, Mobilization, retention, and excretion of ^{181}W in beagle following injection of $Na_2{}^{181}WO_4$ and inhalation of $^{181}WO_3$, 25:51973 (UR-49-1496)

SUBJECT INDEX

Cross references are included in cumulative subject indexes and in *Subject Headings Used by the USAEC Division of Technical Information* (USAEC report TID-5001).

The reader is also referred to *Guide to Abstracting and Indexing for Nuclear Science Abstracts* (USAEC report TID-4576).

Most headings in the subject index are specific materials, things, and processes. The headings are followed by modifiers that describe the properties of, or processes applied to, the headings.

All index entries cite *NSA* volume and abstract numbers; volume number precedes the colon and the abstract number follows it. The designation (R) following the abstract number indicates a progress report; (P) indicates a patent; and (T) indicates a translation. Abstracts for reports other than progress reports carry no letter designation. Report numbers, where applicable, are included in parentheses after the abstract number of the citation. Published literature (journal article or book) can be identified by the absence of a report number.

Ideas presented in the original literature, rather than key words, have been indexed. The indexers have selected what seemed the most probable and logical place to look for typical information. Since it is not always possible to anticipate where a user would look for information, the cumulative indexes include numerous cross references. Consideration of synonymous or closely related terms will prove valuable.

Information is indexed for the greatest use to the greatest number of users. This requires that a topic be indexed to headings that most specifically describe it and not ordinarily to the headings that describe its ultimate use or to the general class headings that include the specific headings. For example, information on boiler design for the Fermi Fast Breeder Reactor would be indexed under the headings BOILERS and FERMI FAST BREEDER REACTOR but not necessarily under the headings REACTORS, FAST or REACTORS, BREEDER.

General or broad headings are reserved for general summaries, reviews, comprehensive reports, and similar literature.

Subject Heading Styles

Generally, the direct form of subject entry is used rather than inverted headings; e.g., AMINO ACIDS rather than ACIDS, AMINO; HELIUM ISOTOPES He-4 rather than HELIUM—ISOTOPES He-4 or HELIUM—He-4 ISOTOPES. Note, however, that in some cases parenthetic modifying terms or inverted headings such as NEUTRONS, FAST, are used where the alphabetical arrangement of a direct entry would cause information to be scattered. In addition, organic compounds are usually entered in the index in the inverted form to facilitate grouping like or related compounds with the parent compounds; e.g., BENZENE, BROMO- rather than BROMOBENZENE. In general, the nomenclature used is that of the subject indexes to *Chemical Abstracts*.

Alphabetization

Subject headings are alphabetized word by word. Parenthetic qualifiers, numbers, and Greek letters within subject headings are disregarded in alphabetizing unless there are two or more headings that are otherwise identical, in which case the qualifier, numerical progression, or spelled names for the Greek letters determine the order.

Examples:

M-Capture
  see ELECTRON CAPTURE
MAGNESIUM
MAGNESIUM ALLOYS AND SYSTEMS
MANGANESE FLUORIDES
MANGANESE FLUORIDES MnF_2
MESONS
MESONS (π)
MESONS (ρ)
1-PENTANOL
2-PENTANOL

Modifying Phrases

The modifiers appearing under a subject heading are written specifically to show the relation between the item being indexed and the heading. The modifier therefore contains a maximum of useful information. Although the modifier begins with the word judged to be of greatest use to the greatest number of users, there is still need for the searcher to consider all modifiers under the heading(s) of interest.

Modifiers usually form meaningful phrases when combined with the subject heading. Some are intended to be read following the subject heading, e.g., the entry HYDROGEN—sorption by charcoal should be read "hydrogen sorption by charcoal." As a result of placing the important word first, however, many modifiers must be rearranged for smooth reading, e.g., FORMALDEHYDE—yields in radiolysis of ethyl ether, effects of deuterium on, should be read "effects of deuterium on formaldehyde yields in radiolysis of ethyl ether" and URANIUM—crystal structure of, effect of cooling rate on allotropic transformations in, should be read "effect of cooling rate on allotropic transformations in crystal structure of uranium."

Special characters are added to modifiers in the fields of physics and reactor technology; if the modifier does not establish the experimental or theoretical character of a reference, a symbol (E), (T), or (E/T) is placed immediately after the modifying phrase and before the abstract number.

XUM

Physical States and Configurations of Materials

The specific physical state, if other than normal, or the geometric configuration of the material is included in the modifying phrase; e.g., information on liquid metals is indexed under the specific metal with "liquid" in the modifier and carbon crucibles is indexed under CARBON with "crucibles" appropriately placed in the modifier. The information on carbon crucibles is also indexed under CRUCIBLES.

Nomenclature of Inorganic Compounds

Inorganic compounds are indexed to subject headings in the direct form. Cations are listed in the order of increasing valence for polycationic salts of varying valence and in alphabetic order for polycationic salts in which all cations have the same valence; e.g., SODIUM ALUMINUM SILICATES and POTASSIUM SODIUM SULFATES. If more than one anionic species is presented in a compound, the anions are arranged alphabetically, e.g., BERYLLIUM FLUORIDE HYDROXIDES.

Nomenclature of Organic Compounds

Organic compounds are indexed by subject headings based on the indexes to *Chemical Abstracts* except in the area of enzymes, in which specific enzymes, named according to the 1964 recommendations of the International Union of Biochemistry, are used. In many cases nonproprietary names for drugs are used as subject headings, and cross references are made from the systematic chemical names. Subject headings for hormones appear in the inverted style at HORMONES.

Nomenclature of Life Sciences

Subject headings for plants are names of phyla with one exception: members of the Phylum Tracheophyta are indexed under class or subclass names. Scientific names (genus and species) are used as the initial, or file, word in the modifying phrase. Scientific names are omitted only when the name is not available in the literature or cannot be found in available references.

Subject headings for animals are the names of phyla with the following exceptions: (1) members of Phylum Arthropoda and Phylum Chordata are indexed under appropriate class name, and (2) common names are used for members of Class Mammalia.

Subject headings are entered for various classes of commodities, and specific products are identified in the file-word position of the modifier. In the following examples, approved subject headings are capitalized and typical modifier file words are listed in lower case.

Example 1	Example 2
CEREALS	MEATS
bread	beef
flour	fish
oats	mutton
rice	pork
rye	poultry
wheat	seafood

Diseases, pathological conditions, and in vitro studies of atypical cells and tissues are indexed under subject headings for the organism affected, under the appropriate anatomical structure of physiological phenomenon affected, and under the appropriate disease heading. Subject headings for diseases (defined as any deviation from the norm) are DISEASES; DISEASES, INFECTIOUS; DISEASES, NEOPLASTIC; DISEASES, PHYSIOLOGICAL; DISEASES, PLANT; and DISEASES, TRAUMATIC.

Diseases of mixed etiology are treated in the following manner: neoplastic diseases that are also classified as infectious or physiological are indexed under DISEASES, NEOPLASTIC; diseases in which a microorganism is the etiologic agent are classified under DISEASES, INFECTIOUS; physiological anomalies that are neither neoplastic nor infectious are indexed under DISEASES, PHYSIOLOGICAL; the acute radiation syndrome, nonspecific radiation injuries, trauma, and wounds or incisions inflicted mechanically are indexed under DISEASES, TRAUMATIC.

Specific diseases or pathological conditions are named in the file-word position of the modifier, in the author's terminology, and are set off from the remainder of the modifier by commas. Neoplasms are designated as benign or malignant in the file-word position when more specific information is not available.

Multicomponent Alloys and Other Systems

Multicomponent alloys and systems, except well-known trade names, are indexed under a subject heading for each component in the form "element systems" for nonmetals or "element alloys and systems" for metals. The modifier begins with element symbols for each component arranged alphabetically. In addition, if significance is placed on the base metal of the alloy, this is indicated by adding "-base" to the element symbol.

Example: A 1.5C, 12Cr, 0.25V, 0.8Mo, bal Fe alloy is indexed as

```
CARBON SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
CHROMIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V,...
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
MOLYBDENUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
VANADIUM ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mo--V, ...
```

Well-known alloys, such as ZIRCALOY-2, are indexed under the trade name; cross references from each component of the alloy to the trade name appear in cumulative indexes.

Multicomponent systems in which nonmetallic elements are present in large percentage and which are commonly referred to as systems or mixtures are indexed in a manner similar to alloys.

Example: A tungsten–silicon preparation is indexed as

```
TUNGSTEN ALLOYS AND SYSTEMS
  Si--W, ...
SILICON SYSTEMS
  Si--W, ...
```

Multicompound systems and mixtures of inorganic compounds are indexed under the subject heading for each component compound; the modifiers begin with an alphabetical listing of compound formulas.

Example: A lead titanate–lead zirconate mixture is indexed as

LEAD TITANATES
  $PbTiO_3$ --$PbZrO_3$
LEAD ZIRCONATES
  $PbTiO_3$ --$PbZrO_3$

XUM

A mixed system of compounds and elements is indexed by a combined form of the preceding conventions; e.g., a dispersion of copper and alumina would be indexed as

- ALUMINUM OXIDES
  - Al_2O_3--Cu, ...
- COPPER ALLOYS AND SYSTEMS
  - Al_2O_3--Cu, ...

Mixtures of organic compounds are indexed under subject headings for each component of the mixture; the modifiers begin with an alphabetical listing of compound names.

Example:

- ACETIC ACID
  - acetic acid--BF_3, ...
- BORON FLUORIDES
  - acetic acid--BF_3, ...

Example:

- BENZENE, CHLORO-
  - bromophenol--chlorobenzene, ...
- PHENOL, BROMO-
  - bromophenol--chlorobenzene, ...

If modifiers for alloys and systems are included with other modifiers under the same subject heading, they are filed last.

Example:

- CARBON SYSTEMS
  - deposition on nuclear fuel particles
  - molecular structure of
  - neutron total cross section for
  - sorptive properties for xenon
  - Young's modulus for
  - Al--C--Cr, superconductivity in
  - B--C, phase studies for
  - C--U--Zr, fabrication and physical properties of

Nomenclature of High Energy Physics

Information on particle-particle events is indexed under subject headings for the specific particles involved. The modifier file word *interactions* is followed by the specific interaction written in symbolic form. Particle nomenclature and symbols follow that of Rosenfeld, et al. *Data on Particles and Resonant States,* UCRL-8030 (latest revision). For consistency the incident particle is always written first. The mass (in MeV) of a resonance state is included in parentheses after the symbol to avoid ambiguity. Hyperfragments are indicated in modifiers as in the following examples: Λ-He^5, Σ-H^3, $\Lambda\Lambda$-Be^{10}. The superscript on the right indicates the total number of baryons in the composite system.

Examples:

- MESONS (π^-)
  - interactions $\pi^- + p \rightarrow \Lambda + K^+ + \pi^-$ at 6 GeV/c in hydrogen bubble chamber, $\Lambda K(1700)$ enhancement in, (E)
- BARYONS, RESONANCE (N*)
  - production of $\Delta^{++}(1236)$ and $\Delta^0(1236)$ from $K^- + p \rightarrow K^- + p + \pi^+ + \pi^-$ interactions at 2.63 and 2.70 GeV/c, (E)
- HYPERFRAGMENTS
  - binding energy of $\Lambda\Lambda$-He^6, three-body α--Λ--Λ model for

Subject headings are also provided for specific models and theories.

Examples:

- ELEMENTARY PARTICLE MODELS (TRIPLET)
  - hadron total cross sections in quark, numerical analysis of
- CURRENT ALGEBRA
  - PCAC hypothesis for A_1 and rho dominance in $\pi \rightarrow e + \nu + \gamma$ decay
- REGGE POLE THEORY
  - predictions for polarization in $K^- + p \rightarrow$ anti $K^0 + n$, $\pi^- + p \rightarrow \pi^0 + n$, and $\pi^- + p \rightarrow$ eta + n interactions at high energies
- SYMMETRY GROUPS
  - $SU(2) \times SU(4)$ intermediate-coupling model for nucleon and hyperon isobars

Nomenclature of Reactor Technology

Subject headings for reactors are of three types:

(1) Specific reactors, e.g., ARGONNE RESEARCH REACTOR, SAXTON POWER REACTOR

(2) Reactors having a common physics or engineering characteristic, e.g., REACTORS, FAST; REACTORS, ORGANIC-COOLED; REACTORS, PRESSURIZED-WATER

(3) Reactors having a common purpose, e.g., REACTORS, POWER; REACTORS, RESEARCH

Information on specific reactors, type (1), is indexed under the one specific subject heading. Information on classes or types of reactors, types (2) (characteristics) and (3) (purpose), is indexed under all applicable headings. For example, information on a heavy-water-moderated organic-cooled power reactor is indexed under REACTORS, HEAVY WATER-MODERATED; REACTORS, ORGANIC-COOLED; and REACTORS, POWER.

Subject headings exist for selected reactor components, e.g., REACTOR FUEL ELEMENTS. When applicable, headings for components are indexed even though they may have been included in a modifier under a type (1) or (2) heading. The materials in reactor components are indexed when the information is peculiar to the material.

Modifier file words under reactor headings are of two primary types: one type expresses reactor characteristics, e.g., reactivity; the other, components, e.g., control rod. If no subject heading appears for a reactor component, the heading REACTORS is used, and the component is used as the modifier file word.

XUM

A

ACCELERATORS
- characteristics for use in agriculture, industry, and medicine, 25:53402 (A/CONF.49/P-442)
- design of nanosecond-pulsed high-current electron, 25:53443
- development of collective ion, for high-energy physics, 25:53404 (A/CONF.49/P-695)
- drift tube quadrupole magnets in, search coil system for centering, 25:53440
- safety interlock system for 3-MeV, 25:53438

ACCIDENTS
- international implications of nuclear, status of laws and treaties relevant to, 25:52100 (A/CONF.49/P-400)
- liability for nuclear, international conventions for third party, 25:52103 (A/CONF.49/P-767)
- occurrence during shipment of Type B-packaged radioactive materials in US, 25:51806

ACENAPHTHENE
- radioinduced oxidation of, using molecular oxygen, γ, 25:51500

ACETALDEHYDE
- radioinduced formation from rearrangement of ethylene glycol in aqueous solutions containing hydrogen peroxide, 25:51502

ACETIC ACID, (ETHYLENEDINITRILO)TETRA-
- effects on radioisotope retention in sheep following intravenous injection, 25:51985

ACETONITRILE
- radiation effects on halomethane-incorporated deuterated crystals of, ESR studies of methyl radical--halide ion pairs produced by γ, 25:51489
- radio emission from, in Sgr A and B, (E), 25:52546

ACETYLCHOLINE
- effects on contractile activity of vas deferens in x-irradiated guinea pigs, 25:52216

ACETYLENE
- reactions at surface of liquid sodium at 110, 150, and 200°C, 25:51438
- reactions with liquid sodium, effects of barium on, 25:51437

ACIDS
- radiation effects on renal excretion of, by uninephrectomized dogs, x, 25:52005

ACOUSTIC EMISSION TESTING
- performance in analysis of defects in heavy-walled pressure vessels, evaluation of, 25:51742

ACROLEIN
- radioinduced cross linking of cellulose with, effects of dose, dose rate, and solvents on γ, 25:51501

ACRYLONITRILE
- radioinduced polymerization with agricultural and stone wastes, cellulose, and wood, properties of products of γ, 25:51494 (A/CONF.49/P-829)

ACTINIDE ALLOYS AND SYSTEMS
- actinides--transition metals, alloy chemistry of, review on, 25:52319 (CONF-710712-3)

ACTINIDES
- alpha decay of, systematics of half-lives for, (E), 25:53746 (KFK-1393)
- electron-capture decay of, systematics of half-lives for, (E), 25:53746 (KFK-1393)
- energy level difference between f/sup q/d^1s^2 and f/sup q + 1/s^2 configurations of gaseous, (T), 25:52605 (CONF-711001-(Vol.1), pp 35-51)
- fission of, systematics of half-lives for spontaneous, (E), 25:53746 (KFK-1393)

ACTINIUM ISOTOPES Ac-227
- production of heat sources of, in Belgium, development of methods for large-scale, 25:51691 (A/CONF.49/P-287)

ACTINIUM OXIDES
- production of actinium-227-enriched, for use as heat source, 25:51691 (A/CONF.49/P-287)

ACTIVATION ANALYSIS
- electrolysis uses in, controlled-potential, 25:51400
- equipment and methods for, in USSR, 25:51405 (A/CONF.49/P-464)
- irradiation in, effects of geometric parameters on fast neutron, 25:51412
- use of neutron, in forensic medicine, 25:51963(R) (NYO-3778-13)
- uses in art identification problems, 25:51410(R) (NYO-3953-3)
- uses in geophysics and mining in Poland, 25:51693 (A/CONF.49/P-334)
- uses in industry in Canada, review on, 25:51382 (A/CONF.49/P-164)

ADENOSINE
- reactions with recoil phosphorus-31 from beta decay of silicon-31, preparation of adenosine 2'-, 3'-, and 5'-monophosphates by, 25:51540

ADENOSINE MONOPHOSPHATES
- preparation by reactions of recoil phosphorus-31 from beta decay of silicon-31 with adenosine, 25:51540

ADHESIVES
- shelf life of film, test for determining, 25:54347 (BDX-613-507)

ADRENAL GLANDS
- radiation effects on function of rat, x, 25:52193
- radiation effects on function of rat, x, 25:52194
- radiation effects on morphology of rat, effects of direct and whole-body dose on x, 25:52190

AEROSOLS
- analysis of radioactive, around IPCR 160-cm cyclotron, gamma spectroscopy, 25:53447
- migration of radioactive fallout, in forests, 25:52011 (A/CONF.49/P-685)
- monitoring of radioactive, experience at Karlsruhe, 25:52070(T) (LA-tr-71-70)

AGE
- radioinduced variations in relation between response and, in irradiated synchronized cultures of Chinese hamster cells, evidence for repair of x, 25:52183

AGE ESTIMATION
- method for biological materials, problems in thermoluminescent, 25:51631

AGRICULTURE
- atomic energy in, joint program of FAO and IAEA for research on, 25:52285 (A/CONF.49/P-772)
- radiation and radioisotope uses in, in Bulgaria, review of, 25:51690 (A/CONF.49/P-107)
- radiation and radioisotope uses in, in Spain, review of, 25:51707 (A/CONF.49/P-728)
- radiations and radioisotopes in, review on, 25:51968 (CONF-710428-, Paper 5)
- radioinduced mutations in plants for disease resistance for use in, 25:52256 (STI/PUB-271)
- radioisotope uses in USSR, review of, 25:51609 (A/CONF.49/P-434)
- radioisotopes in research on, in Latin America, 25:51967 (A/CONF.49/P-756)
- research in developing countries, review of radioisotope and radiation uses in, 25:51708 (A/CONF.49/P-768)
- tracer techniques in, in India, 25:52017 (A/CONF.49/P-537)
- tracer techniques in, in South Africa during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)

AGUIRRE POWER REACTOR, UNIT 1
- design parameters of, 25:53921 (TID-25602)
- design parameters of, 25:53922 (TID-25603(Vol.1))
- site for, data analysis for selection of optimum, 25:54162 (TID-25603(Suppl.))

AIR
- analysis for krypton-85 by chromatographic separation and liquid scintillation counting, 25:51389 (SWRHL-500-r)
- analysis for pollutants by neutron or photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- analysis for trace amounts of elements by nondestructive neutron activation, 25:51414
- monitoring South Africa gold mine, for radon-222 and decay products, 25:52064 (A/CONF.49/P-659)
- plasma of, simulation of spark discharges in, (T), 25:52826
- radon-222 content of, in caves in Budapest, method for measurement of, 25:51621
- air--H_2O, flow rates in open bubble column, effects of axial dispersion on, 25:51585 (ORNL-TM-3139)

AIR SAMPLERS
- performance of personal, for monitoring radon daughter inhalation exposures to uranium mining personnel, 25:52068 (COO-1500-18)

ALASKA
- nuclear testing at Amchitka Island, publicly available reports on underground, 25:51661 (NVO-103)
- radioisotope content of animals, plants, and surface waters of Amchitka Island, during 1969 and 1970, 25:52045(R) (NVO-269-11)
- surface waters from Amchitka Island area, radiochemical analysis of, 25:51618 (USGS-474-123)

ALBUMINS
- radiation effects on content of blood serum of dogs, effects of shielding of abdominal and head regions on γ, 25:51991(T) (JPRS-53801, pp 40-5)
- radiation effects on metabolism of, in small and large intestine of mice, iodine-131 tracer study of x, 25:52003
- radiation effects on molecular structure of solid bovine serum, fluorescence methods for studies of γ, 25:52002

ALCOHOL DEHYDROGENASE
- radiolysis of aqueous solutions of yeast, yields of thiols from γ, 25:51516

ALGAE
- production in algo-agro-industrial complex, design concept for dual purpose reactor for, 25:54239 (A/CONF.49/P-552)

ALKALI METAL HALIDES
- bremsstrahlung absorption and transmission at 5 to 30 MeV in, (T), 25:52892

ALKALI METALS
- analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418

ALKALINE EARTH METALS
- analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418

ALLOYS
- oxidation of, review of internal, 25:52967

ALPHA PARTICLES
- effects on frozen aqueous solutions of acids and bases, LET effects in, 25:51536
- effects on gaseous ammonia or ethane, effects of hydrogen

    sulfide or nitrous oxide on yields from, 25:51518
  effects on radiohalo occurrence in mica, (E), 25:51619
  effects on rat tissues following uptake of plutonium-239, pathological, 25:51970 (NIRS-Pu-6)
  interactions $\alpha + \alpha$, local optical potential for scattering, (T), 25:53521
  interactions $p + \alpha \to p + \alpha + \gamma$ at 7.0 to 12.0 MeV, effects of rescattering on cross sections for, (E), 25:53528
  reactions $(\alpha,4n)$ with gadolinium-160 at 43 MeV, γ spectra from, (E), 25:53762
  reactions (α,γ) with calcium-40 at 4.1 to 4.9 MeV, γ spectra from, (E), 25:53608(R) (NP-18698)
  reactions (α,n) with boron-11 at 3.4 to 3.8 MeV, neutron polarization from, (E), 25:53635
  reactions (α,n) with carbon-13, neon-21, neon-22, and oxygen-17 at 1 to 5 MeV, cross sections for, (E), 25:53752(R) (ORNL-4659)
  reactions (α,n) with lithium-7, differential cross sections for, (E), 25:53501
  reactions (α,n) wth carbon-13 at 2 to 2.5 MeV, neutron polarization from, (E), 25:53641
  reactions $(\alpha,p\gamma)$ with phosphorus-31 at 9.5 MeV, gamma angular distributions and polarizations from, (E), 25:53676
  reactions (α,t) with bismuth-209 at 45 MeV, energy spectra from, (E), 25:53759
  reactions (α,xn) and (α,pn) with copper-63 and -65 from threshold to 37.8 MeV, excitation functions and gamma spectra from, (E), 25:53699
  reactions with atoms at 30 tc 80 MeV, impulse approximation for K-shell ionization and x-ray production in, 25:52635
  scattering by cerium-140 and lanthanum-139 at 45 MeV, differential cross sections for inelastic, (E), 25:53799
  scattering by light $A = 4n$ nuclei, cross-section resonances from beryllium-8 formation in elastic, (T), 25:53664 (INP-751)
  scattering by neon-20 and magnesium-24 at 20 to 24.5 MeV, angular distributions and differential cross sections for, (E), 25:53689
  scattering by silver at 18.7, 22, and 24.7 MeV, optical-model analysis with surface-absorption potential, (T), 25:53780
  stopping by atoms at 0.8 to 2.0 MeV, relation between atomic number and cross sections for, (T), 25:52890
ALPHA SOURCES
  transfer in containment boxes, design of equipment for, 25:51804
ALUMINUM
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  analysis of foils of, for traces of thallium by thermal neutron activation, radiochemical separation, and γ spectrometry, 25:51411
  antideuteron absorption at 13.3 GeV/c, cross sections for, (E), 25:53019
  antideuteron reactions (anti d,anti p) at 13.3 GeV, cross section for, (E), 25:53019
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in presence of cerium by arsenato-iodometric method, 25:51373
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  electron reactions at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
  electron--phonon coupling constant of, from optical measurements, 25:52757
  proton reactions (p,anti He-3) at 70 GeV, cross section for antihelium-3 production in, (E), 25:53021
  proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
  radioinduced dislocation loops in 1100, effects of preinjected hydrogen on electron, 25:52413
  rare-gas ion implantations at 1 to 120 keV in, saturation values of, 25:52922
  solubility in bismuth, kinetics of, 25:54361 (COO-1436-29)
  thermal conductivity measurements during irradiation, 25:51944
  x-ray attenuation in, measurement of diagnostic radiography beam quality from, 25:52136
ALUMINUM ALLOYS AND SYSTEMS
  Al--B--Cr--Hf--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
  Al--Gd--La, thermal capacity of superconducting, with magnetic impurities, (E/T), 25:52738
  Al--Pu-base, radiation effects on electric conductivity of delta-, fission-fragment, 25:52901(T) (JPRS-53800, pp 62-71)
  Al--Si, analysis of standardized, for copper, gallium, and manganese by neutron activation, methods for both destructive and nondestructive, 25:51419
  Al--Sn--Ti-base, properties of castings of, standard for, 25:52338
  Al--Ti-base--V, properties of castings of, standard for, 25:52338
  Al--Tm, crystal field in Tm_3Al_2, Moessbauer and NMR studies of, 25:52972 (IS-T-479)
ALUMINUM IONS
  reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675
ALUMINUM ISOTOPES Al-26
  abundance in lunar rocks, (T), 25:52497
  determination in stone meteorites by indirect γ spectrometry, estimation cf error in, 25:51394
ALUMINUM ISOTOPES Al-27
  cosmic particle reactions with, cross sections for inelastic, (E), 25:53694
  deuteron elastic scattering at 13 MeV, vector analyzing power for, (E), 25:53715
  neutron elastic scattering at 1.36 MeV using polarized beam, depolarization parameter for, (E), 25:53708
  nuclear magnetic resonance study of crystal field in Tm_3Al_2, 25:52972 (IS-T-479)
  proton elastic scattering using polarized beam, depolarization parameter for, (E), 25:53644
  proton fission at 600 MeV, lithium-8 energy and angular distributions from, (E), 25:53688
  proton reactions (p,γ) at 0.850 to 3.00 MeV, gamma spectra from, (E), 25:53700
  proton reactions with, multiple rescattering effects on cross sections for Δ^{++} production in, (T), 25:53051 (JINR-P2-5752)
  proton spallation at 660 MeV, energy and angular distribution of lithium-8 fragments from, (E), 25:53695
ALUMINUM NITRIDES
  compatibility with iron and nickel at high temperatures, 25:52299
  radioinduced defects in wurtzite crystals, anisotropy of, (T), 25:52899(T) (JPRS-53800, pp 44-52)
  AlN--Mo, microstructure of dense sintered dispersions of, 25:52447
ALUMINUM OXIDES
  compatibility with iron and nickel at high temperatures, 25:52299
  proton-induced x-ray emission from thin films of, 25:52601
AMERICIUM
  basicity of trivalent, 25:51468 (CONF-711001-(Vol.1), pp 322-9)
  complexes of, anion exchange, solvent extraction, and spectrophotometric studies of chloride and thiocyanate, 25:51425 (ORNL-TM-3486)
  determination in blood, feces, tissues, and urine by ion exchange and α counting, 25:51395
AMERICIUM HYDROXIDES
  solubilities and solubility products in water, 25:51468 (CONF-711001-(Vol.1), pp 322-9)
AMERICIUM ISOTOPES Am-241
  activity containment integrity of foils used in smoke detectors, test results on, 25:51920 (ORNL-TM-2684)
AMERICIUM SELENIDES
  preparation of $AmSe_2$, by vapor-phase reaction of excess selenium with americium hydride, 25:51433
AMERICIUM SULFIDES
  preparation of AmS_2, by vapor-phase reaction of excess sulfur with americium hydride, 25:51433
AMIDE POLYMERS
  radiation effects on electret voltage of nylon, dosimetric use of, 25:51910
AMINES
  purification for use as isotope exchange agent in heavy water production, 25:51602(P)
AMINO ACIDS
  radiation effects on content of feed mixtures during sterilization, 25:52289
AMMONIA
  complexes with europium, Moessbauer spectra of, 25:51544(R) (NYO-4177-103)
  purification for use as isotope exchange agent in heavy water production, 25:51602(P)
  radiolysis of gaseous, effects of hydrogen sulfide and nitrous oxide on yields from α, 25:51518
AMMONIUM ALUMINUM SULFATES
  performance as polarized proton targets, 25:53477
AMMONIUM COMPOUNDS, SUBSTITUTED
  tetraethylammonium plutonium chloride, magnetic susceptibilities of tetravalent plutonium in, 25:51434
  tetraethylammonium uranylmaleonitriledithiolate, preparation of, 25:51427
  tetramethylammonium plutonium chloride, magnetic susceptibilities of tetravalent plutonium in, 25:51434
  tetrapropylammonium uranylmaleonitriledithiolate, preparation of, 25:51427
AMMONIUM MOLYBDATES
  effects on copper-64 metabolism in liver of lactating cows, 25:51982
AMMONIUM MOLYBDOPHOSPHATES
  sorptive properties for neptunium, thorium, and uranium in hydrofluoric, nitric, and sulfuric acid solutions, 25:51592
AMMONIUM PERCHLORATES
  radiolysis of, effects of hydrogen bonding on ESR parameters for unstable intermediates from γ, 25:51530
ANGIOSPERMIDAE
  Arachis sp., radioinduced mutations in, for improved

agricultural qualities, 25:52278 (A/CONF.49/P-136)
Corchorus olitorius, radioinduced mutations in leaves and stems of, x, 25:52040
Dahlia coccinea, electron dosimetry in seeds of, 1.0-MeV, 25:52087
Dioscorea composita, electron dosimetry in seeds of, 1.0-MeV, 25:52087
Glycine max, radiation effects on free radical, nucleic acid, and protein synthesis in seeds of, effects of varieties on γ, 25:52262
Glycine max, radioinduced mutations for improved quality and yield, thermal neutron, 25:52019 (A/CONF.49/P-748)
Glycine max, radiosensitivity of seeds and seedlings of, γ and x, 25:52261
Glycine max, radiosensitivity of, effects of gene rs_2 on γ, 25:52028
Glycine sp., radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Gossypium sp., radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Helianthus sp., radiation effects on reversion frequency of chlorophyll mutants in, comparison of effects of dimethyl sulfates and nitrosoethylurea with γ, 25:52267
Hordeum sp., radiation effects on frequency of chlorophyll mutations in, effects of spring and winter growth on γ, 25:52036
Hordeum sp., radioinduced mutations for improved agricultural qualities in, effects of ethylenimine on x, 25:52042
Hordeum sp., radiosensitivity of seeds of, correlation between mutation frequency and γ, 25:52033
Hordeum vulgare, radiation effects on frequency of chromosome aberrations and chlorophyll-deficient mutations in, comparison between effects of ethylenimine, nitrogen mustards, and γ, 25:52041
Hordeum vulgare, radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Hordeum vulgare, radiosensitivity of seeds and seedlings of, γ and x, 25:52261
Linum usitatissimum, radioinduced mutations for increased oil content and iodine value in, γ, 25:52030
Lycopersicum sp., radioinduced mutations in, for improved agricultural qualities, 25:52278 (A/CONF.49/P-136)
Lycopersicum sp., radioinduced mutations in, for improved agricultural qualities, 25:52014 (A/CONF.49/P-192)
Olea sp., radioinduced mutations in, for improved agricultural qualities, 25:52014 (A/CONF.49/P-192)
Oryza sativa, radioinduced mutations for improved quality and yield, γ, 25:52019 (A/CONF.49/P-748)
Oryza sativa, radiosensitivity of seeds and seedlings of, γ and x, 25:52261
Phaseolus limensis, radiosensitivity in relation to reproductive stage, γ, 25:52264
Phaseolus vulgaris, isolation and molecular structure of phytohemagglutinin from, 25:52008(R) (RLO-2226-T-1-7)
Phaseolus vulgaris, radiosensitivity of seeds and seedlings of, γ and x, 25:52261
Pisum sativum, radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Pisum sativum, radioinduced mutations in, for improved agricultural qualities, 25:52014 (A/CONF.49/P-192)
Pisum sativum, radiosensitivity of seeds and seedlings of, γ and x, 25:52261
Pisum sp., radiation effects on synchronization of mitosis in root meristem cells of seedlings of, γ, 25:52259
Plantago insularis, radioinduced mutations for albinism in, γ, 25:52032
Prunus sp., radioinduced mutations in, for improved agricultural qualities, 25:52014 (A/CONF.49/P-192)
Secale sp., radiation effects on growth and nitrogen content of, effects of seed exposure dose on γ, 25:52266
Solanum sp., radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Solanum sp., strontium-90 uptake by tubers of, effects of temperature on, 25:51988
Triticum aestivum, radioinduced mutations in, for resistance to Puccinia graminis and Septoria nodorum, comparison of ethyl methanesulfonic acid chemical induced and γ or neutron, 25:52263
Triticum durum, radioinduced mutations in, for improved agricultural qualities, 25:52014 (A/CONF.49/P-192)
Triticum sp., radiation effects on growth and nitrogen content of, effects of seed exposure dose on γ, 25:52266
Triticum sp., radioinduced mutations for improved agricultural qualities in, effects of ethylenimine on x, 25:52042
Triticum sp., radioinduced mutations in winter, cesium-137 γ, 25:52034
Triticum sp., radioinduced mutations in, for protein composition and content, comparison of EMS and ethylenimine with γ, 25:52016 (A/CONF.49/P-354)
Vicia faba, radioinduced chromosome aberrations in, verification of Rivell's hypothesis for x, 25:52035
Zea mays, radioinduced mutations in, for improved agricultural qualities, 25:52278 (A/CONF.49/P-136)
Zea mays, radioinduced mutations in, for improved agricultural qualities, 25:52020 (A/CONF.49/P-844)
Zea mays, radioinduced mutations in, for protein composition and content, comparison of EMS and ethylenimine with γ, 25:52016 (A/CONF.49/P-354)
Zea mays, radiosensitivity of seeds and seedlings of, γ and x, 25:52261

ANGRA POWER REACTOR
technological effects in Brazil of, 25:54337 (A/CONF.49/P-801)

ANHYDRITES
analysis of German standard, by neutron activation, 25:51408 (IFA-NR-34)

ANILINE
radiolysis of, limiting concentrations of stabilized free radicals from, 25:51526

ANIMAL FEEDS
radiation processing effects on amino acid content of, 25:52289

ANIMALS
blood circulation in, use of xenon-133 to study, 25:52126 (A/CONF.49/P-332)
conference on transplants in, 25:52205
fission product uptake and cycling in agricultural, 25:52044 (A/CONF.49/P-686)
nutrition studies in agricultural, tracer techniques in, 25:52015 (A/CONF.49/P-329)
physiology of agricultural, tracer studies of, 25:52279 (A/CONF.49/P-162)
radiation effects on genetics of, mechanisms of recovery from, 25:52175 (A/CONF.49/P-163)
radioisotope content of Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
radiotherapy of organs of, design of applicator for, 25:51729(P)
radiotherapy of, design of applicator for, 25:51726(P)

ANTHRACENE
radiation effects on triplet decay and fluorescence of crystals of, fast-neutron, 25:51903 (COO-1105-166)
radioinduced color center at 6060 A in crystals of, annealing of gamma, 25:52912

ANTIGENS
effects on rat hearts prior to transplantation, rejection following in situ, 25:52208

ANTIMONY
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in solder material by neutron activation following radiochemical separation using tribenzylamine, 25:51404 (A/CONF.49/P-110)
neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)

ANTIMONY FLUORIDES
sorption by solid metal fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)

ANTIMONY ISOTOPES Sb-119
electron-capture decay of, internal bremsstrahlung emission in, (T), 25:53863

ANTIMONY ISOTOPES Sb-121
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786

ANTIMONY ISOTOPES Sb-123
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786

ANTIPYRINE
complexes with TTA and uranyl nitrate, preparation of, 25:51597
effects on solvent properties of TTA for uranium, 25:51597

ANTIPYRINE, 4-(DIMETHYLAMINO)-
complexes with TTA and uranyl nitrate, preparation of, 25:51597
effects on solvent properties of TTA for uranium, 25:51597

ANTIPYRINE, 4,4'-METHYLENEDI-
complexes with TTA and uranyl nitrate, preparation of, 25:51597
effects on solvent properties of TTA for uranium, 25:51597

ARGENTINA
atomic energy program in, post-graduate training for, 25:54329 (A/CONF.49/P-568)
industrialization using nuclear energy, effects of international cooperation on programs for, 25:52101 (A/CONF.49/P-567)
nuclear energy development in, effects of international cooperation on programs for, 25:52101 (A/CONF.49/P-567)
nuclear energy programs in, summary of present and future uses of research reactors in, 25:54181 (A/CONF.49/P-559)
reactor fuel element fabrication in, programs for, 25:52428 (A/CONF.49/P-561)
research in, use of radioisotopes as tracers in biomedical, 25:51959 (A/CONF.49/P-563)
uranium production and requirements in, forecasts to 1985, 25:51642 (A/CONF.49/P-560)

ARGON
electron elastic scattering at 0 to 1 rydberg by, polarized-orbital calculations of total cross sections for, 25:52674
helium-ion reactions at 10 to 200 keV with, cross sections for electron capture into ground and metastable states in, (E), 25:52651

- plasma jets of, luminescence of high-frequency, at reduced pressure in relation to gas consumption, (E), 25:52808
- plasma of, anomalous sound velocity in weakly ionized, (E), 25:52879
- plasma of, bremsstrahlung emission from, (E/T), 25:52810
- plasma of, resonant absorption of magneto-acoustic in dense, (E/T), 25:52866
- plasma of, spectroscopic temperature measurements in arcs, 25:52781 (AD-720856)

ARGON IONS
- abundance in NGC 6826, (E), 25:52513
- implantation in graphite, aluminum, titanium, and copper at 1 to 120 keV, saturation values of, 25:52922
- reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675
- reactions with pyrocarbon, graphite, silicon carbide, and copper at 12 and 30 keV, sputtering and secondary electron yields from, 25:52599 (SGAE-PH-109/1971)

ARGON ISOTOPES
- separation by thermal diffusion, 25:51718(R) (MLM-1816)

ARGON ISOTOPES Ar-36
- nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681

ARGON ISOTOPES Ar-37
- electron-capture decay of, internal bremsstrahlung emission in, (T), 25:53863

ARGON ISOTOPES Ar-40
- electron elastic scattering at 78 to 120 MeV, differential cross sections for, (E), 25:53685
- nuclear root-mean-square radius of, from electron elastic scattering, (E), 25:53685

ARGONNE SYNCHROTRON (ZGS)
- experimental program at, review of, 25:53429 (UCRL-20655, pp 38a-58)

ARSENIC
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- determination in solder material by neutron activation following radiochemical separation using tribenzylamine, 25:51404 (A/CONF.49/P-110)

ARSENIC ISOTOPES As-75
- energy level at 280 keV, angular dependence of half life measurements of, 25:53674
- neutron reactions (n,2n) and (n,p) at 13.02 to 17.78 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)

ARSENIC ISOTOPES As-77
- energy levels from germanium-77 decay, spins and parities of, (E), 25:53686

ARTERIES
- radioinduced neoplasms in region of carotid, following use of Thorotrast for angiography and sialography, 25:52243

ASCORBIC ACID
- effects on γ radiolysis of nicotinamide and nicotinic acid, 25:51531

ASTATINE
- separation from aqueous solutions of perchloric acid by ion exchange on Dowex 50 x 8, 25:51582 (JINR-P12-5855)

ASTRONAUTS
- radiation exposure during Apollo 12 and 13 missions, use of neutron activation and gamma-ray analysis to determine, 25:52071(R) (N-71-24257)
- radioinduced chromosome aberrations in, during space flight, 25:52021(T) (JPRS-53801, pp 77-83)

ASTRONOMY
- book: Reports on Astronomy. Transactions of the IAU. Vol. XIVA, 25:52496

ATLANTIC OCEAN
- radioisotope content of deep and surface waters of, 1965 to 1970 measurements of cesium-137 and strontium-90, 25:51649 (A/CONF.49/P-457)

ATMOSPHERE
- book: Measurement of Atmospheric Radioactivity, 25:51634
- circulation in, review of tritium tracer studies of, 25:51627
- contamination by fossil-fuel and nuclear power plants, comparison of, 25:52043 (A/CONF.49/P-684)
- contamination by radioactive waste disposal, Japanese research studies on methods for prevention of, 25:51607 (A/CONF.49/P-250)
- monitoring for radioactive aerosols, Karlsrube experience in, 25:52070(T) (LA-tr-71-70)
- radioactivity monitoring of surface, of Central, North, and South America during February, 1971, gross β, 25:52056
- sulfur transport in, radioactive and nonradioactive tracer studies of, 25:51632 (A/CONF.49/P-318)
- tungsten-181 and -185 contents of USSR, following Project Schooner, 25:51635
- tungsten-181 content of Swedish ground-level, following Project Schooner, 25:51633 (FOA-4-4460)

ATMOSPHERIC PRECIPITATION
- radioactivity monitoring in Central, North, and South America during February, 1971, gross β, 25:52056

ATOMIC BEAMS
- development of sources for, review of, 25:52604

ATOMIC ENERGY
- activities of Joint Research Center of Commission of European Communities, 25:54332 (A/CONF.49/P-724)
- development in Argentina, postgraduate training program for, 25:54329 (A/CONF.49/P-568)
- development in Denmark, Finland, Norway, and Sweden, regional cooperation program for, 25:54010 (A/CONF.49/P-7)
- development in Europe, review of ENEA activities, 25:54333 (A/CONF.49/P-737)
- development in Uruguay, contribution of Nuclear Research Centre Installation to, 25:54320 (A/CONF.49/P-108)
- development of science and technology of, manpower training for, 25:54321 (A/CONF.49/P-200)
- international agreement on, amendment to June 15, 1955, UK--US, 25:54395
- international co-operation in nuclear projects and exchange of information, 25:54327 (A/CONF.49/P-511)
- international cooperation in field of, activities in Romania in, 25:54324 (A/CONF.49/P-341)
- international cooperation in the years 1964--1971 in U.S.S.R, 25:54335 (A/CONF.49/P-743)
- peaceful development in Iran, prospects for, 25:54328 (A/CONF.49/P-516)
- programs in Poland, description of education and training, 25:54024 (A/CONF.49/P-333)
- role in industrialization of Argentina, effects of international cooperation on, 25:52101 (A/CONF.49/P-567)
- uses in agriculture and food processing, joint program of FAO and IAEA on, 25:52285 (A/CONF.49/P-772)
- uses of, activities of Council for Mutual Economic Assistance in peaceful, 25:54331 (A/CONF.49/P-683)

ATOMIC ENERGY COMMISSION (USA)
- program for isotopes development, review of, 25:51727
- regulations for export and import of nuclear materials and facilities, digest of, 25:51772 (WASH-1163)

ATOMIC ENERGY, LEGAL ASPECTS
- insurance liability for nuclear installations, international conventions for third party, 25:52103 (A/CONF.49/P-767)
- international laws and treaties relevant to emergency assistance in nuclear accidents, 1971 status of, 25:52100 (A/CONF.49/P-400)
- legislation regulating health physics aspects of nuclear facilities in France, 25:52102 (A/CONF.49/P-624)
- regulations for export and import of materials and facilities controlled by USAEC, digest of, 25:51772 (WASH-1163)
- regulations for inspection and testing of containers for safe transport of radioactive material, implementation of IAEA, 25:51831
- regulations for mechanical and thermal performance of Type B shipping containers, compliance with IAEA, 25:51834
- regulations for testing radioactive material shipping containers, review of IAEA, 25:51805
- regulations in Spain concerning reactor safety and safety of radioactive materials during handling and transport, 25:53988 (A/CONF.49/P-734)

ATOMIC MODELS
- charged-particle reactions at high energies with, review of Bethe theory for inelatic, (E/T), 25:52646

ATOMIC PHYSICS
- bibliography on surface and vacuum physics, 25:52600

ATOMIC STRUCTURE
- potential for calculation of, construction of three-body, including relativistic effects, 25:52685
- theory of many-electron, use of SU_3 group in, 25:52689

ATOMS
- alpha-particle reactions at 30 to 80 MeV with, impulse approximation for K-shell ionization and x-ray production in, 25:52635
- alpha-particle stopping at 0.8 to 2.0 MeV by, relation between atomic number and cross sections for, (T), 25:52890
- book: Atomic and Molecular Radiation Physics, 25:52889
- book: Atomic Collision Theory, 25:52652
- charged-particle reactions with, relativistic cross sections for L-shell ionization and characteristic x-ray emission in, (T), 25:52639
- density matrices for, higher random-phase-approximation method for direct calculation of first- and second-order, 25:52690
- electron correlation and exchange energies in, error sources in calculations using local-effective-potential approximation for, 25:52697
- electron elastic and inelastic scattering at low energies by, random phase approximation for, 25:52640
- electron elastic scattering at intermediate energies by, eikonal theory of, 25:52678
- electron reactions with high-Z, cross sections for electron ejection in, (T), 25:52642
- electron rearrangement energies and times for, relation between calculation and observation of, 25:52698
- electron scattering by, modified least-squares technique for nonrelativistic attractive exponential potential for, (T), 25:53387
- energy-level transitions in Z = 70 to 93, radiative component in Coster--Kronig, (T), 25:52613
- energy-level transitions in, matrix elements for relativistic calculation of probabilities of, 25:52687
- energy-level transitions in, method including electron

XUM

correlation for calculating probabilities of forbidden, 25:52699
interactions between, statistical calculation of repulsive potentials for, 25:52616
iodine-ion reactions at 15 to 60 MeV with Z = 6 to 82, production of L-subshell vacancies in, (E), 25:52603
ion reactions with, relation between quasi-classical and quantum mechanical theories of, 25:52669
ionization potentials for core electrons in, relation to electronic structure and atomic shielding constants, (T), 25:52696
properties of two-electron, distinguishable-electron method for calculation of, 25:52691
properties of, algorithms for use in variation--perturbation calculation of, 25:52692
properties of, perturbed uncoupled Hartree--Fock methods for calculation of, 25:52695
properties of, perturbed uncoupled Hartree--Fock methods for calculation of second-order, 25:52694
radiation emission from system of two-level, solution of superradiance master equation for, 25:52684
radiation emission from systems of two-level, photon correlation in spontaneous, (T), 25:52686
reactions between ground-state and metastable, at low energies, associative ionization in, (T), 25:52667
reactions with diatomic molecules at low energies, generalized impact-parameter method for, 25:52637
reactions with diatomic molecules, integral-equation formalism for resonance level widths and positions in, 25:52662
reactions with diatomic molecules, perturbation theory for inelastic, 25:52681
reactions with hydrogen metastable atoms at low energies, quenching cross sections for, (T), 25:52658
scattering by atoms at keV energies, potentials for calculation of differential cross sections and parameters for, 25:52655
scattering by diatomic molecules, nonperturbative method for vibrationally inelastic, (T), 25:52682
scattering by rigid-rotor molecules, semiclassical calculation of transition probabilities in rotationally inelastic, 25:52659
spectra of, effect of recoil in resonance-line scattering in, (T), 25:52549
wave functions for, geminal-product formalism for N-electron correlated, 25:52693

AURORAL ZONE
arcs in ionospheric, occurrence of E x B instability in and effects on, (T), 25:52727
spectroscopy in, photographically recorded relative intensities of vacuum-uv, (E), 25:52723

AUSTRALIA
energy demand and resources to year 2000, survey of, 25:54014 (A/CONF.49/P-127)
fuel resources in, 25:53886 (A/CONF.49/P-135)
power reactors in, development of, 25:53886 (A/CONF.49/P-135)
radiation monitoring at Lucas Heights, during 1960 through 1970, 25:52065 (A/CONF.49/P-800)
radiopharmaceutical preparation and distribution in, 25:52121 (A/CONF.49/P-125)
radiotherapy of cervical carcinomas in, during 1953 to 1968, 25:52171
radiotherapy of nasopharyngeal cancer in, during 1950 to 1969, 25:52170

AUSTRIA
nuclear power plants in, development of, 25:53890 (A/CONF.49/P-212)

AUTORADIOGRAPHY
method for beta--gamma, of reactor fuels, 25:52363

AVES
Gallus sp., metabolism of iron-59 and manganese-54 in, effects of estrogens on, 25:51983

B

BALANCES
conference on vacuum microbalance techniques, Wakefield, Mass., 1969, 25:51937
description of micro-, for thermal analysis of radioactive materials, 25:51938

BARIUM
abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in powdered thermal water residues, mass spectrographic, 25:51369
effects on reactions of liquid sodium with acetylene and ethylene, 25:51437
energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
ion exchange with solid strontium in vermiculite, rate of, 25:51596
ionization of, added to premixed flames, use of rotating single probe to study, 25:51428

BARIUM BROMIDES
spectra of monohydrate of, effects of deuterium on ir, 25:51454

BARIUM CHLORIDES
spectra of monohydrate of, effects of deuterium on ir, 25:51454

BARIUM FLUORIDES
sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)

BARIUM IODIDES
spectra of monohydrate of, effects of deuterium on ir, 25:51454

BARIUM IONS
reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675

BARIUM ISOTOPES Ba-137
energy levels from barium-138 (p,d) reactions, spectroscopic factors for, (E), 25:53740 (FRNC-TH-41)

BARIUM ISOTOPES Ba-138
proton reactions (p,d) at 24.55 MeV, DWBA analysis of differential cross sections and spectra from, (E), 25:53740 (FRNC-TH-41)

BARYONS
contributions of poles of spin-J, to amplitudes of π + N → π(γ) + N interactions, (T), 25:53203
decays of, chiral field algebra in Cabibbo theory for semileptonic, 25:53128
form factors for $^1/_2{}^+$, Schwinger theory for electromagnetic, (T), 25:53078
interactions of, Schwinger theory for electromagnetic, (T), 25:53078
interactions with mesons, model with duality and relativistic SU(6) symmetry for, 25:53173
interactions with pseudoscalar mesons, SU(3)-symmetric Veneziano model for, 25:53207
magnetic moments of $^1/_2{}^+$, Schwinger theory for, (T), 25:53078
mass splitting of, strong, 25:53208
production in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
production of higher-spin, in inelastic π + N interactions, kinematical singularities and helicity amplitudes for, (T), 25:53200
Regge poles for, quark--line diagrams and exchange-degenerate scheme for, 25:53205
spectra of low-lying states of, 25:53130 (UCRL-20655, pp 129-68)
theory for composite, Schwinger model for relativistically invariant equation in, (T), 25:53194

BARYONS (ANTIPARTICLES)
production in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)

BARYONS, RESONANCE
field boundary for, complex Regge trajectories for, (T), 25:53210
spectra of low-lying states of, 25:53130 (UCRL-20655, pp 129-68)

BARYONS, RESONANCE (N*)
interactions π + Δ in P_{33} state, static model for, 25:53198
interactions π + N(1470) → π + N(1470), anomalous magnetic moment for, 25:53201
production of Δ(1236) in proton reactions with nuclei at 730 MeV, (E), 25:53226 (LA-DC-12944)
production of Δ(1650), Δ(1670), and N(1700) in π + N interactions, dispersion theoretic model for, 25:53218
production of Δ(1950) and Δ(2420) in γ + N → Δ → rho + N interactions, differential cross sections for, 25:53086
production of $\Delta^{++}(1236)$ in $p + p \to p + p + \pi^+ + \pi^-$ interactions up to 250 and at 730 MeV, (E), 25:53226 (LA-DC-12944)
production of $\Delta^{--}\Delta^{++}$ in anti $p + p \to$ anti $p + p + 2\pi^+ + 2\pi^-$ interactions at 5.7 GeV/c, multiperipheral model analysis of, (E/T), 25:53009
production of T = $^3/_2$, in π + p interactions, spark-chamber spectrometer study of forward differential cross sections for p + p → d + π interactions at 3.4 to 12.3 GeV/c for, (E), 25:53008 (LA-4483)

BARYONS, RESONANCE (Y*)
production of I = 2 πΣ, in $\pi^- + \Sigma^+ \to \pi^+ + \Sigma^-$ interactions, (T), 25:53217

BASALT
analysis of German standard, by neutron activation, 25:51408 (IFA-NR-34)

BELGIAN REACTOR-2
fuel element testing in, facilities and irradiation conditions for fast, 25:54175 (A/CONF.49/P-280)

BELGIUM
development program for fast breeder reactors in, 25:54026 (A/CONF.49/P-366)
radioactive contamination of food in, review of research on, 25:52054

BELOYARSK POWER REACTOR, UNIT 1
operation of, summary of, 25:53951 (A/CONF.49/P-716)

BELOYARSK POWER REACTOR, UNIT 2
operation of, summary of, 25:53951 (A/CON..49/P-716)

BENZENE
electron energy losses at low energies in thin solid films of, (E), 25:52891
radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

- benzene--hexamethylbenzene, radiolysis of, yields from γ, 25:51510 (KFKI-71-23)

BENZENE, HEXAMETHYL-
- benzene--hexamethylbenzene, radiolysis of, yields from γ, 25:51510 (KFKI-71-23)
- cyclohexane--hexamethylbenzene, radiolysis of, yields from γ, 25:51510 (KFKI-71-23)

BENZENE, NITRO-
- effects on solvent properties of bis(2-ethylhexyl) phosphate for uranium, 25:51600
- radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

BENZOIC ACID, o-[(2-AMINOETHYL)DITHIO]-
- radioprotective effects of analogs of, in mice, γ and x, 25:52114

BENZYL ALCOHOL
- radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

BERKELIUM
- complexes of, anion exchange, solvent extraction, and spectrophotometric studies of chloride and thiocyanate, 25:51425 (ORNL-TM-3486)
- spectra of trivalent and tetravalent, observation and interpretation of low-energy bands in solution absorption, 25:51473

BERKELIUM ISOTOPES Bk-249
- energy levels from einsteinium-253 alpha decay, spin--parity assignments for, (E), 25:53777

BERYLLIUM
- density matrices for ground-state, calculation of first- and second-order, 25:52690
- dipole shielding factor for, calculation using perturbed uncoupled Hartree--Fock methods, 25:52695
- hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
- polarizability of, calculation by perturbed uncoupled Hartree--Fock methods, 25:52694
- proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
- radiation effects on density and mechanical properties of hot-pressed and hot-extruded, low-temperature neutron, 25:52407(T) (JPRS-53800, pp 258-67)
- radiation effects on gas swelling, temperature dependence and kinetics of, 25:52408(T) (JPRS-53800, pp 268-79)
- radiation effects on mechanical and physical properties of, at 150 to 1000°C, fast neutron, 25:52467 (A/CONF.49/P-452)

BERYLLIUM FLUORIDES
- BeF$_2$--LiF--ThF$_4$, solvent properties for plutonium fluoride, (E), 25:54099(R) (NP-18955)
- BeF$_2$--LiF--ThF$_4$, solvent properties for plutonium fluoride, (E), 25:54100(R) (NP-18956)

BERYLLIUM IONS
- polarizability of Be^{2+}, calculation by distinguishable-electron method, 25:52691

BERYLLIUM ISOTOPES Be-7
- beta decay of, branching ratio for, (E), 25:53603 (CONF-701002-, pp 452-64)

BERYLLIUM ISOTOPES Be-8
- energy levels of, calculations using correlated radial wave functions of matrix elements for isospin mixing in, (T), 25:53606 (COO-1120-130)
- nuclear binding energy and radii of, projected Hartree--Fock calculations with phenomenological and realistic effective interactions, (T), 25:53611

BERYLLIUM ISOTOPES Be-9
- deuteron elastic scattering at 12.6 MeV using polarized beam, asymmetry in, (E), 25:53622
- deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
- deuteron reactions (d,n) at 2.1 MeV, neutron polarization from, (E), 25:53589
- deuteron reactions (d,n) at 3 and 3.5 MeV, DWBA analysis of polarization in, (E/T), 25:53651
- deuteron reactions (d,p) at 10 and 12 MeV using polarized beam, vector analyzing power and spectroscopic factors for, (E), 25:53657
- deuteron reactions at 22 MeV, neutron yields from, (E), 25:53619
- electron elastic and inelastic scattering by, form factors for, (T), 25:53618
- electron reactions (e,e'N) with, form factors for, (T), 25:53618
- form factors for, theory of transition toroidal, (T), 25:53607 (JINR-P2-5861)
- helium-3 elastic scattering at 18 MeV, polarization in, (E), 25:53634
- meson (π) absorption by, form factors for two-nucleon, (T), 25:53618
- proton elastic scattering using polarized beam, depolarization parameter for, (E), 25:53644
- proton reactions (p,α) and (p,d) at 0.3 to 1.3 MeV using polarized and unpolarized beams, analyzing power and angular distributions for, (E), 25:53633
- proton reactions (p,α) at 45 MeV, finite-range DWBA analysis of, (T), 25:53613
- proton reactions (p,d) at 6.9 and 9.8 MeV, deuteron D-state effect in tensor polarization for, (T), 25:53649

BERYLLIUM ISOTOPES Be-10
- production in proton reactions (p,2p) with boron-11 at 150 and 600 MeV, use of beryllium-10 to determine age of cosmic rays from cross sections for, (E), 25:53240
- use to determine age of cosmic rays, cross sections for proton reactions (p,2p) with boron-11 at 150 and 600 MeV for, (E), 25:53240

BERYLLIUM ISOTOPES Be-11
- energy level structure from meson (μ^-) capture rate in boron-10, 25:53522

BERYLLIUM OXIDES
- radiation effects on mechanical and physical properties of, at 100 to 1500°C, fast neutron, 25:52467 (A/CONF.49/P-452)
- radiation effects on mechanical properties of, relations of annealing at 500 to 1400°C on recovery from fast neutron, 25:52480
- radioinduced color centers in, EPR spectra of neutron, 25:52900(T) (JPRS-53800, pp 53-61)
- radioinduced defects in wurtzite crystals, anisotropy of, (T), 25:52899(T) (JPRS-53800, pp 44-52)
- radioinduced porosity in, during annealing, fast neutron, 25:52475(T) (JPRS-53800, pp 280-91)
- BeO--PuO$_2$--ThO$_2$, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- BeO--PuO$_2$--ThO$_2$--UO$_2$, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- BeO--PuO$_2$--UO$_2$, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- BeO--ThO$_2$--UO$_2$, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)

BETA DECAY
- asymmetry of Gamow--Teller, effects of weak magnetism in mirror-, (T), 25:53815 (RLO-1388-140)
- currents in mirror, second-class, (T), 25:53817
- detection of inverse, feasibility of direct-coincidence, (E), 25:53518 (SRO-474-2)
- half-life in various chemical environments, effects of electron screening on changes in, (T), 25:53874
- Hamiltonian for, data for experimental determination of parameters of, (E/T), 25:53697
- internal bremsstrahlung emission in, review of research at Debrecen, 25:53620
- matrix elements for, numerical method for determining, (T), 25:53871

BETA PARTICLES
- dose to meristematic tissues of woody plants in forests, fallout, 25:52011 (A/CONF.49/P-685)
- dose to soft tissues, calculation of surface absorbed, 25:52069 (JAERI-13591)
- effects on animals, evaluation of, 25:51965 (A/CONF.49/P-147)
- effects on epilation and hair greying in hamsters, single-dose, 25:52214
- effects on growth of agricultural plants, effects of dose on, 25:52044 (A/CONF.49/P-686)
- effects on zinc-65 uptake by erythrocytes of sheep following skin exposure, 25:52210

BETA SOURCES
- development of strontium-90--yttrium-90, for extracorporeal irradiation of human blood, 25:52149 (A/CONF.49/P-642)
- identification in pharmaceuticals using quench analysis, 25:52135

BEVATRON
- experimental program for, review of, 25:53430 (UCRL-20655, pp 59-71)
- operation and improvement program for, 25:53430 (UCRL-20655, pp 59-71)

BEZNAU POWER REACTOR, UNIT 1
- operating experience with, summary, 25:53949 (A/CONF.49/P-673)
- startup of, 25:53949 (A/CONF.49/P-673)

BIBLIOGRAPHIES
- on Amchitka Island underground nuclear testing, 25:51661 (NVO-103)
- on isotope separation by ion exchange, 25:51578 (IFA-RC-6)
- on plasma physics, 25:52766
- on plasma physics, 25:52767
- on plasma physics and fusion reactors, 25:52769
- on plasma physics and fusion reactors, 25:52768
- on surface and vacuum physics, 25:52600

BINDING ENERGY
- contributions from various types of nuclear forces, equations for, (T), 25:53829

BIOASSAY
- evaluation for monitoring radon daughter inhalation exposures to uranium mining personnel, 25:52068 (COO-1500-18)

BIOLOGICAL MATERIALS
- age of, problems in thermoluminescent method for estimation of, 25:51631
- analysis for mercury by neutron activation and γ spectrometry following chemical separation, 25:51403 (A/CONF.49/P-19)
- analysis for mercury by neutron activation and radiochemical separation, 25:51420
- analysis for selenium-75 and sulfur-35 by oxygen flask combustion method, 25:51393
- analysis for uranium--radium-series elements by liquid scintillation spectrometry, 25:51620
- analysis of aqueous solutions of, for radioisotopes following separation by solvent extraction using

monoisooctyl methylphosphonate, 25:51383 (A/CONF.49/P-451)
radioactivity measurements in, radiometric effects of naturally unstable isotopes on, 25:52084
radioisotope distribution kinetics in, 25:51974
BIOLOGICAL MODELS
development for evaluation of effectiveness of fast neutrons for therapy of neoplasms, 25:52162
development for uv radiation effects on DNA synthesis in mammalian cells for use in determination of chromosome replicon length, 25:51997
BIOLOGICAL SYSTEMS
radiation effects on, review of mechanisms of recovery from, 25:52175 (A/CONF.49/P-163)
BIOPHYSICS
book: Atomic and Molecular Radiation Physics, 25:52889
BIPHENYL
biphenyl--methylcyclohexane, radioinduced deferred luminescence in glass of, 4.2°K gamma, 25:52921
BISMUTH ALLOYS AND SYSTEMS
Bi--Pb, superconducting surface sheath in, microwave studies of, 25:52751
Bi--Pb, superconductivity under high pressure, 25:52737 (IS-T-482)
BISMUTH IONS
implantation into cadmium sulfide at 25 keV for type conversion, 25:52918
BISMUTH ISOTOPES Bi-208
energy levels from lead-208 (p,n) reactions, proton decay width of isobaric analog, (E), 25:53766
BISMUTH ISOTOPES Bi-209
alpha reactions (α,t) at 45 MeV, energy spectra from, (E), 25:53759
neutron elastic scattering at 1.36 MeV using polarized beam, depolarization parameter for, (E), 25:53708
photofission at 300 to 1000 MeV, cross sections for, (E), 25:53806
photon reactions (γ,n) and (γ,p) with, method of accounting for continuous nucleon spectrum from, (T), 25:53770
BISMUTH ISOTOPES Bi-210
beta decay of, nuclear matrix elements for, (T), 25:53871
determination in water and biological materials by liquid scintillation spectrometry, 25:51620
BISMUTH ISOTOPES Bi-212
determination as decay product from radium-224 by reactions with methyl radicals and scintillation counting, 25:51547
BISON
mineral nutrition of, use of calcium-45 and phosphorus-32 for studies on, 25:51986
BLACK HOLES
detection in binary star systems, (E/T), 25:52500
stars surrounding, optical appearance of cloud of, (T), 25:52519
BLOOD
analysis for americium by ion exchange and α counting, 25:51395
circulation in animals and man, use of xenon-133 to study, 25:52126 (A/CONF.49/P-332)
circulation in heart, use of iodine-131-labeled serum albumin in combination with xenon-133 for study of bilateral, 25:52126 (A/CONF.49/P-332)
circulation in man under pathological conditions, use of iodine-131-labeled human serum albumin or sodium iodide in studies of, 25:52126 (A/CONF.49/P-332)
flow in cerebral region of brain, performance of CDC 6400 computer for analysis of scanning data on, 25:52144
radiation effects on circulating, following therapy of lung carcinomas, γ, 25:52241
radiation effects on goat, prior to kidney transplantation, extracorporeal γ, 25:52209
radiation effects on leukocyte count in rat, relation between dose absorbed by various organs and tissues and x, 25:52196
radiation effects on peripheral rat, effects of bis(3-hydroxypropyl) trisulfide on high dose x, 25:52186
radiation effects on survival of lymphocytes in, following extracorporeal exposure, 25:52149 (A/CONF.49/P-642)
radioactivity of mouse, following administration of tritium-labeled 2-methylpiperazinecarbodithioic acid, 25:51978
BLOOD SERUM
radiation effects on magnesium content of human, following therapy of ovarian carcinomas, 25:52249
radiation effects on protein composition and content of juvenile rat, x, 25:52192
BN-350 REACTOR
operations experience of, summary of, 25:54136 (A/CONF.49/P-750)
BN-600 REACTOR
operations experience of, summary of, 25:54136 (A/CONF.49/P-750)
BOHUNICE POWER REACTOR, UNIT 1
construction of, economic and technological problems of, 25:54034 (A/CONF.49/P-541)
startup program for, 25:53947 (A/CONF.49/P-542)
BOHUNICE POWER REACTOR, UNIT 2
construction of, economic and technological problems of, 25:54034 (A/CONF.49/P-541)
BOILERS
corrosion of nuclear power plant steel, methods for minimizing, 25:52294 (A/CONF.49/P-576)
feedwater storage for nuclear power plant, development of heated rock cavities for, 25:53917 (A/CONF.49/P-798)
joints in, thermal shock testing of tantalum--stainless steel, 25:54225 (N-71-22511)
performance of Alco/BLH prototype once-through sodium-heated, evaluation of structural and thermohydraulic, 25:51673 (LMEC-Memo-70-20)
tube wall temperatures in once-through sodium-heated, effects of heat flux, mass velocity, pressure, and tube diameter on, 25:51670 (AEEW-M-1000)
BOILING
detection in sodium, neutronic-acoustic system for, 25:54078
BONE MARROW
radiation effects on cell survival in mouse in vitro and in vivo, protective effects of dimethyl sulfoxide against x, 25:52113
radiation effects on leukocyte reserves in rat, effects of testosterone on recovery from whole-body x, 25:52110
radiation effects on recipient mouse, following injection with expossed thymocytes, x, 25:52206
radiation effects on survival of cells in normal mouse, comparison of RBE for fast neutron and x, 25:52200
radioinduced aplasia in human vertebral, following therapy of carcinomas, 25:52238
radioprotective effects of injections of autologous, on survival of mice, x, 25:52213
radioprotective effects on mice, x, 25:52107
radiosensitivity of in vitro mouse, method for evaluation of, 25:52215
BONES
mineral content of femur, relation between osteoporosis and, 25:54357 (COO-1422-107)
mineral content of, in humans with rheumatoid arthritis, 25:54358 (COO-1422-108)
models of vibrating long, 25:54355 (COO-1422-104)
radiation effects on grafts of, ESR studies on resorption following, 25:52203
radiation effects on regeneration of fractured rabbit, protective effects of Coamid and Mumie against γ, 25:52111
scanning for diagnosis and localization of neoplasms and metastases, use of fluorine-18 for, 25:52127 (A/CONF.49/P-407)
scintigraphy of human, for lesion detection, comparison of effectiveness of strontium-85 and strontium-87m, 25:52143
strength of, studies of resonant frequency as indicator of, 25:54356 (COO-1422-106)
strontium-90 content of human, in USA during 1970, 25:52055
BOR-60 REACTOR
fuel elements for, design of, 25:53898 (A/CONF.49/P-460)
fuel elements for, effects of burnup on mechanical properties of, 25:53898 (A/CONF.49/P-460)
fuel elements for, methods of fabrication of, 25:53898 (A/CONF.49/P-460)
BORON
determination in powdered thermal water residues, mass spectrographic, 25:51369
radiation effects on control elements containing, in-pile, 25:54286 (A/CONF.49/P-704)
reactions with carbon black to prepare boron carbonitride, 25:52433
reactivity worth in fast reactor cores, specific, (E/T), 25:54060(R) (AI-AEC-13005)
BORON CARBIDE NITRIDES
preparation by nitriding boron and carbon black, 25:52433
BORON CARBIDES
book: Refractory Carbides, 25:52451
compatibility with iron and nickel at high temperatures, 25:52299
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
BORON FLUORIDES
radioinduced radicals at low temperatures in pure solid and xenon-matrix, ESR study of γ-, (E), 25:52914
BORON IONS
implantation in silicon at 50 keV, Hall study of ionization energy of, (E), 25:52908
implantation in silicon to form diode-array camera targets, 25:52919
polarizability of B^{3+}, calculation by distinguishable-electron method, 25:52691
BORON ISOTOPES B-10
deuteron reactions (d,p) at 10 and 12 MeV using polarized beam, vector analyzing power and spectroscopic factors for, (E), 25:53657
neutron capture by, cross-section measurements using pulsed-beam techniques, (E), 25:53595 (CONF-701002-, pp 129-35)
neutron elastic scattering up to 2 MeV, R-matrix evaluation of, 25:53592 (CONF-701002-, pp 107-20)
neutron reactions (n,α) at 45 keV to 14.8 MeV, gamma production cross sections for, (E), 25:53597 (CONF-

701002-, pp 141-50)
neutron reactions (n,α) below 200 keV, recommended values of the cross section for, 25:53598 (CONF-701002-, pp 151-65)
neutron reactions (n,α) up to 2 MeV, R-matrix evaluation of,, 25:53592 (CONF-701002-, pp 107-20)
neutron reactions (n,α) with, cross-section ratio to lithium-6 (n,α) for thermal, (E), 25:53594 (CONF-701002-, pp 125-8)
neutron total cross sections up to 2 MeV, R-matrix evaluation of, 25:53592 (CONF-701002-, pp 107-20)
production for reactor control, economics and methods for, 25:51720 (NUMEC-3292-20)
proton elastic scattering using polarized beam, depolarization parameter for, (E), 25:53644
reactivity worth in fast reactor cores, specific, (E/T), 25:54060(R) (AI-AEC-13005)

BORON ISOTOPES B-11
alpha reactions (α,n) at 3.4 to 3.8 MeV, neutron polarization from, (E), 25:53635
deuteron elastic scattering at 12.6 MeV using polarized beam, asymmetry in, (E), 25:53622
deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
deuteron reactions (d,n) at 10 and 11.8 MeV using polarized beam, vector analyzing power for, (E), 25:53652
deuteron reactions (d,n) at 7 to 12 MeV, polarization angular distributions for, (E), 25:53653
deuteron reactions (d,p) at 10 and 12 MeV using polarized beam, vector analyzing power and spectroscopic factors for, (E), 25:53657
meson (μ^-) capture in, nuclear structure of beryllium-11 from, 25:53522
meson (μ^-) hyperfine capture rates in, 25:53522
proton elastic and inelastic scattering at 3.5 to 10.5 MeV using polarized beam, differential cross sections and analyzing power for, (E), 25:53648
proton reactions (p,2p) at 150 and 600 MeV, use to determine age of cosmic rays from cross sections for beryllium-10 production in, (E), 25:53240

BORON NITRIDES
compatibility with iron and nickel at high temperatures, 25:52299
radioinduced defects in wurtzite crystals, anisotropy of, (T), 25:52859(T) (JPRS-53800, pp 44-52)
BN--Mo, microstructure of dense sintered dispersions of, 25:52447

BORON SYSTEMS
Al--B--Cr--Hf--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
B--Mn--Mo, phase studies of, 25:52460
B--Mn--V, phase studies of, 25:52460
B--Mn--W, phase studies of, 25:52460
B--Ni--W, production of compact sintered castings of, direct-contact method for, 25:52437
B--steel, radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)

BOSONS
condensation in hard-sphere gas of, (T), 25:52985
interactions of spinless, quasipotential theory for two-body elastic, (T), 25:53281 (IC-71/75)
interactions with spinless bosons, time-shift evaluation for nonrelativistic, (T), 25:53044
potentials at fixed energy for spin-0, construction of relativistic, (T), 25:53389
production of hypothetical massive spin-1 electromagnetic, in μ^+ + p, μ^- + p interactions and μ^+ and μ^- reactions with iron at high energies, total cross sections for, (T), 25:53107
production of pair of spinless, in e + e and e^+ + e^- interactions in colliding beams, (T), 25:53048 (DESY-71/30)
quantum field theory for, eikonal approximation for vertex function in, 25:53289
quantum stochastic process for massive scalar, in four space--time dimensions, 25:53309
symmetry groups U(n) x U(n) and Sp(4) x Sp(4) for, 25:53271

BOSONS, INTERMEDIATE-VECTOR
interactions l + W, vertex function in V--A theory of, (T), 25:53118
mass from oxygen-14 beta decay, upper limit for, (E), 25:53609
mass from strong interactions, estimate of, (E/T), 25:53230
mass of, from μ + e + ν + anti ν decay, (T), 25:53112
production in strong interactions, cross sections for, (T), 25:53230

BRAIN
blood flow in cerebral region of human, performance of CDC 6400 computer for analysis of scanning data on, 25:52144
radiation effects on cytochrome c peroxidase activity in homogenates of rat, effects of 3-amino-1,2,4-triazole on, 25:52202
radiation effects on rat, histological methods in studies of fractionated or single 50-R dose x, 25:52195
radioinduced necrosis in tissues of human, following therapy of pituitary adenomas, x, 25:52246

BRASS
meson (π) reactions above 20 GeV, multiplicity distribution of collimated secondaries from, 25:53018
nucleon reactions above 20 GeV, multiplicity distribution of collimated secondaries from, 25:53018

BRAZIL
fuel element technology in, present status of, 25:52422 (A/CONF.49/P-197)
nuclear materials management program in, 25:51744 (A/CONF.49/P-204)
power development to year 2000, forecasts of conventional and nuclear, 25:53955 (A/CONF.49/P-802)
radiation processing of food in, research on, 25:51967 (A/CONF.49/P-756)
radioisotopes uses in diagnosis of diseases and medical research in, 25:52123 (A/CONF.49/P-203)
technological effects of Angra Power Reactor on, 25:54337 (A/CONF.49/P-801)

BREEDING (BIOLOGICAL)
radioinduced mutations for, review of, 25:52020 (A/CONF.49/P-844)
radioinduced plant mutations for, 25:51968 (CONF-710428-, Paper 5)

BREMSSTRAHLUNG
absorption in alkali metal halide crystals at 5 to 30 MeV, (T), 25:52892
dose curves for therapy beams of, proton beam comparison with, 25:52074
emission from argon and helium plasmas, (E/T), 25:52810
production on nuclei from e^+ + e^- interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
reactions (γ,f) with bismuth-209 and lead at 300 to 1000 MeV, cross sections for, (E), 25:53806
reactions (γ,f) with radium-226 at 9 to 20 MeV, cross section for, (E), 25:53787
reactions (γ,n) with calcium-40 in giant resonance region, yield curves and cross sections for, (E), 25:53684
reactions (γ,n) with deuterium at 5 to 40 MeV, photoneutron polarization from, (E), 25:53534
reactions (γ,n) with oxygen-16 at 30 and 50 MeV, photoneutron polarization from, (E), 25:53642
reactions (γ,p) with helium-3 at 180 to 300 MeV, asymmetry parmeter and electric dipole cross section from, (E), 25:53517 (LNF-71/23)
research on internal, at Debrecen, 25:53620
transmission in alkali metal halide crystals at 5 to 30 MeV, (T), 25:52892

BROMINE
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in powdered thermal water residues, mass spectrographic, 25:51369
determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
localization of recoil, in dibromoalkanes, gas chromatographic method for, 25:51542

BROMINE ISOTOPES Br-79
effects on microwave spectrum of bromostannane, 25:51444

BROMINE ISOTOPES Br-81
effects on microwave spectrum of bromostannane, 25:51444
energy level at 541 keV from selenium-80 (d,n) reactions, g factor and half-life for isomeric 9/2+, (E), 25:53668
energy levels from oxygen-16 Coulomb excitation, lifetimes of, (E), 25:53752(R) (ORNL-4659)

BROOKHAVEN ALTERNATING-GRADIENT SYNCHROTRON (AGS)
experimental program for, 25:53431 (UCRL-20655, pp 72a-90)

BUGEY REACTORS (EDF-5)
pressure vessels of, design parameters of prestressed concrete, 25:53905 (A/CONF.49/P-571)

BULGARIA
nuclear power plant construction in, estimates for future, 25:53885 (A/CONF.49/P-9)
radiation uses in, review of, 25:51690 (A/CONF.49/P-107)
radioisotope uses in, review of, 25:51690 (A/CONF.49/P-107)

BULK SHIELDING FACILITY
maintenance during April to June 1971, 25:54211(R) (ORNL-TM-3560)
operations during April to June 1971, 25:54211(R) (ORNL-TM-3560)

1,3-BUTADIENE, HEXACHLORO-
radioinduced oxidation by gaseous oxygen, kinetics of branching and thermal generation of initiating centers for chain reactions in γ, 25:51459

BUTANE
reactions with fast tritium molecules and tritium ions (T_2^+), mechanisms of formation of tritiated butane from, 25:51449

BUTANE, 1-BROMO-
radiation effects on, reactions of recoil bromine from neutron, 25:51542

1,3-BUTANEDIONE, 1-PHENYL-
chelates with rare earths, infrared spectra and vibration modes of, 25:52606 (CONF-711001-(Vol.1), pp 64-72)

1,3-BUTANEDIONE, 4,4,4-TRIFLUORO-1-(2-THIENYL)-
chelates with rare earths, infrared spectra and vibration modes of, 25:52606 (CONF-711001-(Vol.1), pp 64-72)
complexes with antipyrines and uranyl nitrate, preparation of, 25:51597
solvent properties for uranium, effects of organic bases

on, 25:51597
2-BUTANOL, 2-METHYL-
  radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

C

CABLES
  properties of superconducting, 25:52761
CADARACHE REACTORS
  fuel element testing in PEGASE, description of, 25:54182 (A/CONF.49/P-580)
CADMIUM
  cadmium-111 nuclear quadrupole interaction in, anomalous temperature effects on, 25:52974
  determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  diffusion of impurities in single crystals of, anisotropic, 25:52358
  electron reactions with, effective cross sections for formation of excited ions in, (E), 25:52668
  energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
  separation of rare earths from, by complexing and precipitation, 25:51589
  sorption and growth on tungsten, kinetics of, (E), 25:52957
CADMIUM ALLOYS AND SYSTEMS
  Ag--Cd, Zener relaxation and diffusion in, comparison of, 25:52340
  Ag--Cd--Zn, diffusion in solid solutions of, at 600°C, determination of coefficients of intrinsic and inter-, 25:52324 (COO-1436-30)
CADMIUM ISOTOPES Cd-106
  helium-3 elastic scattering at 18 MeV, optical-model analysis of differential cross sections for, (E), 25:53749 (NP-18927)
  helium-3 reactions (He-3,d) at 18 MeV, Q values, DWBA analysis of differential cross sections, and spectra from, (E), 25:53749 (NP-18927)
CADMIUM ISOTOPES Cd-109
  energy levels and properties of, Nuclear Data Sheets for, (E), 25:53757
CADMIUM ISOTOPES Cd-111
  neutron inelastic scattering at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)
  nuclear quadrupole interaction in cadmium, anomalous temperature effects on, 25:52974
CADMIUM ISOTOPES Cd-112
  neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)
CADMIUM ISOTOPES Cd-114
  helium-3 elastic scattering at 18 MeV, optical-model analysis of differential cross sections for, (E), 25:53749 (NP-18927)
  helium-3 reactions (He-3,d) at 18 MeV, Q values, DWBA analysis of differential cross sections, and spectra from, (E), 25:53749 (NP-18927)
CADMIUM ISOTOPES Cd-116
  oxygen-16 reactions at 140 MeV, charged-particle energy spectra from, (E), 25:53752(R) (ORNL-4659)
CADMIUM SULFIDES
  bismuth ion implantation for conversion of n-type to p-type, 25-keV, 25:52918
CALCIUM
  analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418
  compounds, preparation of low-in-strontium, method for, 25:51599
  content of milk in relation to strontium-90 in New York during 1969, 25:52058
  content of milk in relation to strontium-90, statistical analysis of, 25:52059
  determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
  determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
  ionization of, added to premixed flames, use of rotating single probe to study, 25:51428
  separation of strontium from, by precipitation as hydroxide, 25:51599
  transport in soils in relation to plant utilization, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
CALCIUM FLUORIDES
  radioinduced color centers in manganese-doped crystals of, optical properties of x-, 25:52910
  sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)
  spectra of europium ions in single crystals of, two-photon, 25:52942 (CONF-711001-(Vol.2), pp 465-77)
CALCIUM ISOTOPES Ca-40
  alpha reactions (α,γ) at 4.1 to 4.9 MeV, γ spectra from, (E), 25:53608(R) (NP-18698)
  deuteron reactions (d,p) at 11 MeV using polarized beam, vector analyzing power for, (E), 25:53726
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
  nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681
  photon reactions (γ,n) in giant resonance region, yield curves and cross sections for, (E), 25:53684
  proton inelastic scattering at 185 MeV with 3- excitation, polarization in, (E), 25:53647
  proton inelastic scattering at 30 MeV, analysis using realistic interaction, (T), 25:53752(R) (ORNL-4659)
CALCIUM ISOTOPES Ca-41
  energy levels from (d,p) reactions, (E), 25:53725
  nuclear radii of, effects of symmetry potential on single-particle calculation of, (T), 25:53679
CALCIUM ISOTOPES Ca-42
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
  proton reactions (p,n) at 7.89 and 8.98 MeV, gamma spectra from, (E), 25:53675
CALCIUM ISOTOPES Ca-45
  metabolism in buffalo and cattle in Egypt, effects of temperature on, 25:51986
  metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
CALCIUM ISOTOPES Ca-46
  proton elastic scattering at 1.8 to 1.9 MeV, excitation functions for, (E), 25:53672
  proton reactions (p,γ) at 1.8 to 1.9 MeV, γ spectra from, (E), 25:53672
CALCIUM ISOTOPES Ca-47
  retention in man following intravenous injection, effects of age and bone diseases on whole-body, 25:51987
CALCIUM ISOTOPES Ca-48
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
  nuclear radii and Coulomb displacement energies for, effects of symmetry potential on single-particle calculation of, (T), 25:53679
  proton elastic scattering at 6 to 13 MeV, energy dependence of cross sections and polarization for, (E), 25:53711
CALCIUM OXIDES
  compatibility with iron and nickel at high temperatures, 25:52299
  $CaO--Nb_2O_5--SiO_2--TiO_2$, phase equilibria in binary and pseudo-binary systems of, 25:52459
CALIFORNIUM
  complexes of, anion exchange, solvent extraction, and spectrophotometric studies of chloride and thiocyanate, 25:51425 (ORNL-TM-3486)
CALIFORNIUM ISOTOPES Cf-252
  fission of, kinetic energies of fragments and angular distributions of α particles from spontaneous ternary, (E), 25:53794
  fission of, prompt pulse efficiency of liquid scintillation detectors for measuring neutrons-per-, 25:51853 (CONF-701002-, pp 481-7)
  fission of, time-of-flight measurements of mass and energy distributions of fragments from spontaneous, 25:53772
  preparation of neutron sources of, design of hot cell for, 25:51791
  shipping of, design of shielded container for, 25:51799
  transfer of neutron sources of, design of pneumatic tube system for, 25:51792
  use as neutron source for analysis of fissionable materials, 25:51767 (LA-DC-12294)
  use as neutron source for analysis of fissionable material, research at LASL on, 25:51766(R) (LA-4705)
CALORIMETERS
  design of adiabatic, for 77 to 400°K, 25:54365 (INP-750)
  performance of differential scanning, 25:51584(R) (MLM-1792)
CANADA
  atomic energy program in, role of irradiation facilities in development of, 25:51665 (A/CONF.49/P-152)
  environment of, effects of nuclear power plant development on, 25:54016 (A/CONF.49/P-160)
  nuclear energy development in, review of, 25:54017 (A/CONF.49/P-166)
  radioactivity monitoring of precipitation and surface atmosphere during February, 1971, gross β, 25:52056
  radioisotope content of milk in, during February, 1971, 25:52058
  radioisotope tracer methods in medicine in, experiences with, 25:52122 (A/CONF.49/P-161)
  thorium production and supply in, forecasts of, 25:51638 (A/CONF.49/P-154)
  uranium ore processing in, development of facilities for, 25:51638 (A/CONF.49/P-154)
  uranium production and supply in, forecasts of, 25:51638 (A/CONF.49/P-154)

CANDU REACTOR
- construction of, description of, 25:53883 (70-CNA-630)
- operation of, review of, 25:53928 (A/CONF.49/P-148)
- status during 1969--1970, summary of, 25:53925 (70-CNA-617)

CARBIDES
- book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362

CARBON
- antideuteron absorption at 13.3 GeV/c, cross sections for, (E), 25:53019
- antideuteron reactions (anti d,anti p) at 13.3 GeV, cross section for, (E), 25:53019
- argon-ion reactions at 12 or 30 keV with pyro-, sputtering and secondary electron yields from, 25:52599 (SGAE-PH-109/1971)
- determination in alkali and alkaline earth metals by γ activation, sample surface purification for, 25:51418
- electron reactions at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
- electron reactions with, effective cross sections for excitation in, (T), 25:52670
- energy-level transitions in, electron correlation in calculation of probabilities of forbidden, 25:52699
- meson (μ^-) capture in emulsions, relative probabilities of reaction channels for lithium-8 production in, (E), 25:53516 (JINR-P1-5893)
- meson (π) reactions above 20 GeV, multiplicity distribution of collimated secondaries from, 25:53018
- meson (π^-) reactions at 4 GeV/c in propane bubble chamber, proton pair correlated production in, (E), 25:53031
- neutron elastic scattering at 0.50 to 2.00 MeV, differential cross sections for, (E), 25:53601 (CONF-701002-, pp 208-17)
- neutron total cross section at 0.5 to 30 MeV, measurement and analysis of, (E), 25:53599 (CONF-701002-, pp 190-200)
- neutron total cross section at 70 eV to 1.5 MeV, measurement and analysis of, (E), 25:53600 (CONF-701002-, pp 201-7)
- nucleon reactions above 20 GeV, multiplicity distribution of collimated secondaries from, 25:53018
- photon reactions at 5 to 7 GeV, rho--ω interference parameters in dipion production in, (E), 25:52991 (DESY-71/37)
- photon reactions at 7.4 GeV, rho--ω interference parameters from di-pion production in, (E), 25:53002
- plasma of, kinetics of laser-produced, (E), 25:52809
- proton reactions at 130 keV with foils of, intensity oscillations of Hβ radiation from excited hydrogen atoms produced in, (E), 25:52623
- proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)

CARBON BLACK
- reactions with boron to prepare boron carbonitride, 25:52433

CARBON DIOXIDES
- analysis for carbon-13 and oxygen-18 simultaneously, development of mass spectrometer for, 25:51945
- corrosive effects on graphite, performance of methane additive to inhibit, 25:54032 (A/CONF.49/P-504)
- radiolysis of, design of thin aluminum or beryllium adiabatic calorimeter dosimeter for measurement of carbon monoxide yields from electron, 25:51915

CARBON IONS
- abundance in NGC 6826, (E), 25:52513
- electron reactions with C III in plasma, excitation-rate coefficients for, (E), 25:52804

CARBON ISOTOPES
- separation of stable, research progress on methods for, 25:51718(R) (MLM-1816)

CARBON ISOTOPES C-12
- deuteron elastic scattering a 41 to 51 MeV, absolute vector-polarization calibration from, (E), 25:53612
- deuteron elastic scattering at 12.3 MeV using polarized beam, tensor analyzing power for, (E), 25:53656
- deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
- deuteron reactions (d,n) at 2.71 and 2.96 MeV, neutron polarizations from, (E), 25:53626
- deuteron reactions (d,n) at 2.8, 5, and 5.4 MeV, neutron polarization from, (E), 25:53589
- deuteron reactions (d,p) at 12.3 MeV using polarized beam, tensor analyzing power for, (E), 25:53656
- deuteron reactions (d,p) at 12.4 MeV, proton polarization from, (E), 25:53654
- deuteron reactions (d,p) at 51 MeV, differential cross section and polarization for, (E), 25:53655
- deuteron reactions (d,p) at 8 MeV, finite-range DWBA analysis of, (T), 25:53613
- electron inelastic scattering at 250 MeV, spectra from, (E), 25:53617
- energy levels from electron scattering, Nilson-model analysis of form factors for, (E), 25:53617
- form factors for, alpha-cluster-model calculations of elastic and inelastic monopole, (T), 25:53616
- helium-3 elastic scattering at 18 and 20 MeV, polarization in, (E), 25:53634
- helium-3 reaction (He-3,n) at 3.8 and 4.5 MeV, neutron polarization from, (E), 25:53589
- helium-3 reactions (He-3,p) at 2.4 to 3.6 MeV, proton polarization in, (E), 25:53640
- lithium-6 reactions (Li-6,d) at 20 to 32 MeV, deuteron spectra from, (E), 25:53614
- mesons (μ^-) capture in emulsions, energy spectra, angular correlations, and relative probability for lithium-8, helium-3, neutron, and neutrino production in, (E), 25:53516 (JINR-P1-5893)
- neutron elastic and inelastic scattering at 14.1 MeV using polarized beam, angular distributions for, (E), 25:53637
- neutron elastic and inelastic scattering at 15.9 MeV using polarized beam, asymmetry in, (E), 25:53638
- neutron elastic scattering at 1.9 to 5.2 MeV, cross sections and polarization for, (E), 25:53608(R) (NP-18698)
- neutron elastic scattering at 3 to 7 MeV, polarization in, 25:53636
- nuclear binding energy and radii of, projected Hartree--Fock calculations with phenomenological and realistic effective interactions, (T), 25:53611
- nuclear charge distribution, moments, and rms radii of, from electron scattering, (E), 25:53617
- oxygen-16 reactions (O-16,α) at 45 to 56 MeV, excitation functions and spectra from, (E), 25:53625
- proton inelastic scattering at 185 MeV with 3- excitation, polarization in, (E), 25:53647
- proton reactions (p,pn) at 660 MeV, angular and energy distribution of carbon-11 recoils from, (E), 25:53621
- proton reactions (p,π^+) with, cross sections for, (T), 25:53239
- proton scattering at 4.8 to 8 MeV, analysis using vibrational and rotational models, (T), 25:53639

CARBON ISOTOPES C-13
- alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
- alpha reactions (α,n) at 2 to 2.5 MeV, neutron polarization from, (E), 25:53641
- determination simultaneously with oxygen-18 in carbon dioxide, development of mass spectrometer for, 25:51945
- helium-3 reactions (He-3,α) at 1.2 to 5.4 MeV, angular distributions, excitation functions, and spectra from, (E), 25:53627
- proton inelastic scattering at 30.3 MeV, coupled-channel analysis of, (E/T), 25:53646

CARBON ISOTOPES C-14
- beta activity measurements by efficiency tracing method, 25:51401
- helium-3 reactions (He-3,α) at 3 to 5 MeV, cross sections for, (E), 25:53615
- proton reactions (p,γ) at 1.3 to 2.6 MeV, angular distributions, excitation functions, and spectra from, (E), 25:53605 (COO-1120-120)
- use as tracer for evaluation of milk volume of mammary glands of goats, 25:51984
- use as tracer in study of herbicide degradation in soils, 25:51958 (A/CONF.49/P-404)
- use for labeling insecticides, 25:52278 (A/CONF.49/P-136)
- use for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)

CARBON MONOXIDES
- diffusion in tantalum during flash desorption, 25:52359
- electron reactions at 300, 400, and 500 eV with, generalized oscillator strengths and selection rule for transitions in, 25:52683
- sorption by tungsten surfaces, flash-method studies on, 25:52352

CARBON SYSTEMS
- C--Cr--Fe-base--Mn--Si, production of sintered electrode strips of, method for, 25:52311
- C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
- C--Fe--Ni, elastic constants of, 25:54366 (IS-T-461)

CARBONATITES
- sulfur-34 content of Mountain Pass, California, 25:51647

CARBONYL SULFIDE
- detection of, in direction of Sgr B, 25:52547

CARDIAC PACEMAKERS
- development of implantable plutonium-238-fueled, French research program for, 25:51703 (A/CONF.49/P-637)
- testing for battery depletion, radiographic method for, 25:51964

CARNOTITES
- processing of, relation of uranium leaching to free acid content in, 25:51604

CASCADE SHOWERS
- fireball production in, parameters of, 25:53144
- production of intranuclear, from nucleon and meson interactions with nuclei, local change of intranuclear matter density in formulation of model for, (T), 25:53227(T) (ORNL-tr-2502)

CATTLE
- copper-64 metabolism in liver of, effects of molybdenum compounds on, 25:51982
- iodine-131 content comparison for milk from, exposed to nuclear effluents at Nevada Test Site and fed contaminated forage, 25:52012 (PNE-914-F)

iodine-131 distribution in tissues of, following nuclear explosions at Nevada Test Site, 25:52012 (PNE-914-F)
mineral nutrition of, use of calcium-45 and phosphorus-32 for studies on, 25:51986
radiation effects on mineral metabolism of, beta and gamma, 25:52210
radiation effects on molecular structure of solid serum albumins from, fluorescence methods for studies of γ, 25:52002
scanning for mineral metabolism, design of Compton whole-body counter for, 25:52142
zinc metabolism in, review of, 25:51980

CAVITIES
development of underground rock, for storage of heated boiler feedwater, 25:53917 (A/CONF.49/P-798)

CELLS
effects of implanted lymphoid, on restoration of immune response in whole-body irradiated mice, 25:52006 (A/CONF.49/P-320)
radiation effects on mammalian, repair of, 25:52175 (A/CONF.49/P-163)
radiation effects on rate of reproduction of, in neoplastic and normal tissues, effects of dose fractionation on, 25:52163
radiation effects on survival of ascites and lymphosarcoma, effects of dose on x, 25:52177 (A/CONF.49/P-554)
radiation effects on survival of in vitro and in vivo mouse bone marrow, protective effects of dimethyl sulfoxide against x, 25:52113
radiation effects on survival of mammalian, in relation to effects on unscheduled DNA synthesis and chromosome number, x, 25:52182
radiation effects on survival of mammalian, RBE for fast neutron, gamma, and x, 25:52174 (A/CONF.49/P-30)
radiation effects on survival of mouse epithelial, effects of depth of penetration on charged particle, 25:52229
radiosensitivity of in vitro mouse bone marrow, method for evaluation of x, 25:52215

CELLS, CONTINUED
radiation effects on age--response pattern of synchronized Chinese hamster, evidence for repair of x, 25:52183
radiation effects on colony-forming ability of ascites and L, protective effects of nucleotides against x, 25:52106 (A/CONF.49/P-257)
radiation effects on growth and mitosis of fibrosarcoma and L, effects of cell phase on electron and gamma, 25:52176 (A/CONF.49/P-358)
radiation effects on myosin metabolism in rat heart, 25:51992 (UCLA-12-830)
radiation effects on survival of hamster, sensitizing effects of 5-bromodeoxyuridine on x, 25:52181
radiation effects on survival of, factors influencing RBE for fast neutron and x, 25:52201
radioinduced growth inhibition in murine lymphoma, mechanisms of recovery from x, 25:52218
radiosensitivity of human kidney and murine leukemia, effects of oxygen content on neutron, 25:52109

CELLS, HeLa
radiation effects on survival of, protective effects of dimethyl sulfoxide against x, 25:52112

CELLS, L
radiation effects on DNA of mouse, effects of dose on repair replication of x, 25:52179 (UCSF-10-P-2-134)
radiation effects on survival of, effects of dose on x, 25:52177 (A/CONF.49/P-554)

CELLULOSE
radioinduced crosslinking with acrolein, effects of dose, dose rate, and solvents on γ, 25:51501
radioinduced polymerization with acrylonitrile, methyl methacrylate, or styrene, properties of products of γ, 25:51494 (A/CONF.49/P-829)
radiolysis of, EPR spectra and free radical yields following γ, 25:51515

CELLULOSE ACETATES
radiolysis of, EPR spectra and free radical yields following γ, 25:51515

CEMENTS
radiation effects on mechanical, physical, and thermal properties of, at 150 to 200°C, fast neutron, 25:52486 (A/CONF.49/P-613)

CENTRAL AMERICA
education in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)
nuclear reactors in, summary of existing and planned, 25:53912 (A/CONF.49/P-757)
radioactivity monitoring of surface atmosphere during February, 1971, gross β, 25:52056
radioisotope content of milk in, during February, 1971, 25:52058
radioisotopes in agriculture in, review of, 25:51967 (A/CONF.49/P-756)
training in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)

CERAMIC MATERIALS
creep of, review of, 25:52439 (RISO-M-1385)

CEREALS
corn, radiation processing effects on insect pests in, 25:52288
flour, radiation processing of, 25:52279 (A/CONF.49/P-162)
flour, radiation processing of dark, in Switzerland, 25:52277 (A/CONF.49/P-120)
maize, radiosterilization of powdered starch of, evaluation of, 25:52282 (A/CONF.49/P-628)
radiation processing in India for disinfestation, 25:52284 (A/CONF.49/P-740)
radioinduced mutations in, for improved quality and yield, γ, 25:52275 (A/CONF.49/P-162)
rice, radiation processing effects on insect pests in, 25:52288
rice, radiation processing effects on insect pests in, 25:52280 (A/CONF.49/P-256)
rice, radiation processing effects on organoleptic properties and thiamine content of, γ, 25:52276 (A/CONF.49/P-115)
rice, radiation processing effects on organoleptic properties of, 25:52280 (A/CONF.49/P-256)
wheat, radiation processing effects on insect pests in, 25:52280 (A/CONF.49/P-256)
wheat, radiation processing effects on insect pests in, 25:52288
wheat, radiation processing in India for disinfestation, 25:52284 (A/CONF.49/P-740)
wheat, radiation processing of, 25:52279 (A/CONF.49/P-162)

CEREBROSPINAL FLUID
flow dynamics in man, effectiveness of radioisotope scanning for measurement of, 25:52139

CERIUM
4f state distribution in metal and oxide of, from x-ray spectra, 25:52607 (CONF-711001-(Vol.1), pp 135-43)
determination by titration with products from γ radiolysis of water, 25:51370
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in presence of aluminum by arsenato-iodometric method, 25:51373
determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
electric conductivity of, effects of temperature and purity on, (E), 25:52963
energy levels of, level-density parameters for, (E), 25:53807
neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
neutron reactions at 14.2 MeV, neutron spectra from, (E), 25:53807
polarographic behavior at mercury dropping electrode, 25:51474
separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)
shock compression-induced emf in, (E/T), 25:52961
thermal conductivity at 500 to 900°C, 25:52320 (CONF-711001-(Vol.1), pp 386-96)

CERIUM ALLOYS AND SYSTEMS
magnetic--nonmagnetic transition in dilute, from pressure dependence of superconducting transition temperature, 25:52960
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
Ce--Co--Fe, lattice constants for Ce$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
Ce--Gd--Ru, magnetization and thermal capacity of superconducting, (T), 25:52739
Ce--La--Pd, structure, Kondo effect, and thermal capacity of Ce/sub x/La/sub 1-x/Pd$_3$, (E/T), 25:52945 (CONF-711001-(Vol.2), pp 680-91)
Ce--La-base, pair-breaking effects in superconducting Kondo, (E/T), 25:52750
Ce--Pd, electric conductivities of PdCe and Pd$_3$Ce at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
Ce-base--Lu--Y, Kondo effect in dhcp, 25:52951
Ce-base--Pu--Y, Kondo effect in dhcp, 25:52951
Ce-base--Sc--Y, Kondo effect in dhcp, 25:52951

CERIUM BORIDES
nonstoichiometry of CeB$_6$, (E/T), 25:52453 (CONF-711001-(Vol.2), pp 598-609)
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
reactions of CeB$_6$, with refractory transition metals at 1700°C, 25:52417

CERIUM ISOTOPES Ce-140
alpha inelastic scattering at 45 MeV, differential cross sections for, (E), 25:53799
energy levels from α inelastic scattering, (E), 25:53799
proton reactions (p,d) at 24.55 MeV, DWBA analysis of differential cross sections and spectra from, (E), 25:53740 (FRNC-TH-41)

CERIUM ISOTOPES Ce-141
use as tracer for evaluation of milk volume of mammary glands of goats, 25:51984

CERIUM ISOTOPES Ce-144
determination in biological and environmental materials and liquid wastes following separation by solvent extraction using monoisooctyl methylphosphonate, 25:51383 (A/CONF.49/P-451)
separation from irradiated thorium--uranium fuels by solvent extraction using N-methyldidecylamine, 25:51566 (A/CONF.49/P-650)
uptake by bottom sediments, plankton, and suspensions,

(E), 25:51649 (A/CONF.49/P-457)

CERIUM OXIDES
  distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
  radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)

CERN SYNCHROTRON
  development of, 1970, 25:53422(R) (NP-18906)
  experimental program at, 25:53432 (UCRL-20655, pp 91-116)
  storage rings at, development and testing of ISR, 25:53452

CESIUM
  density of liquid, to 1053°K, performance of gamma attenuation method for measuring, 25:52364
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  plasma of, density profile calculation for diffusion in magnetic fields, (E/T), 25:52824
  plasma of, diffusion in magnetic fields, (E/T), 25:52797
  removal from pressurized water reactor containment system, performance of filters and sprays for, (E), 25:54155 (BNWL-1592)

CESIUM FLUORIDES
  sorptive properties of solid, for uranium hexafluoride in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene solutions, kinetics of, 25:51465 (A/CONF.49/P-546)

CESIUM ISOTOPES Cs-133
  neutron capture at 400 keV, cross sections and spectra from, (E), 25:53743(R) (INR-1318)

CESIUM ISOTOPES Cs-137
  content in deep and surface waters of Atlantic and Pacific Oceans, 1965 to 1970 measurements of, 25:51649 (A/CONF.49/P-457)
  content of daily diet in Belgium, 25:52054
  content of human placenta and tobacco products, correlation between, 25:52046 (UUIP-739)
  content of man, whole-body counting of, 25:51975
  content of milk in Central, North, and South America during February, 1971, 25:52058
  content of milk in relation to strontium-90, statistical analysis of, 25:52059
  determination in biological and environmental materials and liquid wastes following separation by solvent extraction using monoisooctyl methylphosphonate, 25:51383 (A/CONF.49/P-451)
  performance as source for testing magnesite bricks, 25:51733 (SGAE-IB/IA-24/1971)
  separation from liquid waste solutions, effects of preformed precipitates of nickel ferrocyanide on, 25:51564 (A/CONF.49/P-621)
  use as gamma source in radiometric method for measuring density of alkali metals at high temperatures, 25:52364
  use in irradiators for research on genetics and insect control in Latin America, 25:51967 (A/CONF.49/P-756)

CESIUM ISOTOPES Cs-139
  energy levels from cerium-140 (p,d) reactions, spectroscopic factors for, (E), 25:53740 (FRNC-TH-41)

CESIUM NEPTUNATES
  preparation and properties of Cs_3NpC_8, 25:51431

CESIUM PLUTONIUM CHLORIDES
  magnetic susceptibilities of tetravalent plutonium in, 25:51434

CESIUM URANIUM BROMIDES
  lattice dynamics of Cs_2UBr_6, (T), 25:51475

CHARGED-PARTICLE BEAMS
  interactions of spin-$^3/_2$, formalism for, (T), 25:53850
  transport of polarized, transfer matrix method for calculating spin aberrations in, 25:53476

CHARGED PARTICLES
  acceleration of, by electromagnetic fields around neutron stars, (T), 25:52550
  detection of low-energy, description of NE102A-triggered streamer chamber for, 25:51872
  effects on epithelial cells in skin of mice, effects of depth of penetration on lethal, 25:52229
  electrodynamics of dual electrically and magnetically, (T), 25:53276
  motion in electromagnetic fields, dynamic symmetry group for, 25:53243
  motion in magnetic fields, analysis of, 25:53439
  motion in magnetic fields, covariant equations for covariant spin 3-vector for, (T), 25:53082
  motion in magnetic spectrometers and beam lines, Monte Carlo program for calculating, 25:53427 (TRI-71-2)
  motion of point, radiation reaction as retarded self-interaction from, 25:53273
  motion of variable-spin, in field of flat electromagnetic wave, equation for, (T), 25:53092
  orbits in radial electric fields, periodic solutions of nonlinear differential equation for, (T), 25:53087
  radiation dose to personnel following exposure to beams of accelerated, use of scintillation counting of induced radioactivity in estimation of, 25:52073 (UCRL-20262)
  reactions with atoms, relativistic cross sections for L-shell ionization and characteristic x-ray emission in, (T), 25:52639
  reactions with charged particles at high energies, review of Bethe theory for inelastic, (E/T), 25:52646
  theory with spin and dipole moment of, classical, (T), 25:53056
  uses for therapy, review of status of, 25:52152 (UCRL-20836)

CHEMICALS AND REAGENTS
  production of, economics of dual purpose reactors for, 25:54244

CHINON REACTORS (EDF-3)
  pressure vessels of, performance of thermal insulation of prestressed concrete, 25:53905 (A/CONF.49/P-571)

CHLORINE
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  production of, economics of dual purpose reactors for, 25:54244

CHLORINE IONS
  abundance in NGC 6826, (E), 25:52513

CHLORINE ISOTOPES Cl-34
  energy levels from phosphorus-31 (α,nγ) reactions, lifetimes of low-lying, (E), 25:53608(R) (NP-18698)

CHLORINE ISOTOPES Cl-35
  energy level at 3.16 MeV from sulfur-34 (p,γ) reactions, lifetime of, (E), 25:53608(R) (NP-18698)

CHLOROFORM
  effects on solvent properties of bis(2-ethylhexyl) phosphate for uranium, 25:51600
  radiolysis of liquid, effects of dose rate on yields from steady γ or pulsed x, 25:51519

CHLOROPHYTA
  Acetabularia mediterranea, radiation effects on nucleic acid and protein synthesis in, γ, 25:52000
  Chlorella pyrenoidosa, radiation effects on survival of, effects of dose on proton, 25:52257
  Chlorella pyrenoidosa, radiation effects on, isotope substitution methods for studying fast neutron, γ, thermal neutron, and x, 25:52255 (JUL-727-BO)
  Chlorella pyrenoidosa, radioinduced single-strand breaks in DNA of, effects of cell phase on repair of γ, 25:52253 (A/CONF.49/P-213)
  Chlorella vulgaris, radiation effects on mutability, sporulation, and viability of, additive effects of vibrations on γ, 25:52254(T) (JPRS-53801, pp 133-6)

CHROMATIN
  radioinduced coagulation of rat thymus cortex cell, electron microscopy of x, 25:52225

CHROMATOGRAPHY
  equipment for analysis of radiopharmaceuticals for impurities using, 25:51396
  review of inorganic ion exchange, on oxides and hydrous oxides, 25:51598

CHROMIUM
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  determination by titration with products from γ radiolysis of water, 25:51370
  determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  radioinduced conversion to chromate(VI) in doped potassium iodate, potassium nitrate, or potassium sulfate, uv or γ, 25:51488

CHROMIUM ALLOYS AND SYSTEMS
  Al--B--Cr--Hf--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
  C--Cr--Fe-base--Mn--Si, production of sintered electrode strips of, method for, 25:52311
  C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
  Co--Cr--Mo--Ni--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52333
  Cr--Cu, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cr--Cu--Zr, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cr--Fe--Ni, radiation effects on mechanical properties of, fast neutron, 25:52398(T) (JPRS-53800, pp 122-43)
  Cr--Fe--Ni, testing of bars and rods of, for nuclear applications, standard methods for nondestructive, 25:52350
  Cr--Fe--Ni, testing of plates of, for nuclear uses, standard method for ultrasonic, 25:52335
  Cr--Fe--Ni, testing of seamless pipe and tube of, for nuclear uses, standard methods for nondestructive, 25:52349
  Cr--Fe-base, radiation effects on mechanical properties of, neutron, 25:52397(T) (JPRS-53800, pp 113-21)
  Cr--Hf--Si--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
  Cr--Mo--steel, mechanical properties of plates of, for pressure vessels at high temperatures, standard for, 25:52344
  Cr--Mo--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for,

XUM

25:52334
  Cr--Mo--steel--V, radiation effects on ductility, tensile strength, viscosity, and embrittlement of U.S.S.R. 48 TC, in-pile and neutron, 25:53908 (A/CONF.49/P-705)
  Cr--Mo--Zr, phase studies of isothermal section of, at 1500°C, 25:52379
  Cr--Nb-base, oxidation at 900 to 1100°C, kinetics of, 25:52296 (AD-721321)
  Cr--steel, radiation effects on mechanical properties of, neutron, 25:52397(T) (JPRS-53800, pp 113-21)
CHROMIUM BORIDES
  CrB$_2$--Cr$_2$O$_3$, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415
CHROMIUM CARBIDES
  hardness anisotropy in polycrystalline, measurement of micro-, 25:52449
CHROMIUM ISOTOPES Cr-51
  energy levels from chromium neutron capture, spin assignments for, (E), 25:53704
  incorportion in erythrocytes to determine blood loss in animals infected with Fasciola heptica and Haemonchus contortus, 25:52007 (A/CONF.49/P-355)
  metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
  reactions of recoil, in neutron-irradiated potassium chromate, effects of oxygen on annealing, 25:51541
  use of EDTA-incorporated, for scanning kidneys for glomerular filtration rate, 25:52120 (A/CONF.49/P-121)
CHROMIUM ISOTOPES Cr-52
  deuteron reactions (d,p) at 10 MeV using polarized beam, vector analyzing power for, (E), 25:53726
  deuteron reactions (d,p) at 8 MeV, DWBA calculation including deuteron D-state, (T), 25:53721
  proton inelastic scattering at 5.4 to 6 MeV, polarization in, (E), 25:53720
CHROMIUM ISOTOPES Cr-53
  energy levels from (d,p) reactions, (E), 25:53725
  energy levels from chromium neutron capture, spin assignments for, (E), 25:53704
CHROMIUM ISOTOPES Cr-54
  energy levels from chromium neutron capture, spin assignments for, (E), 25:53704
CHROMIUM OXIDES
  Cr$_2$O$_3$--Cu, heat resistance of, 25:52371
  CrB$_2$--Cr$_2$O$_3$, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415
CHROMOSOMES
  radioinduced aberrations in human, relation between dose and Thorotrast α, 25:52247
  radioinduced aberrations in plant, in relation to intracellular metabolism, 25:52020 (A/CONF.49/P-844)
  radioinduced aberrations in rat embryonic cell, effects of dose and time on x, 25:52217
  radioinduced aberrations in, of astronauts during space flight, 25:52021(T) (JPRS-53801, pp 77-83)
  radioinduced aberrations of barley, comparison between ethylenimine and nitrogen mustards induced and γ, 25:52041
  radioinduced aberrations of human peripheral leukocyte, 25:52022(R) (NYO-4052-4)
  radioinduced aberrations of rat bone marrow cell, following in utero exposure, γ, 25:52224
  radioinduced aberrations of Vicia faba, verification of Rivell's hypothesis for x, 25:52035
  replicon length in mammalian, development of model for, 25:51997
CHROMOSPHERE
  radio emission from, 3-mm oscillatory component in, (E), 25:52561
  spectral line transfer in, (T), 25:52566
CLEAN ROOMS
  description for contamination control, 25:52048
COAL
  resources in Australia, 25:53886 (A/CONF.49/P-135)
  resources in Australia to year 2000, 25:54014 (A/CONF.49/P-127)
COAMID
  effects on regeneration of fractured bones in γ-irradiated rabbits, 25:52111
COBALT
  determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination in steels by atomic fluorescence spectroscopy, 25:51378
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  separation of rare earths from, by complexing and precipitation, 25:51589
COBALT ALLOYS AND SYSTEMS
  Ce--Co--Fe, lattice constants for Ce$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Cr--Mo--Ni--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52333
  Co--Dy--Ni, magnetic properties of DyCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
  Co--Fe--misch metal, lattice constants for MM$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Nd, lattice constants for Nd$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Pr, lattice constants for Pr$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Sm, lattice constants for Sm$_2$(Co/sub 1-x/Fe/sub x)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Y, lattice constants for Y$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Gd--Ni, magnetic properties of Gd(Co/sub 1-x/Ni/sub x/)$_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
  Co--Ho--Ni, magnetic properties of HoCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
  Co--Nd, crystal structure of Nd$_2$Co$_{17}$, 25:52372 (CONF-711001-(Vol.1), pp 96-101)
  Co--Pr, crystal structure of Pr$_2$Co$_{17}$, 25:52372 (CONF-711001-(Vol.1), pp 96-101)
  Co--Pr, magnetic properties of PrCo$_5$ magnets sintered with samarium--cobalt aid, 25:52939 (CONF-711001-(Vol.1), pp 252-60)
  Co--rare earth, magnetic properties of intermetallic compounds, pulsed-field, 25:52936 (CONF-711001-(Vol.1), pp 229-39)
  Co--Sm, magnetic properties of sintered, optimum composition for, 25:52938 (CONF-711001-(Vol.1), pp 242-51)
  Co--Sm, use as sintering aid for PrCo$_5$ magnets, 25:52939 (CONF-711001-(Vol.1), pp 252-60)
COBALT BORIDES
  CoB--YB, structure of YCo$_2$B$_2$, 25:52453 (CONF-711001-(Vol.2), pp 598-609)
COBALT ISOTOPES Co-57
  energy levels from iron-54 (α,p) reactions, lifetimes of, (E), 25:53662(R) (COO-1468-9)
  energy levels of, properties of quintet quadrupole, (T), 25:53673
COBALT ISOTOPES Co-58
  retention in sheep following intravenous injection, effects of EDTA on, 25:51985
COBALT ISOTOPES Co-59
  neutron elastic scattering at 1.36 MeV using polarized beam, depolarization parameter for, (E), 25:53708
  neutron reactions at 0 to 16 MeV, strength of tensor spin--spin potential in, (T), 25:53670
  neutron total cross section at 0.3 to 1.8 MeV using polarized target, nuclear deformation effect on, (E), 25:53709
  proton inelastic scattering at 14 MeV, proton spectra from, (E), 25:53663(R) (COO-1505-48)
  proton reactions (p,α) at 14 MeV, α spectra from, (E), 25:53663(R) (COO-1505-48)
COBALT ISOTOPES Co-60
  content in personnel, methods for monitoring, 25:52053
  use as source in multipurpose irradiation facility, 25:51668 (A/CONF.49/P-804)
  use in irradiators for research on genetics and insect control in Latin America, 25:51967 (A/CONF.49/P-756)
COINCIDENCE CIRCUITS
  pulse limiter--shaper circuit for fast, 25:51941
COLLIMATORS
  design of reflecting conical tube, for producing intense neutron beams, (T), 25:53495
COLLISION PROCESSES
  book: Atomic Collision Theory, 25:52652
  charge-exchange problem in, direct numerical solution to, 25:52664
  perturbed-stationary-state approximation for, translation factor in basis functions used in, 25:52647
  potential-curve crossing in atomic, analysis of Stueckelberg's treatment of inelastic transitions at, 25:52644
  semiclassical approximations for atomic, having complex potentials, 25:52679
  theory of nonadiabatic molecular, trajectory surface hopping approach to, 25:52660
  theory of rearrangement, use of coupled equations with self-consistent optical potential in, 25:52680
COLOMBIA
  radiation processing of food in, research on, 25:51967 (A/CONF.49/P-756)
COMPOSITE PARTICLES
  theory for baryon, Schwinger model for relativistically invariant equation in, (T), 25:53194
  theory for elementary and, with identical quantum numbers in quantum field theory, (T), 25:53302
  theory for proton, theorem on vanishing of Z_2 for, (T), 25:53189
COMPTON EFFECT
  cross sections for, radiative corrections to, (T), 25:52633
COMPUTER PROGRAMS
  COOLTEMP, for coolant temperatures in liquid metal cooled reactor subassemblies, FORTRAN 4 for IBM 360, 25:54198 (ANL-EBR-26)
  development for image enhancement, problems in, 25:54368 (LA-DC-12840)
  FIESTA, for finite element stress and temperature analysis, 25:54377 (RCN-149)
  for analysis of gamma spectra from lithium-drifted germanium detectors, 25:51882 (PEL-204)
  for flowmeter calibration and injection stream

  prediction, 25:51674 (NASA-SP-5938-1)
  for fuel element management in pressurized water reactors, summary in Belgium of, 25:53892 (A/CONF.49/P-278)
  FORMAT, for text processing, 25:54388 (SLAC-135)
  GAMANL, for applying Fourier transforms to analysis of gamma spectral data, in FORTRAN IV for IBM 360/65 and GE 635, 25:53747 (MIT-3944-2)
  GEMS, for graphical systems that generate pictures, 25:54387 (SLAC-134)
  MIRA, for iodine removal analysis in reactor containment systems, FORTRAN II for CDC 6400, 25:54152 (BMI-1915)
  PARTIAL PRESSURE, for determining partial pressures of gases from residual-gas-analyzer data, in FORTRAN for IBM 360, 25:51363 (ORNL-TM-3455)
  PREJUD, for preliminary analysis of two-dimensional pulse-height analyzer data, 25:51881 (N-71-17323)
  REVMOC, for calculating charged-particle transmission through spectrometers and beam lines, in FORTRAN IV, 25:53427 (TRI-71-2)
  SLOPPY, for least squares slope finding in tables of weighted data, 25:54389 (UCID-30009)
  STROKOOP, for cost optimization of nuclear power plant distribution in national systems, 25:54139 (JUL-759-RG)
  URS, for calculating show-neutron spectra in infinite homogeneous media by differential equations, in Algol-60, 25:53490 (IAE-1969)
  XCHEKR, for checking and editing gamma and neutron multigroup cross sections, in FORTRAN IV, 25:53492 (ORNL-TM-3518)

COMPUTERS
  memory development for, BNL program for associative, 25:54351 (BNL-50287)
  modification of IBM 1403 printer, for Braille output, 25:54340 (ANL-7812)
  performance of CDC 6400, for analysis of scanning data in cerebral blood flow studies, 25:52144
  software for high-energy physics experiments, use of interpretive, 25:53425 (RHEL/R-221)
  user's manual for CDC Star-100, 25:54390 (UCID-30021)

CONCRETES
  aggregates for radiation-shielding, standard composition and specific gravity for, 25:52491
  aggregates for radiation-shielding, standard for description of naturally occurring and synthetic constituents of, 25:52490
  crack formation in reinforced hollow cylinders of, effects of thermal stresses on, 25:52487(T) (ORNL-tr-2515)
  preparation using neutron moisture gage for control of water content, 25:52493
  radiation effects on mechanical, physical, and thermal properties of, at 150 to 200°C, fast neutron, 25:52486 (A/CONF.49/P-613)
  radiation effects on reactor pressure vessel, fast neutron, 25:52386 (A/CONF.49/P-189)
  stress testing of prestressed, evaluation of scale models for, (E), 25:54308
  concretes--monomers, radioinduced polymerization of, properties of products of, 25:51503 (A/CONF.49/P-647)

CONGO REPUBLIC
  research reactor operation in, summary of, 25:54190 (A/CONF.49/P-776)

CONTAINMENT SYSTEMS EXPERIMENT
  development of, review of, 25:54155 (BNWL-1592)
  filter systems in, removal of airborne fission products by recirculating, (E), 25:54153 (BNWL-1587)
  operations of, review of, 25:54155 (BNWL-1592)
  spray system for, effects of flow rate on removal of fission products by, (E), 25:54154 (BNWL-1591)

CONTAMINATION
  control and measurement of, radioisotope instrumentation for, 25:51712 (CONF-710428-, Paper 3)
  control of reactor sodium coolant fire-induced, methods for, 25:51789
  control of, review on, 25:52047
  control of, role of clean rooms in, 25:52048
  monitoring of, methods and instruments for, 25:52049

CONTROL SYSTEMS
  design of near-optimal, (T), 25:54378 (SC-CR-715127)
  development of process, for paper industry, use of radioisotope x-ray techniques in, 25:51689 (A/CONF.49/P-6)
  operation of oil-filled hydraulic, for shielding door on nuclear ship Mutsu, 25:51676

CONVEYERS
  design of automated fluid-type, for fuel elements, 25:51845(P)

COPPER
  antideuteron absorption at 13.3 GeV/c, cross sections for, (E), 25:53019
  antideuteron reactions (anti d,anti p) at 13.3 GeV, cross section for, (E), 25:53019
  argon-ion reactions at 12 or 30 keV with, sputtering and secondary electron yields from, 25:52599 (SGAE-PH-109/1971)
  determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination in solder material by neutron activation following radiochemical separation using tribenzylamine, 25:51404 (A/CONF.49/P-110)
  determination in standardized aluminum-silicon alloy by neutron activation, methods for both destructive and nondestructive, 25:51419
  performance of screens of, for cobalt-60 radiography of steel, 25:51741
  properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  proton reactions at 450 MeV, γ spectra from, (E), 25:53663(R) (COO-1505-48)
  proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
  radiation effects on dislocation pinning by point defects in, internal-friction study of 1-MeV electron, (E/T), 25:52905
  rare-gas ion implantations at 1 to 120 keV in, saturation values of, 25:52922
  separation of rare earths from, by complexing and precipitation, 25:51589

COPPER ALLOYS AND SYSTEMS
  Au--Cu, Debye temperatures of, 25:54367 (IS-T-478)
  Cr_2O_3--Cu, heat resistance of, 25:52371
  Cr--Cu, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cr--Cu--Zr, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cu--Fe--Ti, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cu--Ni, testing of bars and rods of, for nuclear applications, standard methods for nondestructive, 25:52350
  Cu--Ni, testing of plates of, for nuclear uses, standard method for ultrasonic, 25:52335
  Cu--Ni, testing of seamless pipe and tube of, for nuclear uses, standard methods for nonoestructive, 25:52349
  Cu--Ni--Zn, multiphase diffusion in, 25:54362 (COO-1436-31)
  Cu--Pu, phase studies of, relations with growth kinetics and formation mechanism, 25:52381
  Cu--ThO_2, heat resistance of, 25:52371
  Cu--Ti, properties of plasma sprayed films of, on ceramics, 25:52312
  Cu--Zr, properties of plasma sprayed films of, on ceramics, 25:52312
  Cu--ZrO_2, heat resistance of, 25:52371

COPPER ISOTOPES Cu-59
  retention in sheep following intravenous injection, effects of EDTA on, 25:51985

COPPER ISOTOPES Cu-63
  alpha reactions (α,2n) + (α,pn) at 17.5 to 37.8 MeV, excitation functions and gamma spectra from, (E), 25:53699
  alpha reactions (α,n) at 8.4 to 37.8 MeV, excitation functions and gamma spectra from, (E), 25:53699
  neutron elastic scattering at 1.36 MeV using polarized beam, depolarization parameter for, (E), 25:53708
  proton inelastic scattering at 15.7 MeV using polarized beam, asymmetry in, (E), 25:53719

COPPER ISOTOPES Cu-64
  metabolism in liver of lactating cows, effects of molybdenum compounds on, 25:51982
  retention in sheep following intravenous injection, effects of EDTA on, 25:51985

COPPER ISOTOPES Cu-65
  alpha reactions (α,2n) at 17.5 to 37.8 MeV, excitation functions and gamma spectra from, (E), 25:53699
  alpha reactions (α,3n) at 29.1 to 37.8 MeV, excitation functions and gamma spectra from, (E), 25:53699
  neutron elastic scattering at 1.36 MeV using polarized beam, depolarization parameter for, (E), 25:53708
  proton inelastic scattering at 15.7 MeV using polarized beam, asymmetry in, (E), 25:53719

COPPER ORES
  processing of, evaluation of deep-underground nuclear explosions for in-situ, 25:51664 (UCRL-72769(Rev.1))

COSMIC PARTICLES
  interactions of nucleons, emission model for multiple particle production in, 25:53238
  meson (π) reactions with brass and carbon above 20 GeV, multiplicity distribution of collimated secondaries from, (E), 25:53018
  neutron flux up to 100 MeV, energy dependence of pressure coefficient of, (E), 25:52701
  reactions with aluminum-27 and lead, cross sections for inelastic, (E), 25:53694
  reactions with lead, measurement of neutron spectra from, (E), 25:51887
  spectra of muon, at sea level, 25:52700
  transport in random magnetic fields, (T), 25:52702

COSMIC RADIATION
  exposure age determination for, cross sections for beryllium-10 production in proton reactions (p,2p) with boron-11 at 150 and 600 MeV for, (E), 25:53240
  flux of background x, from 0.2 to 2 keV, (E), 25:52580

XUM

- COSMIC RADIO SOURCES
  - emission at 6 cm from Cygnus A, distribution of polarized, (E), 25:52539
  - Faraday rotation of extragalactic, model for, (T), 25:52588
  - flux densities and positions of southern galactic, at 1410 MHz, (E), 25:52535
  - identification of 3C 386 as a galaxy, (E), 25:52574
  - identification of Antares B as, (E), 25:52508
  - positions of 28, precise radio, (E), 25:52538
  - scintillations of, interpretation of interplanetary, (E/T), 25:52563
  - structure of compact extragalactic, high-resolution observations at 6 and 18 cm of small-scale, (E), 25:52553
- COSMIC SHOWERS
  - fireball production in, parameters of, 25:53144
  - quark search in 10^{13}- to 10^{16}-eV, using proportional-counter hodoscope, 2/3-integral-charge, (E), 25:52989 (PITHA-48)
- COSMIC X-RAY SOURCES
  - Cen XR-3, search for optical source at position of, (E), 25:52544
  - Cyg X-1, optical identification of, (E), 25:52543

- evaluation of surface-type gamma-backscatter, for soil density, quality factor for, 25:51930
- performance of gamma radiometric, for determining density of irradiated pin-type fuel elements, 25:52440 (RT/ING-(71)6)
- performance of prototype surface-type gamma-backscatter, for soil density, 25:51929

DESALTING
- economics of various methods of, methods for calculating, 25:51666 (A/CONF.49/P-589)
- evaporation cycles for, economics of, 25:54240 (A/CONF.49/P-590)
- programs in Spain, summary of conventional and nuclear, 25:54241 (A/CONF.49/P-733)
- reactors for, design of dual purpose, 25:54243(P)

DEUTERIUM
- concentration in methane by gas chromatography, 25:51595
- deuteron reactions (d,n) at 11 MeV, neutron polarization from, (E), 25:53507
- deuteron reactions (d,n) at 12 MeV using polarized beam, neutron polarization at 0° in, (E), 25:53546
- deuteron reactions (d,n) at 2, 3, and 5 MeV, neutron polarization from, (E), 25:53589
- deuteron reactions (d,n) at 25 to 40 MeV, neutron polarization in, (E), 25:53543
- deuteron reactions (d,n) at 4 to 13.5 MeV using polarized beam, neutron polarization from, (E), 25:53545
- deuteron reactions (d,n) at 6 to 14 MeV, neutron polarization from, (E), 25:53542
- deuteron reactions (d,n) with deuterium at 12 MeV using polarized beam, vector analyzing power for, (E), 25:53544
- deuteron reactions (d,p) at 150, 230, and 340 keV using polarized and unpolarized beams, angular distributions for, (E), 25:53547
- dielectric constant of liquid, 25:51463
- effects on beta elimination from 2-bromobutane, 25:51456
- effects on decomposition of enolic $C_3H_6O\cdot^+$ ion formed from aliphatic ketones, 25:51458
- effects on far-infrared and Raman spectra of methanol at −185°C, 25:51445
- effects on ir spectra of barium and strontium halide monohydrates, 25:51454
- effects on ir spectra of copper chloride dihydrate, 25:51451
- effects on ir spectra of isothiazoles, 25:51446
- effects on microwave spectra of acetic acid, 25:51443
- effects on microwave spectrum, vibration-rotation interaction, and ring puckering vibration in silacyclobutane, 25:51441
- effects on partitioning of ion pair intermediates, study of secondary and solvent α, 25:51447
- effects on photoionization of hydrofluoric acid, 25:51442
- effects on radiolysis of frozen aqueous solutions of perchloric and sulfuric acids, 25:51525
- effects on reaction of galvinoxyl with trihydrogalvinoxyl in cyclohexane, 25:51455
- effects on reverse Diels--Alder reactor of 9,10-dihydro-9,10-ethanoanthracene, 25:51439
- effects on thermolysis of 3-butenoic acid, 3-butyn-1-ol, and 4-penten-2-ol, 25:51457
- effects on transition probabilities in methane, ethylene, ammonia, silane, arsine, and phosphine, 25:51450
- effects on vibrations of methylene cyclopropane, normal coordinate calculations of, 25:51440
- exchange between hydrogen and ammonia or amines, catalysis of, 25:51603(P)
- exchange between hydrogen and deuterated benzene, properties of dicyclopentadienylniobium hydride as catalyst for, 25:51459
- exchange in furan, pyrrole, selenophene, and thiophene, kinetics of acid-catalyzed, 25:51448
- neutron elastic scattering at 1 to 10 MeV, phase-shift analysis of, (T), 25:53536
- neutron elastic scattering at 14.1 MeV using polarized beam, angular distribution for, (E), 25:53637
- neutron elastic scattering at 2.6 MeV, angular dependence of neutron polarization in, (E), 25:53537
- neutron elastic scattering at 22.1 MeV using polarized beam and liquid target, asymmetry in, (E), 25:53548
- neutron elastic scattering at 7.89 MeV using polarized beam, analyzing power for, (E), 25:53536
- photon reactions (γ,n) at 5 to 40 MeV, photoneutron polarization from, (E), 25:53534
- plasma of, lack of partial thermal equilibrium in pinch discharges, (E), 25:52807
- plasma of, neutron production mechanism in dense focus, (E), 25:52856
- plasma of, propagation of strongly ionizing shocks in, 25:52839
- proton elastic scattering at 50 MeV, triple scattering parameters for, (E), 25:53540
- proton reactions (p,2p) at 156 MeV, cross-section calculations including final-state-interaction effects, (T), 25:53524
- proton reactions (p,π^+) at 340 to 600 MeV, cross sections for, 25:53239
- proton reactions at 4 eV with molecular, trajectory surface hopping treatment of, 25:52660
- proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
- proton reactions with molecular, comparison of experiment with trajectory-surface-hopping calculations of charge exchange and rearrangement in, 25:52673
- radioinduced exchange between hydrogen and heavy water at 84 to 381°C, 25:51495 (COO-1116-19)
- reactions with O_2^+, isotope effects in, 25:51453

DEUTERIUM HYDRIDES
- dielectric constant of liquid, 25:51463

DEUTERIUM SYSTEMS
- D--T, thermonuclear reaction waves in solid, (T), 25:52847 (AD-720839)

DEUTERON BEAMS
- polarization by channeling in magnetized nickel monocrystalline foil, 25:52926
- polarization measurements of, Lamb-shift polarimeter for, 25:53474
- polarized, figures of merit for, 25:53475

DEUTERON SOURCES
- description of polarized, for Van de Graaff accelerator,, 25:53461

DEUTERONS
- interactions d + d at low energies, DWBA treatment of, (T), 25:53541
- interactions d + p at 6 and 10 MeV using polarized beam, elastic scattering tensor moments for, 25:53539
- interactions $\gamma + d \to \gamma + d$, double dispersion relations for amplitudes of Compton, (E), 25:53094
- interactions γ + d at 140 to 430 MeV, relativistic impulse approximation analysis of elastic, (T), 25:53064
- interactions γ + d at high energies, review of production of rho and phi production in, (E), 25:52997
- interactions K^+ + d at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
- interactions p + d at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
- interactions p + d at 800 MeV, calculation of polarization and cross sections for scattering, 25:53538
- interactions $\pi^+ + d \to d + \pi^+ + \pi^+ + \pi^-$ at 11.7 GeV/c, helicity conservation in, (E/T), 25:53032
- interactions π^+ + d at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
- reactions (d,3n) with tungsten-186 at 12, 16, and 19.6 MeV, γ spectra from, (E), 25:53763
- reactions (d,α) with lithium-6 at 0.4 to 1 MeV using polarized beam, analyzing power for, (E), 25:53630
- reactions (d,α) with tritium at 51, 76, and 93 keV using polarized beam, analyzing power for, (E), 25:53556
- reactions (d,He-3) with helium-4 at backward angles, contribution of exchange mechanism in, (T), 25:53527
- reactions (d,n) and (d,p) with nuclei, formalism for polarization transfer, (T), 25:53847
- reactions (d,n) with beryllium-9 at 2.1 MeV, neutron polarization from, (E), 25:53589
- reactions (d,n) with beryllium-9 at 3 and 3.5 MeV, DWBA analysis of polarization in, (E/T), 25:53651
- reactions (d,n) with boron-11 and nitrogen-14 at 10 and 11.8 MeV using polarized beam, vector analyzing power for, (E), 25:53652
- reactions (d,n) with boron-11 at 7 to 12 MeV, polarization angular distributions for, (E), 25:53653
- reactions (d,n) with carbon-12 at 2.71 and 2.96 MeV, neutron polarizations from, (E), 25:53626
- reactions (d,n) with carbon-12 at 2.8, 5, and 5.4 MeV, neutron polarization from, (E), 25:53589
- reactions (d,n) with deuterium and hydrogen at 12 MeV

- using polarized beams, neutron polarization at 0° in, (E), 25:53546
- reactions (d,n) with deuterium at 11 MeV, neutron polarization from, (E), 25:53507
- reactions (d,n) with deuterium at 12 MeV using polarized beam, vector analyzing power for, (E), 25:53544
- reactions (d,n) with deuterium at 2, 3, and 5 MeV, neutron polarization from, (E), 25:53589
- reactions (d,n) with deuterium at 25 to 40 MeV, neutron polarization in, (E), 25:53543
- reactions (d,n) with deuterium at 4 to 13.5 MeV using polarized beam, neutron polarization from, (E), 25:53545
- reactions (d,n) with deuterium at 6 to 14 MeV, neutron polarization from, (E), 25:53542
- reactions (d,n) with nitrogen for oxygen-15 production, accelerator facility for, 25:53442
- reactions (d,n) with nitrogen-14 t 3.3 and 5.4 MeV, neutron polarization from, (E), 25:53589
- reactions (d,n) with nuclei using polarized beam, analysis of neutron polarization at 0°, (T), 25:53848
- reactions (d,n) with oxygen-16 at 5.4 MeV, neutron polarization from, (E), 25:53589
- reactions (d,n) with tritium at 0.2 to 1 MeV using polarized beams, analyzing power for, (E), 25:53557
- reactions (d,n) with tritium at 0.5 to 1.6 MeV, angular and energy dependence of neutron polarization from, (E), 25:53743(R) (INR-1318)
- reactions (d,n) with tritium at 3.9 to 15 MeV using polarized beam, neutron polarization in, (E), 25:53558
- reactions (d,n) with tritium at 6, 10, and 11.3 MeV using polarized beam, comparison of vector analyzing power with helium-3 (d,p) reactions, (E), 25:53560
- reactions (d,n) with tritium at 7 to 11.4 MeV, polarization angular distributions from, (E), 25:53555
- reactions (d,n) with tritium below 1 MeV, analysis of polarization studies of, 25:53561
- reactions (d,n) with tritium, quadratic relations between observables for polarization transfer in, (T), 25:53559
- reactions (d,n) with yttrium-89 at 11 MeV using polarized beam, vector analyzing power for, (E), 25:53652
- reactions (d,p) with beryllium-9, boron-10, boron-11, lithium-6, and nitrogen-14 at 10 and 12 MeV using polarized beams, vector analyzing power and spectroscopic factors for, (E), 25:53657
- reactions (d,p) with calcium-40 at 11 MeV using polarized beam, vector analyzing power for, (E), 25:53726
- reactions (d,p) with carbon-12 at 12.3 MeV polarized beam, tensor analyzing power for, (E), 25:53656
- reactions (d,p) with carbon-12 at 12.4 MeV, proton polarization from, (E), 25:53654
- reactions (d,p) with carbon-12 at 51 MeV, differential cross section and polarization for, (E), 25:53655
- reactions (d,p) with carbon-12 at 8 MeV, finite-range DWBA analysis of, (T), 25:53613
- reactions (d,p) with chromium-52 at 8 MeV, DWBA calculation including deuteron D-state, (T), 25:53721
- reactions (d,p) with chromium-52, titanium-48, and titanium-50, at 10 MeV using polarized beam, vector analyzing power for, (E), 25:53726
- reactions (d,p) with deuterium at 150, 230, and 340 keV using polarized and unpolarized beams, angular distributions for, (E), 25:53547
- reactions (d,p) with helium-3 at 0.5 to 2.5 MeV using polarized beam, analyzing power for, (E), 25:53571
- reactions (d,p) with helium-3 at 10 MeV using polarized beam, analyzing power for, (E), 25:53565
- reactions (d,p) with helium-3 at 10 MeV using polarized beams, reactance matrix analysis of, (T), 25:53580
- reactions (d,p) with helium-3 at 10 MeV using polarized target, analyzing power for, (E), 25:53590
- reactions (d,p) with helium-3 at 2 to 13 MeV using polarized beam, angular distribution of analyzing power for, (E), 25:53569
- reactions (d,p) with helium-3 at 2.8 to 10 MeV using polarized beam, tensor moments for, (E), 25:53570
- reactions (d,p) with helium-3 at 2.8 to 10 MeV using polarized target, analyzing power for, (E), 25:53572
- reactions (d,p) with helium-3 at 430 keV using polarized beam and target, efficiencies for, (E), 25:53574
- reactions (d,p) with helium-3 at 6, 8, and 10 MeV using polarized target, proton asymmetries from, (E), 25:53573
- reactions (d,p) with helium-3 at 6, 8, and 10 MeV using polarized beam, proton asymmetries from, (E), 25:53566
- reactions (d,p) with helium-3 below 1 MeV, analysis of polarization studies of, 25:53561
- reactions (d,p) with helium-3 using polarized beam, vector analyzing power near 430-keV resonance in, (E), 25:53568
- reactions (d,p) with helium-3, polarization--asymmetry relations in, (T), 25:53567
- reactions (d,p) with lead-208 at 12.3 MeV using polarized beam, cross section and vector analyzing power for, (E), 25:53793
- reactions (d,p) with magnesium-24 and -26 at 1.3 to 2.5 MeV, mechanism of, (E), 25:53687
- reactions (d,p) with magnesium-24 and oxygen-16 at 12.3 MeV using polarized beam, vector analyzing power for, (E), 25:53722
- reactions (d,p) with nuclei, Coulomb repulsion in diffraction theory of (d,p) stripping, 25:53826
- reactions (d,p) with nuclei, deuteron D-state effect and spin dependence in vector polarization for, (T), 25:53856
- reactions (d,p) with nuclei, polarization effects in, (T), 25:53842
- reactions (d,p) with nuclei, spin dependence of vector analyzing power of, (T), 25:53857
- reactions (d,p) with rare earths, spectra from, (E), 25:53753 (ZFK-172)
- reactions (d,p) with silicon-28 at 10 to 12 MeV, DWBA analysis of polarization effects in, (T), 25:53723
- reactions (d,p) with silicon-28 at 12.3 MeV using polarized beam, proton polarization from, (E), 25:53724
- reactions (d,p) with zirconium-90 at 12 MeV using polarized beam, vector analyzing power for, (E), 25:53726
- reactions (d,p) with zirconium-90 at 6 to 9 MeV using polarized beams, threshold effects in isospin-coupled channels of, (E), 25:53791
- reactions with beryllium and lithium at 22 MeV, neutron yields from, (E), 25:53619
- reactions with nuclei using polarized beams, method for determination of analyzing tensors in, 25:53860
- reactions with nuclei using polarized beams, method for determination of secondary standards for analyzing tensors of, 25:53859
- scattering by aluminum-27, silicon, tin-120, zinc-68, and zirconium-90 at 13 MeV, vector analyzing power for elastic, (E), 25:53715
- scattering by beryllium-9, boron-10, and titanium at 12.6 MeV using polarized beam, asymmetries in, (E), 25:53622
- scattering by beryllium-9, boron-11, carbon-12, nickel, titanium, and tantalum-181 at 13.6 MeV, vector polarization in elastic, (E), 25:53645
- scattering by carbon-12 at 12.3 MeV using polarized beam, tensor analyzing power for elastic, (E), 25:53656
- scattering by carbon-12 at 41 to 51 MeV, absolute vector-polarization calibration from elastic, (E), 25:53612
- scattering by helium-3 at 10 and 12 MeV using polarized beam, analyzing power for elastic, (E), 25:53562
- scattering by helium-3 at 10 MeV using polarized beams, reactance matrix analysis of, (T), 25:53580
- scattering by helium-3 at 10 MeV using polarized target, analyzing power for elastic, (E), 25:53590
- scattering by helium-3 at 4 to 10 MeV using polarized beam, tensor moments for elastic, (E), 25:53564
- scattering by helium-3 at 9.9 and 11.9 MeV using polarized target, asymmetry in elastic, (E), 25:53563
- scattering by helium-4 at 11.5 MeV, comparison of double scattering and polarized ion source measurements of polarization in elastic, 25:53582
- scattering by helium-4 at 12 MeV using polarized beam, vector and tensor analyzing power and phase shifts for elastic, (E), 25:53583
- scattering by helium-4 at 2 to 11.5 MeV, phase-shift analysis of elastic, 25:53585
- scattering by helium-4 at 3 to 11.5 MeV using polarized beam, tensor moments for elastic, (E), 25:53584
- scattering by helium-4 at 9.8 MeV using polarized beam, analyzing tensors for elastic, 25:53859
- scattering by indium-115 at 12 MeV, spectra from inelastic, (E), 25:53749 (NP-18927)
- scattering by magnesium at 7 MeV, tensor polarization in, (E), 25:53714
- scattering by magnesium-24 at 12.3 MeV using polarized beam, vector analyzing power for elastic and inelastic, (E), 25:53713
- scattering by nuclei at 15 MeV, optical-model analysis of polarized, (T), 25:53812 (LA-DC-12577)
- scattering by nuclei at 9 to 12 MeV using polarized beams, optical-model parameters for elastic, 25:53712
- scattering by nuclei, formalism for polarization transfer in elastic, (T), 25:53849
- scattering by nuclei, review of polarization effects in elastic, 25:53839
- scattering by tritium at 3.3 to 12.3 MeV using vector polarized beam, angular distributions for elastic, (E), 25:53554

DEUTERONS (anti d)

- absorption by aluminum at 13.3 GeV, cross sections for, (E), 25:53019
- absorption by carbon at 13.3 GeV, cross sections for, (E), 25:53019
- absorption by copper at 13.3 GeV, cross sections for, (E), 25:53019
- absorption by lead at 13.3 GeV/c, cross sections for, (E), 25:53019
- absorption by lithium at 13.3 GeV, cross sections for, (E), 25:53019
- binding energy from antideuteron reactions (anti d,p) with aluminum, copper, and carbon, (E), 25:53019
- reactions (anti d,anti p) with aluminum at 13.3 GeV, cross section for, (E), 25:53019
- reactions (anti d,anti p) with carbon at 13.3 GeV, cross section for, (E), 25:53019
- reactions (anti d,anti p) with copper at 13.3 GeV, cross section for, (E), 25:53019

DEXTRAN
radioprotective effects of serotonin-containing derivatives of, on mice, γ, 25:52115
toxicity of serotonin-containing derivatives of, to mice, 25:52115
DIAMONDS
radiation effects on Type IIa, ESR study of low-temperature electron, 25:52913
DIDECYLAMINE, N-METHYL-
solvent properties for fission products in separation from irradiated thorium--uranium fuels, 25:51566 (A/CONF.49/P-650)
DIDO REACTORS
neutron beam studies in, 25:54180 (A/CONF.49/P-486)
radiation monitoring at HIFAR, during 1960 through 1970, 25:52065 (A/CONF.49/P-800)
DILATOMETERS
design for dimensional inspection of irradiated fuel elements, 25:51950
DIODES
switching behavior of niobium/niobium oxide/metal, 25:52952
DIPENTAERYTHRITOL HEXANITRATE
crystal structure of, 25:51584(R) (MLM-1792)
DISEASES
effects of bone, on whole-body retention of calcium-47 in man, 25:51987
tropical, evaluation of radioisotope tracer techniques for diagnosis of endemic, 25:52133 (A/CONF.49/P-739)
DISEASES, INFECTIOUS
Schistosomiasis, additive effects of, on low-dose pathological radiation effects on man, 25:52089 (A/CONF.49/P-142)
DISEASES, NEOPLASTIC
cancer, radioinduced manifestation of anaplastic thyroid, in man following therapy of toxic nodular goiter using iodine-131, 25:52237
carcinomas, radiotherapy of cervical, in Australia during 1953 to 1968, 25:52171
carcinomas, radiotherapy of cheek mucosa, review of, 25:52169
carcinomas, radiotherapy of human esophagus, effects of dose, dose fractionation, and energy on effectiveness of x, 25:52157
carcinomas, radiotherapy of human laryngeal and mammary, effects of dose per fraction on effectiveness of cobalt-60 γ, 25:52168
carcinomas, radiotherapy of human thyroid, effectiveness of iodine-131 in combination with chemotherapy, radiation, and surgery for, 25:52173
carcinomas, scanning human lung, using mercury-197-labeled mercury chloride, 25:52141
diagnosis in man, review of effectiveness of radioisotope scanning for, 25:52127 (A/CONF.49/P-407)
fibrosarcomas, radiotherapy using fast neutrons, survival of hypoxic cells during, 25:52159
granulomas, radioinduced, in retromandibular region of man following use of Thorotrast for carotid angiography and sialography, 25:52243
leukemia, radioinduced, in mice following continuous low-level exposure, effects of strain on γ, 25:52226
malignant radiotherapy using fast neutrons, evaluation of neoplasm type for, 25:52161
malignant, diagnosis of human bone, effectiveness of fluorine-18 scanning for, 25:52127 (A/CONF.49/P-407)
malignant, radiotherapy of human lymph system, effectiveness of injections of iodine-131-labeled lipidol for, 25:52153
malignant, radiotherapy of human testes, use of pendulum technique and wedge filters for protection of kidneys and urinary tract during gamma and x, 25:52156
malignant, radiotherapy of nasopharyngeal, in Australia during 1950 to 1969, 25:52170
malignant, radiotherapy of, comparison of effectiveness of fast neutron and high-energy x, 25:52160
malignant, radiotherapy of, comparison of skin reactions following fast neutron or x, 25:52165
malignant, radiotherapy of, effectiveness of fast neutrons for, 25:52164
metastases, diagnosis of human bone, effectiveness of fluorine-18 scanning for, 25:52127 (A/CONF.49/P-407)
metastases, radiodiagnosis of bone, use of strontium-85 and whole-body scanning for, 25:52140
metastases, radiodiagnosis of human bone, comparison of effectiveness of strontium-85 and strontium-87m, 25:52143
metastases, radiotherapy of human lung, comparison of effectiveness of fast neutron, gamma, and x, 25:52162
metastases, radiotherapy of human lung, effectiveness of iodine-131 for, 25:52173
osteosarcomas, radiation effects on survival of in vivo and in vitro cells of, effects of oxygen content on fast neutron and x, 25:52198
radiotherapy using fast neutrons, considerations for clinical trials of, 25:52166
radiotherapy using fast neutrons, effectiveness of, 25:52078
radiotherapy using fast neutrons, evaluation of effectiveness of, 25:52167
sarcomas, radiation effects on cytochrome c peroxidase activity in Jensen, in rats, effects of acidity and 3-amino-1,2,4-triazole on, 25:52202
tumors, radiation effects on cell reproduction in, effects of dose fractionation on, 25:52163
tumors, radiation effects on RNA metabolism in cells of Ehrlich ascites, x, 25:52180
tumors, radiation effects on survival of cells in experimental, factors influencing RBE for fast neutron and x, 25:52201
tumors, radiation effects on survival of cells in experimental, effects of dose and dose fractionation on fast neutron and x, 25:52199
tumors, radioinduced, in dogs by mixed γ and neutron fields and polonium-210, 25:52211
tumors, radiotherapy of human bladder, comparison of effectiveness of cobalt-60 γ and x, 25:52172
tumors, radiotherapy of malignant, in USSR, developments and prospects for, 25:52147 (A/CONF.49/P-437)
tumors, radiotherapy of, RBE for fast neutron, 25:52174 (A/CONF.49/P-30)
tumors, therapy with radiolabeled heterologous antibody, 25:54370(R) (NYO-3468-20)
DISEASES, PHYSIOLOGICAL
arthritis, radiodiagnosis of human, comparison of effectiveness of strontium-85 and strontium-87m, 25:52143
goiter, use of iodine-131 and metastable technetium-99 in survey of endemic, 25:51965 (A/CONF.49/P-147)
hyperthyroidism, radiotherapy in man using combined interstitial iodine-125 and iodine-131, 25:52150 (A/CONF.49/P-654)
myelopathy, radioinduced, in man following therapy of spinal cord, effects of dose per fraction on γ, 25:52245
necrosis, radioinduced, in oral tissues following interstitial therapy of tongue carcinomas using radium, 25:52240
necrosis, radioinduced, in tissues of human brain following therapy of pituitary adenomas, x, 25:52246
osteomyelitis, radioinduced, in human jaws following therapy of cancer, 25:52242
osteonecrosis, radiodiagnosis of human, comparison of effectiveness of strontium-85 and strontium-87m, 25:52143
osteoradionecrosis, radioinduced, in human jaws following cancer therapy, 25:52242
thyrotoxicosis, radiotherapy using iodine-125, 25:52119 (A/CONF.49/P-17)
DISEASES, TRAUMATIC
radiation injuries, of human skin following therapy, effectiveness of methyl sulfoxide for treatment of x, 25:52118
radiation injuries, review of mechanisms of recovery of biological systems from, 25:52175 (A/CONF.49/P-163)
radiation sickness, etiology in rats, relation of toxic substances to, 25:52197
radiation sickness, prognosis in rats, use of dosimetric data in prediction of x, 25:52187
radiation sickness, relation of function of endocrine glands to etiology in rat, 25:52194
DISPERSION RELATIONS
current algebra commutators from, 25:53041
double, for amplitudes for Compton $\gamma + d + \gamma + d$ interactions, 25:53094
scattering amplitudes, distributions for, 25:53393
DISPLACEMENT GAGES
design of portable, for measuring volume of complex devices, 25:54380 (SC-DR-710183)
design parameters of sound transducer, for reactor loading machines, 25:54300(P)
DISTILLATION APPARATUS
design of vacuum quartz, for preparation of high-purity europium, 25:52307
DOEL POWER REACTOR
safety aspects of, 25:53975 (A/CONF.49/P-272)
DOGS
immunization against Echinococcus granulosis using x-irradiated worms, 25:52007 (A/CONF.49/P-355)
radiation effects on content of protein fractions in blood serum of, effects of shielding of abdominal and head regions on γ, 25:51991(T) (JPRS-53801, pp 40-5)
radiation effects on recovery from acute tubular necrosis in, following kidney transplantation, γ, 25:52207
radiation effects on renal acid excretion in uninephrectomized, studies on mechanisms of x, 25:52005
radiation effects on survival of, protective effects of partial-body shielding against proton, 25:52097
radioinduced tumors in, mixed γ and neutron and polonium-210, 25:52211
resorption of γ-irradiated bone grafts in, ESR studies on, 25:52203
tungsten-181 metabolism in, following inhalation as oxide particles or injection as sodium tungstate solutions, 25:51973 (UR-49-1496)
DOUNREAY FAST REACTOR
fuel irradiation in, passive temperature monitors for, 25:54049
maintenance of, review of, 25:54133 (A/CONF.49/P-472)
operations of, review of, 25:54133 (A/CONF.49/P-472)
DRESDEN POWER REACTOR, UNIT 1
personnel for, operations aspects and protection factors for respiratory equipment for, 25:53991 (DOCKET-50010-

94)
  radioactive effluents from, monitoring program for, 25:54004
DRESDEN POWER REACTOR, UNIT 2
  control rod insertion incident in, description of spurious shutdown signal actuated partial, 25:53963 (DOCKET-50237-199)
  instrumentation of, substitution of steam jet air ejector off-gas monitors to plant chimney monitoring, 25:53993 (DOCKET-50237-197)
  maintenance during January to December 1970, 25:53970
  operations during January to December 1970, 25:53970
  personnel for, operations aspects and protection factors for respiratory equipment for, 25:53994 (DOCKET-50237-198)
  startup testing of, 120 percent high flux average power monitoring scram for warranted load response performance during, 25:53992 (DOCKET-50237-144)
DRESDEN POWER REACTOR, UNIT 3
  personnel for, operations aspects and protection factors for respiratory equipment for, 25:53994 (DOCKET-50237-198)
  startup testing of, 120 percent high flux average power monitoring scram for warranted load response performance during, 25:53995 (DOCKET-50249-99)
DUSTS
  analysis of radioactive, around IPCR 160-cm cyclotron, gamma spectroscopy, 25:53447
  density of intergalactic, upper limit for, (E/T), 25:52595
  lines of, in C-field cosmology, world, (T), 25:52583
DYSPROSIUM
  4f state distribution in metal and oxide of, from x-ray spectra, 25:52607 (CONF-711001-(Vol.1), pp 135-43)
  exchange anisotropy from paramagnetic susceptibility in magnetic fields, 25:52947 (CONF-711001-(Vol.2), pp 713-23)
  magneto-elastic effects in magnon and phonon spectra of, (T), 25:52948 (IS-T-464)
DYSPROSIUM ALLOYS AND SYSTEMS
  Au--Dy, phase diagram and intermetallic compounds in, 25:52373 (CONF-711001-(Vol.1), pp 361-7)
  Co--Dy--Ni, magnetic properties of DyCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
  Dy--Fe--Ni, magnetic properties of DyFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
  Dy--Nd, electric, magnetic, and structural properties of, (E/T), 25:52937 (CONF-711001-(Vol.1), pp 240-240k)
  Dy--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
DYSPROSIUM CHLORIDES
  crystal structure of $DyCl_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
DYSPROSIUM ISOTOPES Dy-157
  isomeric transition in, half-life and branching ratio for, (E), 25:53783
  use for scintigraphy of human skeleton for localization of bone fractures and neoplasms, 25:52138
DYSPROSIUM ISOTOPES Dy-160
  neutron reactions (n,α) at 14.2 MeV, energy spectra from, (E), 25:53742 (INR-1275)
  neutron reactions (n,α) at 14.2 MeV, statistical analysis of energy spectra from, (E), 25:53743(R) (INR-1318)
  nuclear moment of inertia of, interpretation of sudden change at 16^+ state, (E/T), 25:53762
DYSPROSIUM ISOTOPES Dy-161
  neutron reactions (n,α) at 14.2 MeV, energy spectra from, (E), 25:53742 (INR-1275)
DYSPROSIUM ISOTOPES Dy-162
  neutron reactions (n,α) at 14.2 MeV, statistical analysis of energy spectra from, (E), 25:53743(R) (INR-1318)
DYSPROSIUM ISOTOPES Dy-163
  energy levels from terbium-163 beta decay, Nilsson and spin--parity assignments for, (E), 25:53804
  energy-level transitions from terbium-163 beta decay, reduced probabilities for, (E), 25:53804
  growth of large single crystals of, 25:52305 (CONF-711001-(Vol.2), pp 657-67)
  neutron reactions (n,α) at 14.2 MeV, energy spectra from, (E), 25:53742 (INR-1275)
DYSPROSIUM ISOTOPES Dy-164
  neutron reactions (n,α) at 14.2 MeV, energy spectra from, (E), 25:53742 (INR-1275)
  neutron reactions (n,α) at 14.2 MeV, statistical analysis of energy spectra from, (E), 25:53743(R) (INR-1318)
DYSPROSIUM OXIDES
  phase transformation of thin films of, by heating in electron microscope, 25:52456 (CONF-711001-(Vol.2), pp 777-85)

E

EARTH
  distance to Sun, effect on E-region ionization, (E/T), 25:52720
  revolution of, general relativity theory for, (T), 25:53333
  rotation of, general relativity theory for, (T), 25:53333
EARTHQUAKES
  effects on nuclear power plant structures, conference on analysis of, 25:54166
  effects on reactor vessels, model studies of, 25:54305
ECOLOGY
  insect pest, tracer studies of, 25:52015 (A/CONF.49/P-329)
ECOSYSTEMS
  radiation effects on aquatic, recovery patterns following, 25:52013
  radiation effects on forest, 25:52011 (A/CONF.49/P-685)
  radioisotope tracer studies of agricultural, review, 25:51968 (CONF-710428-, Paper 5)
EGGS
  hatchability of, from progeny of γ-irradiated fig moths, 25:52184 (A/CONF.49/P-2)
EGYPT
  excavation projects in, possible uses of underground nuclear explosions for large-scale, 25:51655 (A/CONF.49/P-144)
  farm animal mineral nutrition in, use of calcium-45 and phosphorus-32 for studies on, 25:51986
  nuclear materials research in, 25:52420 (A/CONF.49/P-146)
  nuclear power plants for, development for, 25:54015 (A/CONF.49/P-137)
  radiation protection programs in, 25:52089 (A/CONF.49/P-142)
  radioisotope uses in, activities of Middle Eastern Regional Radioisotope Center for developing, 25:51709 (A/CONF.49/P-797)
EINSTEINIUM
  complexes of, anion exchange, solvent extraction, and spectrophotometric studies of chloride and thiocyanate, 25:51425 (ORNL-TM-3486)
EINSTEINIUM ISOTOPES Es-253
  alpha spectra, (E), 25:53777
ELECTRETS
  performance of polymeric thermo-, for dosimetry, 25:51910
ELECTRIC ARCS
  magnetic field effects on cross-flow, transverse, (E), 25:52795
  plasma jet instability in, neutral drag, (E/T), 25:52800
  plasma temperature measurements in argon, spectroscopic, 25:52781 (AD-720856)
  power supply for MPD, electrolytic capacitor current pulse networks, 25:52796
ELECTRIC CHARGES
  motion of point test, in external electromagnetic field with radiation reaction, geodesics of affine connection for, (T), 25:53090
  motion of point, radiation reaction as retarded self-interaction from, 25:53273
  neutralization in USSR industry, use of radioisotopes for, 25:51704 (A/CONF.49/P-699)
  theory for geometrodynamical analog to, excluded possibilities in, (T), 25:53079
ELECTRIC CONDUCTORS
  theory of impedance loaded multiple, in incident electromagnetic fields, 25:54382 (SC-R-713303)
ELECTRIC DISCHARGE
  oscillations in negative hydrogen ion-rich reflex, low-frequency, (E), 25:52881
  plasma prodution in, effects of local fluid constriction on, (E), 25:52837
  radiations from positive column near electron cyclotron harmonics, single-particle, (E/T), 25:52802
  simulation of spark, in air, (T), 25:52826
  structure of transition layer in hf, (T), 25:52822
ELECTRIC FIELDS
  charged-particle orbits in radial, periodic solutions of nonlinear differential equation for, (T), 25:53087
  effects on hydrogen atoms, spontaneous ionization from, (T), 25:52621
ELECTRIC GENERATORS
  design of 800 kV, 100 nsec, 25:54386 (SC-RR-710341)
ELECTRIC POWER
  development in Brazil to year 2000, forecasts of, 25:53955 (A/CONF.49/P-802)
  programs in developing countries, summary of, 25:54137 (A/CONF.49/P-761)
  requirements to year 2000, forecasts of worldwide, 25:54325 (A/CONF.49/P-420)
  resources to year 2000, forecasts of worldwide, 25:54325 (A/CONF.49/P-420)
ELECTRIC PROBES
  performance of Langmuir, for electron density and temperature measurements in flowing plasma boundary layers, (E), 25:52785
  theory for electrostatic, in weakly ionized plasma, (T), 25:52790
ELECTROCHEMICAL ANALYSIS
  radioisotope uses in, 25:51400
ELECTRODYNAMICS
  accelerated systems in, test of free-space constitutive relations for, (E/T), 25:53277
  charged particles in, dual electrically and magnetically, 25:53276
  conservation laws for energy--momentum, moment of momentum, current, and charge conjugation in scalar, unified field formalism for, 25:53274

ELECTROLYTIC CELLS
- development of flow facility for, 25:51585 (ORNL-TM-3139)

ELECTROMAGNETIC FIELDS
- charged particle motion in, equation for variable-spin, (T), 25:53092
- charged-particle motion in, dynamic symmetry group for, 25:53243
- electric charge motion in external, with radiation reaction, geodesics of affine connection for point test, (T), 25:53090
- electron motion in, existence proof for solutions of classical two-electron problem for, (T), 25:53066
- equations for, excluded possibilities of geometrodynamical analog to electric charge in, (T), 25:53079
- interactions $\gamma + e$ in, production of anti ν--ν pairs in, (T), 25:53057
- particle motion in, geodesics of affine connection in general relativity theory for, (T), 25:53345
- photon interactions in homogeneous magnetic field, electron pair production from, (T), 25:53083
- space--time in plane symmetric class-one null, Petrov classification for general nonstatic axially symmetric, (T), 25:53275
- theory for already unified, simplified intrinsic proof of Rainich differential relation for, 25:53278

ELECTROMAGNETIC PUMPS
- design and operation of, for inducing rotary flow in liquid sodium, 25:51678

ELECTROMAGNETIC WAVES
- effects on secular stability of homogeneous charged rotating drop, (T), 25:52520
- gravitational mass of radiated, active, (T), 25:53347
- interactions in magnetized plasmas, nonlinear, (T), 25:52882
- interactions with electron plasma, stochastic kinetic theory of strong, 25:52874
- interactions with plasma, negative Faraday rotation in, (E), 25:52865
- photon interactions with field of, in homogeneous magnetic field, electron pair production from, (T), 25:53083
- propagation along magnetized plasma layers, effect of hf potential on, (T), 25:52861 (KHFTI-70/57)
- propagation in interstellar space, dispersion of, (T), 25:52578
- propagation in magnetosphere, self-consistent solution to spectral shape and intensities of vlf, (T), 25:52726
- propagation in nonlinear media, instability of fixed-phase beam of transverse, (T), 25:52877
- propagation in plasma, resonant frequencies and dispersion relations for, (T), 25:52858 (AD-719799)
- propagation through conducting plasma slab, (T), 25:52876
- scattering on plasma mixtures, density determination from, 25:52791(P)
- transformation into longitudinal oscillations in inhomogeneous plasma near conducting surface, (T), 25:52859 (KHFTI-70/54)

ELECTRON BEAMS
- dose rates at points in, ionization detector system for measuring differences in, 25:51916
- energy recovery of, device for, 25:53453
- interactions with dense plasma focus, neutron enhancement from, (E), 25:52857
- interactions with oscillations in homogeneous plasma, (T), 25:52827
- interactions with plasma, excitation of nonlinear waves in, (T), 25:52872
- interactions with plasma, fine structure of distribution function for, (E), 25:52811
- interactions with plasma, response to relativistic, (T), 25:52823
- production of elongated, cold-cathode discharge device for, 25:51949(P)
- radiation emission by modulated, estimates of intensity of, (T), 25:53085
- wave kinetics in magnetically focused, (T), 25:52598(T) (LB/G-3055)
- wave propagation in uncompensated ring, nonlinear stationary, (T), 25:53446

ELECTRON CAPTURE
- bremsstrahlung emission in, probability for internal, (T), 25:53863
- internal bremsstrahlung emission in, review of research at Debrecen, 25:53620

ELECTRON MICROSCOPES
- use of high-voltage, to simulate fast neutron-induced voids in metals, 25:52410 (RD/B/N-1879)

ELECTRON MICROSCOPY
- beam energy determination in scanning, channeling-pattern method for, 25:51943
- specimen thinning by ion beam for transmission, semiconductor, 25:52969
- use for DNA sequence determination, feasibility of, 25:53752(R) (ORNL-4659)

ELECTRON PAIRS
- production from photon interactions with field of electromagnetic wave in homogeneous magnetic field, (T), 25:53083
- production from photon reactions with nuclear Coulomb field at 900 MeV, angular distribution for, (E), 25:53000
- production in $e^+ + e^-$ and $e^- + e^-$ interactions at 1 to 10 GeV, cross sections for multiple, 25:53052

ELECTRON-RING ACCELERATORS
- development, 25:53404 (A/CONF.49/P-695)
- electron--ion beam oscillations in, coupling resonances of transverse, 25:53434(T) (UCRL-Trans-1451)
- ring instability in, non-linear regime of, (T), 25:53435(T) (UCRL-Trans-1453)

ELECTRON SOURCES
- calibration for therapy, performance of ionization chambers for, 25:51917
- design of cold-cathode discharge, 25:51949(P)

ELECTRONS
- book: Atomic and Molecular Radiation Physics, 25:52889
- book: Atomic Collision Theory, 25:52652
- dose distribution in tissues, 25:52152 (UCRL-20836)
- dosimetry of 1.0-MeV, in dahlia and dioscorea seeds, 25:52087
- dosimetry of 600-keV pulsed, design of thin aluminum or beryllium calorimeter for, 25:51915
- effects of pulsed, on aqueous solutions of lanthanides, 25:51508 (CONF-711001-(Vol.2), pp 560-72)
- effects of pulsed, on aqueous solutions of organic compounds, polarographic study of short-lived radicals from, 25:51528
- effects of pulsed, on methyl sulfoxide, 25:51537
- effects of pulsed, on pyrene in acetone, benzonitrile, and dichloroethane, 25:51532
- effects on ac hopping conductivity of silicon, 25:52917
- effects on anaerobic digestion processes and sludge handling characteristics of fresh solid sewage, 25:52290
- effects on complex formation between DNA and nitroxide free radicals, binding energy and reaction kinetics for, 25:51994
- effects on complex formation between lysozyme and nitroxide free radicals, binding energy and reaction kinetics for, 25:51993
- effects on copper at 1 MeV, internal friction study of dislocation pinning by defects in, (E/T), 25:52905
- effects on curing of paint films, 25:51503 (A/CONF.49/P-647)
- effects on curing of paints, review on, 25:51498
- effects on diamonds at low temperatures, ESR study of, 25:52913
- effects on dislocation loops in 1100 aluminum, relations with preinjected hydrogen, 25:52413
- effects on electric properties of lithium niobate at 1.3 MeV, 25:52482
- effects on gaseous hydrocarbons, ESR study of radicals from, 25:51509 (FRNC-TH-221)
- effects on growth and mitosis of fibrosarcoma and L cells, effects of cell phase on, 25:52176 (A/CONF.49/P-358)
- effects on naphthalene and N,N,N',N'-tetramethyl-p-phenylenediamine in polymeric solvents at 1.9 MeV and 86°K, triplets and molecular ions from, 25:51507 (AD-722057)
- effects on nickel foils at 650 keV, diffusion model of growth rate of interstitial loops induced in, 25:52907
- effects on polymerization of monomers in wood, 25:51503 (A/CONF.49/P-647)
- effects on potassium chloride and bromide at 2 MeV, effects of plastic deformation on V centers induced in, 25:52911
- electromagnetic radiation pressure on free, in spectral field of radiation, (T), 25:53084
- energy losses in solid molecular films at low energies, spectrometer for measurement of, 25:52891
- exchange for hadron production in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
- field theory for, null planes in formulation of quantum electrodynamics in, (T), 25:53312
- interactions $e + e \to 2e + \pi^+(K^+) + \pi^-(K^-)$ in colliding beams, π and K pair production and amplitudes and phases for $\gamma + \gamma \to \pi^+ + \pi^-$ interactions in, (T), 25:53048 (DESY-71/30)
- interactions $e + e \to e + e +$ hadrons, total cross sections for $\gamma + \gamma \to$ hadrons interactions from, 25:53081
- interactions $e + e$ in colliding beams, diffractive inelastic processes in, (T), 25:53050 (DESY-71/36)
- interactions $e + e$, in colliding beams, spinless boson pair production in, (T), 25:53048 (DESY-71/30)
- interactions $e + N \to \pi + N$, review of vector dominance model for π production in, (T), 25:53076
- interactions $e + N \to \pi + N$, vector-meson dominance for $\pi + N \to$ rho + N interactions relation with, (T), 25:53074
- interactions $e + N$ at high energies, conserved vector current hypothesis and current commutators for relation with $\nu + N$ interactions for, (T), 25:53106
- interactions $e + N$ at high energies, review of inelastic, (T), 25:53072
- interactions $e + N$, model for hadrons as extended objects for particle production in deep inelastic, (T), 25:53151
- interactions $e + N$, PCAC hypothesis and current algebra analysis of cross sections for pion production in,

25:53061
- interactions $e + N$, review of vector dominance model for total cross sections for particle production in, (T), 25:53076
- interactions $e + p \to e +$ hadrons in parton model, polarization effects in deep inelastic, 25:53099
- interactions $e + p$ at 0 to 10 GeV, review of nucleon inelastic electromagnetic form factors from, (E/T), 25:52995
- interactions $e + p$ at 2 GeV/c, cross sections for π production in, (E), 25:53006
- interactions $e + p$ in Veneziano-type model with diffraction, deep inelastic, 25:53098
- interactions $e + p$, PCAC hypothesis and current algebra analysis of cross sections for pion production in, 25:53061
- interactions $e^{-} + e^{-} \to e^{-} + e^{-} + e^{+} + e^{-} + e^{+} + e^{-}$ at 1 to 10 GeV, cross sections for, 25:53052
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} + e^{+} + e^{-} + e^{+} + e^{-}$ at 1 to 10 GeV, cross sections for, 25:53052
- interactions $e^{-} + e^{-} \to e^{-} + e^{-} + e^{+} + e^{-}$ at 1 to 10 GeV, cross sections for, 25:53052
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} + e^{+} + e^{-}$ at 1 to 10 GeV, cross sections for, 25:53052
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} + \gamma$, hard bremsstrahlung in, 25:53068
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} +$ hadrons, total cross sections for $\gamma + \gamma \to$ hadrons interactions from, 25:53081
- interactions $e^{-} + e^{-} \to e^{-} + e^{-} + \mu^{+} + \mu^{-}$ at 1 to 10 GeV, cross section for, 25:53052
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} + \mu^{+} + \mu^{-}$ at 1 to 10 GeV, cross sections for, 25:53052
- interactions $e^{+} + e^{-} \to e^{+} + e^{-} + \pi^{+}(K^{+}) + \pi^{-}(K^{-})$ in colliding beams, π and K pair production and amplitudes and phases for $\gamma + \gamma \to \pi^{+} + \pi^{-}$ interactions in, (T), 25:53048 (DESY-71/30)
- interactions $e^{+} + e^{-} \to e^{+}(e^{-}) + e^{-}(e^{+})$ and $e^{+} + e^{-} \to \mu^{+}(\mu^{-}) + \mu^{-}(\mu^{+})$, test of crossing symmetry in quantum electrodynamics from, 25:53004
- interactions $e^{+} + e^{-} \to p +$ anti p in renormalizable theory of weak interactions, total cross sections for, (T), 25:53060
- interactions $e^{+} + e^{-} \to \pi^{+} + \pi^{-}$ in renormalizable theory of weak interactions, total cross sections for, (T), 25:53060
- interactions $e^{+} + e^{-} \to \pi^{+} + \pi^{-}$, upper and lower bounds on π form factor from, 25:53069
- interactions $e^{+} + e^{-} \to$ rho + f, test of tensor-meson dominance in, 25:53065
- interactions $e^{+} + e^{-} \to X^{0}(960) + \mathrm{rho}^{0}(\gamma)$ in colliding beams, determination of spin and parity of $X^{0}(960)$ from, (T), 25:53063
- interactions $e^{+} + e^{-}$ at 0 to 500 MeV at large angles in colliding beams, test and cut-off of quantum electrodynamics from cross sections and luminosity of Bhabha, (E), 25:53296
- interactions $e^{+} + e^{-}$ at 800 to 1000 MeV in colliding beams, status report on, (E), 25:52996
- interactions $e^{+} + e^{-}$ in colliding beams, baryons, antibaryon, meson, single hadron, and multiple particle production and total cross sections for, (E/T), 25:52990 (DESY-71/28)
- interactions $e^{+} + e^{-}$ in colliding beams, hadron production through single photon exchange and electron exchange in, (E/T), 25:52990 (DESY-71/28)
- interactions $e^{+} + e^{-}$ in colliding beams, selection rules for $\gamma + \gamma$ interactions in, (E/T), 25:52990 (DESY-71/28)
- interactions $e^{+} + e^{-}$ in colliding beams, tests of quantum electrodynamics in, (E/T), 25:52990 (DESY-71/28)
- interactions $e^{+} + e^{-}$ in colliding beams, weak interactions in, (E/T), 25:52990 (DESY-71/28)
- interactions $e^{+} + e^{-}$, hard bremsstrahlung contribution to total production cross section for, 25:53068
- interactions $e^{+} + e^{-}$, in colliding beams, spinless boson pair production in, (T), 25:53048 (DESY-71/30)
- interactions $\gamma + e \to \gamma + e$ at 1 to 3 MeV, germanium detector study of relation between energy and momentum for, (E), 25:53001
- interactions $\gamma + e \to \gamma + e$, method for derivation of low-energy theorems for Compton, (T), 25:53070
- interactions $\gamma + e$ in electromagnetic field, anti ν--ν pair production in, (T), 25:53057
- interactions $\gamma + e$, radiative corrections and polarization effects contributions to cross sections for, (T), 25:53059
- mass in gravity-modified quantum electrodynamics, 25:53290
- model for classical extended, gravitational effects in general relativity theory for, (T), 25:53089
- motion along periphery of cylindrical resonators, induced radiation from, (T), 25:52981
- motion in electromagnetic field, existence proof for solutions of classical two-electron problem for, (T), 25:53066
- production of e^{+}--e^{-} pairs in photon reactions in liquid xenon at 35 to 2000 MeV, cross sections for, 25:52994
- reactions (e,e'N) with beryllium-9, form factors for, (T), 25:53618
- reactions of radiolytic hydrated, from pulse radiolysis of air-free alkaline solutions, effects of solution structure on, 25:51506 (AD-721299)
- reactions of radiolytic hydrated, with ferric iron, 25:51523
- reactions with atoms having high Z, cross sections for electron ejection in, (T), 25:52642
- reactions with beryllium-like ions in plasma, excitation-rate coefficients for, (E), 25:52804
- reactions with cadmium, effective cross sections for formation of excited ions in, (E), 25:52668
- reactions with carbon atoms, oxygen ions (O^{2+}), and nitrogen ions (N^{+}), effective cross sections for excitation in, (T), 25:52670
- reactions with carbon monoxide at 300, 400, and 500 eV, generalized oscillator strengths and selection rule for transitions in, 25:52683
- reactions with complex nuclei at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
- reactions with helium at 20 to 2000 eV, cross sections for excitation and polarization of light emitted from, (E), 25:52657
- reactions with helium at 26 to 81.6 eV, differential and integral cross sections for excitation of $2^{1}S$ state in, (E/T), 25:52630 (SC-RR-710474)
- reactions with hydrogen atoms, prior and post approximations in calculation of excitation cross sections for, 25:52676
- reactions with hydrogen ions (H_{2}^{+}), cross sections for dissociative recombination in, (T), 25:52645
- reactions with hydrogen molecules, cross sections for excitation of parity-forbidden transitions in, (T), 25:52661
- reactions with lithium, potassium, and sodium ions, semiclassical calculation of cross sections for double ionization in, 25:52663
- reactions with oxygen molecules at 4 to 45 eV, differential and integral cross sections for excitation in, (E), 25:52677
- scattering by argon and neon at 0 to 1 rydberg, polarized-orbital calculations of total cross sections for elastic, 25:52674
- scattering by argon-40 at 78 to 120 MeV, differential cross sections for, (E), 25:53685
- scattering by atomic systems at m;w energies, random phase approximation for elastic and inelastic, 25:52640
- scattering by atoms at intermediate energies, eikonal theory of elastic, 25:52678
- scattering by atoms, modified least-squares technique for nonrelativistic attractive exponential potential, (T), 25:53387
- scattering by beryllium-9, form factors for elastic and inelastic, (T), 25:53618
- scattering by carbon-12 at 250 MeV, spectra from inelastic, (E), 25:53617
- scattering by helium at 100 to 500 eV, eikonal-theory calculations of elastic, 25:52678
- scattering by helium atoms, third-order calculation of differential cross sections for forward elastic, 25:52648
- scattering by hydrogen atoms, resonance structures in elastic, (T), 25:52680
- scattering by lithium atoms, modified Glauber approximation for total cross sections for elastic, (T), 25:52649
- scattering by magnesium-24, neon-20, and silicon-28 at 183 and 250 MeV, form factors for inelastic, (E), 25:53671
- scattering from potassium halide single crystals, channeling and temperature effects on back-, 25:52916
- theory for difference between μ and, discrete scale transformations for lepton mass spectrum for, (T), 25:53114
- transport by discrete ordinates method, 1- to 8-MeV, (T), 25:52887 (ORNL-TM-3438)
- yields of solvated, from γ radiolysis of alkaline methanol, 25:51533

ELEMENT 104
- separation from products of neon-22-ion bombardment of plutonium-242, thermochromatographic, 25:51581 (JINR-D12-5845)

ELEMENTARY PARTICLE MODELS
- absorption, $\pi^{-} + p \to \pi^{-}(\pi^{0}) + p(n)$ and $\pi^{+} + p \to \pi^{+} + p$ backward interactions in, 25:53187
- chiral Lagrangian, closed-fermion-loop calculations of electromagnetic processes in, 25:53053
- composite, hyperon nonleptonic decay amplitudes in, 25:53124
- droplet, $\pi + N \to \pi + N$ interactions at high energies in spin-dependent, 25:53199
- dual resonance, amplitudes corresponding to globular Feynman diagrams in, 25:53382
- dual resonance, phi^{3} theory from zero-slope limit of unitarized, 25:53328
- dual resonance, single-particle production in, 25:53156
- dual, crossing-symmetric amplitude in split-width, 25:53384
- dual-resonance, generalization of amplitude for excited nonspurious particles in, 25:53371
- dual-resonance, project on operator of nonspurious states in, 25:53362
- dual-resonance, scattering amplitudes for physical states

- in, 25:53372
- Feynman gas and multiperipheral, relations between, 25:53145
- formalism based on fermion fields, 25:53304
- multiperipheral, two- and fcur-particle correlations in, 25:53359
- one-boson-exchange, N + N $\to$ N + N interactions in relativistic, 25:53224 (DESY-71/34)
- optical, π reactions with nuclei near Δ(1236) in, 25:53225 (FRNC-TH-51)
- parton, polarization effects in deep inelastic e + p and ν + p interactions in, 25:53099
- statistical, multiple particle production in SU(3)-, 25:53257
- vector dominance, asymmetry in π^+ production in photon reactions with nuclei at high energies in, 25:53075
- vector dominance, differential cross sections of rhc^0 + p $\to$ rho^0 + p interactions relation with differential cross sections of γ + p $\to$ rho^0 + p interactions in, 25:53091
- vector dominance, π production in e + N $\to$ π + N interactions relation with rho production in π + N $\to$ rho + N interactions in, 25:53074
- vector dominance, range of photon interactions with hadrons at high energies in, 25:53074
- vector dominance, review of photc- and electroproduction in, 25:53076
- vector dominance, tests in pseudoscalar meson production in γ + N interactions, (E), 25:52998
- Veneziano, analysis of K^+ + p $\to$ anti Λ + 2p, K^- + p $\to$ Λ + anti p + p, and p + p $\to$ K^+ + Λ + p in generalized, 25:53190
- Veneziano, final-state interactions, 25:53171
- Veneziano, N-point function for scalar meson resonance spectra in, 25:53160
- Veneziano, planar duality in, 25:53385
- Veneziano, pseudoscalar meson interactions with baryons in SU(3)-symmetric, 25:53207
- Virasoro, duality and factorization in operator formalism of generalized, 25:53366

ELEMENTARY PARTICLE MODELS (TRIPLET)
- SU(3) x SU(3) algebra in quark, Schwinger terms in, 25:53152

ELEMENTARY PARTICLES
- angular momenta for, symmetry for Racah coefficients for, (T), 25:53256
- conference on, (T), 25:53039
- coupling constants for, review of Pade approximation for analyticity in, (T), 25:53040
- decay of, hyperspherical functions for three-body, 25:53042
- electromagnetic interactions at high energies, conference on, (E/T), 25:53071
- electromagnetic interactions at high energies, review of models for, (T), 25:53139
- electromagnetic interactions of spinor, quasipotential theory for two-body, (T), 25:53281 (IC-71/75)
- electromagnetic interactions of, closed-fermion-loop calculations in chiral models for, 25:53053
- existence of, with imaginary mass, energy, and momentum, (T), 25:52506
- interactions at high energies, analyticity constraints for validity of Pomeranchuk theorem and sudden change of slope in cross sections for, (T), 25:53136
- interactions at high energies, design of counter experiments for studying three-body final states in, (E), 25:53017
- interactions at high energies, kinematic correlations in inclusive, 25:53147
- interactions at high energies, Regge poles for large coupling constants for amplitudes of forward, (T), 25:53036 (DESY-71/31)
- interactions at high energies, upper bound on total cross sections for, 25:53148
- interactions at intermediate energies, conference on, 25:53038 (UCRL-20655)
- interactions in phi^3 theory, elastic and inelastic, 25:53291
- interactions of arbitrary-spin, separation of natural and unnatural parity exchange in limit s $\to$ infinity for crossed channel of, (T), 25:53077
- interactions of scalar zero-charge, with photons, review of gauge invariance for amplitudes of 2π production in, 25:53073
- interactions of spinless, quasipotential theory for two-body elastic, (T), 25:53281 (IC-71/75)
- interactions of, complete set of equations for nonrelativistic S-matrix for amplitudes of two-body separable, (T), 25:53374
- interactions of, hyperspherical functions for three-body, 25:53042
- interactions of, model of self-reproducing pomeron for diffraction, 25:53383
- interactions of, separation of resonance term and background term in total cross section for, 25:53141
- interactions of, sum rules for cross sections of inclusive, 25:53045
- interactions with polarized targets, review on, 25:53433 (UCRL-20655, pp 117-28)
- interactions with three-body final states, partial-wave analysis of, 25:53182 (UCRL-20655, pp 220a-49)
- mass of virtual, responsible for gravitation of vacuum and universe expansion, (T), 25:53337
- mass splitting of, scalar fields of low dimension from electromagnetic, 25:53054
- mass splitting theorems for, 25:53270
- motion of arbitrary-spin, Poincare group generators for relativistic equations without redundant components for, (T), 25:53249
- production in γ + N interactions, review of gauge invariance for amplitudes of, (T), 25:53073
- production in γ reactions with nuclei and e + N interactions, review of vector dominance model for total cross sections for, (T), 25:53076
- production near boundary of phase space, quasi-twc-body amplitudes and single Regge exchange for Feynman relation for, (T), 25:53037 (NYO-4204-17)
- production of, statistical model in SU(3) for multiple, 25:53257
- strong interactions at high energies at large distances, increase with energy for electromagnetic and weak corrections to, (T), 25:53143
- strong interactions at high energies, conference on, (E/T), 25:53071
- strong interactions at high energies, dips and spikes in t dependence of differential cross sections for exchange, (T), 25:53138
- strong interactions at high energies, Regge model for quasipotential diffraction in, (T), 25:53150
- strong interactions at high energies, review of duality and Regge cuts in inelastic two-body, (T), 25:53137
- strong interactions at high energies, review of models for, (T), 25:53139
- strong interactions at intermediate energies, experiments on, 25:53133 (UCRL-20655, pp 453b-5)
- strong interactions at low and high energies, review of models for duality and exchange degeneracy in, (T), 25:53134
- strong interactions of, Breit--Wigner-type instability effects on analytic properties of partial-wave amplitudes of relativistic two-body elastic and inelastic, (T), 25:53146
- strong interactions of, dual resonance model for single-particle production in, 25:53156
- strong interactions of, electromagnetic renormalization of, 25:53054
- strong interactions of, explosive and multiperipheral domains for, 25:53153
- strong interactions of, Neeman fifth interaction and octet dominance for, 25:53142
- strong interactions of, review of multiperipheral dynamics for, (T), 25:53155
- strong interactions of, review of Regge cuts in elastic, (T), 25:53135
- strong interactions with quasi-two-particle production at intermediate energies, experiments on, 25:53132 (UCRL-20655, pp 341-95)
- symmetry for angular momenta for, symmetry for Racah coefficients in, (T), 25:53256
- symmetry for positive-mass one-particle states, Clebsch--Gordon coefficients associated with reduction into two classes of Poincare-irreducible tensor operators in, 25:53253
- symmetry for positive-mass one-particle states, Poincare-irreducible tensor operatcrs in, (T), 25:53253
- symmetry for, coupling of de Sitter space--time and internal, (T), 25:53264
- symmetry for, Plancheral measure of principal continuous series of unitary representations of U(p,q), (T), 25:53251
- symmetry for, symmetry of Racah coefficients in, (T), 25:53255
- symmetry in, projection operators for simple Lie groups for decomposition of reducible representations in, 25:53250
- theory for composite and, with identical quantum numbers in quantum field theory, (T), 25:53302
- wave equations for arbitrary-spin, proper Lorentz invariance and invariance under discrete transformations for relativistic, (T), 25:53263
- wave equations for zero-mass, conformal invariance of Klein--Gordon, 25:53314
- weak interactions in e^+ + e^- interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
- weak interactions of, chiral field algebra in Cabibbo theory for semileptonic, 25:53128
- weak interactions of, pseudoscalar form factor in, 25:53522
- weak interactions of, review cn, 25:53102 (UCRL-20655, pp 203-19)

ELEMENTARY PARTICLES (TRIPLET)
- search for 2/3-integral-charge quarks in cosmic showers at 10^{13}- to 10^{16}-eV, using proportional-counter hodoscope, (E), 25:52989 (PITHA-48)
- theory for quark, gradient terms in scalar density-charge density commutator in, (T), 25:53129 (NYO-4204-15)

ELEMENTS
- energy-level transitions in Z = 70 to 93, radiative component in Coster--Kronig, (T), 25:52613

EMBRYOS
- radioinduced chromosome aberrations in cells of rat, x, 25:52217

XUM

ENERGY
- survey of reserves of, including fission and fusion processes, 25:52852 (NP-18988)

ENGINES
- wear in operating, neutron activation and gamma spectrometry method for measuring, 25:51724

ENVIRONMENT
- conference on nuclear power and, 25:53923
- contamination by radioisotopes released by nuclear power plants, 25:52050
- contamination from radioactive waste disposal in UK, evaluation of, 25:51750 (A/CONF.49/P-512)
- contamination near Japanese nuclear power plants, monitoring of, 25:51745 (A/CONF.49/P-253)
- radioactivity monitoring at Atomics International during 1970, 25:52055

ERBIUM
- magnetic transitions in, microwave absorption study of, 25:52949 (IS-T-471)
- oxidation in air at 23 to 293°C and 10^{-9} to 625 torr, thickness of oxide film formed in, 25:52297 (CONF-711001-(Vol.1), pp 397-407)

ERBIUM ALLOYS AND SYSTEMS
- Er--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)

ERBIUM HYDROXIDES
- phase transitions between ErOOH and Er(OH)$_3$, in sodium hydroxide solutions, 25:51470 (CONF-711001-(Vol.2), pp 573-83)
- solubility in sodium hydroxide solutions under hydrothermal conditions, 25:51470 (CONF-711001-(Vol.2), pp 573-83)

ERBIUM IONS
- spectra in erbium oxide single crystals, two-photon, 25:52942 (CONF-711001-(Vol.2), pp 465-77)

ERBIUM ISOTOPES Er-165
- electron-capture decay of, internal bremsstrahlung emission in, (T), 25:53863

ERBIUM ISOTOPES Er-170
- growth of large single crystals of, 25:52305 (CONF-711001-(Vol.2), pp 657-67)

ERBIUM OXIDES
- spectra of erbium ions in single crystals of, two-photon, 25:52942 (CONF-711001-(Vol.2), pp 465-77)

ERYTHROCYTES
- radiation effects on human lung alveolar epithelium, x, 25:52244
- zinc-65 uptake by sheep, effects of yttrium-90-labeled sand on, 25:52210

ESOPHAGUS
- radiotherapy of carcinomas of human, effects of dose, dose fractionation, and energy on effectiveness of x, 25:52157

ESTUARIES
- sediment movement in, tracer method for studying, 25:51611 (A/CONF.49/P-509)

ETHANE
- radiolysis of gaseous, effects of hydrogen sulfide and nitrous oxide on yields from α, 25:51518
- radiolysis of, measurement of yields from γ, 25:51511(R) (ORO-3106-41)

ETHANE, BROMO-
- radiolysis of gaseous, research progress on, 25:51511(R) (ORO-3106-41)

ETHANE, HEXAFLUORO-
- radiolysis of, measurement of yields from γ, 25:51511(R) (ORO-3106-41)

ETHANETHIOL
- effects on main chain scission and volatile product yields from γ radiolysis of poly(methyl methacrylate), 25:51521

ETHANOL
- radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

ETHANOL, 2-CHLORO-
- radiolysis of, titration by silver nitrate of chlorine from γ, 25:51370

1,4-ETHANONAPHTHALENE, 1,4,4a,5,8,8a-HEXAHYDRO-
- radiation chemistry of, processes occurring in γ, 25:51483

ETHYLENE
- reactions with liquid sodium, effects of barium on, 25:51437

ETHYLENE, CHLOROTRIFLUORO-
- radiolysis in 2-propanol, mechanisms of formation of acetone, hydrogen, and telomer from γ, 25:51512 (UJV-2616-Ch)

ETHYLENE GLYCOL
- radioinduced rearrangement of, in aqueous solutions containing hydrogen peroxide, formation of acetaldehyde by γ, 25:51502

ETHYLENE, TETRAFLUORO-, POLYMERS
- radiation effects on electret voltage of Teflon, dosimetric use of, 25:51910

ETHYLENIMINE
- effects on barley and wheat when combined with x irradiation, 25:52042
- effects on frequency of chromosome aberrations and chlorophyll-deficient mutations in barley in comparison to effects of gamma radiation and nitrogen mustards, 25:52041
- effects on maize and wheat, mutagenic, 25:52016 (A/CONF.49/P-354)

EUMYCOTA
- Aspergillus flavus, radiation effects on aflatoxin production by toxigenic and non-toxigenic strains of, following repeated exposure and incubation for three years, 25:52265
- Aspergillus nidulans, radiosensitivity of conidia of mutants of, uv and x, 25:52038
- Dematiaceae, radiation effects on survival of strains of, comparison of exponential and sigmoidal dose--survival curves for γ, 25:52260
- Puccinia graminis, radioinduced mutations in wheat for resistance to, comparison of ethyl methanesulfonic acid chemically induced and γ or neutron, 25:52263
- radioinduced injuries in, reaction mechanisms for gamma, uv, and x, 25:52268 (A/CONF.49/P-538)
- Saccharomyces cerevisiae, radiation effects on mitotic gene conversion in, 25:52039
- Saccharomyces cerevisiae, radiosensitive mutants of, characteristics and repair of uv and x, 25:52025
- Saccharomyces lactis, DNA stability and phosphorus content in radiosensitive, 25:52258
- Saccharomyces vini, DNA stability and phosphorus content in radioresistant, 25:52258
- Septoria nodorum, radioinduced mutations in wheat for resistance to, comparison of ethyl methanesulfonic acid chemically induced and γ or neutron, 25:52263
- Torulopsis sphaerica, DNA stability and phosphorus content in radiosensitive, 25:52258
- Torulopsis utilis, DNA stability and phosphorus content in radioresistant, 25:52258
- yeasts, radioinduced lesions in DNA of mutants of, mechanisms of repair of, 25:52175 (A/CONF.49/P-163)
- yeasts, spectral properties of chromophoric material associated with DNA photoreactivating enzyme from Baker's, 25:54376 (ORO-3630-12)

EUROPE
- uranium requirements for power reactor fuels in western, to 1985, forecasts of, 25:51643 (A/CONF.49/P-678)

EUROPIUM
- 4f state distribution in metal and oxide of, from x-ray spectra, 25:52607 (CONF-711001-(Vol.1), pp 135-43)
- complexes with ammonia, Moessbauer spectra of, 25:51544(R) (NYO-4177-103)
- determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- polarographic behavior at mercury dropping electrode, 25:51474
- preparation of high-purity, by vacuum distillation in quartz apparatus, 25:52307
- radiolysis of aqueous solutions of, formation and reactions of divalent ions in electron pulse, 25:51508 (CONF-711001-(Vol.2), pp 560-72)
- reactivity worth in fast reactor cores, specific, (E/T), 25:54060(R) (AI-AEC-13005)
- shock compression-induced emf in, (E/T), 25:52961

EUROPIUM ALLOYS AND SYSTEMS
- radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
- Eu--Fe--O, compound formation in EuO--Eu$_2$O$_3$--Fe$_2$O$_3$--Fe portion of, (E/T), 25:52455 (CONF-711001-(Vol.2), pp 764-74)
- Eu--Pd, electric conductivity of Pd$_3$Eu at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)

EUROPIUM BORIDES
- magnetic properties of, Moessbauer studies on, 25:51544(R) (NYO-4177-103)
- radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)

EUROPIUM BROMIDES
- crystal structure of EuBr$_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

EUROPIUM CHLORIDES
- crystal structure of EuCl$_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
- vaporization thermodynamics of EuCl$_2$, 25:51471 (CONF-711001-(Vol.2), pp 584-96)

EUROPIUM FLUORIDES
- crystal structure of EuF$_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

EUROPIUM IODIDES
- crystal structure of EuI$_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

EUROPIUM IONS
- radioinduced luminescence of divalent, in alkali-metal halide crystals, (E), 25:52923
- spectra and energy levels in lithium rare-earth oxides, 25:52943 (CONF-711001-(Vol.2), pp 478-87)
- spectra in calcium fluoride and yttria single crystals, two-photon, 25:52942 (CONF-711001-(Vol.2), pp 465-77)
- spectra of rare-earth oxides doped with, flame-excited luminescence, 25:52941 (CONF-711001-(Vol.2), pp 452-64)

EUROPIUM ISOTOPES Eu-152
- nuclear magnetic dipole and electric quadrupole moments and isotope shifts relative to europium-151, (E), 25:53802

EUROPIUM ISOTOPES Eu-153
  isotope shift relative to europium-151, (E), 25:53802
  neutron reactions (n,α) at 14.2 MeV, statistical analysis of energy spectra from, (E), 25:53743(R) (INR-1318)
EUROPIUM ISOTOPES Eu-154
  nuclear electric quadrupole moments and isotope shift relative to europium-151, (E), 25:53802
EUROPIUM OXIDES
  radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
EUROPIUM OXYBROMIDES
  crystal structure of Eu_3O_4Br, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
EUROPIUM OXYCHLORIDES
  vaporization thermodynamics of EuOCl, 25:51471 (CONF-711001-(Vol.2), pp 584-96)
EUTECTICS
  review of grains, 25:52967
EVAPORATORS
  design of desalination, for dual purpose reactors, 25:54240 (A/CONF.49/P-590)
EXCAVATION
  methods for deep-underground, evaluation of nuclear explosion, 25:51664 (UCRL-72769(Rev.1))
  methods for large-scale projects in UAR, comparison of conventional and nuclear, 25:51655 (A/CONF.49/P-144)
EXHAUST SYSTEMS
  fire control and prevention in nuclear facility, methods for, 25:51788
EXPERIMENTAL BREEDER REACTOR-II
  coolant temperatures in subassemblies of, COOLTEMP computer program for calculation of, 25:54198 (ANL-EBR-26)
  design characteristics of, 25:54219
  fission product determination in, performance of on-line cover gas monitor for, 25:51873
  fuel assembly of, design parameters and performance of instrumented, 25:54196 (ANL-7757)
  fuel for, pilot-plant studies on electrolytic dissolution of, 25:51579 (IN-1196)
  fuels and reactor materials for, methods for hot cell inspection of, 25:51783
  heat exchanger for, noise signature detection of vibrations in drain tube of intermediate, 25:54200 (ANL-EBR-36)
  kinetics of Run 46A, collection and evaluation of data for, 25:54199 (ANL-EBR-28)
  noise signature analysis during first half of fiscal year 1971, 25:54200 (ANL-EBR-36)
  operations of 62.5 MW(t), summary of, 25:54201 (ANL-EBR-37)
  operations of 62.5 MW(t), summary of, 25:54197 (ANL-EBR-19)
  operations of, review of, 25:54219
  performance during Run 46A at 62.5 MW(t), 25:54201 (ANL-EBR-37)
  power coefficient of, effects of metallurgical phase change in fuel on, (E/T), 25:54062
  pump for, noise signature detection of binding in primary liquid sodium, 25:54200 (ANL-EBR-36)
EXPLOSIVES
  airblast from single one-ton surface, near surface, and buried chemical, methods for measuring, 25:51723 (SC-RR-710056)
EXPONENTIAL PILES
  kinetics parameters of STSF fast assemblies containing graphite, uranium-235, and uranium-238, (E/T), 25:54215
  neutron energy distribution in pulsed beryllium oxide (BeO), (E/T), 25:54209 (NP-18981)
  neutron slowing down in plane geometry, multigroup transport equations for, (T), 25:54273
  neutron spectra in STSF fast assemblies containing graphite, uranium-235, and uranium-238, (E/T), 25:54215
  physics parameters of uranium--plutonium lattices, theoretical methods for analysis of, 25:54255 (A/CONF.49/P-351)
EXTRACTION APPARATUS
  interface detector for, salt-metal, 25:51585 (ORNL-TM-3139)

F

FALLOUT
  monitoring at Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
  monitoring programs in Egypt, 25:52089 (A/CONF.49/P-142)
FAST CERAMIC REACTOR
  core for, design and kinetics analyses of, 25:54096(R) (GEAP-10028-38)
  fuel elements for, development during February to May 1971, 25:54096(R) (GEAP-10028-38)
  safety of, transient overpower and coolant loss effects on, 25:54096(R) (GEAP-10028-38)
FAST FLUX TEST FACILITY
  containment requirements for, summary of computer programs for, 25:54203 (HEDL-TME-71-30)
  coolant for, design of inert atmosphere cell for analysis of sodium, 25:51797
  safety aspects of, summary of computer programs for, 25:54203 (HEDL-TME-71-30)
  site for, analysis of tornado hazards for, 25:54205 (HEDL-TME-71-35)
  siting requirements for, summary of computer programs for, 25:54203 (HEDL-TME-71-30)
  sodium sampling in, remote equipment for, 25:51764 (HEDL-SA-123)
FAST TEST REACTOR
  accidents in, calculation of maximum energy releases from hypothetical, 25:54204 (HEDL-TME-71-34)
  containment structure of, effects of core disassembly and meltdown accidents on performance of, 25:54206 (HEDL-TME-71-50)
  cooling system of, effects of core disassembly and meltdown accidents on performance of, 25:54206 (HEDL-TME-71-50)
  core disassembly and meltdown accidents in, performance of cooling system and containment structure during, 25:54206 (HEDL-TME-71-50)
  Doppler reactivity coefficient for, calculation of, 25:54208 (HEDL-TME-71-89)
  shutdown system for, performance of liquid lithium, 25:54202 (HEDL-TME-71-18)
FASTENERS
  testing of lid-fixing screw-type, for spent fuel shipping containers, drop-impact, 25:51841
  testing of roof-bolt, for supporting 2-ft-thick roof bed in excavated salt deposit, 25:51738
FECES
  analysis for americium by ion exchange and α counting, 25:51395
FEDERAL REPUBLIC OF GERMANY
  development program for fast breeder reactors in, 25:54026 (A/CONF.49/P-366)
  fuel element development for high-temperature reactors in, research program for, 25:52426 (A/CONF.49/P-385)
  nuclear physics research programs in, government activities in planning and control of, 25:53896 (A/CONF.49/P-417)
  nuclear power plants for, development for, 25:53957 (A/CONF.49/P-806)
  radiation monitoring programs at Juelich Reactor and Karlsruhe Nuclear Research Centers in, 25:52061 (A/CONF.49/P-395)
  radioisotope uses in medicine and pharmacology in, evaluation of, 25:52105
  reactor fuel requirements and supply in, assessment of, 25:51552 (A/CONF.49/P-378)
FEED MATERIALS
  production and supplying of, 25:51567 (A/CONF.49/P-670)
FERMI FAST BREEDER REACTOR
  maintenance during July to December 1970, 25:53971
  operations during July to December 1970, 25:53971
FERMIONS
  field equation of motion for, 25:53304
  interactions of spinor, quasipotential theory for two-body electromagnetic, (T), 25:53281 (IC-71/75)
  interactions with gravitational fields in general relativity theory, nonlinear spinor equation and asymmetric connection for, (T), 25:53348
  motion of variable-spin, in field of flat electromagnetic wave, equation for, (T), 25:53092
  potentials at fixed energy for spin-1/2, construction of relativistic, (T), 25:53389
  thermodynamic limit of BCS state, (T), 25:52749
FERRITIN
  radiation effects on, effects of iron on free radical yields from x, 25:51995
FERROMAGNETIC MATERIALS
  theory of, derivation from microelectromagnetic theory, 25:52753
FERTILIZERS
  efficiency of phosphate, phosphorus-32 tracer study of, 25:52278 (A/CONF.49/P-136)
  labeling with nitrogen-15 and phosphorus-32 for determining effects on cereal crops, 25:52014 (A/CONF.49/P-192)
  radioisotopes in research on phosphorus, in Latin America, 25:51967 (A/CONF.49/P-756)
FETUSES
  radiation effects on human, following therapy of breast carcinoma during pregnancy, x, 25:52239
  radioinduced malformations in human, following abdominal radiography during early pregnancy, x, 25:52252
FIELD THEORY
  field in, geometrization of massive scalar, 25:53280
  field in, geometrization of massless complex scalar, 25:53279
  particle motion in Einstein relativistic, field equations for, 25:53335
  particle motion in Einstein relativistic, field equations for, 25:53334
  theory for already unified, simplified intrinsic proof of Rainich differential relation for, 25:53278
FILMS
  opacity changes in radiographic, quantitative interpretation of, 25:51734 (Y-DL-140)
FILTERS
  design for fluids, data summary on, 25:51674 (NASA-SP-5938-1)
  design of argon atmosphere HEPA, for Hot Fuel Examination

- Facility hot cells, 25:51798
- fire protection of HEPA, for nuclear air cleaning systems, methods for, 25:51788

FILTRATION
- economic analysis of cross-flow, 25:54372 (ORNL-4729)

FINLAND
- electric power system planning in, effects of nuclear power plant reliability on, 25:53926 (A/CONF.49/P-8)
- energy development in, regional cooperation with Denmark, Norway, and Sweden for,, 25:54010 (A/CONF.49/P-7)
- nuclear power plants in, development during 1970 to 1990, 25:53932 (A/CONF.49/P-300)

FINS
- effects of exterior cooling, on heat transfer characteristics of large radioactive material shipping containers under accidental fire conditions, 25:51827
- effects of exterior, on heat removal from spent fuel shipping containers, 25:51828

FIRES
- contamination from sodium reactor coolant, methods for control of, 25:51789
- control and prevention in nuclear facility air cleaning systems, methods for, 25:51788
- control and protection in Rocky Flats Plant, methods for, 25:51786
- control and suppression at Rocky Flats plutonium fabrication plant, methods for glove box, 25:51787
- effects of accidental, on thermal performance of externally-finned containers for shipping radioactive materials, 25:51827
- prevention and control in hot cells, methods for, 25:51785
- prevention in large and small radioisotope shipping containers, low cost methods for, 25:51824
- protection against, in facilities handling radioactive materials, 25:52099

FISSION
- characteristics of fragments from two-stage, method for analysis of, 25:53862
- symmetry breakdown in low-energy, theory of, (T), 25:53872

FISSION FRAGMENTS
- effects on electric conductivity of uranium and plutonium, 25:52901(T) (JPRS-53800, pp 62-71)
- effects on uranium dioxide lattice, x-ray diffraction study of, 25:52903(T) (JPRS-53800, pp 180-7)
- search for tracks of spontaneous, from far transuranium elements in natural minerals, (E), 25:53744 (JINR-P7-5814)

FISSION PRODUCTS
- decay heat effects on dynamics of space propulsion reactors, (T), 25:54228
- description using t-center shell model, (T), 25:53819
- distribution in reactor fuels, beta--gamma autoradiographic method for studying, 25:52363
- gamma spectra in irradiated fuels, burnup estimations from, 25:51387 (JAERI-13754)
- incorporation in glasses for permanent disposal, equipment and method for, 25:51774(P)
- release from accelerator targets, contamination from, 25:53407 (CEA-CONF-1766)
- release from nuclear power plant, Japanese research studies on, 25:51607 (A/CONF.49/P-250)
- removal by reactor containment systems, MIRA code for analysis of, 25:54152 (BMI-1915)
- removal from containment atmospheres, effects of spray flow rate on, (E), 25:54154 (BNWL-1591)
- removal from pressurized water reactor containment system, performance of filters and sprays for, (E), 25:54155 (BNWL-1592)
- removal from reactor containment atmospheres by recirculating filter systems, (E), 25:54153 (BNWL-1587)
- separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)
- separation of rare gas, from gaseous effluents, evaluation of methods for, 25:51586 (RT/PROT-(71)8)
- separation of uranium, prior to analysis, design of automatic ion exchange apparatus for, 25:51550 (A/CONF.49/P-211)
- traps for gaseous, performance of, 25:54119 (RT/ING-(71)2)
- uptake by farm animals and plants of fresh, following contamination of environment, 25:52044 (A/CONF.49/P-686)
- vapor pressure in fuels at high temperature, calculation of, 25:52318(R) (ANL-7820)

FISSIONABLE MATERIAL
- analysis for plutonium and uranium isotopes, development of gamma-ray and neutron methods for, 25:51768 (LA-DC-12295)
- analysis for uranium-235 at Fernald, Ohio scrap recovery plant, performance of MONAL for, 25:51769 (LA-DC-12296)
- analysis for uranium-235, performance of Mobile Nondestructive Assay Laboratory for, 25:51766(R) (LA-4705)
- analysis using radioisotope neutron sources, nondestructive, 25:51767 (LA-DC-12294)
- analysis using radioisotope neutron sources, research at LASL on, 25:51766(R) (LA-4705)
- determination in reactor fuels for use in nuclear safeguards system in West Germany, 25:51759 (A/CONF.49/P-809)
- export and import of, digest of USAEC regulations for, 25:51772 (WASH-1163)

FLOWMETERS
- calibration of liquid, data summary on devices for, 25:51674 (NASA-SP-5938-1)
- calibration of orifice-head pot, with molten salt and bismuth, 25:51585 (ORNL-TM-3139)

FLUID FLOW
- friction in turbulent, through tubes with repeated-rib roughness, (E/T), 25:51685
- heat transfer in turbulent, through tubes with repeated-rib roughness, (E/T), 25:51685
- magnetohydrodynamic duct, end effects for finite magnetic Reynolds numbers, (T), 25:52714
- magnetohydrodynamic duct, in uniform transverse magnetic field, (E/T), 25:52709
- magnetohydrodynamic plane Couette, with asymmetric velocity profile, (T), 25:52713
- magnetohydrodynamic unsteady Couette, with constant discharge of conducting fluid, (T), 25:52715
- magnetohydrodynamic, boundary-layer structure at rear stagnation point in, 25:52712
- magnetohydrodynamic, diagram representation of isotropic turbulence in incompressible, 25:52711
- magnetohydrodynamic, in annular channel, (E/T), 25:52710
- measurement of, radioactive tracer method for, 25:51686
- pressure losses in two-phase, regime effects in frictional, 25:54339 (AAEC/TM-589)
- temperature variations in two-phase, analysis of, 25:51687

FLUIDIC DEVICES
- design of, data summary on, 25:51674 (NASA-SP-5938-1)

FLUIDS
- gravitational-wave interaction with inviscid, in simple motion, (T), 25:52587

FLUORINE
- determination in powdered thermal water residues, mass spectrographic, 25:51369

FLUORINE IONS
- electron spectra and lifetimes from fast beams of, 25:53752(R) (ORNL-4659)

FLUORINE ISOTOPES F-18
- use for scanning bones for diagnosis and localization of neoplasms and metastases, 25:52127 (A/CONF.49/P-407)

FLUORINE ISOTOPES F-19
- helium-3 reactions (He-3,n) at 5.9 MeV with subsequent proton decay, spectra from, (E), 25:53682
- helium-3 reactions (He-3,p) at 5.9 MeV with subsequent neutron decay, spectra from, (E), 25:53682

FOAMS
- thermal properties evaluation of polymeric, 25;54348 (BDX-613-508)

FOG
- formation of atmospheric advection, inhibition by use of reactor waste heat, 25:51636

FOILS
- analysis of standard, for neutron cross section and neutron flux density measurements, 25:52303 (CONF-701002-, pp 488-99)
- preparation of standard, for neutron cross section and neutron flux density measurements, 25:52303 (CONF-701002-, pp 488-99)

FONTENAY-AUX-ROSES REACTORS (TRITON)
- irradiation facility for, design of low-temperature, 25:51684

FOOD
- introduction of irradiated, to consumers, role of government and industry in, 25:52275 (A/CONF.49/P-29)
- radiation processing effects on biochemical, microbiological, and nutritional properties of, 25:52284 (A/CONF.49/P-740)
- radiation processing for extension of storage life, research programs in Hungary on, 25:52281 (A/CONF.49/P-323)
- radiation processing of, conference on problems of, 25:52286 (EURISOTOP-43)
- radiation processing of, evaluation of multipurpose irradiation facility for, 25:51668 (A/CONF.49/P-804)
- radiation processing of, joint program of FAO and IAEA for research on, 25:52285 (A/CONF.49/P-772)
- radiation processing of, research in Soviet Union on, 25:52283 (A/CONF.49/P-696)
- radiation processing programs for, review, 25:51968 (CONF-710428-, Paper 5)
- radioactive contamination of, review of research on, 25:52054
- radiopreservation of, in Spain, review of, 25:51707 (A/CONF.49/P-728)

FOOD CHAINS
- fission product cycling in human, following contamination of environment, 25:52044 (A/CONF.49/P-686)
- uranium movement through human, in Soviet Union, 25:52010 (A-AC-82/G/L.1298)

FOOD IRRADIATION FACILITIES
- construction of industrial, role of government and industry in compliance with federal regulations during, 25:52275 (A/CONF.49/P-29)
- development in European Atomic Energy Community, 25:52286 (EURISOTOP-43)

- development in Japan, 25:52280 (A/CONF.49/P-256)

FORENSIC SCIENCE
- activation analysis in, progress report on research in neutron, 25:51963(R) (NYO-3778-13)
- art identification using nuclear technology in, 25:51410(R) (NYO-3953-3)

FORESTS
- radioisotope migrations through, fallout, 25:52011 (A/CONF.49/P-685)

FORMIC ACID
- radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

FOSSILS
- age of, problems in thermoluminescent method for estimation of, 25:51631

FRANCE
- development of fast breeder reactors in, summary of, 25:54036 (A/CONF.49/P-583)
- health physics programs at nuclear facilities in, legislation regulating, 25:52102 (A/CONF.49/P-624)
- heavy water production in, research on plants for, 25:51702 (A/CONF.49/P-607)
- isotope separation in, developments in, 25:51700 (A/CONF.49/P-605)
- isotope uses in hydrology and sedimentology in, 25:51613 (A/CONF.49/P-634)
- nuclear facilities in, safety requirements for licensing of, 25:52102 (A/CONF.49/P-624)
- programs for mechanical and thermal testing of packages for shipping radioactive materials, 25:51814
- radiation processing in, progress in, 25:51667 (A/CONF.49/P-636)
- radioactive materials transport in, legal priorities in insurance coverage for, 25:52102 (A/CONF.49/P-624)
- reactor safety calculations in, methods for, 25:53984 (A/CONF.49/P-579)
- research at Grenoble Nuclear Centre in conjunction with University and industry, 25:54330 (A/CONF.49/P-638)
- uranium isotope separation in, development plans for, 25:51701 (A/CONF.49/P-606)

FREE RADICALS
- accumulation, yields, and spatial distribution of radiolytic, in frozen aqueous solutions, LET effects in, 25:51536
- properties of radiolytic, in frozen aqueous solutions of acids, 25:51535
- radiation effects on metabolism in soybean seeds in relation to variety, γ, 25:52262
- yields from γ-irradiated ferritin and transferrin in dry state, effects of iron on, 25:51995

FRUCTOSEDIPHOSPHATE ALDOLASE
- radiation effects on activity of rat blood serum, effects of whole-body dose on x, 25:52189

FRUITS
- apricots, radiation processing effects on storage life of, 25:52278 (A/CONF.49/P-136)
- apricots, radiation processing in Switzerland, 25:52277 (A/CONF.49/P-120)
- avocadoes, radiation processing in Israel, 25:52274 (A/CONF.49/P-12)
- citrus, radiation processing effects on storage life of, 25:52278 (A/CONF.49/P-136)
- radiation processing effects on shelf life of, 25:52284 (A/CONF.49/P-740)
- radiation processing of citrus, in Israel, program for commercialization of, 25:52274 (A/CONF.49/P-12)
- strawberries, radiation processing in Israel, 25:52274 (A/CONF.49/P-12)
- strawberries, radiation processing in Switzerland, 25:52277 (A/CONF.49/P-120)

FUEL CAPSULES
- evaluation and testing of, for SNAP-27, 25:51719 (MLM-1831)
- materials for radioisotope thermoelectric generator, development and testing of, 25:51717(R) (MDC G-3124)

FUELS
- resources of, estimates of world wide, 25:54025 (A/CONF.49/P-359)
- resources to year 2000, forecasts of worldwide, 25:54325 (A/CONF.49/P-420)

FUKUSHIMA POWER REACTOR, UNIT 1
- construction of, review of, 25:53958 (A/CONF.49/P-849)
- testing of, description of pre-operation, 25:53958 (A/CONF.49/P-849)

FURNACES
- sample holder for induction irradiation, design of, 25:51682(P)

FUSED SALTS
- book: Advances in Molten Salt Chemistry, Vol. I, 25:51422

G

GADOLINIUM
- 4f state distribution in metal and oxide of, from x-ray spectra, 25:52607 (CONF-711001-(Vol.1), pp 135-43)
- neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
- neutron reactions at 16.405 to 18.822, total cross sections for, (E), 25:53728 (AECD/EP-18)

GADOLINIUM ALLOYS AND SYSTEMS
- Al--Gd--La, thermal capacity of superconducting, with magnetic impurities, (E/T), 25:52738
- Ce--Gd--Ru, magnetization and thermal capacity of superconducting, (T), 25:52739
- Co--Gd--Ni, magnetic properties of Gd(Co/sub 1-x/Ni/sub x/)$_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
- Fe--Gd--Ni, magnetic properties of Gd(Fe/sub 1-x/Ni/sub x/)$_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
- Gd--In--La, superconducting pair density in La/sub 3-x/Gd/sub x/In above transition temperature, from Pauli spin susceptibility, 25:52759
- Gd--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)

GADOLINIUM BORIDES
- nonstoichiometry of GdB_6, (E/T), 25:52453 (CONF-711001-(Vol.2), pp 598-609)

GADOLINIUM ISOTOPES Gd-150
- energy level at 1622.41 keV, properties of, (E), 25:53782
- energy-level transitions in, M1-E2 mixings in, (E), 25:53782

GADOLINIUM ISOTOPES Gd-152
- energy level at 118.0 keV, half-life for, (E), 25:53781
- energy-level transition rates between mixed quasiparticle states in, (E), 25:53781

GADOLINIUM ISOTOPES Gd-155
- energy levels from terbium-155 decay, magnetic moments for, (E), 25:53801
- isomeric transition in, half-life and branching ratio for, (E), 25:53783

GADOLINIUM ISOTOPES Gd-156
- energy levels from terbium-156 decay, magnetic moments for, (E), 25:53801

GADOLINIUM ISOTOPES Gd-157
- energy levels from dysprosium-160 (n,α) reactions, level-density parameters for, (E), 25:53742 (INR-1275)

GADOLINIUM ISOTOPES Gd-158
- energy levels from dysprosium-161 (n,α) reactions, level-density parameters for, (E), 25:53742 (INR-1275)

GADOLINIUM ISOTOPES Gd-160
- alpha reactions (α,4n) at 43 MeV, γ spectra from, (E), 25:53762
- energy levels from dysprosium-163 (n,α) reactions, level-density parameters for, (E), 25:53742 (INR-1275)

GADOLINIUM ISOTOPES Gd-161
- energy levels from dysprosium-164 (n,α) reactions, level-density parameters for, (E), 25:53742 (INR-1275)

GADOLINIUM OXIDES
- spectra of europium- and terbium-doped, flame-excited luminescence, 25:52941 (CONF-711001-(Vol.2), pp 452-64)

GALAXIES
- clustering of, in the supergalactic plane, (T), 25:52588
- dynamics of Perseus cluster of, (E), 25:52569
- gravitational wave emission from radiation sources in, (E), 25:53344
- HII region distribution in Sc, (E/T), 25:52570
- magnitude of, identified with 3C 386, (E), 25:52574
- magnitude--redshift relation for distant, effects of intergalactic dust on, (E/T), 25:52595
- mass of NGC 1265, (E), 25:52569
- nitrogen abundance in Sc, (E/T), 25:52570
- oxygen abundance in Sc, (E/T), 25:52570
- spectral redshift of, identified with 3C 386, (E), 25:52574
- stars in, evolution of initially balanced rotating disk of, (T), 25:52571
- velocity of NGC 1265, radial, (E), 25:52569
- water in HII regions of M33, search for, (E), 25:52579
- x-ray emission from clusters of, effects of Hubble constant on, (T), 25:52586

GALLIUM
- determination in standardized aluminum-silicon alloy by neutron activation, methods for both destructive and nondestructive, 25:51419
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
- Ga--V, electron--phonon coupling constant of intermetallic V_3Ga, from optical measurements, 25:52757

GALLIUM ALLOYS AND SYSTEMS
- Ga--Pu-base, electric conductivity of solid solutions of delta-phase, at 5 to 300°K, 25:52965
- Ga--Pu-base, phase diagram of, effects of pressure on, 25:52382
- Ga--Pu-base, phase transformations of, at 5 to 300°K, effects of concentration on, 25:52965

GALLIUM ISOTOPES Ga-71
- neutron reactions (n,2n) and (n,p) at 13.36 to 16.51 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)

GAMMA CAMERAS
- data collection system for, off-line digital, 25:51877
- design and performance of spark chamber, 25:51876
- development for use in nuclear medicine, 25:52129 (A/CONF.49/P-629)
- development of, review on, 25:51847 (A/CONF.49/P-507)

XUM

modulation transfer function for, algorithm for, 25:51866
response of Digital Autofluoroscope, computer analysis of uniformity of, 25:51865
GAMMA CROSS SECTIONS
data files of, computer program for checking and editing, (E), 25:53492 (ORNL-TM-3518)
GAMMA RADIATION
attenuation in loam and sandy soils, determination of compaction from, 25:52017 (A/CONF.49/P-537)
attenuation in water containing steel rods, (E/T), 25:52893
detection of neutron-induced, in buried land mines for use in mine location method, 25:51731
dose curves for therapy beams of, proton beam comparison with, 25:52074
dose distribution in tissues, 25:52152 (UCRL-20836)
dose to man during fast neutron therapy, 25:52080
dose to man during neutron therapy, methods for measurement of, 25:52079
dosimetry in interstitial therapy, use of computer calculations for, 25:52120 (A/CONF.49/P-121)
dosimetry in therapy, calibration methods for, 25:52088
dosimetry of low-energy high-dose, processing procedure for photographic film for, 25:51909
dosimetry of, response of calcium sulfate--lithium sulfate thermoluminescent dosimeters for, 25:51906
effect on growth and mitosis of fibrosarcoma and L cells, effects of cell phase on, 25:52176 (A/CONF.49/P-358)
effectiveness comparison with fast neutrons for therapy of human lung metastases, 25:52162
effectiveness for therapy of human bladder tumors in comparison to x radiation, 25:52172
effectiveness for therapy of laryngeal and mammary carcinomas in man, effects of dose per fraction on, 25:52168
effects on 1,4,4a,5,8,8a-hexahydro-1,4-ethanonaphthalene, 25:51483
effects on 3-methylpentane glass at 77°K, thermoluminescent, 25:52931
effects on acid aqueous solutions, reactions of ferric iron with hydrated electrons from, 25:51523
effects on adult Drosophila, comparison of x radiosensitivity of embryos and, 25:52026
effects on aerated solutions of thymine, yields of peroxides from, 25:51520
effects on algae, isotope substitution methods for studying, 25:52255 (JUL-727-BO)
effects on alkaline methanol, yields of solvated electrons from, 25:51533
effects on ammonium perchlorate, ESR parameters for unstable intermediates from, 25:51530
effects on anaerobic digestion processes and sludge handling characteristics of fresh solid sewage, 25:52290
effects on animals, evaluation of, 25:51965 (A/CONF.49/P-147)
effects on anthracene crystals, annealing of 6060-A color centers induced in, 25:52912
effects on antigenicity of tooth transplants in rabbits, 25:52009
effects on aqueous solutions of yeast alcohol dehydrogenase, yields of thiols from, 25:51516
effects on bacteria and yeasts, effects of dose on molecular repair mechanisms for, 25:52268 (A/CONF.49/P-538)
effects on barley seeds, correlation between radiosensitivity and frequency of mutagenic, 25:52033
effects on barley, corn, kidney beans, peas, rice, and soybeans following seed or seedling exposure, comparison of, 25:52261
effects on bone grafts, ESR studies on resorption following, 25:52203
effects on boron and phosphorus trifluorides as pure solid and in xenon matrix at low temperatures, ESR study of radicals trapped in, 25:52914
effects on carboxylic acids at cryogenic tempertures, 25:51513
effects on cellulose and cellulose acetates, 25:51515
effects on cereals, fruit trees, and vegetable crops in relation to improved quality and yield, mutagenic, 25:52279 (A/CONF.49/P-162)
effects on chlorotrifluoroethylene in 2-propanol, mechanisms of formation of acetone, hydrogen, and telomer from, 25:51512 (UJV-2616-Ch)
effects on chlorotriphenylmethane in carbon disulfide, carbon tetrachloride, cyclohexane, hexane, and 2,2,4-trimethylpentane, ion-pair yields from, 25:51505 (AD-715391)
effects on chromosomes and postnatal development of rats following in utero exposure, 25:52224
effects on chromosomes of tumor cells of mice, protective effects of DNA and nucleotides against, 25:52106 (A/CONF.49/P-257)
effects on circulating blood following therapy of lung carcinomas, 25:52241
effects on coloration and electric discharge of shielding glass, 25:52492
effects on content of protein fractions in blood serum of dogs, effects of shielding of abdominal and head regions on, 25:51991(T) (JPRS-53801, pp 40-5)
effects on crosslinking of cellulose with acrolein, effects of dose, dose rate, and solvents on, 25:51501
effects on Cryptomeria japonica varieties, somatic mutagenic, 25:52029
effects on cyclohexane, disproportionation and recombination of cyclohexyl radicals from, 25:51527
effects on DNA of Chlorella, effects of cell phase on repair of single-strand breakage, 25:52253 (A/CONF.49/P-213)
effects on DNA of microorganisms, 25:51990 (A/CONF.49/P-633)
effects on dogs, tumorigenic, 25:52211
effects on ethane and hexafluoroethane, yields from, 25:51511(R) (ORO-3106-41)
effects on free radical, nucleic acid, and protein synthesis in soybean seeds, effects of varieties on, 25:52262
effects on frequency of chlorophyll mutations in barley, effects of spring and winter growth on, 25:52036
effects on frequency of chromosome aberrations and chlorophyll-deficient mutations in barley in comparison to effects of ethylenimine and nitrogen mustards, 25:52041
effects on frozen aqueous solutions of acids and bases, LET effects in, 25:51536
effects on frozen aqueous solutions of sulfuric and phosphoric acids, yields of free radicals from, 25:51535
effects on function and morphology of gonads and liver in Indian catfish following injection of cobalt-60, 25:52268 (A/CONF.49/P-538)
effects on growth and nitrogen content of rye and wheat, effects of seed exposure dose on, 25:52266
effects on growth of agricultural plants, effects of dose on, 25:52044 (A/CONF.49/P-686)
effects on growth of colonies of Azotobacter chroococcum, effects of dose on, 25:52270
effects on growth, mitosis, and myosin metabolism of cultured heart cells, 25:51992 (UCLA-12-830)
effects on halomethane incorporated in deuterated acetonitrile crystal, ESR studies of methyl radical--halide ion pairs produced by, 25:51489
effects on hematopoiesis in fasted rats, effects of dose fractionation on, 25:52220
effects on human blood lymphocyte function and renal transplantation survival, extracorporeal, 25:52236
effects on hydrocarbon mixtures, yields from, 25:51510 (KFKI-71-23)
effects on infective and hemagglutinating capacity of measles virus, effects of dose on, 25:52273
effects on influenza virus activity, 25:52272
effects on kidney transplant survival in goats following extracorporeal blood exposure, 25:52209
effects on kidneys and urinary tract during therapy of neoplasms of testes, pathological, 25:52233
effects on leukemia incidence and survival in mice following continuous low-level external exposure, effects of strain on, 25:52226
effects on lima beans in relation to reproductive stage, 25:52264
effects on liquid chloroform, effects of dose rate on yields from, 25:51519
effects on lithium hydrides, calorimetric evidence of molecular hydrogen produced by, 25:51484
effects on lucite disks, thermoelectric currents induced in, 25:52906
effects on maize and wheat, mutagenic, 25:52016 (A/CONF.49/P-354)
effects on maize, peanuts, and tomatoes, mutagenic, 25:52278 (A/CONF.49/P-136)
effects on man following pelvic carcinoma therapy, 25:52251
effects on mechanical properties of poly(methyl methacrylate) at low temperatures, 25:52488 (RHEL/R-220)
effects on metal/nitride/oxide/silicon structures, 25:51955
effects on methylcyclohexane--biphenyl glass at 4.2°K, deferred luminescence, 25:52921
effects on mice, protective effects of cysteamine and cysteamine homologs against, 25:52116
effects on mice, protective effects of serotonin-containing dextran derivatives against, 25:52115
effects on mitosis synchronization in root meristem cells of pea seedlings, 25:52259
effects on molecular structure of solid serum albumin from cattle, fluorescence methods for studies of, 25:52002
effects on mutability, sporulation, and viability of Chlorella, additive effects of vibration on, 25:52254(T) (JPRS-53801, pp 133-6)
effects on myelum following therapy of spinal cord, effects of dose per fraction on pathological, 25:52245
effects on n-hexadecane, effects of dose, dose rate, and trace impurities on, 25:51522
effects on nicotinamide and nicotinic acid, 25:51531
effects on nucleic acid and protein synthesis in Acetabularia mediterranea, inhibitory, 25:52000
effects on octamethyltrisiloxane, yields from, 25:51482
effects on oil content and iodine value of linseed, mutagenic, 25:52030
effects on organoleptic properties and shelf life of

  - fish, 25:52276 (A/CONF.49/P-115)
  - effects on oxidation of acenaphthene using molecular oxygen, 25:51500
  - effects on oxidation of hexachloro-1,3-butadiene with gaseous oxygen, kinetics of branching and thermal generation of initiating centers for chain reactions from, 25:51499
  - effects on phosphorus trichloride, phosphorus pentachloride, and phosphoryl chloride, ESR spectra of radicals from, 25:51514
  - effects on plantain, mutagenic, 25:52032
  - effects on poly(methyl methacrylate), effects of ethanethiol on main chain scission and volatile product yields from, 25:51521
  - effects on poly(methyl methacrylate), thermal decay effects on spatial distribution of radicals from, 25:51487
  - effects on polycrystalline or single crystal RDX, 25:51492
  - effects on polymerization of acrylonitrile, methyl methacrylate, and styrene with agricultural and stone wastes, cellulose, and wood, 25:51494 (A/CONF.49/P-829)
  - effects on polymerization of concretes--monomers, 25:51503 (A/CONF.49/P-647)
  - effects on polymerization of monomers--wood, 25:51504 (A/CONF.49/P-668)
  - effects on potassium and sodium azides, hyperfine coupling and zero-field splitting for nitrogen atoms from, 25:51486
  - effects on pulmonary function in sheep when combined with effects of sublethal blast overpressure and unilateral neutron exposure, 25:52185(R) (AD-721094)
  - effects on rearrangement of ethylene glycol in aqueous solutions containing hydrogen peroxide, 25:51502
  - effects on recovery from acute tubular necrosis in dogs following kidney transplantation, 25:52207
  - effects on regeneration of fractured bones in rabbits, protective effects of Coamid and Mumie against, 25:52111
  - effects on reproductive capacity of codling moths in relation to population control, 25:52279 (A/CONF.49/P-162)
  - effects on reversion frequency of chlorophyll mutants in sunflowers, 25:52267
  - effects on rice plants, cobalt-60 mutagenic, 25:52019 (A/CONF.49/P-748)
  - effects on seeds, reaction mechanisms and modifying factors for, 25:52268 (A/CONF.49/P-538)
  - effects on soybeans, effects of gene rs_2 on, 25:52028
  - effects on spoilage rate of fillets of Bombay duck, effects of storage temperature on, 25:52287
  - effects on sprouting of potatoes, effects of dose on inhibitory, 25:52276 (A/CONF.49/P-115)
  - effects on storage life and wholesomeness of flour, onions, potatoes, and wheat, 25:52279 (A/CONF.49/P-162)
  - effects on storage life of fish, fruits, and vegetables, 25:52278 (A/CONF.49/P-136)
  - effects on storage life of fruits and vegetables, 25:52277 (A/CONF.49/P-120)
  - effects on sulfofuran cation exchange resins, 25:51485
  - effects on survival of Dematiaceae strains, comparison of exponential and sigmoidal dose--survival curves for, 25:52260
  - effects on survival of mammalian cells, RBE for, 25:52174 (A/CONF.49/P-30)
  - effects on survival of mice, protective effects of analogs of o-[(2-aminoethyldithio]benzoic acid against, 25:52114
  - effects on survival of mice, protective effects of DNA, RNA, and nucleosides against, 25:52106 (A/CONF.49/P-257)
  - effects on survival of rice weevils, effects of dose on, 25:52276 (A/CONF.49/P-115)
  - effects on synthesis of ribonucleic acid and protein in amoebae, effects of dactinomycin and temperature on repair of, 25:51999
  - effects on tetraoxymethylene single crystal, properties of polyoxymethylene crystal from, 25:51496
  - effects on thermal conductivity of potassium chloride, (E/T), 25:52904
  - effects on tin compounds, Moessbauer studies on, 25:51534
  - effects on trivalent chromium-51-doped potassium iodate, potassium nitrate, or potassium sulfate, 25:51488
  - effects on water, uses in analytical chemistry of, 25:51370
  - effects on wheat for resistance to Puccinia graminis and Septoria nodorum, mutagenic, 25:52263
  - effects on winter wheat plants, mutagenic, 25:52034
  - effects on zinc content of blood of sheep, 25:52210
  - effects on zinc-65 metabolism in swine, 25:52210
  - emission from Sun, neutron--proton capture, (T), 25:52559
  - reactions with purines and pyrimidines, isolation and structure of yields from radiolysis, 25:51990 (A/CONF.49/P-633)
  - spectra from Λ-H^4 and Λ-He^4 hyperfragments from meson (K^-) capture in lithium-6 and lithium-7, 25:53033
  - transmission through Moessbauer resonant medium, (T), 25:52973
  - transmission through soils, temperature-compensated measurement of soil moisture content using, 25:51630
  - use for control of microorganisms in agriculture, mutation breeding, and sterilization of codling moth in South Africa during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)
  - use for food processing in Hungary, review of research programs on, 25:52281 (A/CONF.49/P-323)
  - use for processing food in Israel, program for commercialization of, 25:52274 (A/CONF.49/P-12)
  - use in radiotherapy in Hungary, 25:52125 (A/CONF.49/P-324)

- **GAMMA SOURCES**
  - design of high-activity, for radiography and teletherapy, 25:51713 (ICRU-18)
  - determination in fission product palladium and rhodium, 25:51385 (BNWL-CC-2239)
  - determination in seawater using immersion scintillation counter, 25:51392
  - development for extracorporeal irradiation of human blood, 25:52149 (A/CONF.49/P-642)
  - isodose curves of 1200 Ci cobalt-60, 25:52072 (RT/PROT-(71)10)
- **GAMMA SPECTROMETERS**
  - data from lithium-drifted germanium, computer techniques for analysis of, 25:51882 (PEL-204)
  - spectra from, computer program for separation of gamma and neutron, 25:51881 (N-71-17323)
- **GAMMA SPECTROSCOPY**
  - data analysis in, computer program for, (E), 25:53747 (MIT-3944-2)
- **GARIGLIANO POWER REACTOR**
  - fuel elements of, performance of, 25:53889 (A/CONF.49/P-188)
  - operating statistics for 1964 to 1971, 25:53931 (A/CONF.49/P-172)
  - safety aspects of, design modifications for improved, 25:53972 (A/CONF.49/P-173)
- **GAS CENTRIFUGES**
  - development for uranium enrichment in tripartite countries, commercial, 25:51699 (A/CONF.49/P-493)
  - process development for uranium enrichment using, tripartite agreement for commercial, 25:51694 (A/CONF.49/P-382)
  - separative power as function of specified fluid parameters, calculation and optimization of, 25:51714(T) (K-Trans-61-1)
  - uranium enrichment using, status of research on, 25:51716(T) (K-Trans-61-4)
  - uranium hexafluoride flow in countercurrent, solution of Navier-Stokes equations for, 25:51715(T) (K-Trans-61-2)
- **GAS CHROMATOGRAPHY**
  - equipment for radio-, review of, 25:51371
- **GASEOUS DIFFUSION PROCESS**
  - development in France for uranium isotope separation, 25:51701 (A/CONF.49/P-606)
- **GASES**
  - analysis in post-shot tunnel systems from nuclear weapons testing, chromatographic, 25:51364 (SC-RR-710337)
  - book: Fundamentals of Gaseous Ionization and Plasma Electronics, 25:52794
  - kinetic equation for single-particle distribution function for, 25:52984
  - partial pressures of, computer program for determining, from residual-gas-analyzer data, 25:51363 (ORNL-TM-3455)
- **GENES**
  - mitotic conversion of, in yeast by chemical mutagens and radiation, comparison of, 25:52039
- **GENETICS**
  - conference on control of radiosensitivity using, 25:52023
- **GENTILLY POWER REACTOR**
  - completion schedule for, 25:53883 (70-CNA-630)
  - operation of, review of, 25:53928 (A/CONF.49/P-148)
  - status during 1969--1970, summary of, 25:53880 (70-CNA-619)
- **GEOMAGNETIC FIELDS**
  - production by kinematic-dynamo action, (T), 25:52568
- **GEOPHYSICS**
  - radioisotope uses in, in Poland, 25:51693 (A/CONF.49/P-334)
- **GERBILS**
  - radiation effects on function and morphology of gonads in, x, 25:52268 (A/CONF.49/P-538)
- **GERMANIUM**
  - properties of lithium-drifted, 25:51861
  - radiation effects on hole drift mobility in n-type, fast-neutron, 25:52920
- **GERMANIUM ISOTOPES Ge-77**
  - beta decay of, directional correlation of the 0.56-0.63 MeV gamma rays following, (E), 25:53686
- **GLASS**
  - fission product incorporation in, for permanent disposal, equipment and method for, 25:51774(P)
  - radioinduced coloration and electric discharge of, kinetics of gamma, 25:52492
  - radioinduced deferred luminescence in methylcyclohexane--biphenyl, 4.2°K gamma, 25:52921
  - radioinduced intrinsic defect center in alkali-metal

borate, ESR studies of low-temperature x, 25:52928
- radioinduced thermoluminescence spectra of 3-methylpentane, studies of 77°K gamma, 25:52931

GLOBULINS
- radiation effects on content of blood serum of dogs, effects of shielding of abdominal and head regions on γ, 25:51991(T) (JPRS-53801, pp 40-5)

GLOVE BOXES
- design for fire control, at Rocky Flats plutonium fabrication plant, 25:51787
- design for plutonium fuels development laboratory, 25:51784
- fabrication of versatile, methods for economic, 25:51671 (LA-DC-12533)

GLOW DISCHARGES
- performance for dense plasma production and diagnostic studies, 25:52834 (N-71-22676)

GLUCOSEPHOSPHATE ISOMERASE
- radiation effects on activity of rat blood serum, effects of whole-body dose on x, 25:52189

GOATS
- milk volume of mammary glands of, use of carbon-14, cerium-141, and yttrium-91 for evaluation of, 25:51984
- radiation effects on kidney transplant survival in, following extracorporeal blood exposure, γ, 25:52209
- zinc metabolism in, review of, 25:51980

GOLD
- determination by atomic absorption and fluorescence spectroscopy with unenclosed atom reservoir, 25:51374
- determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- diffusion in cadmium single crystals, anisotropic, 25:52358
- ytterbium ion implantation at 130 keV in, distribution of damage from, 25:52929

GOLD ALLOYS AND SYSTEMS
- Au--Cu, Debye temperatures of, 25:54367 (IS-T-478)
- Au--Dy, phase diagram and intermetallic compounds in, 25:52373 (CONF-711001-(Vol.1), pp 361-7)
- Au--In, properties of dilute, electric and thermal, 25:52369
- Au--Mn, magnetic resonances in $MnAu_2$, microwave absorption study of, 25:52949 (IS-T-471)
- Au--Sc, dissociation energy of ScAu, 25:52321 (CONF-711001-(Vol.2), pp 795-803)
- Au--Sm, phase diagram and intermetallic compounds in, 25:52373 (CONF-711001-(Vol.1), pp 361-7)
- Au--Y, dissociation energy of YAu, 25:52321 (CONF-711001-(Vol.2), pp 795-803)

GOLD ISOTOPES Au-197
- neutron capture at 25 keV to 1 MeV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
- neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
- neutron capture by, comparison of absolute cross-section measurements of, 25:53737 (CONF-701002-, pp 320-6)
- neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
- proton elastic scattering at 10 to 14 MeV, optical-model analysis of cross sections and polarization for, (E/T), 25:53789

GOLD ISOTOPES Au-198
- implantation for therapy, radiation protection of medical personnel during, 25:52076

GRANITES
- analysis of German standard, by neutron activation, 25:51408 (IFA-NR-34)

GRAPHITE
- analysis for hydrogen and tritium by combustion and vapor pressure measurements, 25:51358 (AEEW-M-1028)
- argon-ion reactions at 12 or 30 keV with, sputtering and secondary electron yields from, 25:52599 (SGAE-PH-109/1971)
- corrosion by carbon dioxide, effects of methane additive on rate of, 25:54032 (A/CONF.49/P-504)
- neutron slowing down density distribution in, evaluation of ENDF/B data for, (E/T), 25:54060(R) (AI-AEC-13005)
- neutron wave propagation in, (T), 25:53500
- optical properties of interstellar grains containing graphite--iron--silicate mixtures, (T), 25:52576
- oxidation of, heterogeneous rate coupling for, (E), 25:52416
- preparation of high-density, method for, 25:52436(P)
- properties of pre-irradiated and post-irradiated, standard method for reporting, 25:52443
- radiation effects on artificial, fast neutron, 25:52476(T) (JPRS-53800, pp 292-306)
- radiation effects on creep in tubes of, neutron, 25:52470 (A/CONF.49/P-614)
- radiation effects on mechanical and physical properties of, at 150 to 1000°C, fast neutron, 25:52467 (A/CONF.49/P-452)
- radiation effects on mechanical and physical properties of, fast neutron, 25:52469 (A/CONF.49/P-503)
- radiation effects on, Japanese studies of neutron, 25:52465 (A/CONF.49/P-245)
- rare-gas ion implantations at 1 to 120 keV in, saturation values of, 25:52922
- testing of delta-in-hours purity of nuclear, standard method for, 25:52442

GRAVITATION
- conservation laws, Lorentz invariance, and PPN parameters in relativistic, (T), 25:52593
- constant of, anisotropy in Newtonian, (T), 25:52594
- effects in classical extended electron model in general relativity theory, 25:53089
- Einstein vacuum field equations in, classification of Harrison metrics for, 25:53354
- formulation of, topology in canonical, (T), 25:53297
- mass of electromagnetic radiation in, active, (T), 25:53347
- quantization of, review of, (T), 25:53332
- quantum theory of, mass of electron in, 25:53290
- testing of relativistic, theoretical framework for, (T), 25:52593
- theory for, covariant theory of, 25:53342
- vacuum in, mass of virtual particle responsible for, 25:53337

GRAVITATIONAL COLLAPSE
- general relativity for, covariance, invariance, and equivalence in, (T), 25:53349

GRAVITATIONAL FIELDS
- commutation relations between components of current and energy--momentum tensor in external, equal-time, 25:53351
- conformally plane, created by matter, (T), 25:52589
- fermion interactions with, nonlinear spinor equation and asymmetric connection for, (T), 25:53348
- multipoles in static, second approximation in explicit form for, 25:53350
- particle motion in, equations for spinning, (T), 25:53353
- theorems for static, in general relativity, 25:53315
- theory for Killing vector, invariant approach for vacuum Einstein spaces in, 25:53352

GRAVITATIONAL RADIATION
- detection of scalar and tensor, design of multidirectional, multipolarization antennas for, 25:53343
- emission by spherically symmetric systems, noncovariant theory of gravitation predictions for, (T), 25:53342
- emission from bounded gravitating system in asymptotically hyperbolic Friedmann space--time, (T), 25:52584
- emission from radiation sources in galaxy, (E), 25:53344
- graviton interactions with arbitrary-spin targets, method for derivation of low-energy theorems for, (T), 25:53070
- interaction with inviscid fluid in simple motion, (T), 25:52587
- Kaigorodov one-wave Type-III solutions in general theory of relativity, 25:53355
- theory for, review of, 25:53332

GRAVITY WAVES
- propagation in ionosphere, parameters from TID-associated electron content, (E/T), 25:52729

GREECE
- nuclear power plants in, development of optimum economic, 25:53891 (A/CONF.49/P-270)

GRENOBLE REACTORS (SILOE)
- research programs in, review of, 25:54183 (A/CONF.49/P-591)

GROUND WATERS
- contamination by underground disposal of liquid radioactive wastes, USSR research on, 25:51749 (A/CONF.49/P-426)
- flow rate through porous limestone and impervious clay, tritium tracer technique for measurement of vertical, 25:51611 (A/CONF.49/P-509)
- radiation monitoring programs for USA, 1968 through 1970, 25:52057
- tritium content of, in limestone and sandstone, relations with ground water discharge and stream flow, 25:51611 (A/CONF.49/P-509)

GROUP THEORY
- algebra factors acting on separable Hilbert space, homotopical significance of type of von Neumann, 25:53258
- book: Algebraic Methods in Nuclear Theory, 25:53861
- book: Group-Theoretical Methods for the Shell Model of Nuclei, Part II, 25:53875
- Clebsch--Gordan coefficients associated with reduction into two classes of Poincare-irreducible tensor operators for positive-mass one-particle states, 25:53253
- compact groups in, Wigner--Eckart theorem for locally, 25:53248
- conformal group in Poincare basis in, principal continuous series of unitary irreducible representations for, 25:53254
- de Sitter space--time coupling with internal symmetry, 25:53264
- invariance groups of phase space for classification of relativistic three-particle states, 25:53375
- Lie algebra in, one class of representations of, 25:53247
- Lie algebras for Killing fields, homogeneous Riemannian spaces from, 25:53341
- Lie algebras in, polynomial bases for representations of semisimple, 25:53266
- Lie groups for decomposition of reducible representations for nuclear and particle theory, 25:53250
- Poincare group generators for relativistic equations of

XUM

motion without redundant components for arbitrary-spin particles, 25:53249
Poincare-irreducible tensor operators for positive-mass one-particle states, 25:53260
Poincare-irreducible tensor operators for positive-mass one-particle states, 25:53253
Racah coefficients for elementary particle angular momenta, symmetry for, 25:53256
Racah coefficients for elementary particles in, symmetry of, 25:53255

GUINEA PIGS
radiation effects on mechanical activity of vas deferens in, effects of drugs on x, 25:52216

GUNDREMMINGEN POWER REACTOR
operations during 1968 to 1970, review of, 25:53957 (A/CONF.49/P-806)
radioactive effluents from, measurements during 1967 to 1970 of, 25:53979 (A/CONF.49/P-396)

GYMNOSPERMIDAE
Cryptomeria japonica, radioinduced somatic mutations in varieties of, γ, 25:52029

GYPSUMS
production of, economics of dual purpose reactors for, 25:54244

H

H.B. ROBINSON POWER REACTOR, UNIT 2
coolant sampling system for, leakage in cooler circuit of, 25:53965 (DOCKET-50261-72)

HII REGIONS
distribution in interstellar medium, (E), 25:52572
distribution in Sc galaxies, (E/T), 25:52570
helium-3 abundance in, (E), 25:52548
ice grains in, sputtering of, (T), 25:52575
spectra of, effect of recoil in resonance-line scattering in, (T), 25:52549
water in extragalactic, search for, (E), 25:52579

HADRONS
exchange in strong interactions at high energies, dips and spikes in t dependence of differential cross sections for, 25:53138
helicity conservation in inelastic l + N interactions, (T), 25:53100 (NYO-4204-14)
helicity conservation in $\nu + p + p + \pi^+ + \mu^-$ interactions, (T), 25:53100 (NYO-4204-14)
interactions at high energies, Regge model for quasipotential diffraction in strong, (T), 25:53150
interactions at intermediate energies with quasi-two-particle production, experiments on, 25:53132 (UCRL-20655, pp 341-95)
interactions at intermediate energies, experiments on, 25:53133 (UCRL-20655, pp 453b-5)
interactions at intermediate energies, Regge theory for multiparticle production in inclusive, 25:53131 (UCRL-20655, pp 277-340)
interactions of, dual resonance model for single-particle production in strong, 25:53156
interactions of, perturbation theory about Goldstone symmetry for, (T), 25:53242 (NYO-4204-16)
interactions of, Reggeon--Reggeon amplitude and duality sum rule from dual amplitude analysis of ditriple Regge limits in, (T), 25:53378
interactions of, sum rules for differential cross sections of inclusive, 25:53140
interactions of, urbaryon rearrangement amplitude in impact parameter representation for resonance structure in, 25:53149
interactions with hadrons at extremely high energies, amplitudes for diffractive inelastic, 25:53096
interactions with hadrons at high energies at large distances, increase with energy for electromagnetic and weak corrections to, (T), 25:53143
interactions with hadrons at high energies, analyticity constraints for validity of Pomeranchuk theorem and sudden change of slope in cross sections for, (T), 25:53136
interactions with hadrons at high energies, conference on, (E/T), 25:53071
interactions with hadrons at high energies, dips and spikes in t dependence of differential cross sections for exchange, (T), 25:53138
interactions with hadrons at high energies, review of models for, (T), 25:53139
interactions with hadrons at high energies, review of duality and Regge cuts in inelastic two-body, (T), 25:53137
interactions with hadrons at low and high energies, review of models for duality and exchange degeneracy in, (T), 25:53134
interactions with hadrons, Breit--Wigner-type instability effects on analytic properties of partial-wave amplitudes of relativistic two-body elastic and inelastic, (T), 25:53146
interactions with hadrons, review of multiperipheral dynamics for, (T), 25:53155
interactions with hadrons, review of Regge cuts in elastic, (T), 25:53135
interactions with photons at extremely high energies, amplitudes for diffractive inelastic, 25:53096
interactions with photons at high energies, vector-meson dominance for range of, (T), 25:53074
interactions with photons, radiative corrections and polarization effects contributions to cross sections for, (T), 25:53059
model for extended, p and π form factors, deep inelastic electroproduction, and heavy μ^+--μ^- pair production in, (T), 25:53151
production in $e^+ + e^-$ interactions in colliding beams, single photon exchange and electron exchange for, (E/T), 25:52990 (DESY-71/28)
production in $\gamma + \gamma$ interactions, cross sections for, 25:53052
production of single, in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)

HAFNIUM
abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)

HAFNIUM ALLOYS AND SYSTEMS
Al--B--Cr--Hf--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
Cr--Hf--Si--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
Hf--Zn--Zr, magnetic properties of Zr/sub 1-x/Hf/sub x/Zn_2, 25:52959

HAFNIUM BORIDES
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
HfB_2--HfO_2, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415

HAFNIUM CARBIDES
magnetoresistance and Hall effect of, (E), 25:52964
preparation and properties of, concentration dependence of, 25:52430
HfC--Re--W-base, mechanical properties of dispersion-strengthened, 25:52327

HAFNIUM OXIDES
properties for use as barrier material in fuel capsules for cermet fuels, 25:51717(R) (MDC G-3124)
HfB_2--HfO_2, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415

HAIR
radioinduced epilation and greying of hamster, single-dose krypton-85 beta, 25:52214

HALDEN BOILING REACTOR
control system for, development of on-line digital computer, 25:53893 (A/CONF.49/P-294)

HAMSTERS
radioinduced epilation and hair greying in, single-dose krypton-85 beta, 25:52214

HANDLING AND STORAGE
methods for safe, of heat-producing radioactive materials during marine shipment, recommendations for, 25:51829

HANDS
radiation dose to, of medical personnel during injection of radioactive solutions, method for estimation of, 25:52081

HANFORD PRODUCTION REACTORS (N)
instrumentation for, review of performance of, 25:54254

HARWELL SYNCHROTRON (NIMROD)
development and operation of, Jan. 1--March 31, 1971, 25:53424(R) (RHEL/R-219)
experimental program at, review of, 25:53428 (UCRL-20655, pp 2-37)
experiments at, list of high-energy, 25:53423 (RHEL/R-214)
operation of, April, 1971, 25:53423 (RHEL/R-214)

HEALTH PHYSICS
personnel applications for American Board of, 25:54363 (HUX-4136-1)
programs at nuclear facilities in France, legislation regulating, 25:52102 (A/CONF.49/P-624)

HEART
blood circulation in, use of iodine-131-labeled serum albumin in combination with xenon-133 for study of bilateral, 25:52126 (A/CONF.49/P-332)
radiation effects on myosin metabolism in cultured cells of, 25:51992 (UCLA-12-830)
radiation effects on rat, prior to recipient transplantation, in situ or whole-body x, 25:52208
scanning for function, use of rubidium-86 uptake by myocardium and metastable technetium-99-labeled erythrocytes for, 25:52130 (A/CONF.49/P-631)
scanning for myocardial infarct diagnosis, mercury-203-labeled hydroxymercuri(fluorescein), 25:52146

HEART, MECHANICAL
development of implantable plutonium-238-fueled, French research program for, 25:51703 (A/CONF.49/P-637)

HEAT
effects on repair of radiation injuries in amoebae, 25:51999
stimulation of geothermal, using underground nuclear explosions, evaluation of, 25:51664 (UCRL-72769(Rev.1))
uses of reactor waste, for inhibition of atmospheric advection fog formation, 25:51636

HEAT EXCHANGERS (LIQUID-LIQUID)
construction of liquid sodium cooled fast reactor, 25:54071 (A/CONF.49/P-482)
design for liquid sodium cooled fast reactors, 25:54071

XUM

(A/CONF.49/P-482)

HEAT-RESISTING ALLOYS AND METALS
- book: Stability of Refractory Metals, 25:52361
- sintering of refractory, design of devices for measurements of shrinkage during, 25:52314

HEAT SOURCES
- evaluation and testing of, for SNAP-27, 25:51719 (MLM-1831)
- gamma scanning of irradiated, equipment for, 25:51864
- testing of Pioneer radioisotope thermoelectric generator, impact and launch abort, 25:51721 (SC-DR-710101)

HEATED EFFLUENTS
- effects on aquatic life, 25:54005
- monitoring in India of nuclear power plants, 25:53982 (A/CONF.49/P-536)

HEATERS
- design characteristics of electrical, for testing fuel rod cladding, 25:54259(P)

HELIUM
- abundance in 13 planetary nebulae, (E), 25:52514
- behavior in irradiated beryllium oxide during annealing, 25:52475(T) (JPRS-53800, pp 280-91)
- density matrices for ground-state, calculation of first- and second-order, 25:52690
- diffusion in lithium hydride single crystals at 200 to 520°C from lithium-6(n,α) reaction, 25:52495
- dipole shielding factor for, calculation using perturbed uncoupled Hartree--Fock methods, 25:52695
- electron elastic scattering at 100 to 500 eV by, eikonal-theory calculations of, 25:52678
- electron elastic scattering by, third-order calculation of differential cross sections for forward, 25:52648
- electron reactions at 20 to 2000 eV with, cross sections for excitation and polarization of light emitted from, (E), 25:52657
- electron reactions at 26 to 81.6 eV with, differential and integral cross sections for excitation of 2^1S state in, (E/T), 25:52630 (SC-RR-710474)
- energy levels of, multichannel configuration-interaction calculations of energies, widths, probability amplitudes, and wave functions for autoionizing, 25:52626
- energy levels of, time-of-flight measurement of radiative lifetime of 2^1S_0 metastable state, (E), 25:52624
- energy levels of, two-photon decay rate of 2^1S_0 metastable, (T), 25:52611
- energy-level transitions between low-lying S and P states of, f values for, (T), 25:52610
- helium-ion reactions at 10 to 200 keV with, cross sections for electron capture into ground and metastable states in, (E), 25:52651
- helium-ion reactions in eV range with, nonadiabatic effects in excitation in, (T), 25:52643
- hydrogen-atom reactions with metastable atoms of, associative ionization in, (T), 25:52667
- hydrogen-metastable-atom reactions at thermal energies with, quenching cross sections for, (E), 25:52654
- interactions with hydrogen molecules, electron distributions in, (T), 25:52619
- photon reactions with, cross sections for ionization in, (T), 25:52611
- plasma of, bremsstrahlung emission from, (E/T), 25:52810
- polarizability of, calculation by distinguishable-electron method, 25:52691
- polarizability of, calculation by perturbed uncoupled Hartree--Fock methods, 25:52694
- quantum defects for, calculation from phase shifts for elastic scattering of electrons by hydrogen ions, 25:52609
- reactions with hydrogen metastable atoms at low energies, quenching cross sections for, (T), 25:52658
- spectra lines of, in Sun, (E/T), 25:52557
- spectra of, collapse of shock-broadened multiplets in, (T), 25:52620

HELIUM HYDRIDES
- electron density distributions in, (T), 25:52619
- potential-energy surface for ions (HeH_2^+) of, LCAO--MO--SCF calculation of, 25:52618

HELIUM IONS
- abundance in NGC 6826, (E), 25:52513
- dose distribution in tissues, 25:52152 (UCRL-20836)
- electron elastic scattering at low energies by, random phase approximation for, 25:52640
- production of He^-, charge exchange target for high-intensity, 25:53455
- reactions with gases at 10 to 200 keV, cross sections for electron capture into ground and metastable states in, (E), 25:52651
- reactions with helium atoms in eV range, nonadiabatic effects in excitation in, (T), 25:52643
- reactions with nitrogen molecules at 0.50 to 3.0 keV, charge exchange at small scattering angles in, (E), 25:52631
- reactions with nitrogen molecules at 2.5 to 490 eV, cross sections for emission of light between 1200 and 3200 A in, (E), 25:52665
- spectra of, Stark-profile measurements of first four n-a lines of, 25:52612
- stopping cross sections in silicon and amorphous silica at 0.3 to 1.7 MeV, (E/T), 25:52888

HELIUM ISOTOPES
- separation by thermal diffusion, 25:51718(R) (MLM-1816)

HELIUM ISOTOPES He-3
- abundance in H II regions, (E), 25:52548
- atomic motion near helium-4 superfluid surface, 25:52730
- deuteron elastic scattering at 10 and 12 MeV using polarized beam, analyzing power for, (E), 25:53562
- deuteron elastic scattering at 10 MeV using polarized beams, reactance matrix analysis of, (T), 25:53580
- deuteron elastic scattering at 10 MeV using polarized target, analyzing power for, (E), 25:53590
- deuteron elastic scattering at 4 to 10 MeV using polarized beam, tensor moments for, (E), 25:53564
- deuteron elastic scattering at 9.9 and 11.9 MeV using polarized target, asymmetry in, (E), 25:53563
- deuteron reactions (d,p) at 0.5 to 2.5 MeV using polarized beam, analyzing power for, (E), 25:53571
- deuteron reactions (d,p) at 10 MeV using polarized beam, analyzing power for, (E), 25:53565
- deuteron reactions (d,p) at 10 MeV using polarized beams, reactance matrix analysis of, (T), 25:53580
- deuteron reactions (d,p) at 2 to 13 MeV using polarized beam, angular distribution of analyzing power for, (E), 25:53569
- deuteron reactions (d,p) at 2.8 to 10 MeV using polarized beam, tensor moments for, (E), 25:53570
- deuteron reactions (d,p) at 2.8 to 10 MeV using polarized target, analyzing power for, (E), 25:53572
- deuteron reactions (d,p) at 430 keV using polarized beam and target, efficiencies for, (E), 25:53574
- deuteron reactions (d,p) at 6, 8, and 10 MeV using polarized target, proton asymmetries from, (E), 25:53573
- deuteron reactions (d,p) at 6, 8, and 10 MeV using polarized beam, proton asymmetries from, (E), 25:53566
- deuteron reactions (d,p) below 1 MeV, analysis of polarization studies of, 25:53561
- deuteron reactions (d,p) using polarized beam, vector analyzing power near 430-keV resonance in, (E), 25:53568
- deuteron reactions (d,p) with helium-3 at 10 MeV using polarized beam, analyzing power for, (E), 25:53590
- deuteron reactions (d,p) with, polarization--asymmetry relations in, (T), 25:53567
- electromagnetic form factors for, calculations using Reid potential, (T), 25:53520
- energy levels of solid, properties of ground and low-excited, 25:54371 (NYO-3699-59)
- meson (μ^-) capture by, calculations using soft-core Irving--Gunn wave function of rate of, (T), 25:53529
- neutron elastic scattering at low energies, phase-shift analysis of differential cross sections for, (T), 25:53526
- neutron elastic scattering up to 3.4 MeV, polarization in, (T), 25:53549
- neutron reactions (n,p) with, review of experiments on, 25:53514 (CONF-701002-, pp 74-9)
- nuclear charge and magnetic radii and form factors for, calculations using BKR potential, (T), 25:53519
- nuclear charge form factors for, calculations using Irving--Gunn radial wave function with soft core, (T), 25:53529
- photon reactions (γ,p) at 180 to 300 MeV, asymmetry parameter and electric dipole cross section from, (E), 25:53517 (LNF-71/23)
- production of anti-, in proton reactions (p,anti He-3) with aluminum at 70 GeV, cross section for, (E), 25:53021
- proton elastic scattering at 4 to 11 MeV using polarized target, analyzing power for, (E), 25:53590
- proton elastic scattering at 42 MeV using polarized beam, asymmetry in, (E), 25:53552
- proton reactions (p,pd) and (p,2p) at 35 MeV, plane-wave impulse-approximation analysis of spectra from, (E), 25:53523
- proton reactions (p,π^+) at 200 to 800 MeV, cross sections for, (T), 25:53239
- proton scattering at backward angles, contribution of exchange mechanism in, (T), 25:53527
- reactions (He-3,α) with carbon-14 at 3 to 5 MeV, cross sections for, (E), 25:53615
- reactions (He-3,α) with nitrogen-14 at 5 to 10 MeV, angular distributions and excitation functions for, (E), 25:53608(R) (NP-18698)
- reactions (He-3,d) with cadmium-106 and -114 at 18 MeV, Q values, DWBA analysis of differential cross sections, and spectra from, (E), 25:53749 (NP-18927)
- reactions (He-3,He-6) with silicon-28 at 70 MeV, cross sections, Q value, and spectra from, (E), 25:53677
- reactions (He-3,n) with carbon-12 at 3.8 and 4.5 MeV, neutron polarization from, (E), 25:53589
- reactions (He-3,n) with fluorine-19 at 5.9 MeV with subsequent proton decay, spectra from, (E), 25:53682
- reactions (He-3,n) with tritium at 2.7 and 3.6 MeV, neutron polarization from, (E), 25:53581
- reactions (He-3,p) with carbon-12 at 2.4 to 3.6 MeV, proton polarization in, (E), 25:53640
- reactions (He-3,p) with fluorine-19 at 5.9 MeV with subsequent neutron decay, spectra from, (E), 25:53682
- reactions (He-3,p) with lithium-6 at 1.4 to 2 MeV, proton polarization from, (E), 25:53631
- reactions (He-3,t) with nuclei, analysis of quadratic spin-orbit effects in, (T), 25:53858

XUM

reactions (He-e,α) with carbon-13 at 1.2 to 5.4 MeV, angular distributions, excitation functions, and spectra frcm, (E), 25:53627
reactions between ground-state and metastable 2^3S_1 atoms of, cross sections for metastability exchange in, (E/T), 25:52653
reactions with helium-4 atoms, metastability exchange in, (E/T), 25:52653
scattering by A > 40 nuclei below 40 MeV, optical-model potential for elastic, 25:53716
scattering by beryllium-9 and oxygen-16 at 18 MeV, polarization in elastic, (E), 25:53634
scattering by cadmium-106 and 114 at 18 MeV, optical-model analysis of differential cross sections for elastic, (E), 25:53749 (NP-18927)
scattering by carbon-12 at 18 and 20 MeV, polarization in elastic, (E), 25:53634
scattering by helium-3 and -4 atoms at very low energies, Ramsauer--Townsend effect in total cross sections for elastic, (T), 25:52672
scattering by helium-4 at 3 to 5 MeV, phase shifts for elastic, (E), 25:53586
scattering by helium-4 at 8.3 and 13 MeV, absolute polarization for elastic, (E), 25:53588
scattering by nuclei, review of polarization effects in elastic, 25:53839
targets of, compression of polarized, 25:53482
targets of, effect of absorption of pumping light on degree of polarization of optically-pumped, 25:53484
targets of, pulsed NMR method for measurement of polarization of, 25:53483
He-3--He-4, forward-scattering amplitudes and Fermi-liquid factors in dilute solutions of, (T), 25:52732
He-3--He-4, Ising model for lambda transition and phase separation in, 25:52731
He-3--He-4, theory of dilute solutions at low temperatures, 25:52733
He-3--He-4, vortex rings in, discontinuous field-velocity relation for, 25:52735
He-3--He-II, microscopic theory of dilute solutions, hydrodynamic equations for, 25:52754
He-3--He-II, microscopic theory of dilute solutions, linearized hydrodynamic equations and Green functions for, 25:52755

HELIUM ISOTOPES He-4
binding energy of, calculation using renormalized Brueckner--Hartree--Fock method with center-of-mass corrections, (T), 25:53752(R) (ORNL-4659)
binding energy of, calculations using energy-density formalism of total, (T), 25:53610
deuteron elastic scattering at 11.5 MeV, comparison of double scattering and polarized icn source measurements of polarization in, 25:53582
deuteron elastic scattering at 12 MeV using polarized beam, vector and tenscr analyzing power and phase shifts for, (E), 25:53583
deuteron elastic scattering at 2 to 11.5 MeV, phase-shift analysis of, 25:53585
deuteron elastic scattering at 3 to 11.5 MeV using polarized beam, tensor moments for, (E), 25:53584
deuteron elastic scattering at 9.8 MeV using polarized beam, analyzing tensors for, 25:53859
deuteron reactions (d,He-3) with, contribution of exchange mechanism in, (T), 25:53527
elastic scattering at 8.3 and 13 MeV, absolute polarization for, (E), 25:53588
energy levels from helium-3 (n,n) and tritium (p,n) and (p,p) reactions, spin--parity assignments for, (T), 25:53526
energy levels of solid, properties of ground and low-excited, 25:54371 (NYO-3659-59)
helium-3 atom bound states on free superfluid surfaces, 25:52730
helium-3 elastic scattering at 3 to 5 MeV, phase shifts for, (E), 25:53586
ion mobility along vortices of superfluid, negative, (T), 25:52736
meson (π) reactions at high energies, model independent analysis for separation between exchange of natural and unnatural parity in rho production in, (T), 25:53184
neutron elastic scattering at 0.5 to 18 MeV, analyzing power from phase-shift data on, 25:53575
neutron elastic scattering at 17.6, 20.9, and 23.7 MeV, phase shifts for, (E), 25:53576
neutron elastic scattering at 27.3 and 30.3 MeV using polarized beam, asymmetries for, (E), 25:53577
nuclear binding energy and matrix elements for, Brueckner self-consistent calculations using hard-core interactions, (T), 25:53515 (COO-1120-128)
nuclear binding energy and radii of, projected Hartree--Fock calculations with phenomenological and realistic effective interactions, (T), 25:53611
photon reactions (γ,n) and (γ,p) with, multipole analysis using two particle unitarity and isotopic phase shifts, (T), 25:53525
photon reactions at high energies, model independent analysis for separation between exchange of natural and unnatural parity in π production in, (T), 25:53184
proton elastic scattering at 1 to 12 MeV, analysis of polarization using Humblet--Rosenfeld S-matrix theory, 25:53578
proton elastic scattering at 3 to 18 MeV, phase-shift analysis of polarization in, 25:53579
proton scattering at backward angles, contribution of exchange mechanism in, (T), 25:53527
quantized vortex rings liquid II, size of, (E/T), 25:52744
reactions with helium-3 atoms, metastability exchange in, (E/T), 25:52653
scattering by helium-3 and -4 atoms at very low energies, Ramsauer--Townsend effect in total cross sections for elastic, (T), 25:52672
spectra of, wavelength measurement of 1s2p $^3P^o$--$2p^2$ ^3P transition in, 25:52622
transfer of film of superfluid, between 0.3°K and lambda point, (E), 25:52734
triton elastic scattering at 6 to 12.3 MeV, absolute polarization for, (E), 25:53588
triton elastic scattering at 6 to 14 MeV, polarization in, (E), 25:53587
He-3--He-4, forward-scattering amplitudes and Fermi-liquid factors in dilute solutions of, (T), 25:52732
He-3--He-4, Ising model for lambda transition and phase separation in, 25:52731
He-3--He-4, theory of dilute solutions at low temperatures, 25:52733
He-3--He-4, vortex rings in, discontinuous field-velocity relation for, 25:52735
He-3--He-II, microscopic theory of dilute solutions, linearized hydrodynamic equations and Green functions for, 25:52755
He-3--He-II, microscopic theory of dilute solutions, hydrodynamic equations for, 25:52754

HELIUM ISOTOPES He-6
binding energy of, calculations using energy-density formalism of total, (T), 25:53610

HELIUM ISOTOPES He-8
binding energy of, calculations using energy-density formalism of total, (T), 25:53610

HELIUM ISOTOPES He-10
binding energy of, calculations using energy-density formalism of total, (T), 25:53610

HEMATOPOIESIS
radiation effects on, in fasted rats, effects of dose fractionation on γ, 25:52220

HERBICIDES
degradation in soils, carbon-14 tracer study of, 25:51958 (A/CONF.49/P-404)

HEXADECANE
radiolysis of, effects of dose, dose rate, and trace impurities on γ, 25:51522

1-HEXENE
electron energy losses at lcw energies in thin solid films of, (E), 25:52891

HEXOKINASE
radiation effects on activity of, in erythrocytes, brain, and liver of rats, x, 25:51998

HIGH-ENERGY PHYSICS
conference on, (T), 25:53039
experiments in, use of interpretive computer software for, 25:53425 (RHEL/R-221)
High Energy Physics Index. Vol. 9, No. 13, 25:53047
High Energy Physics Index. Vol. 9, No. 14, 25:53046
research at CERN, 1970, 25:53422(R) (NP-18906)
research at Daresbury Nuclear Physics Lab., 1970, 25:52988(R) (NP-18909)
research at Nuclear Physics Institute of University of Paris in 1970, 25:53748(R) (NP-18872)
research program at Argonne synchrotron, 25:53429 (UCRL-20655, pp 38a-58)
research program at Bevatron, 25:53430 (UCRL-20655, pp 59-71)
research program at Brookhaven AGS, 25:53431 (UCRL-20655, pp 72a-90)
research program at CERN synchrotron, 25:53432 (UCRL-20655, pp 91-116)
research program at LAMPF, proposed, 25:52987 (LA-4637)
research program for Harwell synchrotron, 25:53428 (UCRL-20655, pp 2-37)

HIGH-TEMPERATURE GAS-COOLED REACTOR EXPERIMENT
development of, review of, 25:54040 (A/CONF.49/P-738)

HODOSCOPES
data acquisition system for scintillation, for measuring decay of $K_2{}^0$, 25:51896 (UCRL-20636)

HOLMIUM
charged-particle reactions with, relativistic cross sections for L-shell ionization and characteristic x-ray emission in, (T), 25:52639

HOLMIUM ALLOYS AND SYSTEMS
Co--Ho--Ni, magnetic properties of HoCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Fe--Ho--Ni, magnetic properties of HoFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Ho--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)

HOLMIUM ISOTOPES Ho-165
neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)

XUM

neutron reactions at 14.79 to 18.88 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)

HORMONES, ADRENAL
corticosterone, radiation effects on content in adrenal cortex and peripheral blood of rats, time variations of, x, 25:52193
corticosterone, radiation effects on rat synthesis of, x, 25:52194
epinephrine, effects on contractile activity of vas deferens in x-irradiated guinea pigs, 25:52216
norepinephrine, effects on contractile activity of vas deferens in x-irradiated guinea pigs, 25:52216

HORMONES, PARATHYROID
effects on recovery of animals from radiation injuries, 25:52175 (A/CONF.49/P-163)

HORMONES, PITUITARY
adrenocorticotropin, radiation effects on rat synthesis of, x, 25:52194

HORMONES, SEX
estrogens, effects on metabolism of iron-59 and manganese-54 in chickens, 25:51983
testosterone, effects on leukocyte reserves in bone marrow of whole-body x-irradiated rats, effects of radiation dose, sex, and time of administration on stimulatory, 25:52110

HOT CELLS
decontamination of ANL Fuel Cycle Facility, equipment and methods for, 25:51781
description of USSR, for materials research, 25:51765(T) (JPRS-53800, pp 4-23)
design of californium facility in TURF, 25:51791
design of demountable shielded, for handling radioactive materials, 25:51842(P)
design of inert atmosphere prototype, for analysis of FFTF coolant sodium, 25:51797
filters for Hot Fuel Examination Facility, design of argon atmosphere HEPA, 25:51798
fire prevention and control in, methods for, 25:51785
maintenance of ANL Fuel Cycle Facility, after 6-year remote operation, methods for in-cell, 25:51782
materials transfer in alpha--gamma, design of disposable plastic container for, 25:51802
operation of Fuels and Examination Facility, for inspection of EBR-II capsules and fuels, 25:51783
operation of JAERI, review of experience in, 25:51780

HUMBOLDT BAY POWER REACTOR
emergency condenser condensate return valve for, failure of, 25:53960 (DOCKET-50133-67)

HUNGARY
radiation processing of foods in, review of research programs on, 25:52281 (A/CONF.49/P-323)
radioactive materials shipping in, testing of Type A packaging for, (E), 25:51810
radioisotope uses in, review of industrial, 25:51692 (A/CONF.49/P-325)
research in nuclear medicine and radiobiology in, 25:52125 (A/CONF.49/P-324)

HYDROCARBONS
radiation chemistry of, research progress on, 25:51511(R) (ORO-3106-41)
radiolysis of vapors of, relationship of mass spectra to ionic fragmentation in, 25:51517

HYDROCHLORIC ACID
determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)

HYDRODYNAMICS
equation of state in, compactness theorem for nonlinear, 25:54385 (SC-RR-710302)

HYDROGEN
abundance in 13 planetary nebulae, (E), 25:52514
abundance in interstellar space, Lyman-α absorption measurement for, (E), 25:52526
abundance in Sc galaxies, (E/T), 25:52570
binding of positrons to atoms of, impossibility of, (T), 25:52628
density of slushy, calibration of reference system for measuring, 25:51674 (NASA-SP-5938-1)
determination in graphite by combustion and vapor pressure measurements, 25:51358 (AEEW-M-1028)
determination in metals, instrument design for, 25:54393 (Y-DA-4214)
deuteron reactions (d,n) at 12 MeV using polarized beam, neutron polarization at 0° in, (E), 25:53546
dielectric constant of liquid, 25:51463
diffusion in niobium at 20 to 273°K, internal friction studies of, 25:52323 (COO-1198-834)
effects of preinjected, on electron-induced dislocation loops in 1100 aluminum, 25:52413
electron elastic scattering by atomic, resonance structures in, (T), 25:52680
electron reactions with atomic, prior and post approximations in calculation of excitation cross sections for, 25:52676
electron reactions with molecular, cross sections for excitation of parity-forbidden transitions in, (T), 25:52661
energy levels of atomic, intensity oscillations in Hβ radiation from excited, (E), 25:52623
equation of state of dense plasma in metallic, (T), 25:52458 (UCRL-51055)
exchange reaction with tritium oxide (HTO) on intermetallic NiGa, 25:51452
force constants for molecular, effects of improved wave functions in calculation of, 25:52617
formation of molecular, in γ-irradiated lithium hydride, calorimetric evidence of, 25:51484
helium-ion reactions at 10 to 200 keV with molecular, cross sections for electron capture into ground and metastable states in, (E), 25:52651
ionization of atomic, in electric fields, spontaneous, (T), 25:52621
ionization of molecular, model for calculation of rates of auto-, 25:52625
neutron capture by, test for determination of S-triplet part of thermal, 25:53535
neutron elastic scattering at 29 MeV, angular distribution for, (E), 25:53513 (CONF-701002-, pp 63-73)
neutron total cross section below 30 MeV, search for structure in, (E), 25:53512 (CONF-701002-, pp 57-62)
neutron total cross sections at 0.5 to 21 MeV, (E), 25:53511 (CONF-701002-, pp 51-6)
neutron total cross sections at 1.5 to 27.5 MeV, 25:53510 (CONF-701002-, pp 42-50)
permeation of electrolytically generated atoms of, through lead foil, radiochemical and electrochemical studies of, 25:51464
plasma of, production by laser irradiation of solid targets, (E), 25:52833 (IPP-IV-16)
plasma of, production using palladium and titanium sources, (E), 25:52836
plasma of, propagation of strongly ionizing shocks in, 25:52839
potential-energy curve of ground state of molecular, 25:52627
proton reactions at 0.1 to 16 keV with atomic, use of molecular potential curves in calculation of 2p excitation in, 25:52666
proton reactions at 1 keV to 1 MeV with atomic, Glauber approximation for total cross sections for 1s--2s and 1s--2p excitations in, (T), 25:52650
proton reactions at low energies with atomic, generalized impact-parameter method for, 25:52637
proton reactions with 1s atoms of, perturbed-stationary-state approximation for electron capture in. (T), 25:52647
proton reactions with atomic, Glauber approximation for elastic scattering and excitation in, 25:52634
proton reactions with atomic, radial transition matrix elements for ionization in, (T), 25:52632
radioinduced exchange reactions with heavy water at 84 to 381°C, 25:51495 (COO-1116-19)
reactions between atoms and molecules of, at low energies, close-coupling calculations of differential and total cross sections for elastic scattering and rotational excitation in, 25:52641
reactions between excited and ground-state atoms of, cross sections for associative ionization in, (T), 25:52645
reactions between ground-state and metastable atoms of, mechanisms of quenching in, (T), 25:52656
reactions of molecules of, with helium, electron distribution in, (T), 25:52619
reactions with atoms and molecules at low energies of metastable atoms of, quenching cross sections for, (T), 25:52658
reactions with cyclohexene, disproportionation and recombination of cyclohexyl radicals from, 25:51527
reactions with helium at thermal energies of metastable atoms of, quenching cross sections for, (E), 25:52654
reactions with helium metastable atoms of atomic, associative ionization in, (T), 25:52667
reactions with hydrogen ions (H^-) at high energies of atomic, eikonal and JWKB approximations for charge exchange and electron detachment in, 25:52679
sorption by tungsten surfaces, flash-method studies on, 25:52352
spectra lines of, in Sun, (E/T), 25:52557
spectra of, collapse of shock-broadened multiplets in, (T), 25:52620
wave functions for atomic, completeness of set of relativistic, (T), 25:52688
yields from α radiolysis of gaseous ammonia or ethane, effects of hydrogen sulfide or nitrous oxide on, 25:51518
yields from reactions of molten uranium oxide (UO_2) with water, (E), 25:54159 (IN-ITR-108)

HYDROGEN IONS (H^-)
electric discharges rich in, low-frequency oscillations of, (E), 25:52881
energy of ground state of, lower bound for, (T), 25:52628
polarizability of, calculation by distinguishable-electron method, 25:52691
production of polarized, for injection into Van de Graaff accelerator, source for, 25:53465
production of, LAMPF linac source for, 25:53417 (LA-DC-13014)
reactions with hydrogen atoms at high energies, eikonal and JWKB approximations for charge exchange and electron detachment in, 25:52679
reactions with oxygen molecules, statistical approximation for energy distribution of products from,

25:52671

HYDROGEN IONS (H_2^+)
- electron reactions with excited, cross sections for dissociative recombination in, (T), 25:52645

HYDROGEN ISOTOPES
- use for determining age and size of water deposits in soil in Latin America, 25:51967 (A/CONF.49/P-756)

HYDROGEN SULFIDES
- effects on yields from α radiolysis of gaseous ammonia or ethane, 25:51518
- radiolysis of, design of thin aluminum or beryllium calorimeter dosimeter for measurement of hydrogen yields from electron, 25:51915

HYDROGEN SYSTEMS
- H--T, preparation of gas standards of, 25:51584(R) (MLM-1792)

HYDROLOGY
- isotope uses in, in France, 25:51613 (A/CONF.49/P-634)
- radioisotope uses in, in Mexico, current and future programs for, 25:51615 (A/CONF.49/P-750)
- radioisotope uses in, in Poland, 25:51693 (A/CONF.49/P-334)
- radioisotope uses in, in Spain, 25:51706 (A/CONF.49/P-727)
- radioisotope uses in, review on, 25:51614 (A/CONF.49/P-769)
- tritium uses in, review of, 25:51627

HYDROMAGNETIC WAVES
- effects on solar-wind streaming properties, (T), 25:52560
- propagation in plasma, anisotropic instabilities in, (T), 25:52875

HYPERFRAGMENTS
- gamma spectra from Λ-H^* and Λ-He^* from meson (K^-) capture on lithium-6 and lithium-7, 25:53033

HYPERONS
- decay amplitudes in composite model, nonleptonic, 25:53124
- decay of, contribution of second-class currents to μ--e ratio in leptonic, 25:53116
- decays of, sum rules for parity-conserving and parity-violating amplitudes in weak nonleptonic, 25:53121

HYPERONS (Λ)
- coupling constant for KΛN, differential cross sections for $\gamma + p \to K^+ + \Lambda$ backward interactions at 1 and 2 GeV for, (E), 25:52992 (LAL-RI-71-3)
- decay $\Lambda \to p + l^- +$ anti ν, second-class currents and μ--e ratio for, 25:53116
- decay of, $\Delta I = {}^1/_2$ sum rules in P-wave nonleptonic, 25:53110
- interactions $\Lambda + N \to \Lambda + N$, multichannel calculation of cross sections and phase shift for, 25:53232
- interactions $\Lambda + N \to \Sigma + N$, multichannel calculation of cross sections and phase shifts for, 25:53232
- interactions $\Lambda + N$ at low energies, multichannel calculation of scattering lengths and effective ranges for, 25:53233
- production in $\gamma + p \to K^+ + \Lambda$ interactions at 1 and 2 GeV, differential cross sections for, (E), 25:52992 (LAL-RI-71-3)

HYPERONS (Σ)
- decay of, $\Delta I = {}^1/_2$ sum rules in P-wave nonleptonic, 25:53110
- interactions $\Sigma + N \to \Sigma + N$, multichannel calculation of cross sections and phase shifts for, 25:53232
- interactions $\Sigma + N$ at low energies, multichannel calculation of scattering lengths and effective ranges for, 25:53233

HYPERONS (Σ^-)
- decay $\Sigma^- \to n + l^- +$ anti ν, second-class currents and μ--e ratio for, 25:53116

HYPERONS (Σ^+)
- interactions $\pi^- + \Sigma^+ \to \pi^+ + \Sigma^-$, $\pi\Sigma\Sigma$ coupling constant and $I = 2$ $\pi\Sigma$ resonance from, (T), 25:53217

HYPOXIA
- effects of potassium cyanide induced, on hexokinase activity in brain, erythrocytes, and liver of rats, 25:51998

I

ICE
- sputtering of grains of, in H II regions, (T), 25:52575

IMIDES
- polymers, methods for preparation of, 25:54349 (BDX-613-509)

IMMUNE REACTIONS
- induction in domestic animals against helminths using irradiated larvae, 25:52007 (A/CONF.49/P-355)
- radiation effects on mouse, effects of implanted lymphoid cells on restoration of whole-body, 25:52006 (A/CONF.49/P-320)
- radioinduced suppression of, against kidney transplants in man using extracorporeal blood exposure, beta or gamma, 25:52149 (A/CONF.49/P-642)

INCOLOY 800
- radiation effects on swelling and mechanical properties of, fast neutron, (E), 25:54096(R) (GEAP-10028-38)

INCONEL
- removal of coating of, from fissile material bundles using azeotropic mixture of hydrofluoric acid and water, 25:51594

INDEXES
- on microscopic neutron data, CINDA 71, 25:53493 (TID-25736)

INDIA
- agro-industrial complexes for, development of dual purpose process heat and power reactors for, 25:54238 (A/CONF.49/P-529)
- nuclear power development in, program for, 25:53904 (A/CONF.49/P-532)
- nuclear power economics in, effects of recent cost trends on, 25:53945 (A/CONF.49/P-527)
- nuclear power plant economics in, model for optimization of, 25:53946 (A/CONF.49/P-528)
- nuclear power plants in, monitoring and control by chemical, radioactive, and thermal effluents from, 25:53982 (A/CONF.49/P-536)
- nuclear technology development in, impact of, 25:54334 (A/CONF.49/P-742)
- nuclear technology training programs in, 25:54033 (A/CONF.49/P-540)
- radiation levels in Kerala coast region of, survey on effects on human populations of natural background, 25:52230 (A/CONF.49/P-535)
- radiation processing of food in, programs for, 25:52284 (A/CONF.49/P-740)
- radioisotope and radiation source uses in industry, radiation processing, and hydrology in, 25:51612 (A/CONF.49/P-539)
- thorium reserves in, estimates of, 25:51641 (A/CONF.49/P-531)
- uranium reserves in, estimates of, 25:51641 (A/CONF.49/P-531)

INDIAN POINT POWER REACTOR, UNIT 1
- control rod drive for, malfunction of, 25:53959 (DOCKET-50003-88)

INDIUM
- diffusion in cadmium single crystals, anisotropic, 25:52358
- diffusion in single crystals of, effects of pressure on self-, (E/T), 25:52950
- electron--phonon coupling constant of, from optical measurements, 25:52757
- hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
- neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
- preparation of spherical monocrystalline, in space, development of methods for, 25:52308

INDIUM ALLOYS AND SYSTEMS
- Ag-base--In, yielding in single crystals of, serrated, 25:52322(R) (COO-916-24)
- Ag-base--In, Zener relaxation and diffusion in, comparison of, 25:52340
- Au--In, properties of dilute, electric and thermal, 25:52369
- Gd--In--La, superconducting pair density in La/sub 3-x/Gd/sub x/In above transition temperature, from Pauli spin susceptibility, 25:52759
- In--Pb, electric conductivity of mixed state of superconducting, 25:52756
- In--Pb, properties and structure of, for use in electric contacts, 25:52365

INDIUM ISOTOPES In-107
- energy levels from cadmium-106 (He-3,d) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:53749 (NP-18927)

INDIUM ISOTOPES In-109
- energy levels and properties of, Nuclear Data Sheets for, (E), 25:53757

INDIUM ISOTOPES In-111
- energy levels from cadmium-111 (p,n) reactions, lifetimes of, (E), 25:53752(R) (ORNL-4659)

INDIUM ISOTOPES In-113
- effectiveness of transferrin-incorporated metastable, for liver scanning, 25:52119 (A/CONF.49/P-17)
- energy levels from cadmium-113 (p,n) reactions, lifetimes of, (E), 25:53752(R) (ORNL-4659)
- use of colloids of metastable, for liver scanning, 25:52133 (A/CONF.49/P-739)
- use of metastable, for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)

INDIUM ISOTOPES In-115
- deuteron inelastic scattering at 12 MeV, spectra from, (E), 25:53749 (NP-18927)
- energy levels from deuteron inelastic scattering and cadmium-114 (He-3,d) reactions, spectroscopic factors and spin--parity assignments for, (E), 25:53749 (NP-18927)
- energy-level transitions from deuteron inelastic scattering and cadmium-114 (He-3,d) reactions, branching ratios for, (e), 25:53749 (NP-18927)
- neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)

INDONESIA
- radiation processing of food in, progress report on, 25:52276 (A/CONF.49/P-115)

INDUSTRIAL MANAGEMENT
- cost of automation, 25:54394 (Y-EC-93)

INFORMATION CENTERS
- description of International Nuclear Information System,

- 25:54322 (A/CONF.49/P-206)
- national network of INIS in Japan, 25:54323 (A/CONF.49/P-266)

INFORMATION RETRIEVAL SYSTEMS
- development of computer-based bibliographic, 25:54391 (UCRL-51040)

INFRARED RADIATION
- emission from atmospheric N_2O, (T), 25:52718
- emission from extraterrestrial sources, (T), 25:52718

INSECTA
- Bombyx sp., radiation effects on, in relation to mortality and mutation frequency, effects of strain differences on x, 25:52027
- Ceratitis capitata, control by male radiosterilization technique, 25:51967 (A/CONF.49/P-756)
- Drosophila melanogaster, radioinduced mutations in, genetic analysis of x, 25:52031
- Drosophila melanogaster, radiosensitivity of adult and embryo, γ and x, 25:52026
- Ephestia cautella, inheritance of radioinduced sterility in F_1 and F_2 progeny of, 25:52184 (A/CONF.49/P-2)
- eradication using radiation, joint program of FAO and IAEA for research on, 25:52285 (A/CONF.49/P-772)
- Laspeyresia pomonella, radiosterilization of female and male, for population control in South Africa during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)
- Laspeyresia pomonella, radiosterilization of female and male, for population control in apple orchards, γ, 25:52279 (A/CONF.49/P-162)
- population control by release of radiosterilized males, review of programs for, 25:51968 (CONF-710428-, Paper 5)
- radiosterilization in UAR, review of, 25:52278 (A/CONF.49/P-136)
- Sitophilus granarius, radiosterilization in corn, effects of dose on, 25:52288
- Sitophilus oryzae, radiation effects on survival of, in rice, effects of dose on γ, 25:52276 (A/CONF.49/P-115)
- Sitophilus oryzae, radiosterilization in rice, effects of dose on, 25:52288
- Tribolium confusum, radiosterilization in wheat, effects of dose on, 25:52288

INSTRUMENTS
- conference on, Houston, Texas, Oct. 1969, 25:51939
- conference on, Houston, Texas, Oct., 1969, 25:51940
- development in Yugoslavia, 25:51846 (A/CONF.49/P-352)
- uses of radiometric, in agriculture and industry in USSR, 25:51697 (A/CONF.49/P-465)

INTENSE NEUTRON GENERATOR (ING)
- magnet pole pieces for, Monte Carlo methods for design of, 25:53436

INTERFEROMETERS
- use for diagnostics of theta-pinch plasmas, 25:52782 (IPP-1/117)

INTERNAL CONVERSION
- coefficients for K, L_1, L_2, and L_3 shells, comparison of Hager--Seltzer and Sliv--Band, (T), 25:53751 (ORNL-4655)

INTERNATIONAL ATOMIC ENERGY AGENCY
- nuclear physics research programs with Norway, Poland, Yugoslavia, and, description of joint, 25:54261 (A/CONF.49/P-330)

INTERSTELLAR MATERIAL
- optical properties of graphite--iron--silicate grains, (T), 25:52576

INTESTINES
- radiation effects on survival of cells in normal mouse, comparison of RBE for fast neutron and x, 25:52200
- radiation protection of human, during therapy of neoplasms of pelvic region, anatomical position for, 25:52154

INVARIANCE PRINCIPLES
- C violation in electromagnetic and semi-strong interactions from rho $\to 3\pi$ decay, 25:53183 (UCRL-20655, pp 250a-76)
- C, P, and T invariance for relativistic wave equations for arbitrary-spin particles, (T), 25:53263
- C, P, and T invariance of c-number infinite-component wave function, 25:53252
- charge conjugation conservation in positronium decay, test of, (T), 25:53241 (AD-720854)
- charge conjugation in scalar electrodynamics, unified field formalism for, (T), 25:53274
- charge symmetry breakdown from ω--rho mixing in $\pi^+ + n \to \pi^+ + \pi^- + p$ and $\pi^- + p \to \pi^+ + \pi^- + n$ interactions, 25:53183 (UCRL-20655, pp 250a-76)
- CP and T violation in weak interactions, review on, 25:53102 (UCRL-20655, pp 203-19)
- parity-violating force in nuclear reactions, method for measuring, (T), 25:53244
- scale invariance breaking in field theory, 25:53245
- scale invariance in self-interacting scalar lambdaphi^4 theory, 25:53301
- time reversal invariance in angular distributions for $n + p \to d + \gamma$ interactions at 475 to 750 MeV, (E), 25:53016

IODINE
- determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
- determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- determination in x-ray contrasters, colorimetric, 25:51367
- removal by reactor containment systems, MIRA code for analysis of, 25:54152 (BMI-1915)
- removal from pressurized water reactor containment system, performance of filters and sprays for, (E), 25:54155 (BNWL-1592)
- separation from gases by isotopic exchange using silver iodide, 25:51569 (A/CONF.49/P-703)

IODINE IONS
- reactions with atoms having Z = 6 to 82 at 15 to 60 MeV, production of L-subshell vacancies in, (E), 25:52603

IODINE ISOTOPES I-125
- effectiveness for therapy of thyrotoxicosis, 25:52119 (A/CONF.49/P-17)
- use for scanning thyroid gland for function, 25:52130 (A/CONF.49/P-631)
- use with iodine-131 for interstitial radiotherapy of hyperthyroidism in man, 25:52150 (A/CONF.49/P-654)

IODINE ISOTOPES I-127
- exchange with iodine-131 between gases and silver iodide in presence of nitrogen oxides, 25:51569 (A/CONF.49/P-703)
- neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
- neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)

IODINE ISOTOPES I-129
- energy levels from tellurium-128 proton resonances, spin assignments for isobaric analog, (E), 25:53792

IODINE ISOTOPES I-131
- content of milk in Central, North, and South America during February, 1971, 25:52058
- content of milk of cows exposed to nuclear explosion debris at Nevada Test Site and fed contaminated forage, 25:52012 (PNE-914-F)
- content of rat thyroid following injection, effects of homogenization and hydrolysis on accuracy of in vitro determinations of, 25:51989
- distribution in tissues of cattle exposed to nuclear explosion debris at Nevada Test Site, 25:52012 (PNE-914-F)
- effectiveness for therapy of human thyroid carcinomas, 25:52173
- effectiveness of lipidol-incorporated, for endolymphatic therapy of neoplasms of human lymph system, 25:52153
- effects of subcutaneous injection of, on motility of sperm in mice, 25:52188
- effects on manifestation of anaplastic thyroid cancer in man following therapy of toxic nodular goiter, 25:52237
- exchange between gases and silver iodide in presence of nitrogen oxides, 25:51569 (A/CONF.49/P-703)
- incorporation in immunoglobulins for estimating immune reaction of animals to Fasciola heptica and Dictyocaulus filaria, 25:52007 (A/CONF.49/P-355)
- metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
- use for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)
- use of hippuran-incorporated, for scanning kidneys or plasma clearance rate, 25:52120 (A/CONF.49/P-121)
- use of human serum albumin-incorporated, for hematological studies on malnourished children, 25:51965 (A/CONF.49/P-147)
- use of human serum albumin-incorported or sodium iodide-incorported, for pathological blood flow studies in man, 25:52126 (A/CONF.49/P-332)
- use of serum albumin-incorporated, in combination with xenon-133 for bilateral cardiac blood flow studies, 25:52126 (A/CONF.49/P-332)
- use with iodine-125 for interstitial radiotherapy of hyperthyroidism in man, 25:52150 (A/CONF.49/P-654)

IODINE ISOTOPES I-133
- beta decay of, gamma spectra and log ft of, (E), 25:53778

IODINE ISOTOPES I-135
- beta decay of, gamma spectra and log ft of, (E), 25:53778

ION-ACOUSTIC WAVES
- propagation in plasma, effect of electron--ion collisions on, (T), 25:52883

ION BEAMS
- interactions with plasma, ion cyclotron instabilities from, (E), 25:52840 (IAE-2044)
- interactions with plasma, low-frequency oscillations from, (E), 25:52812
- use to thin semiconductors for transmission electron microscopy, 25:52969

ION COUNTERS
- design of, 25:54364 (INP-748)

ION EXCHANGE
- bibliography on isotope separation by, 25:51578 (IFA-RC-6)

ION EXCHANGE MATERIALS
- properties of oxide and hydrous oxide, review of, 25:51596
- radiation effects on properties of sulfofuran, γ, 25:51485

ION EXCHANGERS
  development for separation of uranium fission products prior to analysis, automatic, 25:51550 (A/CONF.49/P-211)
ION SOURCES
  beam output of Lamb-shift polarized, air leak method for increasing, 25:53415 (LA-DC-12943)
  beam polarization measurement of LASL Lamb-shift, quench ratio method for absolute, 25:53473
  charge exchange reactions in Lamb-shift polarized, energy dependence of, 25:53472
  description of H$^-$, for LAMPF linac, 25:53417 (LA-DC-13014)
  description of Lamb-shift polarized, 25:53471
  description of Lamb-shift polarized, for Univ. of Washington Van de Graaff accelerator, 25:53469
  description of Lamb-shift polarized, for Van de Graaff accelerators, 25:53470
  description of polarized lithium, for Van de Graaff accelerator, 25:53466
  description of polarized negative hydrogen, for Van de Graaff accelerator, 25:53465
  description of polarized negative, for Van de Graaff accelerator, 25:53464
  description of polarized negative, for Van de Graaff accelerator, 25:53462
  description of polarized, for Karlsruhe cyclotron, 25:53467
  design and operating parameters of Penning, optimization of, 25:53449
  design and operation of Lamb-shift polarized, 25:53459
  design of high-intensity He$^-$, using sodium vapor charge exchange target, 25:53455
  development of polarized, status of, 25:53419 (LA-DC-13016)
  performance of polarized, for Grenoble cyclotron, 25:53463
  performance of polarized, for LASL Van de Graaff accelerator, 25:53468
  theory of polarized, 25:53414 (LA-DC-12942)
IONIZATION
  book: Fundamentals of Gaseous Ionization and Plasma Electronics, 25:52794
IONOSPHERE
  auroral arcs in, occurrence of E x B instability in and effects on, (T), 25:52727
  D region, radio-wave absorption in, new aspects of winter anomaly of, (E), 25:52728
  disturbances in, relation to parameters of internal gravity waves induced by, (E/T), 25:52729
  E region, ionization in, effect of Sun--Earth distance on, (E/T), 25:52720
  E region, parameters concerning Appleton's seasonal anomaly in, (E/T), 25:52719
  E region, radio-wave absorption in, new aspects of winter anomaly of, (E), 25:52728
  E region, relation between peak electron density and sunspot number, world-median, (E/T), 25:52721
  E region, wind and temperature oscillations from incoherent scatter soundings between 95 and 140 km, semi-diurnal, (E), 25:52724
  electron density variations in, remote double resonance coupling of radar energy to, (T), 25:52717
  F region, critical frequency and height in midlatitude, effect of neutral-air winds on, (E/T), 25:52725
  F region, electrodynamic-drift effects in midlatitude, storm-associated, (T), 25:52722
  F region, radio-wave absorption in, new aspects of winter anomaly of, (E), 25:52728
  F2 layer, critical frequency in opposite hemispheric latitudes of summertime, effect of neutral-air winds on, (E/T), 25:52725
  gravity-wave propagation in, parameters from TID-associated electron content, (E/T), 25:52729
  spectroscopy in auroral, photographically recorded relative intensities of vacuum-uv, (E), 25:52723
  wave propagation in, from atmospheric nuclear explosions, (T), 25:51657 (AD-716601)
IONS
  book: Atomic and Molecular Radiation Physics, 25:52889
  book: Atomic Collision Theory, 25:52652
  dipole shielding factors for two- and four-electron, calculation using perturbed uncoupled Hartree--Fock methods, 25:52695
  electron elastic and inelastic scattering at low energies by, random phase approximation for, 25:52640
  energy-level transitions of helium isoelectronic sequence up to Z = 10, f values for, (T), 25:52610
  polarizability of two- and four-electron, calculation by perturbed uncoupled Hartree--Fock methods, 25:52694
  properties of two-electron, distinguishable-electron method for calculation of, 25:52691
  properties of, perturbed uncoupled Hartree--Fock methods for calculation of second-order, 25:52694
  properties of, perturbed uncoupled Hartree--Fock methods for calculation of, 25:52695
  reactions with atoms and ions, relation between quasi-classical and quantum mechanical theories of, 25:52669
  reactions with molecules, optical-model analysis of energy distribution of products from, 25:52671
IRIDIUM
  book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362
  neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
IRIDIUM ALLOYS AND SYSTEMS
  Ir--Mo, properties for use as barrier material in fuel capsules for cermet fuels, 25:51717(R) (MDC G-3124)
IRIDIUM ISOTOPES
  prepartion of carrier-free radioactive, by electrolytic precipitation, 25:51539
IRON
  abundance in 180 G and K giant stars, (E), 25:52502
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  compatibility with aluminum nitride, boron nitride, and silicon nitride at high temperatures, 25:52299
  compatibility with aluminum oxide, calcium oxide, and magnesium oxide at high temperatures, 25:52299
  compatibility with boron carbide and silicon carbide at high temperatures, 25:52299
  compatibility with rare earth oxides at high temperatures, 25:52299
  compatibility with transition metal carbides at high temperatures, 25:52299
  compatibility with transition metal diborides at high temperatures, 25:52299
  compatibility with transition metal disilicides at high temperatures, 25:52299
  compatibility with transition metal nitrides at high temperatures, 25:52299
  compatibility with transition metal oxides at high temperatures, 25:52299
  copper microchemistry of infiltrated powder compacts of, 25:54354 (COO-1198-844)
  determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
  determination by titration with products from γ radiolysis of water, 25:51370
  determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  development of atomic energy in, prospects for peaceful, 25:54328 (A/CONF.49/P-516)
  effects on free radical yields from x-irradiated ferritin and transferrin in dry state, 25:51995
  effects on photometric determination of niobium, 25:51372
  energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
  magnetic fields in, 25:51544(R) (NYO-4177-103)
  meson (μ^+) reactions at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
  meson (μ^-) reactions at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
  metabolism in chickens, iron-59 tracer study of effects of estrogens on, 25:51983
  Moessbauer spectra of trivalent, in ice, 25:51544(R) (NYO-4177-103)
  neutron reactions at 1 to 2 MeV, total cross sections for, (E), 25:53702
  neutron reactions at 1.001 to 2.025 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
  neutron resonance parameters for, (E), 25:53702
  optical properties of interstellar grains containing graphite--iron--silicate mixtures, (T), 25:52576
  production of, uses of nuclear energy in, 25:52310
  radiation effects on mechanical properties of Armco, neutron, 25:52397(T) (JPRS-53800, pp 113-21)
  radioinduced atomic displacement in alpha-phase, computer simulation of annealing of neutron, 25:52392 (HEDL-SA-202)
  reactions of ferric, with hydrated electrons from radiolysis of acid aqueous solutions, 25:51523
  thermal capacity of, electronic and magnon, 25:52958
  ytterbium ion implantation at 130 keV in, distribution of damage from, 25:52929
IRON ALLOYS AND SYSTEMS
  C--Cr--Fe-base--Mn--Si, production of sintered electrode strips of, method for, 25:52311
  C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
  C--Fe--Ni, elastic constants of, 25:54366 (IS-T-461)
  Ce--Co--Fe, lattice constants for Ce$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--misch metal, lattice constants for MM$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Nd, lattice constants for Nd$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Pr, lattice constants for Pr$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Fe--Sm, lattice constants for Sm$_2$(Co/sub 1-x/Fe/sub x)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)

XUM

Co--Fe--Y, lattice constants for Y_2(Co/sub 1-x/Fe/sub x/$)_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
Cr--Fe--Ni, radiation effects on mechanical properties of, fast neutron, 25:52398(T) (JPRS-53800, pp 122-43)
Cr--Fe--Ni, testing of bars and rods of, for nuclear applications, standard methods for nondestructive, 25:52350
Cr--Fe--Ni, testing of plates of, for nuclear uses, standard method for ultrasonic, 25:52335
Cr--Fe--Ni, testing of seamless pipe and tube of, for nuclear uses, standard methods for nondestructive, 25:52349
Cr--Fe-base, radiation effects on mechanical properties of, neutron, 25:52397(T) (JPRS-53800, pp 113-21)
Cu--Fe--Ti, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
Dy--Fe--Ni, magnetic properties of DyFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Eu--Fe--O, compound formation in EuO--Eu_2O_3--Fe_2O_3--Fe portion of, (E/T), 25:52455 (CONF-711001-(Vol.2), pp 764-74)
Fe--Gd--Ni, magnetic properties of Gd(Fe/sub 1-x/Ni/sub x/$)_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
Fe--Ho--Ni, magnetic properties of HoFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Fe--UO_2, fission product distribution in molten, at 2850 to 3000°C, 25:52318(R) (ANL-7820)
Fe-base--W, thermal capacity of, electronic and magnon, 25:52958

IRON CHLORIDES $FeCl_3$
Moessbauer spectra of hexahydrate of, 25:51544(R) (NYO-4177-103)

IRON IONS
reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675

IRON ISOTOPES Fe-54
proton inelastic scattering at 10 MeV, coupled-channels and statistical-model analyses of proton spin-flip probability in, (E/T), 25:53701

IRON ISOTOPES Fe-55
abundance in lunar rocks, (T), 25:52497
energy levels from (d,p) reactions, (E), 25:53725

IRON ISOTOPES Fe-56
neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
proton inelastic scattering of 30.3 MeV, optical-model analysis using potential derived from nuclear matter distributions, (T), 25:53717

IRON ISOTOPES Fe-59
binding to proteins of gastric juice and gastrointestinal extracts of swine, 25:51983
metabolism in chickens, effects of estrogens on, 25:51983
retention in sheep following intravenous injection, effects of EDTA on, 25:51985
use for hematological studies on malnourished children, 25:51965 (A/CONF.49/P-147)

IRON SULFATES $FeSO_4$
radiolysis of, trivalent iron yields from, (E), 25:51908

IRRADIATION FACILITIES
design criteria for multipurpose, 25:51668 (A/CONF.49/P-804)
design for fluids or solids, 25:51680(P)
design for low-temperature irradiation in triton reactor, 25:51684
design for radiotherapy using γ and neutron sources, 25:51728(P)
development of French, progress in, 25:51667 (A/CONF.49/P-636)
dosimetry for biological, at thermal reactors, 25:52077
role in developing Canadian nuclear competence, 25:51665 (A/CONF.49/P-152)

IRRADIATION TECHNIQUES
uses in agricultural research in developing countries, review of, 25:51708 (A/CONF.49/P-768)
uses in agriculture and food sciences in Spain, review of, 25:51707 (A/CONF.49/P-728)
uses in agriculture, industry, and medicine in Bulgaria, review of, 25:51690 (A/CONF.49/P-107)
uses in industry and research in Spain, review of, 25:51706 (A/CONF.49/P-727)

ISOCYANIC ACID, 4-METHYL-m-PHENYLENE ESTER
preparation of, 25:54346 (BDX-613-506)

ISOTOPE DILUTION ANALYSIS
development of automatic, for nuclear safeguards system in West Germany, 25:51759 (A/CONF.49/P-809)

ISOTOPE EFFECTS
use of kinetic primary deuterium, as criterion of transition-state structure, 25:51457

ISOTOPE SEPARATION METHODS
bibliography on ion exchange, 25:51578 (IFA-RC-6)
description and economics of packed column, for boron-10 production, 25:51720 (NUMEC-3292-20)
developments in France, 25:51700 (A/CONF.49/P-605)
equipment for, digest of USAEC regulations for export and import of, 25:51772 (WASH-1163)
performance of countercurrent column, for multicomponent mixtures, mathematical analysis of, 25:51662
research progress on low-temperature and thermal diffusion, 25:51718(R) (MLM-1816)
theory for use in nonisotopic technology, 25:51730

ISOTOPES
concentration at outlet of stationary countercurrent column following separation from multicomponent mixture, calculation of asymptotic, 25:51662

ISRAEL
nuclear medicine in, review of, 25:52119 (A/CONF.49/P-17)
radiation processing of food in, program for commercialization of, 25:52274 (A/CONF.49/P-12)

ITALY
fuel fabrication activities in, review of, 25:52421 (A/CONF.49/P-181)
nuclear power plants in, cost analysis for development of liquid metal cooled fast breeder, 25:54019 (A/CONF.49/P-175)
power requirements for, predictions to 1990 for, 25:54042 (A/CONF.49/P-818)

J

JAPAN
fuel element shipping in, drop-impact testing of containers for, 25:51838
fuel shipping in, drop-impact testing of containers for, 25:51837
nuclear power development in, long-range program for, 25:54023 (A/CONF.49/P-298)
programs in nuclear medicine and radiotherapy in, review of, 25:52124 (A/CONF.49/P-263)
radiation processing of food in, development of facilities for, 25:52280 (A/CONF.49/P-256)
radiation programs at Atomic Energy Research Institute, 25:52066 (A/CONF.49/P-824)
radioactive waste management in, methods for nuclear power plant-produced gaseous and liquid, 25:51745 (A/CONF.49/P-253)
radioactive waste management practices in, research on seawater contamination from, 25:51651 (A/CONF.49/P-850)
radioisotope uses in industry in, 25:51479 (A/CONF.49/P-827)
research reactors for, design and operation of, 25:54192 (A/CONF.49/P-820)
safeguards system for nuclear materials management in, systems study of, 25:51760 (A/CONF.49/P-828)

JAPANESE ADVANCED THERMAL REACTOR
development of 165 MW(e) prototype FUGEN, 25:54021 (A/CONF.49/P-232)

JAPANESE MATERIALS TESTING REACTOR
irradiation testing programs for, review of, 25:54193 (A/CONF.49/P-823)

JAPANESE POWER DEMONSTRATION REACTOR
irradiation testing programs for, review of, 25:54193 (A/CONF.49/P-823)
pressure vessel for, use of borescope for inspection of, 25:54122
pressure vessel for, use of ultrasonic flaw detection method for inspection of, 25:54123

JAPANESE POWER DEMONSTRATION REACTOR II
core for, hydraulic, nuclear, and thermal design parameters of, 25:54097 (JAERI-Memo-4346)

JAWS
radioinduced osteonecrosis in human, effects of cancer therapy dose on incidence of, 25:52242

JOINTS
design characteristics of telescoping tube bellows type expansion, for liquid metal cooled reactor piping system, 25:54079(P)
thermal shock testing of tantalum--stainless steel, method for, 25:54225 (N-71-22511)

JOSE CABRERA POWER REACTOR
operating experience with, summary, 25:53952 (A/CONF.49/P-735)

K

KARACHI POWER REACTOR
completion schedule for, 25:53883 (70-CNA-630)
construction of, progress to May 1970 on, 25:53882 (70-CNA-622)
operation of, review of, 25:53928 (A/CONF.49/P-148)

KEMA SUSPENSION TEST REACTOR
design of, summary of technical features and limitations in, 25:54174 (A/CONF.49/P-20)

KEROSENE
effects on solvent properties of bis(2-ethylhexyl) phosphate for uranium, 25:51600

KIDNEYS
radiation effects on acid excretion by uninephrectomized dog, studies on mechanisms of x, 25:52005
radiation effects on recovery from acute tubular necrosis in dog, following transplantation, γ, 25:52207
radiation effects on survival of transplants of goat, following extracorporeal blood exposure, γ, 25:52209
radiation effects on survival of transplants of human, extracorporeal γ, 25:52236
radiation injuries of human, following therapy of neoplasms of testes, gamma and x, 25:52233

- radiation protection during testicular neoplasm therapy using wedge filters, gamma and x, 25:52156
- scanning for function, use of mercury-197 and mercury-203 for, 25:52130 (A/CONF.49/P-631)
- scanning for glomerular filtration rate and plasma clearance rate, use of chromium-51-labeled EDTA and iodine-131-labeled hippuran for, 25:52120 (A/CONF.49/P-121)
- transplantation in man, use of extracorporeal irradiation of blood for suppression of immune reactions following, 25:52149 (A/CONF.49/P-642)

KRYPTON
- helium-ion reactions at 10 to 200 keV with, cross sections for electron capture into ground and metastable states in, (E), 25:52651

KRYPTON IONS
- implantation in graphite, aluminum, titanium, and copper at 1 to 120 keV, saturation values of, 25:52922
- reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675

KRYPTON ISOTOPES
- separation by thermal diffusion, 25:51718(R) (MLM-1816)

KRYPTON ISOTOPES Kr-85
- determination in atmospheric samples by chromatographic separation and liquid scintillation counting, 25:51389 (SWRHL-500-r)
- preparation and properties of compounds containing, for use in analytical chemistry, 25:51384 (A/CONF.49/P-556)

KRYPTONATES
- preparation and properties of, containing krypton-85 for use in analytical chemistry, 25:51384 (A/CONF.49/P-556)

L

LABORATORIES
- description of USSR hot, for materials research, 25:51765(T) (JPRS-53800, pp 4-23)
- design of hot-cell type, for analysis of underground explosion debris, 25:51795
- design of plutonium fuels development, 25:51784
- design of radiochemical, for analysis of underground explosion drill cores, 25:51794
- fire protection criteria for nuclear, 25:51786
- performance of mobile nondestructive assay, at Fernald, Ohio scrap recovery plant, 25:51769 (LA-DC-12296)
- performance of mobile nondestructive assay, for analysis of fissionable materials, 25:51766(R) (LA-4705)

LABORATORY EQUIPMENT
- design and operation of, for measuring volume of liquid radioactive samples, 25:51773(P)
- fabrication and operation of differential thermal analysis, for determining melting points of plutonium-containing reactor fuels, 25:51672 (LA-DC-12753)

LANTHANUM
- determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- determination of trace amounts of, in low-alloy steels by flame emission spectrophotometry, 25:51376
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- electric conductivity of, effects of temperature and purity on, (E), 25:52963
- neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
- polarographic behavior at mercury dropping electrode, 25:51474
- separation from divalent metals by complexing and precipitation, 25:51589

LANTHANUM ALLOYS AND SYSTEMS
- Al--Gd--La, thermal capacity of superconducting, with magnetic impurities, (E/T), 25:52738
- Ce--La--Pd, structure, Kondo effect, and thermal capacity of Ce/sub x/La/sub 1-x/Pd$_3$, (E/T), 25:52945 (CONF-711001-(Vol.2), pp 680-91)
- Ce--La-base, pair-breaking effects in superconducting Kondo, (E/T), 25:52750
- Gd--In--La, superconducting pair density in La/sub 3-x/Gd/sub x/In above transition temperature, from Pauli spin susceptibility, 25:52759
- Hg--La, polarographic behavior of, 25:51476
- La--Pd, electric conductivity of Pd$_3$La at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)

LANTHANUM BORIDES
- reactions of LaB$_6$, with refractory transition metals at, 1700°C, 25:52417

LANTHANUM CARBIDES
- superconductivity enhancement in, 25:52741(P)

LANTHANUM ISOTOPES La-139
- alpha inelastic scattering at 45 MeV, differential cross sections for, (E), 25:53799
- energy levels from α inelastic scattering, (E), 25:53799
- hyperfine structure of μ-mesic atoms of, nuclear finite-size effect on M1, (E), 25:53761

LANTHANUM OXIDES
- distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)

- phase transformation of thin films of, by heating in electron microscope, 25:52456 (CONF-711001-(Vol.2), pp 777-85)

LARYNX
- radiotherapy of carcinomas of human, effects of dose per fraction on effectiveness of γ, 25:52168

LASER RADIATION
- detection of 337-μ, single-exposure imaging device for, 25:52849 (IPP-IV-18)
- scattering on plasma, enhanced signals from, (E), 25:52878

LASERS
- performance for plasma diagnostics in Tokamak T-3a device, (E), 25:52786
- performance of carbon dioxide, for plasma production by irradiating solid hydrogen targets, (E), 25:52833 (IPP-IV-16)
- use of carbon dioxide, for plasma diagnostics in TP-D machine, (E), 25:52792

LATINA POWER REACTOR
- fuel elements of, performance of, 25:53889 (A/CONF.49/P-188)
- operating statistics for 1964 to 1971, 25:53931 (A/CONF.49/P-172)
- safety aspects of, design modifications for improved, 25:53972 (A/CONF.49/P-173)

LEAD
- antideuteron absorption at 13.3 GeV/c, cross sections for, (E), 25:53019
- cosmic particle reactions with, cross sections for inelastic, (E), 25:53694
- cosmic-ray reactions with, measurement of neutron spectra from, (E), 25:51887
- determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- electric conductivity in superconducting thin films above T/sub c/, effect of fluctuation on dc, 25:52758
- electron--phonon coupling constant of, from optical measurements, 25:52757
- energy gap of superconducting tin/lead sandwich, electron tunneling study of, 25:52746
- energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
- energy-level transitions in, radiative component in Coster--Kronig, (E/T), 25:52613
- hydrogen atom permeation through, radiochemical and electrochemical studies of, 25:51464
- neutron wave propagation in, (E), 25:53499
- performance of filters of, for cobalt-60 radiography of steel, 25:51741
- photofission at 300 to 1000 MeV, cross sections for, (E), 25:53806
- photon reactions at 5 to 7 GeV, rho--ω interference parameters in dipion production in, (E), 25:52991 (DESY-71/37)
- photon reactions at 7.4 GeV, rho--ω interference parameters from di-pion production in, (E), 25:53002
- proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
- superconducting density of states induced by proximity effect in copper/lead films, (E), 25:52747
- superconducting surface sheath in, microwave studies of, 25:52751
- tritium atom peremeation through, radiochemical and electrochemical studies of, 25:51464

LEAD ALLOYS AND SYSTEMS
- Bi--Pb, superconducting surface sheath in, microwave studies of, 25:52751
- Bi--Pb, superconductivity under high pressure, 25:52737 (IS-T-482)
- In--Pb, electric conductivity of mixed state of superconducting, 25:52756
- In--Pb, properties and structure of, for use in electric contacts, 25:52365

LEAD AZIDES
- radiolysis of, yields of nitrogen from x, 25:51524

LEAD CHLORIDES
- PbCl$_2$--UCl$_3$, phase diagrams at 300 to 850°C, 25:51477
- PbCl$_2$--UCl$_4$, phase diagrams at 300 to 600°C, 25:51477

LEAD ISOTOPES
- effects on radiohalo occurrence in mica, (E), 25:51619

LEAD ISOTOPES Pb-204
- neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)

LEAD ISOTOPES Pb-206
- energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
- energy-level transitions in, effects of configuration mixing on M1, (T), 25:53760
- nuclear magnetic moment of, effects of configuration mixing on, (T), 25:53760

LEAD ISOTOPES Pb-207
  energy-level transitions in, effects of configuration mixing on M1, (T), 25:53760
  nuclear magnetic moment of, effects of configuration mixing on, (T), 25:53760
LEAD ISOTOPES Pb-208
  deuteron reactions (d,p) at 12.3 MeV using polarized beam, cross section and vector analyzing power for, (E), 25:53793
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
  energy-level transitions in, effects of configuration mixing on M1, (T), 25:53760
  neutron capture at 9.2 to 13.2 MeV, compound-nucleus and semidirect-capture analysis of gamma spectra from, 25:53805
  nuclear magnetic moment of, effects of configuration mixing on, (T), 25:53760
  nuclear radii and Coulomb displacement energies for, effects of symmetry potential on single-particle calculation of, (T), 25:53679
  proton elastic scattering at 30 to 60 MeV, optical-model analysis of, (T), 25:53838
  proton inelastic scattering at 185 MeV with 3- excitation, polarization in, (E), 25:53647
  proton inelastic scattering of 30.3 MeV, optical-model analysis using potential derived from nuclear matter distributions, (T), 25:53717
  proton reactions (p,n) with bismuth-208 at 30.5 MeV, differential cross sections for, (E), 25:53766
LEAD ISOTOPES Pb-210
  determination in water and biological materials by liquid scintillation spectrometry, 25:51620
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
LEAD ISOTOPES Pb-212
  determination as decay product from radium-224 by reactions with methyl radicals and scintillation counting, 25:51547
LEAD ZIRCONATES
  radiation effects on dielectric properties of, neutron, 25:52930
LENINGRAD POWER REACTORS
  design parameters of, summary of, 25:53909 (A/CONF.49/P-715)
LEPTONS
  decay of heavy, $L^- \to e^- +$ anti ν/sub e/ + ν/sub L/, partial rate of, 25:53109
  decay of heavy, $L^- \to \mu^- +$ anti ν/sub μ/ + ν/sub L/, partial rate of, 25:53109
  decay of heavy, $L^- \to \pi^- + \nu$/sub L/, partial rate of, 25:53109
  decay of heavy, $L^- \to \pi^- + \pi^0 + \nu$/sub L/, partial rate of, 25:53109
  decays of charged heavy, 25:53109
  interactions l + N, hadronic helicity conservation in inelastic, (T), 25:53100 (NYO-4204-14)
  interactions l + W, vertex function in V--A theory of, (T), 25:53118
  mass spectrum of, discrete scale transformations for, (T), 25:53114
  theory for heavy, at masses of 22 and 4554 GeV, 25:53114
LEUKOCYTES
  radiation effects on count in rat blood, relation between dose absorbed by various organs and tissues and x, 25:52196
  radiation effects on count of human and swine, effects of dose on x, 25:52234
  radiation effects on count of human, additive effects of cyclophosphamide therapy on x, 25:52155
  radiation effects on reserves of rat bone marrow, effects of testosterone on recovery from whole-body x, 25:52110
  radioinduced chromosome aberrations in human peripheral, 25:52022(R) (NYO-4052-4)
LEVEL REGULATORS
  design of automatic liquid air, for cold traps, 25:53445
LICENSING AND REGULATION
  criteria and procedures in Germany, 25:54145 (A/CONF.49/P-364)
  role of public in U. S, 25:54006
LIMESTONE
  analysis of German standard, by neutron activation, 25:51408 (IFA-NR-34)
LINEAR ACCELERATORS
  beam buncher for electron, phase and energy characteristics of, 25:53456
  beam intensity in proton, effect of charge distribution on maximum, 25:53457
  buildings for Tohoku electron, 25:53437
  description of induction, 25:53450(P)
  description of ion, with quadrupole acceleration and focusing system, 25:53451(P)
  experimental facility at NBS electron, for total neutron cross section measurements, 25:53408 (CONF-701002-, pp 377-84)
  radiation accidents at, contamination resulting from failure of uranium targets, 25:53407 (CEA-CONF-1766)
LINEAR ENERGY TRANSFER
  relation to therapeutic effectiveness of heavy charged particles, 25:52152 (UCRL-20836)
LINGEN POWER REACTOR
  operations during 1969 to 1970, review of, 25:53957 (A/CONF.49/P-806)
  radioactive effluents from, measurements during 1968 to 1970 of, 25:53979 (A/CONF.49/P-396)
LIPIODOL
  effectiveness of iodine-131-incorporated, for endolymphatic therapy of neoplasms of human lymph system, 25:52153
LIQUID FLOW
  stability in boiling systems, 25:54338 (AAEC/E-217)
LIQUID JETS
  effects on reactor containment vessel, (E), 25:54304
LIQUID METAL FAST BREEDER REACTOR
  cooling channel plugging accidents in, propagation of sodium boiling and fuel element failure from, (T), 25:54167
  fuel element cladding for, fast neutron radiation and high temperature effects on swelling and embrittlement of stainless steel, 25:54109
  fuel element shipping containers for, destructive materials testing program for development of safe, 25:51840
  fuel elements for, development of stainless steel clad plutonium oxide (PuO_2)--uranium oxide (UO_2), 25:54096(R) (GEAP-10028-38)
  fuel pins of, failure propagation characteristics of, 25:54117
  physics measurement programs during July 1970 to June 1971, 25:54060(R) (AI-AEC-13005)
  reactivity measurements by polarity spectral coherence method in, effects of neutron detection efficiency on subcritical, (T), 25:54278
LITHIUM
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418
  antideuteron absorption at 13.3 GeV/c, cross sections for, (E), 25:53019
  density matrices for ground-state, calculation of first- and second-order, 25:52690
  density of liquid, to 1053°K, performance of gamma attenuation method for measuring, 25:52364
  deuteron reactions at 22 MeV, neutron yields from, (E), 25:53619
  electron elastic scattering by, modified Glauber approximation for total cross sections for, (T), 25:52649
  relaxation time of liquid particles in neutron-irradiated lithium fluoride, ESR study of, 25:52975
  spectral lines of, in Sun, (E/T), 25:52557
LITHIUM BORATES
  radioinduced intrinsic defect center in glasses of, ESR studies of low-temperature x-, 25:52928
LITHIUM FLUORIDES
  neon-atom elastic and inelastic scattering by (100) surfaces of, (E), 25:52602
  relaxation time of liquid lithium particles in neutron-irradiated, ESR study of, 25:52975
  sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)
  sorptive properties of solid, for uranium hexafluoride in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene solutions, kinetics of, 25:51465 (A/CONF.49/P-546)
  thermoluminescence of single crystals of doped, effects of titanium distribution on, 25:51912
  BeF_2--LiF--ThF_4, solvent properties for plutonium fluoride, (E), 25:54100(R) (NP-18956)
  BeF_2--LiF--ThF_4, solvent properties for plutonium fluoride, (E), 25:54099(R) (NP-18955)
LITHIUM HYDRIDES
  diffusion of helium in single crystals of, at 200 to 520°C from lithium-6(n,α) reaction, 25:52495
  radiation effects on, calorimetric evidence of molecular hydrogen produced by γ. 25:51484
LITHIUM IONS
  electron reactions with, semiclassical calculation of cross sections for double ionization in, 25:52663
  polarizability of Li^+, calculation by distinguishable-electron method, 25:52691
  production of polarized, for injection into Van de Graaff accelerator, source for, 25:53466
  quantum defects for Li II, calculation from phase shifts for elastic scattering of electrons by hydrogen ions, 25:52609
LITHIUM ISOTOPES Li-6
  charge form factor of, cluster-model calculations of, (T), 25:53628
  deuteron reactions (d,α) at 0.4 to 1 MeV using polarized beam, analyzing power for, (E), 25:53630
  deuteron reactions (d,p) at 10 and 12 MeV using polarized beam, vector analyzing power and spectroscopic factors for, (E), 25:53657
  helium-3 reactions (He-3,p) at 1.4 to 2 MeV, proton polarization from, (E), 25:53631
  meson (K^-) capture by, gamma spectra from Λ-H^4 and Λ-He^4 hyperfragments from, 25:53033
  neutron capture below 1.7 MeV, review of data on the cross section for, 25:53591 (CONF-701002-, pp 80-106)

neutron capture by, cross-section measurements using pulsed-beam techniques, (E), 25:53595 (CONF-701002-, pp 129-35)
neutron elastic scattering at 4.1 MeV, angular distribution and optical-model parameters for, (E/T), 25:53608(R) (NP-18698)
neutron elastic scattering below 1.7 MeV, review of data on the cross section for, 25:53591 (CONF-701002-, pp 80-106)
neutron reactions (n,α) at 1.5 to 700 keV, preliminary measurements of the cross section for, (E), 25:53593 (CONF-701002-, pp 121-4)
neutron reactions (n,α) at 10 to 600 keV, parasitic effects in cross-section measurements, (E/T), 25:53596 (CONF-701002-, pp 136-40)
neutron reactions (n,α) at 25 to 150 keV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
neutron reactions (n,α) below 1.7 MeV, review of data on the cross section for, 25:53591 (CONF-701002-, pp 80-106)
neutron reactions (n,α) with cross section for thermal, (E), 25:53594 (CONF-701002-, pp 125-8)
neutron total cross sections below 1.7 MeV, review of data on, 25:53591 (CONF-701002-, pp 80-106)
polarization of, determination by relation to deuteron polarization using lithium-6 (d,α) reactions, 25:53660
reactions (Li-6,d) with carbon-12 at 20 to 32 MeV, deuteron spectra from, (E), 25:53614

LITHIUM ISOTOPES Li-7
alpha reactions (α,n) with, differential cross sections for, (E), 25:53501
meson (K^-) capture by, gamma spectra from Λ-H* and Λ-He* hyperfragments from, 25:53033
proton reactions (p,n) at 3 to 4 MeV, neutron polarization from, (E), 25:53632
proton reactions (p,n) at 4 MeV, neutron polarization from, (E), 25:53589

LITHIUM ISOTOPES Li-8
energy and angular distributions of, from proton fission of aluminum at 600 MeV, (E), 25:53688
production in meson (μ^-) capture by carbon, nitrogen, and oxygen in emulsions, relative probabilities for reaction channels in, (E), 25:53516 (JINR-P1-5893)
production in meson (π^-) reactions with emulsion nuclei, polarization in, 25:53771

LITHIUM NIOBATES
radiation effects on electric properties of, 1.3 MeV electron, 25:52482

LITHIUM RARE EARTH OXIDES
spectra and energy levels of europium ions in $LnLiO_2$, 25:52943 (CONF-711001-(Vol.2), pp 478-87)

LIVER
scanning for diagnosis of amoebic abscesses, cirrhosis, echinococcosis, and neoplasms, use of colloids of metastable indium-113 for, 25:52133 (A/CONF.49/P-739)

LOOPS
design and construction of sodium vapor test, 25:51669 (A/CONF.49/P-812)

LOS ALAMOS MESON PHYSICS FACILITY
development of, status of, 25:53421 (LA-DC-13019)
experimental facility for high-temperature radiation damage experiments for fusion reactor development, 25:53416 (LA-DC-12995)
linear accelerator for, H^- ion source for, 25:53417 (LA-DC-13014)
linear accelerator for, Lamb-shift polarized proton source for, 25:53420 (LA-DC-13017)
linear accelerator for, performance of duoplasmatron ion source and Pierce injector system for, 25:53418 (LA-DC-13015)
research program at, proposed, 25:52987 (LA-4637)
target for, 0.4 K cryostat for proposed polarized proton, 25:53479
users handbook for, preliminary, 25:53413 (LA-4586)

LUNAR MATERIALS
analysis of 14163, neutron-activation, 25:52597
composition of 14163 and 14259, (E), 25:52596
distribution of radioactive isotopes in crystalline, (T), 25:52497

LUNGS
function studies in dog, performance of catheter-type semiconductor detector in, 25:51862
plutonium uptake by human, development of monitors for, 25:51970 (NIRS-Pu-6)
radiation effects on bactericidal function of mouse, x, 25:52227
radiation effects on erythrocytes in epithelium of human, x, 25:52244
radiation effects on function of sheep, effects of sublethal blast overpressure on combined unilateral γ and neutron, 25:52185(R) (AD-721094)
scanning of human, for diagnosis of bronchial carcinomas, effectiveness of mercury-197-labeled mercury chloride for color, 25:52141
scanning of human, for perfusion and ventilation studies, use of xenon-133 for, 25:52122 (A/CONF.49/P-161)
scintigraphy of blood circulation and respiration in normal human, effectiveness of xenon-133 for, 25:52134

LUTETIUM ALLOYS AND SYSTEMS
Ce-base--Lu--Y, Kondo effect in dhcp, 25:52951
Lu--Pd, electric conductivity of Pd_3Lu at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
Lu--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)

LUTETIUM OXIDES
spectra of europium- and terbium-doped, flame-excited luminescence, 25:52941 (CONF-711001-(Vol.2), pp 452-64)

LYMPHOCYTES
radiation effects on count of, in cirrhosis patients following extracorporeal exposure of blood, 25:52248
radiation effects on function of human blood, transformation tests on extracorporeal γ, 25:52236
radiation effects on mouse, and eventual hematopoiesis in lethally exposed recipients, in vivo and in vitro x, 25:52206
radiation effects on response to phytohemagglutinin, effects of dose on x, 25:52178(R) (RLO-2226-T-1-6)
radiation effects on survival of human blood, extracorporeal beta or γ, 25:52149 (A/CONF.49/P-642)
radiation effects on transformation of, x, 25:52008(R) (RLO-2226-T-1-7)
response to phytohemagglutinin, effects of polyribonucleotides on, 25:52178(R) (RLO-2226-T-1-6)
transformation of, effects of phytohemagglutinin and water-d_2 on, 25:52008(R) (RLO-2226-T-1-7)

LYSOZYME
radioinduced complexing with nitroxide free radicals, binding energy and reaction kinetics for electron, 25:51993

M

MAGNESITES
analysis of Czechoslovakian standard, by neutron activation, 25:51408 (IFA-NR-34)
testing of bricks of, performance of cesium-137 source for radiometric, 25:51733 (SGAE-IB/IA-24/1971)

MAGNESIUM
analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418
determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in powdered thermal water residues, mass spectrographic, 25:51369
determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
deuteron elastic scattering at 7 MeV, tensor polarization in, (E), 25:53714
hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
production of, economics of dual purpose reactors for, 25:54244
radiation effects on content of human blood serum following therapy of ovarian carcinomas, 25:52249

MAGNESIUM ALLOYS AND SYSTEMS
Mg-base--Y, mechanical properties of, effects of thermomechanical treatments on, 25:52304 (CONF-711001-(Vol.2), pp 645-56)

MAGNESIUM CHLORIDES
production of, economics of dual purpose reactors for, 25:54244

MAGNESIUM FLUORIDES
sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)

MAGNESIUM ISOTOPES Mg-24
alpha elastic scattering at 20 to 24.5 MeV, angular distributions and differential cross sections for, (E), 25:53689
deuteron elastic and inelastic scattering at 12.3 MeV using polarized beam, vector analyzing power for, (E), 25:53713
deuteron reactions (d,p) at 1.3 to 2.5 MeV, mechanism of, (E), 25:53687
deuteron reactions (d,p) at 12.3 MeV using polarized beam, vector analyzing power for, (E), 25:53722
electron inelastic scattering at 183 and 250 MeV, form factors for, (E), 25:53671
energy levels from electron inelastic scattering, quadrupole and hexadecapole moments and deformations from, (E), 25:53671
nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681

MAGNESIUM ISOTOPES Mg-26
deuteron reactions (d,p) at 1.3 to 2.5 MeV, mechanism of, (E), 25:53687

MAGNESIUM OXIDES
compatibility with iron and nickel at high temperatures, 25:52299
creep of polycrystalline, at 1300 to 1460°C, mechanism and kinetics of secondary, 25:52439 (RISO-M-1385)
radiation effects on defect production in, relations of pre-annealing in hydrogen on pile neutron, 25:52483
radiation effects on defect production in, relations of dose with pile neutron, 25:52484

MAGNET COILS
optimization of superconducting, (T), 25:52762

XUM

MAGNETIC ANALYZERS
- charged particle transmission in, Monte Carlo program for calculating, 25:53427 (TRI-71-2)

MAGNETIC FIELDS
- charged-particle motion in, analysis of, 25:53439
- charged-particle motion in, covariant equations for covariant spin 3-vector for, (T), 25:53082
- meson (μ^+) depolarization in, account of charge exchange and formation of unstable chemical compounds in theory for, (T), 25:53120
- particle transport in random, cosmic-, (T), 25:52702
- photon interactions with field of electromagnetic wave in homogeneous, electron pair production from, (T), 25:53083
- production of galactic and terrestrial, by kinematic-dynamo action, (T), 25:52568

MAGNETIC MIRROR MACHINES
- plasma density effects on confinement in, with ion cyclotron instabilities, (T), 25:52776
- plasma production at cyclotron frequencies, (E), 25:52831(R) (AD-720847)
- plasma production by molecular ion injection, with supplementary rf electric fields, (E), 25:52838
- plasma spectral index, mode coupling, and energy cascading in, turbulent, (E), 25:52813

MAGNETIC MONOPOLES
- electrodynamics of dual electrically and magnetically charged, (T), 25:53276
- theory for, classical, (T), 25:53067
- theory for, holonomy and characteristic classes in, (T), 25:53080

MAGNETIC PROPERTIES
- plastic deformation on, review, 25:52967

MAGNETIC RESONANCE
- use of alanine ESR for fast-neutron dosimetry, 25:51904 (COO-1105-168)

MAGNETIC STORMS
- effects on midlatitude F region, relation with electric-field effects, (T), 25:52722

MAGNETOHYDRODYNAMIC GENERATORS
- efficiency of Faraday-type open-cycle, for power generation, (T), 25:52705 (IAE-2021)
- heat transfer device for ducted flow of liquids in, 25:52707(P)
- materials for channels of, 25:52706(T) (JPRS-53939)

MAGNETOSPHERE
- boundary regions of, development of charged particle detectors for study of, 25:51848 (AD-718110)
- electron resonance energization by electromagnetic waves in, (T), 25:52716
- wave emission by electrons in, self-consistent solution to spectral shape and intensities of vlf, (T), 25:52726

MAGNETS
- alignment of quadrupole, search coil system for precise, 25:53440
- pole pieces for, Monte Carlo calculation methods for, 25:53436

MAMMARY GLANDS
- milk volume of goat, use of carbon-14, cerium-141, and yttrium-91 for evaluation of, 25:51984
- radiotherapy of carcinomas of human, effects of dose per fraction on effectiveness of γ, 25:52168

MAN
- blood circulation in, under pathological conditions, use of iodine-131-labeled human serum albumin or sodium iodide to study, 25:52126 (A/CONF.49/P-332)
- blood circulation in, use of xenon-133 to study, 25:52126 (A/CONF.49/P-332)
- calcium-47 retention following intravenous injection, effects of age and bone diseases on whole-body, 25:51987
- cesium-137 content of placenta of, in relation to content of tobacco products, 25:52046 (UUIP-739)
- conference on transplants in, 25:52205
- decontamination of skin of, effectiveness of agents for, 25:52052
- excretion of metastable technetium-99 by biliary system of, following injection of labeled albumin macroaggregates, diagnostic value of, 25:51972 (UCLA-12-831)
- irradiated food acceptance by, role of government and industry in, 25:52275 (A/CONF.49/P-29)
- kidney transplantation in, use of extracorporeal irradiation of blood for suppression of immune reactions following, 25:52149 (A/CONF.49/P-642)
- plutonium uptake by lungs and skin of, methods for measurement of, 25:51970 (NIRS-Pu-6)
- radiation dose distribution in, effects of bone density and body size on x, 25:52075
- radiation dose estimates for intestine of, use of survival of enteric bacteria for x, 25:52269
- radiation dose to, during fast neutron therapy, methods for measurement of, 25:52079
- radiation dose to, during radiographic control procedures in orthopedic surgery using conventional and image intensification methods, x, 25:52085
- radiation dose to, from waste disposal operations at Nuclear Fuel Services, 25:52060
- radiation dose to, in Czechoslovakia during 1966 and 1967, sources of, 25:52063 (A/CONF.49/P-550)
- radiation effects on circulating blood, following therapy of lung carcinomas in, γ, 25:52241
- radiation effects on count of leukocytes in, effects of dose on partial-body and whole-body x, 25:52234
- radiation effects on erythrocytes in lungs of, x, 25:52244
- radiation effects on fetus of, following therapy of breast carcinoma during pregnancy, x, 25:52239
- radiation effects on leukocyte count in, additive effects of cyclophosphamide therapy on x, 25:52155
- radiation effects on lymphocyte count of, following extracorporeal exposure of blood, 25:52248
- radiation effects on lymphocyte function and renal transplantation survival in, extracorporeal γ, 25:52236
- radiation effects on magnesium content of blood serum in, following therapy of ovarian carcinomas, 25:52249
- radiation effects on vision of, review of ionizing, 25:52250
- radiation effects on, additive effects of Schistosoma infections on pathological low-dose, 25:52089 (A/CONF.49/P-142)
- radiation effects on, chronic low-dose exposure, 25:52230 (A/CONF.49/P-535)
- radiation effects on, following pelvic carcinoma therapy, γ and radium, 25:52251
- radiation hazards to, following release of radioactive wastes to aquatic environment, 25:52013
- radiation hazards to, from nuclear power operations, evaluation of biological and medical, 25:52235
- radiation hazards to, from radioisotopes released from nuclear power plants, 25:52050
- radiation injuries of kidneys and urinary tract of, following therapy of neoplasms of testes, gamma and x, 25:52233
- radiation injuries of skin of, effectiveness of methyl sulfoxide for treatment of x, 25:52118
- radiation protection during use of radiopharmaceuticals in clinical studies, ICRP report on, 25:52096
- radiation protection methods for, during diagnostic x radiography, 25:52092
- radiation protection of intestine during therapy of neoplasms in pelvic region of, anatomical position for, 25:52154
- radiation protection of kidneys and urinary tract during therapy of neoplasms of testes, use of wedge filters for gamma and x, 25:52156
- radiation protection programs for, in USSR, 25:52062 (A/CONF.49/P-429)
- radioactive contamination of diet of, review of research on, 25:52054
- radioinduced aplasia in vertebral bone marrow of, following therapy of carcinomas, 25:52238
- radioinduced chromosome aberrations in peripheral leukocytes of, 25:52022(R) (NYO-4052-4)
- radioinduced chromosome aberrations in, relation between dose and Thorotrast α, 25:52247
- radioinduced malformations in fetus of, following abdominal radiography during early pregnancy, x, 25:52252
- radioinduced malformations of skeleton of, following therapy of malignant tumors during childhood, 25:52232
- radioinduced manifestation of anaplastic thyroid cancer in, following iodine-131 therapy of toxic nodular goiter, 25:52237
- radioinduced myelopathy in, following therapy of spinal cord, effects of dose per fraction on γ, 25:52245
- radioinduced necrosis in brain tissues of, following therapy of pituitary adenomas, x, 25:52246
- radioinduced necrosis of oral tissues in, following interstitial radium therapy of tongue carcinomas, 25:52240
- radioinduced osteonecrosis in jaws of, following cancer therapy, 25:52242
- radioisotope content of calibration of whole-body counters using, 25:51975
- radiosensitivity of skin of, comparison of fast neutron and x, 25:52165
- radiotherapy of bladder tumors in, comparison of effectiveness of cobalt-60 γ and x, 25:52172
- radiotherapy of esophagus carcinomas of, effects of dose, dose fractionation, and energy on effectiveness of x, 25:52157
- radiotherapy of hyperthyroidism in, use of combined iodine-125 and iodine-131 for interstitial, 25:52150 (A/CONF.49/P-654)
- radiotherapy of laryngeal and mammary carcinomas in, effects of dose per fraction on effectiveness of γ, 25:52168
- radiotherapy of neoplasms of lymph system of, effectiveness of iodine-131-labeled lipidol for endolymphatic, 25:52153
- radiotherapy of organs of, design of applicator for, 25:51729(P)
- radiotherapy of thyroid carcinomas in, effectiveness of combined chemotherapy surgery, and iodine-131, 25:52173
- radiotherapy of, design of applicator for, 25:51726(P)
- strontium-90 content of bones of, in USA during 1970, 25:52055
- uranium movement through food chains of, in Soviet Union, 25:52010 (A-AC-82/G/L.1298)

MANGANESE
abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in powdered thermal water residues, mass spectrographic, 25:51369
determination in standardized aluminum-silicon alloy by neutron activation, methods for both destructive and nondestructive, 25:51419
determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
metabolism in chickens, manganese-54 tracer study of effects of estrogens on, 25:51983
radiochemistry of, review on, 25:51543 (NAS-NS-3018(Rev.))
MANGANESE ALLOYS AND SYSTEMS
Au--Mn, magnetic resonances in MnAu$_2$, microwave absorption study of, 25:52949 (IS-T-471)
B--Mn--Mo, phase studies of, 25:52460
B--Mn--V, phase studies of, 25:52460
B--Mn--W, phase studies of, 25:52460
C--Cr--Fe-base--Mn--Si, production of sintered electrode strips of, method for, 25:52311
C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
Mn--Mo--Ni--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
Mn--Mo--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
Mn--Ni-base, radiation effects on ordering in Ni$_3$Mn, neutron-diffraction study of fast-neutron, 25:52902(T) (JPRS-53800, pp 72-8)
MANGANESE ISOTOPES Mn-53
abundance in lunar rocks, (T), 25:52497
MANGANESE ISOTOPES Mn-54
abundance in lunar rocks, (T), 25:52497
metabolism in chickens, effects of estradiol on, 25:51983
retention in sheep following intravenous injection, effects of EDTA on, 25:51985
MANGANESE ISOTOPES Mn-55
neutron reactions at 0.95 to 1.73 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
proton reactions (p,n) at 1.3 to 3 MeV, neutron yield from, (E), 25:53608(R) (NP-18698)
MANGANESE MINERALS
age and origin of Pacific Ocean, use of isotope ratios to study, 25:51652
MANY BODY PROBLEM
solution of nuclear, using K-harmonics method and including higher harmonics, 25:53864
MARITIME PRESSURIZED-WATER REACTOR
operation of, international legal agreements for, 25:54249 (A/CONF.49/P-401)
MASS SPECTROMETERS
circuits for computerized automatic, 25:51935 (UCRL-5093(Pt.2))
data analysis from residual-gas-analyzer, computer program for, 25:51363 (ORNL-TM-3455)
design of axial-beam time-of-flight, with high-intensity ionizing electron beam, 25:51946(P)
development of high-precision Nier-type, with triple collector, 25:51945
performance of second-order refocusing 15-in., for ultra-precise isotopic ratio measurements, 25:51362 (GAT-655)
MATERIALS TESTING
methods for studying thermal performance of shielded containers for shipping radioactive materials, 25:51833
standards for determining leak-tightness and shielding properties of packages for shipping radioactive materials, USSR criteria for, 25:51816
MATERIALS TESTING, DESTRUCTIVE
equipment and methods for drop-impact, containers for shipping spent-fuel elements in Japan, 25:51837
equipment and methods for drop-impact, of containers for shipping spent fuel elements in Japan, 25:51838
equipment and methods for drop-impact, of lid-fixing screws for spent fuel shipping containers, 25:51841
equipment and methods for, of Type B packaging for shipping radioactive materials, 25:51815
method for drop-impact, of shielded shipping containers, mathematical model for predicting damage from, 25:51835
method for free-drop, of specially-designed shock absorbers for Type B shielded containers, 25:51836
methods for determining crush strength of packages for shipping radioactive materials, recommendations for, 25:51807
methods for measuring mechanical and thermal performance of Type B containers for shipping radioactive materials, 25:51834
methods for scale-model drop-impact, of Excellox and Magnox containers for shipping spent fuel elements, 25:51839
methods for thermal, of Type B containers for shipping radioactive materials, 25:51832
program for developing safe LMFBR fuel shipping containers, 25:51840
MATERIALS TESTING, NONDESTRUCTIVE
use of borescope for pressure vessel, 25:54122
MATHEMATICAL PHYSICS
Peierl's equation for scattering from black cylinder in nonabsorbing medium, method for solving integral, (T), 25:53357 (IAE-1970)
MATHEMATICS
compactness theorem for nonlinear and nondifferentiable equations, 25:54385 (SC-RR-710302)
MATTER
equation of state for cold ultradense, bootstrap, (T), 25:52530
motion in mixmaster universe, (T), 25:52590
MEATS
fish, radiation processing effects on storage life of, 25:52278 (A/CONF.49/P-136)
fish, radiation processing of fillets of Bombay duck, effects of storage temperature on spoilage rate following 0.1 Mrad γ, 25:52287
fish, radiopasteurization effects on organoleptic properties and shelf life of, γ, 25:52276 (A/CONF.49/P-115)
radiation processing effects on shelf life of, 25:52284 (A/CONF.49/P-740)
sausage, radiation processing effects on organoleptic properties of, 25:52280 (A/CONF.49/P-256)
seafood, analysis for mercury by neutron activation and automated chemical separation method, 25:51407 (CONF-710623-1)
seafood, radiation processing effects on shelf life of fish and shrimp, 25:52284 (A/CONF.49/P-740)
seafood, radiation processing in Japan, 25:52280 (A/CONF.49/P-256)
MECHANICS
coordinate transformations in classical, time-dependent, 25:52977
correlation functions in statistical, S-matrix and low-energy theorems for, 25:53397
MEDICAL PERSONNEL
radiation dose to hands of, during injection of radioactive solutions, method for estimation of, 25:52081
radiation dose to, during implantation of gold-198 therapeutic sources in patients, 25:52076
radiation protection methods for, performing diagnostic x radiography, 25:52092
radiation protection programs for, using radioisotopes in diagnostic studies, 25:52094
MEDICAL SUPPLIES
radiosterilization of, evaluation of multipurpose irradiation facilities for, 25:51668 (A/CONF.49/P-804)
MEDICINE
development of nuclear, in Israel, 25:52119 (A/CONF.49/P-17)
programs for use of radioisotopes for diagnosis and research in Brazil, 25:52123 (A/CONF.49/P-203)
programs using radiation sources and radioisotopes in Sudan, 25:52131 (A/CONF.49/P-639)
radiation and radioisotope uses in, in Bulgaria, review of, 25:51690 (A/CONF.49/P-107)
radiation and radioisotopes in, review, 25:52132 (A/CONF.49/P-653)
radioisotope uses in, in West Germany, 25:52105
radioisotopes in diagnostic, in USSR, 25:52128 (A/CONF.49/P-462)
research in nuclear, in Hungary, 25:52125 (A/CONF.49/P-324)
tracer techniques for research in, in Argentina, 25:51959 (A/CONF.49/P-563)
tracer techniques in, Canadian experiences with, 25:52122 (A/CONF.49/P-161)
MEMBRANES
radioisotope permeation of biological, kinetics of, 25:51974
MEMORY DEVICES
description of large-capacity IBM Photostore, at LRL, 25:51936 (UCRL-73251)
MERCHANT VESSELS
design parameters of nuclear reactor propelled, in Italy, 25:54246 (A/CONF.49/P-178)
operation of nuclear powered, international legal agreements for, 25:54249 (A/CONF.49/P-401)
MERCURY
charged-particle reactions with, relativistic cross sections for L-shell ionization and characteristic x-ray emission in, (T), 25:52639
determination in biological materials by neutron activation and radiochemical separation, 25:51420
determination in biological materials, sludge, and water by neutron activation and γ spectrometry following chemical separation, 25:51403 (A/CONF.49/P-19)
determination in fish by neutron activation and automated chemical separation method, 25:51407 (CONF-710623-1)
determination of trace amounts of, by radio-release method, 25:51399
diffusion in cadmium single crystals, anisotropic, 25:52358
energy-level transitions in, corrections to fluorescence yield and probability of L$_2$-subshell Coster--Kronig,

25:52608
- neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)

MERCURY ALLOYS AND SYSTEMS
- Hg--La, polarographic behavior of, 25:51476

MERCURY CHLORIDES
- effectiveness of mercury-197-labeled, for color scanning of human lungs for diagnosis of bronchial carcinomas, 25:52141

MERCURY ISOTOPES Hg-179
- beta decay of, delayed proton spectra and branching ratios for, (E), 25:53765

MERCURY ISOTOPES Hg-181
- beta decay of, delayed proton spectra and branching ratios for, (E), 25:53765

MERCURY ISOTOPES Hg-183
- beta decay of, delayed proton spectra and branching ratios for, (E), 25:53765

MERCURY ISOTOPES Hg-187
- nuclear moments and spin from optical pumping, (E), 25:53758

MERCURY ISOTOPES Hg-197
- effectiveness of mercury chloride-incorporated, for color scanning of human lungs for diagnosis of bronchial carcinomas, 25:52141
- half-life of metastable, angular dependence of measurements of, 25:53674
- use for kidney scanning, 25:52130 (A/CONF.49/P-631)
- use for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)

MERCURY ISOTOPES Hg-201
- energy level at 32.2 keV, Moessbauer measurements of lifetime of, (E), 25:53808

MERCURY ISOTOPES Hg-203
- effectiveness of (hydroxymercuri)fluorescein-incorporated, for diagnosis of myocardial infarcts in dog hearts by scanning, 25:52146
- use for kidney scanning, 25:52130 (A/CONF.49/P-631)
- use for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)

MESIC ATOMS
- energy-level transitions at 150 to 440 keV in μ^-, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
- hyperfine structure of lanthanum-139 and niobium-93 μ^-, nuclear finite-size effect on M1, (E), 25:53761
- x-ray spectra from iodine and thallium π^-, determination of π^- mass from, (E), 25:53005

MESONS
- decay of I = 1, review of, (E/T), 25:53027
- decay of vector, nonlocal symmetry operations and Cabibbo angle for leptonic, 25:53268
- decay of vector, quark model for three-body, 25:53158
- field theory for massive vector, 25:53288
- form factors of pseudoscalar, low-momentum transfer behavior of gravitational, 25:53336
- interactions of massive vector, zero-mass limit of amplitudes for, 25:53174
- interactions of pseudoscalar, s-channel helicity constraints on t-channel exchanges in, 25:53157
- interactions of scalar, nonlinear equations for electrodynamics of, (T), 25:53170
- interactions with baryons, model with duality and relativistic SU(6) symmetry for, 25:53173
- interactions with baryons, SU(3)-symmetric Veneziano model for pseudoscalar, 25:53207
- interactions with mesons, Dirac equation for kinks in model quantum field theory of, (T), 25:53176
- interactions with mesons, model with duality and relativistic SU(6) symmetry for, 25:53173
- interactions with nucleons, s-channel helicity constraints on t-channel exchanges in, 25:53157
- interactions with nucleons, unitarity constraints on helicity flip amplitudes for elastic, 25:53215
- interactions with photons, form factor and virtual-Compton scattering amplitude in dual resonance model, 25:53058
- interactions with protons, broken SU(6) predictions for baryon and polarized vector meson production in, 25:53212
- interactions with spin-${}^1/_2$ particles, helicity amplitudes for unified treatment of photon and vector, 25:53174
- interactions with spinless bosons, time-shift evaluation for nonrelativistic, (T), 25:53044
- mass formula in nonet scheme, 25:53095
- photoproduction of charged, effects of multiple rescattering on cross sections for, (T), 25:53051 (JINR-P2-5752)
- production in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
- production in N + N interactions, Poisson distribution of secondary soft, 25:53228
- production of hypothetical massive spin-1 electromagnetic, in $\mu^+ + p$, $\mu^- + p$ interactions and μ^+ and μ^- reactions with iron at high energies, total cross sections for, (T), 25:53107
- production of I = 1, review of, (E/T), 25:53027
- production of pair of spinless, in e + e and $e^+ + e^-$ interactions in colliding beams, (T), 25:53048 (DESY-71/30)
- production of pseudoscalar, in $\gamma + N$ interactions, tests of vector dominance model in, (E), 25:52998
- production of vector, in $\gamma + N$ interactions and γ reactions with nuclei, review of vector dominance model for, (T), 25:53076
- reactions with nuclei, local change of intranuclear cascade production in, (T), 25:53227(T) (ORNL-tr-2502)
- scattering of charged vector, at high energies in static field, (T), 25:53049 (DESY-71/32)
- spectra of low-lying states of, 25:53130 (UCRL-20655, pp 129-68)

MESONS (eta)
- decay eta $\to 3\pi$, one-current formalism in Veneziano model for, 25:53123
- exchange in $N + N \to N + N$ interactions, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
- interactions eta^0 + eta^0, Khuri-plane structure of Virasoro amplitude for, 25:53162
- mass in quark model with chiral U(3) X U(3) symmetry breaking, 25:53269
- production in $\pi^- + p \to 2\gamma + n$ interactions at 3.65 GeV/c, differential and total cross sections for, (E), 25:53003

MESONS (f)
- coupling of $fA_1\pi$, stress-tensor--current commutation relations for, 25:53336

MESONS (K)
- coupling constant for $K\Lambda N$, differential cross sections for $\gamma + p \to K^+ + \Lambda$ backward interactions at 1 and 2 GeV for, (E), 25:52992 (LAL-RI-71-3)
- decay $K \to 2\pi$, $\Delta I = {}^1/_2$ rule as consequence of dynamical symmetry for, (T), 25:53111
- decay $K \to 3\pi$, $\Delta I = {}^1/_2$ rule as consequence of dynamical symmetry for, (T), 25:53111
- decay $K \to 3\pi$, one-current formalism in Veneziano model for, 25:53123
- decay $K \to 3\pi$, spin-zero pole dominance and hard-meson current algebra for, 25:53103
- decay $K \to \pi + l + \nu$ contribution of K/sub A/(1240) to renormalization of form factor of, 25:53104
- decay $K \to \pi + l + \nu$, Cabibbo angle and form factor in quark model for, 25:53105
- decay $K \to \pi + l + \nu$, field algebra with symmetry breaking in Cabibbo theory for form factors of, 25:53128
- decay $K \to \pi + l + \nu$, form factor parameters from chiral Lagrangians and SU(3) x SU(3) field algebra, 25:53125
- decay $K \to \pi + l + \nu$, modification of time--space current commutators in SU(3) x SU(3) for form factors of, 25:53108
- decay $K \to \pi + l + \nu$, ratio of f/sub -/ to f/sub +/ form factor in, 25:53119
- decay $K \to \pi + l + \nu$, rigorous upper bound for form factor for, (T), 25:53101 (NYO-4204-18)
- decay $K \to \pi + l + \nu$, spin-0 Kemmer wave functions for form factors in, (T), 25:53115
- decay $K \to \pi + \pi + l + \nu$, form factor parameters from chiral Lagrangians and SU(3) x SU(3) field algebra, 25:53125
- decay of, configuration conservation for nonleptonic, 25:53121
- decay of, rigorous upper bound for form factor for $K \to \pi + l + \nu$ decay for ratio of K and π decay constants for, (T), 25:53101 (NYO-4204-18)
- interactions anti K + K, semilocal duality for, 25:53169
- interactions anti K + N $\to$ anti K + π + N, dual five-point function for phenomenological analysis of, (T), 25:53188
- interactions anti K + N, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
- interactions K + N at low and intermediate energies, partial-wave amplitudes for, 25:53220
- interactions K + N, partial wave analysis of, 25:53180 (UCRL-20655, pp 176a-89)
- interactions $K + \pi$, current algebra and elastic unitarity for S-wave, 25:53164
- production and decay of strange 0^-, 25:53117
- trajectory for strange 0^-, from duality, 25:53117

MESONS (K$^-$)
- absorption by nickel-58 and -60, oxygen-16, and silver-107 nuclear surface, neutron/proton density distributions from, (T), 25:53683
- capture by lithium-6 and lithium-7, gamma spectra from Λ-H^4 and Λ-He^4 hyperfragments from, 25:53033
- interactions $K^- + N$ at low and intermediate energies, review of bubble chamber and counter experiments on, 25:53181 (UCRL-20655, pp 190a-202)
- interactions $K^- + p \to$ anti $K^0 + \pi^- + p$, line-reversal-symmetry breaking for, 25:53213
- interactions $K^- + p \to K^{*-} + p$, line-reversal-symmetry breaking and interference effects in, 25:53213
- interactions $K^- + p \to K^- + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
- interactions $K^- + p \to \Lambda$ + anti p + p, generalized Veneziano model analysis of, (T), 25:53190
- interactions $K^- + p$ at high energies, review of backward, (E/T), 25:53029
- interactions $K^- + p$, soft-point PCAC scattering length for, 25:53221
- production of K^+--K^- pairs in $e + e \to 2e + K^+ + K^-$ and $e^+ + e^- \to e^+ + e^- + K^+ + K^-$ interactions in colliding beams, (T), 25:53048 (DESY-71/30)

MESONS (K^0)
  decay $K^0 \to \pi^- + \mu^+ + \nu$, time dependence of μ polarization vector and $\Delta S = \Delta Q$ violation in, 25:53127
  decay $K_2^0 \to 2\gamma$, spin-zero pole dominance and hard-meson current algebra for, 25:53103
  decay $K_2^0 \to 2\pi$, effect of degenerate neutrino sea on, 25:53122
  decay $K_2^0 \to 2\pi$, Lipkin--Abashian model for, 25:53117
  decay $K_2^0 \to \pi + \mu + \nu$, scintillation hodoscope data acquisition system for measuring charge asymmetry in, (E), 25:51896 (UCRL-20636)
  mass difference ($K_2^0 - K_1^0$), spin-zero pole dominance and hard-pion current algebra for, 25:53103
MESONS (K^+)
  interactions $K^+ + d$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
  interactions $K^+ + n \to K^0 + p$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
  interactions $K^+ + n \to K^+ + n$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
  interactions $K^+ + n$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
  interactions $K^+ + p \to$ anti $\Lambda + 2p$, generalized Veneziano model analysis of, (T), 25:53190
  interactions $K^+ + p \to K^{*+} + p$, line-reversal-symmetry breaking and interference effects in, 25:53213
  interactions $K^+ + p \to K^0 + \pi^+ + p$, line-reversal-symmetry breaking for, 25:53213
  interactions $K^+ + p \to K^+ + p$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
  interactions $K^+ + p \to K^+ + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
  interactions $K^+ + p$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
  interactions $K^+ + p$ at high energies, review of backward, (E/T), 25:53029
  interactions $K^+ + p$, proton matrix element of kaon Σ-commutator term in elastic, 25:53192
  interactions $K^+ + p$, soft-point PCAC scattering length for, 25:53221
  production in $\gamma + p \to K^+ + \Lambda$ interactions at 1 and 2 GeV, differential cross sections for, (E), 25:52992 (LAL-RI-71-3)
  production of K^+--K^- pairs in $e + e \to 2e + K^+ + K^-$ and $e^+ + e^- \to e^+ + e^- + K^+ + K^-$ interactions in colliding beams, (T), 25:53048 (DESY-71/30)
MESONS (μ)
  decay $\mu \to e + \nu +$ anti ν, restrictions on mass of ν and W and weak interaction variants from, 25:53112
  g factor of, review of, (E), 25:53007
  interactions $\mu + N$, review of elastic and inelastic, (E), 25:53007
  theory for difference between electron and, discrete scale transformations for lepton mass spectrum for, (T), 25:53114
  theory for, discrete scale transformations for mass spectrum of leptons for muon puzzle in, (T), 25:53114
MESONS (μ^-)
  capture by boron-11, rates of, 25:53522
  capture by carbon, nitrogen, and oxygen in emulsions, relative probabilities of reaction channels for lithium-8 production in, (E), 25:53516 (JINR-P1-5893)
  capture by carbon-12 in emulsions, energy spectra, angular correlations, and relative probability for lithium-8, helium-3, neutron, and neutrino production in, (E), 25:53516 (JINR-P1-5893)
  capture by helium-3, calculations using soft-core Irving--Gunn wave function of rate of, (T), 25:53529
  capture by nuclei, Doppler effect and internal bremsstrahlung in, (T), 25:53629
  capture by nuclei, radiochemical techniques for rate to all particle-stable final states in, (E/T), 25:53813 (LA-DC-12780)
  interactions $\mu^- + p$ at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
  production of heavy μ^---μ^+ pairs at high energies, model for hadrons as extended objects for, (T), 25:53151
  reactions with iron at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
  spectra of cosmic, at sea level, 25:52700
MESONS (μ^+)
  decay $\mu^+ \to e^+ + e^+ + e^-$ in magnetic spark chamber, branching ratio for, (E), 25:52999
  depolarization in magnetic fields, account of charge exchange and formation of unstable chemical compounds in theory for, (T), 25:53120
  interactions $\mu^+ + p$ at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
  polarization vector in $K^0 \to \pi^- + \mu^+ + \nu$ decay, time dependence of, 25:53127
  production of heavy μ^---μ^+ pairs at high energies, model for hadrons as extended objects for, (T), 25:53151
  reactions with iron at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
MESONS (ω)
  decay $\omega \to 2\pi$, branching ratio and relative phase to rho $\to \pi + \pi$ decay for, 25:53002
  decay $\omega \to 3\pi$, quark model for, 25:53158
  decay $\omega \to \pi^0 + \gamma$, quark model for, 25:53158
  exchange contribution to $\pi + N \to$ rho $+ N$ interactions at high energies, model independent analysis for, (T), 25:53184
  exchange in $N + N \to N + N$ interactions, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
  interference of rho--ω in di-pion production in $\gamma + p$ interactions and γ reactions with carbon and lead at 7.4 GeV, parameters for, (E), 25:53002
  interference of rho--ω in dipion production in $\gamma + p$ interactions and γ reactions with carbon and lead at 5 to 7 GeV, parameters for, (E), 25:52991 (DESY-71/37)
  production in $\gamma + p$ interactions and γ reactions with complex nuclei at high energies, review of, (E), 25:52997
MESONS (phi)
  production in $\gamma + p$ and $\gamma + d$ interactions, and γ reactions with complex nuclei at high energies, review of, (E), 25:52997
MESONS (π)
  absorption by beryllium-9, form factors for two-nucleon, (T), 25:53618
  coupling of ππ, Adler--Weisberger universality of isovector, (T), 25:53167
  decay of, rigorous upper bound for form factor for $K \to \pi + l + \nu$ decay for ratio of K and π decay constants for, (T), 25:53101 (NYO-4204-18)
  exchange in $N + N \to N + N$ interactions, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
  exchange in strong interactions at high energies, dips and spikes in t dependence of differential cross sections for, 25:53138
  form factor for, model for hadrons as extended objects for spacelike and timelike, (T), 25:53151
  form factor from $e^+ + e^- \to \pi^+ + \pi^-$ interactions, upper and lower bounds on, 25:53069
  form factor of, low-momentum transfer behavior of gravitational, 25:53336
  interactions $K + \pi$, current algebra and elastic unitarity for S-wave, 25:53164
  interactions $\pi + \Delta$ in P_{33} state, static model for, 25:53198
  interactions $\pi + N \to N + k\pi$, nucleon momentum spectra from duality diagrams for, 25:53193
  interactions $\pi + N \to \omega + N(\Delta)$ at high energies, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184
  interactions $\pi + N \to \pi + N$ at high energies, spin-dependent droplet model for, (T), 25:53199
  interactions $\pi + N \to \pi + N$, vector current and universality for, (T), 25:53167
  interactions $\pi + N \to \pi + N(1470)$, anomalous magnetic moment for, 25:53201
  interactions $\pi + N \to \pi + \pi + N$, partial wave analysis in, 25:53182 (UCRL-20655, pp 220a-49)
  interactions $\pi + N \to \pi(\gamma) + N$, contributions of spin-J baryon poles to amplitudes of, (T), 25:53203
  interactions $\pi + N \to$ rho $+ N$ at high energies, model independent analysis for ω-exchange contribution to, (T), 25:53184
  interactions $\pi + N \to$ rho $+ N$, vector-meson dominance for $e + N \to \pi + N$ interactions relation with, (T), 25:53074
  interactions $\pi + N$ at low and intermediate energies, partial-wave amplitudes for, 25:53220
  interactions $\pi + N$, absorption Regge cut in backward, 25:53206
  interactions $\pi + N$, current algebra for, (T), 25:53191
  interactions $\pi + N$, dispersion theoretic model for Δ(1650), N(1700), and Δ(1670) as rhoN bound states in, 25:53218
  interactions $\pi + N$, energy dependence of slope of diffraction amplitude for, 25:53197
  interactions $\pi + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
  interactions $\pi + N$, helicity structure of Regge couplings in, 25:53195
  interactions $\pi + N$, inequalities for partial waves of, 25:53216
  interactions $\pi + N$, kinematical singularities and helicity amplitudes for π and higher-spin baryon production in, (T), 25:53200
  interactions $\pi + N$, Regge pole absorption theory for dip structure mechanism for meson and nucleon production in, (T), 25:53185
  interactions $\pi + N$, S-channel helicity amplitudes for, 25:53204
  interactions $\pi + N$, soft-point PCAC scattering length for, 25:53221
  interactions $\pi + N$, SU(3) x SU(3) chiral-symmetry breaking for, 25:53202
  interactions $\pi + N$, sum rule for chiral SU(2) x SU(2) symmetry breaking in, (T), 25:53178 (NYO-4204-19)
  interactions $\pi + N$, urbaryon rearrangement amplitude for elastic, 25:53149
  interactions $\pi + N$, vacuum trajectory for amplitudes of, 25:53222
  interactions $\pi + p \to \pi + N(1470)$ at very high energies, integrated cross sections, angular distributions, and

pionization in diffractive, (T), 25:53050 (DESY-71/36)
- interactions $\pi + p \to \pi + p$ at high energies, review of spin rotation parameters for, (E), 25:53028
- interactions $\pi + p$, spark-chamber spectrometer study of forward differential cross sections for $p + p \to d + \pi$ interactions at 3.4 to 12.3 GeV/c for $T = {}^3/_2$ isobars and cross sections for, (E), 25:53008 (LA-4483)
- interactions $\pi + \pi \to N +$ anti N, reduced-moment problem for constraints on partial-wave amplitudes for, 25:53166
- interactions $\pi + \pi \to \pi + \omega$, final-state interactions in Veneziano model for, 25:53171
- interactions $\pi + \pi \to \pi + \pi$, asymptotic decreasing Efimov amplitudes for, 25:53163
- interactions $\pi + \pi \to \pi + \pi$, reduced-moment problem for constraints on partial-wave amplitudes for, 25:53166
- interactions $\pi + \pi$ at low energies, unitarization method for crossing symmetric real amplitudes with resonating phase shifts for, (T), 25:53165
- interactions $\pi + \pi$, exact integral equation for physical-region partial-wave amplitudes of, 25:53172
- interactions $\pi + \pi$, group theoretic derivation of crossing sum rules for amplitudes of, (T), 25:53175
- Lagrangian model for, PCAC in nonlinear conformal and chiral, 25:53272
- production in $e + N \to \pi + N$ interactions, vector-meson dominance for $\pi + N \to$ rho + N interactions relation with, (T), 25:53074
- production in e + N interactions, PCAC hypothesis and current algebra analysis of cross sections for, 25:53061
- production in e + p interactions at 2 GeV/c, cross sections for, 25:53006
- production in electron reactions with complex nuclei at 1.0 to 1.178 GeV, mechanism of, (E/T), 25:52993
- production in $\gamma + N \to \pi + N$ and $e + N \to \pi + N$ interactions, review of vector dominance model for, (T), 25:53076
- production in γ reactions with helium-4 at high energies, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184
- production in photon interactions with scalar charge-zero particles, review of gauge invariance for amplitudes of, (T), 25:53073
- quantum field theory for πN system, finite local, 25:53324
- reactions with brass and carbon above 20 GeV, multiplicity distribution of collimated secondaries from cosmic, (E), 25:53018
- reactions with helium-4 at high energies, model independent analysis for separation between exchange of natural and unnatural parity in rho production in, (T), 25:53184
- reactions with nuclei near $\Delta(1236)$, optical model for, (T), 25:53225 (FRNC-TH-51)
- use for therapy, rationale for, 25:52122 (A/CONF.49/P-161)
- vertex functions from spurion model and Veneziano formula, 25:53161

MESONS (π^-)
- dose distribution in tissues, 25:52152 (UCRL-20836)
- effects on spermatogonia in mice, estimation of RBE for lethal, 25:52228
- interactions of, multiple rescattering effects on cross sections for charge-exchange, (T), 25:53051 (JINR-P2-5752)
- interactions $\pi^- + n \to p + k\pi$, proton momentum spectra from duality diagrams for, 25:53193
- interactions $\pi^- + p \to 2\gamma + n$ at 3.65 GeV/c, differential and total cross sections for eta and eta' production in, (E), 25:53003
- interactions $\pi^- + p \to K^0 + \Lambda$, partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
- interactions $\pi^- + p \to n + \pi^0$, absorption Regge-cut model for cross sections and polarization in, 25:53206
- interactions $\pi^- + p \to p + k\pi$, proton momentum spectra from duality diagrams for, 25:53193
- interactions $\pi^- + p \to p + \pi^+ + \pi^- + \pi^-$ at 11.2 GeV/c, helicity conservation in, (E/T), 25:53032
- interactions $\pi^- + p \to p + \pi^-$, absorption Regge-cut model for cross sections and polarization in, 25:53206
- interactions $\pi^- + p \to \pi^0 + n$ at 5.2 to 13.3 GeV, isotopic spin bounds on polarization in, 25:53209
- interactions $\pi^- + p \to \pi^0 + n$, bound on helicity flip amplitude for absorptive part of, 25:53215
- interactions $\pi^- + p \to \pi^0 + n$, partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
- interactions $\pi^- + p \to \pi^- + p + 2\gamma(3\gamma)$ at 5 GeV/c in propane bubble chamber, $\pi^-\gamma(270)$ production in, (E), 25:53026
- interactions $\pi^- + p \to \pi^- + p$ at high energies, compilation of polarization data and Regge pole model for, (E/T), 25:53186
- interactions $\pi^- + p \to \pi^+ + \pi^- + n$, breakdown of charge symmetry from ω--rho mixing in, 25:53183 (UCRL-20655, pp 250a-76)
- interactions $\pi^- + p \to \pi^-(\pi^0) + p(n)$, absorption model for backward, (T), 25:53187
- interactions $\pi^- + p$ at 10 GeV/c, maximum-momentum analysis of angular and momentum distributions for, (T), 25:53214
- interactions $\pi^- + p$ at 4.33 GeV in bubble chamber, differential cross sections for, (E), 25:53023 (IAE-1975)
- interactions $\pi^- + p$ at high energies, review of backward, (E/T), 25:53029
- interactions $\pi^- + p$, absorptive Regge cut model for forward, 25:53196
- interactions $\pi^- + \Sigma^+ \to \pi^+ + \Sigma^-$, $\pi\Sigma\Sigma$ coupling constant and $I = 2$ $\pi\Sigma$ resonance from, (T), 25:53217
- mass determination from x-ray spectra of iodine and thallium π-mesic atoms, (E), 25:53005
- momentum in emulsions, method for measuring, 25:53030
- production in $p + p \to 2p + \pi^+ + \pi^-$ interactions up to 250 and at 730 MeV, total cross sections and angular distributions for, (E), 25:53226 (LA-DC-12944)
- production in proton reactions with emulsion nuclei at 660 MeV, mechanism of, (E), 25:53010
- production in proton reactions with heavy nuclei at 20.8 GeV/c in emulsions, diffraction, (E), 25:53012
- production in proton reactions with nuclei at 730 MeV, total cross sections for, (E), 25:53226 (LA-DC-12944)
- production of π^+--π^- pairs in $e + e \to 2e + \pi^- + \pi^+$ and $e^+ + e^- \to e^+ + e^- + \pi^+ + \pi^-$ interactions in colliding beams, (T), 25:53048 (DESY-71/30)
- production of π^+--π^- pairs in $\gamma + p$ interactions and γ reactions with carbon and lead at 5 to 7 GeV, rho--ω interference parameters for, (E), 25:52991 (DESY-71/37)
- production of π^---π^+ pairs in $\gamma + p$ interactions and γ reactions with carbon and lead at 7.4 GeV, parameters for rho--ω interference in, (E), 25:53002
- reactions $(\pi^-,2\pi^-\pi^+)$ with nuclei, angular criteria for, (T), 25:53869
- reactions with carbon at 4 GeV/c in propane bubble chamber, proton pair correlated production in, (E), 25:53031
- reactions with emulsion nuclei, polarization of lithium-8 fragments produced by, (E), 25:53771
- scattering at 60 GeV in emulsions, multiple, (E), 25:53030
- use for therapy, review of status of, 25:52148 (A/CONF.49/P-508)

MESONS (π^0)
- photoproduction of, angular distributions for, (E), 25:52988(R) (NP-18909)
- production in $\gamma + n \to \pi^0 + n$ and $\gamma + p \to \pi^0 + p$ interactions, Regge pole absorption theory for dip structure mechanism for ratio of, (T), 25:53185
- production in $\gamma + p \to \pi^0 + p$ interactions at high energies, review of backward, (E/T), 25:53029

MESONS (π^+)
- effects on spermatogonia in mice, estimation of RBE for lethal, 25:52228
- interactions of, multiple rescattering effects on cross sections for charge-exchange, (T), 25:53051 (JINR-P2-5752)
- interactions $\pi^+ + d \to d + \pi^+ + \pi^+ + \pi^-$ at 11.7 GeV/c, helicity conservation in, (E/T), 25:53032
- interactions $\pi^+ + d$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
- interactions $\pi^+ + n \to n + \pi^+ + \pi^+ + \pi^-$ at 11.7 GeV/c, helicity conservation in, (E/T), 25:53032
- interactions $\pi^+ + n \to \pi^+ + \pi^- + p$, breakdown of charge symmetry from ω--rho mixing in, 25:53183 (UCRL-20655, pp 250a-76)
- interactions $\pi^+ + N \to$ rho $+ \Delta$ at 8 GeV/c in deuterium bubble chamber, (E), 25:53752(R) (ORNL-4659)
- interactions $\pi^+ + n$ at 15 to 61 GeV/c, total cross sections for, (E), 25:53014
- interactions $\pi^+ + p \to K^+ + \Sigma^+$ partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
- interactions $\pi^+ + p \to K^+ (K^-) + K^0 + \pi^+ + \pi^- (\pi^+) + p$ at 8.04 GeV/c in hydrogen bubble chamber, production cross section for $X^+(2820)$ in, (E), 25:53024 (IFA-HE-74)
- interactions $\pi^+ + p \to n + k\pi$, neutron momentum spectra from duality diagrams for, (T), 25:53193
- interactions $\pi^+ + p \to p + k\pi$, proton momentum spectra from duality diagrams for, (T), 25:53193
- interactions $\pi^+ + p \to p + \pi^+$, absorption Regge-cut model for cross sections and polarization in, 25:53206
- interactions $\pi^+ + p \to \pi^0 + \Delta^{++}$, absorption effects in, 25:53219
- interactions $\pi^+ + p \to \pi^+ + p$ at high energies, compilation of polarization data and Regge pole model for, (E/T), 25:53186
- interactions $\pi^+ + p \to \pi^+ + p$, absorption model for backward, (T), 25:53187
- interactions $\pi^+ + p$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
- interactions $\pi^+ + p$ at high energies, review of backward, (E/T), 25:53029
- interactions $\pi^+ + p$, absorptive Regge cut model for forward, 25:53196
- production in $\gamma + p \to \pi^+ + n$ interactions at high energies, review of backward, (E/T), 25:53029
- production in $p + p \to 2p + \pi^+ + \pi^-$ interactions up to 250 and at 730 MeV, total cross sections and angular distributions for, (E), 25:53226 (LA-DC-12944)

- production in photon reactions with nuclei at high energies, vector dominance model for asymmetry in, (T), 25:53075
- production in proton reactions (p,π^+) with deuterium, helium-3, and carbon-12, cross sections for, 25:53239
- production in proton reactions with emulsion nuclei at 660 MeV, mechanism of, (E), 25:53010
- production in proton reactions with heavy nuclei at 20.8 GeV/c in emulsions, diffraction, (E), 25:53012
- production in proton reactions with nuclei at 730 MeV, total cross sections for, (E), 25:53226 (LA-DC-12944)
- production of π^+--π^- pairs in $e + e \rightarrow 2e + \pi^- + \pi^+$ and $e^+ + e^- \rightarrow e^+ + e^- + \pi^+ + \pi^-$ interactions in colliding beams, (T), 25:53048 (DESY-71/30)
- production of π^+--π^- pairs in $\gamma + p$ interactions and γ reactions with carbon and lead at 5 to 7 GeV, rho--ω interference parameters for, (E), 25:52991 (DESY-71/37)
- production of π^---π^+ pairs in $\gamma + p$ interactions and γ reactions with carbon and lead at 7.4 GeV, parameters for rho--ω interference in, (E), 25:53002
- reactions with emulsion nuclei at 60 GeV, angular distributions from, (E), 25:53025

MESONS (rho)

- decay rho $\rightarrow 3\pi$, search for C violation in electromagnetic and semi-strong interactions from rho--ω interference in, 25:53183 (UCRL-20655, pp 250a-76)
- decay rho $\rightarrow \pi$ + eta, spin-zero pole dominance and hard-meson current algebra for, 25:53103
- exchange in $N + N \rightarrow N + N$ interactions, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
- interactions rho + N in Veneziano-type model with diffraction, total cross section for, 25:53098
- interactions $\text{rho}^0 + p \rightarrow \text{rho}^0 + p$, model for, (T), 25:53091
- interference of rho--ω in di-pion production in $\gamma + p$ interactions and γ reactions with carbon and lead at 7.4 GeV, parameters for, (E), 25:53002
- interference of rho--ω in dipion production in $\gamma + p$ interactions and γ reactions with carbon and lead at 5 to 7 GeV, parameters for, (E), 25:52991 (DESY-71/37)
- photoproduction of, angular distributions for, (E), 25:52988(R) (NP-18909)
- production in $\gamma + p \rightarrow \text{rho} + p$ diffractive interactions at very high energies, integrated cross sections, angular distributions, and pionization in, (T), 25:53050 (DESY-71/36)
- production in $\gamma + p \rightarrow \text{rho}^0 + p$ interactions, impulse approximation and vector dominance hypothesis for differential cross sections of $\text{rho}^0 + p \rightarrow \text{rho}^0 + p$ interactions relations with differential cross sections of, (T), 25:53091
- production in $\gamma + p$ and $\gamma + d$ interactions, and γ reactions with complex nuclei at high energies, review of, (E), 25:52997
- production in $\pi + N \rightarrow \text{rho} + N$ interactions at high energies, model independent analysis for ω-exchange contribution to, (T), 25:53184
- production in $\pi + N \rightarrow \text{rho} + N$ interactions, vector-meson dominance for $e + N \rightarrow \pi + N$ interactions relation with, (T), 25:53074
- production in π reactions with helium-4 at high energies, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184

MESONS (X^0)

- decay eta' $\rightarrow 2\gamma$, branching ratio for, (E), 25:53003
- mass in quark model with chiral U(3) X U(3) symmetry breaking, 25:53269
- production of eta' in $\pi^- + p \rightarrow 2\gamma + n$ interactions at 3.65 GeV/c, differential and total cross sections for, (E), 25:53003

MESONS, RESONANCE

- coupling of A_2NN on-mass shell, helicity-flip property of, 25:53234
- decay $A_2 \rightarrow$ anti K + K, width and branching ratio for, 25:53169
- decay $K^* \rightarrow K + \pi + \pi$, quark model for, 25:53158
- decay $X^0(960) \rightarrow \text{rho}^0 + e^+ + e^-$, determination of spin and parity of $X^0(960)$ from, (T), 25:53063
- decay $X^+ \rightarrow K + K + \pi$ in hydrogen bubble chamber, (E), 25:53024 (IFA-HE-74)
- exchange of epsilon in $N + N \rightarrow N + N$ interactions, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
- field boundary for, complex Regge trajectories for, (T), 25:53210
- isospin of $X^+(2820)$ in $\pi^+ + p \rightarrow K^+(K^-) + K^0 + \pi^+ + \pi^-(\pi^+)$ interactions at 8.04 GeV/c in hydrogen bubble chamber, (E), 25:53024 (IFA-HE-74)
- mass and width of $\pi^-\gamma(270)$ in $\pi^- + p \rightarrow \pi^- + p + 2\gamma(3\gamma)$ interactions at 5 GeV/c in propane bubble chamber, (E), 25:53026
- mass and width of $X^+(2820)$ in $\pi^+ + p \rightarrow K^+(K^-) + K^0 + \pi^+ + \pi^- (\pi^+)$ interactions at 8.04 GeV/c in hydrogen bubble chamber, (E), 25:53024 (IFA-HE-74)
- parity and spin of $X^0(960)$, interactions $e^+ + e^- \rightarrow X^0(960) + \text{rho}^0(\gamma)$ in colliding beams for determination of, (T), 25:53063
- parity and spin of $X^0(960)$, photon reactions with spin-0 nuclei for determination of, (T), 25:53063
- parity and spin of $X^0(960)$, $X^0(960) \rightarrow \text{rho}^0 + e^+ + e^-$ decay for determination of, (T), 25:53063
- photoproduction of rho'(1500), multiperipheral production mechanism and duality for, 25:53097
- production of I = 1 (1500) in $\pi^+\pi^-$ and $2\pi^+2\pi^-$ spectra, review of, (E), 25:53027
- production of $\pi^-\gamma(270)$ in $\pi^- + p \rightarrow \pi^- + p + 2\gamma(3\gamma)$ interactions at 5 GeV/c in propane bubble chamber, (E), 25:53026
- production of T(2195) in anti p + p $\rightarrow$ anti p + p backward interactions at 1.12 to 1.36 GeV/c in bubble chamber, differential cross sections for, (E), 25:53020
- production of $X^+(2820)$ in $\pi^+ + p \rightarrow K^+ (K^-) + K^0 + \pi^+ + \pi^- (\pi^+)$ interactions at 8.04 GeV/c in hydrogen bubble chamber, (E), 25:53024 (IFA-HE-74)
- spectra of low-lying states of, 25:53130 (UCRL-20655, pp 129-68)
- spectra of scalar, N-point function in Veneziano model for, (T), 25:53160
- splitting of A_2, summary of experimental results on, 25:53168

METABOLISM

- radioisotope tracer studies on agricultural animal and plant, 25:51968 (CONF-710428-, Paper 5)

METALLURGICAL EQUIPMENT

- description of JAERI hot cells, 25:51780
- design for measuring shrinkage during sintering of refractory metals, 25:52314

METALLURGY

- book: Advances in Materials Research, Vol. 5, 25:52967

METALS

- production in USSR, uses of radiometric instruments in processes for, 25:51697 (A/CONF.49/P-465)
- radioinduced void growth in, use of high-voltage electron microscope to simulate fast neutron, 25:52410 (RD/B/N-1879)
- wear of machine part, surface activation for meaurement of, 25:51921

METAMORPHIC ROCKS

- rare earth content in vesuvianite skarns, 25:51645
- uranium content in vesuvianite skarns, 25:51645

METEORITES

- analysis of stone, for aluminum-26 by indirect γ spectrometry, estimation of error in, 25:51394
- fission fragment tracks from far transuranium elements in, search for spontaneous, (E), 25:53744 (JINR-P7-5814)

METHACRYLIC ACID, METHYL ESTER

- radioinduced polymerization with agricultural and stone wastes, cellulose, and wood, properties of products of γ, 25:51494 (A/CONF.49/P-829)

METHACRYLIC ACID, METHYL ESTER, POLYMERS

- radiation effects on mechanical properties of, at liquid nitrogen temperature, gamma, 25:52488 (RHEL/R-220)
- radiation effects on, thermal decay effects on spatial distribution of radicals from γ, 25:51487
- radioinduced thermoelectric currents in lucite disks, effects of electric potential on γ-, 25:52906
- radiolysis of aromatic solutes in, triplets and molecular ions from electron, 25:51507 (AD-722057)
- radiolysis of, effects of ethanethiol on main chain scission and volatile product yield in γ, 25:51521

METHANE

- deuterium concentration in, by gas chromatography, 25:51595
- effects on radiolytic reaction between carbon dioxide and graphite in gas cooled graphite moderated reactors, 25:54074(P)

METHANE, BROMO-

- radiation effects on, incorporated in deuterated acetonitrile, ESR studies of methyl radical--halide ion pairs produced by γ, 25:51489

METHANE, CHLORO-

- radiation effects on, incorporated in deuterated acetonitrile, ESR studies of methyl radical--halide ion pairs produced by γ, 25:51489

METHANE, CHLOROTRIPHENYL-

- radiolysis in carbon disulfide, carbon tetrachloride, cyclohexane, hexane, and 2,2,4-trimethylpentane, ion-pair yields from γ, 25:51505 (AD-715391)

METHANE, IODO-

- removal from pressurized water reactor containment system, performance of filters and sprays for, (E), 25:54155 (BNWL-1592)

METHANESULFONIC ACID, ETHYL ESTER

- effects on maize and wheat, mutagenic, 25:52016 (A/CONF.49/P-354)
- effects on wheat for resistance to Puccinia graminis and Septoria nodorum, mutagenic, 25:52263

METHANOL

- radio emission at 25 GHz from, in Orion, (E), 25:52545
- radiolysis of alkaline, yields of solvated electrons from γ, 25:51533

METHYL SULFATES

- effects on reversion frequency of chlorophyll mutants in sunflowers, 25:52267

METHYL SULFOXIDE

- effectiveness for treatment of radiation injuries of human skin following therapy, 25:52118
- radiolysis of, spectral studies of electron pulse, 25:51537
- radioprotective effects on bone marrow cells of mice in

vitro and in vivo, x, 25:52113
radioprotective effects on HeLa cells, x, 25:52112

MEXICO
hydrology of, use of radioisotopes in research on, 25:51615 (A/CONF.49/P-790)
nuclear power development in, recommendations for, 25:53916 (A/CONF.49/P-793)
nuclear power plant development in, programs for, 25:53915 (A/CONF.49/P-788)
reactor development in, review of, 25:54058

MICA
fission fragment tracks from far transuranium elements in, search for spontaneous, (E), 25:53744 (JINR-P7-5814)
radiohalo occurrence in, effects of unknown alpha radioactivity on, (E), 25:51619

MICE
niobium distribution in tissues of, following inhalation, ingestion, and injection as oxalate, niobium-95 tracer study of, 25:51977
plutonium metabolism in, review of monomeric and polymeric, 25:51969 (CONF-711001-(Vol.2), pp 551-9)
radiation effects on albumin metabolism in small and large intestine of, iodine-131 tracer study of x, 25:52003
radiation effects on content of leukocytes in peripheral blood and survival of, protective effects of royal jelly against x, 25:52108
radiation effects on hematopoiesis in, receiving thymocyte transplants, x, 25:52206
radiation effects on immune response of, effects of implanted lymphoid cells on restoration of whole-body, 25:52006 (A/CONF.49/P-320)
radiation effects on mitosis and tritium-labeled-thymidine uptake by stomach mucosa of, x, 25:52221
radiation effects on motility of sperm of, following subcutaneous injection of iodine-131, 25:52188
radiation effects on pulmonary bactericidal function of, whole-body x, 25:52227
radiation effects on survival of cells in bone marrow and intestine of normal, comparison of RBE for fast neutron and x, 25:52200
radiation effects on survival of epithelial cells in skin of, effects of depth of penetration on charged particle, 25:52229
radiation effects on survival of in vitro and in vivo bone marrow cells of, protective effects of dimethyl sulfoxide against x, 25:52113
radiation effects on survival of neonatal, effects of partial-body shielding on x, 25:52268 (A/CONF.49/P-538)
radiation effects on survival of spermatogonia in, estimation of RBE for meson (π^-) and (π^+), 25:52228
radiation effects on survival of, protective effects of autologous marrow injections and shielding on x, 25:52213
radiation effects on survival of, protective effects of α-amidrazonium thiosulfates against, 25:52204
radiation effects on survival of, protective effects of bone marrow injections against x, 25:52107
radiation effects on survival of, protective effects of analogs of [(2-aminoethyl)dithio]benzoic acid against, 25:52114
radiation effects on, protective effects of C_{s11}HF against whole-body x, 25:52117
radiation effects on, protective effects of cysteamine and cysteamine homologs against γ, 25:52116
radiation effects on, protective effects of serotonin-containing dextran derivatives against γ, 25:52115
radioactivity of blood and tissues in, following administration of 2-methylpiperazinedithioic acid, 25:51978
radioinduced leukemia in, following continuous low-level exposure, effects of strain on γ, 25:52226
radiosensitivity of, diurnal and seasonal variations in x, 25:52191
samarium distribution in tissues of, following inhalation as chlorides, samarium-153 tracer study of, 25:51976
serotonin-containing dextran derivative toxicity to, 25:52115
zinc metabolism in, review of, 25:51980

MICROORGANISMS
radiation control of, in agriculture in South Africa during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)
radiosterilization of, in processed maize starch, 25:52282 (A/CONF.49/P-628)

MICROWAVES
coupling to ionospheric irregularities, remote double resonance, (T), 25:52717
performance for plasma diagnostics in Tokamak T-3a device, (E), 25:52786

MIDWEST FUEL RECOVERY PLANT
fuel shipping casks at, request for authorization for receipt of empty slightly contaminated, 25:51577 (DOCKET-50268-14)

MIHAMA POWER REACTOR, UNIT 1
construction of, review of, 25:53958 (A/CONF.49/P-849)
operations during 1970 to 1971, review of, 25:53958 (A/CONF.49/P-849)
testing of, description of pre-operation, 25:53958 (A/CONF.49/P-849)

MILK
iodine-131 content of, following exposure of cattle to nuclear explosion debris at Nevada Test Site and to contaminated forage, 25:52012 (PNE-914-F)
radioactive contamination of, in Belgium in relation to contamination of total diet, 25:52054
radioisotope content of, in Central, North, and South America during February, 1971, 25:52058
strontium-90 content of, in relation to calcium in New York during 1969, 25:52058
strontium-90 content of, in relation to other elements, statistical analysis of, 25:52059
uranium content of Soviet Union, 25:52010 (A-AC-82/G/L.1298)

MILKY WAY
carbonyl sulfide in direction of, detection of, 25:52547
distance to center of, (E/T), 25:52577
electron density and temperature in diffuse interstellar space, (E), 25:52572
hydrogen column densities in, Lyman-α absorption measurements for, (E), 25:52526
interstellar extinction in, ratio of total to selective, (E/T), 25:52577
kinematic-dynamo action in, under incompressible isotropic velocity turbulence, (T), 25:52568
methyl cyanide emission lines in Sgr A and B, detection of, 25:52546
temperature of interstellar space, ionization equilibrium of nitrogen for, (E/T), 25:52573
x-ray background in, origin of, (E), 25:52580

MINERALS
analysis by energy dispersion x-ray diffraction method, 25:51361 (CONF-710428-, Paper 1)
fission fragment tracks from far transuranium elements in natural, search for spontaneous, (E), 25:53744 (JINR-P7-5814)
transport from soil to root xylem, 25:54374(R) (ORO-1827-6)

MINES
monitoring South Africa gold, for radon-222 and decay products, 25:52064 (A/CONF.49/P-659)

MINING
radioisotope uses in, in Poland, 25:51693 (A/CONF.49/P-334)

MISCH METAL
Co--Fe--misch metal, lattice constants for MM$_2$(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)

MISSISSIPPI
geology of Tatum Dome, Lamar County, SW-NE cross section map of, 25:51617 (USGS-474-114)

MITOSIS
radiation effects on synchronization of pea seedling, root meristem cell, 25:52259
radiation effects on, in stomach mucosa of mice, x, 25:52221

MOESSBAUER EFFECT
gamma-quanta transmission through polycrystals, (T), 25:52973
spectroscopy of rare earths, survey, 25:52971 (CCNF-711001-(Vol.1), pp 144-51)
use in science and engineering research in Soviet Union, 25:52970 (A/CONF.49/P-688)

MOISTURE GAGES
design and calibration of radiometric, for sediment water content, 25:51919 (AD-721095)
performance of radiometric, in automatic control of water in concrete mixes, 25:52493

MOLECULES
atom inelastic scattering by rigid-rotor, semiclassical calculation of rotational transition probabilities in, 25:52659
atom reactions with diatomic, at low energies, generalized impact-parameter method for, 25:52637
atom reactions with diatomic, integral-equation formalism for resonance level widths and positions in, 25:52662
atom reactions with diatomic, perturbation theory for inelastic, 25:52681
atom scattering by diatomic, nonperturbative method for vibrationally inelastic, (T), 25:52682
book: Atomic and Molecular Radiation Physics, 25:52889
book: Atomic Collision Theory, 25:52652
charged-particle reactions at high energies with, review of Bethe theory for inelatic, (E/T), 25:52646
density matrices for, higher random-phase-approximation method for direct calculation of first- and second-order, 25:52690
ion reactions with, optical-model analysis of energy distribution of products from, 25:52671
reactions with hydrogen metastable atoms at low energies, quenching cross sections for, (T), 25:52658
wave functions for, geminal-product formalism for N-electron correlated, 25:52693

MOLTEN SALT BREEDER REACTOR
development of plutonium startup, during February through April 1971, 25:54099(R) (NP-18955)
development of plutonium startup, during November 1970 through January 1971, 25:54100(R) (NP-18956)
fuel reprocessing for, engineering development for, 25:51585 (ORNL-TM-3139)

MOLYBDENUM
  book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362
  compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  determination by precipitation from hydrochloric acid with α-benzoin oxime and EPR, 25:51366
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
  diffusion in tungsten single crystals at 1900 to 2250°C, volume inter-, 25:52339
  electron reactions at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
  optical properties of single crystals of, (E), 25:52962
  particle size distribution in powders of, photosedimentation method for measurement of, 25:52354
  radiation effects on hardening of, relations with original state on fast neutron, 25:52400(T) (JPRS-53800, pp 164-75)
  solvent properties for zirconium, solid, 25:52366
  sorptive properties of surfaces of, for oxygen, measurement by secondary ion--ion emission, 25:52353
MOLYBDENUM ALLOYS AND SYSTEMS
  AlN--Mo, microstructure of dense sintered dispersions of, 25:52447
  B--Mn--Mo, phase studies of, 25:52460
  BN--Mo, microstructure of dense sintered dispersions of, 25:52447
  Co--Cr--Mo--Ni--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52333
  Cr--Mo--steel, mechanical properties of plates of, for pressure vessels at high temperatures, standard for, 25:52344
  Cr--Mo--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52334
  Cr--Mo--steel--V, radiation effects on ductility, tensile strength, viscosity, and embrittlement of U.S.S.R. 48 TC, in-pile and neutron, 25:53908 (A/CONF.49/P-705)
  Cr--Mo--Zr, phase studies of isothermal section of, at 1500°C, 25:52379
  Ir--Mo, properties for use as barrier material in fuel capsules for cermet fuels, 25:51717(R) (MDC G-3124)
  Mn--Mo--Ni--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
  Mn--Mo--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
  Mo--PuO_2, compatibility with refractory metal-lined fuel capsules at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
  Mo--PuO_2--ThO_2, compatibility with refractory metal-lined fuel capsules at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
  Mo--Re, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  Mo--Re, compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
  Mo--Re--W, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  Mo--Ti, preparation and properties of, 25:52313
MOLYBDENUM CARBIDES
  hardness anisotropy in polycrystalline, measurement of micro-, 25:52449
MOLYBDENUM FLUORIDES
  solubility in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene, effects of temperature on, 25:51465 (A/CONF.49/P-546)
MOLYBDENUM ISOTOPES Mo-92
  energy levels of, g-factors and magnetic moments of 8^+ isomeric, (E), 25:53779
MOLYBDENUM ISOTOPES Mo-98
  oxygen-16 reactions (O-16,xn) at 80 MeV, γ spectra from, (E), 25:53752(R) (ORNL-4659)
MOLYBDENUM OXIDES
  distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
  effects on copper-64 metabolism in liver of lactating cows, 25:51982
MOLYBDENUM OXYCHLORIDES
  reactions with uranyl chloride, 25:51426
MOLYBDENUM SULFIDES
  effects on copper-64 metabolism in liver of lactating cows, 25:51982
MONAZITES
  analysis for zirconium by fluorometry using quercetin as complexing agent, 25:51377
MONOMERS
  radioinduced polymerization of, in wood in South Africa, γ, 25:51504 (A/CONF.49/P-668)
  concretes--monomers, radioinduced polymerization of, properties of products of, 25:51503 (A/CONF.49/P-647)
MUCOSA
  radiotherapy of carcinomas of cheek, review of, 25:52169
MUEHLEBERG POWER REACTOR
  operating experience with, summary, 25:53949 (A/CONF.49/P-673)
  startup of, 25:53949 (A/CONF.49/P-673)
MUONIUM
  hyperfine pressure shift in argon, observation of quadratic term in, 25:52629
  hyperfine structure interval in, (E), 25:52629
MUTAGENS
  effects on mitotic gene conversion in yeast, 25:52039
MUTATIONS
  radiation effects on Aspergillus, uv and x, 25:52038
  radiation effects on frequency of barley chlorophyll, effects of spring and winter growth on γ, 25:52036
  radiation effects on frequency of barley, comparison between effects of ethylenimine, nitrogen mustards, and γ, 25:52041
  radiation effects on reversion frequency of sunflower chlorophyll, comparison of effects of dimethyl sulfates and nitrosoethylurea with γ, 25:52267
  radioinduced, for increased antibody production in Bacillus, Clostridium, and Pseudomonas strains, fast neutron, 25:52018 (A/CONF.49/P-690)
  radioinduced, for increased productivity in agricultural plants, 25:51962 (A/CONF.49/P-694)
  radioinduced, in agricultural plants for improvement of qualities, 25:52020 (A/CONF.49/P-844)
  radioinduced, in agricultural plants in South Africa during 1960 to 1969, review of γ, 25:51961 (A/CONF.49/P-669)
  radioinduced, in agriculturally important plants for improved quality and yield in Poland, 25:52015 (A/CONF.49/P-329)
  radioinduced, in Azotobacter chroococcum, effects of dose on γ, 25:52270
  radioinduced, in barley and wheat for improved agricultural qualities, effects of ethylenimine on x, 25:52042
  radioinduced, in barley, correlation between radiosensitivity of seeds and frequency of γ, 25:52033
  radioinduced, in cereals, fruit trees, and vegetable crops for improved quality and yield, γ, 25:52279 (A/CONF.49/P-162)
  radioinduced, in Drosophila, genetic analysis of x, 25:52031
  radioinduced, in leaves and stems of jute, x, 25:52040
  radioinduced, in linseed for increased oil content and iodine value, γ, 25:52030
  radioinduced, in maize and wheat for protein composition and content, γ, 25:52016 (A/CONF.49/P-354)
  radioinduced, in plantain for albinism, γ, 25:52032
  radioinduced, in rice plants for improved quality and yield, γ, 25:52019 (A/CONF.49/P-748)
  radioinduced, in silkworm, effects of strain differences on x, 25:52027
  radioinduced, in soybean plants for improved quality and yield, thermal neutron, 25:52019 (A/CONF.49/P-748)
  radioinduced, in winter wheat, γ, 25:52034
  radioinduced, in yeast for mitotic gene conversion, 25:52039
MUTSU REACTOR
  development of, review of, 25:54247 (A/CONF.49/P-236)
MYLAR
  radiation effects on electret voltage of, dosimetric use of, 25:51910
MYOSIN
  radiation effects on rat cultured heart cell metabolism of, effects of dactinomycin on γ, 25:51992 (UCLA-12-830)

N

NAPHTHALENE
  radiolysis in polymeric solvents at 86°K, triplets and molecular ions from electron, 25:51507 (AD-722057)
NAPHTHALENE, HEPTADECAFLUORODECAHYDRO-2-(TRIFLUOROMETHYL)-
  solvent properties for molybdenum, tungsten, and uranium hexafluorides, effects of temperature on, 25:51465 (A/CONF.49/P-546)
NATIONAL ACCELERATOR LABORATORY SYNCHROTRON
  description of, 25:53454
  target handling system for, design of remotely controlled, 25:53458
NATURAL BACKGROUND RADIATION
  effects of high-level, on population of Kerala coast region in India, 25:52230 (A/CONF.49/P-535)
  measurement at Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
NATURAL GAS
  chemical content of Project Wagon Wheel, predictions of, 25:51663 (UCRL-51067)
  production stimulation in Project Rulison, 25:51660 (CONF-710428-, Paper 2)
  production stimulation using nuclear explosions, evaluation of Projects Gasbuggy and Rulison experience with, 25:51664 (UCRL-72769(Rev.1))
  radioactivity of Project Wagon Wheel, predictions of,

XUM

25:51663 (UCRL-51067)
resources in Australia, 25:53886 (A/CONF.49/P-135)
resources in Australia to year 2000, 25:54014 (A/CCNF.49/P-127)

NATURAL WATERS
radium content of, in Rodnei Mountains, Rumania, 25:51628
radon content of, in Rodnei Mountains, Rumania, 25:51628

NEBULAE
ionization and heating of Gum, by particles from Vela X, (E/T), 25:52529
methyl alcohol in Oricn, detection at 25 GHz, 25:52545

NEMATODA
Dictyocaulus filaria, use of x-irradiated larvae of, for vaccination of sheep, 25:52007 (A/CONF.49/P-355)

NEODYMIUM
determination in powdered thermal water residues, mass spectrographic, 25:51369
polarographic behavior at mercury dropping electrode, 25:51474

NEODYMIUM ALLOYS AND SYSTEMS
Co--Fe--Nd, lattice constants for Nd_2(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
Co--Nd, crystal structure of Nd_2Co_{17}, 25:52372 (CONF-711001-(Vol.1), pp 96-101)
Dy--Nd, electric, magnetic, and structural properties of, (E/T), 25:52937 (CONF-711001-(Vol.1), pp 240-240k)
Nd--Pd. electric conductivity of Pd_3Nd at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)

NEODYMIUM CHLORIDES
crystal structure of $NdCl_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

NEODYMIUM ISOTOPES Nd-141
energy levels from neodymium-142 (p,d) reactions, spectroscopic factors for, (E), 25:53740 (FRNC-TH-41)

NEODYMIUM ISOTOPES Nd-142
proton reactions (p,d) at 24.55 MeV, DWBA analysis of differential cross sections and spectra from, (E), 25:53740 (FRNC-TH-41)

NEODYMIUM ISOTOPES Nd-145
neutron reactions (n,α) at resonance energies, α spectra from, (E), 25:53785

NEODYMIUM OXIDES
phase transformation cf thin films of, by heating in electron microscope, 25:52456 (CCNF-711001-(Vol.2), pp 777-85)

NEON
electron elastic scattering at 0 to 1 rydberg by, polarized-orbital calculations of total cross sections for, 25:52674
helium-ion reactions at 10 to 200 keV with, cross sections for electron capture into ground and metastable states in, (E), 25:52651
photon reactions with, electron rearrangement energies and times following ionization by, 25:52698
proton elastic scattering at 5.71 eV by, analysis of experimental differential cross sections for, (T), 25:52636
scattering by lithium fluoride (100) surfaces at 150°K, elastic and inelastic, (E), 25:52602

NEON IONS
abundance in NGC 6826, (E), 25:52513
electron reactions with Ne VII in plasma, excitation-rate coefficients for, (E), 25:52804
implantation in graphite, aluminum, titanium, and copper at 1 to 120 keV, saturation values of, 25:52922

NEON ISOTOPES
separation by thermal diffusion, 25:51718(R) (MLM-1816)

NEON ISOTOPES Ne-20
alpha elastic scattering at 20 to 24.5 MeV, angular distributions and differential cross sections for, (E), 25:53689
electron inelastic scattering at 183 and 250 MeV, form factors for, (E), 25:53671
energy levels from electron inelastic scattering, quadrupole and hexadecapole moments and deformations from, (E), 25:53671
nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681
nuclear binding energy and radii of, projected Hartree--Fock calculations with phenomenological and realistic effective interacticns, (T), 25:53611
proton inelastic scattering at 24.5 MeV using polarized beam, asymmetry and deformation parameters for, (E), 25:53718

NEON ISOTOPES Ne-21
alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
energy level at 9.14 MeV from fluorine-19 (He-3,p) reactions, branching ratios and reduced widths for neutron decay of, (E), 25:53682

NEON ISOTOPES Ne-22
alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
proton inelastic scattering at 24.5 MeV using polarized beam, asymmetry and deformation parameters for, (E), 25:53718
proton reactions (p,γ) at 1.3 to 2.6 MeV, gamma spectra from resonances in, (E), 25:53692
reactions (Ne-22,f) with tungsten at 98 and 174 MeV, compound-nucleus lifetime in, (E), 25:53795
reactions with plutonium-242, thermochromatographic separation of element-104 from products of, 25:51581 (JINR-D12-5845)

NEPTUNIUM
separation from hydrofluoric, nitric, and sulfuric acid solutions by sorption on ammonium phosphomolybdate, chromatographic, 25:51592
separation of americium from, by ion exchange, 25:51395

NEPTUNIUM ISOTOPES Np-235
electron-capture decay of, calculation of energy of x rays and auger electrons from, 25:53784

NEPTUNIUM ISOTOPES Np-237
targets of, for use with single-burst neutron sources, proposed ultra-low temperature polarized, 25:53478

NEPTUNIUM PERRHENATES
preparation by reaction of rhenium oxide vapor and neptunium dioxide at high temperature or perrhenic acid and neptunium salts, 25:51432

NERVOUS SYSTEM
radiation effects on cells and tissues of rat, RBE for fast neutron, 25:52219

NETHERLANDS
development program for fast breeder reactors in, 25:54026 (A/CONF.49/P-366)

NEUTRINOS
existence of degenerate sea of, effect on $K_2^0 \to 2\pi$ decay, 25:53122
interactions $\nu + N \to l + N$, absence of form factor in e^2 corrections to amplitude for, (T), 25:53113
interactions $\nu + n \to \mu^- + \pi^0 + p$ near $\Delta(1236)$ resonance, cross sections for, 25:53126
interactions $\nu + N$ at high energies, conserved vector current hypothesis and current commutators for relation with $e + N$ interactions at high energies for, (T), 25:53106
interactions $\nu + p \to$ lepton + hadrons, in parton model, polarization effects in deep inelastic, 25:53099
interactions $\nu + p \to \mu^- + p + \pi^+$ near $\Delta(1236)$ resonance, cross sections for, (T), 25:53126

NEUTRINOS (ν/sub e/)
production of anti ν--ν pairs in $\gamma + e$ interactions in electromagnetic field, (T), 25:53057

NEUTRINOS (anti ν/sub e/)
interactions anti $\nu + p \to n + e^+$, coincidence yields from, (E), 25:53518 (SRO-474-2)
production of anti ν--ν pairs in $\gamma + e$ interactions in electromagnetic field, (T), 25:53057

NEUTRINOS (ν/sub μ/)
interactions $\nu + p \to p + \pi^+ + \mu^-$, hadronic helicity conservation in, (T), 25:53100 (NYO-4204-14)
mass of, determination of rest, (E), 25:53005
mass of, from $\mu \to e + \nu$ + anti ν decay, (T), 25:53112

NEUTRON-ABSORPTION ANALYSIS
use to measure void fraction in hydrogeneous media, 25:51924

NEUTRON BEAMS
collimation of 14-MEV, 25:53497
focusing by reflecting conical tube, for intensity increase, (T), 25:53495
polarization measurements of, liquid helium scintillation detector polarimeter for, 25:51875
polarization measurements of, liquid helium scintillation detector for, 25:51874
transport and accumulation of thermal, magnetic systems for, 25:53491 (JINR-P3-5902)

NEUTRON CROSS SECTIONS
calculations for fast assemblies, evaluation of ENDF/B data for, (E/T), 25:54060(R) (AI-AEC-13005)
cross-section standards and related problems for fast-neutron elastic and inelastic scattering measurements, 25:53487 (CONF-701002-, pp 410-14)
data files of, computer program for checking and editing, (E), 25:53492 (ORNL-TM-3518)
index on, CINDA 71, 25:53493 (TID-25736)
measurements for differential elastic and inelastic, corrections for finite volume in, 25:53502
review of standard, for design of fast reactors, 25:54256 (CCNF-701002-, pp 12-24)
role of self-shielding and multiple scattering in capture-standards work, 25:53736 (CONF-701002-, pp 313-19)
standards, conference on, 25:53485 (CONF-701002)
survey of capture, for use as standards, 25:53735 (CONF-701002-, pp 285-312)

NEUTRON MONOCHROMATORS
design of crystal, for production of continuous slow-neutron beams, 25:53503(P)

NEUTRON SOURCES
capsule for curium-244, design of, 25:51803
characteristics of D--T, for fast-neutron therapy, 25:53496
design for U.S.S.R. IBR-2 Reactor, 25:54189 (A/CONF.49/P-774)
design of sealed-tube, incorporating cylindrical graphite moderator and collimator, 25:51743
development for therapy using mixed deuterium--tritium beam and bare copper drive-in target, 25:52164
development of polarized tritium (d,n), with compression ionizer, 25:53508
development of polarized, review on, 25:53506

  development of polarized, using underground nuclear explosion, 25:53509
  neutron spectra of americium-241--lithium and polonium-210--lithium, 25:53501
  polarization measurements for deuterium (d,n) and tritium (d,n), using associated particle method, 25:53507
  properties of radioisotope, for nondestructive analysis of fissionable materials, 25:51767 (LA-DC-12294)
  shipping of californium-252, design of shielded container for, 25:51799
  standardization using manganese and vanadium bath activation methods, 25:51852 (CCNF-701002-, pp 470-80)
  transfer of californium-252, design of pneumatic system for, 25:51792
  tritium release from d--T, 25:53441
  use of filtered-beam techniques in, 25:53486 (CONF-701002-, pp 362-76)

NEUTRON SPECTROMETERS
  data processing for time-of-flight, for inelastic neutron scattering, 25:51884
  description of proton-recoil proportional, 25:51885
  design and operation of proton-recoil proportional, 25:51879 (CONF-701002-, pp 385-400)
  design improvements on time-of-flight, using associated particle method for d + T neutrons, 25:51883
  design of time-of-flight, for total cross section measurements, 25:53408 (CONF-701002-, pp 377-84)
  development for measurement of cosmic-ray produced neutrons, 25:51887
  development of detector with flat energy response for time-of-flight, 25:51880 (CONF-701002-, pp 401-9)
  development of proton-recoil, using anthracene radiator and zinc sulfide scintillation detector, 25:51886
  spectra from, computer program for separation of gamma and neutron, 25:51881 (N-71-17323)

NEUTRON STARS
  collapse of, (T), 25:52506
  crust of, vapor--liquid phase transition in, (T), 25:52505
  equation of state for matter in, bootstrap, (T), 25:52530
  heating in, frictional, (T), 25:52541
  magnetic fields in, origin of, (T), 25:52510
  mass of, upper limit to, (T), 25:52506
  particle acceleration by electromagnetic fields around, (T), 25:52550

NEUTRONS
  absorption in infinite cylinders surrounded by moderator regions, P_1 blackness theory for, 25:54270
  capture by gold-197 and uranium-233, comparison of absolute cross-section measurements of, 25:53737 (CONF-701002-, pp 320-6)
  capture by gold-197 and uranium-238 at 25 keV to 1 MeV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
  capture by nuclei, evaluation of cross sections for use as standards, 25:53735 (CONF-701002-, pp 285-312)
  decay of solar, as coronal energy source, (T), 25:52559
  detection in 100-keV region, sodium iodide scintillation detector with boron-10 slab for, 25:51863
  detection in variable gamma fields, sensitivity variation of ionization chambers for, 25:51854 (FEI-212)
  detection of, description of gas-discharge detector for, 25:51871(P)
  diffusion coefficients for heterogeneous reactors, integral transport theory and P/sub N/ approximation methods for calculation of, (T), 25:54272
  distribution in fast reactors, neutron flux factorization for calculation of space and energy, 25:54269
  effects on beryllia, EPR spectra of color centers induced in, 25:52900(T) (JPRS-53800, pp 53-61)
  effects on coarsening kinetics of γ' particles in Nimonic PE 16 at 600 to 700°C, 25:52411 (TRG-Report-2113)
  effects on creep in graphite tubes, 25:52470 (A/CONF.49/P-614)
  effects on density and mechanical properties of beryllium at low temperatures, 25:52407(T) (JPRS-53800, pp 258-67)
  effects on dielectric properties of lead zirconate, 25:52930
  effects on dogs, tumorigenic, 25:52211
  effects on embrittlement of pressure vessel steels, 25:52387 (A/CONF.49/P-393)
  effects on gas swelling of uranium during annealing, 25:52405(T) (JPRS-53800, pp 237-44)
  effects on graphite, Japanese studies of, 25:52465 (A/CONF.49/P-245)
  effects on materials, effect of energy on size of defect clusters formed in, (T), 25:52897(T) (JPRS-53800, pp 24-8)
  effects on mechanical properties and microstructure of Nimonic PE16 and Types 316 and FV548 stainless steels, relations with neutron dose and temperature, 25:52390 (A/CONF.49/P-499)
  effects on mechanical properties of iron and chromium steels, 25:52397(T) (JPRS-53800, pp 113-21)
  effects on mechanical properties of steel pressure vessels, 25:54072 (A/CONF.49/P-548)
  effects on mechanical properties of steels and uranium oxide (UO_2), 25:54193 (A/CONF.49/P-823)
  effects on mechanical properties of U.S.S.R. 48 TC steel, 25:53908 (A/CONF.49/P-705)
  effects on mechanical properties of uranium, 25:52403(T) (JPRS-53800, pp 223-30)
  effects on orientation of alpha-uranium, 25:52404(T) (JPRS-53800, pp 231-6)
  effects on physical properties of uranium carbide fuel elements, 25:52468 (A/CONF.49/P-454)
  effects on potassium chromates, effects of oxygen on isothermal and isochronal annealing reactions of chromium-51 recoils from, 25:51541
  effects on pulmonary function in sheep when combined with effects of sublethal blast overpressure and unilateral γ exposure, 25:52185(R) (AD-721094)
  effects on seeds, reaction mechanisms and modifying factors for, 25:52268 (A/CONF.49/P-538)
  effects on stress-strain properties of alpha-uranium single crystals with different orientations, 25:52402(T) (JPRS-53800, pp 215-22)
  effects on structure and properties of uranium oxide (UO_2) powders, 25:54289(T) (JPRS-53800, pp 205-14)
  effects on structure of stainless steel-clad uranium fuel elements, 25:52406(T) (JPRS-53800, pp 245-51)
  effects on tin compounds, Moessbauer studies on, 25:51534
  effects on uranium silicides, electric conductivity study of relations of annealing with, 25:52479
  effects on wheat for resistance to Puccinia graminis and Septoria nodorum, mutagenic, 25:52263
  energy distribution in pulsed beryllium oxide (BeO) assemblies, (E/T), 25:54209 (NP-18981)
  flux decay in heterogeneous moderator systems, review of pulsed source measurements on, 25:54280 (A/CONF.49/P-310)
  flux distribution in heterogeneous reactors, calculation of space and time dependent, (T), 25:54274
  flux normalization, conference on, 25:53485 (CONF-701002)
  flux up to 100 MeV of cosmic, energy dependence of pressure coefficient of, (E), 25:52701
  flux variations during power reactor transients, effects of xenon-induced spatial, (t), 25:54063
  flux variations in reactors, optimum infinite multiplication factor distribution for minimization of, 25:54266
  interactions $\gamma + n \to n + \pi^0$ at 540 to 830 MeV, analysis of, (E/T), 25:53088
  interactions $\gamma + n \to p + \pi^-$ at 540 to 830 MeV, analysis of, (E/T), 25:53088
  interactions $\gamma + n \to \pi^0 + n$, Regge pole absorption theory for dip structure mechanism for ratio of π^0 production in $\gamma + p \to \pi^0 + p$ interactions to π^0 production in, (T), 25:53185
  interactions $K^+ + n \to K^0 + p$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
  interactions $K^+ + n \to K^+ + n$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
  interactions $K^+ + n$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
  interactions $n + p \to d + \gamma$ at 475 to 750 MeV, time reversal invariance in angular distributions for, (E), 25:53016
  interactions $n + p$ at 0.5 to 21 MeV, singlet effective range for, (E), 25:53511 (CONF-701002-, pp 51-6)
  interactions $n + p$ below 30 MeV, P phase for correction at 180° for, (T), 25:53223 (CONF-701002-, pp 27-41)
  interactions $\nu + n \to \mu^- + \pi^0 + p$ near $\Delta(1236)$ resonance, cross sections for, 25:53126
  interactions $p + n$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
  interactions $\pi^+ + n \to n + \pi^+ + \pi^+ + \pi^-$ at 11.7 GeV/c, helicity conservation in, (E/T), 25:53032
  interactions $\pi^- + n \to p + k\pi$, proton momentum spectra from duality diagrams for, 25:53193
  interactions $\pi^+ + n \to \pi^+ + \pi^- + p$, breakdown of charge symmetry from ω--rho mixing in, 25:53183 (UCRL-20655, pp 250a-76)
  interactions $\pi^+ + n$ at 15 to 61 GeV/c, total cross sections for, (E), 25:53014
  interactions with polarized nuclei, review on polarized, 25:53843
  reactions (n,α) with lithium-6 at 25 to 150 keV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
  reactions (n,α) with neodymium-145 at resonance energies, α spectra from, (E), 25:53785
  reactions (n,f) with plutonium-239 at 50 keV to 7.2 MeV, analysis for nucleon pairing effects in, (E), 25:53796
  reactions (n,f) with thorium-229 up to 50 eV, cross section and resonance parameters for, (E), 25:53750(R) (NYO-73-340)
  reactions (n,f) with uranium-233 and -235 at 10 to 40 keV, cross section for, (E), 25:53750(R) (NYO-73-340)
  reactions (n,f) with uranium-235 and plutonium-239 at low energies, precise cross sections for, 25:53731 (CONF-701002-, pp 221-45)
  reactions (n,f) with uranium-235 at 25 keV to 1 MeV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
  reactions (n,f) with uranium-235, structure of energy dependence of neutron yields from, (T), 25:53773
  reactions $(n,\gamma f)$ with uranium-235, relative prompt-gamma yields from resonance, (E), 25:53755

reactions (n,p) with helium-3, review of experiments on, 25:53514 (CONF-701002-, pp 74-9)
reactions with cobalt-59 at 0 to 16 MeV, strength of tensor spin--spin potential in, (T), 25:53670
reactions with thorium-232 up to 10 keV, total cross section for, (E), 25:53750(R) (NYO-73-340)
reactions with uranium-238 up to 10 keV, total cross section and resonance parameters for, (E), 25:53750(R) (NYO-73-340)
scattering by helium-3 at low energies, phase-shift analysis of differential cross sections for elastic, (T), 25:53526
scattering in light and heavy water, calculations using itinerant oscillator model for slow, (T), 25:53504
shielding factor calculation for grains in coated-particle fuels, 25:53494
slowing down in plane geometry exponential piles, multigroup transport equations for, (T), 25:54273
thermalization calculations for reactors, degenerate kernel expansion method for, 25:54267
transport in quarter space, treatment of two-dimensional, (T), 25:53505
velocity distribution in homogeneous media, computer program for calculating, 25:53490 (IAE-1969)
wave propagation and reflection in water moderated assemblies, (E/T), 25:54277
wave propagation in graphite, (T), 25:53500
wave propagation in lead, (E), 25:53499

NEUTRONS, DELAYED
yields from thorium-232 (n,f) reactions at 1.7 to 3.0 MeV, (E), 25:53739 (FEI-195)

NEUTRONS, EPITHERMAL
reactions (n,f) with uranium-233 at 15 to 30 eV, cross section for, (E), 25:53750(R) (NYO-73-340)
reactions (n,f) with uranium-235 at 17 to 22 eV, cross section for, (E), 25:53750(R) (NYO-73-340)
reactions (n,f) with uranium-235 in the low resonance region, cross-section measurement and normalization for, (E), 25:53775

NEUTRONS, FAST
capture by A = 115 to 238 nuclei at 400 keV, cross sections and spectra from, (E), 25:53743(R) (INR-1318)
capture by lead-208 at 9.2 to 13.2 MeV, compound-nucleus and semidirect-capture analysis of gamma spectra from, 25:53805
capture by lithium-6 below 1.7 MeV, review of data on cross sections for, 25:53591 (CONF-701002-, pp 80-106)
detection of, tentative standard for dielectric track detectors for, 25:51870
dose distribution in tissues, 25:52152 (UCRL-20836)
dosimetry at 14 MeV, ionization chamber for, 25:51889
dosimetry during therapy, method for, 25:52079
dosimetry for therapy, method for measurement of contribution of scattered γ radiation in, 25:52080
dosimetry in phantoms, comparison of tissue-equivalent ionization chambers and silicon diodes for, 25:51905
dosimetry of, performance of anthracene crystals for, 25:51903 (COO-1105-166)
dosimetry of, use of Raman effect and ESR for, 25:51904 (COO-1105-168)
dosimetry using biological dosimeters, 25:52078
effectiveness comparison with gamma and x radiations for therapy, 25:52078
effectiveness comparison with γ and x radiations for therapy of human lung metastases, 25:52162
effectiveness comparison with high-energy x radiation, 25:52160
effectiveness for neoplasm therapy, 25:52164
effectiveness for therapy, 25:52167
effectiveness for therapy of neoplasms, evaluation of neoplasm type for, 25:52161
effectiveness for therapy, effects of oxygen content of neoplastic cells on, 25:52159
effects on algae, isotope substitution methods for studying, 25:52255 (JUL-727-BC)
effects on artificial graphite, 25:52476(T) (JPRS-53800, pp 292-306)
effects on austenitic steel clad uranium oxide (UO_2)--plutonium oxide (PuO_2), 25:54092 (A/CONF.49/P-609)
effects on Bacillus, Clostridium, and Pseudomonas strains, mutagenic, 25:52018 (A/CONF.49/P-690)
effects on carbide and nitride fuels, relations with linear power and temperature, 25:52472 (EUR-4347)
effects on cells and tissues of rat nervous system, RBE for, 25:52219
effects on corrosion resistance, mechanical properties, and swelling of Zircaloy-2 pressure tubes, 25:52391 (A/CONF.49/P-502)
effects on corrosion stainless steel by sodium, 25:52300
effects on creep in stainless steels, uranium oxide (UO_2), and Zircaloy 2, 25:54110
effects on creep of stainless steels, 25:52399(T) (JPRS-53800, pp 144-63)
effects on defect growth at twin boundaries in nickel during annealing, 25:52394(T) (JPRS-53800, pp 79-86)
effects on ductility of stainless steels and nickel alloys at high temperatures, 25:52396(T) (JPRS-53800, pp 98-112)
effects on fast reactor fuels and fuel element cladding, 25:54108
effects on ferrous sulfate, trivalent iron yields from, (E), 25:51908
effects on fluorescence of anthracene crystals at 2.5 and 14 MeV, 25:51903 (COO-1105-166)
effects on gas swelling of beryllium, 25:52408(T) (JPRS-53800, pp 268-79)
effects on hardening of molybdenum, relations with original state, 25:52400(T) (JPRS-53800, pp 164-75)
effects on hole drift mobility in n-type germanium, 25:52920
effects on human skin following use for therapy of neoplasms, 25:52165
effects on impact viscosity of weld joints in stainless steels, 25:52401(T) (JPRS-53800, pp 176-9)
effects on mechanical and physical properties of beryllium, beryllium oxide, graphite, and zirconium hydride at 100 to 1500°C, 25:52467 (A/CONF.49/P-452)
effects on mechanical and physical properties of graphite, 25:52469 (A/CONF.49/P-503)
effects on mechanical properties and swelling of Incoloy 800 and stainless steel, (E), 25:54096(R) (GEAP-10028-38)
effects on mechanical properties of beryllium oxide, relations of annealing at 500 to 1400°C on recovery from, 25:52480
effects on mechanical properties of concrete and steel pressure vessels, 25:52386 (A/CONF.49/P-189)
effects on mechanical properties of nickel and iron--chromium--nickel alloys, 25:52398(T) (JPRS-53800, pp 122-43)
effects on mechanical properties of stainless steel and nickel alloy reactor fuel cladding, 25:52389 (A/CONF.49/P-453)
effects on mechanical properties of steels, 25:53898 (A/CONF.49/P-460)
effects on mechanical properties of uranium oxide (UO_2), 25:53898 (A/CONF.49/P-460)
effects on mechanical, physical, and thermal properties of shielding concretes, at 150 to 200°C, 25:52486 (A/CONF.49/P-613)
effects on ordering in Ni_3Mn alloy, 25:52902(T) (JPRS-53800, pp 72-8)
effects on porosity of beryllium oxides during annealing, 25:52475(T) (JPRS-53800, pp 280-91)
effects on properties of samarium hexaboride, 25:52477(T) (JPRS-53800, pp 307-13)
effects on recoil atom behavior in niobium, relations with energy spectra, 25:52414
effects on stresses in carbon- and silicon carbide-coated fuel microspheres, 25:52481
effects on structure of precipitation-hardened stainless steels, 25:52395(T) (JPRS-53800, pp 87-97)
effects on survival of cells in cultures and in neoplastic and normal tissues, comparison between x radiation effects and, 25:52201
effects on survival of cells in mouse bone marrow and intestine and rat skin, comparison between x radiation effects and, 25:52200
effects on survival of cells in neoplastic and normal tissues, effects of dose and dose fractionation on RBE for, 25:52199
effects on survival of cultured cells, effects of oxygen content on, 25:52109
effects on survival of mammalian cells, RBE for, 25:52174 (A/CONF.49/P-30)
effects on survival of mouse osteosarcoma cells in vivo and in vitro, effects of oxygen content on, 25:52198
effects on swelling and embrittlement of stainless steels, 25:54109
effects on uranium oxide (UO_2) fuel pins, in pile, 25:54086 (A/CONF.49/P-392)
effects on volt--ampere characteristics of black silicon carbide varistors, 25:51956
effects on yield stress of polycrystalline vanadium, relations of dose and temperature with, 25:52412
flux measurement at 0.5 to 15 MeV, associated particle method and proton-recoil methods for precise, 25:51851 (CONF-701002-, pp 343-54)
interactions n + p at 16.2 MeV, polarization in scattering, (E), 25:53530
interactions n + p at 21.6 MeV, polarization in scattering, (E), 25:53531
interactions n + p at 32 MeV, polarization in scattering, 25:53532
reactions (n,2n) with A = 85 to 204 nuclei at 14.8 MeV cross sections for, (E), 25:53743(R) (INR-1318)
reactions (n,2n) with arsenic-75, gallium-71, selenium-80 and -82, and tin-118 at 13.02 to 17.78 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)
reactions (n,α) with boron-10 at 45 keV to 14.8 MeV, gamma production cross sections for, (E), 25:53597 (CONF-701002-, pp 141-50)
reactions (n,α) with boron-10 below 200 keV, recommended values of, 25:53598 (CONF-701002-, pp 151-65)
reactions (n,α) with boron-10 up to 2 MeV, R-matrix evaluation of, 25:53592 (CONF-701002-, pp 107-20)
reactions (n,α) with dysprosium-160, -161, -163, and -164 at 14.2 MeV, energy spectra from, (E), 25:53742 (INR-1275)
reactions (n,α) with dysprosium-160, -162, and -164 and europium-153 at 14.2 MeV, statistical analysis of energy spectra from, (E), 25:53743(R) (INR-1318)
reactions (n,α) with lithium-6 at 1.5 to 700 keV,

preliminary measurements of the cross section for, (E), 25:53593 (CONF-701002-, pp 121-4)
reactions (n,α) with lithium-6 at 10 to 600 keV, parasitic effects in cross-section measurements, (E/T), 25:53596 (CONF-701002-, pp 136-40)
reactions (n,α) with lithium-6 below 1.7 MeV, review of data on the cross section for, 25:53591 (CONF-701002-, pp 80-106)
reactions (n,α) with palladium-108 and tellurium-124, -126, -128, and -130 at 14.8 MeV, cross sections for, (E), 25:53786
reactions (n,f) with thorium-232 at 1.7 to 3.0 MeV, delayed-neutron yields from, (E), 25:53739 (FEI-195)
reactions (n,f) with uranium-235 at 552 and 644 keV, cross section for, (E), 25:53734 (CONF-701002-, pp 281-4)
reactions (n,f) with uranium-235 in the keV and MeV range, effects of fluctuations on cross section measurements, 25:53732 (CONF-701002-, pp 246-56)
reactions (n,f) with uranium-235, plutonium-239, and plutonium-241 at 17 keV to 1 MeV, absolute cross section for, (E), 25:53733 (CONF-701002-, pp 257-71)
reactions (n,f) with uranium-236 at 0.5 to 8 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
reactions (n,f) with uranium-238 at 1 to 15 MeV, evaluation of ν-bar for, (E), 25:53730 (AWRE-O-44/71)
reactions (n,np) with selenium-80 at 13.36 to 17.78 MeV, excitation function for, (E), 25:53743(R) (INR-1318)
reactions (n,p) and (n,n'γ) with osmium-190 at 14.8 MeV, gamma spectra from, (E), 25:53743(R) (INR-1318)
reactions (n,p) with antimony isotopes, palladium isotopes, and tellurium isotopes at 14.8 MeV, cross sections for, (E), 25:53786
reactions (n,p) with arsenic-75, gallium-71, and tin-117 at 13.02 to 16.51 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)
reactions (n,pn) with tellurium-128 and -130 at 14.8 MeV, cross sections for, (E), 25:53786
reactions with boron-10 up to 2 MeV, R-matrix evaluation of total cross section for, 25:53592 (CONF-701002-, pp 107-20)
reactions with carbon at 0.5 to 30 MeV, measurement and analysis of the total cross section for, (E), 25:53599 (CONF-701002-, pp 190-200)
reactions with carbon at 70 eV to 1.5 MeV, measurement and analysis of the total cross section for, (E), 25:53600 (CONF-701002-, pp 201-7)
reactions with cerium and strontium at 14.2 MeV, neutron spectra from, (E), 25:53807
reactions with cobalt-59 at 0.3 to 1.8 MeV using polarized target, nuclear deformation effect on total cross section for, (E), 25:53709
reactions with hydrogen at 0.5 to 21 MeV, total cross sections for, (E), 25:53511 (CONF-701002-, pp 51-6)
reactions with hydrogen at 1.5 to 27.5 MeV, total cross sections for, (E), 25:53510 (CONF-701002-, pp 42-50)
reactions with hydrogen below 30 MeV, search for structure in the total cross section for, (E), 25:53512 (CONF-701002-, pp 57-62)
reactions with iron at 1 to 2 MeV, total cross sections for, (E), 25:53702
reactions with lithium-6 below 1.7 MeV, review of data on total cross sections for, 25:53591 (CONF-701002-, pp 80-106)
reactions with oxygen-16 at 1.7 to 4.4 MeV, total cross section for, (E), 25:53752(R) (ORNL-4659)
reactions with Z = 16 to 80 nuclei, total cross sections for, (E), 25:53728 (AECD/EP-18)
scattering by A = 48 to 238 nuclei at 0.7 to 1.2 MeV, polarization in elastic, (E), 25:53706
scattering by aluminum-27, bismuth-209, cobalt-59, copper-63, and copper-65 at 1.36 MeV using polarized beams, depolarization parameter for elastic, (E), 25:53708
scattering by boron-10 up to 2 MeV, R-matrix evaluation of elastic, 25:53592 (CONF-701002-, pp 107-20)
scattering by cadmium-111, osmium-190, and yttrium-89 at 14.8 Mev, cross sections for inelastic, (E), 25:53743(R) (INR-1318)
scattering by carbon at 0.50 to 2.00 MeV, differential cross sections for elastic, (E), 25:53601 (CONF-701002-, pp 208-17)
scattering by carbon-12 at 1.9 to 5.2 MeV, cross sections and polarization for elastic, (E), 25:53608(R) (NP-18698)
scattering by carbon-12 at 14.1 MeV using polarized beam, angular distributions for elastic and inelastic, (E), 25:53637
scattering by carbon-12 at 15.9 MeV using polarized beam, asymmetry in elastic and inelastic, (E), 25:53638
scattering by carbon-12 at 3 to 7 MeV, polarization in elastic, 25:53636
scattering by deuterium and oxygen-16 at 14.1 MeV using polarized beam, angular distributions for elastic, (E), 25:53637
scattering by deuterium and tritium at 22.1 MeV using polarized beams and liquid targets, asymmetries in elastic, 25:53548
scattering by deuterium at 1 to 10 MeV, phase-shift analysis of elastic, (T), 25:53536
scattering by deuterium at 2.6 MeV, angular dependence of neutron polarization in elastic, (E), 25:53537
scattering by deuterium at 7.89 MeV using polarized beam, analyzing power for elastic, (E), 25:53536
scattering by helium-3 up to 3.4 MeV, polarization in elastic, (T), 25:53549
scattering by helium-4 at 0.5 to 18 MeV, analyzing power from phase-shift data on, 25:53575
scattering by helium-4 at 17.6, 20.9, and 23.7 MeV, phase shifts for elastic, (E), 25:53576
scattering by helium-4 at 27.3 and 30.3 MeV using polarized beam, asymmetries for elastic, (E), 25:53577
scattering by hydrogen at 29 MeV, angular distribution for, (E), 25:53513 (CONF-701002-, pp 63-73)
scattering by iron-56, nickel-58, -60, -62, niobium-93, and tantalum-181 at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
scattering by lithium-6 at 4.1 MeV, angular distribution and optical-model parameters for elastic, (E/T), 25:53608(R) (NP-18698)
scattering by lithium-6 below 1.7 MeV, review of data on cross sections for elastic, 25:53591 (CONF-701002-, pp 80-106)
scattering by medium- and heavy-weight nuclei at 4 MeV using polarized beam, cross sections for elastic, 25:53707
scattering by nuclei, cross-section standards and related problems for measurement of elastic and inelastic, 25:53487 (CONF-701002-, pp 410-14)
scattering by thorium-232 and uranium-238 at 15 MeV, optical-model analysis including deformations of differential cross sections for elastic, (T), 25:53754
scattering by tin-117 at 13.36 to 15.36 MeV, excitation function for inelastic, (E), 25:53743(R) (INR-1318)
shielding of, attenuation characteristics of materials for, 25:53496
use for therapy, considerations for clinical trials of, 25:52166
use for therapy, review of status of, 25:52148 (A/CONF.49/P-508)
use for tumor therapy, RBE for, 25:52174 (A/CONF.49/P-30)
use in radiotherapy, conference on, 25:52158

NEUTRONS, FISSION
effects on zinc-65 metabolism in swine, 25:52210
spectra of, macroscopic and integral results on measurements of, 25:53488 (CONF-701002-, pp 417-36)
spectra of, review of measurements of microscopic, 25:53489 (CONF-701002-, pp 437-51)

NEUTRONS, FUSION
emission from dense plasma focus, time correlation with x-ray emission, 25:52855
production in dense plasma focus, enhancement by electron beam interactions, (E), 25:52857
production mechanism in dense plasma focus, (E), 25:52856

NEUTRONS, INTERMEDIATE
dosimetry of, comparison of equipment and methods for, 25:51913
reactions (n,α) with boron-10 below 200 keV, recommended values of, 25:53598 (CONF-701002-, pp 151-65)
reactions (n,f) with uranium-235, plutonium-239, and plutonium-241 at 17 keV to 1 MeV, absolute cross section for, (E), 25:53733 (CONF-701002-, pp 257-71)
reactions with carbon at 70 eV to 1.5 MeV, measurement and analysis of the total cross section for, (E), 25:53600 (CONF-701002-, pp 201-7)
reactions with plutonium-239 and uranium-235 at 0.1 to 30 keV, strength functions for, 25:53798

NEUTRONS, PILE
effects on defect production in magnesium oxide, relations with dose, 25:52484
effects on defect production in magnesium oxide, relations with pre-irradiation annealing in hydrogen, 25:52483
effects on thermal conductivity of sintered uranium dioxide, 25:52478

NEUTRONS, THERMAL
capture by hydrogen, test for determination of S-triplet part of, 25:53535
capture by lithium-6 and boron-10, cross-section measurements using pulsed-beam techniques, (E), 25:53595 (CONF-701002-, pp 129-35)
capture by natural selenium and titanium, gamma spectra from polarized, (E), 25:53704
capture by nickel-58, valency-neutron-model calculations of gamma intensities from, (T), 25:53665
capture by samarium-150 and -151, gamma spectra from, (E), 25:53741 (IAE-1976)
capture by xenon-129 and -131, gamma spectra from, (E), 25:53776
diffusion in cadmium-poisoned water, multigroup calculation using Nalkin model, (T), 25:53498
dose distribution in tissues, 25:52152 (UCRL-20836)
dosimetry of, fission foil--polycarbonate track detector for, 25:51911
dosimetry of, response of calcium sulfate--lithium sulfate thermoluminescent dosimeters for, 25:51906
dosimetry using polymer thermoelectrets, 25:51910
effects on algae, isotope substitution methods for studying, 25:52255 (JUL-727-BO)
effects on bromobutane, reactions of recoil bromine from, 25:51542

XUM

effects on soybean plants, mutagenic, 25:52019 (A/CONF.49/P-748)
fluence measurements using cobalt activation detectors, in-core, 25:51850 (CONF-701002-, pp 327-30)
flux in in-pile test capsules, filters for shaping of, 25:54290 (N-71-17932)
reactions (n,α) with boron-10, cross-section ratio to lithium-6 for, (E), 25:53594 (CONF-701002-, pp 125-8)
reactions (n,α) with lithium-6, cross section for, (E), 25:53594 (CONF-701002-, pp 125-8)
reactions (n,f) with uranium-235, energy--angular distribution of alpha particles from, (E), 25:53743(R) (INR-1318)
reactions (n,f) with uranium-235, fission yields and γ spectra from, (E), 25:53800
reactions with sodium-22, charged-particle spectra from, (E), 25:53696
spectra calculations for reactors, degenerate kernel expansion method for, 25:54268
spectra in water moderated reactor lattices during fuel burnup, (T), 25:54271

NEVADA TEST SITE
iodine-131 content of milk and tissues of dairy cows at, 25:52012 (PNE-914-F)
nuclear explosions at, comparison of calculated and measured data on seismic wave propagation from underground, 25:51654 (NVO-1163-225)

NEW YORK
strontium-90 content of milk in, during 1969, 25:52058

NICKEL
compatibility with aluminum nitride, boron nitride, and silicon nitride at high temperatures, 25:52299
compatibility with aluminum oxide, calcium oxide, and magnesium oxide at high temperatures, 25:52299
compatibility with boron carbide and silicon carbide at high temperatures, 25:52299
compatibility with rare earth oxides at high temperatures, 25:52299
compatibility with transition metal carbides at high temperatures, 25:52299
compatibility with transition metal diborides at high temperatures, 25:52299
compatibility with transition metal disilicides at high temperatures, 25:52299
compatibility with transition metal nitrides at high temperatures, 25:52299
compatibility with transition metal oxides at high temperatures, 25:52299
determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in low-grade nickel ores by neutron capture γ spectroscopy, 25:51416
determination in powdered thermal water residues, mass spectrographic, 25:51369
determination in steels by atomic fluorescence spectroscopy, 25:51378
deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
electron reactions at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
radiation effects on mechanical properties of, fast neutron, 25:52398(T) (JPRS-53800, pp 122-43)
radioinduced defects at coherent twin boundaries in, microstructure and annealing growth of fast-neutron, 25:52394(T) (JPRS-53800, pp 79-86)
radioinduced interstitial loops in thin foils of, diffusion model of temperature dependence of growth rate of 650-keV electron, (T), 25:52907
radioinduced void growth in, use of high-voltage electron microscope to simulate fast neutron, 25:52410 (RD/B/N-1879)
separation of rare earths from, by complexing and precipitation, 25:51589

NICKEL ALLOYS AND SYSTEMS
radiation effects on mechanical properties of reactor fuel element cladding of, fast neutron, 25:52389 (A/CONF.49/P-453)
radioinduced embrittlement of, high-temperature fast neutron, 25:52396(T) (JPRS-53800, pp 98-112)
B--Ni--W, production of compact sintered castings of, direct-contact method for, 25:52437
C--Fe--Ni, elastic constants of, 25:54366 (IS-T-461)
Co--Cr--Mo--Ni--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52333
Co--Dy--Ni, magnetic properties of DyCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Co--Gd--Ni, magnetic properties of Gd(Co/sub 1-x/Ni/sub $x/)_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
Co--Ho--Ni, magnetic properties of HoCo/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Cr--Fe--Ni, radiation effects on mechanical properties of, fast neutron, 25:52398(T) (JPRS-53800, pp 122-43)
Cr--Fe--Ni, testing of bars and rods of, for nuclear applications, standard methods for nondestructive, 25:52350
Cr--Fe--Ni, testing of plates of, for nuclear uses, standard method for ultrasonic, 25:52335
Cr--Fe--Ni, testing of seamless pipe and tube of, for nuclear uses, standard methods for nondestructive, 25:52349
Cu--Ni, testing of bars and rods of, for nuclear applications, standard methods for nondestructive, 25:52350
Cu--Ni, testing of plates of, for nuclear uses, standard method for ultrasonic, 25:52335
Cu--Ni, testing of seamless pipe and tube of, for nuclear uses, standard methods for nondestructive, 25:52349
Cu--Ni--Zn, multiphase diffusion in, 25:54362 (COO-1436-31)
Dy--Fe--Ni, magnetic properties of DyFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Fe--Gd--Ni, magnetic properties of Gd(Fe/sub 1-x/Ni/sub $x/)_3$, transition-metal moment from, 25:52934 (CONF-711001-(Vol.1), pp 208-17)
Fe--Ho--Ni, magnetic properties of HoFe/sub 3-x/Ni/sub x/, 25:52935 (CONF-711001-(Vol.1), pp 218-28)
Mn--Mo--Ni--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
Mn--Ni-base, radiation effects on ordering in Ni_3Mn, neutron-diffraction study of fast-neutron, 25:52902(T) (JPRS-53800, pp 72-8)
Ni--rare earth, magnetic properties of intermetallic compounds, pulsed-field, 25:52936 (CONF-711001-(Vol.1), pp 229-39)
Ni--Re, phase diagram of, 25:52384
Ni--steel, mechanical properties of quenched and tempered plate of, for pressure vessels, standard for, 25:52332
Ni--W, sintering of, design of devices for measuring shrinkage during, 25:52314

NICKEL ISOTOPES Ni-58
energy level at 2.94 MeV from proton inelastic scattering, branching ratio for e^+--e^- pair decay of, (E), 25:53669
energy-level transitions from proton inelastic scattering, intensities and multipolarities of, (E), 25:53669
meson (K^-) absorption on surface of, neutron/proton density distribution ratio from, (T), 25:53683
neutron capture by, valency-neutron-model calculations of gamma intensities from thermal, (T), 25:53665
neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
proton inelastic scattering at 7.0 MeV, e^+--e^- pair spectra from, (E), 25:53669
proton inelastic scattering of 30.3 MeV, optical-model analysis using potential derived from nuclear matter distributions, (T), 25:53717

NICKEL ISOTOPES Ni-59
energy level from nickel-58 neutron capture, radiative width for, (T), 25:53665
energy levels from nickel neutron capture, spin assignments for, (E), 25:53704

NICKEL ISOTOPES Ni-60
neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
proton inelastic scattering at 10 MeV, coupled-channels and statistical-model analyses of proton spin-flip probability in, (E/T), 25:53701

NICKEL ISOTOPES Ni-61
energy levels from nickel neutron capture, spin assignments for, (E), 25:53704

NICKEL ISOTOPES Ni-62
neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
proton inelastic scattering at 14 MeV, angular distributions for, (E), 25:53663(R) (COO-1505-48)
proton reactions (p,α) and (p,d) at 14 MeV, α and deuteron evaporation spectra from, (E), 25:53663(R) (COO-1505-48)
proton reactions (p,α) at 14 MeV, angular distributions for, (E), 25:53663(R) (COO-1505-48)

NICKEL ISOTOPES Ni-63
energy levels from nickel neutron capture, spin assignments for, (E), 25:53704

NICKEL ISOTOPES Ni-64
meson (K^-) absorption on surface of, neutron/proton density distribution ratio from, (T), 25:53683

NICKEL ORES
analysis of low-grade, for nickel by neutron capture γ spectroscopy, 25:51416

NICOTINIC ACID
radiolysis of aqueous solutions of, effects of ascorbic acid on γ, 25:51531

NIMONIC PE 16
coarsening kinetics of γ' particles in, at 600 to 700°C, 25:52411 (TRG-Report-2113)
radiation effects on coarsening kinetics of γ' particles in, at 400 to 650°C, neutron, 25:52411 (TRG-Report-2113)
radiation effects on mechanical properties and microstructure of, relations of dose and temperature with neutron, 25:52390 (A/CONF.49/P-499)

NIOBIUM
book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362
determination in presence of iron, tantalum, and

XUM

- titanium, photometric, 25:51372
- determination in sulfuric acid by spectrophotometry using salicylic acid, 25:51368
- diffusion of hydrogen in, at 20 to 273°k, internal friction studies of, 25:52323 (CCO-1198-834)
- electric properties as outside layer in niobium oxide/metal diodes, 25:52952
- electron--phonon coupling constant of, from optical measurements, 25:52757
- magnetic flux line lattice in superconducting, yield and recovery cf, 25:52748
- mechanical properties of, effects of nitriding on, 25:52370
- plastic deformation of single crystals of, at 2.17 to 17°K, heterogeneous, 25:52356
- radioinduced recoil atoms in, relations of displacements with energy of neutron, 25:52414
- separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)
- thermal capacity at 3°K, from Kohn anomaly in phonon density of states, (T), 25:52953
- thermal conductivity of superconducting, (E/T), 25:52743
- ultrasonic attenuation in mixed-state superconducting, field dependence of, 25:52760

NIOBIUM ALLOYS AND SYSTEMS
- Cr--Nb-base, oxidation at 900 to 1100°C, kinetics of, 25:52296 (AD-721321)
- N--Nb, internal friction spectrum of deformed and undeformed, to 700°C, 25:52441
- Nb--Sn, electron--phonon coupling constant of intermetallic Nb_3Sn, from optical measurements, 25:52757
- Nb--Ti--Zr, particle size distribution in powders of, photosedimentation method for measurement of, 25:52354
- Nb--Zr-base, performance of fuel element cladding of, 25:53919(T) (JPRS-53800, pp 252-7)
- Nb--Zr-base, phase transformations in, effects of heat treatments on, 25:52380
- Nb--Zr-base, properties of pressure tubes of, for use in CANDU reactor, 25:52385 (A/CONF.49/P-159)
- Nb--Zr-base, properties of tubes of, relations with texture coefficients, 25:52325
- Nb--Zr-base, reactions with sodium at 400°C, hydriding and oxidation, 25:52298 (EUR-4460)
- Nb-base--W, thermal capacity at 3°K, from Kohn anomaly in phonon density of states, (T), 25:52953

NIOBIUM BORIDES
- NbB_2--Nb_2O_5, phase compositicns of compounds formed at 1000 to 2000°C in, 25:52415

NIOBIUM CARBIDES
- emissivity of NbC in range 1200 to 2100°K, (E/T), 25:52966
- preparation and properties of, concentration dependence of, 25:52430
- slip system at room temperature, hardness anisotropy measurements for, 25:52444
- NbC--TiC, emissivity in range 1200 to 2100°K, (E/T), 25:52966
- NbC--ZrC, properties of solid solutions of, electric, magnetic, and thermal, 25:52446

NIOBIUM ISOTOPES Nb-93
- hyperfine structure of μ-mesic atoms of, nuclear finite-size effect on M1, (E), 25:53761
- neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693

NIOBIUM ISOTOPES Nb-95
- determination simultaneously with ruthenium-106 and zirconium-95, electrolytic methods in, 25:51400
- distribution in tissues of mice following inhalation or parenteral administration as oxalate, 25:51977
- uptake by bottom sediments, plankton, and suspensions, (E), 25:51649 (A/CONF.49/P-457)

NIOBIUM OXIDES
- electric properties as middle layer in niobium/metal diodes, 25:52952
- CaO--Nb_2O_5--SiO_2--TiO_2, phase equilibria in binary and pseudo-binary systems of, 25:52459
- NbB_2--Nb_2O_5, phase compositicns of compounds formed at 1000 to 2000°C in, 25:52415

NITRIC ACID
- determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
- separation from uranyl nitrate--nitric acid--magnesium nitrate--water--TBP system by solvent extraction, 25:51580 (INR-1248)
- separation of plutonium and uranium from solutions of, by solvent extraction using mcno- and bifunctional phosphine oxides, 25:51556 (A/CONF.49/P-443)

NITROGEN
- abundance in 13 planetary nebulae, (E), 25:52514
- abundance in Sc galaxies, (E/T), 25:52570
- determination in alkali and alkaline earth metals by γ activaticn, sample surface purification for, 25:51418
- determination in presence of carbon and oxygen by photon activation, separation method for, 25:51413
- determination simultaneously with oxygen in carbides and nitrides by inert gas fusicn method using impulse heating furnace, 25:51359 (AERE-R-6537)
- deuteron reactions (d,n), accelerator facility for oxygen-15 productien by, 25:53442
- effects on mechanical properties of niobium, 25:52370
- energy-level transitions in, electron correlation in calculation of probabilities of forbidden, 25:52699
- helium-ion reactions at 0.50 to 3.0 keV with molecular, charge exchange at small scattering angles in, (E), 25:52631
- helium-ion reactions at 10 to 200 keV with molecular, cross sections for electron capture into ground and metastable states in, (E), 25:52651
- helium-ion reactions at 2.5 to 490 eV with molecular, cross sections for emissicn of light between 1200 and 3200 A in, (E), 25:52665
- ionization equilibrium of interstellar, (E/T), 25:52573
- meson (μ^-) capture in emulsions, relative probabilities of reaction channels for lithium-8 production in, (E), 25:53516 (JINR-P1-5893)
- radiation effects on rye and wheat content of, effects of seed exposure dose on γ, 25:52266
- radiolysis of, absorption spectroscopic method for measuring rate constant of reactions of N_2^+ from, 25:51529
- sorption by tungsten surfaces, flash-method studies on, 25:52352
- yields from α radiolysis of gaseous ammonia, effects of hydrogen sulfide or nitrous oxide on, 25:51518

NITROGEN IONS
- abundance in NGC 6826, (E), 25:52513
- electron reactions with N IV in plasma, excitation-rate coefficients for, (E), 25:52804
- reactions with hydrogen in interstellar space, charge-exchange, (E/T), 25:52573

NITROGEN IONS (N^+)
- electron reactions with, effective cross sections for excitation in, (T), 25:52670
- energy-level transitions in, electron correlation in calculation of probabilities of forbidden, 25:52699
- reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675

NITROGEN IONS (N_2^+)
- reactions of radiolytic, with various molecules, absorption spectroscopic methcd for measuring rate constants of, 25:51529

NITROGEN ISOTOPES N-14
- deuteron reactions (d,n) at 10 and 11.8 MeV using polarized beam, vector analyzing power for, (E), 25:53652
- deuteron reactions (d,n) at 3.3 and 5.4 MeV, neutron polarization from, (E), 25:53589
- deuteron reactions (d,p) at 10 and 12 MeV using polarized beam, vector analyzing power and spectroscopic factors for, (E), 25:53657
- helium-3 reactions (He-3,α) at 5 to 10 MeV, angular distribution and excitation functions for, (E), 25:53608(R) (NP-18698)

NITROGEN ISOTOPES N-15
- energy levels from carbon-14 (p,γ) reactions, spin--parity assignments and widths for, (E), 25:53605 (COO-1120-120)
- energy-level transitions from carbon-14 (p,γ) reactions, branching and mixing ratics fcr, (E), 25:53605 (CCO-1120-120)
- incorporation in fertilizers for determining effects on cereal crops, 25:52014 (A/CONF.49/P-192)
- proton reactions (p,He-3) and (p,t) at 43.8 MeV using polarized beam, angular distributions of analyzing power for, (E), 25:53658

NITROGEN MUSTARDS
- effects on frequency of chromoscme aberrations and chlorophyll-deficient mutations in barley in comparison to effects of gamma radiation and ethylenimine, 25:52041

NITROGEN OXIDES NO
- oxygen isotope fractionation between water and, 25:51601
- radiolysis of, absorption spectroscopic method for measuring rate constant of reacticns of N_2^+ from, 25:51529

NITROGEN OXIDES NO_2 OR N_2O_4
- properties of dissociating, for gas cooled reactor coolant, 25:54284 (A/CONF.49/P-431)
- thermodynamic properties of dissociating, 25:54284 (A/CONF.49/P-431)

NITROGEN OXIDES N_2O
- effects on yields from α radiolysis of gaseous ammonia cr ethane, 25:51518
- infrared emission from atmospheric, (T), 25:52718
- radiolysis of, design of thin aluminum or beryllium adiabatic calorimeter dosimeter fcr measurement of nitrogen yields from electron, 25:51915

NITROGEN SYSTEMS
- N--Nb, internal friction spectrum of deformed and undeformed, to 700°C, 25:52441
- N--O, radiolysis of, absorption spectroscopic method for measuring rate constants of reactions of N_2^+ from, 25:51529

NORTH ANNA POWER REACTOR, UNIT 3
- containment systems for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
- control system for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
- cooling system for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
- engineered safeguards for, preliminary safety analysis

  of, 25:54001 (DOCKET-50404-4)
  instrumentation for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
NORTH ANNA POWER REACTOR, UNIT 4
  containment systems for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
  control system for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
  cooling system for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
  engineered safeguards for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
  instrumentation for, preliminary safety analysis of, 25:54001 (DOCKET-50404-4)
NORWAY
  nuclear energy development in, regional cooperation with Finland, Denmark, and Sweden for, 25:54010 (A/CONF.49/P-7)
  nuclear physics research programs with Poland, Yugoslavia, and IAEA, description of joint, 25:54261 (A/CONF.49/P-330)
  nuclear power plants in, development during 1970 to 1990, 25:53932 (A/CONF.49/P-300)
  nuclear power plants in, economics and safety aspects of underground siting of, 25:54144 (A/CONF.49/P-290)
NOVAE
  radio emission from, (T), 25:52551
NPD REACTOR
  operating history during period April 30, 1969 to April 30, 1970, 25:54171 (70-CNA-616)
  operation of, review of, 25:53928 (A/CONF.49/P-148)
NUCLEAR EMULSIONS
  irradiation of, equipment for isotropic, 25:51900(P)
  meson (μ^-) capture by carbon, nitrogen, and oxygen in, relative probabilities of reaction channels for lithium-8 production in, (E), 25:53516 (JINR-P1-5893)
  meson (μ^-) capture by carbon-12 in, energy spectra, angular correlations, and relative probability for lithium-8, helium-3, neutron, and neutrino production in, (E), 25:53516 (JINR-P1-5893)
  meson (π^-) momentum in, method for measuring, 25:53030
  meson (π^-) multiple scattering at 60 GeV in, (E), 25:53030
  meson (π^+) reactions at 60 GeV, angular distributions of tracks from, (E), 25:53025
  meson (π^-) reactions with, polarization of lithium-8 fragments produced by, (E), 25:53771
  particle track geometry in, study of transverse 10-GeV proton, 25:51897
  proton reactions at 660 MeV, production of slow π mesons in, (E), 25:53010
  proton reactions with heavy nuclei at 20.8 GeV/c in, π^+ and π^- diffraction production in, (E), 25:53012
NUCLEAR ENGINEERING
  development in India, impact of, 25:54334 (A/CONF.49/P-742)
  education in Latin America, summary of, 25:54336 (A/CONF.49/P-755)
  role in United Nations, 25:54326 (A/CONF.49/P-421)
  training in Latin America, summary of, 25:54336 (A/CONF.49/P-755)
  training programs in, requirements of developing countries for, 25:54033 (A/CONF.49/P-540)
NUCLEAR EXPLOSIONS, ATMOSPHERIC
  detection of, study of extremely low frequency waves and ionospheric disturbances for, 25:51657 (AD-716601)
  effects of sublethal blast overpressures from simulated, on pulmonary function in sheep, effects of unilateral exposure to combined γ rays and neutrons on, 25:52185(R) (AD-721094)
  fireballs from, xenon shock tube simulation of thermal environment of, 25:51658 (AD-717090)
  pressure waves from low-altitude, studies of atmospheric, 25:51659 (AD-720853)
NUCLEAR EXPLOSIONS, UNDERGROUND
  debris from, design of hot-cell radiochemical laboratory for analysis of, 25:51795
  effects of Project Schooner, on tungsten-181 and -185 contents in USSR atmosphere, 25:51635
  effects of Project Schooner, on tungsten-181 content in Swedish ground-level atmosphere, 25:51633 (FOA-4-4460)
  effects on iodine-131 content of milk and tissues of dairy cows at Nevada Test Site, 25:52012 (PNE-914-F)
  evaluation of deep, for industrial uses, 25:51664 (UCRL-72769(Rev.1))
  reports on Amchitka Island, Alaska, list of publicly available, 25:51661 (NVO-103)
  seismic wave propagation from, numerical model for calculating, 25:51654 (NVO-1163-225)
  uses for large-scale excavation projects in UAR, prospects for, 25:51655 (A/CONF.49/P-144)
  uses of, evaluation of technical feasibility, safety, and economic viability of peaceful, 25:51656 (A/CONF.49/P-762)
NUCLEAR MATERIALS MANAGEMENT
  accountability and control system for, in Czechoslovakia Socialist Republic, 25:51751 (A/CONF.49/P-558)
  accounting system for, in nuclear fuel cycle, 25:51748 (A/CONF.49/P-415)
  fuel assay in, dual spectrum fast--thermal reactor for, 25:54217
  fuel element identification marking, system of magnetic inclusions for, 25:54307(P)
  inventory methods at Cadarache radiochemical processing plant, review on, 25:51762 (CEA-CONF-1786)
  methods for representative industrial installations in Belgium, 25:51747 (A/CONF.49/P-286)
  safeguards for, systems analysis in, 25:51757 (A/CONF.49/P-771)
  safeguards system for non-proliferation treaty, development of IAEA, 25:51756 (A/CONF.49/P-770)
  safeguards system for, at Fernald, Ohio scrap recovery plant, performance of MONAL for, 25:51769 (LA-DC-12296)
  safeguards system for, development of Euratom, 25:51754 (A/CONF.49/P-725)
  safeguards system for, systems study of Japanese, 25:51760 (A/CONF.49/P-828)
  safeguards systems for, description of Brazilian, 25:51744 (A/CONF.49/P-204)
  safeguards systems for, development of nondestructive assay methods for, 25:51768 (LA-DC-12295)
  safeguards systems for, in fuel fabrication and reprocessing plants, mathematical model for evaluating efficiency of, 25:51844
  safeguards systems for, in Japanese fuel fabrication plants, development of automated, 25:51746 (A/CONF.49/P-265)
  safeguards systems for, in West Germany, development of instrumented assay methods for, 25:51759 (A/CONF.49/P-809)
  safeguards systems for, properties of radioisotope neutron sources for use in, 25:51767 (LA-DC-12294)
  safeguards systems for, requirements for effective, 25:51761 (BNWL-SA-3904)
  safeguards systems for, review of LASL research on, 25:51766(R) (LA-4705)
  safeguards systems for, technical basis for international, 25:51758 (A/CONF.49/P-773)
NUCLEAR MODELS
  droplet, review of, (T), 25:53814 (LBL-209)
  optical, effects of isospin term and various form factors on, (T), 25:53877
  optical, review on, 25:53838
  optical, spin-orbit radius for, (E/T), 25:53789
  optical, variation of real well depth of nonlocal potentials with Gaussian and Yukawa kernels, (T), 25:53878
  phonon, mechanism for rotational spectrum in, 25:53827
  shell, book: Group-Theoretical Methods for the Shell Model of Nuclei. Part II, 25:53875
  shell, extension to asymmetric configurations of two-center, (T), 25:53819
NUCLEAR PHYSICS
  book: Principles of Methods for Experimental Nuclear Physics, 25:53797
  programs in Poland, description of education and training, 25:54024 (A/CONF.49/P-333)
  research at CERN, 1970, 25:53422(R) (NP-18906)
  research at Daresbury Nuclear Physics Lab., 1970, 25:52988(R) (NP-18909)
  research at Nuclear Physics Institute of University of Paris in 1970, 25:53748(R) (NP-18872)
  research program at LAMPF, proposed, 25:52987 (LA-4637)
  research programs in Germany, government activities in planning and control of, 25:53896 (A/CONF.49/P-417)
  research programs in research reactors, in Yugoslavia, 25:54178 (A/CONF.49/P-348)
  research programs on, description of joint Norway, Poland, Yugoslavia, and IAEA, 25:54261 (A/CONF.49/P-330)
  technology in developing nations, requirements for, 25:53897 (A/CONF.49/P-418)
NUCLEAR POWER
  conference on environment and, 25:53923
  development in Australia, predictions to year 2000 for, 25:54014 (A/CONF.49/P-127)
  development in Brazil to year 2000, forecasts of, 25:53955 (A/CONF.49/P-802)
  development in Germany, government activities in planning and control of, 25:53896 (A/CONF.49/P-417)
  development in United Kingdom since 1964, summary of, 25:53899 (A/CONF.49/P-467)
  development of, role in filling world energy needs, 25:54048
  programs in developing countries, summary of, 25:54137 (A/CONF.49/P-761)
  uses in production of iron, review on, 25:52310
NUCLEAR POWER PLANTS
  construction in Bulgaria, estimates for future, 25:53885 (A/CONF.49/P-9)
  construction in Czechoslovakia, economic and technological problems of, 25:54034 (A/CONF.49/P-541)
  construction in Iran, prospects for, 25:54328 (A/CONF.49/P-516)
  construction in Korea, estimates of future, 25:53913 (A/CONF.49/P-778)
  construction in Latin America, summary of existing and planned, 25:53912 (A/CONF.49/P-757)
  construction in Taiwan, economics of, 25:53956 (A/CONF.49/P-803)
  design of Japanese, earthquake resistant criteria for, 25:53974 (A/CONF.49/P-226)

XUM

  development in Australia, 25:53886 (A/CONF.49/P-135)
  development in Austria, 25:53890 (A/CONF.49/P-212)
  development in Canada, effects on environment of, 25:54016 (A/CONF.49/P-160)
  development in East Germany, 25:53924
  development in Egypt, 25:54015 (A/CONF.49/P-137)
  development in Finland, Norway, and Sweden during 1970 to 1990, 25:53932 (A/CONF.49/P-300)
  development in Greece, analysis of optimum economic, 25:53891 (A/CONF.49/P-270)
  development in India, program for, 25:53904 (A/CONF.49/P-532)
  development in Italy, predictions to 1990 for, 25:54042 (A/CONF.49/P-818)
  development in Japan, long-range program for, 25:54023 (A/CONF.49/P-298)
  development in Mexico, programs for, 25:53915 (A/CONF.49/P-788)
  development in Mexico, recommendations for, 25:53916 (A/CONF.49/P-793)
  development in Peru, program for, 25:54041 (A/CONF.49/P-796)
  development in Poland, economics for, 25:53936 (A/CONF.49/P-338)
  development in Turkey, cost analysis of, 25:53914 (A/CONF.49/P-780)
  development in U.S.S.R., summary of, 25:54039 (A/CONF.49/P-712)
  development in Yugoslavia, long-term projections of, 25:53895 (A/CONF.49/P-347)
  development of, analysis of optimum, 25:53910 (A/CONF.49/P-718)
  development of, benefits versus costs evaluations of, 25:54007
  distribution in national power systems, STROKOOP code for cost optimization of, 25:54139 (JUL-759-RG)
  economic aspects in U.K, 25:53940 (A/CONF.49/P-473)
  economics in India, effects of recent cost trends on, 25:53945 (A/CONF.49/P-527)
  economics in power systems in India, model for optimization of, 25:53946 (A/CONF.49/P-528)
  economics in South Africa, computer model for simulation of, 25:53985 (A/CONF.49/P-660)
  economics in Sweden, 25:53978 (A/CONF.49/P-306)
  economics in U.K. for, present worth evaluations for optimum, 25:54140
  economics of integration into existing hydroelectric distribution system, planning in Switzerland for, 25:53950 (A/CONF.49/P-675)
  economics of integration with hydrocapacity in Portugal, 25:53943 (A/CONF.49/P-519)
  economics of small and medium size, 25:53953 (A/CONF.49/P-760)
  economics of small, in remote areas of U.S.S.R, 25:54250 (A/CONF.49/P-713)
  economics of, effects of conventional plants in integrated utility systems on, 25:53927 (A/CONF.49/P-21)
  effects on radioisotope contamination of environment, 25:52043 (A/CONF.49/P-684)
  effluents from, monitoring and control in India of chemical, radioactive, and thermal, 25:53982 (A/CONF.49/P-536)
  effluents from, sources and control of, 25:54003
  environmental effects of, need for good public relations on, 25:53986 (A/CONF.49/P-681)
  environmental monitoring of U.S.S.R, 25:53987 (A/CONF.49/P-687)
  fuel cycle management in Sweden, analysis of optimum, 25:53938 (A/CONF.49/P-425)
  fuel requirements for Argentine, forecasts to 1985, 25:51642 (A/CONF.49/P-560)
  integration into existing power distribution and district heating systems, in Hungary, 25:53894 (A/CONF.49/P-322)
  integration into existing power distribution grids, in Egypt, 25:54015 (A/CONF.49/P-137)
  integration into existing power distribution grids, in U.S.S.R, 25:53910 (A/CONF.49/P-718)
  integration into power grid of Spain, summary of existing and future, 25:53911 (A/CONF.49/P-729)
  operation in developing nations, technology requirements for, 25:53897 (A/CONF.49/P-418)
  operation in Scotland, integration with hydro and steam power plant systems, 25:53902 (A/CONF.49/P-478)
  operation in U.K., review of, 25:53941 (A/CONF.49/P-474)
  operation of, evaluation of biological and medical hazards to man from, 25:52235
  operational reliability of, effects on power system planning in Finland of, 25:53926 (A/CONF.49/P-8)
  power conversion systems for, heated storage in rock cavities for feedwater for, 25:53917 (A/CONF.49/P-798)
  public opinion attitudes toward, in Switzerland, 25:53907 (A/CONF.49/P-676)
  pumps for, development of, 25:51677
  radiation protection criteria and procedures at Italian, summary of, 25:53973 (A/CONF.49/P-191)
  radiation protection methods in France for, summary of Electricite de France, 25:53990 (A/CONF.49/P-848)
  radioactive effluents in Germany from, safety aspects of gaseous and liquid, 25:53980 (A/CONF.49/P-399)
  radioactive wastes from Japanese, management of gaseous and liquid, 25:51745 (A/CONF.49/P-253)
  regulation of U. S., role of public in, 25:54006
  safety aspects in U.K, 25:53941 (A/CONF.49/P-474)
  safety of, need for good public relations on, 25:53986 (A/CONF.49/P-681)
  safety of, policies in Sweden on, 25:53976 (A/CONF.49/P-304)
  safety of, Swedish criteria for, 25:53977 (A/CONF.49/P-305)
  seismic effects on, conference on analysis of, 25:54166
  sites for, probability analysis of radiation dose levels at, 25:54008
  siting in Czechoslovakia, criteria for, 25:53983 (A/CONF.49/P-543)
  siting in Norway, economics and safety aspects of underground, 25:54144 (A/CONF.49/P-290)
  structural components for, Japanese programs on safety of, 25:54143 (A/CONF.49/P-225)
  thermal effluents from, ecological effects of, 25:54005

NUCLEAR REACTION ANALYSIS
  uses in art identification problems, 25:51410(R) (NYO-3953-3)

NUCLEAR REACTIONS
  angular correlation theory for polarized-beam induced, 25:53846
  angular correlations in, design of equipment for automatic measurement of, 25:51888
  cluster transfer in heavy-ion induced, analysis using quasiclassical approximation, (T), 25:53868
  compound-nucleus excitation in, review of polarization phenomena for light nuclei, 25:53837
  cross sections above Coulomb barrier for heavy-ion transfer, Q dependence of, (T), 25:53818
  form factors in square-well model of, effect of various, (T), 25:53825
  parity-violating force in, method for measuring, (T), 25:53244
  polarization effects for A = 3 and 4 systems in, review on, 25:53835
  polarization effects for A = 5 systems in, review on, 25:53836
  polarization in, relationship of analyzing power and asymmetry to, (T), 25:53845
  polarization phenomena in, conference on, 25:53788
  polarization phenomena in, coordinate systems and conventions for, 25:53833
  polarization phenomena in, relation to symmetry properties, 25:53831
  polarization phenomena in, review on, 25:53832
  research on transfer, review of experimental, 25:53705
  S-matrix analysis of channels like carbon-12 (α,n), determination of absolute parities by, (T), 25:53852
  T matrix corresponding to sum of Coulomb and separable potentials for, expansion of O(4) harmonics for off-shell, (T), 25:53830
  theory of transfer, review on, 25:53842

NUCLEAR REACTIONS (DIRECT)
  Coulomb repulsion in diffraction theory of (d,p) stripping, 25:53826
  deuteron stripping (d,p) anomaly at threshold of neutron analog channel, analysis of, (T), 25:53824

NUCLEAR SPIN
  measurement with dynamically polarized proton target and backscattered neutrons, 25:53481

NUCLEAR STRUCTURE
  core renormalization and scaling properties of residual interactions in, (T), 25:53876
  description for yrast region using nonaxial symmetric deformation, (T), 25:53820
  descriptions for deformed odd-A nuclei, 25:53870
  energy levels in, mechanism for rotational spectrum in phonon model for, 25:53827
  self-energy of system with hard core, 25:53828
  theory of spectral distributions in, (T), 25:53823

NUCLEAR THEORY
  Bethe--Goldstone equation in, exact solution of, 25:53866
  book: Algebraic Methods in Nuclear Theory, 25:53861
  conference on, (T), 25:53039
  deformation parameters of light nuclei, empirical formula for, 25:53873
  Faddeev--Amado equation in, numerical solution without deformation of contours, 25:53821
  forces in, contributions to binding energy from various types of, 25:53829
  self-energy of system with hard core, 25:53828
  symmetry in, projection operators for simple Lie groups for decomposition of reducible representations in, 25:53250
  three-body problem in, classification of states in oscillator basis, 25:53865
  three-body problem in, final-state interactions in dynamical calculations of, 25:53822

NUCLEAR WEAPONS
  testing of, gas chromatographic analysis of gases found in post-shot tunnel systems from, 25:51364 (SC-RR-710337)

NUCLEI
  alpha elastic scattering by light A = 4n, cross-section resonances from beryllium-8 formation in, (T), 25:53664 (INP-751)

XUM

- beta decay of mirror, asymmetry and second-class currents in, (T), 25:53817
- decay of, measurement of γ-γ angular correlations in, 25:51544(R) (NYO-4177-103)
- deformation parameters of light, empirical formula for, (E), 25:53873
- deuteron elastic scattering at 15 MeV, optical-model analysis of polarized, (T), 25:53812 (LA-DC-12577)
- deuteron elastic scattering at 9 to 12 MeV using polarized beams, optical-model parameters for, 25:53712
- deuteron elastic scattering by, formalism for polarization transfer in, (T), 25:53849
- deuteron elastic scattering by, review of polarization effects in, 25:53839
- deuteron reactions (d,n) and (d,p) with, formalism for polarization transfer, (T), 25:53847
- deuteron reactions (d,n) using polarized beam, analysis of neutron polarization at 0°, (T), 25:53848
- deuteron reactions (d,p) with, deuteron D-state effect and spin dependence in vector polarization for, (T), 25:53856
- deuteron reactions (d,p) with, polarization effects in, (T), 25:53842
- deuteron reactions (d,p) with, spin dependence of vector analyzing power of, (T), 25:53857
- deuteron reactions using polarized beams, method for determination of secondary standards for analyzing tensors of, 25:53859
- deuteron reactions using polarized beams, method for determination of analyzing tensors in, 25:53860
- energy level lifetimes in, systems for measurement of short, 25:51544(R) (NYO-4177-103)
- energy level of doubly closed-shell, shell-model analysis with configuration mixing of mysterious second zero, (T), 25:53816
- energy levels from (α,n) reactions with intermediate and heavy nuclei, nuclear temperatures and densities of, (E), 25:53809
- energy levels in, mechanism for rotational spectrum in phonon model for, 25:53827
- energy levels of 1p-shell, shell-model analysis using effective interactions, (T), 25:53604 (CCC-1120-113)
- energy levels of A = 35 to 65, systematics of 2s single-particle, (T), 25:53667
- energy-level transitions in heavy, calculations using Saxon--Woods potential including pair correlations and Cariolis interactions for E1, (T), 25:53745 (JINR-P4-5872)
- helium-3 elastic scattering below 40 MeV by A > 40, optical-model potential for, 25:53716
- helium-3 elastic scattering by, review of polarization effects in, 25:53839
- helium-3 reactions (He-3,t) with, analysis of quadratic spin-orbit effects in, (T), 25:53858
- meson (μ^-) capture by, Doppler effect and internal bremsstrahlung in, (T), 25:53629
- meson (μ^-) capture by, radiochemical techniques for rate to all particle-stable final states in, (E/T), 25:53813 (LA-DC-12780)
- meson (π) reactions near Δ(1236), optical model for, (T), 25:53225 (FRNC-TH-51)
- meson (π^-) reactions ($\pi^-,2\pi^-\pi^+$) with, angular criteria for, (T), 25:53869
- meson (π^-) reactions with, polarization of lithium-8 fragments produced by, (E), 25:53771
- meson reactions with, local change of intranuclear matter density in formulation of model for intranuclear cascade production in, (T), 25:53227(T) (ORNL-tr-2502)
- neutron elastic scattering at 0.7 to 1.2 MeV by A = 48 to 238, polarization in, (E), 25:53706
- neutron elastic scattering at 4 MeV by medium- and heavy-weight, cross sections for polarized, 25:53707
- neutron interactions with polarized, review on polarized, 25:53843
- nucleon elastic scattering at 4 to 30 MeV by A = 40 to 210, polarization in, (T), 25:53867
- nucleon elastic scattering by Z = 13 to 92, variation of real well depth of nonlocal potentials in optical-model analysis of elastic, (T), 25:53878
- nucleon reactions with, local change of intranuclear matter density in formulation of model for intranuclear cascade production in, (T), 25:53227(T) (ORNL-tr-2502)
- nucleon scattering by A = 4, 5, and 6, analysis using refined cluster model, (T), 25:53851
- photon reactions at high energies, vector dominance model for asymmetry in π^+ production in, (T), 25:53075
- photon reactions with complex, at high energies, review of rho, phi, and ω production in, (E), 25:52997
- photon reactions with Coulomb field of, at 900 MeV, angular distribution of electron pairs from, (E), 25:53000
- photon reactions with spin-0, determination of spin and parity of X^0(960) from, (T), 25:53063
- photon reactions with, multiperipheral production mechanism and duality for rho'(1500) production in, 25:53097
- photon reactions with, review of vector dominance model for vector meson production in, (T), 25:53076
- photon reactions with, review of vector dominance model for total cross sections for particle production in, (T), 25:53076
- proton elastic scattering by, analysis using optical potential with real surface term, (T), 25:53853
- proton elastic scattering by, formalism for polarization transfer in, (T), 25:53849
- proton elastic scattering with isobaric analog excitation, formalism for analysis of, (T), 25:53855
- proton inelastic scattering by, review of polarization effects in, 25:53840
- proton inelastic scattering using polarized beams, nuclear structure effects on asymmetry in, (T), 25:53854
- proton reactions (p,n) with, effects of isospin term and various form factors on optical-model analysis of, (T), 25:53877
- proton reactions ($p,p\pi^+\pi^-$) with, angular criteria for, (T), 25:53869
- proton reactions at 660 MeV, production of slow π mesons in, (E), 25:53010
- proton reactions with heavy, at 20.8 GeV/c in emulsions, π^+ and π^- diffraction production in, (E), 25:53012
- proton reactions with, cross sections for π^+ production in, 25:53239
- proton scattering near isobaric analog resonances, review of polarization effects in, 25:53841
- theory for deformed, Nilsson Hamiltonian on asymptotic basis in, (T), 25:53811 (FRNC-TH-27)
- triton elastic scattering below 40 MeV by A > 40, optical-model potential for, 25:53716
- triton elastic scattering by, review of polarization effects in, 25:53839

NUCLEIC ACID
- radiation effects on Acetabularia mediterranea synthesis of, γ, 25:52000
- radiation effects on constituents of, review of, 25:51990 (A/CONF.49/P-633)

NUCLEIC ACID, DEOXYRIBO-
- radiation damage to, in ascites, L, and lymphosarcoma cells in relation to cell survival, effects of dose on repair of x, 25:52177 (A/CONF.49/P-554)
- radiation effects on Bacillus subtilis, repair capacity of competent cells following uv, 25:51996
- radiation effects on Hemophilus influenzae, reextraction study of integration and repair of uv, 25:52271
- radiation effects on mammalian cell, effects of dose on repair replication of x, 25:52179 (UCSF-10-P-2-134)
- radiation effects on solutions of, quantitative determination of nitrogen bases and nucleosides released following, 25:52004
- radiation effects on synthesis of mammalian cell, determination of length of chromosome replicons from, 25:51997
- radiation effects on synthesis of, in cultured fibrosarcoma and L cells, electron and γ, 25:52176 (A/CONF.49/P-358)
- radiation effects on transfer of Escherichia coli, uv, 25:52001
- radiation effects on unscheduled synthesis of mammalian cell, in relation to cell survival and chromosome number, x, 25:52182
- radiation effects on, use of degradation products of pyrimidine in estimation of γ, 25:51990 (A/CONF.49/P-633)
- radioinduced complexing with nitroxide free radicals, binding energy and reaction kinetics for electron, 25:51994
- radioinduced single-strand breaks in Chlorella, effects of cell phase on repair of γ, 25:52253 (A/CONF.49/P-213)
- radioinduced single-strand breaks in radiosensitive Escherichia coli B mutant R 15, x, 25:52024
- radioprotective effects on chromosomes of tumor cells, γ, 25:52106 (A/CONF.49/P-257)
- radiosensitivity of novobiocin resistance marker in Hemophilus influenzae, effects of genetic mismatch and target size on uv, 25:52037
- sequence determination using electron microscopy, feasibility of, 25:53752(R) (ORNL-4659)
- stability in radioresistant and radiosensitive yeasts, 25:52258

NUCLEIC ACID, RIBO-
- radiation effects on metabolism in Ehrlich ascites tumor cells, tritium tracer study on x, 25:52180
- radiation effects on metabolism in soybean seeds in relation to variety, γ, 25:52262
- radiation effects on synthesis of, in cultured fibrosarcoma and L cells, electron and γ, 25:52176 (A/CONF.49/P-358)

NUCLEOGENESIS
- helium-3 production in stellar, (E), 25:52548

NUCLEONS
- coupling constant for KAN, differential cross sections for $\gamma + p \to K^+ + \Lambda$ backward interactions at 1 and 2 GeV for, (E), 25:52992 (LAL-RI-71-3)
- coupling of A_2NN on-mass shell, helicity-flip property of, 25:53234
- form factors of, review of e + p interactions at 0 to 10 GeV energies for inelastic electromagnetic, (E/T), 25:52995
- interactions anti K + N → anti K + π + N, dual five-point function for phenomenological analysis of, (T), 25:53188

interactions anti $K + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions anti $N + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions $e + N \to \pi + N$, review of vector dominance model for π production in, (T), 25:53076
interactions $e + N \to \pi + N$, vector-meson dominance for $\pi + N \to \rho + N$ interactions relation with, (T), 25:53074
interactions $e + N$ at high energies, conserved vector current hypothesis and current commutators for relation with $\nu + N$ interactions for, (T), 25:53106
interactions $e + N$ at high energies, review of inelastic, (T), 25:53072
interactions $e + N$, model for hadrons as extended objects for particle production in deep inelastic, (T), 25:53151
interactions $e + N$, PCAC hypothesis and current algebra analysis of cross sections for pion production in, 25:53061
interactions $e + N$, review of vector dominance model for total cross sections for particle production in, (T), 25:53076
interactions $\gamma + N \to \Delta(1950) \to \rho + N$, differential cross section and rho density matrix elements for, 25:53086
interactions $\gamma + N \to \Delta(2420) \to \rho + N$, differential cross section and rho density matrix elements for, 25:53086
interactions $\gamma + N \to \pi + N$, equivalent experimental set ups for polarization measurements in, (T), 25:53077
interactions $\gamma + N \to \pi + N$, relativistic reconstruction of amplitudes at arbitrary angles, 25:53062
interactions $\gamma + N \to \pi + N$, review of vector dominance model for π production in, (T), 25:53076
interactions $\gamma + N$, Regge pole absorption theory for dip structure mechanism for meson and nucleon production in, (T), 25:53185
interactions $\gamma + N$, review of gauge invariance for amplitudes of particle production in, (T), 25:53073
interactions $\gamma + N$, review of vector dominance model for vector meson production in, (T), 25:53076
interactions $\gamma + N$, tests of vector dominance model in pseudoscalar meson production in, (E), 25:52998
interactions $K + N$ at low and intermediate energies, partial-wave amplitudes for, 25:53220
interactions $K + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions $K + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions $K + N$, partial wave analysis of, 25:53180 (UCRL-20655, pp 176a-89)
interactions $K^- + N$ at low and intermediate energies, review of bubble chamber and counter experiments on, 25:53181 (UCRL-20655, pp 190a-202)
interactions $l + N$, hadronic helicity conservation in inelastic, (T), 25:53100 (NYO-4204-14)
interactions $\Lambda + N \to \Lambda + N$, multichannel calculation of cross sections and phase shift for, 25:53232
interactions $\Lambda + N \to \Sigma + N$, multichannel calculation of cross sections and phase shifts for, 25:53232
interactions $\Lambda + N$ at low energies, multichannel calculation of scattering lengths and effective ranges for, 25:53233
interactions $\mu + N$, review of elastic and inelastic, (E), 25:53007
interactions $N + N \to N + N$, relativistic one-boson-exchange model for, (T), 25:53224 (DESY-71/34)
interactions $N + N$ in cosmic jets, emission model for multiple particle production in, 25:53238
interactions $N + N$ in quantum field theory, s-channel helicity nonflip amplitude of, 25:53292
interactions $N + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions $N + N$, partial wave analysis of, 25:53180 (UCRL-20655, pp 176a-89)
interactions $N + N$, Poisson distribution of secondary soft mesons from multiple production in, 25:53228
interactions $N + N$, review on, (T), 25:53834
interactions $\nu + N \to l + N$, absence of form factor in e^2 corrections to amplitude for, (T), 25:53113
interactions $\nu + N$ at high energies, conserved vector current hypothesis and current commutators for relation with $e + N$ interactions at high energies for, (T), 25:53106
interactions of, hyperspherical functions for three-body, 25:53042
interactions $\pi + N \to N + k\pi$, nucleon momentum spectra from duality diagrams for, 25:53193
interactions $\pi + N \to \omega + N(\Delta)$ at high energies, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184
interactions $\pi + N \to \pi + N$ at high energies, spin-dependent droplet model for, (T), 25:53199
interactions $\pi + N \to \pi + N$, vector current and universality for, (T), 25:53167
interactions $\pi + N \to \pi + N(1470)$, anomalous magnetic moment for, 25:53201
interactions $\pi + N \to \pi + \pi + N$, partial wave analysis in, 25:53182 (UCRL-20655, pp 220a-49)
interactions $\pi + N \to \pi(\gamma) + N$, contributions of spin-J baryon poles to amplitudes of, (T), 25:53203
interactions $\pi + N \to \rho + N$ at high energies, model independent analysis for ω-exchange contribution to, (T), 25:53184
interactions $\pi + N \to \rho + N$, vector-meson dominance for $e + N \to \pi + N$ interactions relation with, (T), 25:53074
interactions $\pi + N$ at low and intermediate energies, partial-wave amplitudes for, 25:53220
interactions $\pi + N$, absorption Regge cut in backward, 25:53206
interactions $\pi + N$, current algebra for, (T), 25:53191
interactions $\pi + N$, dispersion theoretic model for $\Delta(1650)$, $N(1700)$, and $\Delta(1670)$ as rhoN bound states in, 25:53218
interactions $\pi + N$, energy dependence of slope of diffraction amplitude for, 25:53197
interactions $\pi + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159
interactions $\pi + N$, helicity structure of Regge couplings in, 25:53195
interactions $\pi + N$, inequalities for partial waves of, 25:53216
interactions $\pi + N$, kinematical singularities and helicity amplitudes for π and higher-spin baryon production in, (T), 25:53200
interactions $\pi + N$, Regge pole absorption theory for dip structure mechanism for meson and nucleon production in, (T), 25:53185
interactions $\pi + N$, S-channel helicity amplitudes for, 25:53204
interactions $\pi + N$, soft-point PCAC scattering length for, 25:53221
interactions $\pi + N$, SU(3) x SU(3) chiral-symmetry breaking for, 25:53202
interactions $\pi + N$, sum rule for chiral SU(2) x SU(2) symmetry breaking in, (T), 25:53178 (NYO-4204-19)
interactions $\pi + N$, urbaryon rearrangement amplitude for elastic, 25:53149
interactions $\pi + N$, vacuum trajectory for amplitudes of, 25:53222
interactions $\pi^+ + N \to \rho + \Delta$ at 8 GeV/c in deuterium bubble chamber, (E), 25:53752(R) (ORNL-4659)
interactions $\rho + N$ in Veneziano-type model with diffraction, total cross section for, 25:53098
interactions $\Sigma + N \to \Sigma + N$, multichannel calculation of cross sections and phase shifts for, 25:53232
interactions $\Sigma + N$ at low energies, multichannel calculation of scattering lengths and effective ranges for, 25:53233
interactions with mesons, s-channel helicity constraints on t-channel exchanges in, 25:53157
interactions with mesons, unitarity constraints on helicity flip amplitudes for elastic, 25:53215
quantum field theory for πN system, finite local, 25:53324
reactions with brass and carbon above 20 GeV, multiplicity distribution of collimated secondaries from cosmic, (E), 25:53018
reactions with nuclei, local change of intranuclear cascade production in, (T), 25:53227(T) (ORNL-tr-2502)
scattering by A = 4, 5, and 6 nuclei, analysis using refined cluster model, (T), 25:53851
scattering by A = 40 to 210 nuclei at 4 to 30 MeV, polarization in elastic, (T), 25:53867
scattering by Z = 13 to 92 nuclei, variation of real well depth of nonlocal potentials in optical-model analysis of elastic, (T), 25:53878

NUCLEONS (anti N)
interactions anti $N + N$, formulation of Reggeized absorption model with exchange degeneracy for elastic and charge-exchange, (T), 25:53159

NUCLEOSIDES
radioinduced release in DNA solutions, quantitative determination of, 25:52004
radioprotective effects on Escherichia coli, x, 25:52106 (A/CONF.49/P-257)

NUCLEOTIDES
effects of polyribo-, on lymphocytes, 25:52178(R) (RLO-2226-T-1-6)
effects of polyribo-, on lymphocytes, 25:52008(R) (RLO-2226-T-1-7)
radioprotective effects on chromosomes of tumor cells, γ, 25:52106 (A/CONF.49/P-257)
radioprotective effects on Escherichia coli, x, 25:52106 (A/CONF.49/P-257)

O

OBRIGHEIM POWER REACTOR (GERMANY)
operations during 1969 to 1970, review of, 25:53957 (A/CONF.49/P-806)
radioactive effluents from, measurements during 1969 to 1970 of, 25:53979 (A/CONF.49/P-396)

XUM

ORDNANCE MATERIEL
  detection of buried land mine, feasibility study of neutron-induced gamma radiation method for, 25:51731
  testing of Apollo, using neutron radiography, 25:51740
ORES
  sorting of batches of, radiometric methods for automatic, 25:51696 (A/CONF.49/P-455)
ORGANIC ACIDS
  preparation of polyamic, 25:54349 (BDX-613-509)
  radiolysis at cryogenic temperatures, ESR studies of mechanisms in γ, 25:51513
ORGANIC COMPOUNDS
  radiation chemistry of, correlation between optical and other dynamic properties and, 25:51480 (UJV-2611-Ch)
ORGANS
  radioactivity of mouse, following administration of tritium-labeled 2-methylpiperazinecarbodithioic acid, 25:51978
  radiotherapy of animal and human, design of applicator for, 25:51729(P)
ORNL RESEARCH REACTOR
  maintenance during April to June 1971, 25:54210(R) (ORNL-TM-3559)
  operations during April to June 1971, 25:54210(R) (ORNL-TM-3559)
OSKARSHAMN POWER REACTOR
  licensing procedures for, 25:53934 (A/CONF.49/P-302)
  performance of, review of, 25:53935 (A/CONF.49/P-303)
  personnel for, training program for, 25:53934 (A/CONF.49/P-302)
  pressure vessel for, preoperational inspection of, 25:53934 (A/CONF.49/P-302)
OSMIUM
  determination of trace amounts of, in platinum by neutron activation and radiochemical separation, 25:51409 (IS-T-458)
OSMIUM ISOTOPES
  preparation of carrier-free radioactive, by electrolytic precipitation, 25:51538
OSMIUM ISOTOPES Os-190
  neutron inelastic scattering at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)
  neutron reactions (n,p) and (n,n'γ) at 14.8 MeV, gamma spectra from, (E), 25:53743(R) (INR-1318)
OSTEICHTHYES
  Heteropneustes fossilis, radiation effects on function and morphology of gonads and liver in, interstitial cobalt-60 γ, 25:52268 (A/CONF.49/P-538)
  Oryzias latipes, radiation effects on survival of, protective effects of nucleosides and nucleotides against x, 25:52106 (A/CONF.49/P-257)
OTTO HAHN REACTOR
  operation of, economics and reliability of, 25:54248 (A/CONF.49/P-376)
  operation of, international legal agreements for, 25:54249 (A/CONF.49/P-401)
  shielding for, calculation of neutron flux and γ dose rates for primary, (T), 25:54252
OVARIES
  radiation dose to human, during hysterosalpingography using two-film, fluoroscopy, and spot film techniques, 25:52086
OXYGEN
  abundance in 13 planetary nebulae, (E), 25:52514
  abundance in Sc galaxies, (E/T), 25:52570
  determinatin simultaneously with nitrogen in carbides and nitrides by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)
  determination at surface of silicon, comparison of nuclear reactions for, 25:51417
  determination by fast neutron activation, precision system for, 25:51421
  determination in alkali and alkaline earth metals by γ activation, sample surface purification for, 25:51418
  determination in presence of carbon and nitrogen by photon activation, separation method for, 25:51413
  effects on fast neutron and x radiosensitivity of mouse osteosarcoma cells in vivo and in vitro, 25:52198
  effects on neutron sensitivity of cultured human kidney and murine leukemia cells, 25:52109
  effects on neutron sensitivity of neoplastic cells, 25:52159
  electron reactions at 4 to 45 eV with molecular, differential and integral cross sections for excitation in, (E), 25:52677
  energy-level transitions in, electron correlation in calculation of probabilities of forbidden, 25:52699
  hydrogen-ion (H^-) reactions with molecular, statistical approximation for energy distribution of products from, 25:52671
  ion reactions at 30 keV to 2 MeV with atomic, cross sections for electron capture and loss in, (E), 25:52675
  meson (μ^-) capture in emulsions, relative probabilities of reaction channels for lithium-8 production in, (E), 25:53516 (JINR-P1-5893)
  radioinduced reactions with hexachloro-1,3-butadiene, kinetics of branching and thermal generation of initiating centers for chain reactions in γ, 25:51499
  reactions with chromium--niobium alloy at 900 to 1100°C, kinetics of oxidation, 25:52296 (AD-721321)
  sorption by molybdenum surfaces, measurement by secondary ion--ion emission, 25:52353
  sorption by tungsten surfaces, flash-method studies on, 25:52352
OXYGEN IONS
  abundance in NGC 6826, (E), 25:52513
  electron reactions with O V in plasma, excitation-rate coefficients for, (E), 25:52804
  electron reactions with O^{2+}, effective cross sections for excitation in, (T), 25:52670
  electron spectra and lifetimes from fast beams of, 25:53752(R) (ORNL-4659)
  energy-level transitions in O^{2+}, electron correlation in calculation of probabilities of forbidden, 25:52699
OXYGEN IONS (O^+)
  energy-level transitions in, electron correlation in calculation of probabilities of forbidden, 25:52699
  reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675
  reactions with xenon at 50 to 210 keV, delayed-coincidence study of inelastic processes in, 25:52638
OXYGEN IONS (O^-)
  reactions with oxygen molecules, rate constants for, 25:51481
OXYGEN IONS (O_2^+)
  reactions with deuterium, isotope effects in, 25:51453
OXYGEN IONS (O_2^-)
  reactions with oxygen molecules, rate constants for, 25:51481
OXYGEN ISOTOPES
  fractionation between nitric oxide and water, 25:51601
  use for determining age and size of water deposits in soil in Latin America, 25:51967 (A/CONF.49/P-756)
OXYGEN ISOTOPES O-14
  beta decay of, ft value and half-life for, (E), 25:53609
OXYGEN ISOTOPES O-15
  production by deuteron reactions with nitrogen, Van de Graaff accelerator facility for, 25:53442
OXYGEN ISOTOPES O-16
  binding energy of, calculation using renormalized Brueckner--Hartree--Fock method with center-of-mass corrections, (T), 25:53752(R) (ORNL-4659)
  deuteron reactions (d,n) at 5.4 MeV, neutron polarization from, (E), 25:53589
  deuteron reactions (d,p) at 12.3 MeV using polarized beam, vector analyzing power for, (E), 25:53722
  energy level at 6.06 MeV, description using fluctuation in radial mass distribution, (T), 25:53624
  energy levels from carbon-12 (Li-6,d) reactions, spin-parity assignments for rotational, (E), 25:53614
  energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
  form factors for, alpha-cluster-model calculations of elastic and inelastic monopole, (T), 25:53616
  helium-3 elastic scattering at 18 MeV, polarization in, (E), 25:53634
  meson (K^-) absorption on surface of, neutron/proton density distribution ratio from, (T), 25:53683
  neutron elastic scattering at 14.1 MeV using polarized beam, angular distribution for, (E), 25:53637
  neutron total cross section at 1.7 to 4.4 MeV, (E), 25:53752(R) (ORNL-4659)
  nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681
  nuclear binding energy and matrix elements for, Brueckner self-consistent calculations using hard-core interactions, (T), 25:53515 (COO-1120-128)
  nuclear binding energy and radii of, projected Hartree--Fock calculations with phenomenological and realistic effective interactions, (T), 25:53611
  photon reactions (γ,n) at 30 and 50 MeV, photoneutron polarization from, (E), 25:53642
  proton elastic scattering at 8 to 12 MeV, polarization in, (E), 25:53643
  proton inelastic scattering at 30.3 MeV, coupled-channel analysis of, (E/T), 25:53646
  proton reactions (p,d) at 30 MeV, effect of deuteron D-state on DWBA calculation for, (T), 25:53650
  proton reactions (p,He-3) and (p,t) at 43.8 MeV using polarized beam, angular distributions of analyzing power for, (E), 25:53658
  proton reactions (p,He-3) and (p,t) at 49.5 MeV using polarized beam, DWBA analysis of, (E/T), 25:53659
  reactions (O-16,α) with carbon-12 at 45 to 56 MeV, excitation functions and spectra from, (E), 25:53625
  reactions (O-16,xn) with molybdenum-98 at 80 MeV, γ spectra from, (E), 25:53752(R) (ORNL-4659)
  reactions with cadmium-116 at 140 MeV, charged-particle energy spectra from, (E), 25:53752(R) (ORNL-4659)
OXYGEN ISOTOPES O-17
  alpha reactions (α,n) at 1 to 5 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
  energy levels at 21.7 and 22.1 MeV from carbon-14 (He-3,α) reactions, spin-parity assignments for, (E), 25:53615
  energy levels from carbon-12 (α,n) reactions, nonuniqueness of spin--parity assignments for, (E), 25:53641

OXYGEN ISOTOPES O-18
- determination simultaneously with carbon-13 in carbon dioxide, development of mass spectrometer for, 25:51945
- effects on phosphoric acid decomposition of cadmium, lead, manganese, and zinc carbonates, effects of temperature on intramolecular, 25:51460
- energy levels of, calculation for particle-hole population numbers using configuration interaction method, (T), 25:53623
- energy levels of, calculation using exact solution of Bethe--Goldstone equation and Brueckner--Hartree--Fock method, 25:53866
- use as tracer to determine water movements in roots and soils, 25:51960 (A/CONF.49/P-626)

OXYGEN SYSTEMS
- Eu--Fe--O, compound formation in EuO--Eu_2O_3--Fe_2O_3--Fe portion of, (E/T), 25:52455 (CONF-711001-(Vol.2), pp 764-74)
- N--O, radiolysis of, absorption spectroscopic method for measuring rate constants of reactions of N_2^+ from, 25:51529

P

PACIFIC OCEAN
- radioisotope content of deep and surface waters of, 1965 to 1970 measurements of cesium-137 and strontium-90, 25:51649 (A/CONF.49/P-457)

PACKAGING
- design and testing of, for shipping large quantities of radioactive material, criteria for, 25:51822
- design of radioactive materials shipping, functional separation of mechanical components in, 25:51821
- design of radioactive materials, at Bhabha Atomic Research Center, 25:51812
- design of Type A, for shipping radioactive materials, analysis of international and national requirements for, 25:51808
- leak-tightness and shielding properties of radioactive materials, criteria for evaluation of, 25:51816
- requirements for nuclear materials, development of IAEA test, 25:51805
- safety of Type B, during shipment of radioactive materials in US, (E), 25:51806
- standardization of Types A and B, for shipping radioactive materials, 25:51811
- testing of radioactive materials, at Bhabha Atomic Research Center, (E), 25:51812
- testing of radioactive materials, for compliance with IAEA containment and shielding standards, methods for, 25:51817
- testing of radioactive materials, French programs for mechanical and thermal, 25:51814
- testing of radioactive materials, US programs for, 25:51813
- testing of Type A, for shipping radioactive materials, analysis of international and national requirements for, 25:51808
- testing of Type A, for shipping radioactive materials in Hungary, (E), 25:51810
- testing of Type A, for shipping radioactive materials, equipment and methods for, 25:51809
- testing of Type B, for shipping radioactive materials, equipment and methods for drop and thermal, 25:51815
- testing of Types A and B, for shipping radioactive materials, recommendations for drop, 25:51807
- testing of Types A and B, for shipping radioactive materials, (E), 25:51811
- testing of types UKT-I-V and UKT-II-V, for shipping radioactive materials, methods for mechanical and thermal, 25:51820

PACKED COLUMNS
- design for production of boron-10, 25:51720 (NUMEC-3292-20)
- dispersion coefficients in, measurement of axial, 25:51585 (ORNL-TM-3139)
- performance of countercurrent contactor, effects of axial dispersion on, 25:51585 (ORNL-TM-3139)

PAINTS
- radioinduced curing of films of, electron, 25:51503 (A/CONF.49/P-647)
- radioinduced curing of, review on electron, 25:51498

PAKISTAN
- power requirements for, prospects for dual purpose reactors for, 25:54234 (A/CONF.49/P-299)
- water requirements for, prospects of dual purpose reactors for, 25:54234 (A/CONF.49/P-299)

PALLADIUM
- analysis of fission product, for γ sources, 25:51385 (BNWL-CC-2239)
- use for producing pure hydrogen plasma, (E), 25:52836

PALLADIUM ALLOYS AND SYSTEMS
- Ce--La--Pd, structure, Kondo effect, and thermal capacity of Ce/sub x/La/sub 1-x/Pd_3, (E/T), 25:52945 (CONF-711001-(Vol.2), pp 680-91)
- Ce--Pd, electric conductivities of PdCe and Pd_3Ce at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Eu--Pd, electric conductivity of Pd_3Eu at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- La--Pd, electric conductivity of Pd_3La at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Lu--Pd, electric conductivity of Pd_3Lu at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Nd--Pd, electric conductivity of Pd_3Nd at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Pd--Pr, electric conductivity of Pd_3Pr at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Pd--Sc, electric conductivity of Pd_3Sc at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Pd--Sm, electric conductivity of Pd_3Sm at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Pd--Ti, properties of castings of, standard for, 25:52338
- Pd--Y, electric conductivity of Pd_3Y at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- Pd--Yb, electric conductivity of Pd_3Yb at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)

PALLADIUM ISOTOPES Pd-104
- neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786

PALLADIUM ISOTOPES Pd-105
- neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786

PALLADIUM ISOTOPES Pd-106
- neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786

PALLADIUM ISOTOPES Pd-108
- neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)
- neutron reactions (n,α) at 14.8 MeV, cross section for, (E), 25:53786

PALLADIUM ISOTOPES Pd-109
- energy levels and properties of, Nuclear Data Sheets for, (E), 25:53757

PALLADIUM ISOTOPES Pd-110
- neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)

PANCREAS
- scanning for function, use of selenium-75-labeled-selenomethionine with colloidal gold-198 liver image subtraction for, 25:52130 (A/CONF.49/P-631)

PAPER
- production in USSR, uses of radiometric instruments in processes for, 25:51697 (A/CONF.49/P-465)
- production of, radioisotope x-ray techniques for process and quality control in, 25:51689 (A/CONF.49/P-6)

PARTICLE TRACKS
- analysis of bubble chamber, computer program for control of scanning equipment for, 25:51890 (IFVE-SPK-70-61)
- analysis of bubble chamber, matrix methods for geometrical, 25:51899

PARTICLES
- monitoring of, methods and instruments for, 25:52049
- motion in Einstein relativistic, field equations for, 25:53335
- motion in Einstein relativistic, field equations for, 25:53334
- motion in electromagnetic, Proca, and scalar fields in general relativity theory, geodesics of affine connection for, (T), 25:53345
- motion of spinning, in gravitational fields, equations for, (T), 25:53353
- motion of spinning, outside rotating star, equations for, (T), 25:53353
- radioisotope content of airborne, in USA during 1970, 25:52056
- scattering by black cylinders in nonabsorbing media, solution of Peierl's equation for, (T), 25:53357 (IAE-1970)
- size distribution measurements of suspended, in liquid scintillators by quenching effects, 25:51928

PEACH BOTTOM POWER REACTOR, UNIT 1
- operations for June 1971, 25:53961 (DOCKET-50171-93)

PEACH BOTTOM POWER REACTOR, UNIT 2
- technical specifications for, proposed, 25:53997 (DOCKET-50277-23)

PEACH BOTTOM POWER REACTOR, UNIT 3
- technical specifications for, proposed, 25:53997 (DOCKET-50277-23)

PENTANE, 3-METHYL-
- radioinduced thermoluminescence spectra of glasses of, studies of 77°K gamma, 25:52931

2,4-PENTANEDIONE
- chelates with rare earths, infrared spectra and vibration modes of, 25:52606 (CONF-711001-(Vol.1), pp 64-72)

PEOPLE'S DEMOCRATIC REPUBLIC OF GERMANY
- nuclear power plants for, development of, 25:53924

PERCHLORIC ACID
- radiolysis of aqueous, reactions of ferric iron with hydrated electrons from γ, 25:51523
- radiolysis of frozen aqueous solutions of, isotope effects on, 25:51525
- radiolysis of frozen aqueous solutions of, LET effects on yields and distribution of free radicals from α and γ, 25:51536

PERIODONTIUM
- radiation effects on rat, comparison of local and whole-body exposure x, 25:52223

PERSONNEL
- education in nuclear technology in Latin America, summary of, 25:54336 (A/CONF.49/P-755)

XUM

  lung cancer incidence in gold mining, in South Africa during 1960 to 1967, 25:52064 (A/CONF.49/P-659)
  qualifications for research reactor, 25:54195 (ANCR-1019)
  radiation dose to accelerator, following exposure to charged particle beams, use of scintillation counting of induced activity in estimation of, 25:52073 (UCRL-20262)
  radiation dose to, in Yugoslavia during 1962 to 1967, 25:52095
  radiation monitoring of, evaluation of dosimeters for, 25:52082
  radiation protection at Italian nuclear power plants, 25:53973 (A/CONF.49/P-191)
  radiation protection of nuclear power plants, summary of Electricite de France methods for, 25:53990 (A/CONF.49/P-848)
  radiation protection programs for plutonium handling, 25:51970 (NIRS-Pu-6)
  radiation protection programs for radiochemistry laboratory, 25:52093
  radiation protection programs for, evaluation of USSR, 25:52090 (A/CONF.49/P-439)
  radiation protection programs for, in USSR, 25:52062 (A/CONF.49/P-429)
  radiation protection programs for, mining and fabricating uranium and thorium, 25:52083
  radioisotope content of, relation of half-life to monitoring of, 25:52053
  radon daughter inhalation by uranium mining, comparison of bioassay and personal air sampling methods for monitoring, 25:52068 (COO-1500-18)
  training in nuclear technology in Latin America, summary of, 25:54336 (A/CONF.49/P-755)
  training of nuclear scientist and engineer, requirements of developing countries for, 25:54033 (A/CONF.49/P-540)
  training of nuclear, program in Republic of China for, 25:54012 (A/CONF.49/P-106)
  training program for operator, for boiling power reactors, 25:53934 (A/CONF.49/P-302)
  training program for research reactor, 25:54195 (ANCR-1019)
PERTURBATION THEORY
  T-matrix for Faddeev equations in, 25:53364
PERU
  nuclear power development in, program for, 25:54041 (A/CONF.49/P-796)
PESTICIDES
  research on pollution from, joint FAO and IAEA, 25:52285 (A/CONF.49/P-772)
PETROLEUM
  resources in Australia, 25:53886 (A/CONF.49/P-135)
  resources in Australia to year 2000, 25:54014 (A/CONF.49/P-127)
PHANTOMS
  use for calibration of whole-body counters, 25:51975
PHARMACEUTICALS
  analysis of radio-, for impurities by chromatography, equipment for, 25:51396
  identification of beta-emitting, using quench analysis, 25:52135
  preparation and distribution of radioisotope-labeled, in Australia, 25:52121 (A/CONF.49/P-125)
PHARMACOLOGY
  radioisotope uses in, in West Germany, 25:52105
PHENIX FAST REACTOR
  construction of, problems during, 25:53906 (A/CONF.49/P-584)
  design parameters for, 25:53906 (A/CONF.49/P-584)
  fuel elements for, development, fabrication, and testing of, 25:54092 (A/CONF.49/P-609)
  testing program for, schedule for, 25:53906 (A/CONF.49/P-584)
PHENYL SULFOXIDE
  complexes with tetravalent thorium, effects of anions on, 25:51435
p-PHENYLENEDIAMINE, N,N,N',N'-TETRAMETHYL-
  radiolysis in polymeric solvents at 86°K, triplets and molecular ions from electron, 25:51507 (AD-722057)
PHILIPPINE RESEARCH REACTOR
  operations aspects of, review of, 25:54191 (A/CONF.49/P-787)
PHOSPHATE FERTILIZERS
  transport in soils, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
PHOSPHINE OXIDE
  properties of substituted, for separation of plutonium and uranium from nitric acid solutions, 25:51556 (A/CONF.49/P-443)
PHOSPHORIC ACID
  radiolysis of frozen aqueous solutions of, at 77°K, ESR studies and free radicals from γ, 25:51535
PHOSPHORIC ACID, BIS(2-ETHYLHEXYL) ESTER
  solvent properties for uranium from perchloric acid solutions, 25:51591
  solvent properties for uranium, effects of diluents on, 25:51600
PHOSPHORIC ACID, TRIBUTYL ESTER
  solvent properties for uranium as uranyl nitrate, 25:51580 (INR-1248)
  solvent properties for yttrium, 25:51593
PHOSPHORIC TRIAMIDE, HEXAMETHYL-
  complexes with uranyl salts, preparation and properties of, 25:51429
PHOSPHORUS
  content in radioresistant and radiosensitive yeasts, 25:52258
  cycling in brackish waters, 25:54375 (ORO-3549-7)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  sorption from soils by coconut trees, phosphorus-32 tracer study of, 25:52019 (A/CONF.49/P-748)
PHOSPHORUS CHLORIDES
  radiolysis of PCl_3 and PCl_5, ESR spectra of radicals produced in γ, 25:51514
PHOSPHORUS FLUORIDES
  radioinduced radicals at low temperatures in pure solid and xenon-matrix, ESR study of γ-, (E), 25:52914
PHOSPHORUS IONS
  implantation in silicon at 50 keV, Hall study of ionization energy of, (E), 25:52908
PHOSPHORUS ISOTOPES P-29
  energy levels from silicon-28 (d,n) reactions, lifetimes of, (E), 25:53662(R) (COO-1468-9)
PHOSPHORUS ISOTOPES P-30
  energy-level scheme from silicon-29 (p,γ) reactions, (E), 25:53608(R) (NP-18698)
PHOSPHORUS ISOTOPES P-31
  alpha reactions $(\alpha,p\gamma)$ at 9.5 MeV, gamma angular distributions and polarizations from, (E), 25:53676
  reactions of recoil, from beta decay of silicon-31 with adenosine, preparation of adenosine 2'-, 3'- and 5'-monophosphates from, 25:51540
PHOSPHORUS ISOTOPES P-32
  beta decay of, longitudinal polarization of beta particles from, (E), 25:53803
  incorporation in fertilizers for determining effects on cereal crops, 25:52014 (A/CONF.49/P-192)
  metabolism in buffalo and cattle in Egypt, effects of temperature on, 25:51986
  metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
  use as tracer to determine phosphorus sorption from soils by coconut trees, 25:52019 (A/CONF.49/P-748)
  use for labeling insecticides, 25:52278 (A/CONF.49/P-136)
  use for treatment of leukemia, lymphomas, and polycythemia, 25:52008(R) (RLO-2226-T-1-7)
PHOSPHORYL CHLORIDES
  radiolysis of, ESR spectra of radicals produced in γ, 25:51514
PHOTOCONDUCTIVITY
  conference on, third international, Stanford, Calif., Aug. 12 to 15, 1969, 25:52895
PHOTONS
  absorption by silicon-28 and sulfur-32, continuum-shell-model calculation of cross sections for total, (T), 25:53678
  book: Atomic and Molecular Radiation Physics, 25:52889
  exchange of single, for hadron production in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
  field theory for, null planes in formulation of quantum electrodynamics in, (T), 25:53312
  interactions $\gamma + d \to \gamma + d$, double dispersion relations for amplitudes of Compton, (E), 25:53094
  interactions $\gamma + d$ at 140 to 430 MeV, relativistic impulse approximation analysis of elastic, (T), 25:53064
  interactions $\gamma + d$ at high energies, review of production of rho and phi production in, (E), 25:52997
  interactions $\gamma + e \to \gamma + e$ at 1 to 3 MeV, germanium detector study of relation between energy and momentum for, (E), 25:53001
  interactions $\gamma + e \to \gamma + e$, method for derivation of low-energy theorems for Compton, (T), 25:53070
  interactions $\gamma + e$ in electromagnetic field, anti ν--ν pair production in, (T), 25:53057
  interactions $\gamma + e$, radiative corrections and polarization effects contributions to cross sections for, (T), 25:53059
  interactions $\gamma + \gamma \to$ delta, cross sections for, 25:53081
  interactions $\gamma + \gamma \to$ epsilon, cross sections for, 25:53081
  interactions $\gamma + \gamma \to$ eta, cross sections for, 25:53081
  interactions $\gamma + \gamma \to$ hadrons from $e^+ + e^-$ and $e^- + e^-$ interactions, total cross sections for, 25:53081
  interactions $\gamma + \gamma \to$ hadrons, cross sections for, 25:53052
  interactions $\gamma + \gamma \to \pi^0$, cross sections for, 25:53081
  interactions $\gamma + \gamma \to \pi^+ + \pi^-$ in $e + e \to 2e + \pi^+ + \pi^-$ and $e^+ + e^- \to e^+ + e^- + \pi^+ + \pi^-$ interactions in colliding beams, amplitudes and phases for, (T), 25:53048 (DESY-71/30)
  interactions $\gamma + \gamma \to X^0$, cross sections for, 25:53081
  interactions $\gamma + \gamma$ in $e^+ + e^-$ interactions in colliding beams, selection rules for, (E/T), 25:52990 (DESY-71/28)
  interactions $\gamma + \gamma$, asymptotic behavior of total cross sections off mass shell for, 25:53093
  interactions $\gamma + N \to \Delta(1950) \to$ rho + N, differential cross section and rho density matrix elements for,

25:53086
interactions $\gamma + N \to \Delta(2420) \to$ rho + N, differential cross section and rho density matrix elements for, 25:53086
interactions $\gamma + n \to n + \pi^0$ at 540 to 830 MeV, analysis of, (E/T), 25:53088
interactions $\gamma + n \to p + \pi^-$ at 540 to 830 MeV, analysis of, (E/T), 25:53088
interactions $\gamma + N \to \pi + N$, equivalent experimental set ups for polarization measurements in, (T), 25:53077
interactions $\gamma + N \to \pi + N$, relativistic reconstruction of amplitudes at arbitrary angles, 25:53062
interactions $\gamma + N \to \pi + N$, review of vector dominance model for π production in, (T), 25:53076
interactions $\gamma + n \to \pi^0 + n$, Regge pole absorption theory for dip structure mechanism for ratio of π^0 production in $\gamma + p \to \pi^0 + p$ interactions to π^0 production in, (T), 25:53185
interactions γ + N, Regge pole absorption theory for dip structure mechanism for meson and nucleon production in, (T), 25:53185
interactions γ + N, review of gauge invariance for amplitudes of particle production in, (T), 25:53073
interactions γ + N, review of vector dominance model for vector meson production in, (T), 25:53076
interactions γ + N, tests of vector dominance model in pseudoscalar meson production in, (E), 25:52998
interactions $\gamma + p \to K^+ + \Lambda$ at 1 and 2 GeV, KΛN coupling constant from differential cross sections for backward, (E), 25:52992 (LAL-RI-71-3)
interactions $\gamma + p \to \pi^0 + p$ at 3 GeV, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184
interactions $\gamma + p \to \pi^0 + p$, equivalent experimental set ups for polarization measurements in, (T), 25:53077
interactions $\gamma + p \to \pi^0 + p$, Regge pole absorption theory for dip structure mechanism for ratio of π^0 production in $\gamma + n \to \pi^0 + n$ interactions to π^0 production in, (T), 25:53185
interactions $\gamma + p \to \pi^0(\pi^+) + p(n)$ at high energies, review of backward, (E/T), 25:53029
interactions $\gamma + p \to$ rho + p at very high energies, integrated cross sections, angular distributions, and pionization in diffractive, (T), 25:53050 (DESY-71/36)
interactions $\gamma + p \to$ rho^0 + p, impulse approximation and vector dominance hypothesis for differential cross sections of rho^0 + p $\to$ rho^0 + p interactions relation with differential cross sections of, (T), 25:53091
interactions γ + p at 5 to 7 GeV, rho--ω interference parameters in dipion production in, (E), 25:52991 (DESY-71/37)
interactions γ + p at 7.4 GeV, rho--ω interference parameters from di-pion production in, (E), 25:53002
interactions γ + p at high energies, review of production of rho, phi, and ω in, (E), 25:52997
interactions γ + p, asymptotic behavior of total cross sections off mass shell for, 25:53093
interactions γ + p, multiperipheral production mechanism and duality for rho'(1500) production in, 25:53097
interactions of, analytic structure of amplitudes for forward Compton, 25:53055
interactions with 0^+ mesons, form factor and virtual-Compton scattering amplitude in dual resonance model for, 25:53058
interactions with field of electromagnetic wave in homogeneous magnetic field, electron pair production from, (T), 25:53083
interactions with hadrons at extremely high energies, amplitudes for diffractive inelastic, 25:53096
interactions with hadrons at high energies, vector-meson dominance for range of, (T), 25:53074
interactions with hadrons, radiative corrections and polarization effects contributions to cross sections for, (T), 25:53059
interactions with scalar charge-zero particles, review of gauge invariance for amplitudes of 2π production in, (T), 25:53073
interactions with spin-$^1/_2$ particles, helicity amplitudes for unified treatment of vector-meson and, 25:53174
reactions (γ,n) and (γ,p) with helium-4, multipole analysis using two-particle unitarity and isotopic phase shifts, 25:53525
reactions (γ,n) and (γ,p) with nuclei, method of accounting for continuous nucleon spectrum from, (T), 25:53770
reactions in liquid xenon at 35 to 2000 MeV, cross sections for e^+--e^- pair production in, (E), 25:52994
reactions with carbon and lead at 5 to 7 GeV, rho--ω interference parameters in dipion production in, (E), 25:52991 (DESY-71/37)
reactions with carbon and lead at 7.4 GeV, rho--ω interference parameters from di-pion production in, (E), 25:53002
reactions with complex nuclei at high energies, review of rho, phi, and ω production in, (E), 25:52997
reactions with helium 1^1S_0 and 2^1S_0 states, cross sections for ionization in, (T), 25:52611
reactions with helium-4 at high energies, model independent analysis for separation between exchange of natural and unnatural parity in π production in, (T), 25:53184
reactions with neon, electron rearrangement energies and times following ionization by, 25:52698
reactions with nuclear Coulomb field at 900 MeV, angular distribution of electron pairs from, (E), 25:53000
reactions with nuclei at high energies, vector dominance model for asymmetry in π^+ production in, (T), 25:53075
reactions with nuclei, multiperipheral production mechanism and duality for rho'(1500) production in, 25:53097
reactions with nuclei, review of vector dominance model for vector meson production in, (T), 25:53076
reactions with nuclei, review of vector dominance model for total cross sections for particle production in, (T), 25:53076
reactions with spin-0 nuclei, determination of spin and parity of $X^0(960)$ from, (T), 25:53063

PHYSICS
research at Chalk River October 1 to December 31, 1970, 25:53729(R) (AECL-3865)

PHYTOHEMAGGLUTININ
effects on development of virus-induced leukemia, 25:52008(R) (RLO-2226-T-1-7)
effects on transformation of lymphocytes following treatment with D_2O and x radiation, 25:52008(R) (RLO-2226-T-1-7)
effects on x-irradiated lymphocytes, 25:52178(R) (RLO-2226-T-1-6)
mitogenic action of, studies on mechanism of, 25:52178(R) (RLO-2226-T-1-6)
molecular structure of, 25:52008(R) (RLO-2226-T-1-7)
molecular structure of, effects of proteolytic enzymes on, 25:52178(R) (RLO-2226-T-1-6)

PICKERING POWER REACTOR, UNIT 1
completion schedule for, 25:53883 (70-CNA-630)
operation of, review of, 25:53928 (A/CONF.49/P-148)
status during 1969--1970, summary of, 25:53879(R) (70-CNA-618)

PICKERING POWER REACTOR, UNIT 2
completion schedule for, 25:53883 (70-CNA-630)
status during 1969--1970, summary of, 25:53879(R) (70-CNA-618)

PINCH DEVICES
ion energy distribution measurements in conical theta-, effect of analyzing slit dimension on, 25:52784
plasma diagnostics in theta-, using 10.6 μ interferometry, 25:52782 (IPP-1/117)
plasma diagnostics in theta-, using image-converter camera, 25:52789
plasma radial motion in theta, simulation of, 25:52815 (IPPJ-DT-23)
plasma thermal equilibrium in theta-, Balmer line intensities for, (E), 25:52807

4-PIPERIDONE, 2,2,6,6-TETRAMETHYL-, N-OXIDE
radioinduced complexing with DNA, binding energy and reaction kinetics for electron, 25:51994
radioinduced complexing with lysozyme, binding energy and reaction kinetics for electron, 25:51993

PIPES
thermal ratchetting in, 25:54311

PITUITARY GLAND
radiation effects on function of rat, x, 25:52194

PLACENTA
cesium-137 content of human, in relation to content of tobacco products, 25:52046 (UUIP-739)

PLANETARY NEBULAE
electron density and temperature in NGC 6826, (E), 25:52513
element abundances in 13, (E), 25:52514
infrared emission from young dust-filled, (T), 25:52515
models for young dust-filled, (T), 25:52515
spectral line intensities in NGC 7027, (E), 25:52525
spectroscopic data for NGC 6826, (E), 25:52513

PLANKTON
radioisotope content of seawater, from fallout and waste disposal, (E), 25:51649 (A/CONF.49/P-457)

PLANTS
fission product uptake and cycling in agricultural, 25:52044 (A/CONF.49/P-686)
interactions with soil, tracer studies of, 25:52279 (A/CONF.49/P-162)
radiation effects on growth of agricultural, following contamination with mixtures of fresh fission products, effects of radiation dose and stage of maturity on, 25:52044 (A/CONF.49/P-686)
radioinduced mutations in agricultural, for increased productivity, 25:51962 (A/CONF.49/P-694)
radioinduced mutations in agriculturally important, in Poland, 25:52015 (A/CONF.49/P-329)
radioinduced mutations in crop, in India for improved quality and yield, 25:52017 (A/CONF.49/P-537)
radioinduced mutations in, agricultural, 25:52020 (A/CONF.49/P-844)
radioisotope content of Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
radioisotope content of woody, 25:52011 (A/CONF.49/P-685)
radiosensitivity of agriculturally important, in Poland, 25:52015 (A/CONF.49/P-329)
research on metabolism and nutrition of agricultural, use of tracer techniques in Ukrainian SSR in, 25:51962 (A/CONF.49/P-694)
tracer studies of calcium, sulfur, and zinc utilization

by, in relation to soil transport, 25:52017 (A/CONF.49/P-537)

PLANTS (INDUSTRIAL)

safeguards systems for Japanese fuel fabrication, development of automated, 25:51746 (A/CONF.49/P-265)

safeguards systems for, mathematical model for evaluating efficiency of, 25:51844

PLASMA

atomic energy levels in, theory of critical screening radius for, (T), 25:52818

bibliography on, 25:52767

bibliography on, 25:52766

bibliography on plasma physics and fusion reactors, 25:52769

bibliography on plasma physics and fusion reactors, 25:52768

book: Fundamentals of Gaseous Ionization and Plasma Electronics, 25:52794

charged-particle motion in homogeneous magnetized, shell structure from, (T), 25:52816 (UUIP-724)

collisions in, effects on ion acoustic wave growth in, (T), 25:52883

conductivity of collisionless, asymptotic solution of anomalous, (T), 25:52820

confinement by high-frequency electromagnetic fields in closed magnetic configurations, (T), 25:52779

confinement in mirrors with ion cyclotron instabilities, density effects on, (T), 25:52776

confinement in TOR-1, effects of collision frequency on, 25:52772 (NP-18973)

diagnostics by broadening of spectral lines in inhomogeneous interatomic electric fields, 25:52788

diagnostics in Tokamak T-3a, using lasers and microwaves, (E), 25:52786

diagnostics of argon arcs, spectroscopic, 25:52781 (AD-720856)

diagnostics of low-pressure mixtures of, using electromagnetic wave scattering, 25:52791(P)

diagnostics of theta-pinch, effect of slit dimension on ion energy distribution, 25:52784

diagnostics of theta-pinch, using image-converter camera, 25:52789

diagnostics of theta-pinch, using side-on interferometry at 10.6 μ, 25:52782 (IPP-1/117)

diagnostics of, nonisothermal theory of electrostatic probe for, (T), 25:52790

diagnostics of, using remote scanning spectrometers, 25:52783

diagnostics using carbon dioxide lasers, in TP--D machine, (E), 25:52792

diagnostics using direct display system, electron energy distribution, (E), 25:52787

diffusion in axially decaying magnetized, in presence of oscillations, (T), 25:52774

diffusion of cesium in magnetic fields, density profiles in, (E/T), 25:52824

diffusion of equilibrium toroidal, at intermediate and higher collision frequencies, 25:52778

diffusion of low-beta axisymmetric toroidal, properties of, (T), 25:52777

diffusion of strongly ionized thermal cesium, in magnetic fields, (E/T), 25:52797

electric discharges in air, simulation of spark, (T), 25:52826

electric discharges in, propagation of microwave, (E/T), 25:52798

electron beam interactions with oscillations in homogeneous, (T), 25:52827

electron beam interactions with, excitation of nonlinear waves in, (T), 25:52872

electron beam interactions with, fine structure of distribution function for, (E), 25:52811

electron beam interactions with, response to relativistic, (T), 25:52823

electron cloud dispersion in collisionless, quasi-neutral inhomogeneity in, (T), 25:52819

electron collisions with beryllium-like ions in, excitation-rate coefficients for, (E), 25:52804

electron density inhomogeneities in, effect of initial conditions on, (T), 25:52821

equation of state for dense, application to white dwarfs and metallic hydrogen, (T), 25:52498 (UCRL-51055)

equilibrium in pinch discharges, lack of partial thermal, (E), 25:52807

heating by magneto-acoustic resonance, nonlinear processes in, (T), 25:52773

heating by two hf electromagnetic waves beating near cyclotron frequency, (T), 25:52780

heating in Tokamak TM-3, turbulent, (T), 25:52775

heating using transverse current, turbulence in, 25:52771 (KHFTI-70-62)

interactions with axially symmetric magnetic fields, (E/T), 25:52793 (KHFTI-70-50)

ion beam interactions with, ion cyclotron instabilities from, (E), 25:52840 (IAE-2044)

ion beam interactions with, low-frequency oscillations from, (E), 25:52812

kinetic equation for single-particle distribution function for, 25:52984

kinetic theory in weakly inhomogeneous magnetic fields, for arbitrary collision frequency, 25:52830

kinetic theory of turbulent, propagators for, 25:52828

kinetic theory of, quantum-mechanical, 25:52814 (AD-718436)

kinetics of laser-produced carbon, (E), 25:52809

laser beam scattering on, enhanced signals from, (E), 25:52878

motion in theta pinches, simulation of radial, 25:52815 (IPPJ-DT-23)

oscillations in negative hydrogen ion-rich reflex discharges, low-frequency, (E), 25:52881

oscillations in, effect of electromagnetic wave field on longitudinal, (T), 25:52862 (KHFTI-70/58)

production by carbon dioxide laser irradiation of solid hydrogen targets, (E), 25:52833 (IPP-IV-16)

production by magnetic induction at low frequencies, (E/T), 25:52835

production by molecular ion injection into magnetic mirrors with supplementary rf electric fields, (E), 25:52838

production in confined-discharge generators, effects of local fluid constriction on, (E), 25:52837

production in glow discharges, diagnostic studies in, 25:52834 (N-71-22676)

production in magnetic mirrors at cyclotron frequencies, (E), 25:52831(R) (AD-720847)

production of pure hydrogen, palladium and titaniu sources for pure hydrogen, (E), 25:52836

radiations from beam--plasma system, measurement of x, 25:52806

radiations from positive column near electron cyclotron harmonics, single-particle, (E/T), 25:52802

radiations from, electron bremsstrahiung in field of argon and helium atoms, (E/T), 25:52810

research at Commissariat a l'Energie Atomique, 25:52765 (A/CONF.49/P-813)

research at Kharkov Physico-Technical Institute, 25:52770

research in Federal Republic of Germany, 25:52763. (A/CONF.49/P-377)

research in United Kingdom, review of, 25:52845 (A/CONF.49/P-488)

research in USSR, 25:52764 (A/CONF.49/P-441)

sheath formation near conducting walls, (T), 25:52817

shock wave in current-carrying, electromagnetic, 25:52805

shock wave propagation in hydrogen and deuterium, strongly ionizing, (E), 25:52839

shock wave propagation in, structure of magnetohydrodynamic, (E), 25:52803

shock waves in, isomagnetic discontinuity in collisionless, (E/T), 25:52799

simulation in pinch devices, computer program for, 25:52815 (IPPJ-DT-23)

simulation of Bernstein modes in two-dimensional, computer, (T), 25:52884

simulation of relativistic streaming instabilities in, one-dimensional, (T), 25:52844

simulation using finite-size particles, (E/T), 25:52825

sound velocity in weakly ionized argon, anomalous, (E), 25:52879

spectra of turbulent, mode coupling and energy cascading in, (E), 25:52813

spectra of, remote scanning spectrometer for electron temperature determination, 25:52783

stability in collisionless shocks, nonlocal behavior of ion acoustic, (T), 25:52843

stability in Tokamak devices, nature of large-scale, (E), 25:52841

stability of drift waves in sheared fields, eikonal equations for, 25:52869

stability of ion beam-produced, ion cyclotron, (E), 25:52840 (IAE-2044)

stability of, nonlocal theory for trapped-particle in toroidal systems, (T), 25:52842

stability of, one-dimensional simulation of relativistic streaming, (T), 25:52844

thermonuclear reaction waves in solid deuterium--tritium, (T), 25:52847 (AD-720839)

wave absorption by dense argon, resonant magneto-acoustic, (E/T), 25:52866

wave broadening in, high-amplitude monochromatic cyclotron, (T), 25:52871

wave coupling in hollow cathode in longitudinal magnetic field, ion and electron, (E), 25:52868

wave echoes in inhomogeneous magnetic fields, E--H cyclotron, (T), 25:52870

wave excitation in beam--plasma system, nonlinear,.(T), 25:52872

wave growth in, electron--ion collisional effects on ion acoustic, (T), 25:52883

wave instabilities in sheared fields, eikonal equations for drift-, 25:52869

wave interactions in magnetized, nonlinear electromagnetic, (T), 25:52882

wave interactions with electron, stochastic kinetic theory of strong electromagnetic, 25:52874

wave interactions with hf electric fields in, ion, (T), 25:52867

wave interactions with, negative Faraday rotation in, (E), 25:52865

wave propagation along layer of magnetized, effect of hf potential on, (T), 25:52861 (KHFTI-70/57)

  wave propagation and damping in hot bounded, (T), 25:52863 (ORO-3778-6)
  wave propagation in cold cylindrical, dispersion of ion cyclotron, (T), 25:52880
  wave propagation in cold, nonlinear effects from two transverse monochromatic, (T), 25:52885
  wave propagation in collisionless, large-amplitude whistler and weak electrostatic, (T), 25:52864(R) (SIT-3785-16)
  wave propagation in nonlinear media, instability of fixed-phase beam of transverse, (T), 25:52877
  wave propagation in rarefied, overturning of, (T), 25:52873
  wave propagation in two-dimensional, Bernstein mode, (T), 25:52884
  wave propagation in warm inhomogeneous, linear conversion of oblique, (T), 25:52886
  wave propagation in, anisotropic instabilities of hydromagnetic, (T), 25:52875
  wave propagation in, resonant frequencies and dispersion relation calculations for, 25:52858 (AD-719799)
  wave propagation through conducting slab, electromagnetic, (T), 25:52876
  wave transformation into longitudinal oscillations in inhomogeneous, near ideally conducting surface, (T), 25:52859 (KHFTI-70/54)
  wave transformation into longitudinal oscillations in waveguides, surface, (T), 25:52860 (KHFTI-70/55)
PLASMA ACCELERATORS
  design using magnetic field annihilation, 25:52832 (AD-721214)
  neutron and x-ray emission from dense focus, time correlations of, 25:52855
  neutron enhancement from dense focus, by electron beam interactions, (E), 25:52857
  neutron production mechanism in dense focus, (E), 25:52856
PLASMA JETS
  diagnostics in boundary layers, electron density and temperature, (E), 25:52785
  interactions with axially symmetric magnetic fields, (E/T), 25:52793 (KHFTI-70-50)
  kinetic theory of, self-consistent relativistic beam equilibria in, (T), 25:52829
  luminescence of high-frequency argon, at reduced pressure in relation to gas consumption, (E), 25:52808
  motion in cross-flow arcs, transverse magnetic field effects on, (E), 25:52795
  production and heating by magnetic field annihilation, 25:52832 (AD-721214)
  shock wave structure in continuous supersonic wind tunnels, (E/T), 25:52801
  stability in arc discharges, neutral drag, (E/T), 25:52800
PLASTIC DEFORMATION
  effects on magnetic properties, review, 25:52967
PLASTICS
  cure testing of molded, 25:51584(R) (MLM-1792)
  properties of mineral fiber-reinforced, as radiation shielding materials for structure and vehicles, 25:52494(P)
  plastics--wood, radioinduced production of, properties of products of electron, 25:51503 (A/CONF.49/P-647)
PLATES
  jet force effects on, displacement and strain in, (E), 25:54304
PLATINUM
  analysis for trace amounts of osmium and ruthenium by neutron activation and radiochemical separation, 25:51409 (IS-T-458)
  proton elastic scattering at 5 MeV, search for Mott-Schwinger polarization in, (E), 25:53790
PLATINUM ISOTOPES
  prepartion of carrier-free radioactive, by electrolytic precipitation, 25:51539
PLATINUM ISOTOPES Pt-195
  energy levels at 99 and 130 keV, Moessbauer hfs measurements of nuclear magnetic moments and charge radii of, (E), 25:53808
PLATYHELMINTHES
  Echinococcus granulosis, use of x-irradiated, for immunization of dogs, 25:52007 (A/CONF.49/P-355)
  Fasciola hepatica, use of irradiated metacercariae of, for immunization of sheep, 25:52007 (A/CONF.49/P-355)
PLOWSHARE PROJECT
  airblast from Project Trinidad in, from single one-ton surface, near surface, and buried chemical explosions, 25:51723 (SC-RR-710056)
  natural gas from Project Wagon Wheel in, predictions for quality and radioactivity of, 25:51663 (UCRL-51067)
  natural gas production stimulation in, evaluation of Projects Gasbuggy and Rulison experience with, 25:51664 (UCRL-72769(Rev.1))
  natural gas production stimulation in, history of Project Rulison, 25:51660 (CONF-710428-, Paper 2)
PLUTONIUM
  abundance of hexavalent and pentavalent, in dilute acid solutions, 25:51584(R) (MLM-1792)
  bibliography on, July 1971, 25:52291
  bibliography on, June 1971, 25:52292
  determination by passive γ spectroscopy, interferences in, 25:51386 (CONF-710617-15)
  determination in soil by fusion method and α counting, 25:51584(R) (MLM-1792)
  distribution in plutonium oxide--uranium oxide fuel, effects of composition and thermal gradients on, 25:52463
  fabrication of fuel elements containing, for fast breeder reactors, economics of, 25:52423 (A/CONF.49/P-274)
  magnetic susceptibilities of tetravalent, in cesium plutonium chloride, tetraethylammonium plutonium chloride, and tetramethylammonium plutonium chloride, 25:51434
  metabolism in man and rats following inhalation, ingestion, or wound intake, 25:51970 (NIRS-Pu-6)
  metabolism of monomeric and polymeric, in mice and rabbits, review on, 25:51969 (CONF-711001-(Vol.2), pp 551-9)
  production by reprocessing of spent fuel by Purex process, 25:51588
  production for nuclear industry in Federal Republic of Germany, 25:51552 (A/CONF.49/P-378)
  radiation effects on electric conductivity of alpha-fission-fragment, 25:52901(T) (JPRS-53800, pp 62-71)
  recycle demonstration program for, research progress on, 25:54102(R) (WCAP-4167-1)
  recycle in pressurized water reactors, power distribution and depletion calculations for, 25:54103 (WCAP-4167-1, pp 3.1-30)
  recycle in water cooled power reactors, development in Belgium of program for, 25:54128 (A/CONF.49/P-277)
  separation from nitric acid solutions by solvent extraction using mono- and bifunctional phosphine oxides, 25:51556 (A/CONF.49/P-443)
  separation of americium from, by ion exchange, 25:51395
  utilization in pressurized water reactor fuels, (E/T), 25:54101(R) (WCAP-3385-28)
  utilization in thermal and fast reactor fuels, physics and economics of, 25:54126 (A/CONF.49/P-185)
PLUTONIUM ALLOYS AND SYSTEMS
  Al--Pu-base, radiation effects on electric conductivity of delta-, fission-fragment, 25:52901(T) (JPRS-53800, pp 62-71)
  Ce-base--Pu--Y, Kondo effect in dhcp, 25:52951
  Cu--Pu, phase studies of, relations with growth kinetics and formation mechanism, 25:52381
  Ga--Pu-base, electric conductivity of solid solutions of delta-phase, at 5 to 300°K, 25:52965
  Ga--Pu-base, phase diagram of, effects of pressure on, 25:52382
  Ga--Pu-base, phase transformations of, at 5 to 300°K, effects of concentration on, 25:52965
PLUTONIUM CARBIDES
  production and properties of fuels of, 25:52468 (A/CONF.49/P-454)
  PuC--UC, preparation of fuel particles of, by carbothermic reduction of sol-gel oxides, 25:52419 (A/CONF.49/P-119)
  PuC--UC, radiation effects on fuels of, relations of linear power and temperature with fast neutron, 25:52472 (EUR-4347)
PLUTONIUM CARBONITRIDES
  PuCN--UCN, radiation effects on fuels of, relations of linear power and temperature with fast neutron, 25:52472 (EUR-4347)
  PuCN--UCN, radiation effects on fuels of, relations of linear power and temperature with fast neutron, 25:52472 (EUR-4347)
PLUTONIUM FLUORIDES
  solubility in beryllium fluoride--lithium fluoride--thorium fluoride salt mixtures, (E), 25:54100(R) (NP-18956)
  solubility in beryllium fluoride--lithium fluoride--thorium fluoride salt mixtures, (E), 25:54099(R) (NP-18955)
PLUTONIUM ISOTOPES
  determination in fissionable materials, development of gamma-ray and neutron methods for, 25:51768 (LA-DC-12295)
PLUTONIUM ISOTOPES Pu-235
  electron-capture decay of, branching ratio, decay energies, and half-life for, (E), 25:53746 (KFK-1393)
PLUTONIUM ISOTOPES Pu-236
  determination in plutonium dioxide in presence of plutonium-238, direct and indirect radiometric methods for, 25:51402
PLUTONIUM ISOTOPES Pu-238
  content of airborne particulates in USA during 1970, 25:52056
  effects on determination of plutonium-236 in plutonium dioxide by direct and indirect radiometric methods, 25:51402
  fission half-life of, spontaneous, 25:51584(R) (MLM-1792)
  production and uses in France, programs for, 25:51703 (A/CONF.49/P-637)
  shipping of large quantities of, design and performance of Universal Source container for, 25:51823
  shipping of large quantities of, design and testing criteria for containers for, 25:51822
PLUTONIUM ISOTOPES Pu-239
  content of airborne particulates in USA during 1970, 25:52056

XUM

determination following separation from liquid wastes by solvent extraction and reversed phase chromatography, 25:51383 (A/CONF.49/P-451)
distribution in rat tissues following inhalation, ingestion, or skin puncture, whole-body autoradiography of, 25:51570 (NIRS-Pu-6)
neutron fission at 17 keV to 1 MeV, absolute cross section for, (E), 25:53733 (CONF-701002-, pp 257-71)
neutron fission at 50 keV to 7.2 MeV, analysis for nucleon pairing effects in, (E), 25:53796
neutron fission at low energies, precise cross section for, 25:53731 (CONF-701002-, pp 221-45)
neutron fission cross section for, evaluation of ENDF/B data for, (E/T), 25:54060(R) (AI-AEC-13005)
neutron fission rate in ECEL core 20, effects of axial position on, (E), 25:54060(R) (AI-AEC-13005)
neutron reactions at 0.1 to 30 keV, strength functions for, 25:53798

PLUTONIUM ISOTOPES Pu-241
neutron fission at 17 keV to 1 MeV, absolute cross section for, (E), 25:53733 (CONF-701002-, pp 257-71)

PLUTONIUM ISOTOPES Pu-242
neon-22-ion bombardment of, thermochromatographic separation of element-104 from products of, 25:51581 (JINR-D12-5845)

PLUTONIUM NITRATES
$Pu(NO_3)_4$--$UO_2(NO_3)_2$, processing at West Valley, proposed change in technical specifications for, 25:51575 (DOCKET-50201-82)

PLUTONIUM NITRIDES
production and properties of fuels of, 25:52468 (A/CONF.49/P-454)
PuN--UN, radiation effects on fuels of, relations of temperature and linear power with fast neutron, 25:52472 (EUR-4347)

PLUTONIUM OXIDES PuO_2
analysis for plutonium-236 in presence of plutonium-238, direct and indirect radiometric methods for, 25:51402
compatibility with refractory metal and alloy fuel capsules at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
gas generation and swelling in reactor fuel of, mechanisms of, 25:52474(T) (JPRS-53800, pp 196-204)
grain shielding factor calculations for particles in graphite matrix, 25:53494
radioinduced porosity in sintered, electron microscopic study of, 25:52473(T) (JPRS-53800, pp 188-95)
BeO--PuO_2--ThO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
BeO--PuO_2--ThO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
BeO--PuO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
fabrication of fuel rods of, design of development laboratory for, 25:51784
Mo--PuO_2, compatibility with refractory metal-lined fuel capsules at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
Mo--PuO_2--ThO_2, compatibility with refractory metal-lined fuel capsules at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
PuO_2--ThO_2, radiation effects on fuel pellets of, review of in-pile, 25:54082 (A/CONF.49/P-158)
PuO_2--UO_2, analysis of irradiated stainless steel-clad, shielded electron probe microanalyzer for, 25:51379
PuO_2--UO_2, development of stainless steel clad fuel elements of, 25:54096(R) (GEAP-10028-38)
PuO_2--UO_2, enthalpy at 2348 to 3041°K, 25:52318(R) (ANL-7820)
PuO_2--UO_2, fabrication and properties of pellets of, specifications for, 25:52429 (WCAP-4167-1, pp E.1-6)
PuO_2--UO_2, fabrication of fuel rods of, Westinghouse Plutonium Fuels Development Laboratory for, 25:51675 (WCAP-4167-1, pp 5.1-58)
PuO_2--UO_2, heat transfer in Zircaloy-4 clad rods of, 25:54104 (WCAP-4167-1, pp 4.1-35)
PuO_2--UO_2, melting point of, differential thermal analysis equipment for determination of, 25:51672 (LA-DC-12753)
PuO_2--UO_2, performance of reactor fuels of, 25:54094 (A/CONF.49/P-821)
PuO_2--UO_2, plutonium distribution in, effects of composition and thermal gradients on, 25:52463
PuO_2--UO_2, preparation of microspheres of, 25:52432(P)
PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 25:54096(R) (GEAP-10028-38)
PuO_2--UO_2, radiation effects on fuel pellets of, review of in-pile, 25:54082 (A/CONF.49/P-158)
PuO_2--UO_2, radiation effects on, fast neutron, 25:54092 (A/CONF.49/P-609)
PuO_2--UO_2, radiation effects testing of fuels of, 25:54096(R) (GEAP-10028-38)
PuO_2--UO_2, reactivity worth of, effects of plutonium oxide (PuO_2) particle size on, (E/T), 25:54287 (BNWL-1608)
PuO_2--UO_2, reprocessing of irradiated, fluorination method for, 25:51557 (A/CONF.49/P-448)
PuO_2--UO_2, stoichiometry of irradiated, lattice constant measurement method for determination of, 25:52461
PuO_2--UO_2, thermal conductivity of high burnup, measurement of 1200°C to melting, (E), 25:54288 (GEAP-13703)
PuO_2--UO_2, uranium distribution in, effects of composition and thermal gradients on, 25:52463
PuO_2--UO_2-base, radioinduced porosity in sintered, electron microscopic study of, 25:52473(T) (JPRS-53800, pp 188-95)

PLUTONIUM PHOSPHIDES
production and properties of fuels of, 25:52468 (A/CONF.49/P-454)

PLUTONIUM SULFATES
stability of tetrahydrate of, 10-yr evaluation of, 25:51546

PLUTONIUM SULFIDES
production and properties of fuels of, 25:52468 (A/CONF.49/P-454)

PNEUMATIC SYSTEMS
design for transfer of californium-252 neutron sources at TRU and TURF, 25:51792
design of tube-type, for transfer of radioactive samples, 25:51793

POINT BEACH POWER REACTOR, UNIT 1
protection system for, improper startup trip setpoints for, 25:53966 (DOCKET-50266-54)

POLAND
nuclear physics education and training programs in, 25:54024 (A/CONF.49/P-333)
nuclear physics research programs with Norway, Yugoslavia, IAEA, and, description of joint, 25:54261 (A/CONF.49/P-330)
nuclear power plants for, economics for development of, 25:53936 (A/CONF.49/P-338)
radioisotope uses in, 25:51710 (A/CONF.49/P-831)
radioisotope uses in geophysics, hydrology, and mining in, 25:51693 (A/CONF.49/P-334)

POLARIMETERS
performance of silicon, for proton scattering studies, 25:53710

POLONIUM ISOTOPES Po-210
determination in tobacco by α counting, 25:51397
determination in water and biological materials by liquid scintillation spectrometry, 25:51620
effects on dogs, tumorigenic, 25:52211
energy levels from bismuth-209 (α,t) reactions, suggested spin--parity assignments and proton configurations for, (E), 25:53759
production of, iron and tin contamination in, 25:51584(R) (MLM-1792)

POLYMERS
radiation effects on viscous, relatively low-molecular-weight, preparation of highly radiation-sensitive telomerized polyesters by, 25:51497(P)
strength of, review of, 25:52967

POLYOXYMETHYLENE
radioinduced polymerization of tetraoxymethylene single crystal, properties of polymer crystal from γ, 25:51496

POPULATIONS
radiation dose to world-wide human, during 1970, 25:52067 (A/CONF.49/P-851)
radiation effects on Kerala coast region, India, high-level natural background, 25:52230 (A/CONF.49/P-535)

PORTLAND CEMENTS
production of, economics of dual purpose reactors for, 25:54244

PORTUGAL
nuclear power plant integration with hydro capacity of, economics of, 25:53943 (A/CONF.49/P-519)
radiation protection programs during 1965 through 1970, 25:52091 (A/CONF.49/P-523)
uranium processing and resources for nuclear industry in, 25:51561 (A/CONF.49/P-522)

POSITRONIUM
decay of, test of charge conjugation conservation in, (T), 25:53241 (AD-720854)

POSITRONS
binding to hydrogen atoms, impossibility of, (T), 25:52628
interactions $e^+ + e^- \to e^+ + e^- + e^+ + e^- + e^+ + e^-$ at 1 to 10 GeV, cross sections for, 25:53052
interactions $e^+ + e^- \to e^+ + e^- + e^+ + e^-$ at 1 to 10 GeV, cross sections for, 25:53052
interactions $e^+ + e^- \to e^+ + e^- + \gamma$, hard bremsstrahlung in, 25:53068
interactions $e^+ + e^- \to e^+ + e^-$ + hadrons, total cross sections for $\gamma + \gamma \to$ hadrons interactions from, 25:53081
interactions $e^+ + e^- \to e^+ + e^- + \mu^+ + \mu^-$ at 1 to 10 GeV, cross sections for, 25:53052
interactions $e^+ + e^- \to e^+ + e^- + \pi^+(K^+) + \pi^-(K^-)$ in colliding beams, π and K pair production and amplitudes and phases for $\gamma + \gamma \to \pi^+ + \pi^-$ interactions in, (T), 25:53048 (DESY-71/30)
interactions $e^+ + e^- \to e^+(e^-) + e^-(e^+)$ and $e^+ + e^- \to \mu^+(\mu^-) + \mu^-(\mu^+)$, test of crossing symmetry in quantum electrodynamics from, 25:53004
interactions $e^+ + e^- \to p$ + anti p in renormalizable theory of weak interactions, total cross sections for, (T), 25:53060
interactions $e^+ + e^- \to \pi^+ + \pi^-$ in renormalizable theory of weak interactions, total cross sections for, (T), 25:53060
interactions $e^+ + e^- \to \pi^+ + \pi^-$, upper and lower bounds on π form factor from, 25:53069
interactions $e^+ + e^- \to$ rho + f, test of tensor-meson

  dominance in, 25:53065
  interactions $e^+ + e^-$ → $X^0(960)$ + rho$^0(\gamma)$ in colliding beams, determination of spin and parity of $X^0(960)$ from, (T), 25:53063
  interactions $e^+ + e^-$ at 0 to 500 MeV at large angles in colliding beams, test and cut-off of quantum electrodynamics from cross sections and luminosity of Bhabha, (E), 25:53296
  interactions $e^+ + e^-$ at 800 to 1000 MeV in colliding beams, status report on, (E), 25:52996
  interactions $e^+ + e^-$ in colliding beams, baryons, antibaryon, meson, single hadron, and multiple particle production and total cross sections for, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, hadron production through single photon exchange and electron exchange in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, pair production and bremsstrahlung on nuclei in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, pair production and bremsstrahlung on nuclei in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, selection rules for $\gamma + \gamma$ interactions in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, tests of quantum electrodynamics in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$ in colliding beams, weak interactions in, (E/T), 25:52990 (DESY-71/28)
  interactions $e^+ + e^-$, hard bremsstrahlung contribution to total production cross section for, 25:53068
  interactions $e^+ + e^-$, in colliding beams, spinless boson pair production in, (T), 25:53048 (DESY-71/30)
  production of e^+--e^- pairs in photon reactions in liquid xenon at 35 to 2000 MeV, cross sections for, 25:52994
  scattering from potassium halide single crystals, channeling and temperature effects on back-, 25:52916
POTASH
  production of, economics of dual purpose reactors for, 25:54244
POTASSIUM
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  content of milk in relation to strontium-90, statistical analysis of, 25:52059
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
POTASSIUM ALUMINUM SULFATES
  performance as polarized proton targets, 25:53477
POTASSIUM AMIDES
  reactions with ytterbium(II) iodide in liquid ammonia, potentiometric titration studies of, 25:51423 (CONF-711001-(Vol.1), pp 315-21)
POTASSIUM AZIDES
  radiation effects on, hyperfine coupling and zero-field splitting for nitrogen atoms from γ, 25:51486
POTASSIUM BORATES
  radioinduced intrinsic defect center in glasses of, ESR studies of low-temperature x-, 25:52928
POTASSIUM BROMIDES
  electron/positron backscattering from single crystals of, channeling and temperature effects on, 25:52916
  radioinduced luminescence in europium-activated, electron-capture levels from x-, (E), 25:52923
  radioinduced V centers in single crystals of, effects of plastic deformation on 2-MeV electron, 25:52911
POTASSIUM CHLORIDES
  electron/positron backscattering from single crystals of, channeling and temperature effects on, 25:52916
  paraelectric resonance of lithium-doped, effects of stress on, 25:54369 (NYO-2150-76)
  production of, economics of dual purpose reactors for, 25:54244
  radiation effects on thermal conductivity of crystals of, γ, (E/T), 25:52904
  radioinduced hardening of crystals of, effects of strontium ions on x-, 25:52924
  radioinduced luminescence in europium-activated, electron-capture levels from x-, (E), 25:52923
  radioinduced V centers in single crystals of, effects of plastic deformation on 2-MeV electron, 25:52911
  shear stress of crystals of, effects of strontium ion content on critical resolved, 25:52925
POTASSIUM CHROMATES
  radiation effects on, effects of oxygen on isothermal and isochronal annealing reactions of chromium-51 recoils from neutron, 25:51541
POTASSIUM CYANOMOLYBDATES
  reactions with uranyl nitrates, conductometric and spectral studies on composition and stability of uranyl molybdocyanide ion produced by, 25:51436
POTASSIUM FLUORIDES
  sorptive properties of solid, for uranium hexafluoride in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene, kinetics of, 25:51465 (A/CONF.49/P-546)
POTASSIUM HYDROXIDES
  radiolysis of frozen aqueous solutions of, LET effects on yields and distribution of free radicals from α and γ, 25:51536
POTASSIUM IODATES
  radiation effects on trivalent chromium-51-doped, conversion to chromate(VI) by uv or γ, 25:51488
POTASSIUM IODIDES
  positron backscattering from single crystals of, channeling and temperature effects on, 25:52916
  radioinduced luminescence in europium-activated, electron-capture levels from x-, (E), 25:52923
POTASSIUM IONS
  electron reactions with, semiclassical calculation of cross sections for double ionization in, 25:52663
  reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675
POTASSIUM ISOTOPES K-40
  metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
POTASSIUM ISOTOPES K-42
  content of man, whole-body counting of, 25:51975
POTASSIUM NEPTUNATES
  preparation and properties of K_3NpO_5, 25:51431
POTASSIUM NITRATES
  radiation effects on trivalent chromium-51-doped, conversion to chromate(VI) by uv or γ, 25:51488
POTASSIUM SULFATES
  radiation effects on trivalent chromium-51-doped, conversion to chromate(VI) by uv or γ, 25:51488
POWDERS
  particle size distribution in suspensions of, photosedimentation method for measurement of, 25:52354
POWER BURST FACILITY
  personnel for, training and qualification program for, 25:54195 (ANCR-1019)
PRAIRIE ISLAND POWER REACTOR, UNIT 1
  effluents from, effects on environment of radioactive and thermal, 25:53998 (DOCKET-50282-39)
  site for, environmental radiation survey during June to December 1970, 25:53998 (DOCKET-50282-39)
PRAIRIE ISLAND POWER REACTOR, UNIT 2
  effluents from, effects on environment of radioactive and thermal, 25:53998 (DOCKET-50282-39)
  site for, environmental radiation survey during June to December 1970, 25:53998 (DOCKET-50282-39)
PRASEODYMIUM
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  neutron reactions at 1.00 to 18.022 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
  radiolysis of aqueous solutions of, formation and reactions of tetravalent ions in electron pulse, 25:51508 (CONF-711001-(Vol.2), pp 560-72)
PRASEODYMIUM ALLOYS AND SYSTEMS
  Co--Fe--Pr, lattice constants for Pr_2(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Co--Pr, crystal structure of Pr_2Co_{17}, 25:52372 (CONF-711001-(Vol.1), pp 96-101)
  Co--Pr, magnetic properties of $PrCo_5$ magnets sintered with samarium--cobalt aid, 25:52939 (CONF-711001-(Vol.1), pp 252-60)
  Pd--Pr, electric conductivity of Pd_3Pr at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
PRASEODYMIUM BORIDES
  nonstoichiometry of PrB_6, (E/T), 25:52453 (CONF-711001-(Vol.2), pp 598-609)
PRASEODYMIUM OXIDES
  crystal growth and structure of higher, 25:51467 (CONF-711001-(Vol.1), pp 84-95)
  phase transformation of thin films of, by heating in electron microscope, 25:52456 (CONF-711001-(Vol.2), pp 777-85)
  PrO--ZrO_2, phase relations in, effects of oxygen pressure on, 25:52454 (CONF-711001-(Vol.2), pp 631-7)
PREAMPLIFIERS
  design and performance of current pulse, for fission chambers, standard for, 25:51857 (RDT-C-15-3-T)
  design and performance of high-resolution current, for semiconductor counters, 25:51860
PRESSURE
  calculation of average surface, on inclined bodies of revolution at hypersonic speed, 25:54384 (SC-RR-710287)
PRESSURE VESSELS
  cover for reinforced concrete, description of frustum shaped, 25:54301(P)
  defects in heavy-walled, analysis and detection by acoustic emission testing, 25:51742
  design parameters for prestressed concrete, for gas cooled power reactors, 25:53900 (A/CONF.49/P-469)
  design requirements for prestressed concrete, for gas cooled reactors, 25:54147 (A/CONF.49/P-475)
  design requirements in U.K. for power reactors, 25:53941 (A/CONF.49/P-474)
  development of prestressed concrete, for boiling reactors, 25:54070 (A/CONF.49/P-307)
  end slabs of prestressed concrete, effects of penetrations on shear strength of, (E/T), 25:54292 (UILU-ENG-71-2019)
  failure of steel, effects of neutron radiation and size on brittle, 25:54072 (A/CONF.49/P-548)
  inspection of boiling power reactor, ultrasonic

XUM

procedures for, 25:53934 (A/CONF.49/P-302)
inspection of JPDR, use of borescope for, 25:54122
inspection of reactor, in Germany, ultrasonic method for in-service, 25:51739
liners of reactor, analysis of deformation stresses in, (T), 25:54315
performance of prestressed concrete, for gas cooled power reactors, 25:53900 (A/CONF.49/P-469)
prestressing of concrete, analysis of, 25:53905 (A/CONF.49/P-571)
radiation effects on concrete and steels, fast neutron, 25:52386 (A/CONF.49/P-189)
radiation effects on mechanical properties of U.S.S.R. 48 TC steel, in-pile and neutron, 25:53908 (A/CONF.49/P-705)
seismic effects on, model studies of, 25:54305
stress analysis of reactor concrete, three dimensional, (T), 25:54075
stress testing of prestressed concrete, evaluation of scale models for, (E), 25:54308
stresses in reactor steel, conference on methods for analysis of, 25:54053
thermal insulation of prestressed concrete, performance of, 25:53905 (A/CONF.49/P-571)
thermal ratchetting in cylinder shaped, (T), 25:54311

PRESSURE WAVES
propagation of atmospheric, from low-altitude nuclear explosions, (E), 25:51659 (AD-720853)
propagation of extremely low frequency atmospheric, from atmospheric nuclear explosions, (T), 25:51657 (AD-716601)

PROMETHIUM ISOTOPES Pm-148
determination of promethium-148g by γ spectrometry, 25:51398

PROMETHIUM OXIDES
distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)

PROPANE, 2,2-DIMETHYL-
radiolysis of gaseous, ESR study of radicals from electron, 25:51509 (FRNC-TH-221)

PROPANE, 2-METHYL-
radiolysis of gaseous, ESR study of radicals from electron, 25:51509 (FRNC-TH-221)

1,3-PROPANEDIONE, 1,3-DIPHENYL-
chelates with rare earths, infrared spectra and vibration modes of, 25:52606 (CONF-711001-(Vol.1), pp 64-72)

2-PROPANOL
radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

2-PROPANOL, 2-METHYL-
radiolysis of aqueous solutions of, polarographic study of short-lived radicals from electron pulse, 25:51528

2-PROPANONE, HEXAFLUORO-
decomposition by rare gas metastable atom activation, 25:51511(R) (ORO-3106-41)

PROPENE, 2-METHYL-
radiolysis of gaseous, ESR study of radicals from electron, 25:51509 (FRNC-TH-221)

PROPYNE
reactions at surface of liquid sodium at 110, 150, and 200°C, 25:51438

PROSPECTING
equipment and methods for uranium, UK research and development on, 25:51640 (A/CONF.49/P-489)

PROTACTINIUM
abundance relative to uranium-235 in manganese nodules from Pacific Ocean, 25:51652
determination in St. Louis Residues, 25:51584(R) (MLM-1792)
separation of americium from, by ion exchange, 25:51395

PROTACTINIUM ISOTOPES Pa-230
electron-capture decay of, Q value for, (E), 25:53743(R) (INR-1318)

PROTACTINIUM ISOTOPES Pa-231
production from airport cake residues by acid leach process, 25:51584(R) (MLM-1792)

PROTEINS
effects of plant cell wall, on secretion of enzymes by plant pathogens, 25:54360 (COO-1426-56)
radiation effects on Acetabularia mediterranea synthesis of, γ, 25:52000
radiation effects on blood serum fractions of, in rats following exposure of oral mucous membrane, uv, 25:52222
radiation effects on composition and content of rat blood serum, x, 25:52192
radiation effects on synthesis in soybean seeds in relation to variety, γ, 25:52262
radiation effects on synthesis of, in cultured fibrosarcoma and L cells, electron and γ, 25:52176 (A/CONF.49/P-358)
reactions with metal ions, structural changes produced in, 25:54392 (UR-49-1494)

PROTON BEAMS
intensity of, effect of charge distribution on maximum, 25:53457
polarization measurements of, Lamb-shift polarimeter for, 25:53474
use for therapy, 25:52151 (A/CONF.49/P-752)

PROTON SOURCES
description of polarized, for Van de Graaff accelerator,, 25:53461

PROTONS
dechanneling in silicon crystals at 1 and 1.5 MeV, temperature and energy dependence of, (E/T), 25:52909
detection at 10 GeV, study of transverse track geometry in nuclear emulsion for, 25:51897
dose curves for therapy beams of, comparison between bremsstrahlung, gamma, high-energy x radiation, and, 25:52074
dose distribution in tissues, 25:52152 (UCRL-20836)
effects on Chlorella pyrenoidosa, effects of dose on lethal, 25:52257
effects on dogs, protective effects of partial-body shielding against lethal, 25:52097
effects on tin compounds, Moessbauer studies on, 25:51534
form factor of, relation between $p + p \to p + p^*$ and $p + p \to p + p$ interactions from scaling for hadronic, (T), 25:53211
form factors for, model for hadrons as extended objects for elastic and inelastic electromagnetic, (T), 25:53151
intensity in solar wind, (T), 25:52497
interactions anti $\nu + p \to n + e^+$, coincidence yields from, (E), 25:53518 (SRO-474-2)
interactions anti $p + p \to$ anti $p + p + 2\pi^+ + 2\pi^-$ at 5.7 GeV/c, multiperipheral model analysis of $\Delta^{--}\Delta^{++}$ production in, (E/T), 25:53009
interactions anti $p + p \to$ anti $p + p + \pi^- + \pi^+$ at 12 GeV/c, cross sections and effective mass distributions for, (E/T), 25:53011
interactions anti $p + p \to$ anti $p + p$ at 1.12 and 1.36 GeV/c in bubble chamber, production of T(2195) in differential cross sections for backward, (E), 25:53020
interactions anti $p + p \to$ anti $p + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
interactions anti $p + p \to \Delta^{--} + \Delta^{++}$ at 12 GeV/c, cross sections and decay angular distributions for, (E/T), 25:53011
interactions anti $p + p \to$ eta $+ \pi^+ + \pi^-$ at rest, Veneziano-type amplitude for, (E/T), 25:53177
interactions anti $p + p$, extrapolation of slope parameter for, 25:53237
interactions $d + p$ at 6 and 10 MeV using polarized beam, elastic scattering tensor moments for, 25:53539
interactions $e + p \to e +$ hadrons in parton model, polarization effects in deep inelastic, 25:53099
interactions $e + p$ at 0 to 10 GeV, review of nucleon inelastic electromagnetic form factors from, (E/T), 25:52995
interactions $e + p$ at 2 GeV/c, cross sections for π production in, (E), 25:53006
interactions $e + p$ in Veneziano-type model with diffraction, deep inelastic, 25:53098
interactions $e + p$, PCAC hypothesis and current algebra analysis of cross sections for pion production in, 25:53061
interactions $\gamma + p \to K^+ + \Lambda$ at 1 and 2 GeV, KΛN coupling constant from differential cross sections for backward, (E), 25:52992 (LAL-RI-71-3)
interactions $\gamma + p \to \pi^0 + p$ at 3 GeV, model independent analysis for separation between exchange of natural and unnatural parity in, (T), 25:53184
interactions $\gamma + p \to \pi^0 + p$, equivalent experimental set ups for polarization measurements in, (T), 25:53077
interactions $\gamma + p \to \pi^0 + p$, Regge pole absorption theory for dip structure mechanism for ratio of π^0 production in $\gamma + n \to \pi^0 + n$ interactions to π^0 production in, (T), 25:53185
interactions $\gamma + p \to \pi^0(\pi^+) + p(n)$ at high energies, review of backward, (E/T), 25:53029
interactions $\gamma + p \to$ rho $+ p$ at very high energies, integrated cross sections, angular distributions, and pionization in diffractive, (T), 25:53050 (DESY-71/36)
interactions $\gamma + p \to \text{rho}^0 + p$, impulse approximation and vector dominance hypothesis for differential cross sections of $\text{rho}^0 + p \to \text{rho}^0 + p$ interactions relation with differential cross sections of, (T), 25:53091
interactions $\gamma + p$ at 5 to 7 GeV, rho--ω interference parameters in dipion production in, (E), 25:52991 (DESY-71/37)
interactions $\gamma + p$ at 7.4 GeV, rho--ω interference parameters from di-pion production in, (E), 25:53002
interactions $\gamma + p$ at high energies, review of production of rho, phi, and ω in, (E), 25:52997
interactions $\gamma + p$, asymptotic behavior of total cross sections off mass shell for, 25:53093
interactions $\gamma + p$, multiperipheral production mechanism and duality for rho'(1500) production in, 25:53097
interactions $K^- + p \to$ anti $K^0 + \pi^- + p$, line-reversal-symmetry breaking for, 25:53213
interactions $K^+ + p \to$ anti $\Lambda + 2p$, generalized Veneziano model analysis of, (T), 25:53190
interactions $K^- + p \to K^{*-} + p$, line-reversal-symmetry breaking and interference effects in, 25:53213
interactions $K^+ + p \to K^{*+} + p$, line-reversal-symmetry breaking and interference effects in, 25:53213
interactions $K^+ + p \to K^0 + \pi^+ + p$, line-reversal-symmetry breaking for, 25:53213

interactions $K^+ + p \to K^+ + p$ at 270 MeV in nuclear emulsions, angular distributions for, 25:53034
interactions $K^+ + p \to K^+ + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
interactions $K^- + p \to K^- + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
interactions $K^- + p \to \Lambda + \text{anti } p + p$, generalized Veneziano model analysis of, (T), 25:53190
interactions $K^+ + p$ at 15 to 60 GeV/c total cross sections for, (E), 25:53014
interactions $K^- + p$ at high energies, review of backward, (E/T), 25:53029
interactions $K^+ + p$ at high energies, review of backward, (E/T), 25:53029
interactions $K^+ + p$, proton matrix element of kaon Σ-commutator term in elastic, 25:53192
interactions $K^+ + p$, soft-point PCAC scattering length for, 25:53221
interactions $K^- + p$, soft-point PCAC scattering length for, 25:53221
interactions $\mu^- + p$ at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
interactions $\mu^+ + p$ at high energies, total cross sections for production of hypothetical massive spin-1 electromagnetic bosons in, (T), 25:53107
interactions $n + p \to d + \gamma$ at 475 to 750 MeV, time reversal invariance in angular distributions for, (E), 25:53016
interactions $n + p$ at 0.5 to 21 MeV, singlet effective range for, (E), 25:53511 (CONF-701002-, pp 51-6)
interactions $n + p$ at 16.2 MeV, polarization in scattering, (E), 25:53530
interactions $n + p$ at 21.6 MeV, polarization in scattering, (E), 25:53531
interactions $n + p$ at 32 MeV, polarization in scattering, 25:53532
interactions $n + p$ below 30 MeV, P phase for correction at 180° for, (T), 25:53223 (CONF-701002-, pp 27-41)
interactions $\nu + p \to$ leptons + hadrons in parton model, polarization effects in deep inelastic, 25:53099
interactions $\nu + p \to \mu^- + p + \pi^+$ near $\Delta(1236)$ resonance, cross sections for, (T), 25:53126
interactions $\nu + p \to p + \pi^+ + \mu^-$, hadronic helicity conservation in, (T), 25:53100 (NYO-4204-14)
interactions $p + \alpha \to p + \alpha + \gamma$ at 7.0 to 12.0 MeV, effects of rescattering on cross sections for, (E), 25:53528
interactions $p + d$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
interactions $p + d$ at 800 MeV, calculation of polarization and cross sections for scattering, 25:53538
interactions $p + n$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
interactions $p + p \to \text{anti } p$ + particles at 19.2 GeV/c, tri-Regge behavior of, (E/T), 25:53229
interactions $p + p \to d + \pi^+$ at 3.4 to 12.3 GeV/c, $\pi + p$ interactions from spark-chamber spectrometer study of forward differential cross sections for, (E), 25:53008 (LA-4483)
interactions $p + p \to K^+ + \Lambda + p$, generalized Veneziano model analysis of, (T), 25:53190
interactions $p + p \to K^+$ + particles at 19.2 GeV/c, tri-Regge behavior of, (E/T), 25:53229
interactions $p + p \to K^-$ + particles at 19.2 GeV/c, tri-Regge behavior of, (E/T), 25:53229
interactions $p + p \to N + N + \pi$ at high energies, design of counter experiments for studying, (E), 25:53017
interactions $p + p \to p + p + \pi^+ + \pi^-$ at very high energies, integrated cross sections, angular distributions, and pionization in diffractive, (T), 25:53050 (DESY-71/36)
interactions $p + p \to p + p$ at 50 GeV, emulsion study of slope parameter of differential cross sections for, (E), 25:53022
interactions $p + p \to p + p$ at high energies, compilation of polarization data and exchange degenerate Regge pole model for, (E/T), 25:53186
interactions $p + p \to p + p$ at very high energies, integrated cross sections, angular distributions, and pionization in diffractive, (T), 25:53050 (DESY-71/36)
interactions $p + p \to p + p$, scaling for proton hadronic form factor for relation between $p + p \to p + p^*$ and, (T), 25:53211
interactions $p + p \to p + p^*$, scaling for proton hadronic form factor for relation between $p + p \to p + p$ and, (T), 25:53211
interactions $p + p \to p$ + particles at 19.2 GeV/c, tri-Regge behavior of inclusive, (E/T), 25:53229
interactions $p + p \to \pi^-$ + particles at 19.2 GeV/c, tri-Regge behavior of inclusive, (E/T), 25:53229
interactions $p + p \to \pi^+$ + particles at 19.2 GeV/c, tri-Regge behavior of inclusive, (E/T), 25:53229
interactions $p + p \to \pi^+ + \pi^- + 2p$ up to 250 and at 730 MeV, $\Delta^{++}(1236)$ production and total cross sections and angular distributions for π^- and π^+ production in, (E), 25:53226 (LA-DC-12944)
interactions $p + p$ at 144 MeV differential cross sections and phase shifts for small-angle, (E), 25:53013
interactions $p + p$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
interactions $p + p$ at 26.5, 37.2, and 46.9 MeV, spin correlation parameters for scattering, (E), 25:53644
interactions $p + p$ at 30, 42, and 48.8 MeV, polarization in scattering, (E), 25:53533
interactions $p + p$ at 500 to 1400 GeV, diffraction slope parameter for small-angle elastic, (E), 25:53015
interactions $p + p$ at high energies, Regge poles for large coupling constants for amplitudes of forward, (T), 25:53036 (DESY-71/31)
interactions $p + p$ at large momentum transfers, parameters for elastic, (E/T), 25:53231
interactions $p + p$ at low energies, test of local hidden-variable theory from, 25:53235
interactions $p + p$, extrapolation of slope parameter for, 25:53237
interactions $p + p$, slope of Pomeron trajectory from analysis of elastic, 25:53236
interactions $\pi + p \to \pi + N(1470)$ at very high energies, integrated cross sections, angular distributions, and pionization in diffractive, (T), 25:53050 (DESY-71/36)
interactions $\pi + p \to \pi + p$ at high energies, review of spin rotation parameters for, (E), 25:53028
interactions $\pi + p$, spark-chamber spectrometer study of forward differential cross sections for $p + p \to d + \pi$ interactions at 3.4 to 12.3 GeV/c for $T = {}^3/_2$ isobars and cross sections for, (E), 25:53008 (LA-4483)
interactions $\pi^- + p \to 2\gamma + n$ at 3.65 GeV/c, differential and total cross sections for eta and eta' production in, (E), 25:53003
interactions $\pi^- + p \to K^0 + \Lambda$, partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
interactions $\pi^+ + p \to K^+ + \Sigma^+$ partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
interactions $\pi^+ + p \to K^+ (K^-) + K^0 + \pi^+ + \pi^- (\pi^+) + p$ at 8.04 GeV/c in hydrogen bubble chamber, production cross section for $X^+(2820)$ in, (E), 25:53024 (IFA-HE-74)
interactions $\pi^+ + p \to n + k\pi$, neutron momentum spectra from duality diagrams for, (T), 25:53193
interactions $\pi^- + p \to n + \pi^0$, absorption Regge-cut model for cross sections and polarization in, 25:53206
interactions $\pi^+ + p \to p + k\pi$, proton momentum spectra from duality diagrams for, (T), 25:53193
interactions $\pi^- + p \to p + k\pi$, proton momentum spectra from duality diagrams for, 25:53193
interactions $\pi^- + p \to p + \pi^+ + \pi^- + \pi^-$ at 11.2 GeV/c, helicity conservation in, (E/T), 25:53032
interactions $\pi^+ + p \to p + \pi^+$, absorption Regge-cut model for cross sections and polarization in, 25:53206
interactions $\pi^- + p \to p + \pi^-$, absorption Regge-cut model for cross sections and polarization in, 25:53206
interactions $\pi^+ + p \to \pi^0 + \Delta^{++}$, absorption effects in, 25:53219
interactions $\pi^- + p \to \pi^0 + n$ at 5.2 to 13.3 GeV, isotopic spin bounds on polarization in, 25:53209
interactions $\pi^- + p \to \pi^0 + n$, bound on helicity flip amplitude for absorptive part of, 25:53215
interactions $\pi^- + p \to \pi^0 + n$, partial-wave analysis for test of Harari--Freund hypothesis from, 25:53179 (UCRL-20655, pp 169-75)
interactions $\pi^- + p \to \pi^- + p + 2\gamma(3\gamma)$ at 5 GeV/c in propane bubble chamber, $\pi^-\gamma(270)$ production in, (E), 25:53026
interactions $\pi^+ + p \to \pi^+ + p$ at high energies, compilation of polarization data and Regge pole model for, (E/T), 25:53186
interactions $\pi^- + p \to \pi^- + p$ at high energies, compilation of polarization data and Regge pole model for, (E/T), 25:53186
interactions $\pi^+ + p \to \pi^+ + p$, absorption model for backward, (T), 25:53187
interactions $\pi^- + p \to \pi^+ + \pi^- + n$, breakdown of charge symmetry from ω--rho mixing in, 25:53183 (UCRL-20655, pp 250a-76)
interactions $\pi^- + p \to \pi^-(\pi^0) + p(n)$, absorption model for backward, (T), 25:53187
interactions $\pi^- + p$ at 10 GeV/c, maximum-momentum analysis of angular and momentum distributions for, (T), 25:53214
interactions $\pi^+ + p$ at 15 to 60 GeV/c, total cross sections for, (E), 25:53014
interactions $\pi^- + p$ at 4.33 GeV in bubble chamber, differential cross sections for, (E), 25:53023 (IAE-1975)
interactions $\pi^- + p$ at high energies, review of backward, (E/T), 25:53029
interactions $\pi^+ + p$ at high energies, review of backward, (E/T), 25:53029
interactions $\pi^+ + p$, absorptive Regge cut model for forward, 25:53196
interactions $\pi^- + p$, absorptive Regge cut model for forward, 25:53196
interactions $\text{rho}^0 + p \to \text{rho}^0 + p$, model for, (T), 25:53091
interactions with mesons, broken SU(6) predictions for baryon and polarized vector meson production in, 25:53212
production of anti p--p pairs of, in π^- reactions with

carbon at 4 Gev/c in propane bubble chamber, correlated, (E), 25:53031
reactions (p,2p) with boron-11 at 150 and 600 MeV, use to determine age of cosmic rays from cross sections for beryllium-10 production in, (E), 25:53240
reactions (p,2p) with deuterium at 156 MeV, cross-section calculations including final-state-interaction effects, (T), 25:53524
reactions (p,2p) with silicon-28 at 600 MeV, optical-model analysis of distortion effects on recoil momentum distributions from, (T), 25:53680
reactions (p,anti He-3) with aluminum at 70 GeV, cross section for antihelium-3 production in, (E), 25:53021
reactions (p,α) and (p,d) with lithium-6 at 0.3 to 1.3 MeV using polarized and unpolarized beams, analyzing power and angular distributions in, (E), 25:53633
reactions (p,α) and (p,d) with nickel-62 at 14 MeV, α and deuteron evaporation spectra from, (E), 25:53663(R) (COO-1505-48)
reactions (p,α) with beryllium-9 at 45 MeV, finite-range DWBA analysis of, (T), 25:53613
reactions (p,α) with cobalt-59 at 14 MeV, α spectra from, (E), 25:53663(R) (COO-1505-48)
reactions (p,α) with nickel-62 at 14 MeV, angular distributions for, (E), 25:53663(R) (COO-1505-48)
reactions (p,d) with barium-138, cerium-140, neodymium-142, and samarium-144 at 24.55 MeV, DWBA analysis of differential cross sections and spectra from, (E), 25:53740 (FRNC-TH-41)
reactions (p,d) with beryllium-9 at 6.9 and 9.8 MeV, deuteron D-state effect in tensor polarization for, (T), 25:53649
reactions (p,d) with oxygen-16 at 30 MeV, effect of deuteron D-state on DWBA calculation for, (T), 25:53650
reactions (p,f) with aluminum at 600 MeV, lithium-8 energy and angular distributions from, (E), 25:53688
reactions (p,f) with uranium-238 at 11.5 GeV, production cross sections and recoil ranges for A = 131 isobars from, (E), 25:53663(R) (COO-1505-48)
reactions (p,γ) with aluminum-27 at 0.850 to 3.00 MeV, gamma spectra from, (E), 25:53700
reactions (p,γ) with calcium-46 at 1.8 to 1.9 MeV, γ spectra from, (E), 25:53672
reactions (p,γ) with carbon-14 at 1.3 to 2.6 MeV, angular distributions, excitation functions, and spectra from, (E), 25:53605 (COO-1120-120)
reactions (p,γ) with neon-22 at 1.3 to 2.6 MeV, gamma spectra from resonances in, (E), 25:53692
reactions (p,γ) with strontium-88 and yttrium-89 at 2.3 to 3.0 MeV, cross sections, excitation functions, and spectra from, (E), 25:53661 (COO-1120-119)
reactions (p,γ) with titanium-48 at 1358 to 1370 MeV, excitation function for, (E), 25:53608(R) (NP-18698)
reactions (p,γ) with titanium-50 at 1363 to 1379 keV, excitation function for, (E), 25:53608(R) (NP-18698)
reactions (p,He-3) and (p,t) with nitrogen-15 and oxygen-16 at 43.8 MeV using polarized beam, angular distributions of analyzing power for, (E), 25:53658
reactions (p,He-3) and (p,t) with oxygen-16 at 49.5 MeV using polarized beam, DWBA analysis of, (E/T), 25:53659
reactions (p,n) with calcium-42 at 7.89 and 8.98 MeV, gamma spectra from, (E), 25:53675
reactions (p,n) with lead-208 at 30.5 MeV, differential cross sections for, (E), 25:53766
reactions (p,n) with lithium-7 at 3 to 4 MeV, neutron polarization from, (E), 25:53632
reactions (p,n) with lithium-7 at 4 MeV, neutron polarization from, (E), 25:53589
reactions (p,n) with manganese-55 at 1.3 to 3 MeV, neutron yield from, (E), 25:53608(R) (NP-18698)
reactions (p,n) with nuclei, effects of isospin term and various form factors on optical-model analysis of, (T), 25:53877
reactions (p,n) with tin-117, -118, -119, -120, -122, and -124 at 3 to 7 MeV, strength functions for, (E), 25:53752(R) (ORNL-4659)
reactions (p,n) with titanium-50 at 3.4 to 3.7 MeV, neutron yield from, (E), 25:53608(R) (NP-18698)
reactions (p,n) with tritium at 2.3 and 2.9 MeV, neutron polarization from, (E), 25:53589
reactions (p,n) with tritium at low energies, phase-shift analysis of differential cross sections for, (T), 25:53526
reactions (p,pd) and (p,2p) with helium-3 at 35 MeV, plane-wave impulse-approximation analysis of spectra from, (E), 25:53523
reactions (p,pn) with carbon-12 at 660 MeV, angular and energy distribution of carbon-11 recoils from, (E), 25:53621
reactions (p,p$\pi^+\pi^-$) with nuclei, angular criteria for, (T), 25:53869
reactions (p,π^+) with carbon-12, cross sections for, (T), 25:53239
reactions (p,π^+) with deuterium at 340 to 600 MeV, cross sections for, 25:53239
reactions (p,π^+) with helium-3 at 200 to 800 MeV, cross sections for (T), 25:53239
reactions with aluminum-27, multiple rescattering effects on cross sections for Δ^{++} production in, (T), 25:53051 (JINR-P2-5752)
reactions with carbon foils at 130 keV, intensity oscillations of Hβ radiation from excited hydrogen atoms produced in, (E), 25:52623
reactions with copper at 450 MeV, γ spectra from, (E), 25:53663(R) (COO-1505-48)
reactions with deuterium molecules at 4 eV, trajectory surface hopping treatment of, 25:52660
reactions with deuterium molecules, comparison of experiment with trajectory-surface-hopping calculations of charge exchange and rearrangement in, 25:52673
reactions with emulsion nuclei at 660 MeV, production of slow π mesons in, (E), 25:53010
reactions with heavy nuclei at 20.8 GeV/c in emulsions, π^+ and π^- diffraction production in, (E), 25:53012
reactions with hydrogen 1s atoms, perturbed-stationary-state approximation for electron capture in, (T), 25:52647
reactions with hydrogen atoms at 0.1 to 16 keV, use of molecular potential curves in calculation of 2p excitation in, 25:52666
reactions with hydrogen atoms at 1 keV to 1 MeV, Glauber approximation for total cross sections for 1s--2s and 1s--2p excitations in, (T), 25:52650
reactions with hydrogen atoms at low energies, generalized impact-parameter method for, 25:52637
reactions with hydrogen atoms, Glauber approximation for elastic scattering and excitation in, 25:52634
reactions with hydrogen atoms, radial transition matrix elements for ionization in, (T), 25:52632
reactions with nuclei at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
reactions with nuclei, cross sections for π^+ production in, 25:53239
reactions with thin films, x-ray emission from, 25:52601
scattering by aluminum-27, beryllium-9, and boron-10 using polarized beam, depolarization parameters for elastic, (E), 25:53644
scattering by boron-11 at 3.5 to 10.5 MeV using polarized beam, differential cross sections and analyzing power for elastic and inelastic, (E), 25:53648
scattering by calcium-40 at 30 MeV, analysis using realistic interaction, (T), 25:53752(R) (ORNL-4659)
scattering by calcium-40, carbon-12, lead-208, and zirconium-90 at 185 MeV with 3^- excitation, polarization in inelastic, (E), 25:53647
scattering by calcium-46 at 1.8 to 1.9 MeV, excitation functions for elastic, (E), 25:53672
scattering by calcium-48 at 6 to 13 MeV, energy dependence of cross sections and polarization for elastic, (E), 25:53711
scattering by carbon-12 at 4.8 to 8 MeV, analysis using vibrational and rotational models, (T), 25:53639
scattering by carbon-13 and oxygen-16 at 30.3 MeV, coupled-channel analysis of inelastic, (E/T), 25:53646
scattering by chromium-52 at 5.4 to 6 MeV, polarization in inelastic, (E), 25:53720
scattering by cobalt-59 at 14 MeV, proton spectra from inelastic, (E), 25:53663(R) (COO-1505-48)
scattering by copper-63 and -65 at 15.7 MeV using polarized beam, asymmetry in inelastic, (E), 25:53719
scattering by deuterium at 50 MeV, triple scattering parameters for elastic, (E), 25:53540
scattering by gold-197 at 10 to 14 MeV, optical-model analysis of cross sections and polarizations for elastic, (E/T), 25:53789
scattering by helium-3 and -4 at backward angles, contribution of exchange mechanism in, (T), 25:53527
scattering by helium-3 and tritium at 42 MeV using polarized beams, asymmetries in elastic, (E), 25:53552
scattering by helium-3 at 4 to 11 MeV using polarized target, analyzing power for elastic, (E), 25:53590
scattering by helium-4 at 1 to 12 MeV, analysis of polarization using Humblet--Rosenfeld S-matrix theory, 25:53578
scattering by helium-4 at 3 to 18 MeV, phase-shift analysis of polarization in elastic, 25:53579
scattering by iron-54 and nickel-60 at 10 MeV, coupled-channels and statistical-model analyses of proton spin-flip probability in inelastic, (E/T), 25:53701
scattering by lead-208 at 30 to 60 MeV, optical model analysis of elastic, (T), 25:53838
scattering by neon at 5.71 eV, analysis of experimental differential cross sections for elastic, (T), 25:52636
scattering by neon-20 and -22 at 24.5 MeV using polarized beam, asymmetry and deformation parameters for inelastic, (E), 25:53718
scattering by nickel-58 at 7.0 MeV, e^+--e^- pair spectra from inelastic, (E), 25:53669
scattering by nickel-62 at 14 MeV, angular distributions for inelastic, (E), 25:53663(R) (COO-1505-48)
scattering by nuclei near isobaric analog resonances, review of polarization effects in, 25:53841
scattering by nuclei using polarized beams, nuclear structure effects on asymmetry in inelastic, (T), 25:53854
scattering by nuclei with isobaric analog excitation, formalism for analysis of elastic, (T), 25:53855
scattering by nuclei, formalism for polarization transfer in elastic, (T), 25:53849
scattering by nuclei, polarization analysis using optical

XUM

potential with real surface term, (T), 25:53853
scattering by nuclei, review of polarization effects in inelastic, 25:53840
scattering by oxygen-16 at 8 to 12 MeV, polarization in elastic, (E), 25:53643
scattering by platinum at 5 MeV, search for Mott-Schwinger polarization in elastic, (E), 25:53790
scattering by scandium-45 at 2 to 5 MeV, $p-\gamma$ coincidence spectra from inelastic, (E), 25:53608(R) (NP-18698)
scattering by silicon-28 at 7.5 to 11.5 MeV, polarization in elastic, (E), 25:53710
scattering by strontium-86 at 12 MeV, differential cross sections for elastic and inelastic, (E), 25:53752(R) (ORNL-4659)
scattering by tellurium-128 at 9.8 to 10.5 MeV, polarization and excitation functions for elastic, (E), 25:53792
scattering by titanium-48 at 1358 to 1370 keV, excitation function for elastic, (E), 25:53608(R) (NP-18698)
scattering by titanium-50 at 1363 to 1379 keV, excitation function for elastic, (E), 25:53608(R) (NP-18698)
scattering by titanium-50 at 3.4 to 3.7 MeV, excitation functions for elastic, (E), 25:53608(R) (NP-18698)
scattering by tritium at 13.6 MeV using polarized beam, asymmetry in elastic, (E), 25:53551
scattering by tritium at 4 to 12 MeV using polarized beam, angular distributions for elastic, (E), 25:53550
scattering by tritium at low energies, phase-shift analysis of differential cross sections for, (T), 25:53526
scattering by tritium near 5.45 MeV, search for resonance in elastic, (E), 25:53553
scattering by tritium up to 3.4 MeV, polarization in elastic, (T), 25:53549
scattering by yttrium-89 and zirconium-90 at 61 MeV, analysis using realistic interaction, (T), 25:53752(R) (ORNL-4659)
scattering by zirconium-96 at 11 to 12 MeV using polarized beam, threshold effects in isospin-coupled channels of elastic, (E), 25:53791
scattering inelastically by iron-56, lead-208, nickel-58, and tin-120 at 30.3 MeV, optical-model analysis using potential derived from nuclear matter distributions, (T), 25:53717
spallation of aluminum-27 at 660 MeV, energy and angular distribution of lithium-8 fragments from, (E), 25:53695
targets of polarized, performance of ammonium aluminum sulfates and potassium aluminum sulfates, 25:53477
targets of, 0.4 K cryostat for polarized, 25:53479
targets of, frozen polarized, 25:53480
theory for compositeness of, theorem on vanishing of Z_2 for, (T), 25:53189

PROTONS (anti p)
interactions anti $p + p \rightarrow$ anti $p + p + 2\pi^+ + 2\pi^-$ at 5.7 GeV/c, multiperipheral model analysis of $\Delta^{--}\Delta^{++}$ production in, (E/T), 25:53009
interactions anti $p + p \rightarrow$ anti $p + p + \pi^- + \pi^+$ at 12 GeV/c, cross sections and effective mass distributions for, (E/T), 25:53011
interactions anti $p + p \rightarrow$ anti $p + p$ at 1.12 and 1.36 GeV/c in bubble chamber, production of T(2195) in differential cross sections for backward, (E), 25:53020
interactions anti $p + p \rightarrow$ anti $p + p$ at high energies, compilation of polarization data and exchange-degenerate Regge pole model for, (E/T), 25:53186
interactions anti $p + p \rightarrow \Delta^{--} + \Delta^{++}$ at 12 GeV/c, cross sections and decay angular distributions for, (E/T), 25:53011
interactions anti $p + p \rightarrow$ eta $+ \pi^+ + \pi^-$ at rest, Veneziano-type amplitude for, (E/T), 25:53177
interactions anti p + p, extrapolation of slope parameter for, 25:53237
production of anti p--p pairs of, in π^- reactions with carbon at 4 Gev/c in propane bubble chamber, correlated, (E), 25:53031

PROTOTYPE FAST REACTOR
cooling system for, design and construction of, 25:54071 (A/CONF.49/P-482)
core for, design parameters of, 25:54030 (A/CONF.49/P-481)
fuel elements for, irradiation testing of uranium oxide (UO_2)--plutonium oxide (PuO_2), 25:54089 (A/CONF.49/P-498)
heat exchangers for, design and construction of, 25:54071 (A/CONF.49/P-482)
instrumentation and control systems for, 25:51948
operations aspects of, 25:54133 (A/CONF.49/P-472)

PROTOZOA
Amoeba sp., radiation effects on synthesis of ribonucleic acid and protein in, effects of dactinomycin and temperature on repair of γ and uv, 25:51999

PUERTO RICO
education in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)
nuclear reactors in, summary of existing and planned, 25:53912 (A/CONF.49/P-757)
training in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)

PULSARS
evolution of, (T), 25:52552
model for, featuring coherent neutral sheet radiation, (T), 25:52536
models for (T), 25:52506
NP 0532, model of glitches in, (E), 25:52537
NP 0532, pulsed x-ray emission at 30 to 100 keV from, (T), 25:52542
NP 0532, radiation mechanism for, (T), 25:52550
NP 0532, rotation rate changes in, (E), 25:52537
polarization of, (T), 25:52552
pulse properties of, (T), 25:52552
radio emission from, (T), 25:52551
x-ray emission from, thermal, (T), 25:52541

PULSE ANALYZERS
development of two-channel pulse-height, for photon bone-mineral measuring instrument, 25:51932 (COO-1422-98)

PULSE CONVERTERS
design and performance of time-to-pulse height, 25:51947

PULSE DISCRIMINATORS
design for fast coincidence circuit, 25:51941

PULSE GENERATORS (ELECTRONICS)
design of fast mercury switch, for pulsing accelerators, 25:53443

PULSE SHAPERS
design for fast coincidence circuit, 25:51941

PUMPS
development for use in nuclear power industry, 25:51677
maintenance requirements for power reactor, 25:53969
reliability of power reactor, 25:53969

PUMPS (LIQUID METAL)
development of sodium, 25:51677

PURINES
radiolysis of, isolation and structure of products of γ, 25:51990 (A/CONF.49/P-633)

PYRENE
radiolysis in acetone, benzonitrile, and dichloroethane, absorption spectra and reactions of cations from electron pulse, 25:51532

PYRIMIDINES
radioinduced degradation of, relation between lesions induced in DNA and γ, 25:51990 (A/CONF.49/P-633)
radiolysis of, isolation and structure of products of γ, 25:51990 (A/CONF.49/P-633)

Q

Q DEVICES
cathode design for large radial electric fields, 25:52853
plasma diagnostics in TP-D, using carbon dioxide lasers, 25:52792

QUALITY CONTROL
method for water content in concrete mixes using radiometric moisture gages, 25:52493
methods for paper industry, use of radioisotope x-ray techniques in, 25:51689 (A/CONF.49/P-6)
program for design and fabrication of containers for shipping radioactive material, 25:51830
standards for fabrication and use of radioactive material shipping containers, implementation of IAEA, 25:51831

QUANTUM ELECTRODYNAMICS
crossing symmetry in, experimental test of, 25:53004
current commutators on light cone, canonical structure of, 25:53293
cut-off in, cross sections and luminosity of Bhabha scattering at 0 to 500 MeV at large angles in colliding beams for lower limit of, (E), 25:53296
divergences in, renormalized Ward identity for axial-vector, 25:53282
electron mass in gravity-modified, 25:53290
formulation for electrons and photons on null planes, 25:53312
harmonics in, spin harmonics for tensor and spinor spherical, 25:53331
mass renormalization in, 25:53286
photon propagator in, vacuum expectation values as indicatrices of maximal regularity for, 25:53319
symmetry breakdown in, spontaneous, 25:53326
test in cross sections and luminosity of Bhabha scattering at 0 to 500 MeV at large angles in colliding beams, (E), 25:53296
tests in $e^+ + e^-$ interactions in colliding beams, (E/T), 25:52990 (DESY-71/28)
theory with indefinite metric for, formal structure and acausality in, 25:53284
triangle graphs in finite-mass, second-order correction to anomaly in, 25:53286
two-body problem in, quasipotential theory for, 25:53281 (IC-71/75)
vacuum polarization corrections to Dirac energy in μ^- mesic atom energy level transitions from 150 to 440 keV, test of, (E), 25:53322
vertex function in, asymptotic behavior of, 25:53295

QUANTUM FIELD THEORY
Bethe--Salpeter equation for massless-meson exchange ladder model at vanishing total four-momentum in, vector--scalar sector solutions to spinor--spinor, 25:53329
canonical anticommutation relations in, quadratic fermion interaction Hamiltonian for, 25:53318
canonical commutation relations in, generalized free

fields as cyclic representations of, 25:53313
commutation relations between components of current and energy-momentum tensor in external Yang--Mills fields in, equal-time, 25:53351
commutators in canonical formalism in, equal-time, 25:53311
current commutator in axiomatic, validity of Gell-Mann--Fubini sum rules from equal-time, 25:53305
divergences in πN system in finite local, removal of, 25:53324
eikonal approximation in pseudoscalar, 25:53292
energy--momentum spectrum and vacuum expectation values in, 25:53306
Feynman rules for Yang--Mills field, canonical quantization method for derivation of, 25:53294
field quantization in, method for relativistic, 25:53321
fields as cyclic representations of canonical commutation relations in, generalized free, 25:53313
formalism based on fermion fields for elementary particles, 25:53304
formulation of Wightman axiomatic, in terms of operator Jacobi matrices, 25:53303
Green function for relativistic scattering in, infinite set of quasipotential equations from Kadyshevsky, 25:53285
Lagrangians in, regularization of nonpolynomial, 25:53310
Lee model in, canonical perturbation theory for nonlinear oscillators for, 25:53330
meson scattering at high energies in static field in, charged vector, 25:53049 (DESY-71/32)
model of interacting mesons in, Dirac equation for kinks in, 25:53176
models for, review of, 25:53283
operator Jacobi matrices for Wightman axiomatic, reformulation in terms of, 25:53303
operators in indefinite metric spaces in, self-adjoint, 25:53317
oscillators in, canonical perturbation theory for nonlinear, 25:53330
particle elastic and inelastic scattering in phi^3, 25:53291
particles with identical quantum numbers in, formalism for composite and elementary, 25:53302
propagators and matrix elements of renormalizable, vacuum expectation values as indicatrices of maximal regularity for, 25:53319
propagators of causal unrenormalizable fields in, indicatrices for definition of, 25:53320
quantization of asymptotic fields in, relation between spin and statistics and, 25:53287
quantization of metric field in, Sommerfeld--Wilson, 25:53298
quantization of relativistic fields in, method for, 25:53321
S-matrix in, asymptotic action principle from unitarity of, 25:53287
scale invariance in self-interacting scalar lambdaphi^4, 25:53301
scattering amplitude of two infinite-component fields in, 25:53323
sum rules in axiomatic, equal-time current commutator for validity of Gell-Mann--Fubini, 25:53305
superpropagator of fields with exponential coupling in, 25:53300
theory for local relativistic, real, scalar, phi/sup 2N/, exact physical solutions to Schroedinger stationary state equation for, 25:53316
two-body problem in, quasipotential theory for, 25:53281 (IC-71/75)
vertex function in boson, eikonal approximation for, 25:53289
von Neumann algebras for, summation vectors in, 25:53308
Wightman functions for arbitrary-spin fields, spin--statistics theorem from spectral representations for two-point, 25:53325
Yang--Mills fields in, equal-time commutation relations between components of current and energy--momentum tensor in external, 25:53351

QUANTUM MECHANICS
canonical transformations for matrix elements of multipole operators between single-particle states in harmonic oscillator potential in, 25:52983
canonical transformations in, 25:52976
canonical transformations, unitary representations of linear, 25:52982
coordinate transformations in, time-dependent, 25:52977
Dirac and Klein--Gordon operators in relativistic, functional calculus and perturbations of pseudo-resolvents for, 25:53307
harmonic oscillator in, linear canonical transformations and their unitary representations for N-dimensional, 25:52982
harmonic oscillator in, quasi-potential equation for relativistic, 25:52979
harmonic oscillator potential in, canonical transformations for matrix elements of multipole operators between single-particle states in, 25:52983
Klein--Gordon equation for massless particles in, conformal invariance of, 25:53314
measurement problem in, mathematics of, (E), 25:52986
phase-space functions in, kernels realizing associative multiplications between, 25:52980
Schroedinger equation for potential scattering, analytic continuation in complex angular momentum plane for regular solution of, 25:53391
Schroedinger equation in, direct numerical solution to time-dependent, 25:52664
Schroedinger equation in, theorem for invariance principle for generalized wave operators for, 25:52978
wave operators in, invariance principle for generalized, 25:52978

QUARTZ
fission fragment tracks from far transuranium elements in, search for spontaneous, (E), 25:53744 (JINR-P7-5814)

QUASARS
distribution of, with large redshifts, (E/T), 25:52582
radio image of 3C 279, model for rapidly changing, 25:52554
radio polarization of, circular, (T), 25:52540
spectra of PKS 0237-23, line shifts in absorption, (E/T), 25:52534
stability of supermassive disks against fragmentation, (T), 25:52532
structure of, high-resolution observations at 6 and 18 cm of small-scale, (E), 25:52553
synchrotron optical depth effects in, (T), 25:52540

R

RABBITS
plutonium metabolism in, review of monomeric and polymeric, 25:51969 (CONF-711001-(Vol.2), pp 551-9)
radiation effects on antigenicity of tooth transplants in, γ, 25:52009
radiation effects on regeneration of fractured bones of, protective effects of Coamid and Mumie against γ, 25:52111
resorption of γ-irradiated bone grafts in, ESR studies on, 25:52203

RADIATION
book: Atomic and Molecular Radiation Physics, 25:52889
conference on innovative applications of, Dallas, Texas, April 22 to 23, 1971, 25:51711 (CONF-710428)
dose to astronauts during Apollo 12 and 13 missions, use of neutron activation and gamma-ray analysis to determine, 25:52071(R) (N-71-24257)
dose to hands of medical personnel injecting radioactive solutions, method for estimation of, 25:52081
dose to personnel following exposure to accelerated charged particle beams, use of scintillation counting of induced activity in estimation of, 25:52073 (UCRL-20262)
dose to personnel in medicine and industry in Yugoslavia during 1962 to 1967, 25:52095
dose to public from waste disposal operations at Nuclear Fuel Services, 25:52060
dose to world-wide human population during 1970, 25:52067 (A/CONF.49/P-851)
effectiveness for sterilization of powdered food products, 25:52282 (A/CONF.49/P-628)
effects of pulsed, on alkaline solutions, reactions of hydrated electrons from, 25:51506 (AD-721299)
effects on 5-methylcytosine single crystals, ESR study of free radical produced by, 25:51490
effects on aflatoxin production by toxigenic and non-toxigenic strains of Aspergillus following repeated exposure and incubation for three years, 25:52265
effects on agricultural plants, genetic and physiological, 25:52020 (A/CONF.49/P-844)
effects on agricultural plants, review of mutagenic, 25:52020 (A/CONF.49/P-844)
effects on agriculturally important plants in Poland in relation to improved quality and yield, mutagenic, 25:52015 (A/CONF.49/P-329)
effects on agriculturally important plants in Poland, research on sensitivity to, 25:52015 (A/CONF.49/P-329)
effects on amino acid content of feed mixtures during sterilization, 25:52289
effects on aquatic ecosystems, recovery patterns following, 25:52013
effects on bcc crystals, propagation of chains of correlated atom/atom collisions in, (T), 25:52898(T) (JPRS-53800, pp 29-37)
effects on biological systems, mechanisms of recovery from, 25:52175 (A/CONF.49/P-163)
effects on cereal insect pests, effects of dose on, 25:52288
effects on chemical reactions in processed food, 25:52283 (A/CONF.49/P-696)
effects on chromosomes in peripheral leukocytes of man, 25:52022(R) (NYO-4052-4)
effects on crop plants in India in relation to quality and yield, mutagenic, 25:52017 (A/CONF.49/P-537)
effects on crystals, void nucleation for supersaturation of vacancies and interstitials, (T), 25:52927
effects on cytochrome c peroxidase activity in normal rat tissues and Jensen sarcomas, effects of acidity and catalase inhibition on, 25:52202
effects on DNA solutions, quantitative determination of nitrogen bases and nucleosides released following,

25:52004
  effects on forest ecosystems, 25:52011 (A/CONF.49/P-685)
  effects on human skeleton following therapeutic exposure during childhood, 25:52232
  effects on human vision, review of, 25:52250
  effects on immune response of mice, effects of implanted lymphoid cells on restoration of whole-body lethal, 25:52006 (A/CONF.49/P-320)
  effects on lymphocyte count in cirrhosis patients following extracorporeal exposure of blood, 25:52248
  effects on magnesium content of blood serum following therapy of ovarian carcinomas, 25:52249
  effects on man, additive effects of Schistosoma infections on pathological low-dose, 25:52089 (A/CONF.49/P-142)
  effects on man, chronic low-dose, 25:52230 (A/CONF.49/P-535)
  effects on mitotic gene conversion in yeast, 25:52039
  effects on nitrogen, nitrogen--oxygen mixtures, or nitric oxide, reactions of N_2^+ from, 25:51529
  effects on plants for disease resistance, mutagenic, 25:52256 (STI/PUB-271)
  effects on productivity of agricultural plants, mutagenic, 25:51962 (A/CONF.49/P-694)
  effects on quality of agricultural plants, mutagenic, 25:52014 (A/CONF.49/P-192)
  effects on rate of cell reproduction in neoplastic and normal tissues, effects of dose fractionation on, 25:52163
  effects on rats, relation of toxins to pathological, 25:52197
  effects on reactor materials, USSR research on, 25:52393(T) (JPRS-53800)
  effects on riboflavin and vitamin C content of legumes during germination, 25:51965 (A/CONF.49/P-147)
  effects on survival of mice, protective effects of α-amidrazonium thiosulfates against lethal, 25:52204
  effects on vertebral bone marrow in man following therapy of carcinomas, aplastic, 25:52238
  effects on viscous relatively low-molecular weight polymers, preparation of highly radiation sensitive telomerized polyesters by, 25:51497(P)
  hazards to man following release of radioactive wastes to aquatic environment, 25:52013
  use for food processing in Soviet Union, 25:52283 (A/CONF.49/P-696)
  use for processing of food in India, programs for, 25:52284 (A/CONF.49/P-740)
  use for therapy of cheek mucosa carcinomas, review of, 25:52169
  uses in agriculture, biology, medicine, and metallurgy in Romania, 25:51608 (A/CONF.49/P-340)
  uses in agriculture, review, 25:51968 (CONF-710428-, Paper 5)
RADIATION CHEMISTRY
  calculations of relationship of mass spectra to ionic fragmentation in, 25:51517
  developments in industrial applications of, in Japan, 25:51479 (A/CONF.49/P-827)
  research progress on, at University of Florida, 25:51511(R) (ORO-3106-41)
  uses in USSR industry, equipment and methods for, 25:51493 (A/CONF.49/P-466)
RADIATION DETECTORS
  design and performance of track chamber with charge multiplication in film electrodes, 25:51891 (JINR-P13-5780)
  design characteristics of chemical shim fluid monitoring, for pressurized water reactors, 25:54069(P)
  design of multidirectional multipolarization antennas for detection of scalar and tensor gravitational radiation, 25:53343
  development in Yugoslavia, 25:51846 (A/CONF.49/P-352)
  development of charged particle, for satellite, rocket, and laboratory studies of magnetospheric boundary regions, 25:51848 (AD-718110)
  performance of, test procedures for evaluation of, 25:51849 (AD-871790)
  scintillation, development of large-area, for monitoring human lungs for plutonium, 25:51970 (NIRS-Pu-6)
RADIATION DETECTORS, ACTIVATION
  performance of manganese and vanadium bath, for absolute neutron source determination, 25:51852 (CONF-701002-, pp 470-80)
  use of cobalt, for in-core thermal neutron fluence measurements, 25:51850 (CONF-701002-, pp 327-30)
RADIATION DETECTORS, BUBBLE CHAMBER
  development at CERN, 1970, 25:53422(R) (NP-18906)
  expansion system for, design of, 25:51898(P)
  mixtures in 1.5-meter, study of homogeneity and stopping power of neon--hydrogen, 25:51894 (RHEL/R-218)
  optical system for, design and performance of, 25:51901
  particle tracks in, calibration of image plane digitizers for measuring, 25:51895 (RHEL/R-223)
  particle tracks in, computer program for control of scanning equipment for, 25:51890 (IFVE-SPK-70-61)
  particle tracks in, matrix methods for geometrical reconstruction of, 25:51859
RADIATION DETECTORS, DIELECTRIC TRACK
  description of fission foil--polycarbonate track detector for thermal neutron dosimetry, 25:51911
  standards for fast-neutron flux measurements by, tentative, 25:51870
RADIATION DETECTORS, FISSION CHAMBER
  preamplifier for standard, current pulse, 25:51857 (RDT-C-15-3-T)
RADIATION DETECTORS, FISSION FOIL
  description of fission foil--polycarbonate track detector for thermal neutron dosimetry, 25:51911
RADIATION DETECTORS, IONIZATION CHAMBER
  charge multiplication in liquid-filled wire, 25:51855 (JINR-P13-5838)
  description of gas-discharge, for neutron detection, 25:51871(P)
  design for measuring small differences in dose rates at points in radiation beam, 25:51916
  design for tritium stack monitoring, engineering drawings for, 25:51869
  design of position-sensitive, 25:51867(P)
  design with polyethylene walls for dosimetry of 14-MeV neutrons, 25:51889
  performance for absorbed dose calibration of electron and x-ray sources, 25:51917
  performance of tissue-equivalent, for fast neutron dosimetry in phantoms, 25:51905
  sensitivity variation for neutron detection in variable gamma fields, 25:51854 (FEI-212)
RADIATION DETECTORS, PROPORTIONAL
  description of proton-recoil, for fast neutron spectroscopy, 25:51885
  design and operation of proton-recoil, for fast neutron spectroscopy, 25:51879 (CONF-701002-, pp 385-400)
  design of multiwire position-sensitive, for high-energy particles, 25:51902
  development of large-area, for monitoring human lungs for plutonium, 25:51970 (NIRS-Pu-6)
RADIATION DETECTORS, SCINTILLATION
  calibration of thallium-activated sodium iodide, for determination of metastable technetium-99, 25:51390
  control system for automatic angular-correlation measurements, design of, 25:51888
  data acquisition system for hodoscope, for measuring decay of K_2^0, 25:51896 (UCRL-20636)
  description of liquid helium, for neutron polarization measurements, 25:51875
  description of sodium iodide, with boron-10 slab for total neutron cross section measurements, 25:51863
  design and operation of Maxon--Rae, for neutron capture measurements below 100 keV, 25:53750(R) (NYO-73-340)
  design and performance of sodium iodide, with flat energy response for neutron time-of-flight spectroscopy, 25:51880 (CONF-701002-, pp 401-9)
  efficiency of liquid, for average neutrons-per-fission measurements, variation in prompt pulse, 25:51853 (CONF-701002-, pp 481-7)
  performance for on-line noble-gas fission-product monitoring in EBR II, 25:51873
  performance for radiation-leakage testing of containers for shipping radioactive materials, 25:51819
  performance of liquid helium, for neutron polarization measurements, 25:51874
  properties of multiplex Hadamard-transform telescope, 25:51892 (JINR-P13-5896)
  suspensions in liquid, particle size distribution measurements by quenching effects for, 25:51928
RADIATION DETECTORS, SEMICONDUCTOR
  performance of catheter-type, for pulmonary function studies, 25:51862
RADIATION DETECTORS, SEMICONDUCTOR (GERMANIUM)
  current carrier lifetime in lithium-drifted, measurement of, 25:51858
  data from lithium-drifted, computer techniques for analysis of, 25:51882 (PEL-204)
  materials studies on lithium-drifted, 25:51861
  preamplifier for lithium-drifted, design and performance of high-resolution current, 25:51860
  timing characteristics of coaxial lithium-drifted, (T), 25:51868
RADIATION DETECTORS, SEMICONDUCTOR (SILICON)
  development for x-ray fluorescence spectroscopy, 25:51856 (LBL-9)
  performance for fast neutron dosimetry in phantoms, based on electric conductivity change, 25:51905
RADIATION DETECTORS, SPARK CHAMBER
  description of NE102A-triggered streamer, for recording tracks of low-energy charged particles, 25:51872
  design and performance of gamma cameras using, 25:51876
RADIATION DOSE
  calculations for nuclear power plant sites, probability analysis of atmospheric dispersion for, 25:54008
  measurements in salt surrounding Project Salt Vault-disposed high-level solid radioactive wastes, 25:51778
RADIATION DOSIMETERS
  performance of polymer thermoelectrets as, 25:51910
RADIATION DOSIMETERS, BIOLOGICAL
  evaluation of chromosome aberration frequency in human peripheral leukocytes as, 25:52022(R) (NYO-4052-4)
  evaluation of leukocyte count in peripheral blood as, 25:52234
  evaluation of survival of enteric bacteria in man as x, 25:52269
  use for dosimetry in fast neutron therapy, 25:52078

RADIATION DOSIMETERS, CALORIMETRIC
- design of thin aluminum and beryllium adiabatic, for analysis of gaseous samples, 25:51915

RADIATION DOSIMETERS, CHEMICAL
- ferric ion concentration in Fricke, measurement of, 25:51918
- radiation yield of trivalent iron from ferrous sulfate, neutron, (E), 25:51908

RADIATION DOSIMETERS, PHOTOGRAPHIC FILM
- performance for monitoring radiation dose to personnel in medicine and industry, 25:52095
- performance for personnel monitoring, 25:52082
- processing for high and very high radiation doses, 25:51909
- readout of, development of x-ray fluorescence spectrometry for, 25:51914

RADIATION DOSIMETERS, PHOTOLUMINESCENT
- performance for personnel monitoring, 25:52082
- performance of anthracene crystal, for fast neutrons, 25:51903 (COO-1105-166)

RADIATION DOSIMETERS, THERMOLUMINESCENT
- performance for personnel monitoring, 25:52082
- performance of titanium-doped lithium fluoride, 25:51912
- response of calcium sulfate--lithium sulfate, to thermal neutrons and gamma rays, 25:51906
- use of implanted, for measurement of dose absorbed by organs and tissues in rats, 25:52196

RADIATION DOSIMETRY
- equipment and methods for, 25:51907
- methods for fast-neutron, Raman effect and ESR, 25:51904 (COO-1105-168)

RADIATION EXPOSURE CHAMBERS
- dosimetry for biological, at thermal reactors, 25:52077

RADIATION MONITORING
- equipment and methods for, 25:51907
- equipment for, test procedures for evaluation of, 25:51849 (AD-871790)
- methods for Japanese nuclear power plant environs, 25:51745 (A/CONF.49/P-253)
- methods used in Egypt for environmental and personnel, 25:52089 (A/CONF.49/P-142)
- procedures for nuclear power plants in India, 25:53982 (A/CONF.49/P-536)
- programs at Atomic Energy Research Institute, Japan, 25:52066 (A/CONF.49/P-824)
- programs at HIFAR reactor during 1960 through 1970, 25:52065 (A/CONF.49/P-800)
- programs at Juelich Reactor and Karlsruhe Nuclear Research Centers, Germany, 25:52061 (A/CONF.49/P-395)
- programs for drinking, ground, and surface waters in USA during 1968 through 1970, 25:52057
- programs in Czechoslovakia during 1966 and 1967, 25:52063 (A/CONF.49/P-550)

RADIATION PROTECTION
- equipment and methods for, 25:51907
- equipment for personnel, during light and heavy-duty operations in radioactive environments, development of mobile, 25:51753 (A/CONF.49/P-617)
- legal aspects of international, in nuclear accidents, 25:52100 (A/CONF.49/P-400)
- methods for environmental and installation, at linear accelerators, 25:53407 (CEA-CONF-1766)
- methods for man during use of radiopharmaceuticals in clinical studies, ICRP report on, 25:52096
- methods for patients and personnel during diagnostic x radiography, 25:52092
- procedures at Italian nuclear power plants, 25:53973 (A/CONF.49/P-191)
- programs for medical personnel during implantation of gold-198 therapeutic sources in patients, evaluation of effectiveness of, 25:52076
- programs for medical personnel using radioisotopes in diagnostic studies, 25:52094
- programs for personnel in USSR, evaluation of effectiveness of, 25:52090 (A/CONF.49/P-439)
- programs for personnel mining and fabricating uranium and thorium, 25:52083
- programs for personnel of radiochemistry laboratories, 25:52093
- programs in Egypt, 25:52089 (A/CONF.49/P-142)
- programs in Portugal during 1965 through 1970, 25:52091 (A/CONF.49/P-523)
- standards for personnel and general population, USSR, 25:52062 (A/CONF.49/P-429)
- standards for, development of domestic and international, 25:52104

RADIATION RATE METERS
- circuits for two, ratio, 25:51942

RADIATION SOURCES
- uses for therapy, review, 25:52132 (A/CONF.49/P-653)
- uses in industry and hydrology in India, 25:51612 (A/CONF.49/P-539)

RADIATION TARGET CANS
- design for fuel swelling testing, 25:52409 (KFK-1398)
- design of sample holder, for induction irradiation furnace, 25:51682(P)
- inspection of irradiated EBR-II, in Fuels and Examination Facility hot cells, 25:51783
- neutron flux in, filters for shaping of thermal, 25:54290 (N-71-17932)

RADIATION TARGET CHAMBERS
- description for nuclear spin measurements using dynamically polarized proton target and backscattered neutron, 25:53481
- description for Van de Graaff accelerator, 25:53444

RADIATION TARGETS
- characteristics of tritium, lifetime and radiation-hazard, 25:53496
- compression of optically-pumped polarized helium-3, 25:53482
- cryostat for polarized proton, 0.4 K, 25:53479
- description of frozen polarized proton, 25:53480
- design proposal for polarized neptunium-237, 25:53478
- failure of uranium, contamination resulting from, 25:53407 (CEA-CONF-1766)
- handling system for 200-GeV proton accelerator, design of remote maintenance equipment for, 25:53458
- polarization measurements of helium-3, pulsed NMR method for, 25:53483
- polarization of optically-pumped helium-3, effect of absorption of pumping light on degree of, 25:53484
- polarization of solid, methods for dynamic, 25:53460
- preparation of deuterium and tritium, methods for, 25:53743(R) (INR-1318)
- use of polarized, in high-energy physics, 25:53433 (UCRL-20655, pp 117-28)

RADIO WAVES
- absorption in ionosphere, new aspects of winter anomaly of, (E), 25:52728
- emission from coronas of M supergiant stars, (T), 25:52527
- propagation of, design of electrical length bridge for measuring time delay in, 25:54381 (SC-DR-710384)

RADIOACTIVE CONTAMINATION
- dynamics of secondary, on surfaces, 25:52051

RADIOACTIVE MATERIALS
- analysis of highly, by electron microprobe method, 25:51360 (CEA-CONF-1783)
- conference on testing of containers for shipping of, Vienna, Feb. 8 to 12, 1971, 25:51770 (STI/PUB-285)
- handling and shipping of, recommended drop testing of packages for, 25:51807
- handling facilities for, fire protection practices for, 25:52099
- handling in hot cells, design of hydraulically activated manipulator arm for, 25:51775(P)
- handling of small, design of grasping implement for, 25:51777(P)
- handling of, design of demountable shielded hot cell for, 25:51842(P)
- handling of, safety regulations in Spain for, 25:53988 (A/CONF.49/P-734)
- shipment by sea, insurance liability during, 25:52103 (A/CONF.49/P-767)
- shipping in Australia, containers and methods for, 25:51843
- shipping in Hungary, testing of Type A packaging for, 25:51810
- shipping in US, accident experience with Type B packaging for, 25:51806
- shipping of large quantities of, design and testing criteria for containers for, 25:51822
- shipping of, analysis of international and national design and test requirements for Type A packaging for, 25:51808
- shipping of, at Bhabha Atomic Research Center, design and testing of packaging for, 25:51812
- shipping of, criteria for leak-tightness and shielding properties of packaging of, 25:51816
- shipping of, design and testing of large-volume Type B containers for, 25:51826
- shipping of, development of IAEA regulations for testing of packaging for, 25:51805
- shipping of, equipment and methods for drop and thermal testing of Type B packaging for, 25:51815
- shipping of, equipment and methods for testing Type A packaging for, 25:51809
- shipping of, free-drop testing of specially-designed shock absorbers for Type B containers for, 25:51836
- shipping of, French programs for mechanical and thermal testing of packaging for, 25:51814
- shipping of, functional separation of mechanical components in packaging for, 25:51821
- shipping of, heat transfer characteristics of externally-finned containers for, (E/T), 25:51827
- shipping of, implementation of IAEA standards for inspecting containers for safe, 25:51831
- shipping of, mathematical model for predicting free-fall damage to containers for, 25:51835
- shipping of, methods for leak-tightness testing of large containers for, 25:51818
- shipping of, methods for mechanical and thermal testing of types UKT-I-V and UKT-II-V packaging for, 25:51820
- shipping of, methods for studying thermal performance of containers for, 25:51833
- shipping of, methods for testing containment and shielding characteristics of packaging for, 25:51817
- shipping of, methods for testing mechanical and thermal performance of Type B containers for, 25:51834
- shipping of, methods for thermal testing of Type B containers for, 25:51832
- shipping of, quality assurance program for design and fabrication of containers for, 25:51830

- shipping of, radiometric method for radiation-leakage testing of containers for, 25:51819
- shipping of, standardization and testing of Types A and B packaging for, 25:51811
- shipping of, US programs for testing packaging for, 25:51813
- storage of heat-producing, during marine transport, recommendation for safe, 25:51829
- thermal analysis system for, 25:51938
- transfer from preparation facility to analytical facilities, design of pneumatic tube system for, 25:51793
- transport in France, legal priorities in insurance coverage for, 25:52102 (A/CONF.49/P-624)
- transportation of, safety regulations in Spain for, 25:53988 (A/CONF.49/P-734)
- volume of liquid, equipment for measuring sample, 25:51773(P)

RADIOACTIVE WASTE
- analysis for plutonium by passive γ spectroscopy, interferences in, 25:51386 (CONF-710617-15)
- analysis of aqueous solutions of, for radioisotopes following separation by solvent extraction using monoisooctyl methylphosphonate, 25:51383 (A/CONF.49/P-451)
- calcination by FINGAL process, study of ruthenium dioxide volatilization and deposition in, 25:51571 (AERE-R-6418)
- disposal and control of nuclear fuel reprocessing, 25:51590
- disposal and storage of, present practices and future needs in, 25:51755 (A/CONF.49/P-766)
- disposal at Nuclear Fuel Services, radiation dose to public from, 25:52060
- disposal in Asse salt mine, equipment and methods for, 25:51616(R) (KFK-1212)
- disposal in atmosphere and ocean, Japanese research studies on, 25:51607 (A/CONF.49/P-250)
- disposal in UK, evaluation of environmental contamination from, 25:51750 (A/CONF.49/P-512)
- disposal into sea, Japanese research on contamination of marine environment from, 25:51651 (A/CONF.49/P-850)
- disposal of alpha and high-level, environmental effects of Project Salt Vault for, 25:51771 (TID-25729)
- disposal of high-level solid, in salt deposits, demonstration results of, 25:51778
- disposal of liquid, aquatic ecosystem recovery patterns following, 25:52013
- disposal of liquid, hydraulic fracturing method for underground, 25:51626
- disposal of liquid, into aquatic environment, hazards to man from, 25:52013
- disposal of liquid, into deep geologic formations, USSR research on, 25:51749 (A/CONF.49/P-426)
- disposal of, evaluation of nuclear explosion methods for excavating deep-underground repositories for, 25:51664 (UCRL-72769(Rev.1))
- management of gaseous and liquid, from Japanese nuclear power plants, 25:51745 (A/CONF.49/P-253)
- processing of, progress in conditioning methods for, in France, 25:51564 (A/CONF.49/P-621)
- release from gas cooled power reactors, 25:53981 (A/CONF.49/P-505)
- release from nuclear power plants in Germany, measurements during 1961 to 1970 of, 25:53979 (A/CONF.49/P-396)
- release from nuclear power plants in Germany, safety aspects of, 25:53980 (A/CONF.49/P-399)
- release from power reactors in India, monitoring and control of, 25:53982 (A/CONF.49/P-536)
- solidification of, Japanese research studies on, 25:51607 (A/CONF.49/P-250)

RADIOACTIVITY
- book: Measurement of Atmospheric Radioactivity, 25:51634
- levels in natural gas from Project Wagon Wheel, predictions of, 25:51663 (UCRL-51067)
- measurement of gross α and β, in Amchitka Island area surface waters, 25:51618 (USGS-474-123)
- monitoring at Atomics International during 1970, 25:52055
- monitoring at Hanford Atomic Products Operation during 1968, 25:52055
- monitoring in precipitation and surface atmosphere in Central, North, and South America during February, 1971, 25:52056

RADIOAPPLICATORS
- design for local radiotherapy of animals and man, 25:51726(P)
- design for therapy of body organs, 25:51729(P)

RADIOBIOLOGY
- research in Hungary, status of, 25:52125 (A/CONF.49/P-324)

RADIOCHEMICAL PROCESSING PLANTS
- design and operation of EEI-Westinghouse, for recycling plutonium, 25:51675 (WCAP-4167-1, pp 5.1-58)
- design and operation of Soviet, for treatment of effluents by electrodialysis method, 25:51554 (A/CONF.49/P-427)
- design and operation of Windscale, for oxide fuels, 25:51559 (A/CONF.49/P-491)
- design modifications of La Hague and Marcoule, for new types of irradiated fuels, 25:51562 (A/CONF.49/P-601)
- development of, survey on needs in Western Europe for, 25:51565 (A/CONF.49/P-640)
- equipment and methods for industrial, in USSR, 25:51493 (A/CONF.49/P-466)
- fire control at Rocky Flats, methods for, 25:51787
- fire protection criteria for Rocky Flats, 25:51786
- nuclear materials safeguards at Cadarache, accounting methods for, 25:51762 (CEA-CONF-1786)
- operation of ATTILA and AT.1, in France, review on, 25:51563 (A/CONF.49/P-603)
- operation of Dounreay and Windscale, review on, 25:51560 (A/CONF.49/P-492)
- operation of EUREX and ITREC, in Italy, review on, 25:51549 (A/CONF.49/P-182)
- operation of Eurochemic, economics, methods, and planned improvements in, 25:51548 (A/CONF.49/P-28)
- operation of Karlsruhe, planned improvements based on initial, 25:51553 (A/CONF.49/P-381)
- operation of La Hague UP 2, developmental and experimental studies during, 25:51605
- performance of Japanese, for reprocessing of irradiated fuels, 25:51551 (A/CONF.49/P-239)
- safeguards systems for, mathematical model for evaluating efficiency of, 25:51844

RADIOCHEMISTRY
- radiation protection programs for personnel in, 25:52093
- research at Nuclear Physics Institute of University of Paris in 1970, 25:53748(R) (NP-18872)

RADIOGRAPHY, BIOMEDICAL
- beam quality for x-ray diagnostic, method for measurement of, 25:52136
- gamma sources for, design of high-activity, 25:51713 (ICRU-18)
- method for testing cardiac pacemakers for battery depletion, 25:51964

RADIOGRAPHY, INDUSTRIAL
- equipment and methods for neutron, using accelerator source, 25:51743
- equipment for cobalt-60, for testing of steel, performance of copper screens and lead filters in, 25:51741
- equipment for neutron, of HFR irradiation capsules, design of, 25:51732 (RCN-135)
- evaluation of statistical, for determining effects of defects on weld strength, 25:51735
- facility for, neutron using TRIGA reactor source, design and performance of, 25:51737
- film from x-ray, quantitative interpretation of opacity of, 25:51734 (Y-DL-140)
- gamma sources for, design of high-activity, 25:51713 (ICRU-18)
- method for neutron, for Apollo ordnance objects, 25:51740
- method using small subcritical reactor, 25:51736

RADIOISOTOPE SCANNERS
- design with adjustable collimators, for whole-body counting, 25:51878(P)
- development for use in nuclear medicine, 25:52129 (A/CONF.49/P-629)
- development of, review on, 25:51847 (A/CONF.49/P-507)
- modulation transfer function for, algorithm for, 25:51866

RADIOISOTOPE SCANNING
- counter development for whole-body cattle, 25:52142
- development in USSR from 1960 to 1970, 25:52128 (A/CONF.49/P-462)
- developments in, review, 25:52132 (A/CONF.49/P-653)
- developments in, review of, 25:52129 (A/CONF.49/P-629)
- effectiveness for diagnosis and localization of neoplasms, review, 25:52127 (A/CONF.49/P-407)
- effectiveness for diagnosis of autotransplantation of spleen in man, 25:52137
- effectiveness for measurement of cerebrospinal fluid flow dynamics, effects of previous lumbar puncture and pneumoencephalography on, 25:52139
- programs in Brazil for diagnostic, 25:52123 (A/CONF.49/P-203)
- programs in Japan, review of, 25:52124 (A/CONF.49/P-263)
- use of strontium-85 for whole-body, in diagnosis of bone metastases of mammary cancer, 25:52140

RADIOISOTOPES
- conference on innovative applications of, Dallas, Texas, April 22 to 23, 1971, 25:51711 (CONF-710428)
- content and source of, in animals, plants, and surface waters at Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
- counting of, development of nomogram for, 25:52008(R) (RLO-2226-T-1-7)
- distribution in biological tissues, kinetics of, 25:51974
- distribution in body in relation to half-life, methods for monitoring, 25:52053
- effects of naturally unstable, on activity measurements in biological materials, 25:52084
- export and import of, digest of USAEC regulations for, 25:51772 (WASH-1163)
- migration of fallout, in forest plantations, 25:52011 (A/CONF.49/P-685)
- production and uses of, review of USAEC program for, 25:51727
- production in research reactors, in Yugoslavia, 25:54178

  (A/CONF.49/P-348)
  release to atmosphere during operation of nuclear power plants, 25:52043 (A/CONF.49/P-684)
  release to environment by nuclear power plants, hazards to human populations from, 25:52050
  shipping of large quantities of, design and performance of Universal Source container for, 25:51823
  shipping of, design of low-cost fire shields for large and small containers for, 25:51824
  transport in seawater, mechanisms of, 25:51653
  use as source in x-ray methods for process and quality control in paper industry, 25:51689 (A/CONF.49/P-6)
  use as tracer for determining mineral metabolism in domestic animals, conference on, 25:51971 (STI/PUB-293)
  use as tracers in biomedical research in Argentina, 25:51959 (A/CONF.49/P-563)
  use as tracers in research and agricultural plant metabolism and nutrition in Ukrainian SSR, 25:51962 (A/CONF.49/P-694)
  use as tracers to determine crop root distribution in soils, 25:52017 (A/CONF.49/P-537)
  use as tracers to determine fate of calcium, sulfur, and zinc in soils in relation to plant utilization, 25:52017 (A/CONF.49/P-537)
  use as tracers to determine fate of phosphate fertilizers in soils, 25:52017 (A/CONF.49/P-537)
  use for clinical studies in man, ICRP report on patient protection during, 25:52096
  use in agricultural research in Latin America, 25:51967 (A/CONF.49/P-756)
  use in coastal pollution control in Denmark, 25:51650 (A/CONF.49/P-646)
  use in medical diagnoses, radiation protection programs for personnel during, 25:52094
  use in nuclear medicine research in Hungary, 25:52125 (A/CONF.49/P-324)
  uses for medical diagnosis and therapy in Sudan, 25:52131 (A/CONF.49/P-639)
  uses for medical diagnosis and therapy, review, 25:52132 (A/CONF.49/P-653)
  uses in agricultural research in developing countries, review of, 25:51708 (A/CONF.49/P-768)
  uses in agriculture and food sciences in Spain, review of, 25:51707 (A/CONF.49/P-728)
  uses in agriculture and industry in USSR, 25:51697 (A/CONF.49/P-465)
  uses in agriculture, biology, medicine, and metallurgy in Romania, 25:51608 (A/CONF.49/P-340)
  uses in agriculture, industry, and medicine in Bulgaria, review of, 25:51690 (A/CONF.49/P-107)
  uses in agriculture, review, 25:51968 (CONF-710428-, Paper 5)
  uses in Arab Countries, activities of Middle Eastern Regional Radioisotope Center for developing, 25:51709 (A/CONF.49/P-797)
  uses in clinical diagnosis in USSR from 1960 to 1970, 25:52128 (A/CONF.49/P-462)
  uses in Hungarian industry, review of, 25:51692 (A/CONF.49/P-325)
  uses in hydrology and sedimentology in France, 25:51613 (A/CONF.49/P-634)
  uses in hydrology research in Mexico, 25:51615 (A/CONF.49/P-790)
  uses in hydrology, review on, 25:51614 (A/CONF.49/P-769)
  uses in industry and hydrology in India, 25:51612 (A/CONF.49/P-539)
  uses in industry and research in Spain, review of, 25:51706 (A/CONF.49/P-727)
  uses in industry in Australia, review on, 25:51381 (A/CONF.49/P-123)
  uses in industry in Canada, review on, 25:51382 (A/CONF.49/P-164)
  uses in industry in Japan, 25:51479 (A/CONF.49/P-827)
  uses in medicine and pharmacology in West Germany, evaluation of, 25:52105
  uses in neutralization of electrostatic charges in USSR industry, 25:51704 (A/CONF.49/P-699)
  uses in Poland, research progress on, 25:51710 (A/CONF.49/P-831)
  uses in pollution measurement and control, 25:51712 (CONF-710428-, Paper 3)
  uses in USSR agrochemical research, 25:51609 (A/CONF.49/P-434)
RADIOMETRIC ANALYSIS
  equipment and methods for x, in USSR, 25:51405 (A/CONF.49/P-464)
  kryptonate uses in, review on, 25:51384 (A/CONF.49/P-556)
  methods for traces of elements, radio-release, 25:51399
  uses in art identification problems, 25:51410(R) (NYO-3953-3)
  uses in industry in Australia, review on, 25:51381 (A/CONF.49/P-123)
  uses in industry in Canada, review on, 25:51382 (A/CONF.49/P-164)
RADIOMETRIC TESTING
  equipment and method for magnesite bricks using cesium-137 source, 25:51733 (SGAE-IB/IA-24/1971)
RADIOPRESERVATION
  conference on problems and techniques of, in European Atomic Energy Community, 25:52286 (EURISOTOP-43)
RADIOPROTECTIVE COMPOUNDS
  α-amidrazonium thiosulfates, preparation and properties of, 25:52204
  development in Ukrainian SSR for use in agricultural plant production research, 25:51962 (A/CONF.49/P-694)
  effectiveness of C_{s11}HF in mice, 25:52117
  Mumie, effects on regeneration of bone fractures in γ-irradiated rabbits, 25:52111
RADIOSENSITIVITY
  conference on genetic control of, 25:52023
RADIOTHERAPY
  charged particles in, review of status of heavy, 25:52152 (UCRL-20836)
  conference on fast neutrons in, 25:52158
  developments in, review, 25:52132 (A/CONF.49/P-653)
  dose calibration methods for γ and x, 25:52088
  dose curves for bremsstrahlung, gamma, proton, and high-energy x, comparison of, 25:52074
  equipment for, using γ and neutron sources, 25:51728(P)
  methods in USSR, development and prospects of, 25:52147 (A/CONF.49/P-437)
  programs in Japan, review of, 25:52124 (A/CONF.49/P-263)
  programs in Sudan for, 25:52131 (A/CONF.49/P-639)
  proton beams in, 25:52151 (A/CONF.49/P-752)
  rationale for meson (π), 25:52122 (A/CONF.49/P-161)
  review of nasopharyngeal cancer, in Australia during 1950 to 1969, 25:52170
  shielding for, melting pot for fabrication of lead shot--thermoplastic individual, 25:52489
  status of fast neutron and meson (π^-), review of, 25:52148 (A/CONF.49/P-508)
  use in combination with surgery for cervical carcinomas in Australia during 1953 to 1968, review of, 25:52171
RADIUM
  content in mineral waters in Rodnei Mountains, Rumania, 25:51628
  determination in rocks by radiochemical and radiometric methods, 25:51391
  determination in water and biological materials by liquid scintillation spectrometry, 25:51620
  effects on man following pelvic carcinoma therapy, 25:52251
  effects on oral tissues following interstitial therapy of tongue carcinomas, necrotic, 25:52240
RADIUM ISOTOPES Ra-224
  alpha decay of, separation and identification of products from, 25:51547
RADIUM ISOTOPES Ra-226
  activity containment integrity of foils used in smoke detectors, test results on, 25:51920 (ORNL-TM-2684)
  photofission at 9 to 20 MeV, cross section for, (E), 25:53787
RADON
  content in mineral waters in Rodnei Mountains, Rumania, 25:51628
  inhalation by uranium mining personnel, comparison of bioassay and personal air sampling methods for monitoring, 25:52068 (COO-1500-18)
RADON ISOTOPES Rn-222
  content in cave air in Budapest, method for measurement of, 25:51621
  monitoring in South Africa gold mines, 25:52064 (A/CONF.49/P-659)
RAMAN EFFECT
  evaluation for fast-neutron dosimetry, 25:51904 (COO-1105-168)
RAPP POWER REACTOR
  construction of, progress to May 1970 on, 25:53881 (70-CNA-621)
RARE EARTH ALLOYS AND SYSTEMS
  thermal capacity of intermetallic, review of low-temperature, 25:52944 (CONF-711001-(Vol.2), pp 668-78)
  Co--rare earth, magnetic properties of intermetallic, pulsed-field, 25:52936 (CONF-711001-(Vol.1), pp 229-39)
  Ni--rare earth, magnetic properties of intermetallic, pulsed-field, 25:52936 (CONF-711001-(Vol.1), pp 229-39)
  rare earths--transition metals, alloy phase structure of, review on, 25:52319 (CONF-710712-3)
  rare earths--transition metals, valence bonds in CaCu$_5$-type compounds, (T), 25:52376 (CONF-711001-(Vol.2), pp 617-29)
RARE EARTH BORIDES
  crystal-field effects in properties of hexavalent, models of, 25:52955
RARE EARTH CHLORIDES
  volatility of, radiochemical studies on, 25:51424 (CONF-711001-(Vol.1), pp 343-58)
RARE EARTH FLUORIDES
  photon reactions with, energy spectra of 4f and valence electrons ejected in, (E), 25:52615
RARE EARTH HALIDES
  crystal structures of salt-like dihalides, review on, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
RARE EARTH HYDROXIDES
  solubilities and solubility products in water, 25:51468 (CONF-711001-(Vol.1), pp 322-9)
RARE EARTH IONS
  spectra in single crystals, two-photon, (E/T), 25:52942

(CONF-711001-(Vol.2), pp 465-77)

RARE EARTH OXALATES
  structure and properties of, 25:51469 (CONF-711001-(Vol.1), pp 330-42)

RARE EARTH OXIDES
  compatibility with iron and nickel at high temperatures, 25:52299
  thermal decomposition of, radiochemical studies on, 25:51424 (CONF-711001-(Vol.1), pp 343-58)
  volatility of, radiochemical studies on, 25:51424 (CONF-711001-(Vol.1), pp 343-58)

RARE EARTHS
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  basicity of trivalent, 25:51468 (CONF-711001-(Vol.1), pp 322-9)
  chelates with β-diketones, infrared spectra and vibration modes of, 25:52606 (CONF-711001-(Vol.1), pp 64-72)
  conference on research on, ninth, Blacksburg, Virginia, 10/71, 25:52940 (CONF-711001-(Vol.2))
  conference on research on, ninth, Blacksburg, Virginia, 10/71, 25:52932 (CONF-711001-(Vol.1))
  content in vesuvianite skarns, 25:51645
  deuteron reactions (d,p) with, spectra from, (E), 25:53753 (ZFK-172)
  electron binding energies of, from x-ray photoelectron spectra, 25:52615
  energy level difference between f/sup q/d^1s^2 and f/sup q + $1/s^2$ configurations of gaseous, (T), 25:52605 (CONF-711001-(Vol.1), pp 35-51)
  energy levels of, lifetimes and spin--parity assignments for, (E), 25:53753 (ZFK-172)
  energy levels of, splitting of 4d sublevels, 25:52614
  energy-level transitions from (d,p) reactions, hindrance factors, internal conversion coefficients, and multipolarities for, (E), 25:53753 (ZFK-172)
  energy-level transitions in, probabilities for E0, (T), 25:53810 (COO-1120-123)
  magnetic properties of pure, review of phenomenological basis of, 25:52933 (CONF-711001-(Vol.1), pp 200-7)
  Moessbauer spectroscopic research on, survey, 25:52971 (CONF-711001-(Vol.1), pp 144-51)
  nuclear radii of, effects of higher-order deformations on, (T), 25:53810 (COO-1120-123)
  properties of, radiochemical studies on, 25:51424 (CONF-711001-(Vol.1), pp 343-58)
  separation from divalent metals by complexing and precipitation, 25:51589
  separation of samarium from light, by selective stripping of DEHPA organic phase, 25:51572 (CONF-711001-(Vol.1), pp 294-305)
  spectra of, x-ray emission, (E), 25:52614

RARE GASES
  separation of fission product, from gaseous effluents, evaluation of methods for, 25:51586 (RT/PROT-(71)8)

RATS
  autoradiography for plutonium-239 distribution, method for whole-body, 25:51970 (NIRS-Pu-6)
  iodine-131 content of thyroid gland of, following injection, effects of homogenization and hydrolysis on accuracy of in vitro determinations of, 25:51989
  plutonium distribution in tissues of, following uptake by inhalation, ingestion, or through wounds, 25:51970 (NIRS-Pu-6)
  radiation dose to organs and tissues of, use of implanted themoluminescent dosimeters for measurement of absorbed, 25:52196
  radiation effects on blood serum protein fractions of, following exposure of oral mucous membrane, uv, 25:52222
  radiation effects on brain in, histological methods in studies of, 25:52195
  radiation effects on cells and tissues of nervous system of, RBE for fast neutron, 25:52219
  radiation effects on chromosomes and postnatal development following in utero exposure, γ, 25:52224
  radiation effects on composition and content of blood serum proteins of juvenile, x, 25:52192
  radiation effects on content of aromatic amines in blood and urine of, effects of dose on x, 25:52268 (A/CONF.49/P-538)
  radiation effects on cytochrome c peroxidase activity in tissues of, effects of acidity and catalase inhibition on, 25:52202
  radiation effects on endocrine gland function in, relation between etiology of radiation sickness and x, 25:52194
  radiation effects on enzyme activity in blood serum of, effects of dose on whole-body x, 25:52189
  radiation effects on function of adrenal glands in, effects of dose and time on x, 25:52193
  radiation effects on hearts of, prior to recipient transplantation, in situ or whole-body x, 25:52208
  radiation effects on hematopoiesis in fasted, effects of dose fractionation on γ, 25:52220
  radiation effects on hexokinase activity of brain, erythrocytes, and liver of, x, 25:51998
  radiation effects on leukocyte reserves in bone marrow of, effects of testosterone on recovery from whole-body x, 25:52110
  radiation effects on morphology of adrenal glands in, effects of dose on x, 25:52190
  radiation effects on periodontium of, comparison of local and whole-body exposure x, 25:52223
  radiation effects on peripheral blood in, effects of bis(3-hydroxypropyl) trisulfide on high dose x, 25:52186
  radiation effects on survival of cells in skin of, comparison of RBE for fast neutron and x, 25:52200
  radiation effects on thyroid gland of, repeated low-dose x, 25:52212
  radiation injuries in, relation between dose absorbed by various tissues and x, 25:52187
  radiation sickness etiology in, relation of toxins to, 25:52197
  radioinduced chromosome aberrations in embryonic cells of, effects of dose and time on x, 25:52217
  selenium-75 distribution in tissues of, effects of carrier and administration route on, 25:51979
  zinc metabolism in, review of, 25:51980

REACTIVITY
  measurement of subcritical, effects of neutron detection efficiency on polarity spectral coherence method, (T), 25:54278

REACTOR CONTAINMENT STRUCTURES
  design parameters of double concentric, 25:54293(P)
  heads for metal cylinder shaped, calculation aids for design of torispherical, 25:54291 (RT/ING-(71)4)
  jet force effects on dry well, displacement and strain in, (E), 25:54304
  seismic effects on, model studies of, 25:54305
  stresses in cylindrical, conference on methods for analysis of, 25:54054

REACTOR CONTAINMENT SYSTEMS
  design characteristics of ice condensers, for pressurized water reactor, 25:54121(P)
  fission product removal by water cooled, MIRA code for analysis of iodine, 25:54152 (BMI-1915)
  performance of boiling water power reactor pressure suppression, during coolant loss accident, 25:54118 (NEDO-10320)
  performance of pressurized water reactor, during coolant loss accident conditions, (E), 25:54155 (BNWL-1592)
  requirements for 1000 MW(e) gas cooled fast breeder, for core meltdown accidents, 25:54161 (ORNL-TM-3546)

REACTOR CONTROL ELEMENTS
  design parameters of core penetrating flexible, for shutdown, 25:54298(P)
  design parameters of helical grooved rod, for pebble bed reactors, 25:54067(P)
  development of spheroidal, composed of oxide- or carbide-coated diboride particles embedded in pyrolytic carbon or zirconium alloy, 25:52435(P)
  drives for helical grooved rod, description of coaxial shaft threaded gear, 25:54067(P)
  drives for rod type, description of shutdown and control two mode operation, 25:54302(P)
  heating rates in mockup tantalum, in fast cores, (E/T), 25:54060(R) (AI-AEC-13005)
  lock for steam cooled fast breeder reactor rod, description of ejection preventing safety, 25:54068(P)
  monitoring of pressurized water reactor fluid shim, radiation detector system for, 25:54069(P)
  radiation effects on, summary of, 25:54286 (A/CONF.49/P-704)
  reactivity worth of mockup tantalum, in fast cores, (E), 25:54060(R) (AI-AEC-13005)
  standpipes for gas cooled rod type, description of top and bottom presure vessel penetrating, 25:54066(P)
  testing of boiling power reactor, requirements for field, 25:54098 (NEDO-10017)

REACTOR CONTROL SYSTEMS
  development of on-line digital computer, for power reactors, 25:53893 (A/CONF.49/P-294)
  development requirements of power reactor, 25:54059
  operation of oil pressure-driven, on NS Savannah, 25:51676
  reactivity monitoring by, process computer for continuous, 25:54295(P)
  transient response of, effects of eigenvalue sensitivity on, (T), 25:54258

REACTOR COOLANTS
  thermodynamic properties of dissociating gas, 25:54284 (A/CONF.49/P-431)

REACTOR EXPERIMENTAL FACILITIES
  design of advanced specialized, description of, 25:54184 (A/CONF.49/P-593)

REACTOR FUEL ELEMENTS
  analysis of irradiated, shielded electron probe microanalyzer for, 25:51379
  cladding failure of, effects of power change increments on, (E), 25:54282 (A/CONF.49/P-314)
  cladding for fast reactor, fast neutron radiation effects on creep in, 25:54110
  cladding for fast reactor, fast neutron radiation effects on, 25:54108
  cladding for fast reactor, stress and strain calculations for, 25:54114
  cladding for liquid metal cooled, fast neutron radiation and high temperature effects on swelling and embrittlement of stainless steel, 25:54109
  cladding for mixed oxide fast, development and testing of, 25:54096(R) (GEAP-10028-38)

XUM

cladding for rod type, description of electrical heater for testing, 25:54299(P)
cladding for rod, analysis of creep buckling of cylinder shaped, (T), 25:54312
cladding for, analysis of thermal ratchetting in cylinder, (T), 25:54311
cladding for, design and performance requirements for, 25:54310
cladding for, development of ultrafine grain Type 316 stainless steel, 25:52317
cladding for, electrolytic polishing method for, 25:52315(P)
cladding for, radiation effects on stainless steel and nickel alloy, 25:52389 (A/CONF.49/P-453)
cladding of fast, radiation effects on steel, 25:53898 (A/CONF.49/P-460)
cladding of pellet type, calculation of interface stresses for cylinder shaped, (T), 25:54316
cladding of rod type, stress distribution in axial finned cylinder shaped, (T), 25:54314
cladding of rod type, variation principles for calculation of creep distortion in cylinder shaped, (T), 25:54313
cladding of water cooled uranium oxide (UO_2) rod, effects of coolant loss accidents on failure of Zircaloy, (E), 25:54116
cladding of, analysis of deformation stresses in, (T), 25:54315
conveyer for, design of automated fluidic, 25:51845(P)
cost analysis in Canada for uranium oxide (UO_2) fabrication and operation, 25:53888 (A/CONF.49/P-156)
cycle management in pressurized water reactors, development of simulator and computer codes for, 25:53892 (A/CONF.49/P-278)
decladding of Inconel-, stainless steel-, and vanadium-clad, using azeotropic mixture of hydrofluoric acid and water, 25:51594
density of irradiated cylindrical pin-type, gamma densitometry equipment and method for determining, 25:52440 (RT/ING-(71)6)
design of Zircaloy-4 clad plutonium oxide (PuO_2)--uranium oxide (UO_2) assemblies, 25:54104 (WCAP-4167-1, pp 4.1-35)
design parameters for gas cooled pin type, optimum economic, 25:54088 (A/CONF.49/P-495)
design parameters of liquid sodium cooled instrumented cluster arranged rod type, 25:54196 (ANL-7757)
design parameters of pressure tube assemblies, for heavy water moderated boiling water cooled reactors, 25:54106(P)
design requirements for, 25:54310
design with offset plenum region for lowering resistance to coolant flow, 25:54309(P)
design with stainless steel grid members supporting Zircaloy control rod guide tubes, 25:54297(P)
development for high-temperature reactors in Federal Republic of Germany, 25:52426 (A/CONF.49/P-385)
development of aluminum-clad, for high flux reactors in Brazil, 25:52422 (A/CONF.49/P-197)
development of, irradiation testing for, 25:54182 (A/CONF.49/P-580)
fabrication for Magnox reactor, development of equipment and methods for, 25:52427 (A/CONF.49/P-490)
fabrication in Argentina, programs for, 25:52428 (A/CONF.49/P-561)
fabrication in Japan, development of automated safeguards systems for facilities for, 25:51746 (A/CONF.49/P-265)
fabrication in UK to 1990, proposed methods for disposing of radioactive waste from, 25:51750 (A/CONF.49/P-512)
fabrication of fast, equipment for, 25:54092 (A/CONF.49/P-609)
fabrication of high temperature gas cooled, development of methods for, 25:54087 (A/CONF.49/P-494)
fabrication of metal-clad cermet-type, method for, 25:52431(P)
fabrication of plutonium dioxide--uranium dioxide, design of development laboratory for, 25:51784
fabrication of plutonium, for fast breeder reactor, economics of, 25:52423 (A/CONF.49/P-274)
fabrication of plutonium-bearing, for fast and thermal reactors, 25:52425 (A/CONF.49/P-379)
fabrication of, mathematical model for evaluating efficiency of safeguards systems in facilities for, 25:51844
fabrication of, properties of radioisotope neutron sources for safeguards system for, 25:51767 (LA-DC-12294)
failure of Zircaloy-2 clad uranium oxide (UO_2), effects of thermal stresses on mechanical interactions leading to, 25:54281 (A/CONF.49/P-295)
failure of Zircaloy-2 clad uranium oxide (UO_2), in pile, 25:54283 (A/CONF.49/P-315)
failure propagation characteristics of liquid metal cooled pin, 25:54117
fission gas collection system for liquid sodium cooled, 25:54119 (RT/ING-(71)2)
handling of gas cooled power, review of, 25:53901 (A/CONF.49/P-470)
heat transfer characteristics for pin type, effects of cladding contact pressure on, (T), 25:54317
identification marking of, system of magnetic inclusions for, 25:54307(P)
meltdown of water cooled, hydrogen release from uranium oxide (UO_2)--water reactions during, (E), 25:54159 (IN-ITR-108)
performance of boiling and gas cooled reactors, in Italy, 25:53889 (A/CONF.49/P-188)
performance of defected mixed oxide, in flowing sodium, (E), 25:54096(R) (GEAP-10028-38)
performance of graphite moderated gas cooled reactor, 25:53903 (A/CONF.49/P-500)
performance of liquid sodium cooled instrumented cluster arranged rod type, 25:54196 (ANL-7757)
performance of pin, computer program calculation of mechanical and thermal, 25:54319
performance of uranium alloy tube, in gas cooled reactors, 25:54091 (A/CONF.49/P-608)
performance of Zircaloy clad mixed oxide, in pressurized water reactors, (E), 25:54101(R) (WCAP-3385-28)
performance of Zircaloy-2 clad uranium oxide (UO_2), in-pile, 25:54283 (A/CONF.49/P-315)
performance requirements for, 25:54310
production process for spherical, with mixed oxide fuel in beryllium oxide matrix, 25:54303(P)
profile measurements of irradiated, electro-optical system for, 25:51933 (LA-DC-12378)
radiation effects on austenitic steel clad uranium oxide (UO_2)--plutonium oxide (PuO_2), fast neutron, 25:54092 (A/CONF.49/P-609)
radiation effects on performance of uranium monocarbide fuel assemblies, in-pile, 25:52471 (A/CONF.49/P-707)
radiation effects on plutonium-bearing, 25:52425 (A/CONF.49/P-379)
radiation effects on stresses in pin-type fast, in-pile, 25:54086 (A/CONF.49/P-392)
radiation effects on structure of stainless steel-clad uranium, 25:52406(T) (JPRS-53800, pp 245-51)
radiation effects on swelling of, design of profilometer for measuring, 25:51950
radiation effects testing of mixed oxide fast, 25:54096(R) (GEAP-10028-38)
radiation effects testing of zirconium alloy clad sintered uranium oxide (UO_2), description of, 25:54187 (A/CONF.49/P-720)
radiation testing program for fast and gas cooled reactors, in Italy, 25:53889 (A/CONF.49/P-188)
radioinduced swelling of, design of facility for in-pile measurement of, 25:52409 (KFK-1398)
reactivity worth of plutonium oxide (PuO_2)--uranium oxide (UO_2) rod, effects of plutonium oxide (PuO_2) particle size on, (E/T), 25:54287 (BNWL-1608)
reprocessing capacities for, in Federal Republic of Germany, 25:51552 (A/CONF.49/P-378)
reprocessing in UK to 1990, proposed methods for disposing of radioactive waste from, 25:51750 (A/CONF.49/P-512)
reprocessing of fast and thermal, in USSR, review on, 25:51555 (A/CONF.49/P-435)
reprocessing of fast reactor, fluorination method for, 25:51557 (A/CONF.49/P-448)
reprocessing of, mathematical model for evaluating efficiency of safeguards systems in facilities for, 25:51844
requirements and supply assessment for, in Federal Republic of Germany, 25:51552 (A/CONF.49/P-378)
shipping of spent, drop-impact testing of lid-fixing screens for containers for, 25:51841
shipping of spent, effects of coolant losses and finned surfaces on heat removal from containers for, 25:51828
shipping of spent, from French power reactors, research on equipment and methods for, 25:51752 (A/CONF.49/P-611)
shipping of spent, in Japan, drop-impact testing of containers for, 25:51837
shipping of spent, in Japan, equipment and methods for drop-impact testing of containers for, 25:51838
shipping of spent, scale-model drop-impact testing of Excellox and Magnox containers for, 25:51839
spacers for, method for securing ends of wire-wrap, 25:54306(P)
standpipe plugs for gas cooled, description of pressure equalizing locking, 25:54107(P)
stress analysis in, conference on methods for, 25:54050
stresses in liquid metal cooled clusters of rod, effects of rod spacing on, 25:54115
swelling of uranium oxide (UO_2) fast, effects of burnup on, 25:53898 (A/CONF.49/P-460)
temperature distribution in liquid metal cooled clusters of rod, effects of rod spacing on, 25:54115
testing of boiling power reactor, requirements for field, 25:54098 (NEDO-10017)
testing of fast, equipment for, 25:54092 (A/CONF.49/P-609)
thermal stresses in clad cylinder and sphere, (T), 25:54318
vibration of pins in sodium cooled, effects of spacer grid distribution on, (E), 25:54095(T) (EURFNR-903)
voids in water cooled ceramic rod, description of offset on partitioned central, 25:54105(P)

REACTOR FUELS
analysis by cyclic activation, nondestructive, 25:51406 (CONF-710617-10)
analysis for fissionable materials, development of

  automatic methods for, 25:51759 (A/CONF.49/P-809)
  assay of fast, dual spectrum fast--thermal reactor for, 25:54217
  burnup estimations from gamma spectra of fission products, 25:51387 (JAERI-13754)
  burnup of, fast breeder, efficiency of, 25:54135 (A/CONF.49/P-709)
  cycle for, material accounting system for safeguards in, 25:51748 (A/CONF.49/P-415)
  cycle management for boiling reactors, calculation of optimum, 25:54085 (A/CONF.49/P-312)
  cycle management for conceptual 640 MW(e) prismatic core gas cooled, 25:54130 (A/CONF.49/P-346)
  cycle management for gas cooled and heavy water moderated pressure tube power reactors, calculation of optimum economic, 25:54134 (A/CONF.49/P-497)
  cycle management for liquid sodium cooled fast reactors, 25:54030 (A/CONF.49/P-481)
  cycle management for power, effective planning of overall operations for optimum economic, 25:53954 (A/CONF.49/P-764)
  cycle management for power, optimization of, 25:53937 (A/CONF.49/P-390)
  cycle management for water cooled power reactor, multilevel data-based computer programs for, 25:54129 (A/CONF.49/P-293)
  cycle management procedures for power, analysis in Sweden of optimum, 25:53938 (A/CONF.49/P-425)
  cycles for high temperature gas cooled, economics of high enriched and low enriched uranium, 25:54131 (A/CONF.49/P-389)
  cycles for power reactors, effects of plutonium utilization on long term, 25:54138 (A/CONF.49/P-822)
  cycles for water cooled, Italian program for analysis of thorium--uranium, 25:54127 (A/CONF.49/P-186)
  cycles of plutonium, economics and problems of, 25:54285 (A/CONF.49/P-496)
  depletion of plutonium recycle, calculations for, 25:54103 (WCAP-4167-1, pp 3.1-30)
  development of fast, Belgian programs for, 25:54083 (A/CONF.49/P-275)
  development of gas cooled, program in Belgium for, 25:54084 (A/CONF.49/P-288)
  fabrication of, review of Italian activities in, 25:52421 (A/CONF.49/P-181)
  fission product distribution in, beta--gamma autoradiographic method for studying, 25:52363
  gas generation and swelling in oxide, mechamisms of, 25:52474(T) (JPRS-53800, pp 196-204)
  grain shielding factor calculation for coated-particle, 25:53494
  isotopic composition of plutonium bearing, effects of thermal reactor burnup on, 25:54093 (A/CONF.49/P-610)
  performance of coated particle sphere, computer program calculation of effects of burnup induced stresses on, 25:54113
  performance of coated particle sphere, effects of burnup induced stresses on, 25:54111
  performance of coated particle sphere, effects of burnup induced stresses on, (T), 25:54112
  performance of power reactor, review of, 25:54082 (A/CONF.49/P-158)
  power distribution in plutonium recycle, calculations for, 25:54103 (WCAP-4167-1, pp 3.1-30)
  radiation effects on creep in fast reactor, 25:54110
  radiation effects on fast reactor, fast neutron, 25:54108
  radiation effects on uranium oxide (UO_2), in AGR-type plants, 25:54090 (A/CONF.49/P-501)
  reprocessing by Purex process, production and utilization of plutonium obtained by, 25:51588
  reprocessing of carbon-coated particles of oxide, grind-burn-leach head-end methods for, 25:51583 (JUL-741-RW)
  reprocessing of fast and MTR, decontamination factors for, 25:51560 (A/CONF.49/P-492)
  reprocessing of irradiated thorium--uranium, separation of fission products by solvent extraction using N-methyldidecylamine, 25:51566 (A/CONF.49/P-650)
  reprocessing of irradiated, at La Hague and Fontenay-aux-Roses, economics of, 25:51563 (A/CONF.49/P-603)
  reprocessing of irradiated, in Japan, developments in, 25:51551 (A/CONF.49/P-239)
  reprocessing of molten fluoride, by reductive extraction, 25:51585 (ORNL-TM-3139)
  reprocessing of oxide, design and operation of Windscale plant for, 25:51559 (A/CONF.49/P-491)
  reprocessing of spent, decontamination of hot cells for, 25:51781
  reprocessing of stainless steel-clad, pilot-plant studies on electrolytic dissolution in, 25:51579 (IN-1196)
  reprocessing of, management of wastes from, 25:51590
  reprocessing of, progress in operation of EUREX and ITREC plants for, in Italy, 25:51549 (A/CONF.49/P-182)
  reprocessing of, projected needs of Western European facilities for, 25:51565 (A/CONF.49/P-640)
  research and development on ceramic, in Yugoslavia, review on, 25:52424 (A/CONF.49/P-350)
  resources of, estimates of world wide, 25:54025 (A/CONF.49/P-359)
  sound velocity in molten, development of methods for measuring, 25:52318(R) (ANL-7820)
  thermal conductivity of high burnup plutonium oxide (PuO_2)--uranium oxide (UO_2), measurement of 1200°C to melting, (E), 25:54288 (GEAP-13703)
  transfer from preparation facility to analytical facilities, design of pneumatic tube system for, 25:51793
REACTOR LOADING MACHINES
  design characteristics of core handling, for liquid metal cooled fast test reactor, 25:54216(P)
  design parameters of carriage type, 25:54294(P)
  design with interchangeable component units for handling spherical fuel elements, 25:54296(P)
  performance of gas cooled power reactor, 25:53901 (A/CONF.49/P-470)
  position indicators for, description of sound transducer, 25:54300(P)
REACTOR MODERATORS
  neutron flux decay in systems of heterogeneous, review of pulsed source measurements on, 25:54280 (A/CONF.49/P-310)
  physics calculations for bundles of rods, albedo method for, (T), 25:54262 (IAE-1981)
REACTOR SAFETY
  analysis of plants with integral cooling systems, application of maximum credible accident criteria to, 25:54148 (A/CONF.49/P-476)
  calculational methods in France, 25:53984 (A/CONF.49/P-579)
  comparison of experimental and calculated analyses of, 25:54149 (A/CONF.49/P-477)
  policies in Sweden, summary of, 25:53976 (A/CONF.49/P-304)
  regulations in Spain, summary of, 25:53988 (A/CONF.49/P-734)
  standards for, effects of public acceptance of non-nuclear hazards on, 25:54150 (A/CONF.49/P-671)
REACTORS
  cooling systems for, conference on stress analysis of, 25:54052
  core components for, conference on shock and vibration analysis of, 25:54051
  core components for, conference on stress analysis in, 25:54050
  core lifetime in, optimal control theory model for optimization of, 25:54257
  core support structures for, conference on stress analysis of, 25:54052
  development in Mexico, review of, 25:54058
  export and import of, digest of USAEC regulations for, 25:51772 (WASH-1163)
  feasibility of small subcritical, for neutron radiography, 25:51736
  heat from, prevention of atmospheric advection fog formation using waste, 25:51636
  kinetics calculations for, method for space-energy-angular dependent, (E/T), 25:54276
  kinetics for, effects of space distribution of power and feedback reactivity on, (T), 25:54264 (JAERI-Memo-4352)
  kinetics of, application of asymmetric discontinuity approach to initial value and boundary valve problems for discontinuous trial function method for, (T), 25:54265 (RPI-328-231)
  materials for, USSR research on effects of radiation on, 25:52393(T) (JPRS-53800)
  neutron flux variations in, optimum infinite multiplication factor distribution for minimization of, 25:54266
  neutron spectra calculations for, degenerate kernel expansion method for thermal, 25:54268
  neutron thermalization calculations for, degenerate kernel expansion method for, 25:54267
  neutron transport in spherical, 25:52894
  physics parameters of uranium--plutonium lattices, theoretical methods for analysis of, 25:54255 (A/CONF.49/P-351)
  physics research programs for, description of joint Norway, Poland, Yugoslavia, and IAEA, 25:54261 (A/CONF.49/P-330)
  piping systems for, analysis of thermal ratchetting in cylinder shaped, (T), 25:54311
  pressure vessel of, description of frustum shaped cover for reinforced concrete, 25:54301(P)
  pressure vessels for, analysis of deformation stresses in lining of, (T), 25:54315
  pressure vessels for, analysis of thermal ratchetting in cylinder shaped, (T), 25:54311
  pressure vessels for, conference on stress analysis in steel, 25:54053
  pressure vessels for, shear strength of end slabs of prestressed concrete, (E/T), 25:54292 (UILU-ENG-71-2019)
  pressure vessels for, three dimensional stress analysis of concrete, (T), 25:54075
  structural components for, conference on shock and vibration analysis of, 25:54051
  structures for, conference on methods for stress analysis of, 25:54056
  structures for, conference on thermal and mechanical stress analysis of, 25:54055
  xenon transition processes in, (T), 25:54263 (ITEF-817)

XUM

REACTORS, AGR-TYPE
  fuels for, thermal and radiation effects on uranium oxide (UO$_2$), 25:54090 (A/CONF.49/P-501)
  loading machines for, performance of, 25:53901 (A/CONF.49/P-470)
  operations aspects of, analysis of load following, 25:53942 (A/CONF.49/P-479)
  power conversion system for, coolant temperature control of power output from, 25:54170(P)
  safety aspects of, 25:54147 (A/CONF.49/P-475)
  shutdown of, method for core cooling during, 25:54080(P)
REACTORS, BOILING
  containment system for power, performance during coolant loss accident of pressure suppression, 25:54118 (NEDO-10320)
  control elements for, analysis of field testing requirements for, 25:54098 (NEDO-10017)
  coolant loss accidents in, blowdown and core heatup during, 25:54168
  cores of, calculation of optimum design parameters for, 25:54085 (A/CONF.49/P-312)
  decontamination of equipment and surfaces of, 25:53989 (A/CONF.49/P-799)
  development in Germany of power, review of, 25:53957 (A/CONF.49/P-806)
  economics of CANDU-type, 25:54124 (A/CONF.49/P-151)
  fuel cycle management for, calculation of optimum, 25:54085 (A/CONF.49/P-312)
  fuel elements for, analysis of field testing requirements for, 25:54098 (NEDO-10017)
  operating aspects of heavy water moderated, analysis of load following, 25:53942 (A/CONF.49/P-479)
  pressure vessels for, development of prestressed concrete, 25:54070 (A/CONF.49/P-307)
  shutdown system of power, safety analysis of transients during failure of, 25:54160 (NEDO-10349)
REACTORS, BREEDER
  conrol rod for steam cooled fast, description of ejection preventing safety lock for, 25:54068(P)
  cooling system for heavy water steam cooled fast, 25:54073(P)
  core meltdown accident in 1000 MW(e) gas cooled fast, analysis of cooling and containment requirements for, 25:54161 (ORNL-TM-3546)
  design parameters of 1000 MW(e) helium cooled fast, 25:54011 (A/CONF.49/P-23)
  development in Belgium, Denmark, Germany, and Netherlands of liquid metal cooled fast, review of joint, 25:54026 (A/CONF.49/P-366)
  development in France, status of, 25:54036 (A/CONF.49/P-583)
  development in Italy of liquid metal cooled fast power, cost analysis for, 25:54019 (A/CONF.49/P-175)
  development of gas cooled fast, 25:54013 (A/CONF.49/P-116)
  development of liquid sodium cooled fast, in Japan, 25:54043 (A/CONF.49/P-819)
  development of U.S. fast, 25:54047
  fuel cladding for, creep rupture at 550 to 700ºC of Type 316 stainless steel, 25:52355
  fuels for liquid metal cooled fast, development in Japan of plutonium bearing, 25:54094 (A/CONF.49/P-821)
  fuels in, burnup efficiency of, 25:54135 (A/CONF.49/P-709)
  operation experience of U.S.S.R., summary of, 25:54136 (A/CONF.49/P-750)
REACTORS, CANADA
  development of optimum cost analysis for power, 25:53929 (A/CONF.49/P-149)
  industrial investments for development of power, 25:53887 (A/CONF.49/P-155)
  operation of power, review of, 25:53928 (A/CONF.49/P-148)
  safety of, review of criteria for, 25:54142 (A/CONF.49/P-150)
REACTORS, CANDU-TYPE
  cost analysis for, development of optimum, 25:53929 (A/CONF.49/P-149)
  development in Canada, industrial investments for, 25:53887 (A/CONF.49/P-155)
  economics of, comparison of cooling systems for, 25:54124 (A/CONF.49/P-151)
  fuel elements for, fabrication and operation cost analysis for uranium oxide (UO$_2$), 25:53888 (A/CONF.49/P-156)
  marketing of, problems of, 25:53884 (70-CNA-647)
  pressure tubes for, metallurgical properties of niobium--zirconium-base alloy, 25:52385 (A/CONF.49/P-159)
REACTORS, FAST
  accident analysis for, summary of computer programs for, 25:54203 (HEDL-TME-71-30)
  control rod for steam cooled breeder, description of ejection preventing safety lock for, 25:54068(P)
  coolant boiling in liquid sodium cooled, neutronic-acoustic detection system for, 25:54078
  cooling system for heavy water steam cooled breeder, 25:54073(P)
  core disassembly and meltdown accidents in, performance of cooling system and containment structure during, 25:54206 (HEDL-TME-71-50)
  core handling equipment for liquid metal cooled test, 25:54216(P)
  core meltdown accident in 1000 MW(e) gas cooled breeder, analysis of cooling and containment requirements for, 25:54161 (ORNL-TM-3546)
  design concept for dual spectrum, for safeguards assay of plutonium--uranium fuels, 25:54217
  design of, review of standard nuclear data for, 25:54256 (CONF-701002-, pp 12-24)
  design parameters of 1000 MW(e) helium cooled, 25:54011 (A/CONF.49/P-23)
  development in Belgium, Denmark, Germany, and Netherlands of liquid metal cooled breeder, review of joint, 25:54026 (A/CONF.49/P-366)
  development in France, status of, 25:54036 (A/CONF.49/P-583)
  development in Italy of liquid metal cooled power, cost analysis for, 25:54019 (A/CONF.49/P-175)
  development in U.K. of liquid sodium cooled, 25:54030 (A/CONF.49/P-481)
  development of gas cooled breeder, 25:54013 (A/CONF.49/P-116)
  development of liquid sodium cooled breeder, in Japan, 25:54043 (A/CONF.49/P-819)
  development of U.S. breeder, 25:54047
  Doppler temperature coefficients for, calculations with resonance overlap for, (T), 25:54061
  energy releases from hypothetical accidents in, calculation and assessment of, 25:54204 (HEDL-TME-71-34)
  fuel cladding for, creep rupture at 550 to 700ºC of Type 316 stainless steel, 25:52355
  fuel cycles for, problems and economics of plutonium, 25:54285 (A/CONF.49/P-496)
  fuel element cladding for, fast neutron radiation effects on creep in, 25:54110
  fuel element cladding for, fast neutron radiation effects on, 25:54108
  fuel element cladding for, stress and strain calculations for, 25:54114
  fuel element failures in sodium cooled, mechanisms and consequences of, (E), 25:54141 (A/CONF.49/P-27)
  fuel elements for, development in Italy of, 25:53889 (A/CONF.49/P-188)
  fuel elements for, radiation effects on stresses in pin-type, 25:54086 (A/CONF.49/P-392)
  fuel elements of liquid sodium cooled power, fission gas collection system for, 25:54119 (RT/ING-(71)2)
  fuel pins for Na-1 concept, effects of spacer grid distribution on vibration of, (E), 25:54095(T) (EURFNR-903)
  fuels for liquid metal cooled breeder, development in Japan of plutonium bearing, 25:54094 (A/CONF.49/P-821)
  fuels for, Belgian programs for development of, 25:54083 (A/CONF.49/P-275)
  fuels for, fast neutron radiation effects on, 25:54108
  fuels for, fast neutron radiation effects on creep in, 25:54110
  fuels for, utilization of plutonium in, 25:54126 (A/CONF.49/P-185)
  fuels in, burnup efficiency of, 25:54135 (A/CONF.49/P-709)
  neutron distribution in, neutron flux factorization for calculation of space and energy, 25:54269
  operating aspects of power, analysis of load following, 25:53942 (A/CONF.49/P-479)
  operation experience of U.S.S.R., summary of, 25:54136 (A/CONF.49/P-750)
  operations aspects of power, 25:54133 (A/CONF.49/P-472)
  physics calculations for, development of RABBLE and VIM codes for, 25:54060(R) (AI-AEC-13005)
  transients in, spectral synthesis method analysis of spatially dependent, 25:54279
REACTORS, FRANCE
  development of high temperature, summary of, 25:54037 (A/CONF.49/P-585)
  development programs for power, 25:54035 (A/CONF.49/P-569)
  fuels from, research on equipment and methods for shipping spent, 25:51752 (A/CONF.49/P-611)
  radiation protection methods for, summary of Electricite de France, 25:53990 (A/CONF.49/P-848)
REACTORS, GAS-COOLED
  control rod standpipes for, description of top and bottom pressure vessel penetrating, 25:54066(P)
  coolant additives for carbon dioxide cooled graphite moderated, decreased coolant radiolytic reaction with graphite by methane, 25:54074(P)
  coolant flow path for, description of power fuel axial entrance and radial exit, 25:54076(P)
  cooling system for, design characteristics of, 25:53900 (A/CONF.49/P-469)
  cooling system for, design requirements for, 25:54147 (A/CONF.49/P-475)
  core meltdown accident in 1000 MW(e) fast breeder, analysis of cooling and containment requirements for, 25:54161 (ORNL-TM-3546)
  design parameters for conceptual 640 MW(e) prismatic core, 25:54130 (A/CONF.49/P-346)
  design parameters of 1000 MW(e) helium cooled fast, 25:54011 (A/CONF.49/P-23)
  development of fast breeder, 25:54013 (A/CONF.49/P-116)
  development of high temperature helium cooled, estimates

in England to year 1990 of, 25:54029 (A/CONF.49/P-480)
- development of high temperature, in France, 25:54037 (A/CONF.49/P-585)
- fuel cycle for power, calculation of optimum economic, 25:54134 (A/CONF.49/P-497)
- fuel cycle management for conceptual 640 MW(e) prismatic core, 25:54130 (A/CONF.49/P-346)
- fuel cycles for high temperature, economics of high enriched and low enriched uranium, 25:54131 (A/CONF.49/P-389)
- fuel element standpipes for, description of pressure equalizing locking plugs for, 25:54107(P)
- fuel elements for high temperature, development of fabriction methods for, 25:54087 (A/CONF.49/P-494)
- fuel elements for high temperature, optimum economic design parameters for pin type, 25:54088 (A/CONF.49/P-495)
- fuel elements for, development in Italy of, 25:53889 (A/CONF.49/P-188)
- fuel elements of, performance uranium tube, 25:54091 (A/CONF.49/P-608)
- fuels for high temperature, program in Belgium for development of, 25:54084 (A/CONF.49/P-288)
- moderators for carbon dioxide cooled, effects of coolant composition on corrosion cf graphite, 25:54032 (A/CONF.49/P-504)
- operating aspects of high temperature, analysis of load following, 25:53942 (A/CONF.49/P-479)
- pressure vessels for, design requirements for prestressed concrete, 25:54147 (A/CONF.49/P-475)
- protection system for, design requirements for, 25:54147 (A/CONF.49/P-475)
- safety aspects of high temperature, 25:54147 (A/CONF.49/P-475)
- support structures for, design of earthquake resistant, 25:54151 (A/CONF.49/P-672)
- turbines for carbon dioxide-cooled, design for closed cycle gas, 25:51679(P)

REACTORS, GAS-FUELED
- performance of regeneratively cooled gas core, for various space missions, (T), 25:54227 (N-71-22618)

REACTORS, GERMANY
- safety of water cooled, design and performance of systems for, 25:54146 (A/CONF.49/P-365)
- safety of, licensing criteria and procedures for, 25:54145 (A/CONF.49/P-364)

REACTORS, GRAPHITE-MODERATED
- coolant additives for carbon dioxide cooled, decreased coolant radiolytic reaction with graphite by methane, 25:54074(P)
- moderators for carbon dioxide cooled, effects of coolant composition on corrosion cf, 25:54032 (A/CONF.49/P-504)

REACTORS, GREAT BRITAIN
- development of high temperature helium cooled, estimates to year 1990 of, 25:54029 (A/CONF.49/P-480)
- development of liquid sodium cooled fast, 25:54030 (A/CONF.49/P-481)
- development since 1964, summary of, 25:53899 (A/CONF.49/P-467)
- operation since 1964, summary of, 25:53899 (A/CONF.49/P-467)
- operations aspects of power, comparison of reactor types for load following, 25:53942 (A/CONF.49/P-479)
- operations aspects of research, review of, 25:54179 (A/CONF.49/P-485)
- performance of power, review of, 25:53939 (A/CONF.49/P-468)

REACTORS, HEAVY WATER-MODERATED
- design characteristics of pressure tube, 25:54031 (A/CONF.49/P-483)
- fuel cycle for steam generating pressure tube power, calculation of optimum economics, 25:54134 (A/CONF.49/P-497)
- fuel cycles for organic cooled, economics of thorium, 25:54125 (A/CONF.49/P-157)
- fuel element assemblies of boiling water cooled, description of pressure tube, 25:54106(P)
- operating aspects of boiling, analysis of load following, 25:53942 (A/CONF.49/P-479)

REACTORS, HETEROGENEOUS
- kinetics for, calculation of space and time dependent, (T), 25:54274
- neutron diffusion coefficients for, integral transport theory and P/sub N/ approximation methods for calculation of, (T), 25:54272
- neutron flux in, description of fuel assembly enclosed absorbing material for shaping, 25:54065(P)

REACTORS, JAPAN
- design of, earthquake resistant criteria for, 25:53974 (A/CONF.49/P-226)
- development of liquid sodium cooled fast breeder, 25:54043 (A/CONF.49/P-819)
- structural components of, review of safety programs for, 25:54143 (A/CONF.49/P-225)

REACTORS, LIQUID METAL-COOLED
- accident analysis for, summary of computer programs for, 25:54203 (HEDL-TME-71-30)
- coolant boiling in fast, neutronic-acoustic detection system for, 25:54078
- coolant channel plugging accidents in, propagation of sodium boiling and fuel element failures from, (T), 25:54167
- coolant for, methods for control of fires from leaking sodium, 25:51789
- cooling system of, description of core dual conduit circuits for, 25:54077(P)
- core disassembly and meltdown accidents in, performance of cooling system and containment structure during, 25:54206 (HEDL-TME-71-50)
- core handling equipment for fast test, description of, 25:54216(P)
- development in Belgium, Denmark, Germany, and Netherlands of fast breeder, review of joint, 25:54026 (A/CONF.49/P-366)
- development in Italy of fast breeder power, cost analysis for, 25:54019 (A/CONF.49/P-175)
- development in U.K. of fast, 25:54030 (A/CONF.49/P-481)
- development of fast breeder, in Japan, 25:54043 (A/CONF.49/P-819)
- Doppler coefficient calculations for, 25:54208 (HEDL-TME-71-89)
- Doppler coefficient calculations for, isothermal, 25:54207 (HEDL-TME-71-81)
- energy releases from hypothetical accidents in, calculation and assessment of, 25:54204 (HEDL-TME-71-34)
- fuel element failures in sodium cooled, mechanisms and consequences of, (E), 25:54141 (A/CONF.49/P-27)
- fuel elements for, effects of rod spacing on stresses and temperature distribution in clusters of rod, 25:54115
- fuel elements of fast power, fission gas collection system for, 25:54119 (RT/ING-(71)2)
- fuels for fast breeder, development in Japan of plutonium bearing, 25:54094 (A/CONF.49/P-821)
- fuels in fast breeder, burnup efficiency of, 25:54135 (A/CONF.49/P-709)
- piping system for, description of telescoping tube bellows type expansion joints for, 25:54079(P)
- reactivity measurement using rod-drop method, (E), 25:54199 (ANL-EBR-28)

REACTORS, MAGNOX
- cooling system for, design parameters and performance of, 25:53900 (A/CONF.49/P-469)
- fuel elements for, developments in fabrication processes for, 25:52427 (A/CONF.49/P-490)
- fuel elements of, performance of, 25:53903 (A/CONF.49/P-500)
- loading machines for, performance of, 25:53901 (A/CONF.49/P-470)
- pressure vessels for, design parameters and performance of, 25:53900 (A/CONF.49/P-469)
- radioactive effluents from, compariscn of calculated and measured, 25:53981 (A/CONF.49/P-505)
- shielding for, performance of, 25:53981 (A/CONF.49/P-505)

REACTORS, MARITIME
- design characteristics of Lenin Ship Reactor, 25:54251 (A/CONF.49/P-722)
- design parameters in Italy, 25:54246 (A/CONF.49/P-178)
- operations of Lenin Ship Reactor, review of, 25:54251 (A/CONF.49/P-722)

REACTORS, ORGANIC-COOLED
- cost analysis for reference 220 MW(t) desalination, 25:54233 (A/CONF.49/P-177)
- design parameters for reference 220 MW(t) organic moderated desalination, 25:54233 (A/CONF.49/P-177)
- economics of CANDU-type, 25:54124 (A/CONF.49/P-151)
- fuel cycles for heavy water moderated, economics of thorium, 25:54125 (A/CONF.49/P-157)

REACTORS, ORGANIC-MODERATED
- cost analysis for reference 220 MW(t) desalination, 25:54233 (A/CONF.49/P-177)
- design parameters for reference 220 MW(t) organic cooled desalination, 25:54233 (A/CONF.49/P-177)

REACTORS, PEBBLE-BED
- control rod drives for, description of coaxial shaft threaded gear, 25:54067(P)
- control rods for, description of helical grooved, 25:54067(P)
- fuel sphere circulations in, core vessel shaping for improved, 25:54057(P)
- loading machine for, interchangeable component unit design for, 25:54296(P)

REACTORS, POWER
- auxiliary systems for, reference preliminary safety analysis report for, 25:54157 (DOCKET-RESARA-4)
- containment system for boiling, performance during coolant loss accident of pressure suppression, 25:54118 (NEDO-10320)
- control systems for, development of on-line digital computer, 25:53893 (A/CONF.49/P-294)
- control systems for, development requirements of, 25:54059
- control systems for, reference safety analysis report for, 25:54157 (DOCKET-RESARA-4)
- cooling system for, reference safety analysis report for, 25:54156 (DOCKET-RESARA-3)
- core meltdown accident in 1000 MW(e) gas cooled fast breeder, analysis of cooling and containment requirements for, 25:54161 (ORNL-TM-3546)
- design characteristics for, reference safety analysis report for, 25:54156 (DOCKET-RESARA-3)

XUM

design characteristics of dual purpose desalination, analysis of optimum, 25:54237 (A/CONF.49/P-484)
design characteristics of heavy water moderated pressure tube, 25:54031 (A/CONF.49/P-483)
design characteristics of U.S, 25:54047
design concept for production of algae in algo-agro-industrial complex, 25:54239 (A/CONF.49/P-552)
design of dual purpose, for reforming gas mixtures, desalination, and power, 25:54243(P)
design parameters for 200 MW(e) and 400 MW(e) water cooled, calculation of standard, 25:54022 (A/CONF.49/P-285)
design parameters for underground, 25:54045(P)
design parameters of CIRENE, summary of, 25:54020 (A/CONF.49/P-176)
development in Denmark, Finland, Norway, and Sweden, regional cooperation program for, 25:54010 (A/CONF.49/P-7)
development in France, 25:54035 (A/CONF.49/P-569)
development in Germany of boiling and pressurized water, review of, 25:53957 (A/CONF.49/P-806)
development in Italy of liquid metal cooled fast breeder, cost analysis for, 25:54019 (A/CONF.49/P-175)
development in Italy, review of program for, 25:54018 (A/CONF.49/P-169)
development in U.S., proposed schedule for, 25:54046
development of dual purpose process heat and, for agro-industrial complexes in India, 25:54238 (A/CONF.49/P-529)
development of high temperature helium cooled, estimates in England to year 1990 of, 25:54029 (A/CONF.49/P-480)
development of in-core thermionic, for space vehicles, 25:54230
development of liquid sodium cooled fast breeder, in Japan, 25:54043 (A/CONF.49/P-819)
development of U.S.S.R. Topaz, with thermionic converter, 25:54044 (A/CONF.49/P-852)
development of, problems in Canada of, 25:54009 (70-CNA-654)
economics for use in desalination and agro-industrial complexes in Israel, 25:54231 (A/CONF.49/P-18)
economics in Puerto Rico for agro-industrial complex, 25:53921 (TID-25602)
economics in Puerto Rico for agro-industrial complex, 25:53922 (TID-25603(Vol.1))
economics of dual purpose desalination, at power levels up to 500 MW(e), 25:54236 (A/CONF.49/P-371)
economics of dual purpose desalination, for coastal areas of Pakistan, 25:54234 (A/CONF.49/P-299)
economics of dual purpose process heat and, for chemical production and desalting, 25:54244
economics of dual purpose space heating, 25:53894 (A/CONF.49/P-322)
emergency core cooling system for water cooled, performance criteria for, 25:54120
engineered safeguards for, reference safety analysis report for, 25:54157 (DOCKET-RESARA-4)
fuel cycle management for water cooled, multilevel data-based computer programs for, 25:54129 (A/CONF.49/P-293)
fuel cycle management for, effective planning of overall operations for optimum economic, 25:53954 (A/CONF.49/P-764)
fuel cycle management in, optimization of, 25:53937 (A/CONF.49/P-390)
fuel cycles for process heat, economics of thorium, 25:54125 (A/CONF.49/P-157)
fuel cycles for, effects of plutonium utilization on long term, 25:54138 (A/CONF.49/P-822)
fuel cycles in water cooled, development in Belgium of plutonium recycle, 25:54128 (A/CONF.49/P-277)
fuel element cladding of water cooled, effects of coolant loss accidents on failure of Zircaloy, (E), 25:54116
fuel elements of liquid sodium cooled fast, fission gas collection system for, 25:54119 (RT/ING-(71)2)
fuels for high temperature, computer program calculation of burnup effects on stresses in coated particle sphere, 25:54113
fuels for high temperature, effects of burnup induced stresses on lifetime of coated particle sphere, 25:54111
fuels for high temperature, effects of burnup on stresses in coated particle sphere, (T), 25:54112
fuels for thermal, effects of burnup on isotopic composition of plutonium bearing, 25:54093 (A/CONF.49/P-610)
fuels for, irradiation performance of, 25:54082 (A/CONF.49/P-158)
fuels in fast breeder, burnup efficiency of, 25:54135 (A/CONF.49/P-709)
inspection in Italy, description of equipment and procedures for, 25:53930 (A/CONF.49/P-171)
instrumentation for, reference safety analysis report for, 25:54157 (DOCKET-RESARA-4)
kinetics of, 25:54059
list of U.S., complete, 25:53920 (TID-8200(24th Rev.))
maintenance in Italy, description of equipment and procedures for, 25:53930 (A/CONF.49/P-171)
maintenance requirements for, 25:53969
neutron flux variations during transients in, effects of xenon-induced spatial, (T), 25:54063
operation in Puerto Rico of agro-industrial complex, cost analysis and production efficiency calculations for, 25:54242 (TID-25603(Vol.2))
operations aspects in U.K., comparison of reactor types for load following, 25:53942 (A/CONF.49/P-479)
operations aspects in U.K., review of, 25:53939 (A/CONF.49/P-468)
operations aspects of fast, 25:54133 (A/CONF.49/P-472)
operations aspects of U.S, 25:54047
performance of U.K., review of, 25:53939 (A/CONF.49/P-468)
power increases in, effects in fuel element cladding cracking of incremental, 25:54282 (A/CONF.49/P-314)
pressure vessels for U.K., design requirements of, 25:53941 (A/CONF.49/P-474)
pressure vessels for, effects of neutron radiation and size on brittle failure of, 25:54072 (A/CONF.49/P-548)
pumps for, reliability and maintenance requirements of, 25:53969
quality assurance program for, reference safety analysis report for, 25:54158 (DOCKET-RESARA-5)
radioisotope release to environment by, hazards to human populations from, 25:52050
reliability of, requirements for components, 25:53969
safety aspects of dual purpose space heating, 25:53894 (A/CONF.49/P-322)
safety aspects of, .(E/T), 25:54149 (A/CONF.49/P-477)
safety of Canadian, review of criteria for, 25:54142 (A/CONF.49/P-150)
safety of dual purpose, in power and district heating plants, 25:54235 (A/CONF.49/P-311)
safety of German, licensing criteria and procedures for, 25:54145 (A/CONF.49/P-364)
safety of integral cooling system design concepts, application of maximum credible accident criteria to, 25:54148 (A/CONF.49/P-476)
safety of, basic concepts of, 25:54165
shutdown system of boiling, safety analysis of transients during failure of, 25:54160 (NEDO-10349)
site in Puerto Rico for agro-industrial complex, data analysis for selection of optimum, 25:54162 (TID-25603(Suppl.))
siting of U.S., environmental considerations for, 25:54164
support structures for, design of earthquake resistant, 25:54151 (A/CONF.49/P-672)
surveillance in Italy, description of equipment and procedures for on-load, 25:53930 (A/CONF.49/P-171)
testing of U.S.S.R. Topaz, with thermionic converter, 25:54044 (A/CONF.49/P-852)
testing program for, reference safety analysis report for, 25:54158 (DOCKET-RESARA-5)
underground construction of, economics and safety aspects of, 25:54144 (A/CONF.49/P-290)

REACTORS, PRESSURIZED-WATER
containment system for, description of ice condensers, 25:54121(P)
containment systems of, performance during coolant loss accident conditions of, (E), 25:54155 (BNWL-1592)
control fluids of, radiation detector system for monitoring effectiveness of chemical, 25:54069(P)
coolant loss accidents in, blowdown and core heatup during, 25:54168
coolant loss accidents in, computer program space and time dependent analysis of, 25:54163 (WCAP-7750)
coolant loss accidents in, performance of containment systems during, (E), 25:54155 (BNWL-1592)
decontamination of equipment and surfaces of, 25:53989 (A/CONF.49/P-799)
development in Germany of power, review of, 25:53957 (A/CONF.49/P-806)
economics of heavy water cooled CANDU-type, 25:54124 (A/CONF.49/P-151)
fuel assemblies for, design of plutonium recycle, 25:54104 (WCAP-4167-1, pp 4.1-35)
fuel element management in, development of simulator and computer codes for, 25:53892 (A/CONF.49/P-278)
fuel elements for, performance of Zircaloy clad mixed oxide, (E), 25:54101(R) (WCAP-3385-28)
fuels for, power distribution and depletion calculations for plutonium recycle, 25:54103 (WCAP-4167-1, pp 3.1-30)
fuels for, utilization of plutonium in, (E/T), 25:54101(R) (WCAP-3385-28)
power conversion systems for, compressor and heat exchanger arrangement for reserve, 25:54169 (A/CONF.49/P-582)

REACTORS, PROCESS HEAT
cost analysis for reference 220 MW(t) organic cooled and moderated desalination, 25:54233 (A/CONF.49/P-177)
design characteristics of dual purpose desalination and power, analysis of optimum, 25:54237 (A/CONF.49/P-484)
design concept for production of algae in algo-agro-industrial complex, 25:54239 (A/CONF.49/P-552)
design of dual purpose, for reforming gas mixtures, desalination, and power, 25:54243(P)
design parameters for reference 220 MW(t) organic cooled and moderated desalination, 25:54233 (A/CONF.49/P-177)
design parameters of high temperature tungsten--uranium oxide (UO_2) fueled spherical shell, for use as thermal radiation source, 25:54245
development in Spain of desalination, summary of,

- 25:54241 (A/CONF.49/P-733)
- development of dual purpose power and, for agro-industrial complexes in India, 25:54238 (A/CONF.49/P-529)
- economics for desalination in United Arab Republic, 25:54232 (A/CONF.49/P-140)
- economics for use in desalination and agro-industrial complexes in Israel, 25:54231 (A/CONF.49/P-18)
- economics in Puerto Rico for agro-industrial complex, 25:53922 (TID-25603(Vol.1))
- economics in Puerto Rico for agro-industrial complex, 25:53921 (TID-25602)
- economics of dual purpose desalination, at power levels up to 500 MW(e), 25:54236 (A/CONF.49/P-371)
- economics of dual purpose desalination, for coastal areas of Pakistan, 25:54234 (A/CONF.49/P-299)
- economics of dual purpose power and space heating, 25:53894 (A/CONF.49/P-322)
- economics of dual purpose power and, for chemical production and desalting, 25:54244
- evaporation for dual purpose power and, distillation cycle for, 25:54240 (A/CONF.49/P-590)
- fuel cycles for power, economics of thorium, 25:54125 (A/CONF.49/P-157)
- operation in Puerto Rico of agro-industrial complex, cost analysis and production efficiency calculations for, 25:54242 (TID-25603(Vol.2))
- safety aspects of dual purpose power and space heating, 25:53894 (A/CONF.49/P-322)
- safety of dual purpose, in power and district heating plants, 25:54235 (A/CONF.49/P-311)
- site in Puerto Rico for agro-industrial complex, data analysis for selection of optimum, 25:54162 (TID-25603(Suppl.))

REACTORS, PRODUCTION
- list of U.S., complete, 25:53920 (TID-8200(24th Rev.))

REACTORS, RESEARCH
- construction in Latin America, summary of existing and planned, 25:53912 (A/CONF.49/P-757)
- design of Franco-German High Flux, summary of, 25:54185 (A/CONF.49/P-594)
- design of U.S.S.R. IBR-2, 25:54189 (A/CONF.49/P-774)
- design parameters in 2 kW(t) fast, Japan of, 25:54192 (A/CONF.49/P-820)
- development of Franco-German High Flux, summary of, 25:54185 (A/CONF.49/P-594)
- experimental facilities in U.S.S.R. MP Materials Testing Multiloop, description of, 25:54187 (A/CONF.49/P-720)
- in-pile irradiation facilities for specialized, advancements in design in France of, 25:54184 (A/CONF.49/P-593)
- irradiation testing programs for JRR-2 and JRR-3, review of, 25:54193 (A/CONF.49/P-823)
- list of U.S., complete, 25:53920 (TID-8200(24th Rev.))
- neutron beam studies in HERALD, 25:54180 (A/CONF.49/P-486)
- neutron source for U.S.S.R. IBR-2, design of, 25:54189 (A/CONF.49/P-774)
- nuclear physics programs in Yugoslavia, 25:54178 (A/CONF.49/P-348)
- operating experience of, summary, 25:54190 (A/CONF.49/P-776)
- operation and uses of ARB1, ARGOS, and Coral-1, summary of, 25:54188 (A/CONF.49/P-732)
- operation of Democritos, review of, 25:54172 (A/CONF.49/P-3)
- operation of IRR-1, review of advanced research projects in, 25:54173 (A/CONF.49/P-11)
- operation of U.S.S.R. MP Materials Testing Multiloop, problem of increasing efficiency for, 25:54187 (A/CONF.49/P-720)
- operations aspects in Hungary of WWR-type, reviews of, 25:54176 (A/CONF.49/P-326)
- operations aspects of KUR, review of nuclear physics studies, 25:54192 (A/CONF.49/P-820)
- operations aspects of U.K., review of, 25:54179 (A/CONF.49/P-485)
- operations experience of U.S.S.R. fast, summary of, 25:54136 (A/CONF.49/P-750)
- operations history in Romania of WWR-S, review of, 25:54177 (A/CONF.49/P-344)
- radioisotope production in Yugoslavia, 25:54178 (A/CONF.49/P-348)
- reactivity measurements in pulsed TRIGA, kinetic distortion effect on, (E/T), 25:54275
- research programs for IRR-2, review of, 25:54186 (A/CONF.49/P-655)
- safety of Karlsruhe FR2, for irradiation testing, 25:52409 (KFK-1398)
- use of TRIGA, as neutron source in radiography facility, 25:51737
- uses in Argentina nuclear energy programs, summary of present and future, 25:54181 (A/CONF.49/P-559)

REACTORS, ROCKET
- dynamics of, effects of fission product decay heating on re-start, (T), 25:54228
- list of U.S., complete, 25:53920 (TID-8200(24th Rev.))
- performance of regeneratively cooled gas core, for various space missions, (T), 25:54227 (N-71-22618)
- shielding calculations for, compilation of cross section data for, 25:54220(R) (N-71-15163)
- shielding calculations for, cross section generation and data processing codes for, 25:54221(R) (N-71-15164)
- shielding calculations for, one-dimensional discrete ordinates transport technique for, 25:54222(R) (N-71-15165)
- shielding calculations for, point kernel techniques for, 25:54224(R) (N-71-15167)
- shielding calculations for, two-dimensional discrete ordinates transport technique for, 25:54223(R) (N-71-15166)

REACTORS, SUPERHEATING
- control rod for steam cooled fast breeder, description of ejection preventing safety lock for, 25:54068(P)
- cooling system for heavy water steam cooled fast breeder, 25:54073(P)

REACTORS, TEST
- core handling equipment for liquid metal cooled fast, description of, 25:54216(P)
- list of U.S., complete, 25:53920 (TID-8200(24th Rev.))

REACTORS, THERMAL
- fuel cycles for, problems and economics of plutonium, 25:54285 (A/CONF.49/P-496)
- fuels for power, effects of burnup on isotopic composition of plutonium bearing, 25:54093 (A/CONF.49/P-610)
- fuels for water cooled, development in Japan of plutonium oxide (PuO_2)--uranium oxide (UO_2), 25:54094 (A/CONF.49/P-821)
- fuels for, utilization of plutonium in, 25:54126 (A/CONF.49/P-185)

REACTORS, U.S.S.R.
- development of water cooled and moderated, summary of, 25:54038 (A/CONF.49/P-693)
- operations experience of fast breeder, summary of, 25:54136 (A/CONF.49/P-750)

REACTORS, WATER-COOLED
- containment systems for, MIRA code for analysis of iodine removal by, 25:54152 (BMI-1915)
- coolant loss accidents in, blowdown and core heatup during, (E), 25:54168
- cooling channels for, helical baffle for prevention of dryout in, 25:54081(P)
- decontamination of equipment and surfaces of, 25:53989 (A/CONF.49/P-799)
- design characteristics of U.S, 25:54047
- design parameters for 200 MW(e) and 400 MW(e), calculation of standard, 25:54022 (A/CONF.49/P-285)
- development in U.S.S.R., summary of, 25:54038 (A/CONF.49/P-693)
- emergency core cooling system for power, performance criteria for, 25:54120
- fuel cycle management for power, multilevel data-based computer programs for, 25:54129 (A/CONF.49/P-293)
- fuel cycles for, Italian program for analysis of thorium--uranium, 25:54127 (A/CONF.49/P-186)
- fuel cycles in power, development in Belgium of plutonium recycle, 25:54128 (A/CONF.49/P-277)
- fuel element assemblies of heavy water moderated boiling, description of pressure tube, 25:54106(P)
- fuel element cladding of power, effects of coolant loss accidents on failure of Zircaloy, (E), 25:54116
- fuel element meltdown in, hydrogen release from uranium oxide (UO_2)--water reactions during, (E), 25:54159 (IN-ITR-108)
- fuel elements of, description of offset on partitioned central voids in rod type ceramic, 25:54105(P)
- fuels for thermal, development in Japan of plutonium oxide (PuO_2)--uranium oxide (UO_2), 25:54094 (A/CONF.49/P-821)
- operations aspects of U.S, 25:54047
- radiation monitoring in U.S.S.R, 25:53987 (A/CONF.49/P-687)

REMOTE-CONTROL EQUIPMENT

- design for sampling FFTF sodium, 25:51764 (HEDL-SA-123)

REMOTE-HANDLING EQUIPMENT

- conference on remote systems technology, Washington, D.C., Nov. 1970, 25:51779
- design for maintenance of beam-line components and shielding of 20-GeV proton accelerator, 25:53458
- design for positioning samples for stereoscopic inspection in ANL Fuel Cycle Facility hot cell, 25:51796
- design for processing underground explosion drill cores, 25:51794
- design for transfer of alpha emitters in containment boxes, 25:51804
- design for TURF, 25:51790
- design for TURF californium facility, 25:51791
- design of grasping, for radioactive materials, 25:51777(P)
- design with hydraulically actuated manipulator arm, 25:51775(P)
- development and uses of master--slave-type, 25:51801
- development of vehicle-mounted, for light and heavy-duty operations in radioactive environments, 25:51753 (A/CONF.49/P-617)
- motion locks for master--slave-type, design of trigger-actuated pneumatic, 25:51800
- wrist joints for master-slave, design of, 25:51776(P)

REMOTE-VIEWING EQUIPMENT

- design for inspection of ANL Fuel Cycle samples in Hot cell, 25:51796
- design for TURF, 25:51790

REPRODUCTIVE SYSTEM

- radiation effects on mechanical activity of vas deferens in guinea pig, effects of drugs on x, 25:52216

REPUBLIC OF CHINA

- nuclear energy program of, personnel training program for, 25:54012 (A/CONF.49/P-106)
- nuclear power plant construction in, economics of, 25:53956 (A/CONF.49/P-803)

REPUBLIC OF KOREA

- nuclear power plant construction in, estimates of future, 25:53913 (A/CONF.49/P-778)

REPUBLIC OF SOUTH AFRICA

- monitoring air in gold mines in, for radon-222 and decay products, 25:52064 (A/CONF.49/P-659)
- nuclear power plant economics in, computer model for simulation of, 25:53985 (A/CONF.49/P-660)
- radiation uses in agriculture in, during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)
- radioisotope tracer methods in agriculture in, during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)

RESINS

- effects of impregnation with cured, on fallout contamination of textiles, 25:52098(P)

RESISTORS

- radiation effects on volt--ampere characteristics of black silicon carbide varistors, fast neutron, 25:51956

RHENIUM

- compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
- neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
- thorium desorption from surfaces of, parameters for, 25:52367
- uranium desorption from surfaces of, parameters for, 25:52367

RHENIUM ALLOYS AND SYSTEMS

- HfC--Re--W-base, mechanical properties of dispersion-strengthened, 25:52327
- Mo--Re, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
- Mo--Re, compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
- Mo--Re--W, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
- Ni--Re, phase diagram of, 25:52384
- Re--ThO_2--W-base, crystallization behavior of dispersion-strengthened, effects of cold working on, 25:52458
- Re--W-base, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
- Re--W-base, compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)

RHENIUM ISOTOPES Re-185

- energy level from tungsten-186 (d,3n) reactions, lifetime of $9/2^-$, (E), 25:53763

RHENIUM ISOTOPES Re-186

- beta decay of, nuclear matrix elements for, (T), 25:53871

XUM

RHENIUM ISOTOPES Re-190
- isomeric transition in, half-life for, (E), 25:53743(R) (INR-1318)

RHODIUM
- analysis of fission product, for γ sources, 25:51385 (BNWL-CC-2239)

RHODIUM ISOTOPES Rh-102
- determination in fission product rhodium, 25:51385 (BNWL-CC-2239)

RHODIUM ISOTOPES Rh-103
- neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)

RHODIUM ISOTOPES Rh-109
- nuclear properties of, Nuclear Data Sheets for, (E), 25:53757

RICHLAND AREA (WASH.)
- radioactivity monitoring during 1968, 25:52055

ROBERT E. GINNA POWER REACTOR, UNIT 1
- operations for December 1970 to June 1971, 25:53964 (DOCKET-50244-77)

ROCKET REACTORS (NERVA)
- cooldown of, in-flight coolant management for, (T), 25:54229

ROCKS
- analysis for radioactive elements by chemical, radiochemical, and radiometric methods, 25:51391
- analysis for zirconium by fluorometry using quercetin as complexing agent, 25:51377
- analysis of German and Czechoslovakian standard, by neutron activation, 25:51408 (IFA-NR-34)

ROMANIA
- international cooperation in field of atomic energy by, 25:54324 (A/CONF.49/P-341)
- radioisotope and radiation uses in, 25:51608 (A/CONF.49/P-340)

ROOTS
- distribution in soils, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
- growth pattern of crop plant, rubidium-86 tracer studies of, 25:51966 (A/CONF.49/P-506)
- water movements in, oxygen-18 and tritium tracer studies of, 25:51960 (A/CONF.49/P-626)

ROYAL JELLY
- radioprotective effects on mice, x, 25:52108

RUBIDIUM
- abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
- determination in powdered thermal water residues, mass spectrographic, 25:51369

RUBIDIUM ISOTOPES Rb-85
- neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)

RUBIDIUM ISOTOPES Rb-86
- use as tracer for determining growth pattern of roots of crop plants, 25:51966 (A/CONF.49/P-506)
- use for scanning heart for function, 25:52130 (A/CONF.49/P-631)

RUBIDIUM ISOTOPES Rb-87
- neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)

RUBIDIUM NEPTUNATES
- preparation and properties of Rb_3NpO_5, 25:51431

RUTHENIUM
- determination by spectrophotometry using acenaphthenequinone monoxime, 25:51375
- determination of trace amounts of, in platinum by neutron activation and radiochemical separation, 25:51409 (IS-T-458)
- distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
- separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)

RUTHENIUM ALLOYS AND SYSTEMS
- Ce--Gd--Ru, magnetization and thermal capacity of superconducting, (T), 25:52739

RUTHENIUM ISOTOPES Ru-103
- separation from liquid waste solutions, effects of iron compounds on, 25:51564 (A/CONF.49/P-621)

RUTHENIUM ISOTOPES Ru-106
- determination simultaneously with niobium-95 and zirconium-95, electrolytic methods in, 25:51400
- separation from irradiated thorium--uranium fuels by solvent extraction using N-methyldidecylamine, 25:51566 (A/CONF.49/P-650)
- separation from liquid waste solutions, effects of iron compounds on, 25:51564 (A/CONF.49/P-621)

RUTHENIUM ISOTOPES Ru-109
- nuclear properties of, Nuclear Data Sheets for, (E), 25:53757

RUTHENIUM OXIDES
- distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
- volatilization and deposition of RuO_2, in relation to FINGAL process, 25:51571 (AERE-R-6418)

S

S-MATRIX
- correlation functions, low-energy theorems for, 25:53397
- equations for nonrelativistic, complete set of, 25:53374
- Lagrangian correlation with unitarity of, realistic field theories for Hermitian, 25:53368
- theory for, analytic continuation of regular solution of Schroedinger equation in complex angular momentum plane in, 25:53391
- unitarity of, realistic field theories for Hermitian Lagrangian correlation with, 25:53368

SAINT LAURENT-DES-EAUX REACTOR (EDF-4)
- decontamination following fuel element meltdown in, 25:53918 (A/CONF.49/P-811)
- fuel elements of, startup after meltdown of, 25:53918 (A/CONF.49/P-811)
- repairs to fuel elements after meltdown incident in, 25:53918 (A/CONF.49/P-811)

SAINT LAURENT-DES-EAUX REACTOR, UNIT 2
- pressure vessels of, performance of prestressing and thermal insulation of, 25:53905 (A/CONF.49/P-571)

SALT DEPOSITS
- radioactive waste disposal in Lyons, Kansas, effects on environment of alpha and high-level, 25:51771 (TID-25729)
- radioactive waste disposal in, demonstration results of high-level solid, 25:51778
- roof beds in excavated, testing of bolts for supporting 2-ft-thick, 25:51738
- stratigraphy of Upper Silurian, in US, gamma well logging data on, 25:51624

SAMARIUM
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- radiolysis of aqueous solutions of, formation and reactions of divalent ions in electron pulse, 25:51508 (CONF-711001-(Vol.2), pp 560-72)
- separation from light rare earths by selective stripping of DEHPA organic phase, 25:51572 (CONF-711001-(Vol.1), pp 294-305)

SAMARIUM ALLOYS AND SYSTEMS
- radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
- Au--Sm, phase diagram and intermetallic compounds in, 25:52373 (CONF-711001-(Vol.1), pp 361-7)
- Co--Fe--Sm, lattice constants for Sm_2(Co/sub 1-x/Fe/sub x)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
- Co--Sm, magnetic properties of sintered, optimum composition for, 25:52938 (CONF-711001-(Vol.1), pp 242-51)
- Co--Sm, use as sintering aid for $PrCo_5$ magnets, 25:52939 (CONF-711001-(Vol.1), pp 252-60)
- Pd--Sm, electric conductivity of Pd_3Sm at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)

SAMARIUM BORIDES
- nonstoichiometry of SmB_6, (E/T), 25:52453 (CONF-711001-(Vol.2), pp 598-609)
- radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
- radiation effects on properties of SmB_6, fast neutron, 25:52477(T) (JPRS-53800, pp 307-13)

SAMARIUM CHLORIDES
- crystal structure of $SmCl_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

SAMARIUM FLUORIDES
- crystal structure of SmF_2, 25:51466 (CONF-711001-(Vol.1), pp 74-83)

SAMARIUM ISOTOPES Sm-143
- energy levels from samarium-144 (p,d) reactions, spectroscopic factors for, (E), 25:53740 (FRNC-TH-41)

SAMARIUM ISOTOPES Sm-144
- proton reactions (p,d) at 24.55 MeV, DWBA analysis of differential cross sections and spectra from, (E), 25:53740 (FRNC-TH-41)

SAMARIUM ISOTOPES Sm-150
- neutron capture by, gamma spectra from thermal, (E), 25:53741 (IAE-1976)

SAMARIUM ISOTOPES Sm-151
- binding energy of last neutron in, from samarium-150 neutron capture, (E), 25:53741 (IAE-1976)
- energy-level transitions from samarium-150 neutron capture, branching ratios and intensities of, (E), 25:53741 (IAE-1976)
- neutron capture by, gamma spectra from thermal, (E), 25:53741 (IAE-1976)

SAMARIUM ISOTOPES Sm-152
- binding energy of last neutron in, from samarium-151 neutron capture, (E), 25:53741 (IAE-1976)
- energy levels of, calculation including rotation--vibration interaction of moments of inertia of, (T), 25:53769
- energy-level transitions from samarium-151 neutron capture, branching ratios and intensities of, (E), 25:53741 (IAE-1976)
- energy-level transitions in, calculation including rotation--vibration interaction of matrix elements for E2, (T), 25:53769

SAMARIUM ISOTOPES Sm-153
- distribution in tissues of mice following inhalation as chloride, 25:51976
- isomeric transition in, half-life and branching ratio for, (E), 25:53783

SAMARIUM ISOTOPES Sm-154
- growth of large single crystals of, 25:52305 (CONF-711001-(Vol.2), pp 657-67)

XUM

- SAMARIUM OXIDES
  - radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
- **SAMPLING**
  - equipment for radioactive sodium, design of, 25:51764 (HEDL-SA-123)
- SAN ONOFRE POWER REACTOR, UNIT 1
  - cooling system of, response to earthquakes of, 25:54002 (UCLA-ENG-7151)
  - radioactive effluents from, conversion factors for, 25:53962 (DOCKET-50206-123)
  - site for, earthquake history of, 25:54002 (UCLA-ENG-7151)
  - steam and power conversion system of, response to earthquakes of, 25:54002 (UCLA-ENG-7151)
- SANDIA PULSED REACTOR II
  - control system for, 25:54213 (SC-M-710227)
  - design parameters of, 25:54213 (SC-M-710227)
  - operating manual for, 25:54213 (SC-M-710227)
- SANTA MARIA DE GARONA POWER REACTOR
  - operating experience with, summary, 25:53952 (A/CONF.49/P-735)
- SAVANNAH RIVER PRODUCTION REACTORS
  - xenon oscillations for, characteristics of axial, 25:54253 (DP-1251)
- SAXTON POWER REACTOR
  - fuel elements for, midlife handling and examination of core 3, 25:54101(R) (WCAP-3385-28)
  - operation during April through June 1971, 25:54101(R) (WCAP-3385-28)
- SCANDIUM
  - determination in air dusts and river sludge by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  - determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  - hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
  - effects of additions of, on electric, mechanical, and welding properties of copper and its alloys, 25:52368
- SCANDIUM ALLOYS AND SYSTEMS
  - bond energy of diatomic intermetallic compounds of, calculations of, 25:52321 (CONF-711001-(Vol.2), pp 795-803)
  - Au--Sc, dissociation energy of ScAu, 25:52321 (CONF-711001-(Vol.2), pp 795-803)
  - Ce-base--Sc--Y, Kondo effect in dhcp, 25:52951
  - Pd--Sc, electric conductivity of Pd_3Sc at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
- SCANDIUM ISOTOPES Sc-42
  - beta decay of, branching ratios for, (E), 25:53675
- SCANDIUM ISOTOPES Sc-43
  - energy-level transitions in, quartet-model calculation of probabilities for E2, (T), 25:53698
- SCANDIUM ISOTOPES Sc-45
  - energy levels from alpha Coulomb excitation, transition probabilities for, (E), 25:53608(R) (NP-18698)
  - energy-level scheme from proton inelastic scattering, (E), 25:53608(R) (NP-18698)
  - proton inelastic scattering at 2 to 5 MeV, p-γ coincidence spectra from, (E), 25:53608(R) (NP-18698)
- SCANDIUM ISOTOPES Sc-46
  - uses as tracer to study sediment movement around Karachi Harbor, 25:51606 (A/CONF.49/P-113)
- SCANDIUM ISOTOPES Sc-47
  - energy levels from calcium-46 proton resonances, isobaric analog, (E), 25:53672
- SCANDIUM OXIDES
  - preparation and properties of crystals of substoichiometric, 25:52954
- SCATTERING
  - amplitude for N-particle, operator formalism of generalized Virasoro model for, 25:53366
  - amplitude in dual resonance model corresponding to globular Feynman diagrams, 25:53382
  - amplitude of high-energy, on smooth quasipotential, 25:53367
  - amplitudes and unitarity relations in helicity formalism, partial-wave, 25:53361
  - amplitudes at high energies and at nonzero momentum transfers, properties of, 25:53365
  - amplitudes for excited nonspurious particles in dual-resonance models, 25:53371
  - amplitudes for forward two-particle, integral equation in multiperipheral model for absorptive part of forward, 25:53359
  - amplitudes for physical states in dual-resonance model, 25:53372
  - amplitudes for three-particle, analytic properties in scattering-angle variable for, 25:53363
  - amplitudes for, formalism for determination from polarization measurements, (T), 25:53844
  - amplitudes from potential, function for determining, 25:53392
  - amplitudes in multi-Regge theory, fixed-angle limits of multiparticle, 25:53360
  - amplitudes in nonpolynomial Lagrangian models, asymptotic decreasing Efimov, 25:53163
  - amplitudes in Regge pole theory, infinite one-particle-exchange model for, 25:53381
  - amplitudes in split-width dual model, crossing-symmetric, 25:53384
  - amplitudes of forward Compton, as analytic function of complex photon mass and energy, 25:53055
  - amplitudes of quasi-particle, irreducible Feynman diagram contribution to energy dependence of, 25:53388
  - amplitudes of two infinite-component fields, 25:53323
  - amplitudes of two-body, with separable interaction, complete set of equations for nonrelativistic S-matrix for, 25:53374
  - amplitudes of, Froissart--Gribov transforms and dispersion relations for distributions for, 25:53393
  - amplitudes of, Khuri-plane structure of Virasoro amplitude for, 25:53162
  - amplitudes of, N-point generalization of Virasoro, 25:53377
  - amplitudes of, planar and local duality for, 25:53385
  - amplitudes of, singularities of dual multiloop, 25:53358
  - cross sections for Compton, radiative corrections to, (T), 25:52633
  - equations for four-body, quasi-two-particle, 25:53373
  - Lippmann--Schwinger equation for two-body potential, existence of solutions of, 25:53396
  - operators for, properties of dual multiloop planar, 25:53394
  - phase shifts from potential, function for determining, 25:53392
  - potential finite Born series for exponential s-wave, 25:53386
  - potential high-energy, amplitude for smooth quasi-, 25:53367
  - potential many-body, modified least-squares technique for nonrelativistic attractive exponential, 25:53387
  - potential, analytic continuation of regular solution of Schroedinger equation in complex angular momentum plane for, 25:53391
  - potential, existence of solutions of Lippmann--Schwinger equation for two-body, 25:53396
  - potential, Fredholm methods for Green function of Schroedinger equation for three-body problem in, 25:53398
  - potential, function for determining amplitude and phase shifts from, 25:53392
  - potential, quasiclassical approximation for inverse problem in, 25:53369
  - potential, Sturm--Liouville functions for Schroedinger equation in anisotropic Saxon--Woods, 25:53376
  - potential, T-matrix for exponential, 25:53390
  - potential, T-matrix perturbation theory for Faddeev equations for three-body, 25:53364
  - potentials at fixed energy for spin-0- and -1/2-particle, construction of relativistic, 25:53389
  - potentials for, Regge trajectories at high energies for class of analytic, 25:53399
  - T-matrix for exponential potential, 25:53390
  - theory for stationary-state, 25:53395
  - theory of, matrix-shape approach to, 25:52682
  - theory of, use of coupled equations with self-consistent optical potential in, 25:52680
  - three-particle states in, invariance groups of phase space for classification of relativistic, 25:53375
  - transition probabilities in rotationally inelastic, semiclassical calculation of, 25:52659
  - two-body problem in, quasipotential theory for, 25:53281 (IC-71/75)
  - wave function for nonrelativistic three-body, coordinate asymptotics of, 25:53370
- SCHIZOMYCOTA
  - Azotobacter chroococcum, radiation effects on growth of cultures of, lethal dose for γ, 25:52270
  - Bacillus mesentericus, radioinduced mutations for increased antibody production, fast neutron, 25:52018 (A/CONF.49/P-690)
  - Bacillus subtilis, radiation effects on DNA in, repair capacity of competent cells following uv, 25:51996
  - Clostridium perfringens, radioinduced mutations for increased antibody production, fast neutron, 25:52018 (A/CONF.49/P-690)
  - Escherichia coli B, radioinduced single-strand DNA breaks in radiosensitive mutant of, x, 25:52024
  - Escherichia coli, radiation effects on DNA transfer in, uv, 25:52001
  - Escherichia coli, radiation effects on survival of, protective effects of guanosine-5'-monophosphate, nucleosides, and nucleotides against x, 25:52106 (A/CONF.49/P-257)
  - Escherichia coli, radioinduced lesions in DNA of mutants of, mechanisms of repair of, 25:52175 (A/CONF.49/P-163)
  - Escherichia coli, use of radiation effects on survival in human intestine of, as dosimeter for x radiation, 25:52269
  - Hemophilus influenzae, radiation effects on DNA of, reextraction study of integration and repair of uv, 25:52271
  - Hemophilus influenzae, radiation effects on transforming DNA of, effects of genetic mismatch and target size on uv, 25:52037
  - Pseudomonas sp., radioinduced mutations for increased antibody production, fast neutron, 25:52018 (A/CONF.49/P-690)
  - radioinduced injuries in, reaction mechanisms for gamma, uv, and x, 25:52268 (A/CONF.49/P-538)

- Staphylococcus aureus, radiation effects on removal of, from lungs of mice, phosphorus-32 tracer study of x, 25:52227

SCINTILLATION CAMERAS
- description of high-resolution, based on delay-line time conversion, 25:51859
- modulation transfer function for, algorithm for, 25:51866

SCOTLAND
- electricity supply systems for, integration of nuclear power plants with hydro and steam power plants for, 25:53902 (A/CONF.49/P-478)

SEAS
- contamination by radioactive waste disposal, Japanese research studies on methods for prevention of, 25:51607 (A/CONF.49/P-250)

SEAWATER
- analysis for gamma sources using immersion scintillation counter, 25:51392
- contamination by marine disposal of radioactive wastes, Japanese research on, 25:51651 (A/CONF.49/P-850)
- contamination of Danish coastal, radioiotope tracer studies of, 25:51650 (A/CONF.49/P-646)
- radioisotope transport in, mechanisms of, 25:51653

SEED
- electron dosimetry in dahlia and dioscorea, method for 1.0 MeV, 25:52087
- radiation effects on dormant, reaction mechanisms for genetic and somatic neutron and γ, 25:52268 (A/CONF.49/P-538)
- radiosensitivity of barley, correlation between mutation frequency and γ, 25:52033

SEISMIC WAVES
- propagation from underground nuclear explosions, numerical model for calculating, 25:51654 (NVO-1163-225)

SELENIUM
- neutron capture by natural, gamma spectra from polarized thermal, (E), 25:53704

SELENIUM ISOTOPES Se-72
- energy-level scheme from bromine-72 decay, (E), 25:53752(R) (ORNL-4659)

SELENIUM ISOTOPES Se-74
- energy level scheme from bromine-74 decay, (E), 25:53752(R) (ORNL-4659)

SELENIUM ISOTOPES Se-75
- determination in biological materials by oxygen flask combustion method, 25:51393
- distribution in rat tissues, effects of carrier and administration route on, 25:51979
- effectiveness of selenomethionine-incorporated, for scanning mediastinum for tumor localization, 25:52145
- use of selenomethionine-incorporated, for scanning pancreas, 25:52130 (A/CONF.49/P-631)

SELENIUM ISOTOPES Se-77
- energy levels from selenium neutron capture, spin assignments for, (E), 25:53704

SELENIUM ISOTOPES Se-78
- energy levels from selenium neutron capture, spin assignments for, (E), 25:53704

SELENIUM ISOTOPES Se-80
- neutron reactions (n,2n) and (n,np) at 13.02 to 17.78 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)

SELENIUM ISOTOPES Se-82
- neutron reactions (n,2n) at 13.02 to 17.78 MeV, excitation functions for, (E), 25:53743(R) (INR-1318)

SEMICONDUCTOR JUNCTIONS
- radiation effects on threshold voltage of metal/nitride/oxide/silicon, effects of charge transport on gamma, 25:51955
- switching behavior of niobium/niobium oxide/metal diodes, 25:52952

SEMICONDUCTORS
- ion-beam thinning for transmission electron microscopy, comparison with chemical-jet method, 25:52969

SENA POWER REACTOR
- maintenance during 1967 to 1971, 25:53948 (A/CONF.49/P-575)
- operations incidents during 1967 to 1971, 25:53948 (A/CONF.49/P-575)

SEROTONIN
- radioprotective effects of dextran derivatives containing, on mice, γ, 25:52115
- toxicity of dextran derivatives containing, to mice, 25:52115

SERPUKHOV SYNCHROTRON
- beam extraction system for, study of physical characteristics of slow, 25:53410 (IFVE-SKU-70-51)
- operation and performance of, 25:53403 (A/CONF.49/P-449)
- research at, summary of high-energy, 25:53403 (A/CONF.49/P-449)

SEWAGE
- radiation processing of fresh solid, electron and γ, 25:52290

SEYFERT GALAXIES
- distribution of, (E/T), 25:52582

SF MATERIALS ACCOUNTING
- methods for, financial aspects of, 25:51763 (CONF-710617-26)

SHALES
- fractures in, mechanics of hydraulic, 25:51626

SHEEP
- immunization against helminths using irradiated larvae, 25:52007 (A/CONF.49/P-355)
- radiation effects on pulmonary function in, effects of sublethal blast overpressure on combined unilateral γ and neutron, 25:52185(R) (AD-721094)
- radioisotope retention following intravenous injection, effects of EDTA on, 25:51985
- zinc-65 uptake by erythrocytes of, effects of yttrium-90 on, 25:52210

SHIELDED CONTAINERS
- conference on testing of, for shipping radioactive materials, Vienna, Feb. 8 to 12, 1971, 25:51770 (STI/PUB-285)
- deformation of radioactive material-shipping, mathematical model for predicting free-fall, 25:51835
- design and fabrication of, for shipping radioactive materials, quality assurance program for, 25:51830
- design and performance of Universal Source, for shipping large quantities of radioisotopes, 25:51823
- design and testing of large-volume Type B, for shipping radioactive material, 25:51826
- design for shipping californium-252, 25:51799
- design for shipping radioactive materials in Australia, 25:51843
- design of large, for safe shipping of uranium hexafluoride, 25:51825
- development for safe transport of LMFBR spent fuel elements, destructive testing program for, 25:51840
- evaluation for shipping spent fuels from French power reactors, 25:51752 (A/CONF.49/P-611)
- fire shields for large and small, for shipping radioisotopes, design of low-cost, 25:51824
- heat removal from, for shipping spent fuel elements, effects of coolant losses and finned surfaces on, (E), 25:51828
- heat transfer characteristics of externally-finned, for shipping radioactive materials, (E/T), 25:51827
- inspection of radioactive material shipping, during fabrication and use, implementation of IAEA standards for, 25:51831
- performance of radioactive material-shipping, methods for studying thermal, 25:51833
- radiation leakage from, for shipping radioactive materials, method for testing, 25:51819
- screws for spent fuel shipping, drop-impact testing of lid-fixing, 25:51841
- shock absorbers for Type B, free-drop testing of specially-designed, 25:51836
- testing of cylindrical, for shipping spent fuel elements, drop-impact, 25:51837
- testing of cylindrical, for shipping spent fuel elements, Japanese equipment and methods for drop-impact, 25:51838
- testing of Excellox and Magnox, for shipping spent fuel elements, scale-model drop-impact, 25:51839
- testing of large, for shipping radioactive materials, method for leak-tightness, 25:51818
- testing of Type B, for compliance with IAEA standards for mechanical and thermal performance, methods for, 25:51834
- testing of Type B, for shipping radioactive materials, methods for thermal, 25:51832

SHIELDING
- design for underground explosion drill core analytical laboratory, 25:51794
- fabrication of individual, for radiotherapy, 25:52489
- radiation effects on coloration and electric discharge of glass, gamma, 25:52492
- radiative transfer in spherical shell atmospheres with radial symmetry, (T), 25:52894
- radioprotective effects of partial-body, during proton irradiation of dogs, 25:52097
- radioprotective effects on mice in comparison to autologous bone marrow injections, x, 25:52213

SHIELDING MATERIALS
- description of fiber-reinforced plastic, for nuclear radiation, 25:52494(P)

SHIPPING
- accidents with Type B-packaged radioactive materials in US, review of, 25:51806
- containers and methods for radioactive material, in Australia, 25:51843
- containers for large-quantity radioactive-material, design and testing criteria for, 25:51822
- containers for large-quantity radioisotope, design and performance of Universal Source, 25:51823
- containers for radioactive material, criteria for leak-tightness and shielding properties of, 25:51816
- containers for radioactive material, design and testing of large-volume Type B, 25:51826
- containers for radioactive material, development of IAEA regulations for testing, 25:51805
- containers for radioactive material, equipment and methods for drop and thermal testing of Type B, 25:51815
- containers for radioactive material, French programs for mechanical and thermal testing of, 25:51814
- containers for radioactive material, mathematical model for predicting free-fall damage to, 25:51835

containers for radioactive material, method for leak-tightness testing of large, 25:51818
containers for radioactive material, methods for mechanical and thermal testing of types UKT-I-V and UKT-II-V, 25:51820
containers for radioactive material, methods for studying thermal performance of, 25:51833
containers for radioactive material, methods for testing containment and shielding characteristics of, 25:51817
containers for radioactive material, quality assurance program for design and fabrication of, 25:51830
containers for radioactive material, radiometric method for radiation-leakage testing of, 25:51819
containers for radioactive material, US programs for testing, 25:51813
containers for radioisotope, design of low-cost fire shields for large and small, 25:51824
containers for spent fuel elements, effects of coolant losses and finned surfaces on heat removal from, (E), 25:51828
equipment and methods for large-quantity uranium hexafluoride, development of safe, 25:51825
insurance liability during maritime radioactive materials, 25:52103 (A/CONF.49/P-767)
packaging for radioactive material, analysis of international and national design and test requirements for Type A, 25:51808
packaging for radioactive material, at Bhabha Atomic Research Center, design and testing of, 25:51812
packaging for radioactive material, equipment and methods for testing Type A, 25:51809
packaging for radioactive material, functional separation of mechanical components in, 25:51821
packaging for radioactive material, in Hungary, testing of Type A, (E), 25:51810
packaging for radioactive material, standardization and testing of Types A and B, 25:51811
safety of marine, of heat-producing radioactive materials, evaluation of, 25:51829

SHIPPINGPORT PRESSURIZED-WATER REACTOR
performance of Core 2 Seed 1, physics tests results for December 1966 to March 1969, 25:53967 (WAPD-PWR-TE-206)
performance of Core 2 Seed 2, physics tests results for June to July 1969, 25:53968 (WAPD-PWR-TE-260)

SHIPS
hydraulic devices for nuclear, operation of oil-filled, 25:51676

SHOCK
analysis of reactor structural components, conference on, 25:54051

SHOCK WAVES
effects on rare earths, emf induced in, (E/T), 25:52961
measurements of Project Trinidad, from single one-ton surface, near surface, and buried chemical explosions, 25:51723 (SC-RR-710056)
plasma instabilities in collisionless, nonlocal behavior of ion acoustic, (T), 25:52843
production of strong ionizing, (E), 25:52839
propagation in current-carrying plasma, electromagnetic, 25:52805
propagation of strong, near stellar surfaces, (T), 25:52521
propagation of strongly ionizing, in deuterium and hydrogen, (E), 25:52839
structure in continuous supersonic wind tunnels (E/T), 25:52801
structure of collisionless, isomagnetic discontinuity in, (E/T), 25:52799
structure of magnetohydrodynamic, in plasma, (E), 25:52803

SILICATES
optical properties of interstellar grains containing graphite--iron--silicate mixtures, (T), 25:52576

SILICON
abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
analysis for surface oxygen, comparison of nuclear reactions for, 25:51417
analysis of epitaxial, for trace impurities by neutron activation, 25:51415
determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
determination in powdered thermal water residues, mass spectrographic, 25:51369
deuteron elastic scattering at 13 MeV, vector analyzing power for, (E), 25:53715
helium-ion stopping cross sections at 0.3 to 1.7 MeV in, (E/T), 25:52888
ion implantation at 50 keV in, Hall study of ionization energies in boron- and phosphorus-, (E), 25:52908
proton dechanneling in crystals of, temperature and energy dependences of, (E/T), 25:52909
radiation effects on ac hopping conductivity of n-type, p-type, and high-purity, electron, 25:52917
thermal conductivity measurements during irradiation, 25:51944

SILICON CARBIDES
argon-ion reactions at 12 or 30 keV with, sputtering and secondary electron yields from, 25:52599 (SGAE-PH-109/1971)
book: Refractory Carbides, 25:52451
compatibility with iron and nickel at high temperatures, 25:52299

SILICON IONS
electron reactions with Si XI in plasma, excitation-rate coefficients for, (E), 25:52804

SILICON ISOTOPES SI-25
mass excess from silicon-28 (He-3,He-6) reactions, (E), 25:53677

SILICON ISOTOPES SI-28
deuteron reactions (d,p) at 10 to 12 MeV, DWBA analysis of polarization effects in, (T), 25:53723
deuteron reactions (d,p) at 12.3 MeV using polarized beam, proton polarization from, (E), 25:53724
electron inelastic scattering at 183 and 250 MeV, form factors for, (E), 25:53671
energy levels from aluminum-27 (p,γ) reactions, (E), 25:53700
energy levels from electron inelastic scattering, quadrupole and hexadecapole moments and deformations from, (E), 25:53671
energy levels of, angular momentum projection from nonaxial intrinsic, (E), 25:53666
helium-3 reactions (He-3,He-6) at 70 MeV, cross section, Q value, and spectra from, (E), 25:53677
nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681
photon reactions with, continuum-shell-model calculation of total-absorption cross sections for, (T), 25:53678
proton elastic scattering at 7.5 to 11.5 MeV, polarization in, (E), 25:53710
proton reactions (p,2p) at 600 MeV, optical-model analysis of distortion effects on recoil momentum distributions from, (T), 25:53680

SILICON ISOTOPES SI-31
beta decay of, reactions with adenosine of recoil phosphorus-31 from, 25:51540

SILICON JUNCTIONS
fabrication and electric properties of diode-array camera targets, using boron ion implantation, 25:52919
radiation hardness of diffused silicon p--n, design criteria for optimization of, 25:51951 (COO-1624-36)

SILICON NITRIDES
analysis for nitrogen and oxygen simultaneously by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)
compatibility with iron and nickel at high temperatures, 25:52299

SILICON OXIDES
helium-ion stopping cross sections at 0.3 to 1.7 MeV in amorphous, (E/T), 25:52888
$CaO--Nb_2O_5--SiO_2--TiO_2$, phase equilibria in binary and pseudo-binary systems of, 25:52459
SiO_2--UO_2, radiation effects on creep, swelling, and fission gas release of fuel elements of, in-pile, 25:52466 (A/CONF.49/P-339)

SILICON SYSTEMS
Al--Si, analysis of standardized, for copper, gallium, and manganese by neutron activation, methods for both destructive and nondestructive, 25:51419
C--Cr--Fe-base--Mn--Si, production of sintered electrode strips of, method for, 25:52311
C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
Cr--Hf--Si--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
Si--U-base, uranium silicide growth in cast, kinetics of, 25:52464

SILICONES
aging characteristics of Y-3333 cellular, shelf, 25:54344 (BDX-613-375(Rev.))
thickness of Y-3333 slabs of cellular, effects of stretch on, 25:54343 (BDX-613-360(Rev.))

SILTS
age of Indian Ocean, uranium-234/uranium-238 method for estimation of, 25:51629
analysis of river, for pollutants by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
moisture content of, design and calibration of radiometric gage for measuring, 25:51919 (AD-721095)
movement around Karachi Harbor, scandium-46 tracer study of, 25:51606 (A/CONF.49/P-113)
movement over seabed or in estuaries, tracer method for studying, 25:51611 (A/CONF.49/P-509)
radioisotope content of ocean-bottom, from fallout and waste disposal, (E), 25:51649 (A/CONF.49/P-457)
transport in French streams, uses of radioisotope and stable isotopes in tracer studies of, 25:51613 (A/CONF.49/P-634)

SILVER
alpha elastic scattering at 18.7, 22, and 24.7 MeV, optical-model analysis with surface-absorption potential, (T), 25:53780
determination in powdered thermal water residues, mass spectrographic, 25:51369
diffusion in cadmium single crystals, anisotropic, 25:52358
energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322

  microhardness phenomena in, 25:54352(R) (COO-916-23)
  neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
  proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
SILVER ALLOYS AND SYSTEMS
  Ag--Cd, Zener relaxation and diffusion in, comparison of, 25:52340
  Ag--Cd--Zn, diffusion in solid solutions of, at 600°C, determination of coefficients of intrinsic and inter-, 25:52324 (COO-1436-30)
  Ag-base--In, yielding in single crystals of, serrated, 25:52322(R) (COO-916-24)
  Ag-base--In, Zener relaxation and diffusion in, comparison of, 25:52340
SILVER ISOTOPES Ag-107
  meson (K^-) absorption on surface of, neutron/proton density distribution ratio from, (T), 25:53683
SILVER ISOTOPES Ag-109
  energy levels and properties of, Nuclear Data Sheets for, (E), 25:53757
  isomeric transition in, interpretation of conversion electron spectra from, (E), 25:53764
SINGLE CRYSTALS
  review of growth and technology of, 25:52967
SKELETAL SYSTEM
  radioinduced malformations of, following therapy of malignant tumors during childhood, 25:52232
  scintigraphy for localization of bone fractures and neoplasms, use of dysprosium-157 for, 25:52138
SKIN
  decontaminating agents for human, effectiveness of, 25:52052
  plutonium uptake by human, development of monitors for, 25:51970 (NIRS-Pu-6)
  radiation effects on survival of cells in normal rat, comparison of RBE for fast neutron and x, 25:52200
  radiation effects on survival of epithelial cells in mouse, effects of depth of penetration on charged particle, 25:52229
  radioinduced injuries following therapy, effectiveness of methyl sulfoxide for treatment of x, 25:52118
  radiosensitivity of human, comparison of fast neutron and x, 25:52165
SMOKES
  detection of, test results on containment integrity of radioactive foils used for, 25:51920 (ORNL-TM-2684)
SNOW
  density measurements of, gamma radiometric gage for profile, 25:51926
  density measurements of, gamma radiometric gage for profile, 25:51927
  density of, development of radiometric methods for measuring, 25:51925
SODIUM
  analysis for carbon, nitrogen, and oxygen by γ activation, sample surface purification for, 25:51418
  analysis of FFTF coolant, design of inert atmosphere cell for, 25:51797
  boiling in liquid metal cooled fast reactors, neutronic-acoustic detection system for, 25:54078
  corrosive effects on stainless steel, relations with fast neutron irradiation, 25:52300
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  flow of liquid, design and performance of electromagnetic device for inducing rotary, 25:51678
  radioinduced luminescence in europium-activated, electron-capture levels from x-, (E), 25:52923
  reactions of liquid, with acetylene and ethylene, effects of barium on, 25:51437
  reactions of liquid, with acetylene and propyne at 110, 150, and 200°C, 25:51438
  reactions with niobium--zirconium alloy at 400°C, hydriding and oxidation, 25:52298 (EUR-4460)
  sampling of radioactive liquid, design of equipment for, 25:51764 (HEDL-SA-123)
SODIUM AZIDES
  radiation effects on, hyperfine coupling and zero-field splitting for nitrogen atoms from γ, 25:51486
SODIUM BORATES
  radioinduced intrinsic defect center in glasses of, ESR studies of low-temperature x-, 25:52928
SODIUM CHLORIDES
  conference on mining, production, and uses of, Cleveland, Ohio, April 22 to 24, 1969, 25:51623
  conference on mining, production, and uses of, Cleveland, Ohio, April 22 to 24, 1969, 25:51625
  production of, economics of dual purpose reactors for, 25:54244
  radioinduced oxygen color centers in doped single crystals of, analysis of ESR parameters of, (T), 25:52896 (IFA-SR-1)
SODIUM FLUORIDES
  effects on resonant frequency of ulnar bones of elderly women, 25:54359 (COO-1422-109)
  sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)
SODIUM HYDROXIDES
  production of, economics of dual purpose reactors for, 25:54244
SODIUM IONS
  electron reactions with, semiclassical calculation of cross sections for double ionization in, 25:52663
SODIUM ISOTOPES Na-21
  energy level at 9.22 MeV from fluorine-19 (He-3,n) reactions, branching ratios and reduced widths for proton decay of, (E), 25:53682
SODIUM ISOTOPES Na-22
  abundance in lunar rocks, (T), 25:52497
  neutron reactions with, charged-particle spectra from thermal, (E), 25:53696
SODIUM ISOTOPES Na-23
  energy levels below 4 MeV from neon-22 (p,γ) reactions, lifetimes and branching ratios of, (E), 25:53690
  energy levels from neon-22 (p,γ) reactions, lifetimes, resonance strengths, and spin--parity assignments for bound and resonance, (E), 25:53703
  energy-level transitions from neon-22 (p,γ) reactions, branching ratios for, (E), 25:53703
SODIUM SALICYLATES
  radiation effects on fluorescence of aqueous solutions of, x, 25:51491
SODIUM URANATES
  enthalpy of Na_3UO_4, at 600 to 1200°K, 25:52318(R) (ANL-7820)
SOILS
  analysis for moisture content, neutron diffraction method for, 25:52017 (A/CONF.49/P-537)
  analysis for plutonium by fusion method and α counting, 25:51584(R) (MLM-1792)
  analysis for water content by neutron diffraction methods, 25:51960 (A/CONF.49/P-626)
  compaction studies in loam and sandy, gamma attenuation methods for, 25:52017 (A/CONF.49/P-537)
  contamination by underground disposal of liquid radioactive wastes, USSR research on, 25:51749 (A/CONF.49/P-426)
  density measurement of, design optimization of surface-type gamma-backscatter gages for, 25:51931
  density measurement of, performance of prototype surface-type gamma-backscatter for, 25:51929
  density measurement of, quality factor for evaluation of surface-type gamma-backscatter gages for, 25:51930
  effects on abiotic and biotic degradation of herbicides, carbon-14 tracer study of, 25:51958 (A/CONF.49/P-404)
  fertility studies, tracer techniques in, 25:52015 (A/CONF.49/P-329)
  interactions with plants, tracer studies of, 25:52279 (A/CONF.49/P-162)
  mineral transport to soils in, tracer studies on, 25:52017 (A/CONF.49/P-537)
  phosphate fertilizer transport in, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
  phosphorus sorption from, by coconut trees, phosphorus-32 tracer study of, 25:52019 (A/CONF.49/P-748)
  radioisotope migration through forest, 25:52011 (A/CONF.49/P-685)
  root distribution in, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
  uranium content of Soviet Union, 25:52010 (A-AC-82/G/L.1298)
  water content of, temperature-compensated gamma-ray transmission method for measuring, (E), 25:51630
  water movements in, oxygen-18 and tritium tracer studies of, 25:51960 (A/CONF.49/P-626)
SOLAR ACTIVE REGIONS
  electron densities and temperatures in, (E), 25:52558
SOLAR CELLS
  radiation hardening of silicon, developments in, 25:51957
SOLAR CORONA
  energy source for, decaying neutrons as, (T), 25:52559
  radio emission from, 3-mm oscillatory component in, (E), 25:52561
SOLAR FLARES
  x-ray emission during, parameters of source regions for, (E), 25:52558
SOLAR PROMINENCES
  magnetohydrodynamic systems in, equilibrium and stability of, (T), 25:52556
  origin of quiescent, (T), 25:52556
SOLAR RADIO BURSTS
  relation of Type IV, to radio emission from stellar coronas, (T), 25:52527
SOLAR SYSTEM
  scintillations of cosmic radio sources, interplanetary, (E/T), 25:52563
SOLAR WIND
  angular momentum transfer from magnetic field to, pressure anisotropy effects on, (T), 25:52565
  angular-momentum flux in, (E), 25:52564
  charged-particle fluxes in, at 1 A.U., (T), 25:52567
  cosmic-ray modulation by, (T), 25:52702
  dynamics of, effects of Alfvenic wave pressures on, (T), 25:52560
  electric field in, radial, (T), 25:52567
  electron thermal anisotropy in, (E), 25:52555 (LA-DC-

XUM

  12515)
  electron-to-ion temperature ratio in, (E), 25:52555 (LA-DC-12515)
  model for quiet-day, 25:52565
  pressure anisotropy in, total, (E), 25:52555 (LA-DC-12515)
  proton flux in, (T), 25:52497
  thermal conduction properties of, (E), 25:52555 (LA-DC-12515)
SOLAR X-RAY BURSTS
  spectra of, at 3 to 10 keV, (E), 25:52562
SOLDERS
  analysis for antimony, arsenic, and copper by neutron activation following radiochemical separation using tribenzylamine, 25:51404 (A/CONF.49/P-110)
  spattering by outgassing holes in printed wiring boards, 25:54345 (BDX-613-505)
SOLID STATE PHYSICS
  book: Advances in Materials Research, Vol. 5, 25:52967
  photoconductivity conference at Stanford, Calif., Aug. 12 to 15, 1969, 25:52855
SOLIDS
  diffusion of impurities in, (E), 25:54353(R) (COO-1041-20)
  radioinduced atomic displacement in, computer simulation of annealing of neutron, 25:52392 (HEDL-SA-202)
  radioinduced defect clusters in, effects of neutron energy on size distribution of, (T), 25:52897(T) (JPRS-53800, pp 24-8)
SOLUTIONS
  molecular motion in, perturbed angular correlation experiments for studies on, 25:51544(R) (NYO-4177-103)
  radiolysis of acid aqueous, reactions of ferric iron with hydrated electrons from γ, 25:51523
  radiolysis of air-free alkaline, effects of solution structure on reactions of hydrated electrons from pulse, 25:51506 (AD-721299)
SOUND
  velocity in weakly ionized argon plasma, anomalous, (E), 25:52879
SOUTH AMERICA
  education in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)
  nuclear reactors in, summary of existing and planned, 25:53912 (A/CONF.49/P-757)
  radioactivity monitoring of surface atmosphere during February, 1971, gross β, 25:52056
  radioisotope content of milk in, during February, 1971, 25:52058
  radioisotopes in agriculture in, review of, 25:51967 (A/CONF.49/P-756)
  training in nuclear technology in, summary of, 25:54336 (A/CONF.49/P-755)
SOUTHWEST EXPERIMENTAL FAST OXIDE REACTOR
  core for, determination of loading for minimum critical, (E/T), 25:54064
  Doppler reactivity coefficient for Core 1-E, calculation of isothermal, 25:54207 (HEDL-TME-71-81)
  maintenance during August 1970 to January 1971, 25:54218
  operations during August 1970 to January 1971, 25:54218
SOVIET UNION
  economics of small nuclear power plants in remote areas of, 25:54250 (A/CONF.49/P-713)
  nuclear medicine developments in, during 1960 to 1970, 25:52128 (A/CONF.49/P-462)
  nuclear methods and equipment for elemental analysis in industry in, 25:51405 (A/CONF.49/P-464)
  nuclear power plants in, summary of development of, 25:54039 (A/CONF.49/P-712)
  radiation monitoring in nuclear power plants and environment in, 25:53987 (A/CONF.49/P-687)
  radiation processing of food in, research programs for, 25:52283 (A/CONF.49/P-696)
  radiation protection programs for personnel in, evaluation of effectiveness of, 25:52090 (A/CONF.49/P-439)
  radiation protection standards of, legal aspects of, 25:52062 (A/CONF.49/P-429)
  radiochemical processes for industrial uses in, 25:51493 (A/CONF.49/P-466)
  radioisotope uses in agriculture and industry in, 25:51697 (A/CONF.49/P-465)
  radiotherapy in, development and prospects of, 25:52147 (A/CONF.49/P-437)
  research on agricultural plant metabolism and nutrition in, use of tracer techniques in, 25:51962 (A/CONF.49/P-694)
  research on agricultural plant production in, development of radioprotective compounds for use in, 25:51962 (A/CONF.49/P-694)
SPACE
  dust density in intergalactic, (E/T), 25:52595
  electromagnetic wave dispersion in interstellar, (T), 25:52578
SPACE FLIGHT
  effects on chromosomes of astronauts, aberrant, 25:52021(T) (JPRS-53801, pp 77-83)
  effects on man, 25:52231(T) (JPRS-53801)
SPACE VEHICLES
  safety of Pioneer, evaluation of impact and launch abort, 25:51721 (SC-DR-710101)
SPAIN
  desalination programs in, summary of conventional and nuclear, 25:54241 (A/CONF.49/P-733)
  nuclear power plants in, summary of existing and future integration into power grids of, 25:53911 (A/CONF.49/P-729)
  operation and use of research reactors in, summary of, 25:54188 (A/CONF.49/P-732)
  radiation and radioisotope uses in agriculture and food sciences in, review of, 25:51707 (A/CONF.49/P-728)
  radiation and radioisotope uses in industry and research in, review of, 25:51706 (A/CONF.49/P-727)
SPANISH REACTORS (JEN-1)
  operation and uses of, summary of, 25:54188 (A/CONF.49/P-732)
SPANISH REACTORS (JEN-2)
  operation and uses of, summary of, 25:54188 (A/CONF.49/P-732)
SPECTROMETERS
  charged particle transmission in magnetic, Monte Carlo program for calculating, 25:53427 (TRI-71-2)
  design for plasma electron temperature measurements, 25:52783
SPECTROSCOPY
  two-photon absorption, experimental arrangement for, 25:52942 (CONF-711001-(Vol.2), pp 465-77)
SPERM
  radiation effects on motility of mouse, following subcutaneous injection of iodine-131, 25:52188
SPERMATOGONIA
  radiation effects on survival of mouse, estimation of RBE for meson (π^-) and (π^+), 25:52228
SPHERES
  stress analysis of thick walled orthotropic, 25:54342 (BDX-613-137)
SPLEEN
  radiation effects on cytochrome c peroxidase activity in homogenates of rat, effects of 3-amino-1,2,4-triazole on, 25:52202
  scanning for diagnosis of autotransplantation in man, effectiveness of radioisotope-labeled colloids and erythrocytes for, 25:52137
STABLE ISOTOPES
  thermal diffusion factors for, measurement of, 25:51718(R) (MLM-1816)
  uses in hydrology and sedimentology in France, 25:51613 (A/CONF.49/P-634)
  uses in USSR agrochemical research, 25:51609 (A/CONF.49/P-434)
STACK DISPOSAL
  tritium in, equipment for monitoring, 25:51869
STAINLESS STEEL
  analysis for cobalt and nickel by atomic fluorescence spectroscopy, 25:51378
  creep rupture of Type 316 fuel cladding tubes of, at 550 to 700°C, 25:52355
  defects in Type 304L, quantitative interpretation of film-opacity data for radiographic detection of, 25:51734 (Y-DL-140)
  embrittlement of, fast neutron radiation and high temperature effects on, 25:54109
  emissivity of, equipment and methods for measurement of, 25:52360
  preparation of ultrafine grain tubes of Type 316, by repetitive anneal--cold work method, 25:52317
  properties of bolting materials of austenitic, for pressure vessels, valves, flanges, and fittings for low-temperature service, standard for, 25:52348
  properties of forgings of austenitic, ferritic, and martensitic, for general use at high or low temperature, standard for, 25:52345
  properties of hot- and cold-finished bars of austenitic, for use in boiler and pressure vessel construction, standard for, 25:52336
  properties of hot- and cold-finished bars of, for general corrosion resistance and high-temperature service, standard for, 25:52342
  radiation effects on corrosion by sodium, fast neutron, 25:52300
  radiation effects on creep in Type 304 and Type 316, fast neutron, 25:54110
  radiation effects on creep properties of, fast neutron, 25:52399(T) (JPRS-53800, pp 144-63)
  radiation effects on impact viscosity of welded joints of, fast neutron, 25:52401(T) (JPRS-53800, pp 176-9)
  radiation effects on mechanical properties and microstructure of Types 316 and FV548, relations of dose and temperature with neutron, 25:52390 (A/CONF.49/P-499)
  radiation effects on mechanical properties of reactor fuel element cladding of, fast neutron, 25:52389 (A/CONF.49/P-453)
  radiation effects on microstructure of precipitation-hardened, fast neutron, 25:52395(T) (JPRS-53800, pp 87-97)
  radiation effects on swelling and mechanical properties of Types 304, 316, and 347, fast neutron, (E), 25:54096(R) (GEAP-10028-38)
  radioinduced embrittlement of, high-temperature fast neutron, 25:52396(T) (JPRS-53800, pp 98-112)
  radioinduced void growth in, use of high-voltage electron microscope to simulate fast neutron, 25:52410 (RD/B/N-

1879)
  removal of coating of, from fissile material bundles using azeotropic mixture of hydrofluoric acid and water, 25:51594
  swelling of, fast neutron radiation and high temperature effects on, 25:54109

STANDARDS
  classification of unirradiated uranium scrap, ANSI N15.1 1970, 25:52351
  development of domestic and international radiation protection, 25:52104
  fast-neutron flux measurements by track-etch technique, ASTM E418-70T, 25:51870
  nomenclature of constituents of aggregates for radiation-shielding concrete, ASTM C638-69T, 25:52490
  preamplifiers for fission chambers, current pulse, 25:51857 (RDT-C-15-3-T)
  specification for alloy steel bolting materials for low-temperature service, ASTM A320-70, 25:52348
  specification for carbon steel castings suitable for fusion welding for high-temperature service, ASTM A216-70a, 25:52347
  specification for chromium--molybdenum alloy steel plates for pressure vessels, ASTM A387-70a, 25:52344
  specification for eight and nine per cent quenched and tempered nickel alloy steel plate, for pressure vessels, ASTM A553-71, 25:52332
  specification for high-strength quenched and tempered alloy steel plates, for pressure vessels, ASTM A517-70a, 25:52331
  specification for piping fittings of wrought carbon steel and alloy steel for moderate and elevated temperatures, ASTM A234-71, 25:52341
  specification for plutonium dioxide--uranium dioxide pellets, 25:52429 (WCAP-4167-1, pp E.1-6)
  specification for quenched and tempered carbon and alloy steel forgings for pressure vessel component, ASTM A541-69, 25:52330
  specification for quenched and tempered chromium--molybdenum alloy steel plates, for pressure vessels, ASTM A542-70a, 25:52334
  specification for quenched and tempered manganese--molybdenum and manganese--molybdenum--nickel alloy steel plates, for pressure vessels, ASTM A533-70, 25:52346
  specification for quenched and tempered nickel--cobalt--molybdenum--chromium alloy steel plates, for pressure vessels, ASTM A605-70, 25:52333
  specification for quenched and tempered vacuum treated carbon and alloy steel forgings for pressure vessels, ASTM A508-69, 25:52337
  specification for seamless ferritic alloy steel pipe for high-temperature service, ASTM A335-70, 25:52343
  specification for stainless and heat-resisting steel bars, and shapes, ASTM A276-70, 25:52342
  specification for stainless and heat-resisting steel forgings, ASTM A473-70, 25:52345
  specification for stainless and heat-resisting steel bars and shapes for use in boilers and other pressure vessels, ASTM A479-63, 25:52336
  specification for supplementary requirements for nickel alloy seamless pipe and tube for nuclear applications, ASTM B513-70, 25:52349
  specification for supplementary requirements for nickel alloy plate for nuclear applications, ASTM B509-70, 25:52335
  specification for supplementary requirements for nickel alloy rod and bar for nuclear applications, ASTM B510-70, 25:52350
  specification for tantalum and tantalum alloy tubing, ASTM B521-70, 25:52329
  specification for titanium and titanium alloy castings, ASTM B367-69, 25:52338
  specification of high-activity gamma-ray sources, 25:51713 (ICRU-18)
  tentative method of test for delta-in-hours purity of nuclear graphite, ASTM C624-68T, 25:52442
  tentative recommended practice for reporting irradiation results on graphite, ASTM C625-68, 25:52443
  tentative specification for aggregates for radiation-shielding concrete, ASTM C637-69, 25:52491

STAR CLUSTERS
  detection of highly-reddened globular, in Sagittarius, 25:52507
  evolutionary time scales in M67, (E), 25:52512
  photometry of M67, (E), 25:52512
  star period-frequency distribution Oosterhoff Types I and II, RR Lyrae variable, (E/T), 25:52511

STARCHES
  radiosterilization of powdered maize, evaluation of, 25:52282 (A/CONF.49/P-628)

STARS
  atmospheres of, temperature distribution in, (T), 25:52518
  black holes in binary, detection of, (E/T), 25:52500
  evolution of degenerate carbon cores of, (T), 25:52531
  evolution of initially balanced rotating disk of, (T), 25:52571
  evolutionary state of Algol, (E/T), 25:52517
  flare emission from YY Gem, (E), 25:52509
  gravitational interaction of very dense, (T), 25:52506
  iron abundance in 180 G and K giant, (E), 25:52502
  light curves of Mira variables at 1.04 μ, (E), 25:52528
  luminosity of massive main-sequence, effects of rapid differential rotation on, (T), 25:52503
  magnetic fields in rotating, (T), 25:52499
  magnetic fields in white-dwarf, origin of, (T), 25:52510
  magnitudes of 48, in Cepheid instability strip, (E), 25:52516
  mass of white-dwarf, upper limit to, (T>, 25:52506
  model for Algol, (E/T), 25:52517
  opacity tables for calculations on, linear interpolation in, 25:52523
  optical appearance of ensemble of, surrounding a black hole, (T), 25:52519
  particle motion outside rotating, equations for spinning, (T), 25:53353
  period-frequency distribution of RR Lyrae, in Oosterhoff Types I and II globular clusters, (E/T), 25:52511
  physical conditions in, equation of state for dense plasmas for determining, (T), 25:52498 (UCRL-51055)
  radiative transfer in spherical shell atmospheres with radial symmetry, (T), 25:52894
  radio emission from Antares B, (E), 25:52508
  radio emission from blue-dwarf, (T), 25:52551
  radio emission from coronas of M supergiant, (T), 25:52527
  radio emission from red-dwarf and red-supergiant, (T), 25:52551
  shock-wave propagation near surfaces of, (T), 25:52521
  space distribution of OB, (E), 25:52533
  spectra of delta, epsilon, and zeta Ori and zeta Pup, Lyman-α absorption in, (E), 25:52526
  spectroscopic characteristics of OB, (E), 25:52533
  spectroscopic observations of VY CMa, (E), 25:52524
  stability of rotating, effects of electromagnetic radiation on, (T), 25:52520
  stability of supermassive, against fragmentation, (T), 25:52532
  stability of, in Cepheid instability strip, (E), 25:52516
  structure of massive main-sequence, in rapid differential rotation, (T), 25:52503
  ultraviolet continuum brightness of 40 early-type, (E), 25:52504
  x-ray emission from rotating magnetic white-dwarf, (T), 25:52501

STATISTICS
  correlation functions in statistical mechanics, S-matrix and low-energy theorems for, 25:53397

STEAM-GENERATING HEAVY-WATER-MODERATED REACTOR
  design characteristics of, 25:54031 (A/CONF.49/P-483)
  maintanance of, summary of, 25:54132 (A/CONF.49/P-471)
  operation of, summary of, 25:54132 (A/CONF.49/P-471)

STEAM POWER PLANTS
  effects of fossil-fuel, on environment, 25:52043 (A/CONF.49/P-684)

STEEL
  analysis for cobalt and nickel by atomic fluorescence spectroscopy, 25:51378
  analysis of low-alloy, for trace amounts of lanthanum by flame emission spectrophotometry, 25:51376
  corrosion of steam generator, in nuclear power plants, 25:52294 (A/CONF.49/P-576)
  corrosion resistance of mild, in primary circuit of water-cooled reactors, 25:52293 (A/CONF.49/P-296)
  mechanical properties of high-strength quenched and tempered plates of alloy, for pressure vessels, standard for, 25:52331
  mechanical properties of quenched and tempered forgings of alloy and carbon, for pressure vessel components, standard for, 25:52330
  mechanical properties of quenched and tempered vacuum treated forgings of carbon and alloy, for pressure vessels, standard for, 25:52337
  production in USSR, uses of radiometric instruments in processes for, 25:51697 (A/CONF.49/P-465)
  production of, sulfur-35 tracer method for studying sulfur balance in processes for, 25:51725
  properties of austentic, for fast reactor fuel cladding, 25:54092 (A/CONF.49/P-609)
  properties of bolting materials of ferritic, for pressure vessels, valves, flanges, and fittings for low-temperature service, standard for, 25:52348
  properties of castings of carbon, for pressure-containing parts for high-temperature service, standard for, 25:52347
  properties of forgings of heat-resisting, for general use at high or low temperature, standard for, 25:52345
  properties of hot- and cold-finished bars of ferritic, for use in boiler and pressure vessel construction, standard for, 25:52336
  properties of seamless and welded fittings of wrought carbon and alloy, for use in pressure piping and pressure vessels at moderate and elevated temperatures, standard for, 25:52341
  properties of seamless pipe of ferritic, for high-temperature service, standard for, 25:52343
  radiation effects on austenitic, fast neutron, 25:54092 (A/CONF.49/P-609)
  radiation effects on mechanical properties of fuel element cladding of, fast neutron, 25:53898 (A/CONF.49/P-460)

XUM

- radiation effects on mechanical properties of pressure vessel, neutron, 25:54193 (A/CONF.49/P-823)
- radiation effects on mechanical properties of U.S.S.R. pressure vessel, in-pile and neutron, 25:53908 (A/CONF.49/P-705)

- Co--Cr--Mo--Ni--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52333
- Cr--Mo--steel, mechanical properties of plates of, for pressure vessels at high temperatures, standard for, 25:52344
- Cr--Mo--steel, tensile properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52334
- Cr--Mo--steel--V, radiation effects on ductility, tensile strength, viscosity, and embrittlement of U.S.S.R. 48 TC, in-pile and neutron, 25:53908 (A/CONF.49/P-705)
- Cr--steel, radiation effects on mechanical properties of, neutron, 25:52397(T) (JPRS-53800, pp 113-21)
- Mn--Mo--Ni--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
- Mn--Mo--steel, mechanical properties of quenched and tempered plates of, for pressure vessels, standard for, 25:52346
- Ni--steel, mechanical properties of quenched and tempered plate of, for pressure vessels, standard for, 25:52332

STELLAR FLARES
- emission from YY Gem, (E), 25:52509

STELLARATORS
- plasma confinement in TOR-1, effects of collision frequency on, 25:52772 (NP-18973)
- plasma drift effects in, low-beta axisymmetric, (T), 25:52777

STOMACH
- radiation effects on mitosis and tritium-labeled-thymidine uptake by mucosa of mouse, x, 25:52221

STORAGE RINGS
- beam cooling in proton--antiproton, energy recovery device for electron, 25:53453
- development and testing of CERN ISR, 25:53452
- development and testing of ISR, 1970, 25:53422(R) (NP-18906)
- experimental facility for Wisconsin Univ. electron, proposed ultraviolet radiation source, 25:53406 (AD-722472)
- magnetic field corrections for solenoid beam monitors in electron--positron, 25:53409 (DESY-R-1-70/5)
- space charge effects in electron--positron, nonlinear, 25:53426(T) (SLAC-Trans-133)

STRAIN GAGES
- noise rejection in, for weapons testing, 25:51952
- performance of electron-irradiated silicon, for measurement of low-level strains, 25:51953
- radiation compensation of silicon, orientation dependence of gage factor during electron, 25:51954

STRESS
- analysis in reactor steel pressure vessels, conference on, 25:54053
- analysis of cylindrical structures, conference on methods of, 25:54054
- analysis of reactor core support structures, conference on, 25:54052
- analysis of reactor fuel elements, conference on, 25:54050
- analysis of reactor structure, conference on, 25:54055
- analysis of reactor structures, conference on methods for, 25:54056
- calculation in fuel element interfaces, method for, 25:54316

STRONTIUM
- determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
- determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- energy levels of, level-density parameters for, (E), 25:53807
- energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
- ion exchange of solid, with barium in vermiculite, rate of, 25:51596
- ionization of, added to premixed flames, use of rotating single probe to study, 25:51428
- neutron reactions at 14.2 MeV, neutron spectra from, (E), 25:53807
- separation from calcium by precipitation as hydroxide, 25:51599
- separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)

STRONTIUM BROMIDES
- spectra of monohydrate of, effects of deuterium on ir, 25:51454

STRONTIUM CHLORIDES
- radioinduced color centers in single crystals of, low-temperature x-, (E/T), 25:52915
- spectra of monohydrate of, effects of deuterium on ir, 25:51454

STRONTIUM FLUORIDES
- sorptive properties for antimony fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)

STRONTIUM IODIDES
- spectra of monohydrate of, effects of deuterium on ir, 25:51454

STRONTIUM IONS
- effects on critical resolved shear stress of potassium chloride crystals, 25:52925
- effects on hardness of potassium chloride crystals, 25:52924

STRONTIUM ISOTOPES Sr-85
- effectiveness for diagnosis of human bone lesions in comparison with strontium-87m, 25:52143
- use for whole-body scanning in diagnosis of bone metastases of mammary cancer, 25:52140

STRONTIUM ISOTOPES Sr-86
- proton elastic and inelastic scattering at 12 MeV, differential cross sections for, (E), 25:53752(R) (ORNL-4659)

STRONTIUM ISOTOPES Sr-87
- effectiveness of metastable, for diagnosis of human bone lesions in comparison with strontium-85, 25:52143

STRONTIUM ISOTOPES Sr-88
- proton reactions (p,γ) at 2.3 to 3.0 MeV, cross sections, excitation functions, and spectra from, (E), 25:53661 (CCO-1120-119)

STRONTIUM ISOTOPES Sr-90
- content in deep and surface waters of Atlantic and Pacific Oceans, 1965 to 1970 measurements of, 25:51649 (A/CONF.49/P-457)
- content of daily diet in Belgium, 25:52054
- content of human bones in USA during 1970, 25:52055
- content of milk in Central, North, and South America during February, 1971, 25:52058
- content of milk in relation to calcium in New York during 1969, 25:52058
- content of milk in relation to other elements, statistical analysis of, 25:52059
- determination in biological and environmental materials and liquid wastes following separation by solvent extraction using monoisooctyl methylphosphonate, 25:51383 (A/CONF.49/P-451)
- separation from saline waste solutions by ion exchange, 25:51564 (A/CONF.49/P-621)
- uptake by potato tubers, effects of temperature on, 25:51988

STRUCTURAL ENGINEERING
- theory of distortion failure in orthotropic materials, 25:54341 (BDX-613-136)

STRUCTURES
- radiation shielding materials for, development of, 25:52494(P)

STYRENE
- radioinduced polymerization with agricultural and stone wastes, cellulose, and wood, properties of products of γ, 25:51494 (A/CONF.49/P-829)

STYRENE POLYMERS
- radiation effects on electret voltage of, dosimetric use of, 25:51910
- radiolysis of aromatic solutes in, triplets and molecular ions from electron, 25:51507 (AD-722057)

SUCCINATE DEHYDROGENASE
- radiation effects on activity of, in Jensen sarcomas in rats, 25:52202

SULFUR
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- neutron reactions at 53 to 157 keV, total cross sections for, (E), 25:53728 (AECD/EP-18)
- transport in soils in relation to plant utilization, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
- transport of atmospheric, radioactive and nonradioactive tracer studies of, 25:51632 (A/CONF.49/P-318)

SULFUR IONS
- abundance in NGC 6826, (E), 25:52513

SULFUR ISOTOPES S-32
- distribution in sandstone-type uranium deposits, patterns of, 25:51646
- energy level at 5.689 MeV from phosphorus-31 (α,pγ) reactions, spin--parity assignments for, (E), 25:53676
- energy levels at 4.458 and 5.410 MeV, spins and parities of, (E), 25:53691
- energy-level transitions from phosphorus-31 (α,pγ) reactions, multipole mixing ratios and polarizations for, (E), 25:53676
- nuclear binding energies, shapes, and single-particle energies for, Hartree--Fock calculations using density- and momentum-dependent delta-function forces, (T), 25:53681
- photon reactions with, continuum-shell-model calculation

XUM

of total-absorption cross sections for, (T), 25:53678

SULFUR ISOTOPES S-33
- energy levels from sulfur-32 (d,p) reactions, lifetimes of, (E), 25:53662(R) (CCC-1468-9)

SULFUR ISOTOPES S-34
- content in carbonatite at Mountain Pass, California, 25:51647
- distribution in sandstone-type uranium deposits, patterns of, 25:51646

SULFUR ISOTOPES S-35
- determination in biological materials by oxygen flask combustion method, 25:51393
- energy levels from sulfur-34 (d,p) reactions, lifetimes of, (E), 25:53662(R) (COO-1468-9)
- use as tracer for studying sulfur balance in steel-making processes, 25:51725

SULFURIC ACID
- determination by radiometric titration using krypton-85-labeled compounds, 25:51384 (A/CONF.49/P-556)
- production of, economics of dual purpose reactors for, 25:54244
- radiolysis of aqueous, reactions of ferric iron with hydrated electrons from γ, 25:51523
- radiolysis of frozen aqueous solutions of, at 77°K, ESR studies and free radicals from γ, 25:51535
- radiolysis of frozen aqueous solutions of, isotope effects on, 25:51525
- radiolysis of frozen aqueous solutions of, LET effects on yields and distribution of free radicals from α and γ, 25:51536

SUN
- distance to Earth, effect on E-region ionization, (E/T), 25:52720
- spectra of, line shifts in, (E/T), 25:52557

SUNSPOTS
- cycle of 1949-59, worldwide relation with E-region peak electron density, (E/T), 25:52721

SUPERCONDUCTIVITY
- London equation of, derivation from microelectromagnetic theory, 25:52753
- thermodynamic limit of BCS state, (T), 25:52749

SUPERCONDUCTORS
- book: Superconducting Materials, 25:52745
- critical fields in, possibility of increasing, 25:52761
- current density depinning in Type-II, effects of ac fields on, (E), 25:52752
- electron susceptibility in, (T), 25:52740
- theory of strong-coupling anisotropic, near critical temperature in magnetic field, microscopic, 25:52742

SUPERFLUIDITY
- heat dissipation in neutron-star interiors, (T), 25:52541
- vortex rings in helium-3--helium-4, discontinuous field velocity relation for, 25:52735

SUPERNOVA REMNANTS
- effects of energetic particles from Vela X, on ionization and heating of Gum Nebula, (E/T), 25:52529

SURFACE WATERS
- radiation monitoring programs for USA, 1968 through 1970, 25:52057
- radioactivity of Amchitka Island area, measurement of gross α and β, 25:51618 (USGS-474-123)
- radioisotope content of Amchitka Island, Alaska, during 1969 and 1970, 25:52045(R) (NVO-269-11)
- tritium content of Amchitka Island area, (E), 25:51618 (USGS-474-123)

SURFACES
- bibliography on surface and vacuum physics, 25:52600
- contamination of, methods and instruments for monitoring, 25:52049
- radioactive contamination of, dynamics of secondary, 25:52051

SURGERY
- use in combination with radiotherapy for cervical carcinomas in Australia during 1953 to 1968, review of, 25:52171

SUSPENSIONS
- radioisotope content of seawater, from fallout and waste disposal, (E), 25:51649 (A/CONF.49/P-457)
- size distribution measurements in liquid scintillators, by quenching effects, 25:51928

SWEDEN
- nuclear energy development in, regional cooperation with Denmark, Finland, and Norway for, 25:54010 (A/CONF.49/P-7)
- nuclear power and district heating plants in, safety aspects of, 25:54235 (A/CONF.49/P-311)
- nuclear power plant economics in, 25:53978 (A/CONF.49/P-306)
- nuclear power plants in, analysis of optimum fuel cycle management procedures for, 25:53938 (A/CONF.49/P-425)
- nuclear power plants in, development during 1970 to 1990, 25:53932 (A/CONF.49/P-300)
- nuclear power plants in, safety criteria for, 25:53977 (A/CONF.49/P-305)
- nuclear power plants in, safety policies on, 25:53976 (A/CONF.49/P-304)

SWEDISH REACTORS (R-3)
- maintenance during 1964 to 1971, 25:53933 (A/CONF.49/P-301)
- operations during 1964 to 1971, 25:53933 (A/CONF.49/P-301)

SWINE
- iron-59 metabolism in, 25:51983
- radiation effects on count of leukocytes in, effects of dose on partial-body and whole-body x, 25:52234
- radiation effects on zinc-65 metabolism in, gamma and fission neutron, 25:52210
- zinc metabolism in, review of, 25:51980
- zinc-65 metabolism in, following experimental ingestion with feed, 25:51981

SWITCHES
- calibration of pressure, data summary on devices for, 25:51674 (NASA-SP-5938-1)

SWITZERLAND
- electric power distribution system in, planning for integration of nuclear plants into existing hydro, 25:53950 (A/CONF.49/P-675)
- public opinion attitudes toward nuclear power plant construction in, 25:53907 (A/CONF.49/P-676)
- radiation processing of fruits and vegetables in, 25:52277 (A/CONF.49/P-120)

SYMMETRY GROUPS
- breaking in quantum electrodynamics, spontaneous, 25:53326
- breaking of chiral and conformal, in nonlinear Lagrangian model by PCAC, 25:53272
- O(4) harmonics for off-shell nuclear T matrix corresponding to sum of Coulomb and separable potentials, 25:53830
- O(n), irreducible representations of, modification rules and products of, 25:53262
- perturbation theory about Goldstone, for hadron interactions, 25:53242 (NYO-4204-16)
- representations for nuclear and particle theory, simple Lie groups for decomposition of reducible, 25:53250
- SL(2,C), Bjorken limit and sum rules from harmonic analysis of electroproduction structure functions in, 25:53267
- SO(5), Wigner coefficients of, unit adjoint tensor operators for, 25:53259
- SO(n), Wigner coefficients of, unit adjoint tensor operators for, 25:53259
- SO(p,1), matrix elements for most degenerate continuous principal series of representations of, 25:53261
- SO(p,q), Euler factorization of, 25:53265
- Sp(4) x Sp(4), construction of boson states in, 25:53271
- Sp(n), irreducible representations of, modification rules and products of, 25:53262
- SU(2) x SU(2) chiral breaking in π + N interactions, sum rule for, 25:53178 (NYO-4204-19)
- SU(3) x SU(3) chiral, K → π + l + ν and K → π + π + l + ν form factor parameters from field algebra and Lagrangians in, 25:53125
- SU(3) x SU(3), allowed domains in theories of broken, 25:53246
- SU(3) x SU(3), scalar fields of low dimension in representations of, 25:53054
- SU(p,q), Euler factorization of, 25:53265
- transformations under nonlocal, for vector meson fields, 25:53268
- U(3) X U(3), masses of eta and X in quark model with breaking of chiral, 25:53269
- U(n) x U(n), recursive construction of boson states of, 25:53271
- U(n), irreducible representations of, modification rules and products of, 25:53262
- U(N,1) dynamic, for nonstationary quantum systems with quadratic Hamiltonian, 25:53243
- U(p,q), Plancheral measure of principal continuous series of unitary representations of, 25:53251

SYMMETRY GROUPS SU(3)
- statistical model of multiple particle production in, 25:53257

SYNCHROTRONS
- beam intensity in proton, effect of charge distribution on maximum, 25:53457
- development and operation at Daresbury Nuclear Physics Lab., 1970, 25:52988(R) (NP-18909)

SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP)
- fuel capsules for Pioneer, impact and launch abort testing of, 25:51721 (SC-DR-710101)

SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-8)
- boilers for, shell side hydraulic characteristics of multiple tube, (E), 25:54226 (N-71-22512)
- boilers for, thermal shock testing of tantalum--stainless steel joints in, 25:54225 (N-71-22511)

SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-21)
- shock testing of, 25:51722

SYSTEMS FOR NUCLEAR AUXILIARY POWER (SNAP-27)
- fuel capsule assembly for, evaluation and testing of (FCA)4, 25:51719 (MLM-1831)

T

T-111 (TANTALUM ALLOY)
- compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
- hardness of fuel capsules of, 25:51717(R) (MDC G-3124)

XUM

TACHYONS
classical mechanics of charged, 25:53043
TANTALUM
diffusion of carbon monoxide in, during flash desorption, 25:52359
effects on photometric determination of niobium, 25:51372
electric conductivity of films sputtered in oxygen--argon, effects of substrate bias on, 25:52956
energy-level transitions in, corrections to fluorescence yield and probability of L_2-subshell Coster--Kronig, 25:52608
preparation of oriented large monocrystals of, by electron beam zone melting, 25:52309
properties at 1400 to 2800°K, electric, spectral, and thermal, 25:52326
proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
reactivity worth in fast reactor cores, specific, (E/T), 25:54060(R) (AI-AEC-13005)
testing of tubing of, standard for, 25:52329
TANTALUM ALLOYS AND SYSTEMS
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
Al--B--Cr--Hf--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
Cr--Hf--Si--Ta, oxidation of cladding of, at 2200 to 2700°C, 25:52295 (AD-720724)
Ta-base--W, hardness of fuel capsules of, 25:51717(R) (MDC G-3124)
Ta-base--W, properties at 1400 to 2800°K, electric, spectral, and thermal, 25:52326
Ta-base--W, testing of tubing of, standard for, 25:52329
TANTALUM BORIDES
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
TaB_2--Ta_2O_5, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415
TANTALUM CARBIDES
preparation and properties of, concentration dependence of, 25:52430
thermal expansion at 600°C to melting point, 25:52452
TANTALUM ISOTOPES Ta-181
deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
neutron capture cross sections for, evaluation of data for calculation of, (E/T), 25:54060(R) (AI-AEC-13005)
neutron inelastic scattering at threshold to 1.8 MeV, gamma-ray production cross sections for, (E), 25:53693
neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
TANTALUM OXIDES
proton-induced x-ray emission from thin films of, 25:52601
radiation effects on control elements of, in-pile, 25:54286 (A/CONF.49/P-704)
TaB_2--Ta_2O_5, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415
TARAPUR POWER REACTOR
performance of, summary of, 25:53944 (A/CONF.49/P-526)
startup testing of, summary of, 25:53944 (A/CONF.49/P-526)
TECHNETIUM
determination in powdered thermal water residues, mass spectrographic, 25:51369
TECHNETIUM ISOTOPES Tc-99
determination of metastable, calibration method using scintillation detector for, 25:51390
excretion of metastable, by human biliary system following injection of labeled albumin macroaggregates, diagnostic value of, 25:51972 (UCLA-12-831)
use of erythrocyte-incorporated metastable, for scanning blood circulation in heart, 25:52130 (A/CONF.49/P-631)
use of metastable, for labeling pharmaceuticals, 25:51965 (A/CONF.49/P-147)
TEETH
radiation effects on transplants of rabbit, γ, 25:52009
TEKTITES
uranium content of Ivory Coast micro-, corrected values for, 25:51648
TELLURIUM ISOTOPES Te-109
nuclear properties of, Nuclear Data Sheets for, (E), 25:53757
TELLURIUM ISOTOPES Te-122
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786
TELLURIUM ISOTOPES Te-124
neutron reactions (n,α) at 14.8 MeV, cross section for, (E), 25:53786
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786
TELLURIUM ISOTOPES Te-126
neutron reactions (n,α) at 14.8 MeV, cross section for, (E), 25:53786
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786
TELLURIUM ISOTOPES Te-128
neutron reactions (n,α) at 14.8 MeV, cross section for, (E), 25:53786
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786
neutron reactions (n,pn) at 14.8 MeV, cross section for, (E), 25:53786
proton elastic scattering at 9.8 to 10.5 MeV, polarization and excitation functions for, (E), 25:53792
TELLURIUM ISOTOPES Te-130
neutron reactions (n,α) at 14.8 MeV, cross section for, (E), 25:53786
neutron reactions (n,p) at 14.8 MeV, cross sections for, (E), 25:53786
neutron reactions (n,pn) at 14.8 MeV, cross section for, (E), 25:53786
TEMPERATURE
measurement in uninstrumented irradiation facilities, passive devices for, 25:54049
TERBIUM
energy-level transitions in, corrections to fluorescence yield and probability of L_2-subshell Coster--Kronig, 25:52608
ferromagnetic resonance in, microwave absorption study of, 25:52949 (IS-T-471)
magneto-elastic effects in magnon and phonon spectra of, (T), 25:52948 (IS-T-464)
TERBIUM ALLOYS AND SYSTEMS
Tb--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
TERBIUM BORIDES
nonstoichiometry of TbB_6, (E/T), 25:52453 (CONF-711001-(Vol.2), pp 598-609)
TERBIUM IONS
spectra of rare-earth oxides doped with, flame-excited luminescence, 25:52941 (CONF-711001-(Vol.2), pp 452-64)
TERBIUM ISOTOPES Tb-159
neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
TERBIUM ISOTOPES Tb-163
beta decay of, branching ratios, half-life, log-ft value, Q value, and gamma spectra from, (E), 25:53804
TERBIUM OXIDES
crystal growth and structure of higher, 25:51467 (CONF-711001-(Vol.1), pp 84-95)
TEXTILES
radioactive contamination of, effects of impregnation with cured resins against fallout, 25:52098(P)
radioinduced graft polymerization of jute, with acrylonitrile, methyl methacrylate, and styrene, properties of products of γ, 25:51494 (A/CONF.49/P-829)
THALLIUM
determination of trace amounts of, in aluminum foils by thermal neutron activation, radiochemical separation, and γ spectrometry, 25:51411
hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
neutron capture at 400 keV, cross sections and spectra from, (E), 25:53743(R) (INR-1318)
THALLIUM ISOTOPES Tl-207
energy-level transitions in, effects of configuration mixing on M1, (T), 25:53760
nuclear magnetic moment of, effects of configuration mixing on, (T), 25:53760
THALLIUM ISOTOPES Tl-208
determination as decay product from radium-224 by reactions with methyl radicals and scintillation counting, 25:51547
nuclear magnetic moment of, effects of configuration mixing on, (T), 25:53760
THERMAL CONDUCTIVITY
measurement in cylindrical samples in radiation damage studies, dynamic technique for, 25:51944
THERMAL INSULATION
performance of prestressed concrete reactor pressure vessel, 25:53905 (A/CONF.49/P-571)
THERMAL STRESSES
analysis of reactor structure, conference on, 25:54055
THERMIONIC CONVERTERS
development for use in reactors in France, 25:52703 (A/CONF.49/P-592)
development of reactor powered U.S.S.R. Topaz, 25:54044 (A/CONF.49/P-852)
testing of reactor powered U.S.S.R. Topaz, 25:54044 (A/CONF.49/P-852)
theory of, with practical interelectrode spacing, 25:52708
THERMOCOUPLES
response times of intrinsic, method for improving effective, 25:54383 (SC-RR-710146)
THERMODYNAMICS
equation of state in, compactness theorem for linear, 25:54385 (SC-RR-710302)
THERMOELECTRIC CONVERTERS
design, development, and testing of plutonium-238- and strontium-90-fueled, UK research program for, 25:51698

- (A/CONF.49/P-487)
  - development of radioisotope, in USSR, 25:52704 (A/CONF.49/P-721)
- **THERMONUCLEAR REACTIONS**
  - wave phenomena in solid deuterium--tritium, (T), 25:52847 (AD-720839)
- **THERMONUCLEAR REACTORS**
  - bibliography on plasma physics and fusion reactors, 25:52769
  - bibliography on plasma physics and fusion reactors, 25:52768
  - design for high-temperature plasma confinement, using C-shaped field coil magnets, 25:52854(P)

  - complexes with phenyl sulfoxide, properties of, 25:51435
- **THORIUM FLUORIDES**
  - separation from molten salts by reductive extraction, 25:51585 (ORNL-TM-3139)
  - BeF_2--LiF--ThF_4, solvent properties for plutonium fluoride, (E), 25:54099(R) (NP-18955)
  - BeF_2--LiF--ThF_4, solvent properties for plutonium fluoride, (E), 25:54100(R) (NP-18956)
- **THORIUM HIGH-TEMPERATURE REACTOR**
  - development of, status of program for, 25:54028 (A/CONF.49/P-370)
- **THORIUM IODATES**
  - radioinduced precipitation from sodium metaperiodate solutions containing thorium(IV), 25:51370
- **THORIUM IODIDES**
  - complexes with phenyl sulfoxide, properties of, 25:51435
- **THORIUM ISOTOPES Th-229**
  - neutron fission up to 50 eV, cross section and resonance parameters for, (E), 25:53750(R) (NYO-73-340)
  - production from uranium-233, separation processes in, 25:51584(R) (MLM-1792)
- **THORIUM ISOTOPES Th-230**
  - abundance relative to uranium-238 in manganese nodules from Pacific Ocean, 25:51652
  - determination in St. Louis Residues, 25:51584(R) (MLM-1792)
  - energy levels from protactinium-230 electron-capture decay, spin--parity assignments for, (E), 25:53743(R) (INR-1318)
  - production from airport cake residues by acid leach process, 25:51584(R) (MLM-1792)
- **THORIUM ISOTOPES Th-232**
  - neutron elastic scattering at 15 MeV, optical-model analysis including deformations of differential cross sections for, (T), 25:53754
  - neutron fission at 1.7 to 3.0 MeV, delayed-neutron yields from, (E), 25:53739 (FEI-195)
  - neutron total cross section up to 10 keV, (E), 25:53750(R) (NYO-73-340)
- **THORIUM NITRATES**
  - complexes with phenyl sulfoxide, properties of, 25:51435
- **THORIUM OXIDES**
  - effects on chromosomes in man, equations for relation between dose and aberrant α, 25:52247
- **THORIUM OXIDES ThO_2**
  - effects on incidence of neoplasms in retromandibular region following use for carotid angiography and sialography, 25:52243
  - grain growth in gels of, kinetics of, 25:52457 (RT/CHI-(70)36)
  - BeO--PuO_2--ThO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
  - BeO--PuO_2--ThO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
  - BeO--ThO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
  - Cu--ThO_2, heat resistance of, 25:52371
  - Mo--PuO_2--ThO_2, compatibility with refractory metal-lined fuel capsules at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
  - PuO_2--ThO_2, radiation effects on fuel pellets of, review of in-pile, 25:54082 (A/CONF.49/P-158)
  - Re--ThO_2--W-base, crystallization behavior of dispersion-strengthened, effects of cold working on, 25:52458
  - ThO_2--UO_2, analysis for thorium by x-ray fluorescence, 25:51584(R) (MLM-1792)
  - ThO_2--UO_2, preparation of microspheres of, 25:52432(P)
- **THORIUM PERCHLORATES**
  - complexes with phenyl sulfoxide, properties of, 25:51435
- **THORIUM PERRHENATES**
  - preparation by reaction of rhenium oxide vapor and thorium dioxide at high temperature or perrhenic acid and thorium salts, 25:51432
- **THORIUM RESERVES**
  - estimates of Indian, 25:51641 (A/CONF.49/P-531)
- **THORIUM THIOCYANATES**
  - complexes with phenyl sulfoxide, properties of, 25:51435
- **THULIUM ALLOYS AND SYSTEMS**
  - Al--Tm, crystal field in Tm_3Al_2, Moessbauer and NMR studies of, 25:52972 (IS-T-479)
- **THULIUM CHLORIDES**
  - crystal structure of $TmCl_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
- **THULIUM IODIDES**
  - crystal structure of TmI_2, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
- **THULIUM ISOTOPES Tm-169**
  - Moessbauer study of crystal field in Tm_3Al_2, 25:52972 (IS-T-479)
  - neutron capture by, cross-section evaluation for use as standard, 25:53735 (CONF-701002-, pp 285-312)
- **THULIUM ISOTOPES Tm-170**
  - beta decay of, nuclear matrix elements for, (T), 25:53871
- **THYMIDINE**
  - radiation effects on uptake of tritium-labeled, by stomach mucosa of mice, x, 25:52221
- **THYMINE**
  - radiolysis of aerated solutions of, yields of peroxides from γ, 25:51520
- **THYMUS GLAND**
  - radioinduced coagulation of chromatin in cortex cells of rat, high dose x, 25:52225
- **THYROID GLAND**
  - iodine-131 content of, in rats following injection, effects of homogenization and hydrolysis on accuracy of in vitro determinations of, 25:51989
  - radiation effects on rat, repeated low-dose x, 25:52212
  - radioinduced manifestation of anaplastic cancer of, in man following iodine-131 therapy of toxic nodular

XUM

- goiter, 25:52237
- scanning for function, use of iodine-125 for, 25:52130 (A/CONF.49/P-631)

TIHANGE POWER REACTOR
- safety aspects of, 25:53975 (A/CONF.49/P-272)

TIN
- compounds, radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- electron--phonon coupling constant of, from optical measurements, 25:52757
- energy gap of superconducting tin/lead sandwich, electron tunneling study of, 25:52746
- energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322

TIN ALLOYS AND SYSTEMS
- Al--Sn--Ti-base, properties of castings of, standard for, 25:52338
- Nb--Sn, electron--phonon coupling constant of intermetallic Nb_3Sn, from optical measurements, 25:52757

TIN HALIDES
- radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534

TIN ISOTOPES
- effects on microwave spectrum of bromostannane, 25:51444

TIN ISOTOPES Sn-109
- nuclear properties of, Nuclear Data Sheets for, (E), 25:53757

TIN ISOTOPES Sn-117
- neutron inelastic scattering at 13.36 to 15.36 MeV, excitation function for, (E), 25:53743(R) (INR-1318)
- neutron reactions (n,p) at 13.02 to 16.51 MeV, excitation function for, (E), 25:53743(R) (INR-1318)
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN ISOTOPES Sn-118
- neutron reactions (n,2n) at 13.02 to 15.88 MeV, excitation function for, (E), 25:53743(R) (INR-1318)
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN ISOTOPES Sn-119
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN ISOTOPES Sn-120
- deuteron elastic scattering at 13 MeV, vector analyzing power for, (E), 25:53715
- proton inelastic scattering of 30.3 MeV, optical-model analysis using potential derived from nuclear matter distributions, (T), 25:53717
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN ISOTOPES Sn-122
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN ISOTOPES Sn-124
- proton reactions (p,n) at 3 to 7 MeV, strength function for, (E), 25:53752(R) (ORNL-4659)

TIN OXIDES
- radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534

TIN SELENIDES
- radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534

TIN SULFIDES
- radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534

TIN TELLURIDES
- radiation effects on, Moessbauer studies on proton and mixed γ and neutron, 25:51534

TISSUES
- analysis for americium by ion exchange and α counting, 25:51395
- neutron fluence-to-kerma conversion in wet, for americium-241--lithium and polonium-210--lithium sources, 25:53501
- radiation dose to soft, calculation of surface absorbed β, 25:52069 (JAERI-13591)
- radiation effects on cell reproduction in normal, effects of dose fractionation on, 25:52163
- radiation effects on cytochrome c peroxidase activity in homogenates of rat, effects of 3-amino-1,2,4-triazole on, 25:52202
- radiation effects on survival of cells in normal, effects of dose and dose fractionation on fast neutron and x, 25:52199
- radiation effects on survival of cells in normal, factors influencing RBE for fast neutron and x, 25:52201
- radioactivity of mouse, following administration of tritium-labeled 2-methylpiperazinecarbodithioic acid, 25:51978
- radioinduced necrosis in oral, following interstitial therapy of tongue carcinomas using radium, 25:52240
- radioisotope distribution kinetics in, 25:51974

TITANIUM
- abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
- determination in air dusts by photon activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- deuteron elastic scattering at 12.6 MeV using polarized beam, asymmetry in, (E), 25:53622
- deuteron elastic scattering at 13.6 MeV, vector polarization in, (E), 25:53645
- effects on photometric determination of niobium, 25:51372
- energy-level transitions at 150 to 440 keV in μ^- mesic, test of vacuum polarization corrections to Dirac energy in, (E), 25:53322
- machining large, complex, thin-walled component from forged, 25:54350 (BDX-613-525)
- neutron capture by natural, gamma spectra from polarized thermal, (E), 25:53704
- properties of castings of, standard for, 25:52338
- proton reactions at 730 MeV, Δ production and total cross sections for π^+ and π^- production in, (E), 25:53226 (LA-DC-12944)
- rare-gas ion implantations at 1 to 120 keV in, saturation values of, 25:52922
- use for producing pure hydrogen plasma, (E), 25:52836

TITANIUM ALLOYS AND SYSTEMS
- analysis for zirconium, unifying techniques for, 25:51365
- Al--Sn--Ti-base, properties of castings of, standard for, 25:52338
- Al--Ti-base--V, properties of castings of, standard for, 25:52338
- Cu--Fe--Ti, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
- Cu--Ti, properties of plasma sprayed films of, on ceramics, 25:52312
- Mo--Ti, preparation and properties of, 25:52313
- Nb--Ti--Zr, particle size distribution in powders of, photosedimentation method for measurement of, 25:52354
- Pd--Ti, properties of castings of, standard for, 25:52338
- Ti--Zn--Zr, magnetic properties of Zr/sub 1-x/Ti/sub x/Zn_2, (T), 25:52959

TITANIUM CARBIDES
- analysis for nitrogen and oxygen simultaneously by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)
- emissivity of TiC in range 1200 to 2100°K, (E/T), 25:52966
- magnetoresistance and Hall effect of, (E), 25:52964
- preparation and properties of, concentration dependence of, 25:52430
- slip system at room temperature, hardness anisotropy measurements for, 25:52444
- NbC--TiC, emissivity in range 1200 to 2100°K, (E/T), 25:52966

TITANIUM ISOTOPES Ti-44
- energy-level scheme from calcium-40 (α,γ) reactions, (E), 25:53608(R) (NP-18698)

TITANIUM ISOTOPES Ti-47
- energy levels from (d,p) reactions, (E), 25:53725

TITANIUM ISOTOPES Ti-48
- deuteron reactions (d,p) at 10 MeV using polarized beam, vector analyzing power for, (E), 25:53726
- proton elastic scattering at 1358 to 1370 keV, excitation function for, (E), 25:53608(R) (NP-18698)
- proton reactions (p,γ) at 1358 to 1370 keV, excitation function for, (E), 25:53608(R) (NP-18698)

TITANIUM ISOTOPES Ti-49
- energy levels from (d,p) reactions, (E), 25:53725
- energy levels from titanium neutron capture, spin assignments for, (E), 25:53704

TITANIUM ISOTOPES Ti-50
- deuteron reactions (d,p) at 10 MeV using polarized beam, vector analyzing power for, (E), 25:53726
- proton elastic scattering at 1363 to 1379 keV, excitation function for, (E), 25:53608(R) (NP-18698)
- proton elastic scattering at 3.4 to 3.7 MeV, excitation functions for, (E), 25:53608(R) (NP-18698)
- proton reactions (p,γ) at 1363 to 1379 keV, excitation function for, (E), 25:53608(R) (NP-18698)
- proton reactions (p,n) at 3.4 to 3.7 MeV, neutron yield from, (E), 25:53608(R) (NP-18698)

TITANIUM ISOTOPES Ti-51
- energy levels from (d,p) reactions, (E), 25:53725

TITANIUM NITRIDES
- analysis for nitrogen and oxygen simultaneously by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)

TITANIUM OXIDES
- spectra of, satellite bands of γ' system in, (E/T), 25:52522
- CaO--Nb_2O_5--SiO_2--TiO_2, phase equilibria in binary and pseudo-binary systems of, 25:52459

TOBACCO (the commodity)
- analysis for polonium-210 by α counting, 25:51397
- cesium-137 content of commercial products of, in relation to content of human placenta, 25:52046 (UUIP-739)

TOKAI-MURA POWER REACTOR
- operations during 1967 to 1971, review of, 25:53958 (A/CONF.49/P-849)

TOKAMAK DEVICES
- plasma diagnostics in T-3a, using lasers and microwaves,

XUM

- (E), 25:52786
  - plasma instabilities in, nature of large-scale, (E), 25:52841
  - plasma turbulent heating in TM-3, (T), 25:52775
  - research in USSR, 25:52764 (A/CONF.49/P-441)
- **TOLUENE**
  - hexamethylbenzene--toluene, radiolysis of, yields from γ, 25:51510 (KFKI-71-23)
- **TOXICITY**
  - radiation effects on, of processed powdered maize starch, 25:52282 (A/CONF.49/P-628)
- **TOXINS**
  - radiation effects on production of aflatoxins by Aspergillus, 25:52265
  - radioinduced in rats tissues, relation between etiology of radiation sickness and, 25:52197
- **TRACER TECHNIQUES**
  - development and uses of isotope, 25:51705 (A/CONF.49/P-701)
  - development for medical diagnosis and research, review, 25:52132 (A/CONF.49/P-653)
  - evaluation for diagnosis of anemias, nutritional diseases, and vitamin deficiencies endemic in tropical regions, 25:52133 (A/CONF.49/P-739)
  - method for determination of wear of machine parts by charged-particle activation, 25:51921
  - use for plant and soil relation studies in agriculture, 25:52279 (A/CONF.49/P-162)
  - use in animal health, nutrition, and physiology studies, 25:52279 (A/CONF.49/P-162)
  - use in medicine, Canadian experiences with, 25:52122 (A/CONF.49/P-161)
  - use of radioactive, for fluid flow measurements, 25:51686
  - use of sulfur-35, for studying sulfur balance in steel-making processes, 25:51725
  - uses in agriculture , review, 25:51968 (CONF-710428-, Paper 5)
  - uses in agriculture in India, 25:52017 (A/CONF.49/P-537)
  - uses in agriculture in Poland, 25:52015 (A/CONF.49/P-329)
  - uses in agriculture in South Africa during 1960 to 1969, review of, 25:51961 (A/CONF.49/P-669)
  - uses of radioactive, in industry and research in Spain, review of, 25:51706 (A/CONF.49/P-727)
  - uses of radioisotope, in hydrology in Poland, 25:51693 (A/CONF.49/P-334)
- **TRANSACTINIDE ELEMENTS**
  - charge distribution around $Z > 137$, effects of vacuum polarization on Bethe--Salpeter model of, (T), 25:53756
  - existence in natural minerals, search for, (E), 25:53744 (JINR-P7-5814)
  - fission of, half-life from analysis of carbonaceous-chondrite xenon anomaly, (T), 25:53768
  - synthesis and search for, at JINR, 25:53727 (A/CONF.49/P-447)
- **TRANSFERRIN**
  - radiation effects on, effects of iron on free radical yields from x, 25:51995
- **TRANSISTORS**
  - radiation effects on threshold voltage of metal/nitride/oxide/silicon, effects of charge transport on gamma, 25:51955
- **TRANSITION METAL ALLOYS AND SYSTEMS**
  - actinides--transition metals, alloy chemistry of, review on, 25:52319 (CONF-710712-3)
  - rare earths--transition metals, alloy phase structure of, review on, 25:52319 (CONF-710712-3)
  - rare earths--transition metals, valence bonds in $CaCu_5$-type compounds, (T), 25:52376 (CONF-711001-(Vol.2), pp 617-29)
- **TRANSITION METAL BORIDES**
  - compatibility with iron and nickel at high temperatures, 25:52299
- **TRANSITION METAL CARBIDES**
  - book: Refractory Carbides, 25:52451
  - compatibility with iron and nickel at high temperatures, 25:52299
- **TRANSITION METAL NITRIDES**
  - compatibility with iron and nickel at high temperatures, 25:52299
- **TRANSITION METAL OXIDES**
  - compatibility with iron and nickel at high temperatures, 25:52299
- **TRANSITION METAL SILICIDES**
  - compatibility with iron and nickel at high temperatures, 25:52299
- **TRANSITION METALS**
  - reactions of refractory, with cerium hexaboride and lanthanum hexaboride at 1700°C, 25:52417
- **TRANSITION RADIATION**
  - production from electron motion along periphery of cylindrical resonators, (T), 25:52981
- **TRANSPLANTS**
  - conference on animal and human, 25:52205
- **TRANSPORT THEORY**
  - radiative transfer in spherical shell atmospheres with radial symmetry, (T), 25:52894
  - radiative, spectral line transfer in presence of two-dimensional velocity gradients, (T), 25:52566
- **TRANSURANIUM ELEMENTS**
  - bibliography on, July 1971, 25:52291
  - bibliography on, June 1971, 25:52292
  - fission fragment tracks in natural minerals, search for spontaneous, (E), 25:53744 (JINR-P7-5814)
  - properties of, correlation of crystallographic, thermodynamic, molecular, and physical, 25:51568 (A/CONF.49/P-689)
  - separation of, evaluation of methods for, 25:51568 (A/CONF.49/P-689)
- **TRANSURANIUM PROCESSING PLANT**
  - californium-252 transfer systems for TRU and TURF, design of pneumatic, 25:51792
  - systems for TURF, design of remote handling and viewing, 25:51790
- **TRAPS**
  - coolant for cold, automatic level regulator for liquid air, 25:53445
  - efficiency of liquid sodium cooled, for gaseous fission products, 25:54119 (RT/ING-(71)2)
- **s-TRIAZINE, HEXAHYDRO-1,3,5-TRINITRO-**
  - radiation effects on polycrystalline or single crystal, ESR studies of γ, 25:51492
- **1,2,4-TRIAZOLE, 3-AMINO-**
  - effects on cytochrome c peroxidase activity in irradiated rat tissues, 25:52202
- **TRIETHYLAMINE**
  - reactions with monomer and dimer cations from pulse radiolysis of pyrene, 25:51532
- **TRINO POWER REACTOR**
  - fuel elements of, performance of. 25:53889 (A/CONF.49/P-188)
  - operating statistics for 1964 to 1971, 25:53931 (A/CONF.49/P-172)
  - safety aspects of, design modifications for improved, 25:53972 (A/CONF.49/P-173)
- **TRISILOXANE, OCTAMETHYL-**
  - radiation chemistry of, yields and scissioning reaction in γ, 25:51482
- **TRISULFIDE, BIS(3-HYDROXYPROPYL)**
  - effects on peripheral blood in high dose x-irradiated rats, 25:52186
- **TRITIUM**
  - binding energy of, calculation using harmonic oscillator basis, 25:53865
  - content in Amchitka Island area surface waters, (E), 25:51618 (USGS-474-123)
  - content in ground waters in limestone and sandstone, relations with ground water discharge and stream flow, 25:51611 (A/CONF.49/P-509)
  - content in personnel, methods for monitoring, 25:52053
  - content of surface and well waters following underground nuclear explosion at Amchitka Island, Alaska, 25:52045(R) (NVO-269-11)
  - determination by scintillation counting and statistical linear regression analysis of count rate, 25:51388 (LA-DC-12552)
  - determination in graphite by combustion and vapor pressure measurements, 25:51358 (AEEW-M-1028)
  - deuteron elastic scattering at 3.3 to 12.3 MeV using vector polarized beam, angular distributions for, (E), 25:53554
  - deuteron reactions (d,α) at 51, 76, and 93 keV using polarized beam, analyzing power for, (E), 25:53556
  - deuteron reactions (d,n) at 0.2 to 1 MeV using polarized beams, analyzing power for, (E), 25:53557
  - deuteron reactions (d,n) at 0.5 to 1.6 MeV, angular and energy dependence of neutron polarization from, (E), 25:53743(R) (INR-1318)
  - deuteron reactions (d,n) at 3.9 to 15 MeV using polarized beam, neutron polarization in, (E), 25:53558
  - deuteron reactions (d,n) at 6, 10, and 11.3 MeV using polarized beam, comparison of vector analyzing power with helium-3 (d,p) reactions, (E), 25:53560
  - deuteron reactions (d,n) at 7 to 11.4 MeV, polarization angular distributions from, (E), 25:53555
  - deuteron reactions (d,n) below 1 MeV, analysis of polarization studies of, 25:53561
  - deuteron reactions (d,n) with, quadratic relations between observables for polarization transfer in, (T), 25:53559
  - effects on oxidation of 1,2,3,4-tetrahydronaphthalene to naphthalene by 2,3-dichloro-5,6-dicyanoquinone, kinetic, secondary, and intramolecular, 25:51462
  - effects on partitioning of ion pair intermediates, study of secondary and solvent α, 25:51447
  - exchange between tritium oxide (HTO) and hydrogen on intermetallic NiGa, 25:51452
  - helium-3 reactions (He-3,n) at 2.7 and 3.6 MeV, neutron polarization from, (E), 25:53581
  - metabolism in buffalo, cattle, and goats in relation to heat stress, 25:52278 (A/CONF.49/P-136)
  - monitoring for, equipment for stack, 25:51869
  - neutron elastic scattering at 22.1 MeV using polarized beam and liquid target, asymmetry in, (E), 25:53548
  - nuclear binding energy and matrix elements for, Brueckner self-consistent calculations using hard-core interactions, (T), 25:53515 (COO-1120-128)
  - nuclear charge form factors for, calculations using Irving--Gunn radial wave function with soft core, (T), 25:53529
  - permeation of electrolytically generated atoms of,

XUM

  through lead foil, radiochemical and electrochemical studies of, 25:51464
  proton elastic scattering at 13.6 MeV using polarized beam, asymmetry in, (E), 25:53551
  proton elastic scattering at 4 to 12 MeV using polarized beam, angular distributions for, (E), 25:53550
  proton elastic scattering at 42 MeV using polarized beam, asymmetry in, (E), 25:53552
  proton elastic scattering at low energies, phase-shift analysis of differential cross sections for, (T), 25:53526
  proton elastic scattering near 5.45 MeV, search for resonance in, (E), 25:53553
  proton elastic scattering up to 3.4 MeV, polarization in, (T), 25:53549
  proton reaction (p,n) at 2.3 and 2.9 MeV, neutron polarization from, (E), 25:53589
  proton reactions (p,n) at low energies, phase-shift analysis of differential cross sections for, (T), 25:53526
  reactions of fast molecules of, with butane, mechanisms of formation of tritiated butane from, 25:51449
  release from d--T neutron sources, 25:53441
  target of, lifetime and tritium release from neutron source, 25:53441
  targets for (d,n) reactions, performance characteristics of, 25:53496
  uptake of 2-methyl-piperazine-dithicformate-incorporated, by mouse blood and tissues, 25:51978
  use as tracer in measurement of vertical flow-rate of ground water through porous limestone and impervious clay, 25:51611 (A/CONF.49/P-509)
  use as tracer to determine water movements in roots and soils, 25:51960 (A/CONF.49/P-626)
  use for determining body weight gain in farm animals following diethylstilbestrol implantation, 25:52278 (A/CONF.49/P-136)
  use for hematological studies on malnourished children, 25:51965 (A/CONF.49/P-147)
  uses of cosmic ray- and nuclear explosion-produced, in atmospheric and hydrologic research, 25:51627

TRITIUM IONS
  reactions of T_2^+ with butane, mechanisms of formation of tritiated butane from, 25:51449

TRITIUM SYSTEMS
  D--T, thermonuclear reaction waves in solid, (T), 25:52847 (AD-720839)
  H--T, preparation of gas standards of, 25:51584(R) (MLM-1792)

TRITONS
  binding energy, D- and S'-state probabilities, and charge and magnetic radii and form factors for, calculations using BKR potential, (T), 25:53519
  electromagnetic form factors for, calculations using Reid potential, (T), 25:53520
  scattering by A > 40 nuclei below 40 MeV, optical-model potential for elastic, 25:53716
  scattering by helium-4 at 6 to 12.3 MeV, absolute polarization for elastic, (E), 25:53588
  scattering by helium-4 at 6 to 14 MeV, polarization in elastic, (E), 25:53587
  scattering by nuclei, review of polarization effects in elastic, 25:53839

TRI-UNIVERSITY MESON FACILITY (TRIUMF)
  development of, May 1970, 25:53400 (70-CNA-625)

TSURUGA POWER REACTOR
  operations during 1970 to 1971, review of, 25:53958 (A/CONF.49/P-849)

TUBES
  creep buckling of reactor fuel element cladding, (T), 25:54312
  fluid flow in, with repeated-rib roughness, heat transfer and friction for turbulent, (E/T), 25:51685

TUNGSTEN
  book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362
  cadmium adsorption and growth on polycrystalline, kinetics of, (E), 25:52957
  compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  crystallization of, effects of cold working on, 25:52458
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  diffusion in molybdenum single crystals at 1900 to 2250°C, volume inter-, 25:52339
  diffusion in presence of carbon, field electron emission study of surface self-, 25:52357
  electron reactions at 1.0 to 1.178 GeV, pion electroproduction mechanism in, (E/T), 25:52993
  neon-22 reactions (Ne-22,f) at 98 and 174 MeV, compound-nucleus lifetime in, (E), 25:53795
  polishing of chemical vapor deposited, for studying microstructures, electrolytic method for, 25:52302 (BDX-613-242)
  properties at 1400 to 2800°K, electric, spectral, and thermal, 25:52326
  sintering of, inhibiting effects of pore gas pressure on, 25:52306(T) (LA-tr-71-59)
  sorptive properties of surfaces of, for gases, flash-method studies on, 25:52352
  thorium desorption from surfaces of, parameters for, 25:52367

TUNGSTEN ALLOYS AND SYSTEMS
  B--Mn--W, phase studies of, 25:52460
  B--Ni--W, production of compact sintered castings of, direct-contact method for, 25:52437
  C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
  Fe-base--W, thermal capacity of, electronic and magnon, 25:52958
  HfC--Re--W-base, mechanical properties of dispersion-strengthened, 25:52327
  Mo--Re--W, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  Nb-base--W, thermal capacity at 3°K, from Kohn anomaly in phonon density of states, (T), 25:52953
  Ni--W, sintering of, design of devices for measuring shrinkage during, 25:52314
  Re--ThO_2--W-base, crystallization behavior of dispersion-strengthened, effects of cold working o, 25:52458
  Re--W-base, compatibility of fuel capsules of, with curium oxide and plutonium oxide fuels at 1800 to 2000°C, 25:51717(R) (MDC G-3124)
  Re--W-base, compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)
  Ta-base--W, hardness of fuel capsules of, 25:51717(R) (MDC G-3124)
  Ta-base--W, properties at 1400 to 2800°K, electric, spectral, and thermal, 25:52326
  Ta-base--W, testing of tubing of, standard for, 25:52329

TUNGSTEN CARBIDES
  analysis for nitrogen and oxygen simultaneously by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)
  hardness anisotropy in polycrystalline, measurement of micro-, 25:52449

TUNGSTEN FLUORIDES
  solubility in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene, effects of temperature on, 25:51465 (A/CONF.49/P-546)

TUNGSTEN ISOTOPES W-180
  energy-level transitions from tantalum-181 (p,2n) reactions, hindrance factors and M2/E1 and E3/E1 mixing ratios for, (E), 25:53767

TUNGSTEN ISOTOPES W-181
  content in Swedish ground-level atmosphere following Project Schooner, 25:51633 (FOA-4-4460)
  content in USSR atmosphere following Project Schooner, 25:51635
  metabolism in dogs following inhalation as oxide particles or injection as sodium tungstate solution, 25:51973 (UR-49-1496)

TUNGSTEN ISOTOPES W-185
  content in USSR atmosphere following Project Schooner, 25:51635

TUNGSTEN ISOTOPES W-186
  deuteron reactions (d,3n) at 12, 16, and 19.6 MeV, γ spectra from, (E), 25:53763
  neutron reactions (n,2n) at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)

TURBINES
  design for carbon dioxide-cooled power reactor, 25:51679(P)

TURKEY
  nuclear power plants in, cost analysis for development of, 25:53914 (A/CONF.49/P-780)
  uranium deposits in, radiometric methods for prospecting for, 25:51644 (A/CONF.49/P-781)

TZM (MOLYBDENUM ALLOY)
  compatibility of refractory metal-lined fuel capsules of, with molybdenum--actinide cermet fuels at 1500 to 2000°C, 25:51717(R) (MDC G-3124)

U

ULTRACENTRIFUGATION
  theory of isotope separation by gas, 25:51714(T) (K-Trans-61-1)

ULTRASONIC TESTING
  method for in-service inspection of reactor pressure vessels in Germany, 25:51739
  use for inspection of pressure vessels, 25:54123

ULTRASOUND
  attenuation in mixed state of superconducting niobium, 25:52760

ULTRAVIOLET RADIATION
  effects on bacteria and yeasts, effects of dose on molecular repair mechanisms for, 25:52268 (A/CONF.49/P-538)
  effects on blood serum protein fractions in rats following oral mucous membrane exposure, 25:52222
  effects on conidia of Aspergillus mutants, 25:52038
  effects on DNA in Bacillus subtilis, repair capacity of competent cells following, 25:51996
  effects on DNA of Hemophilus influenzae, reextraction study of integration and repair of, 25:52271
  effects on DNA synthesis in mammalian cells,

XUM

- determination of length of chromosome replicons from, 25:51997
- effects on DNA transfer in Escherichia coli, 25:52001
- effects on mitotic gene conversion in yeasts, 25:52039
- effects on synthesis of ribonucleic acid and protein in amoebae, effects of dactinomycin and temperature on repair of, 25:51999
- effects on transforming DNA of Hemophilus influenzae, effects of genetic mismatch and target size on, 25:52037
- effects on trivalent chromium-51-doped potassium iodate, potassium nitrate, or potassium sulfate, 25:51488
- effects on yeasts, characteristics and repair of mutagenic, 25:52025
- spectroscopy in auroral zone, photographically recorded relative intensities of vacuum, (E), 25:52723

ULTRAVIOLET SOURCES
- development of Wisconsin Univ. electron storage ring, 25:53406 (AD-722472)

UNDERGROUND STRUCTURES
- design parameters for nuclear power plant, 25:54045(P)
- development of power reactor, economics and safety aspects of, 25:54144 (A/CONF.49/P-290)

UNITED KINGDOM
- nuclear power plants in, economic aspects of, 25:53940 (A/CONF.49/P-473)
- radioactive waste management in, evaluation of environmental contamination from, 25:51750 (A/CONF.49/P-512)
- research reactors in, neutron beam studies in, 25:54180 (A/CONF.49/P-486)
- thermoelectric generator development in, research program on isotope-fueled, 25:51698 (A/CONF.49/P-487)

UNITED STATES
- programs for testing of packages for shipping radioactive materials, 25:51813
- radiation monitoring programs for drinking, ground, and surface waters during 1968 through 1970, 25:52057
- radioactivity monitoring of precipitation and surface atmosphere during February, 1971, gross β, 25:52056
- radioisotope content of airborne particulates in, during 1970, 25:52056
- radioisotope content of milk in, during February, 1971, 25:52058
- salt deposits in northeastern, gamma well logging data on stratigraphy of Upper Silurian, 25:51624
- strontium-90 content of human bones in, during 1970, 25:52055

UNIVERSE
- baryon separation and element formation in, (T), 25:52592
- classification for static gravitational, scheme for, (T), 25:53315
- density fluctuations in, growth of, (T), 25:52592
- expansion of, mass of virtual particle responsible for, (T), 25:52337
- generation of combined scalar-, electro-, and magneto-gravitational, (T), 25:53315
- gravitational fields for, theorems for static, (T), 25:53315
- model of mixmaster, with arbitrarily moving matter, (T), 25:52590
- structure of, present fine-grained, (T), 25:52592
- thermal history of, (T), 25:52592

URANIUM
- analysis for zinc by differential linear sweep oscillographic polarography, 25:51380
- classification of unirradiated scrap of, standard method for, 25:52351
- complexes of, crystal structure of tetraethylammonium octathiocyanato-N-uranate(IV), 25:51430
- complexes of, preparation of tetraethylammonium and tetrapropylammonium uranylmaleonitriledithiolate, 25:51427
- content in Ivory Coast microtektites, corrected values for, 25:51648
- content in personnel, methods for monitoring, 25:52053
- content in vesuvianite skarns, 25:51645
- criticality calculations for enriched systems, effects of varying neutron group cross section sets and space-angle mesh on, (T), 25:54259
- demand for and production of, in Israel, present and future, 25:51637 (A/CONF.49/P-13)
- desorption from rhenium surfaces, parameters for, 25:52367
- determination by titration with products from γ radiolysis of water, 25:51370
- determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
- determination in rocks by luminescence and radiometric methods, 25:51391
- determination in water and biological samples by liquid scintillation spectrometry, 25:51620
- dissolution of stainless steel-clad, pilot-plant studies on electrolytic, 25:51579 (IN-1196)
- distribution in plutonium oxide--uranium oxide fuel, effects of composition and thermal gradients on, 25:52463
- enrichment by gas centrifugation, developments and objectives of tripartite agreement for commercial, 25:51694 (A/CONF.49/P-382)
- enrichment by gas centrifugation, developments in tripartite countries for commercial, 25:51699 (A/CONF.49/P-493)
- enrichment by separation nozzle process, economics and stage development for, 25:51695 (A/CONF.49/P-383)
- enrichment using gas centrifuges, status of research on, 25:51716(T) (K-Trans-61-4)
- fabrication and mining of, radiation protection programs for personnel during, 25:52083
- hydration sphere of, as uranyl ion in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
- ionization of, added to premixed flames, use of rotating single probe to study, 25:51428
- movement through human food chains in Soviet Union, 25:52010 (A-AC-82/G/L.1298)
- processing for nuclear industry in Portugal, 25:51561 (A/CONF.49/P-522)
- production and requirements in Argentina, forecasts to 1985, 25:51642 (A/CONF.49/P-560)
- production and supply in Canada, forecasts of, 25:51638 (A/CONF.49/P-154)
- radiation effects on electric conductivity of polycrystalline and single-crystal alpha-, fission-fragment, 25:52901(T) (JPRS-53800, pp 62-71)
- radiation effects on gas swelling of, during annealing, neutron, 25:52405(T) (JPRS-53800, pp 237-44)
- radiation effects on mechanical properties of, neutron, 25:52403(T) (JPRS-53800, pp 223-30)
- radiation effects on orientation of alpha-, inverse pole-figure and x-ray growth-index study of, 25:52404(T) (JPRS-53800, pp 231-6)
- radiation effects on stress-strain properties of single crystals of alpha-, neutron, 25:52402(T) (JPRS-53800, pp 215-22)
- radiation effects on structure of stainless steel-clad fuel elements of, 25:52406(T) (JPRS-53800, pp 245-51)
- recovery as industrial byproduct, Spanish research on, 25:51570 (A/CONF.49/P-730)
- requirements and resources of, for fast breeder and light water reactors in Portugal, 25:51561 (A/CONF.49/P-522)
- separation from aqueous solutions as uranyl nitrate by solvent extraction using TTA, effects of organic bases on, 25:51597
- separation from carnotite ores by leaching, effects of free acid content on, 25:51604
- separation from fission products by partition chromatography, 25:51587 (UJV-2567-Ch)
- separation from hydrofluoric, nitric, and sulfuric acid solutions by sorption on ammonium phosphomolybdate, chromatographic, 25:51592
- separation from Indian ores, development of methods for, 25:51641 (A/CONF.49/P-531)
- separation from marginal ores, Spanish research progress on, 25:51570 (A/CONF.49/P-730)
- separation from nitric acid solutions as uranyl nitrate by solvent extraction using TBP, 25:51580 (INR-1248)
- separation from nitric acid solutions by solvent extraction using mono- and bifunctional phosphine oxides, 25:51556 (A/CONF.49/P-443)
- separation from perchloric acid by solvent extraction using bis(2-ethylhexyl)phosphate, 25:51591
- separation from thorium by solvent extraction, 25:51584(R) (MLM-1792)
- separation from unirradiated carbon-coated oxide fuel particles, grind-burn-leach head-end procedure for, 25:51583 (JUL-741-RW)
- separation of tetravalent and hexavalent, from perchloric acid solutions by solvent extraction using bis(2-ethylhexyl) phosphate, effects of diluents on, 25:51600

URANIUM ALLOYS AND SYSTEMS
- Si--U-base, uranium silicide growth in cast, kinetics of, 25:52464

URANIUM CARBIDES
- production and properties of fuel of, 25:52468 (A/CONF.49/P-454)
- radiation effects on performance of fuel assemblies of, in-pile, 25:52471 (A/CONF.49/P-707)
- radiation effects on physical properties of fuel elements of, neutron, 25:52468 (A/CONF.49/P-454)
- radiation effects on reactor fuel rods of, in-pile, 25:54082 (A/CONF.49/P-158)
- thermal expansion at 800°C to melting point, 25:52452
- PuC--UC, preparation of fuel particles of, by carbothermic reduction of sol-gel oxides, 25:52419 (A/CONF.49/P-119)
- PuC--UC, radiation effects on fuels of, relations of linear power and temperature with fast neutron, 25:52472 (EUR-4347)
- ThC--UC, radiation effects on stresses in carbon- and silicon carbide-coated particles of, fast neutron, 25:52481

URANIUM CHLORIDES UCl_3
- $PbCl_2$--UCl_3, phase diagrams at 300 to 850°C, 25:51477

URANIUM CHLORIDES UCl_4
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429
- $PbCl_2$--UCl_4, phase diagrams at 300 to 600°C, 25:51477

XUM

- **URANIUM CONCENTRATES**
  - requirements and supply assessment for, in Federal Republic of Germany, 25:51552 (A/CONF.49/P-378)
- **URANIUM DEPOSITS**
  - occurrence in Yugoslavia during 1948 to 1970, data review on, 25:51639 (A/CONF.49/P-349)
  - prospecting and exploration in Turkey, radiometric methods for, 25:51644 (A/CONF.49/P-781)
  - prospecting in UK, development of equipment and methods for, 25:51640 (A/CONF.49/P-489)
  - sulfur isotope distribution in sandstone-type, patterns of, 25:51646
- **URANIUM FLUORIDES UF_6**
  - analysis for uranium isotope ratios, second-order refocusing mass spectrometer for, 25:51362 (GAT-655)
  - criticality of spherical volumes of hydrofluoric acid solutions of 93 percent uranium-235-enriched, 25:51545 (Y-CDC-9)
  - flow in countercurrent gas centrifuges, solution of Navier-Stokes equations for, 25:51715(T) (K-Trans-61-2)
  - shipping of, development of containers for safe, 25:51825
  - solubility in heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene, effects of temperature on, 25:51465 (A/CONF.49/P-546)
  - sorption from heptadecafluorodecahydro-2-(trifluoromethyl)naphthalene solutions by solid cesium, lithium, or potassium fluorides, kinetics of, 25:51465 (A/CONF.49/P-546)
- **URANIUM ISOTOPES**
  - determination of ratios of, in uranium hexafluoride, second-order refocusing mass spectrometer for, 25:51362 (GAT-655)
  - separation of, French development plans for, 25:51701 (A/CONF.49/P-606)
  - separation of, French developments in, 25:51700 (A/CONF.49/P-605)
- **URANIUM ISOTOPES U-232**
  - energy levels from protactinium-232 beta decay, spin--parity assignments for, (E), 25:53743(R) (INR-1318)
  - energy-level transitions from protactinium-232 beta decay, multipolarities for, (E), 25:53743(R) (INR-1318)
- **URANIUM ISOTOPES U-233**
  - neutron capture by, comparison of absolute cross-section measurements of, 25:53737 (CONF-701002-, pp 320-6)
  - neutron fission at 10 to 40 keV, cross section for, (E), 25:53750(R) (NYO-73-340)
  - neutron fission at 15 to 30 eV, cross section for, (E), 25:53750(R) (NYO-73-340)
  - separation from irradiated thorium--uranium fuels by solvent extraction using N-methyldidecylamine, 25:51566 (A/CONF.49/P-650)
- **URANIUM ISOTOPES U-234**
  - abundance relative to uranium-238 in marine sediments, age estimation from, 25:51629
  - half-life, (E), 25:53738 (CONF-701002-, pp 465-9)
- **URANIUM ISOTOPES U-235**
  - abundance relative to protactinium in manganese nodules from Pacific Ocean, 25:51652
  - concentration in uranium by separation nozzle process, economics and stage development for, 25:51695 (A/CONF.49/P-383)
  - concentration in uranium, development and objectives of tripartite agreement for commercial, 25:51694 (A/CONF.49/P-382)
  - concentration in uranium, developments in tripartite countries for commercial, 25:51699 (A/CONF.49/P-493)
  - determination in fissionable materials, performance of Mobile Nondestructive Laboratory for, 25:51766(R) (LA-4705)
  - determination in radioactive scrap received at Fernald, Ohio plant, performance of MONAL for, 25:51769 (LA-DC-12296)
  - neutron fission at 10 to 40 keV, cross section for, (E), 25:53750(R) (NYO-73-340)
  - neutron fission at 17 keV to 1 MeV, absolute cross section for, (E), 25:53733 (CONF-701002-, pp 257-71)
  - neutron fission at 17 to 22 eV, cross section for, (E), 25:53750(R) (NYO-73-340)
  - neutron fission at 25 keV to 1 MeV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
  - neutron fission at 552 and 644 keV, cross section for, (E), 25:53734 (CONF-701002-, pp 281-4)
  - neutron fission at low energies, precise cross section for, 25:53731 (CONF-701002-, pp 221-45)
  - neutron fission in the keV and MeV range, effects of fluctuations on cross-section measurements, 25:53732 (CONF-701002-, pp 246-56)
  - neutron fission in the low resonance region, cross-section measurement and normalization for, (E), 25:53775
  - neutron fission of, energy--angular distribution of alpha particles from thermal, (E), 25:53743(R) (INR-1318)
  - neutron fission of, fission yields and γ spectra from thermal, (E), 25:53800
  - neutron fission of, structure of energy dependence of neutron yields from, (T), 25:53773
  - neutron fission rate in ECEL core 20, effects of axial position on, (E), 25:54060(R) (AI-AEC-13005)
  - neutron reactions (n,γf) with, relative prompt-gamma yields from resonance, (E), 25:53755
  - neutron reactions at 0.1 to 30 keV, strength functions for, 25:53798
- **URANIUM ISOTOPES U-236**
  - neutron fission at 0.5 to 8 MeV, cross section for, (E), 25:53752(R) (ORNL-4659)
- **URANIUM ISOTOPES U-238**
  - abundance relative to thorium-230 in manganese nodules from Pacific Ocean, 25:51652
  - abundance relative to uranium-234 in marine sediments, age estimation from, 25:51629
  - determination in fissionable materials, development of gamma-ray and neutron methods for, 25:51768 (LA-DC-12295)
  - neutron capture at 25 keV to 1 MeV, evaluated cross sections for, 25:53602 (CONF-701002-, pp 331-40)
  - neutron capture at 400 keV, cross sections for, (E), 25:53743(R) (INR-1318)
  - neutron elastic scattering at 15 MeV, optical-model analysis including deformations of differential cross sections for, (T), 25:53754
  - neutron fission from 1 to 15 MeV, evaluation of ν-bar for, (E), 25:53730 (AWRE-O-44/71)
  - neutron fission of, energy surface from Cassini ovaloid-type figures for asymmetrical, 25:53774
  - neutron fission rate in ECEL core 20, effects of axial position on, (E), 25:54060(R) (AI-AEC-13005)
  - neutron total cross section and resonance parameters up to 10 keV, (E), 25:53750(R) (NYO-73-340)
  - proton fission at 11.5 GeV, production cross sections and recoil ranges of A = 131 isobars from, (E), 25:53663(R) (COO-1505-48)
- **URANIUM MINERALS**
  - processing for nuclear industry in Portugal, 25:51561 (A/CONF.49/P-522)
- **URANIUM NITRIDES**
  - production and properties of fuels of, 25:52468 (A/CONF.49/P-454)
  - PuN--UN, radiation effects on fuels of, relations of temperature and linear power with fast neutron, 25:52472 (EUR-4347)
- **URANIUM ORE PROCESSING PLANTS**
  - environmental studies for Lisbon Valley, 25:51573 (DOCKET-408084-1)
  - environmental studies on Highland, Converse County, Wyoming, 25:51574 (DOCKET-408102-1)
- **URANIUM ORES**
  - milling of, environmental studies in support of license application at Lisbon Valley, Utah for, 25:51573 (DOCKET-408084-1)
  - milling of, environmental studies on facilities for, Converse County, Wyoming, 25:51574 (DOCKET-408102-1)
  - processing by underground leaching, 25:51558 (A/CONF.49/P-459)
  - processing for thorium and uranium production in Canada, development of facilities for, 25:51638 (A/CONF.49/P-154)
  - processing in UAR, 25:52420 (A/CONF.49/P-146)
  - processing in UK, development of improved methods for, 25:51640 (A/CONF.49/P-489)
  - processing of marginal, Spanish research progress on, 25:51570 (A/CONF.49/P-730)
  - sorting of batches of, radiometric methods for automatic, 25:51696 (A/CONF.49/P-455)
- **URANIUM OXIDES UO_2**
  - compressibility at 2865 to 2923°C, 25:52448
  - creep of monocrystalline and polycrystalline, at 1100 to 1400°C, effects of density, grain size, stoichiometry, and stress on, 25:52438 (BMI-1912)
  - diffusion in, development of methods for measuring thermal, 25:52318(R) (ANL-7820)
  - fabrication of fuel rods of, Westinghouse Plutonium Fuels Development Laboratory for, 25:51675 (WCAP-4167-1, pp 5.1-58)
  - gas generation and swelling in reactor fuel of, mechanisms of, 25:52474(T) (JPRS-53800, pp 196-204)
  - preparation of epitaxial grown single-crystal thin films of, cathode sputtering method for, 25:52434
  - preparation of microspheres of, 25:52432(P)
  - preparation of spheres of, sol-gel and electrodeposition methods for, 25:52418 (A/CONF.49/P-26)
  - preparation of, UAR studies on, 25:52420 (A/CONF.49/P-146)
  - radiation effects in fuels of, in pile, 25:54090 (A/CONF.49/P-501)
  - radiation effects on creep in, fast neutron, 25:54110
  - radiation effects on fuel pellets of, review of in-pile, 25:54082 (A/CONF.49/P-158)
  - radiation effects on fuels of, during reactor startup, relations of fuel life with in-pile, 25:52485
  - radiation effects on lattice structural factors of, fission-fragment, 25:52903(T) (JPRS-53800, pp 180-7)
  - radiation effects on mechanical properties of, neutron, 25:54193 (A/CONF.49/P-823)
  - radiation effects on performance of vibrocompacted fuel rods of, in-pile, 25:52418 (A/CONF.49/P-26)
  - radiation effects on properties and structure of powders of, neutron, 25:54289(T) (JPRS-53800, pp 205-14)
  - radiation effects on stresses in, in-pile, 25:54086 (A/CONF.49/P-392)
  - radiation effects on swelling of fast neutron, 25:53898

(A/CONF.49/P-460)
- radiation effects on thermal conductivity of sintered, pile neutron, 25:52478
- radiation effects on Zircaloy-2 clad, in-pile, 25:54283 (A/CONF.49/P-315)
- radiation effects on zirconium alloy clad sintered, 25:54187 (A/CONF.49/P-720)
- radioinduced porosity in sintered, electron microscopic study of, 25:52473(T) (JPRS-53800, pp 188-95)
- reactions with water during fuel meltdown, hydrogen release from, (E), 25:54159 (IN-ITR-108)
- sintering of, inhibiting effects of pore gas pressure on, 25:52306(T) (LA-tr-71-59)
- sintering of, UAR studies on, 25:52420 (A/CONF.49/P-146)
- spectra of condensing vapors of, ir, 25:52318(R) (ANL-7820)
- temperature effects on fuels of, 25:54090 (A/CONF.49/P-501)
- BeO--PuO_2--ThO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- BeO--PuO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- BeO--ThO_2--UO_2, preparation of fine grain matrixes for reactor fuels, process for, 25:54303(P)
- fabrication of fuel rods of, design of development laboratory for, 25:51784
- Fe--UO_2, fission product distribution in molten, at 2850 to 3000°C, 25:52318(R) (ANL-7820)
- PuO_2--UO_2, analysis of irradiated stainless steel-clad, shielded electron probe microanalyzer for, 25:51379
- PuO_2--UO_2, development of stainless steel clad fuel elements of, 25:54096(R) (GEAP-10028-38)
- PuO_2--UO_2, enthalpy at 2348 to 3041°K, 25:52318(R) (ANL-7820)
- PuO_2--UO_2, fabrication and properties of pellets of, specifications for, 25:52429 (WCAP-4167-1, pp E.1-6)
- PuO_2--UO_2, fabrication of fuel rods of, Westinghouse Plutonium Fuels Development Laboratory for, 25:51675 (WCAP-4167-1, pp 5.1-58)
- PuO_2--UO_2, heat transfer in Zircaloy-4 clad rods of, 25:54104 (WCAP-4167-1, pp 4.1-35)
- PuO_2--UO_2, melting point of, differential thermal analysis equipment for determination of, 25:51672 (LA-DC-12753)
- PuO_2--UO_2, performance of reactor fuels of, 25:54094 (A/CONF.49/P-821)
- PuO_2--UO_2, plutonium distribution in, effects of composition and thermal gradients on, 25:52463
- PuO_2--UO_2, preparation of microspheres of, 25:52432(P)
- PuO_2--UO_2, properties of fuels of, mechanical, physical, and thermal, (E), 25:54096(R) (GEAP-10028-38)
- PuO_2--UO_2, radiation effects on fuel pellets of, review of in-pile, 25:54082 (A/CONF.49/P-158)
- PuO_2--UO_2, radiation effects on, fast neutron, 25:54092 (A/CONF.49/P-609)
- PuO_2--UO_2, radiation effects testing of fuels of, 25:54096(R) (GEAP-10028-38)
- PuO_2--UO_2, reactivity worth of, effects of plutonium oxide (PuO_2) particle size on, (E/T), 25:54287 (BNWL-1608)
- PuO_2--UO_2, reprocessing of irradiated, fluorination method for, 25:51557 (A/CONF.49/P-448)
- PuO_2--UO_2, stoichiometry of irradiated, lattice constant measurement method for determination of, 25:52461
- PuO_2--UO_2, thermal conductivity of high burnup, measurement of 1200°C to melting, (E), 25:54288 (GEAP-13703)
- PuO_2--UO_2, uranium distribution in, effects of composition and thermal gradients on, 25:52463
- PuO_2--UO_2-base, radioinduced porosity in sintered, electron microscopic study of, 25:52473(T) (JPRS-53800, pp 188-95)
- SiO_2--UO_2, radiation effects on creep, swelling, and fission gas release of fuel elements of, in-pile, 25:52466 (A/CONF.49/P-339)
- ThO_2--UO_2, analysis for thorium by x-ray fluorescence, 25:51584(R) (MLM-1792)
- ThO_2--UO_2, preparation of microspheres of, 25:52432(P)

URANIUM OXIDES U_3O_8
- requirements for power reactor fuels in western Europe to 1985, forecasts of, 25:51643 (A/CONF.49/P-678)

URANIUM PHOSPHIDES
- production and properties of fuels of, 25:52468 (A/CONF.49/P-454)

URANIUM RESERVES
- development of Canadian, review of, 25:51638 (A/CONF.49/P-154)
- estimates of Argentine, to 1985, 25:51642 (A/CONF.49/P-560)
- estimates of Indian, 25:51641 (A/CONF.49/P-531)
- estimates to 1985 of worldwide, 25:51643 (A/CONF.49/P-678)

URANIUM SILICIDES
- growth in cast silicon--uranium alloy, kinetics of, 25:52464
- radiation effects on reactor fuel rods of, in-pile, 25:54082 (A/CONF.49/P-158)
- radioinduced damage in U_3Si, electric conductivity study of effects of annealing on neutron, 25:52479

URANIUM SULFIDES
- production and properties of fuels of, 25:52468 (A/CONF.49/P-454)
- thermal capacity of US, at 298 to 1000°K, laser flash method for measurement of, 25:52445

URANYL ACETATES
- luminescence in butanol, effects of temperature on, 25:51478

URANYL BROMIDES
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429

URANYL CHLORIDES
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429
- reactions with molybdenum oxychloride, 25:51426

URANYL COMPOUNDS
- photolysis of ethanol solutions of, 25:52420 (A/CONF.49/P-146)

URANYL NITRATES
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429
- complexes with TTA and antipyrines, preparation of, 25:51597
- luminescence in butanol and propanol, effects of temperature on, 25:51478
- reactions with potassium cyanomolybdates, conductometric and spectral studies on composition and stability of uranyl molybdocyanide ion produced by, 25:51436
- separation from uranyl nitrate--nitric acid--magnesium nitrate--water--TBP system by solvent extraction, 25:51580 (INR-1248)
- $Pu(NO_3)_4$--$UO_2(NO_3)_2$, processing at West Valley, proposed change in technical specifications for, 25:51575 (DOCKET-50201-82)

URANYL PERCHLORATES
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429

URANYL THIOCYANATES
- complexes with hexamethylphosphoric triamide, preparation and properties of, 25:51429

UREA, 1-ETHYL-1-NITROSO-
- effects on reversion frequency of chlorophyll mutants in sunflowers, 25:52267

URIDINE, 5-BROMO-2'-DEOXY-
- radiosensitizing effects on hamster cells, x, 25:52181

URINARY TRACT
- radiation injuries of human, following therapy of neoplasms of testes, gamma and x, 25:52233
- radiation protection during testicular neoplasm therapy using wedge filters, gamma and x, 25:52156

URINE
- analysis for americium by ion exchange and α counting, 25:51395

URUGUAY
- technical development of, contribution of Nuclear Research Centre Installation to, 25:54320 (A/CONF.49/P-108)

UTERUS
- radiotherapy of cervical carcinomas of, in Australia during 1953 to 1968, 25:52171

V

VACUUM
- bibliography on surface and vacuum physics, 25:52600

VACUUM VESSELS
- design of insulated, for analyzing materials immersed in various media, 25:51681(P)

VAK REACTOR
- radioactive effluents from, measurements during 1961 to 1970 of, 25:53979 (A/CONF.49/P-396)

VAN DE GRAAFF ACCELERATORS
- beam buncher for, calculations on multiple-aperture klystron, 25:53448
- development and operation of NRL, Jan.--June, 1970, 25:53405 (AD-714141)
- experimental facility for oxygen-15 production by deuteron reactions with nitrogen, 25:53442
- ion source for LASL, air leak method for increasing output of Lamb-shift polarized, 25:53415 (LA-DC-12943)
- ion source for LASL, performance of polarized, 25:53468
- ion source for Univ. of Washington, Lamb-shift polarized, 25:53469
- ion source for, Lamb-shift polarized, 25:53470
- ion source for, polarized negative, 25:53464
- ion source for, polarized negative hydrogen, 25:53465
- ion source for, polarized proton and deuteron, 25:53461
- ion source, polarized negative, 25:53462
- target chamber for Dacca, 25:53444
- use for nuclear research in New Zealand, 25:53401 (A/CONF.49/P-1)
- vacuum system for, automatic liquid air level regulator for cold traps for, 25:53445

VANADIUM
- determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
- determination in powdered thermal water residues, mass spectrographic, 25:51369
- determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
- electron--phonon coupling constant of, from optical measurements, 25:52757
- radiation effects on yield stress of polycrystalline,

relations of dose and temperature with fast neutron, 25:52412
removal of coating of, from fissile material bundles using azeotropic mixture of hydrofluoric acid and water, 25:51594

VANADIUM ALLOYS AND SYSTEMS
Al--Ti-base--V, properties of castings of, standard for, 25:52338
B--Mn--V, phase studies of, 25:52460
C--Cr--Fe-base--Mn--Si--V--W, production of sintered electrode strips of, method for, 25:52311
Cr--Mo--steel--V, radiation effects on ductility, tensile strength, viscosity, and embrittlement of U.S.S.R. 48 TC, in-pile and neutron, 25:53908 (A/CONF.49/P-705)
Ga--V, electron--phonon coupling constant of intermetallic V_3Ga, from optical measurements, 25:52757

VANADIUM CARBIDES
magnetic susceptibility of single-crystal, (E/T), 25:52968
preparation and properties of, concentration dependence of, 25:52430
slip system at room temperature, hardness anisotropy measurements for, 25:52444
stacking faults as nuclei for transformation to V_2C or zeta phase, electron microscopic study of large, 25:52462

VANADIUM ISOTOPES V-49
energy-level scheme from titanium-49 (p,nγ) reactions, (E), 25:53608(R) (NP-18698)

VANADIUM ISOTOPES V-50
energy levels from alpha Coulomb excitation, transition probabilities for, (E), 25:53608(R) (NP-18698)

VANADIUM ISOTOPES V-51
energy levels from alpha Coulomb excitation, transition probabilities for, (E), 25:53608(R) (NP-18698)

VEGETABLES
beans, radiation processing in Switzerland, 25:52277 (A/CONF.49/P-120)
garlic, radiation processing in Israel, 25:52274 (A/CONF.49/P-12)
onions, radiation processing effects on sprouting of, 25:52280 (A/CONF.49/P-256)
onions, radiation processing effects on sprouting of, 25:52284 (A/CONF.49/P-740)
onions, radiation processing effects on storage life of, 25:52278 (A/CONF.49/P-136)
onions, radiation processing in Israel, 25:52274 (A/CONF.49/P-12)
onions, radiation processing of, 25:52279 (A/CONF.49/P-162)
potatoes, radiation processing effects on sprouting of, 25:52284 (A/CONF.49/P-740)
potatoes, radiation processing effects on sprouting of, 25:52280 (A/CONF.49/P-256)
potatoes, radiation processing effects on sprouting of, effects of dose on γ, 25:52276 (A/CONF.49/P-115)
potatoes, radiation processing effects on storage life of, 25:52278 (A/CONF.49/P-136)
potatoes, radiation processing in Israel, 25:52274 (A/CONF.49/P-12)
potatoes, radiation processing in Switzerland, 25:52277 (A/CONF.49/P-120)
potatoes, radiation processing of, 25:52279 (A/CONF.49/P-162)
radiation processing effects on shelf life of, 25:52284 (A/CONF.49/P-740)
tomatoes, radiation processing in Switzerland, 25:52277 (A/CONF.49/P-120)

VEHICLES
development of shielded, for carrying personnel and remote-handling equipment in radioactive environments, 25:51753 (A/CONF.49/P-617)
radiation shielding materials for, development of, 25:52494(P)

VELA PROJECT
site for Dribble Event in, SW-NE cross section map of Tatum Dome, 25:51617 (USGS-474-114)

VERMONT YANKEE POWER REACTOR
quality assurance program for, revised and additional data on, 25:53996 (DOCKET-50271-62)

VESSELS
design of disposable plastic, for transfer of materials in and out of hot cells, 25:51802

VIBRATIONS
analysis of reactor structural components, conference on, 25:54051
effects on mutability, sporulation, and viability of Chlorella, additive effects of gamma radiation on, 25:52254(T) (JPRS-53801, pp 133-6)

VIRGIL C. SUMMER POWER REACTOR, UNIT 1
design parameters of, requested additional data on, 25:54000 (DOCKET-50395-11)
operations aspects of, requested additional data on, 25:54000 (DOCKET-50395-11)

VIRUSES
influenza PR-8, radioinduced inactivation of, γ, 25:52272
measles, radiation effects on infective and hemagglutinating capacity of, effects of dose on γ, 25:52273

VISCOMETERS
design of radiometric, 25:51923

VISION
radiation effects on human, review of, 25:52250

VITAMIN B GROUP
nicotinamide, radiolysis of aqueous solutions of, effects of ascorbic acid on γ, 25:51531

VK-50 REACTOR
fuel element assemblies of examination after 5000-hr operation of, 25:53919(T) (JPRS-53800, pp 252-7)

VOID FRACTION
measurement in hydrogeneous media, use of neutron transmission for, 25:51924

W

WATER
analysis for mercury by neutron activation and γ spectrometry following chemical separation, 25:51403 (A/CONF.49/P-19)
analysis for tritium by scintillation counting and statistical linear regression analysis of count rate, 25:51388 (LA-DC-12552)
analysis for uranium--radium-series elements by liquid scintillation spectrometry, 25:51620
analysis of powdered residues of thermal, mass spectrographic, 25:51369
analysis of river, for pollutants by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
content in soils, temperature-compensated gamma-ray transmission method for measuring, (E), 25:51630
content of soils, neutron diffraction method for determination of, 25:52017 (A/CONF.49/P-537)
gamma attenuation in, containing steel rods, (E/T), 25:52893
movements in roots and soils, oxygen-18 and tritium tracer studies of, 25:51960 (A/CONF.49/P-626)
neutron diffusion in cadmium-poisoned, multigroup calculation using Nelkin model, (T), 25:53498
neutron scattering in, calculations using itinerant oscillator model for slow, (T), 25:53504
neutron slowing down density distribution in, evaluation of ENDF/B data for, (E/T), 25:54060(R) (AI-AEC-13005)
occurrence in HII regions of M33, (E), 25:52579
oxygen isotope fractionation between nitric oxide and, 25:51601
radiation effects on corrosive effects of boiling, on zirconium alloys, relations of alloying constituents with in-pile, 25:52388 (A/CONF.49/P-428)
radiolysis of, uses in analytical chemistry of γ, 25:51370
reactions with molten uranium oxide (UO_2), hydrogen release from, (E), 25:54159 (IN-ITR-108)
viscosity of, correlation between free-volume and relaxation time or, 25:51461
void fraction in natural circulation boiling, with uniform heat flux, amplitude ratios and phase difference effects on, 25:51688
air--H_2O, flow rates in open bubble column, effects of axial dispersion on, 25:51585 (ORNL-TM-3139)

WATER-d_2
effects on transformation of lymphocytes by phytohemagglutinin, 25:52008(R) (RLO-2226-T-1-7)
neutron scattering in, calculations using itinerant oscillator model for slow, (T), 25:53504
neutron slowing down density distribution in, evaluation of ENDF/B data for, (E/T), 25:54060(R) (AI-AEC-13005)
production at French plants, research on processes for, 25:51702 (A/CONF.49/P-607)
production of, purification of isotope exchange agents for, 25:51602(P)
production of, UAR research studies on, 25:52420 (A/CUNF.49/P-146)
radioinduced exchange reactions with hydrogen at 84 to 381°C, 25:51495 (COO-1116-19)
viscosity of, correlation between free-volume and relaxation time or, 25:51461

WATER-t
exchange reaction with hydrogen on intermetallic NiGa, 25:51452

WATER SUPPLIES
radiation monitoring programs for USA, 1968 through 1970, 25:52057

WEAR
measurements on operating machine parts, using neutron activation and gamma spectrometry, 25:51724

WEISWEILER POWER REACTOR
development program for, review of, 25:54027 (A/CONF.49/P-369)

WELDED JOINTS
radiation effects on impact viscosity of stainless steel, fast neutron, 25:52401(T) (JPRS-53800, pp 176-9)

WELDS
strength of, statistical radiographic evaluation of effects of defects on, 25:51735

WELL LOGGING
equipment and method for density correction for gamma--gamma radiometric, 25:51622(P)
methods for pulsed neutron, in USSR, 25:51610 (A/CONF.49/P-436)
methods for radiometric, in Poland, 25:51693

XUM

- (A/CONF.49/P-334)
- uses of gamma, for studying stratigraphy of Upper Silurian salt deposits in US, 25:51624

WEST VALLEY PROCESSING PLANT
- operation of, authorization of changes in Technical Specifications 3.1, 4.10, and 6.1 for, 25:51576 (DOCKET-50201-85)
- operation of, proposed changes in technical specifications for processing plutonium nitrate--uranyl nitrate solutions in, 25:51575 (DOCKET-50201-82)
- radioactive waste disposal to environment at, 25:52060

WHISTLERS
- propagation in collisionless magnetoplasmas, with weak electrostatic waves, (T), 25:52864(R) (SIT-3785-16)

WHOLE-BODY COUNTERS
- calibration methods for, 25:51975
- design of Compton, for scanning cattle for mineral metabolism, 25:52142

WILLIAM H. ZIMMER POWER REACTOR, UNIT 1
- design parameters of, revised and additional data on, 25:53999 (DOCKET-50358-26)
- operations aspects of, revised and additional data on, 25:53999 (DOCKET-50358-26)

WIND
- effect of neutral air, on ionospheric F-region parameters, (E/T), 25:52725
- hazards from tornado, to Fast Flux Test Facility site, 25:54205 (HEDL-TME-71-35)
- intensity of tornado, use of fatality and damage reports in estimation of, 25:54379 (SC-DC-714011)

WOOD
- radioinduced polymerization of monomers in South African, γ, 25:51504 (A/CONF.49/P-668)
- radioinduced polymerization with acrylonitrile, methyl methacrylate, or styrene, properties of products of γ, 25:51494 (A/CONF.49/P-829)
- plastics--wood, radioinduced production of, properties of products of electron, 25:51503 (A/CONF.49/P-647)

X

X RADIATION
- dose curves for therapy beams of, proton beam comparison with, 25:52074
- dose distribution in therapy, effects of bone density and body size on, 25:52075
- dose distribution in tissues, 25:52152 (UCRL-20836)
- dose to human ovaries during hysterosalpingography using two-film, fluoroscopy, and spot film techniques, 25:52086
- dose to man during radiographic control procedures in orthopedic surgery using conventional and image intensification methods, comparison of, 25:52085
- dosimetry in human intestine, use of survival of enteric bacteria for, 25:52269
- dosimetry in therapy, calibration methods for, 25:52088
- dosimetry in tissues and organs of rats, use of implanted thermoluminescent detectors for, 25:52196
- dosimetry of low-energy high-dose, processing procedure for photographic film for, 25:51909
- dosimetry using polymer thermoelectrets, 25:51910
- effcts on human skin during therapy, pathological, 25:52118
- effectiveness comparison with fast neutrons for therapy of human lung metastases, 25:52162
- effectiveness for neoplasm therapy in comparison with fast neutrons, 25:52160
- effectiveness for therapy of carcinomas of esophagus, effects of dose, dose fractionation, and energy on, 25:52157
- effects of pulsed, on liquid chloroform, effects of dose rate on yields from, 25:51519
- effects on age--response pattern in synchronized cultures of Chinese hamster cells, evidence for repair of, 25:52183
- effects on albumin metabolism in small and large intestines in mice, iodine-131 tracer study of, 25:52003
- effects on algae, isotope substitution methods for studying, 25:52255 (JUL-727-BO)
- effects on alkali-metal borate glasses, ESR studies of intrinsic defect center induced in, 25:52928
- effects on bacteria and yeasts, effects of dose on molecular repair mechanisms for, 25:52268 (A/CONF.49/P-538)
- effects on barley and wheat, effects of ethylenimine on mutagenic, 25:52042
- effects on barley, corn, kidney beans, peas, rice, and soybeans following seed or seedling exposure, comparison of, 25:52261
- effects on bone marrow cells of mice in vitro and in vivo, protective effects of dimethyl sulfoxide against lethal, 25:52113
- effects on chromosomes in embryonic cells of rats, aberrant whole-body, 25:52217
- effects on chromosomes of Vicia faba, verification of Rivell's hypothesis for aberrant, 25:52035
- effects on colony-forming ability of ascites cells and L cells, protective effects of nucleotides against, 25:52106 (A/CONF.49/P-257)
- effects on composition and content of blood serum proteins in juvenile rats, effects of dose on, 25:52192
- effects on conidia of Aspergillus mutants, 25:52038
- effects on content of aromatic amines in blood and urine of rats, effects of dose on, 25:52268 (A/CONF.49/P-538)
- effects on content of leukocytes in peripheral blood and survival of mice, protective effects of royal jelly against, 25:52108
- effects on count of leukocytes in blood of man and swine, effects of partial-body and whole-body dose on, 25:52234
- effects on cultured HeLa cells, protective effects of dimethyl sulfoxide against lethal, 25:52112
- effects on DNA of mammalian cells, effects of dose on repair replication of, 25:52179 (UCSF-10-P-2-134)
- effects on Drosophila embryos, comparison of γ radiosensitivity of adults and, 25:52026
- effects on Drosophila melanogaster, mutagenic, 25:52031
- effects on endocrine gland function in rats, relation of etiology of radiation sickness to, 25:52194
- effects on enzyme activity in blood serum of rats, effects of whole-body dose on, 25:52189
- effects on europium-activated alkali-metal halide crystals, luminescence induced by, (E), 25:52923
- effects on ferritin and transferrin in dry state, effects of iron on free radical yields from, 25:51995
- effects on fetus following abdominal radiography during pregnancy, teratological, 25:52252
- effects on fluorescence of aqueous solutions of sodium salicylate, 25:51491
- effects on function and morphology of gonads in gerbils, effects of dose on, 25:52268 (A/CONF.49/P-538)
- effects on function of rat adrenal glands, effects of dose and time on, 25:52193
- effects on growth of murine lymphoma cells, mechanisms of recovery from inhibitory, 25:52218
- effects on hardness of potassium chloride crystals, 25:52924
- effects on hematopoiesis in mice receiving thymocyte transplants, in vitro and in vivo, 25:52206
- effects on hematopoiesis in mice, protective effects of RNA against, 25:52106 (A/CONF.49/P-257)
- effects on hexokinase activity in brain, erythrocytes, and liver of rats, 25:51998
- effects on human fetus following therapy of breast carcinoma during pregnancy, 25:52239
- effects on human lungs following therapy, 25:52244
- effects on human skin following use for therapy of neoplasms, 25:52165
- effects on kidneys and urinary tract during therapy of neoplasms of testes, pathological, 25:52233
- effects on lead azides, yields of nitrogen from, 25:51524
- effects on leaves and stems of jute, morphological characteristics of mutagenic, 25:52040
- effects on leukocyte count in blood of human patients during therapy, additive effects of cyclophosphamide therapy on, 25:52155
- effects on leukocyte reserves in bone marrow of rats, effects of testosterone on recovery from whole-body, 25:52110
- effects on lung worm larvae for use in guinea pig and sheep immunization, 25:52007 (A/CONF.49/P-355)
- effects on lymphocyte response to phytohemagglutinin, effects of dose on, 25:52178(R) (RLO-2226-T-1-6)
- effects on manganese-doped calcium fluoride crystals, optical properties of color centers induced in, 25:52910
- effects on mechanical activity of vas deferens of guinea pigs, threshold dose for, 25:52216
- effects on mice, protective effects of C_{s11}HF against whole-body exposure, 25:52117
- effects on mitosis and uptake of tritium-labeled-thymidine by stomach mucosa of mice, 25:52221
- effects on morphology of rat adrenal glands, effects of direct and whole-body dose on, 25:52190
- effects on mortality and mutation frequency in silkworms as function of strain differences, 25:52027
- effects on mouse bone marrow cells in vivo, method for demonstrating recovery following lethal whole-body exposure, 25:52215
- effects on nuclei of rat thymus cortex cells, electron microscopy of high dose, 25:52225
- effects on periodontium of rats, comparison of local and whole-body exposure, 25:52223
- effects on peripheral blood in rats, effects of bis(3-hydroxypropyl) trisulfide on high dose, 25:52186
- effects on pulmonary bactericidal function of mice, 25:52227
- effects on rat brain, histological methods in studies of fractionated or single 50-R dose, 25:52195
- effects on rat hearts prior to recipient transplantation, in situ or whole-body, 25:52208
- effects on rats, relation between dose absorbed by various tissues and pathological, 25:52187
- effects on renal acid excretion in uninephrectomized dogs, studies on mechanisms of, 25:52005
- effects on RNA synthesis in Ehrlich ascites tumor cells, 25:52180
- effects on single-strand DNA breaks in radiosensitive

XUM

  Escherichia coli B mutant R 15, 25:52024
 effects on skin and tissues during therapy of human bladder tumors, 25:52172
 effects on stomach mucosa of mice, pathology of, 25:52221
 effects on strontium chloride single crystals at low temperature, color centers induced in, (E/T), 25:52915
 effects on survival of ascites, L, and lymphosarcoma cells, effects of dose on, 25:52177 (A/CONF.49/P-554)
 effects on survival of cells in cultures and in neoplastic and normal tissues, comparison between fast neutron effects and, 25:52201
 effects on survival of cells in mouse bone marrow and rat skin, comparison between effects of fast neutrons and, 25:52200
 effects on survival of cells in neoplastic and normal tissues, effects of dose and dose fractionation on RBE for, 25:52199
 effects on survival of cultured hamster cells, sensitizing effects of 5-bromodeoxyuridine on, 25:52181
 effects on survival of mammalian cells in relation to effects on unscheduled DNA synthesis and chromosome number, 25:52182
 effects on survival of mammalian cells, RBE for, 25:52174 (A/CONF.49/P-30)
 effects on survival of mice, diurnal and seasonal variations in, 25:52191
 effects on survival of mice, protective effects of analogs of o-[(2-aminoethyldithio]benzoic acid against, 25:52114
 effects on survival of mice, protective effects of autologous marrow injections and shielding on, 25:52213
 effects on survival of mice, protective effects of bone marrow injections against lethal, 25:52107
 effects on survival of mouse osteosarcoma cells in vivo and in vitro, effects of oxygen content on, 25:52198
 effects on survival of neonatal mice, effects of dose and partial-body shielding on, 25:52268 (A/CONF.49/P-538)
 effects on thyroid gland in rats, repeated low-dose, 25:52212
 effects on tissues of human brain following therapy of pituitary adenomas, necrotic, 25:52246
 effects on transformation of lymphocytes by phytohemagglutinin, 25:52008(R) (RLO-2226-T-1-7)
 effects on yeasts, characteristics and repair of mutagenic, 25:52025
 emission at 30 to 100 keV of pulsed, from NP 0532, (T), 25:52542
 emission during solar flares, parameters of source regions for, (E), 25:52558
 emission from beam--plasma system, measurement of, 25:52806
 emission from clusters of galaxies, effects of Hubble constant on, (T), 25:52586
 emission from dense plasma focus, time correlation with neutron emission, 25:52855
 emission from thin films, induced by protons, 25:52601
 emission of thermal, from pulsars, (T), 25:52541
 flux of cosmic background, from 0.2 to 2 keV, (E), 25:52580
 protection against, during diagnostic radiography, 25:52092
 reactions with rare earth fluorides, energy spectra of 4f and valence electrons ejected in, (E), 25:52615
 spectra of nonthermal solar, at 3 to 10 keV, (E), 25:52562
X-RAY BEAMS
 dose rates at points in, ionization detector system for measuring differences in, 25:51916
 quality of diagnostic radiography, method for measurement of, 25:52136
X-RAY-DIFFRACTION ANALYSIS
 sample containment for volatile compounds in high-temperature, 25:51584(R) (MLM-1792)
X-RAY FLUORESCENCE ANALYSIS
 development of automatic, for nuclear safeguards system in West Germany, 25:51759 (A/CONF.49/P-809)
 uses in geophysics and mining in Poland, 25:51693 (A/CONF.49/P-334)
 x-ray sources for, design and performance of small tube, 25:51934 (LBL-10)
X-RAY SOURCES
 calibration for therapy, performance of ionization chambers for, 25:51917
 design and performance of small tube, for fluorescence analysis, 25:51934 (LBL-10)
X-RAY SPECTROMETERS
 background and sensitivity of silicon, with guard ring, 25:51856 (LBL-9)
 development of semiconductor, for use in nonferrous mining industry, 25:51361 (CONF-710428-, Paper 1)
X-RAY SPECTROSCOPY
 methods of energy dispersion, used in nonferrous mining industry, 25:51361 (CONF-710428-, Paper 1)
XENON
 oscillations in production reactors, characteristics of axial, 25:54253 (DP-1251)
 oxygen-ion (O^+) reactions at 50 to 210 keV with, delayed-coincidence study of inelastic processes in, 25:52638
 photon reactions at 35 to 2000 MeV in liquid, cross sections for e^+--e^- pair production in, (E), 25:52994
 transition processes in reactors, (T), 25:54263 (ITEF-817)
 use for shock tube simulation of thermal environment of nuclear fireballs, 25:51658 (AD-717090)
XENON IONS
 implantation in graphite, aluminum, titanium, and copper at 1 to 120 keV, saturation values of, 25:52922
 reactions with oxygen atoms at 30 keV to 2 MeV, cross sections for electron capture and loss in, (E), 25:52675
XENON ISOTOPES
 separation by thermal diffusion, 25:51718(R) (MLM-1816)
XENON ISOTOPES Xe-115
 beta decay of, delayed proton spectra and branching ratios for, (E), 25:53765
XENON ISOTOPES Xe-117
 beta decay of, delayed proton spectra and branching ratios for, (E), 25:53765
XENON ISOTOPES Xe-129
 neutron capture by, gamma spectra from thermal, (E), 25:53776
XENON ISOTOPES Xe-130
 energy levels from xenon-129 (n,γ) reactions, (E), 25:53776
XENON ISOTOPES Xe-131
 neutron capture by, gamma spectra from thermal, (E), 25:53776
XENON ISOTOPES Xe-132
 energy levels from xenon-131 (n,γ) reactions, (E), 25:53776
XENON ISOTOPES Xe-133
 energy levels from iodine-133 decay, spins and parities of, (E), 25:53778
 evaluation for blood circulation and ventilation scintigraphy in normal human lungs, 25:52134
 use for blood flow studies in animals and man, 25:52126 (A/CONF.49/P-332)
 use in combination with iodine-131-labeled serum albumin for bilateral cardiac blood flow studies, 25:52126 (A/CONF.49/P-332)
 use in medicine for lung perfusion and ventilation studies, 25:52122 (A/CONF.49/P-161)
XYLENE
 effects on solvent properties of bis(2-ethylhexyl) phosphate for uranium, 25:51600

Y

YTTERBIUM
 energy level distribution in metal and oxide of, from x-ray spectra, 4f-state, 25:52607 (CONF-711001-(Vol.1), pp 135-43)
 energy-level transitions in, corrections to fluorescence yield and probability of L_2-subshell Coster--Kronig, 25:52608
 phase transformation in thin films of, effects of annealing at 500°K in vacuum on fcc to hcp, 25:52375 (CONF-711001-(Vol.1), pp 379-85)
 radiolysis of aqueous solutions of, formation and reactions of divalent ions in electron pulse, 25:51508 (CONF-711001-(Vol.2), pp 560-72)
 reactions of divalent, with amides in liquid ammonia, potentiometric titration studies of, 25:51423 (CONF-711001-(Vol.1), pp 315-21)
 shock compression-induced emf in, (E/T), 25:52961
YTTERBIUM ALLOYS AND SYSTEMS
 Pd--Yb, electric conductivity of Pd_3Yb at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
YTTERBIUM BROMIDES
 crystal structure of $YbBr_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
YTTERBIUM CHLORIDES
 crystal structure of $YbCl_2$, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
YTTERBIUM FLUORIDES
 crystal structure of YbF_2, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
YTTERBIUM IODIDES
 crystal structure of YbI_2, 25:51466 (CONF-711001-(Vol.1), pp 74-83)
 reactions with potassium amide in liquid ammonia, potentiometric titration studies of, 25:51423 (CONF-711001-(Vol.1), pp 315-21)
YTTERBIUM IONS
 implantation in iron and gold at 130 keV, distribution of damage from, 25:52929
YTTRIUM
 book: Monocrystals of Refractory and Rare Metals. Reports of the Third All-Union Conference on Preparation, Structure, Physical Properties, and Uses of Monocrystals of Refractory and Rare Metals, 25:52362
 plasticity of cylinders of, from -95 to 796°C, (E), 25:52328
 separation as thiocyanate from aqueous solutions by solvent extraction using TBP, 25:51593
 separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)
 stability of cylinders of, from -95 to 796°C, (E), 25:52328

YTTRIUM ALLOYS AND SYSTEMS
  bond energy of diatomic intermetallic compounds of, calculations of, 25:52321 (CONF-711001-(Vol.2), pp 795-803)
  Au--Y, dissociation energy of YAu, 25:52321 (CONF-711001-(Vol.2), pp 795-803)
  Ce-base--Lu--Y, Kondo effect in dhcp, 25:52951
  Ce-base--Pu--Y, Kondo effect in dhcp, 25:52951
  Ce-base--Sc--Y, Kondo effect in dhcp, 25:52951
  Co--Fe--Y, lattice constants for Y_2(Co/sub 1-x/Fe/sub x/)$_{17}$, 25:52374 (CONF-711001-(Vol.1), pp 368-78)
  Mg-base--Y, mechanical properties of, effects of thermomechanical treatments on, 25:52304 (CONF-711001-(Vol.2), pp 645-56)
  Pd--Y, electric conductivity of Pd_3Y at 1.5 to 300°K, 25:52946 (CONF-711001-(Vol.2), pp 692-703)
  Y--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
YTTRIUM BORIDES
  CoB--YB, structure of YCo_2B_2, 25:52453 (CONF-711001-(Vol.2), pp 598-609)
YTTRIUM CARBIDES
  superconductivity enhancement in, 25:52741(P)
YTTRIUM ISOTOPES Y-89
  deuteron reactions (d,n) at 11 MeV using polarized beam, vector analyzing power for, (E), 25:53652
  energy levels from strontium-88 (p,γ) reactions, spin--parity assignments for, (E), 25:53661 (COO-1120-119)
  energy-level transitions from strontium-88 (p,γ) reactions, intensities and multipolarities for, (E), 25:53661 (COO-1120-119)
  neutron inelastic scattering at 14.8 MeV, cross section for, (E), 25:53743(R) (INR-1318)
  proton inelastic scattering at 61 MeV, analysis using realistic interaction, (T), 25:53752(R) (ORNL-4659)
  proton reactions (p,γ) at 2.3 to 3.0 MeV, cross sections, excitation functions, and spectra from, (E), 25:53661 (COO-1120-119)
YTTRIUM ISOTOPES Y-90
  beta decay of, longitudinal polarization of beta particles from, (E), 25:53803
YTTRIUM ISOTOPES Y-91
  uptake by bottom sediments, plankton, and suspensions, (E), 25:51649 (A/CONF.49/P-457)
  use as tracer for evaluation of milk volume of mammary glands of goats, 25:51984
YTTRIUM OXIDES
  spectra of europium- and terbium-doped, flame-excited luminescence, 25:52941 (CONF-711001-(Vol.2), pp 452-64)
  spectra of rare-earth ions in single crystals of, two-photon, 25:52942 (CONF-711001-(Vol.2), pp 465-77)
YUGOSLAVIA
  development of nuclear power plants in, long-term projections of, 25:53895 (A/CONF.49/P-347)
  fuel element research in, review on, 25:52424 (A/CONF.49/P-350)
  nuclear physics programs in research reactors in, 25:54178 (A/CONF.49/P-348)
  nuclear physics research programs with Norway, Poland, IAEA, and description of joint, 25:54261 (A/CONF.49/P-330)
  radioisotope production in research reactors in, 25:54178 (A/CONF.49/P-348)
  uranium exploration in, during 1948 to 1970, data review on, 25:51639 (A/CONF.49/P-349)

Z

ZINC
  determination in air dusts by neutron activation and γ spectrometry, 25:51403 (A/CONF.49/P-19)
  determination in mining and milling samples by energy dispersion x-ray spectrometry, 25:51361 (CONF-710428-, Paper 1)
  determination in powdered thermal water residues, mass spectrographic, 25:51369
  determination in uranium by differential linear sweep oscillographic polarography, 25:51380
  determination of trace amounts of, in surface air by nondestructive neutron activation, 25:51414
  diffusion in cadmium single crystals, anisotropy and isotope effect in, 25:52358
  electron--phonon coupling constant of, from optical measurements, 25:52757
  hydration sphere of, in aqueous solution, oxygen-17 NMR studies of first, 25:51472 (UCRL-20580)
  metabolism in farm animals, review of literature on, 25:51980
  metabolism in swine, zinc-65 tracer study of, 25:51981
  separation of rare earths from, by complexing and precipitation, 25:51589
  solubility in mercury, kinetics of, 25:54361 (COO-1436-29)
  transport in soils in relation to plant utilization, tracer techniques to determine, 25:52017 (A/CONF.49/P-537)
ZINC ALLOYS AND SYSTEMS
  Ag--Cd--Zn, diffusion in solid solutions of, at 600°C, determination of coefficients of intrinsic and inter-, 25:52324 (COO-1436-30)
  Cu--Ni--Zn, multiphase diffusion in, 25:54362 (COO-1436-31)
  Hf--Zn--Zr, magnetic properties of Zr/sub 1-x/Hf/sub x/Zn_2, 25:52959
  Ti--Zn--Zr, magnetic properties of Zr/sub 1-x/Ti/sub x/Zn_2, (T), 25:52959
ZINC ISOTOPES Zn-65
  energy levels from zinc neutron capture, spin assignments for, (E), 25:53704
  metabolism in farm animals, review of literature on, 25:51980
  metabolism in swine following experimental ingestion with feed, 25:51981
  radiation effects on sheep and swine metabolism of, gamma and fission neutron, 25:52210
  retention in sheep following intravenous injection, effects of EDTA on, 25:51985
ZINC ISOTOPES Zn-67
  energy levels from zinc neutron capture, spin assignments for, (E), 25:53704
ZINC ISOTOPES Zn-68
  deuteron elastic scattering at 13 MeV, vector analyzing power for, (E), 25:53715
  energy levels from zinc neutron capture, spin assignments for, (E), 25:53704
ZINC OXIDES
  radioinduced defects in wurtzite crystals, anisotropy of, (T), 25:52899(T) (JPRS-53800, pp 44-52)
ZIRCALOY
  fabrication of reactor fuel cladding tubes of, 25:52301 (A/CONF.49/P-291)
  failure of fuel element cladding of, effects of coolant loss accidents on, 25:54116
  mechanical properties of reactor fuel cladding tubes of, 25:52301 (A/CONF.49/P-291)
ZIRCALOY-2
  creep buckling of cylinder shaped tubes of, (T), 25:54312
  properties of tubes of, relations with texture coefficients, 25:52325
  radiation effects on corrosion resistance, mechanical properties, and swelling of pressure tubes of, fast neutron, 25:52391 (A/CONF.49/P-502)
  radiation effects on creep in, fast neutron, 25:54110
  radiation effects on, in-pile, 25:54283 (A/CONF.49/P-315)
ZIRCONIUM
  abundance in Apollo 14 soils 14163 and 14259, (E), 25:52596
  determination in rock and monazite samples by fluorometry using quercetin as complexing agent, 25:51377
  determination in titanium alloys, unifying techniques for, 25:51365
  distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
  neutron reactions at 1.00 to 2.00 MeV, total cross sections for, (E), 25:53728 (AECD/EP-18)
  separation from uranium by partition chromatography, 25:51587 (UJV-2567-Ch)
  slip in α-, room-temperature basal and prismatic, 25:52383
  solubility in molybdenum, solid, 25:52366
  surface treatment for plating of, pickling method for, 25:52316(P)
ZIRCONIUM ALLOYS AND SYSTEMS
  metal--oxide interface on oxidized, electron microscopy studies on, 25:52378
  polishing of finished parts of, electrolytic method for, 25:52315(P)
  radiation effects on corrosion of, by boiling water, relations of alloying constituents with in-pile, 25:52388 (A/CONF.49/P-428)
  surface treatment for plating of, pickling method for, 25:52316(P)
  Cr--Cu--Zr, properties of, effects of scandium additions on electric, mechanical, and welding, 25:52368
  Cr--Mo--Zr, phase studies of isothermal section of, at 1500°C, 25:52379
  Cu--Zr, properties of plasma sprayed films of, on ceramics, 25:52312
  Dy--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Er--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Gd--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Hf--Zn--Zr, magnetic properties of Zr/sub 1-x/Hf/sub x/Zn_2, 25:52959
  Ho--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Lu--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Nb--Ti--Zr, particle size distribution in powders of, photosedimentation method for measurement of, 25:52354
  Nb--Zr-base, performance of fuel element cladding of,

25:53919(T) (JPRS-53800, pp 252-7)
  Nb--Zr-base, phase transformations in, effects of heat treatments on, 25:52380
  Nb--Zr-base, properties of pressure tubes of, for use in CANDU reactor, 25:52385 (A/CONF.49/P-159)
  Nb--Zr-base, properties of tubes of, relations with texture coefficients, 25:52325
  Nb--Zr-base, reactions with sodium at 400°C, hydriding and oxidation, 25:52298 (EUR-4460)
  Tb--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)
  Ti--Zn--Zr, magnetic properties of Zr/sub 1-x/Ti/sub x/Zn_2, (T), 25:52959
  Y--Zr, solid solution formation in, by splat cooling, solubility limits of, 25:52377 (CONF-711001-(Vol.2), pp 638-44)

ZIRCONIUM BORIDES
  solubility in zirconium nitride, 25:52450
  solvent properties for zirconium nitride, 25:52450
  ZrB_2--ZrN, preparation of refractories of, method for, 25:52450
  ZrB_2--ZrO_2, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415

ZIRCONIUM CARBIDES
  magnetoresistance and Hall effect of, (E), 25:52964
  preparation and properties of, concentration dependence of, 25:52430
  slip system at room temperature, hardness anisotropy measurements for, 25:52444
  NbC--ZrC, properties of solid solutions of, electric, magnetic, and thermal, 25:52446

ZIRCONIUM HYDRIDES
  radiation effects on mechanical and physical properties of, at 100 to 850°C, fast neutron, 25:52467 (A/CONF.49/P-452)

ZIRCONIUM ISOTOPES Zr-90
  deuteron elastic scattering at 13 MeV, vector analyzing power for, (E), 25:53715
  deuteron reactions (d,p) at 12 MeV using polarized beam, vector analyzing power for, (E), 25:53726
  deuteron reactions (d,p) at 6 to 9 MeV using polarized beams, threshold effects in isospin-coupled channels of, (E), 25:53791
  energy levels from yttrium-89 (p,γ) reactions, spin--parity assignments for, (E), 25:53661 (CCO-1120-119)
  energy levels of, g-factors and magnetic moments of 8^+ isomeric, (E), 25:53779
  energy-level transitions from yttrium-89 (p,γ) reactions, intensities and multipolarities for, (E), 25:53661 (COO-1120-119)
  proton inelastic scattering at 185 MeV with 3^- excitation, polarization in, (E), 25:53647
  proton inelastic scattering at 61 MeV, analysis using realistic interaction, (T), 25:53752(R) (ORNL-4659)

ZIRCONIUM ISOTOPES Zr-91
  photon reactions (γ,n) and (γ,p) with, method of accounting for continuous nucleon spectrum from, (T), 25:53770

ZIRCONIUM ISOTOPES Zr-95
  determination simultaneously with niobium-95 and ruthenium-106, electrolytic methods in, 25:51400
  separation from irradiated thorium--uranium fuels by solvent extraction using N-methyldidecylamine, 25:51566 (A/CONF.49/P-650)

ZIRCONIUM ISOTOPES Zr-96
  proton elastic scattering at 11 to 12 MeV using polarized beams, threshold effects in isospin-coupled channels of, (E), 25:53791

ZIRCONIUM NITRIDES
  analysis for nitrogen and oxygen simultaneously by inert gas fusion method using impulse heating furnace, 25:51359 (AERE-R-6537)
  solubility in zirconium diboride, 25:52450
  solvent properties for zirconium diboride, 25:52450
  ZrB_2--ZrN, preparation of refractories of, method for, 25:52450

ZIRCONIUM OXIDES
  distribution between molten iron and uranium dioxide at 2850 to 3000°C, 25:52318(R) (ANL-7820)
  Cu--ZrO_2, heat resistance of, 25:52371
  PrO--ZrO_2, phase relations in, effects of oxygen pressure on, 25:52454 (CONF-711001-(Vol.2), pp 631-7)
  ZrB_2--ZrO_2, phase compositions of compounds formed at 1000 to 2000°C in, 25:52415

REPORT NUMBER INDEX

Reports, conference papers and proceedings, numbered translations, and patents are included in this index. Each item is listed by report number; this is followed by the abstract number and a brief notation regarding public availability. The index entries show which reports are on file in the institutions listed on the back of the front cover (Dep.), which reports have been published in open-literature journals (journal citation), and which reports can be purchased (source and price). Whenever a report is identified by more than one number, the availability is given under the primary number, and a cross reference is given under the secondary report number.

The report number codes apply to USAEC reports unless designated otherwise. Non-USAEC reports are identified by parenthetical notes after the report codes; e.g., (non-AEC), (British), (Canadian), (French). The note (Misc.) identifies the codes used for both USAEC and non-USAEC reports. Patents are listed under the heading "PATENTS"; the country of origin is included in parentheses.

A comprehensive list of both USAEC and non-USAEC report codes is contained in the latest revision of TID-85, *Report Number Series Used by the Division of Technical Information in Cataloging Reports.* This information is also included in the Cumulative Report Number Index (issued annually).

Availability of USAEC Reports

All USAEC Reports abstracted in *Nuclear Science Abstracts* are available through one or more of the following sources:

(1) University and public libraries in the United States. A list of these organizations appears on the inside front cover of each issue of *NSA*.

(2) NCR Microcard Editions in Microcard and micronegative form. Orders and inquiries should be sent to: Order Processing Department, 365 South Oak Street, West Salem, Wisconsin 54669.

(3) National Technical Information Service, U. S. Department of Commerce, Springfield, Virginia 22151.

(4) Superintendent of Documents, U. S. Government Printing Office, Washington, D. C. 20402.

(5) Microsurance, Inc., P. O. Box 3522, Oak Ridge, Tenn. 37830, in micronegative form. Purchase details available on request.

Availability of Non-USAEC Reports

U. S. Reports. Reports of U. S. Government agencies are available to the public from the National Technical Information Service (NTIS). If specific availability is not shown, inquiries may be directed to NTIS.

Non-U. S. Reports. Reports of atomic energy organizations of other countries are available from NTIS for U. S. sale only. Specific availability in the country of origin is shown, when known, at the report number entry. Otherwise, inquiries should be made to the organizations listed below:

AUSTRALIA

Australian Atomic Energy Commission Research Establishment. Available upon request from the Library, Australian Atomic Research Establishment, Private Mail Bag, Sutherland, New South Wales, Australia.

BELGIUM

Centre d'Étude de l'Energie Nucléaire. Available upon request to individuals and organizations from the Centre d'Etude de l'Energie Nucléaire (C.E.N.), Studiecentrum voor Kernenergie (S.C.K.), Technical Information Dept., MOL-DONK (Belgium).

CERN

CERN European Organization for Nuclear Research. Available without charge from CERN European Organization for Nuclear Research, Geneva 23, Switzerland. Copies are deposited in libraries throughout the world.

FRANCE

Commissariat à l'Energie Atomique. Inquiries for reports numbered 1-2199 should be addressed to Service Central de Documentation du C.E.A., Centre d'Etudes Nucléaires de Saclay, Boîte postale n° 2, 91. GIF-sur-YVETTE, FRANCE. Reports numbered 2200 and above are available from La Documentation Française, 31 quai Voltaire, 75, PARIS (7e), FRANCE.

Service Central de Protection contre les Rayonnements Ionisants. Copies are available from Ministère de la Santé Publique, Service Central de Protection contre les Rayonnements Ionisants, B.P. n° 78 Le Vesinet (France) Telex 25667.

GERMANY

Deutsches Elektronen-Synchrotron DESY. Copies are available from Deutsches Elektronen-Synchrotron DESY, Dokumentation, 2000 Hamburg 52, Notkestieg 1, Germany.

Gesellschaft für Kernforschung mbH (KFK). Copies are available from Gesellschaft für Kernforschung mbH, 75 Karlsruhe, Postfach 947, Germany. Copies are also deposited in many national nuclear centers in the world.

Kernforschungsanlage. Copies may be ordered from Zentralbibliothek der Kernforschungsanlage Jülich, Jülich, Bundesrepublik Deutschland.

Hahn-Meitner-Institute für Kernforschung. Available without charge from Hahn-Meitner-Institute für Kernforschung Ber-

XUM

lin, Bibliothek, Glienicker Strasse 100, 1 Berlin 39, Germany. Copies are deposited in many national nuclear centers in the world.

Johann-Wolfgang-Goethe Universität, Frankfurt Am Main, Institut für Kernphysik, (IKF). Copies are available from Gmelin Institut, 40–42 Varrentrappstrasse, Frankfurt (Main), West Germany.

ISRAEL

Israel Atomic Energy Commission. Available without charge from Israel Atomic Energy Commission, Soreq Nuclear Research Centre, Yavne, Israel.

ITALY

Centro Informazioni Studi Esperienze (CISE). For sale at CISE Press Office, Casella Postale 3986, Milano, Italy. Copies are deposited in the libraries of various nuclear centers in Italy and abroad.

Comitato Nazionale per l'Energia Nucleare. Copies are available from Comitato Nazionale per l'Energia Nucleare, Divisione Affari Internazionali e Studi Economici, Ufficio Pubblicazioni, Via Belisario, 15, Roma, Italy.

JAPAN

Japan Atomic Energy Research Institute (JAERI). Available from the Staff Supply Cooperative of Japan Atomic Energy Research Institute (JAERI), Tokai-mura, Naka-gun, Ibaraki-ken, Japan. Copies are deposited in depositories in Tokyo, Nagoya, and Osaka.

Nagoya University. Copies are available from Research Information Center, Institute of Plasma Physics, Nagoya University, Nagoya, Japan.

University of Tokyo. Available free of charge from Institute for Nuclear Study, University of Tokyo, Tanashi-Machi, Kitatama-gun, Tokyo, Japan.

NETHERLANDS

Reactor Centrum Nederland. For sale by Reactor Centrum Nederland, 112 Scheveningseweg, 's-Gravenhage, The Netherlands. Copies are deposited in university libraries in Holland and in many national nuclear centers in the world.

NEW ZEALAND

Institute of Nuclear Sciences. Copies are available from Librarian, N. Z. Institute of Nuclear Sciences, D.S.I.R., Private Bag, Lower Hutt, New Zealand. Copies are deposited in other countries.

PAKISTAN

Atomic Energy Center. Copies are available from Atomic Energy Center, P. O. Box 658, Lahore, (West Pakistan).

POLAND

Reports of the Polish nuclear institutes are published by the Nuclear Energy Information Center of the Government Commissioner for Use of Nuclear Energy. Copies are available free of charge from Nuclear Energy Information Center, Palace of Culture and Science, Warsaw, Poland.

SPAIN

Junta de Energia Nuclear. "JEN" reports are available without charge from Servicio de Documentation, Junta de Energia Nuclear, Ciudad Universitaria, Madrid (3), España.

SWITZERLAND

Eidgenössisches Institut für Reaktorforschung. "EIR" reports are available from Eidgenössisches Institut für Reaktorforschung, c/o Bibliothek, 5303 Würenlingen/Switzerland.

TURKEY

Turkish Atomic Energy Commission. Copies are available free of charge from T.A.E.C., Çekmece Nuclear Research Center, P. O. Box 1, Airport, Istanbul, Turkey.

Conferences

Published conference proceedings as well as individual unpublished papers from conferences are included in this index. A CONF number is assigned to the conference if published proceedings are received and also if only a single paper is received. The base number used is year-month-sequence. Thus, the number CONF-650101 indicates that the conference was held in 1965, in January, and that this was the first January 1965 conference so received. This number would be assigned to complete published proceedings. If individual papers are received, the base number is extended to include a paper number, e.g., CONF-650101-1. As additional papers are received, they will be assigned consecutive numbers in the series, CONF-650101-1, CONF-650101-2, etc. This numbering system ensures that all papers received from a conference will be associated with that conference in this index.

If published proceedings are received after the receipt of individual papers, the complete proceedings will be abstracted and the abstract number will appear in this index with the base CONF number.

Abbreviations Used in Availability Column

AECL	Reports of the Atomic Energy of Canada Limited are for sale by the Scientific Document Distribution Office, Atomic Energy of Canada Limited, Chalk River, Ontario, Canada.
CFSTI	See NTIS
DENM	Reports of the Atomic Energy Commission Research Establishment, Risö, are available on exchange from the Library, Danish Atomic Energy Commission, Risö, Roskilde, Denmark. Also for sale at the price shown from Jul. Gjellerup, Booksellers, 87 Sölvgade, Kobenhavn K., Denmark. Reports of Danatom are available on loan from Research Establishment, Risö, Roskilde, Denmark. Copies are available from Danatom, Aurehojvej 2, Hellerup, Denmark.
Dep.	AEC reports so designated are maintained in the organizations listed on the inside front cover of *NSA*. Prior to July 1, 1965, reports were deposited either in printed copy form or in microform. After that time, all reports have been in the form of micronegatives. Reports from other countries so designated are available in the United States at the organizations listed on the inside front cover of *NSA*.

XUM

DTIE	Available from the U. S. Atomic Energy Commission, Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830. (Conference papers are available on loan only.)
EM	Blueline prints of AEC engineering drawings are available from NTIS, U. S. Department of Commerce, Springfield, Virginia 22151. Current prices of the CAPE-packages may be obtained from this address. TID-4100, available from the Division of Technical Information Extension, P. O. Box 62, Oak Ridge, Tennessee 37830, contains information on all the CAPE-packages for sale.
EUR	For sale by Centrale de vente des publications des Communautés européennes 37, rue Glesener-Luxembourg.
GPO	For sale by the Superintendent of Documents, Government Printing Office, Washington, D. C. 20402.
IAEA	Available from the International Atomic Energy Agency, Vienna, Austria, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each STI/DOC and STI/PUB publication.
INIS	Available on microfiche at $0.65 per document from INIS Section, International Atomic Energy Agency, P. O. Box 590 A-1011, Vienna, Austria
LMEC	Available *only to requesters within the United States* from the Liquid Metal Engineering Center, P. O. Box 1449, Canoga Park, CA 91304
NORW	Reports from Forsvarets Forskningsinstitutt are available from Norwegian Defense Research Establishment, Library, P. O. Box 25, Kjeller, Norway. "KR" reports are available on an exchange basis from the Library, Institutt for Atomenergi, Box 40, Kjeller, Norway. Reports of the Norwegian Reactor School are available from the Library, Institutt for Atomenergi, P. O. Box 40, Kjeller, Norway.
NRC	For sale by the National Research Council of Canada, Ottawa, Ontario, Canada.
NTIS	For sale by the National Technical Information Service (NTIS), U. S. Department of Commerce, Springfield, Virginia 22151 at the following prices for eye legible copy: 1–300 pages $3.00 301–600 pages $6.00 601–900 pages $9.00 Documents over 900 pages have special prices which may be obtained from NTIS. Microfiche copy of each separately bound document can be purchased for $0.95. Reports issued by organizations outside the United States will be sold by NTIS *only to purchasers within the United States.* Purchasers outside the United States may acquire such reports from the sources described elsewhere in these columns.
OECD	Available from O. E. C. D., Publications 2, rue, André-Pascal, 75 Paris 16^{e}, France, and from its sales agencies in various countries throughout the world. A list of these agencies is found in each OECD publication.
RSO	Available *only to requesters within the United States* from the Reactor Standards Office, Oak Ridge National Laboratory, P. O. Box X, Oak Ridge, TN 37830
SWED	"AE" reports are for sale from Aktiebolaget Atomenergi, Library Section, Box 43041, Stockholm 43, Sweden. Microcopy of these reports is available from the International Documentation Center, Turnba, Sweden. Reports of the VDDIT-series may be obtained from Aktiebolaget Atomenergi, Information Office, Scientific and Technical Information, Box 43041, Stockholm 43, Sweden. Other series are not generally available to the public. Organizations in the Atomic Energy field may obtain copies from Aktiebolaget Atomenergi.
UK	United Kingdom Atomic Energy Authority reports generally may be purchased from Her Majesty's Stationery Office, P. O. Box 569, London S.E.1. Copies of many UKAEA reports (particularly earlier ones) may be purchased in microcopy form from Micro Methods Ltd., East Ardsley, Wakefield, Yorkshire, England. Copies of UKAEA reports are deposited with the National Lending Library for Science and Technology and 10 public libraries in England; with the USAEC and (through USAEC) with NTIS; and in most national nuclear centers throughout the world. In the USA, UKAEA reports are available on a subscription basis, by subject category, from UNIPUB, Inc., P. O. Box 433, New York, NY 10016, USA; and from Pendragon House, Inc., 1093 Charter Avenue, Redwood City, CA 94063, USA.
UN	Mail orders should be directed to the Sales Section, Room 1059, United Nations Headquarters, New York, New York 10017.
ZAED	Available from Zentralstelle für Atomkernenergie Dokumentation, 6000 Frankfurt/Main 90, P. O. Box 901069, Westendstr. 21, West Germany

CONF-681232-		(3rd All Union Conference on Preparation, Structure, Physical Properties and Uses of Monocrystals of Refractory and Rare Metals, Moscow, U.S.S.R., Dec. 2-4, 1968)
	25-52362	Moscow; Izdatel'stvo Nauka (1971). 184p
CONF-690456-		(3rd International Symposium on Salt, Cleveland, Ohio, Apr. 22-24, 1969)
(Vol.1)	25-51623	Cleveland; Northern Ohio Geological Society, Inc. (1970). 481p
(Vol.2)	25-51625	Cleveland; Northern Ohio Geological Society, Inc. (1970). 492p
CONF-690662-		(8th Conference on Vacuum Microbalance Techniques, Wakefield, Mass., June 12-13, 1969)
	25-51937	New York; Plenum Publishing Corporation (1971). 262p. $22.50
CONF-690731-		(Symposium on Genetical Control of Radiosensitivity, Ohmiya-machi, Ibaraki-ken, Japan, July 28-29, 1969)
	25-52023	Gamma Field Symp.; No. 8, 1-129(1969)
CONF-690808-		(3rd International Conference on Photoconductivity, Stanford, Calif., Aug. 12-15, 1969)
	25-52895	Elmsford, N. Y.; Pergamon Press Inc. (1971). 419p
CONF-691004-		(24th Annual Conference on Instrument Society of America, Houston, Tex., Oct. 27-30, 1969)
(Pt.2)	25-51939	Pittsburgh; Instrument Society of America (1969). 223p
(Pt.4)	25-51940	Pittsburgh; Instrument Society of America (1969). 292p
CONF-691033-		(8th Eastern Theoretical Physics Conference, Syracuse, N.Y., Oct. 10-11, 1969)
	25-53039	Syracuse, N. Y.; Syracuse University (1969). 329p
CONF-700325-		(5th International Conference on Electromagnetic Interactions, Meribel-les-Allues, France, Mar. 9-20, 1970).
	25-53071	Orsay, France; Laboratoire de Physique Theorique et Hautes Energies (1970). 371p
CONF-700415-		(Conference on Nuclear Power and the Environment, Madison, Wis., Apr. 3-4, 1970)
	25-53923	Madison, Wis.; University of Wisconsin (1970). 232p
CONF-700505-		(2nd Congress of the International Radiation Protection Association, Brighton, England, May 3-8, 1970)
27	25-52068	See COO-1500-18
CONF-700557-		(Meeting on Mechanical Flow Processes in Gas Centrifuges, Porz-Wahn, Germany, May 14, 1970)
6	25-51714	See K-Trans-61-1
9	25-51716	See K-Trans-61-4
10	25-51715	See K-Trans-61-2
CONF-700564-		(10th Annual International Conference of the Canadian Nuclear Association, Toronto, Canada, May 24-27, 1970)
1	25-53884	See NUMERICAL 70-CNA-647
3	25-53880	See NUMERICAL 70-CNA-619
6	25-53882	See NUMERICAL 70-CNA-622
8	25-54171	See NUMERICAL 70-CNA-616
9	25-53883	See NUMERICAL 70-CNA-630
14	25-54009	See NUMERICAL 70-CNA-654
15	25-53879	See NUMERICAL 70-CNA-618
18	25-53925	See NUMERICAL 70-CNA-617
19	25-53881	See NUMERICAL 70-CNA-621
20	25-53400	See NUMERICAL 70-CNA-625
CONF-700645-		(Conference on Newer Techniques and Technology in Radiotherapy and Oncology, Los Angeles, Calif., June 5-6, 1970)
2	25-52152	See UCRL-20836
CONF-700655-		(Meeting Held at the Radiobiological Institute TNO, Rijswijk, The Netherlands, June 22-24, 1970)
	25-52158	Eur. J. Cancer; 7: No. 2-3, 97-267(May 1971)
CONF-700657-		(Conference on Experience of Organization Subject to Nuclear Safeguards Inspection, London, England, June 1-2, 1970)
1	25-51762	See CEA-CONF-1786
CONF-700714-		(International School of Subnuclear Physics Seminar, Trapani, Italy, July 1-19, 1970)
2	25-53281	See IC-71/75
CONF-700811-		(3rd International Symposium on Polarization Phenomena in Nuclear Reactions, Madison, Wis., Aug. 31-Sept. 4, 1970)
	25-53788	Madison, Wis.; University of Wisconsin Press (1971). 956p. $15.00
CONF-700845-		(21st Annual Meeting of the American Institute of Biological Sciences, Bloomington, Ind., Aug. 23-29, 1970)
1	25-54375	See ORO-3549-7
CONF-700962-		(3rd International Congress of the Transplantation Society, The Hague, The Netherlands, Sept. 7-11, 1970)
	25-52205	Transplant. Proc.; 3: No. 1, 1-978(Mar 1971)
CONF-700966-		(Panel on Mineral Studies with Isotopes in Domestic Animals, Vienna, Austria, Sept. 28-Oct. 2, 1970)
	25-51971	See STI/PUB-293
CONF-700970-		(Symposium on the Applications of Transport Theory, Oxford, England, Sept. 1-4, 1970)
1	25-54119	See RT/ING-(71)2
CONF-701002-		(Symposium on Neutron Standards and Flux Normalization, Argonne, Ill., Oct. 21-23, 1970)
	25-53485	Dep. NTIS, 525p.
CONF-701052-		(Panel on Mutation Breeding for Disease Resistance, Vienna, Austria, Oct. 12-16, 1970)
	25-52256	See STI/PUB-271
CONF-701053-		(Isotopic Snow Gage Information Meeting, Sun Valley, Idaho, Oct. 28, 1970)
	25-51925	Boise, Idaho; Idaho Nuclear Energy Commission (1970). 66p
CONF-701056-		(Microcircuits Applications Conference, Fort Monmouth, N.J., October 1970)
1	25-51951	See COO-1624-36
CONF-701112-		(Symposium on New Developments in Physical and Biological Radiation Detectors, Vienna, Austria, Nov. 23-27, 1970)
	25-51911	Energ. Nucl. (Milan); 18: No. 6, 360-2(Jun 1971)
CONF-701132-		(18th Conference on Remote Systems Technology, Washington, D.C., November 1970)
	25-51779	Hinsdale, Ill.; American Nuclear Society, Inc. (1970). 236p
CONF-710108-		(2nd Panel on the Peaceful Uses of Nuclear Explosions, Vienna, Austria, Jan. 18-22, 1971)
1	25-51664	See UCRL-72769(Rev.1)
CONF-710112-		(Proceedings of LAMPF Theoretical Study Group, Los Alamos, N. Mex., Jan. 25-29, 1971)
	25-52987	See LA-4637
CONF-710210-		(Tests on Transport Packaging for Radioactive Materials Seminar, Vienna, Austria, Feb. 8-12, 1971)
	25-51770	See STI/PUB-285
CONF-710316-		(Workshop on Particle Physics at Intermediate Energies, Pasadena, Calif., Mar. 29-30, 1971)
	25-53038	See UCRL-20655
CONF-710319-		(Conference of the American Society of Nondestructive Testing, Los Angeles, Calif., Mar. 8-12, 1971)
1	25-51734	See Y-DL-140
CONF-710328-		(Solar Wind Conference, Pacific Grove, Calif., Mar. 22-26, 1971)
1	25-52555	See LA-DC-12515
